1. DATA SET IDENTIFICATION

1.1 Title of Catalog document

National Coastal Assessment Database  
2003 New York/New Jersey Harbor System  
Sediment Analyte Concentration Data

1.2 Author of the Catalog entry

Melissa M. Hughes, Raytheon

1.3 Catalog revision date

June 29, 2012

1.4 Data set name

Sediment Analyte Concentration Data

1.5 Task Group

Regional Environmental Monitoring and Assessment Program

1.6 Data set identification code

NA

1.7 Version

NA

1.8 Requested Acknowledgment

If you plan to publish these data in any way, EPA requires a standard statement for work it has supported: "Although the data described in this article have been funded wholly or in part by the U. S. Environmental Protection Agency through its EMAP-Estuaries Program, it has not been subjected to Agency review, and therefore does not necessarily reflect the views of the Agency and no official endorsement should be inferred."

## 2. INVESTIGATOR INFORMATION

### 2.1 Principal Investigator

Ms. Darvene A. Adams

U.S. Environmental Protection Agency - Region II

### 2.2. Investigation Participant

Ms. Sandi Robinson

U.S. Environmental Protection Agency - ORD/NHEERL/AED

## 3. DATA SET ABSTRACT

### 3.1 Abstract of the Data Set

The Sediment Analyte Concentration data set reports the concentrations of a suite of analytes measured in surficial sediment samples. These samples were taken in the New York/New Jersey Harbor region. The suite of compounds analyzed included: 4 major and 12 trace inorganic elements, 23 polycyclic aromatic hydrocarbons (PAHs), DDT and its metabolites, 10 other chlorinated pesticides, 20 PCB congeners, 17 dioxin and furan congeners (only analyzed in samples from selected regions), mono-, di-, tri- and tetra-butyltins and acid volatile sulfide (AVS). PCB concentrations are not included due to quality assurance issues.

### 3.2 Keywords for the Data Set

sediment contaminants, inorganics, organics, AVS

## 4. OBJECTIVES AND INTRODUCTION

### 4.1 Program Objective

The project was designed to support resource management decisions related to pollution control and remediation throughout the New York/New Jersey (NY/NJ) Harbor and to assist the New York-New Jersey Harbor Estuary Program (HEP) in developing a contaminant monitoring strategy to be included in the Comprehensive Conservation and Management Plan (CCMP) for the NY/NJ Harbor system.

### 4.2 Data Set Objective

To provide an overview of the extent of the sediment contamination in the NY/NJ harbor region based on chemical analyses.

### 4.3 Data Set Background Discussion

The New York/New Jersey Harbor System has been susceptible to toxic contamination due to surrounding land uses. Harbor sediments are contaminant reservoirs which can function as a secondary source of these land use contaminants. Contaminated sediments pose a substantial threat to Harbor resources and are a management challenge. Adverse changes in the biota of the system have been documented with increasing frequency, and many of these changes have been linked to toxic contamination.

### 4.4 Summary of Data Set Parameters

Sediment Analyte Concentration data set values were based on the results of analytical procedures performed in the laboratory.

## 5. DATA ACQUISITION AND PROCESSING METHODS

### 5.1 Data Acquisition

#### 5.1.1 Sampling Objective

Collect sediment grab samples suitable for the analysis of organic and inorganic contaminants.

#### 5.1.2 Sample Collection Methods Summary

The grab sampler was lowered through the water column; the grab penetrated the sediment by gravity releasing a trigger allowing the jaws to close. When the grab was pulled from the sediment using the winch, the jaws closed, encapsulating the sediment sample.

Multiple grabs were required to collect enough volume for analysis. Overlying water was carefully drained. Aliquots of the top 2 cm were taken from the undisturbed surface of individual grabs using a 60-cc syringe which had the narrow end removed to create a mini-corer. When the sample container was filled to the top, it was sealed with Teflon tape and immediately frozen.

The remaining top 2 cm of sediment from each grab was removed using stainless steel spoons. A composite of all grabs was homogenized in a glass bowl for 10 minutes. Subsamples were removed for metals, organics, and TOC and transferred to sample containers that were stored on ice.

#### 5.1.3 Sampling Start Date

July 1, 2003

#### 5.1.4 Sampling End Date

September 25, 2003

#### 5.1.5 Platform

Sampling was conducted from the U.S.EPA research vessel, the R/V CLEAN WATERS.

