1. DATA SET IDENTIFICATION

1.1 Title of Catalog document

Regional Environmental Monitoring and Assessment Program - Region 1
1993-94 Fish Tissue Contamination in Maine Lakes
Lake Dissolved Organic Carbon Data Set

1.2 Author of the Catalog entry

Melissa Hughes, OAO Corporation

1.3 Catalog revision date

10 March 1998

1.4 Data set name

DOC1

1.5 Task Group

Region 1

1.6 Data set identification code

00006

1.7 Version

001

1.8 Requested Acknowledgment

If you plan to publish these data in any way, EPA requires a standard statement for work it has supported:

"Although the data described in this article have been funded wholly or in part by the U. S. Environmental Protection Agency through its Regional EMAP program, it has not been subjected to Agency review, and therefore does not necessarily reflect the views of the Agency and no official endorsement should be inferred."

2. INVESTIGATOR INFORMATION

2.1 Principal Investigators

Barry Mower
Jeanne DiFranco
Linda Bacon
David Courtemanch
State of Maine Department of Environmental Protection

2.2 Investigation Participant-Sample Collection

Not applicable

3. DATA SET ABSTRACT

3.1 Abstract of the Data Set

The R-EMAP Region 1 Lake Dissolved Organic Carbon data set presents dissolved organic carbon data measured from water samples taken at three depths in the water column. These included one meter below the surface, at the top of the hypolimnion and at one meter above the bottom. This is a factor that may affect a fish's or lake's sensitivity to contamination.

3.2 Keywords for the Data Set

Lake, Maine, water column, dissolved organic carbon

4. OBJECTIVES AND INTRODUCTION

4.1 Program and Project Objectives

4.1.1 Program Objective

Regional Environmental Assessment and Monitoring Program (R-EMAP) was initiated to test the applicability of the EMAP approach to answer questions about ecological conditions at regional and local scales. Using EMAP's statistical design and indicator concepts, R-EMAP conducts projects at smaller geographic scales and in shorter time frames.

4.1.2 Project Objective

The primary goal of this study was to estimate the levels of contamination in fish populations, and the risk these levels pose to human and wildlife consumers. The primary objective was to determine concentrations of cadmium, lead, mercury, PCBs and selected pesticides in fish collected from Maine lakes.

4.2 Data Set Objective

The objective of this data set is to characterize the dissolved organic carbon concentrations in each lake.

4.3 Data Set Background Discussion

From a population of 1800 Maine lakes that have been surveyed by the Maine DIFW and have principal fisheries, one hundred and fifty lakes were selected using the EMAP sampling design and 125 were sampled. Correlations with factors that may affect a fish's or lake's sensitivity to contamination will be examined secondarily. These factors include species, size, age, geography, geology, water and sediment chemistry, hydrology, trophic state and air flow patterns. The results will be used to develop preventive actions and management techniques.

4.4 Summary of Data Set Parameters

Dissolved organic carbon was measured in water samples collected at three depths in each lake.

5. DATA ACQUISITION AND PROCESSING METHODS

5.1 Data Acquisition

5.1.1 Sampling Objective

Collect a water sample at three depths to measure dissolved organic carbon concentrations.

5.1.2 Sample Collection Methods Summary

DIFW bathymetric maps were used to determine the deepest part of each lake. Water samples were collected from this point. Kemmerer or Van Dorn water bottles were used to collect water samples. Water samples were collected at one meter below the surface, at the top of the hypolimnion (in stratified lakes) and at one meter above the bottom. After collection, samples were placed in a cooler on ice.

5.1.3 Sampling Start Date

June 1993
September 1994

5.1.4 Sampling End Date

September 1993
September 1994

5.1.5 Platform

Not applicable.

5.1.6 Sampling Equipment

Kemmerer or Van Dorn water bottles

5.1.7 Manufacturer of Sampling Equipment

Not known

5.1.8 Key Variables

The data are based on the results of chemical analyses.

7.1.7 Minimum values in data set

Variable	Minimum
DEPTH	0.5
DOC_PPM	1.0

7.1.8 Maximum values in data set

Variable	Maximum
DEPTH	95.0
DOC_PPM	28.7

7.2 Data Record Example

7.2.1 Column Names for Example Records

LAKE;MIDAS;SAMPDATE;DEPTH;DOC_PPM;DOC_F;TYPE;REP;

7.2.2 Example Data Records

LAKE;MIDAS;SAMPDATE;DEPTH;DOC_PPM;DOC_F;TYPE;REP;
 EMBD;0078;08/17/93;9.0;1.0;ND;BG; ;
 PLEA;0159;08/26/93;11.0;1.0;ND;BG; ;
 MEDD;0177;08/06/93;15.0;2.0; ;BG; ;
 ROWE;0202;08/05/93;11.5;2.4; ;BG; ;
 LDIM;0240;08/04/93;4.0;4.9; ;BG; ;

8. GEOGRAPHIC AND SPATIAL INFORMATION

8.1 Minimum Longitude

-71 Degrees 00 Minutes 47 Decimal Seconds

8.2 Maximum Longitude

-67 Degrees 10 Minutes 30 Decimal Seconds

8.3 Minimum Latitude

43 Degrees 15 Minutes 21 Decimal Seconds

8.4 Maximum Latitude

47 Degrees 07 Minutes 11 Decimal Seconds

8.5 Name of area or region

EPA Region 1

The sampling area included the entire state of Maine.

9. QUALITY CONTROL AND QUALITY ASSURANCE

9.1 Data Quality Objectives

The data quality objective for aqueous samples was to have no more than a 30% relative percent difference.

9.2 Data Quality Assurance Procedures

Collection of one set of field duplicate samples for each region ensured that duplicates were collected from a minimum of 5% of the project lakes for all parameters sampled, as required in the Project Work/QA Plan.

A sample duplicate is a second sample obtained following the same procedures as for the first sample. It provides information on the homogeneity of the matrix and the consistency with which samples are collected, preserved and analyzed.

Duplicates were assigned unique identification numbers for use in laboratory analyses. Pre-labeled containers were identified as additional samples, not as duplicates, to reduce analytical bias. The duplicate results were not averaged with the sample, but were maintained in the data base as quality control indicators.

Equipment blanks samples were collected for dissolved organic carbon and were noted as such in field records. After routine decontamination of equipment upon completion of sampling a lake, each team submitted one equipment blank for these parameters in the form of a water bottle.

9.3 Quality Assessment Results

All water sample field duplicates met the stated data quality objective with the exception of one calcium sample.

10. DATA ACCESS

10.1 Data Access Procedures

Data can be downloaded from the WWW site or contact personnel listed in Section 10.3.

10.2 Data Access Restrictions

Not Applicable

10.3 Data Access Contact Persons
