BORDER 2020 ARIZONA-SONORA MINING SYMPOSIUM
JUNE 25, 2015
CENTER FOR CREATIVE PHOTOGRAPHY AUDITORIUM
UNIVERSITY OF ARIZONA
1030 North Olive Road, Tucson, AZ 85721

Environmental issues related to mining in the 100 km U.S.-Mexico continue to be an area of interest as a result of recent high profile mining related incidents, the prevalence of mining in the region, and the fact that mining issues cut across all five U.S.-Mexico Border 2020 Task Forces (Air, Water, Materials Management and Clean Sites, Emergency Preparedness and Response, Enforcement). The symposium will convene technical experts to develop a common understanding of the regulatory structure, share best practices, and highlight innovative and emerging technologies. A key goal will be to develop recommendations for near-term best practices for the mines and identify domestic and/or binational follow-up actions that government, academia and industry can potentially implement (e.g., best practices for mitigation, monitoring QA/QC, sulfuric acid tanker car derailment emergency response training exercise, risk communication training).
