SANCTUARIES

Partners - continued

Purpose

- To assess condition of aquatic resources in near-coastal waters of the U.S. continental shelf (where prior EMAP-type assessments have been lacking)
- To provide quantitative benchmarks for comparisons with any future follow-up monitoring in these waters to determine long-term trends and how environmental conditions may be changing with time

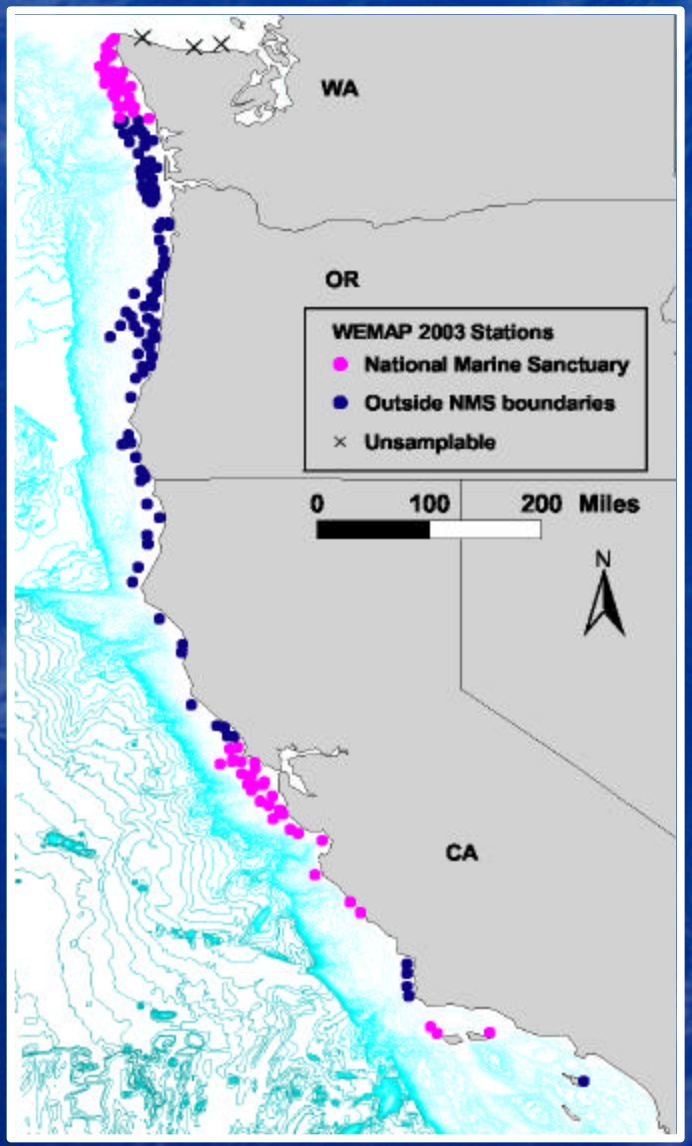
Approach

- Extension of previous EMAP efforts in estuaries and inland waters to near-coastal shelf waters
- Use of probabilistic sampling approach of EMAP to support statistical estimation of spatial extent of condition with respect to measured indicators
- Multiple indicators measured synoptically at each station to support “weight-of-evidence” assessments of condition, and examination of potential associations between presence of stressors and biological responses

Approach - continued

- Nesting of sampling sites across varying spatial scales to enable assessment of condition at state, regional, and national levels
- Sites included in all 5 NOAA NMSs on west coast and Gray's Reef NMS within SAB, thus allowing comparison of condition in sanctuaries vs. surrounding shelf waters.

