** A tip for displaying a text file on your screen **

Displaying a text file on your screen requires selecting the appropriate
protocol and then downloading the file to your screen. Always use protocol
number 1 "TYPE file to your screen" for displaying text files.

  Select the correct protocol by entering: P 1
            then
  Select the file to display by entering: D <name>

Commands can also be stacked and a file can be displayed with one statement:

          P 1 <name>