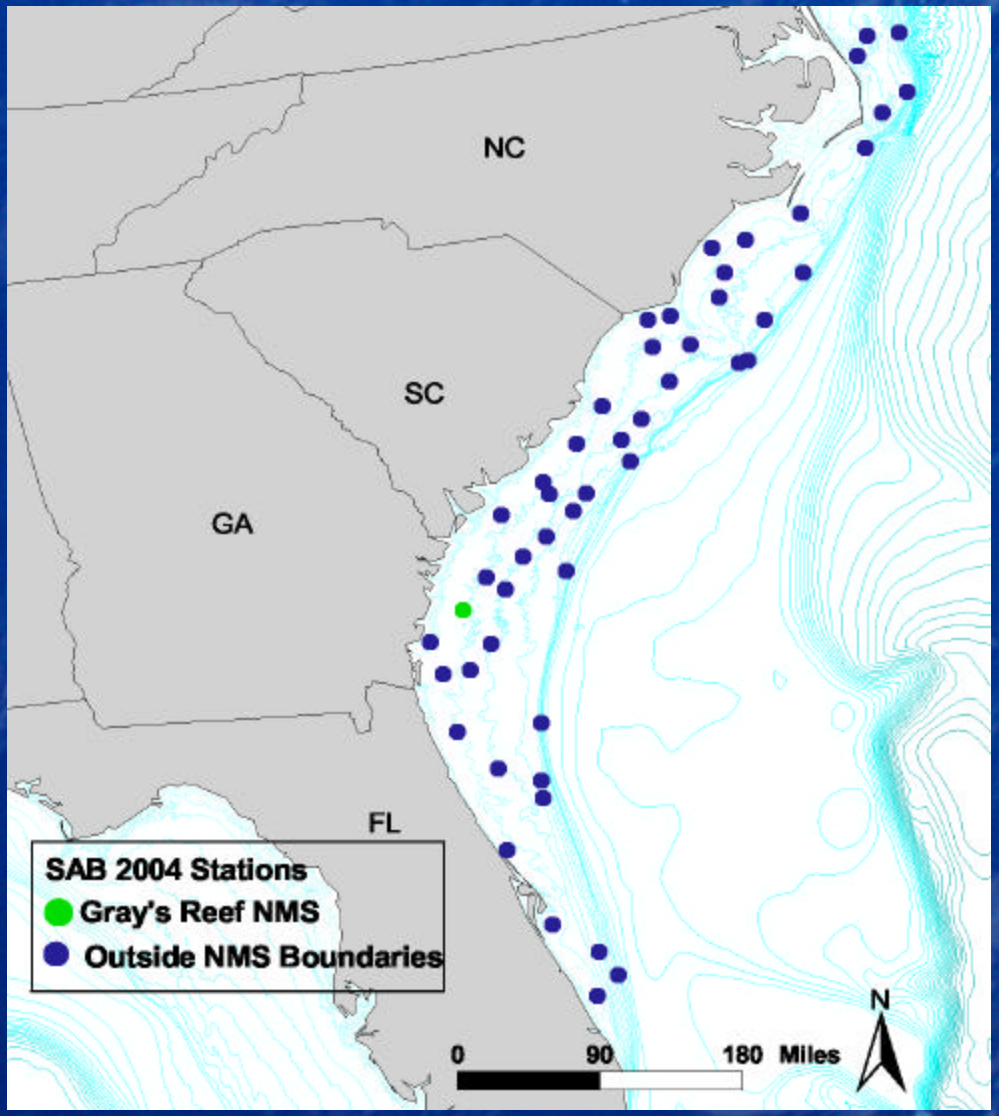
West Coast Shelf (30-120 m): June 03



Partners:
NOAA (NCCOS, NMSP, NMFS)
EPA/ORD/NHEERL
States of WA, OR, CA, AK
SCCWRP
MLML

Sampling Parameters:
Habitat Characteristics (T, S, DO, Nutrients, Grain-Size, TOC)
Stressors (Chemical Contaminants in Sediments & Biota)
Biological Condition (Benthic Infauna, Chlorophyll A, fish pathology)

SAB Shelf (~10-100 m): April 04



Partners:
NOAA (NCCOS, NMSP)
EPA/ORD/NHEERL
States of FL, GA, SC, NC

Sampling Parameters:
Habitat Characteristics
(T, S, DO, Nutrients, Grain-Size, TOC)
Stressors (Chemical Contaminants in Sediments & Biota)
Biological Condition
(Benthic Infauna, Chlorophyll A, fish pathology)

Observations/Lessons Learned

- **Need for large ships for sampling in offshore waters**

KNOTS
DEG

200
SINGER

Observations/Lessons Learned

- Need for large ships for sampling in offshore waters
- **Hook-n-line works well for fish sampling offshore**

Target Fish Species Caught

West Coast Survey (48 of 146 sites*):	SAB Survey (15 of 50 sites*):
• Pacific sanddab • Speckled sanddab • Butter sole • Dover sole	• Sand perch • Black sea bass • Lizard fish • Snake fish • Dusky flounder • Porgy, grunts, & tomtate (sporadically)

* Fish caught at ~ 1/3 of sites

Observations/Lessons Learned

- Need for large ships for sampling in offshore waters
- Hook-n-line works well for fish sampling offshore
- **Bottom substrates are samplable with grabs in most areas; large double van-Veen works well offshore**

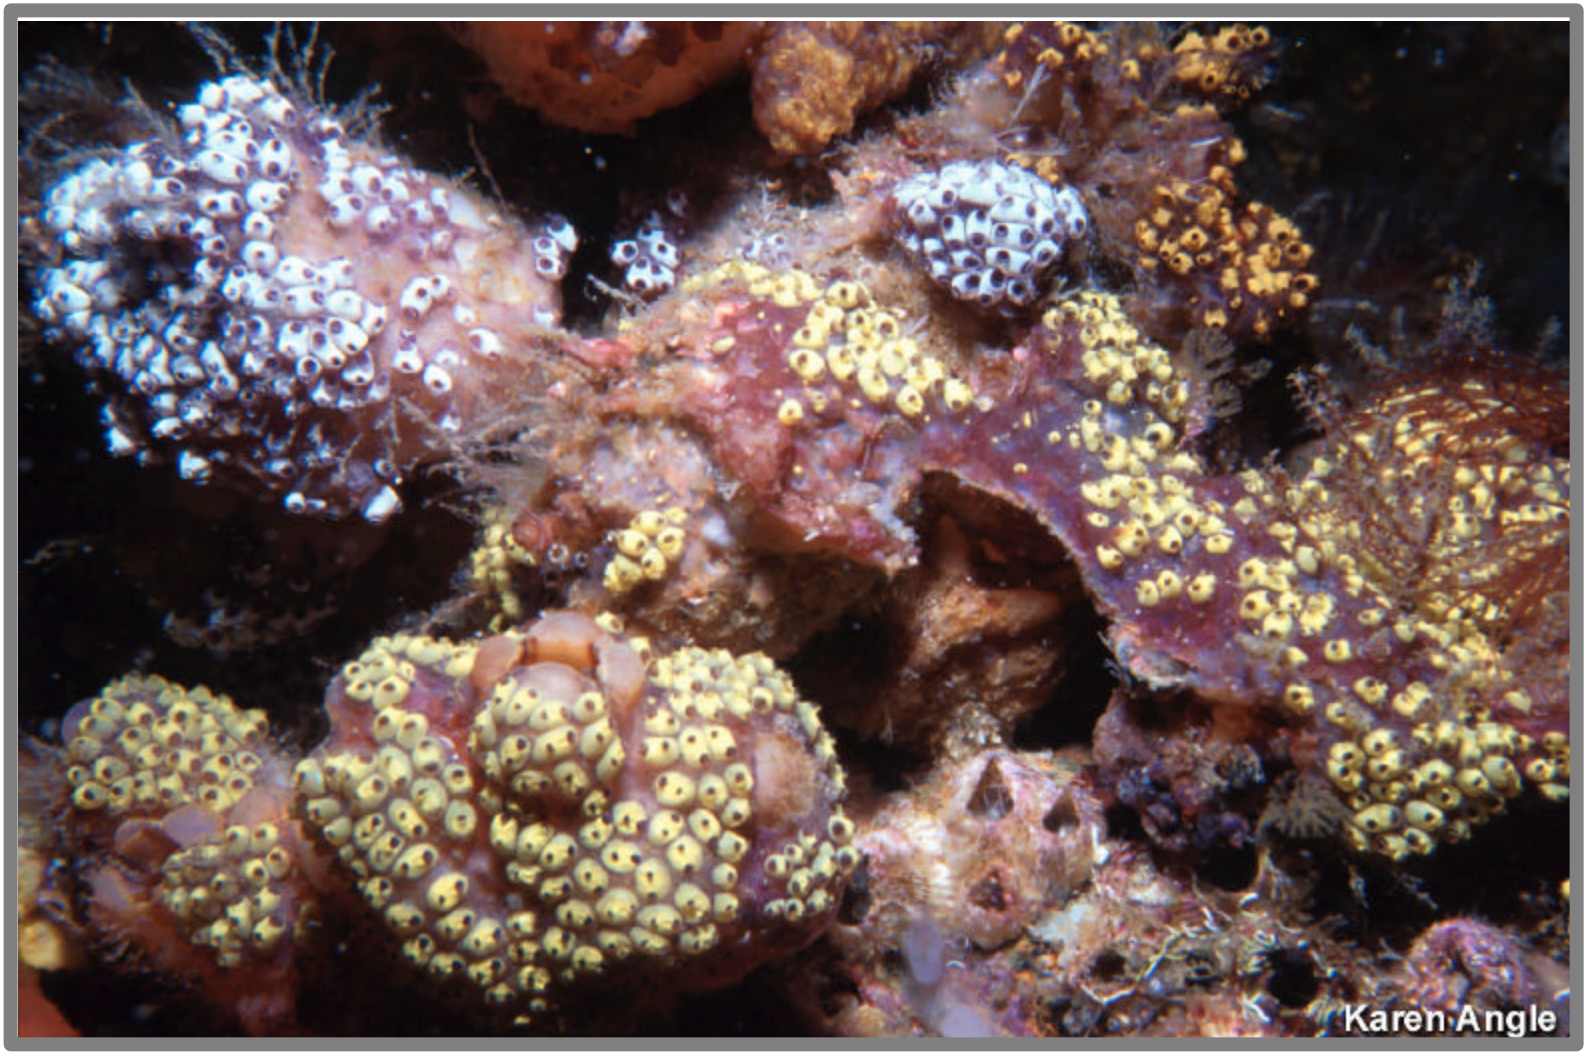
Observations/Lessons Learned

- Need for large ships for sampling in offshore waters
- Hook-n-line works well for fish sampling offshore
- Bottom substrates samplable with grabs in most areas
- **Opportunity to report on condition of sanctuaries is a bonus (given value of these resources)**



Karen Angle

Gray's Reef National Marine Sanctuary

Tony Chess

Steve Fisher

Examples of Marine Mammals of west-coast National Marine Sanctuaries

Humpback whales

Orcas

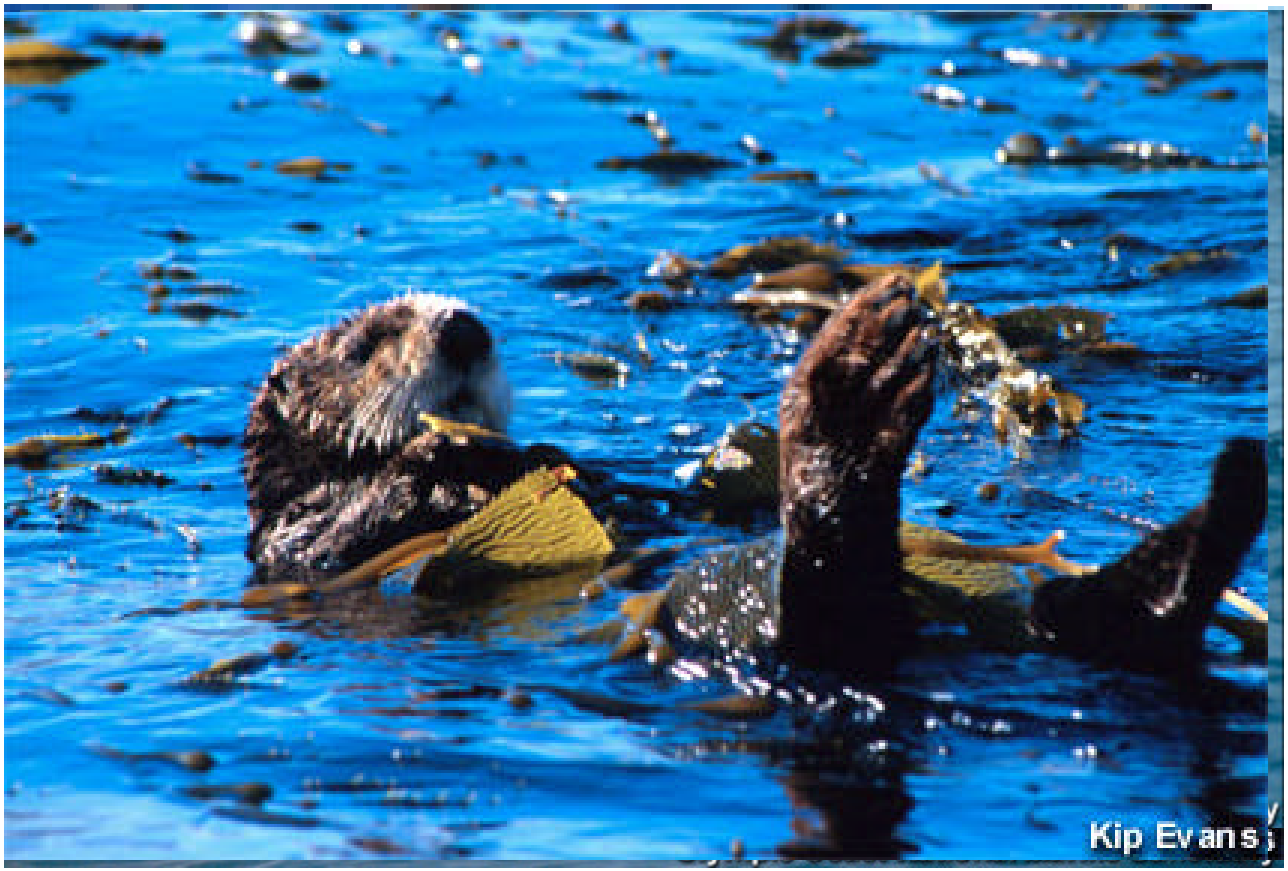
Elephant seals

Sea lions

Harbor seals

Dolphins

Sea otters



Observations/Lessons Learned

- Need for large ships for sampling in offshore waters
- Hook-n-line works well for fish sampling offshore
- Opportunity to report on condition of sanctuaries is bonus
- Bottom substrates samplable with grabs in most areas
- **Ability to examine important oceanographic patterns & processes (e.g., influence of major river plumes).**

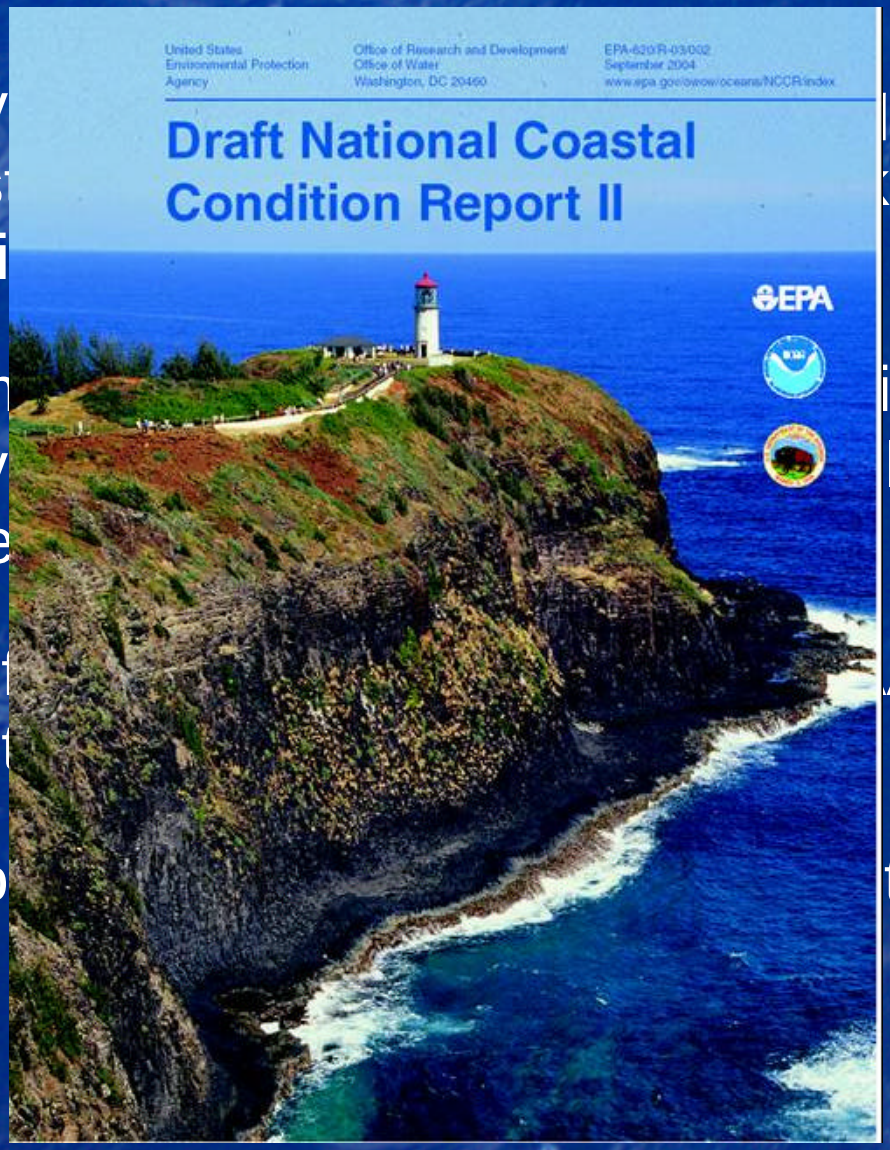
Observations/Lessons Learned

- Need for large ships for sampling in offshore waters
- Hook-n-line works well for fish sampling offshore
- Opportunity to report on condition of sanctuaries is bonus
- Bottom substrates samplable with grabs in most areas
- Ability to examine important oceanographic patterns & processes (e.g., influence of major river plumes).
- **One study limitation is that, although chemical contaminants are being measured, other potential sources of human disturbance in offshore waters (e.g., commercial trawling) are not.**

SOFA
Olympic Coast National Marine Sanctuary

Summary/Value

- Studies prov…uatic resources in near-coast…king) and at varying spati…
- Synoptic san…indicators allows for ev…lation to stressor leve…
- Opportunity f…A NMSs in comparison t…
- New input fo…tion Reports



Summary - continued

- Opportunity to enhance understanding of broad-scale oceanographic patterns and processes
- Demonstration of benefits of performing science through partnerships
- Results will serve as benchmarks for any future long-term monitoring
- Future efforts should perhaps include additional stressor indicators of importance in offshore waters.

The End