#### 5.1.6 Sampling Gear

A 0.04-m<sup>2</sup> or 0.1-m<sup>2</sup>, stainless steel, Young-modified Van Veen Grab sampler was used to collect sediment grabs. This grab sampled an area of 440 cm<sup>2</sup> and a maximum depth of penetration in the sediment of 10 cm.

#### 5.1.7 Manufacturer of Sampling Equipment

Young's Welding, Sandwich, MA

#### 5.1.8 Key Variables

No data were recorded at the time of sample collection.

#### 5.1.9 Collection Method Calibration

The sampling gear did not require any calibration. It required inspection for deformities incurred due to mishandling or impact on rocky substrates.

#### 5.1.10 Sample Collection Quality Control

A successful grab had relatively level, intact sediment over the entire area of the grab and a sediment depth at the center of at least 5 centimeters. Unacceptable grabs included those with grossly slumped surfaces and those completely filled to the top, where the sediment was in direct contact with the hinged top.

The van Veen Grab was rinsed with ambient seawater between grabs at a station to remove remaining organisms. It was thoroughly cleaned with detergent and water between stations.

5.2 Data Preparation and Sample Processing

5.2.1 Sample Processing Objective

Process sediment samples to accurately measure organic and inorganic compounds, TOC and AVS.

5.2.2 Sample Processing Methods Summary

The samples were analyzed by standard methods.

5.2.3 Sample Processing Method Calibration

Appropriate Sediment Reference Materials (SRM) from the National Research Council of Canada (NRCC), the National Institute of Technology (NIST) and Cambridge Isotope Laboratories were used.

5.2.4 Sample Processing Quality Control

All analyses employed appropriate quality assurance samples.

5.2.5 Sample Processing Method Reference

6. DATA MANIPULATIONS

NA

6.1 Name of new or modified values

NA

6.2 Data Manipulation Description

NA

6.3 Data Manipulation Examples

NA

7. DATA DESCRIPTION

7.1 Description of Parameters

Attribute Name	Format	Description
Data Group	VARCHAR2(4)	Data group conducting sampling
Sampling Year	NUMBER(4.0)	Data collection year
Station Name	VARCHAR2(20)	The station identifier
Sampling Collection Date	DATE	Date of sample collection
Latitude Decimal Degrees	NUMBER(9.3)	Decimal degrees of latitude
Longitude Decimal Degrees	NUMBER(9.3)	Decimal degrees (-) of longitude
Analyte Code	VARCHAR2(8)	Analyte Code
Analyte Concentration	NUMBER(13.6)	Concentration (dry wt.)
Unit Code	VARCHAR2(15)	Unit of measure
Detection Limit Conc.	NUMBER(13.6)	Method Detection Limit

7.1.6 Precision to which values are reported

The precision is indicated by the format reported under 7.1.7 and 7.1.8

## 7.1.7/7.1.8 Minimum/Maximum value in data set

### 8. GEOGRAPHIC AND SPATIAL INFORMATION

#### 8.1 Minimum Longitude

-74 Degrees 17.4 Minutes 48.00 Decimal Seconds

#### 8.2 Maximum Longitude

-73 Degrees 45 Minutes 0.54 Decimal Seconds

#### 8.3 Minimum Latitude

40 Degrees 25.2 Minutes 36.00 Decimal Seconds

#### 8.4 Maximum Latitude

40 Degrees 51.6 Minutes 42.00 Decimal Seconds

#### 8.5 Name of area or region

New York/New Jersey Harbor System:

Four sub-basins were sampled in the New York/New Jersey Harbor, including: Upper Harbor, Newark Bay, Lower Harbor (includes Raritan and Sandy Hook Bays) and Jamaica Bay. For purposes of this study, the region includes the lower portions of the Hudson, Passaic, Harlem, Hackensack and Raritan Rivers, upstream to a near-bottom salinity of 15 ppt, the East River to Long Island Sound and Lower Harbor to the Atlantic Ocean.

### 9. QUALITY CONTROL AND QUALITY ASSURANCE

#### 9.1 Data Quality Objectives

Quality assurance goals were developed and followed for each sample type.

#### 9.2 Quality Assurance/Quality Control Procedures

The QA/QC procedures for the laboratory chemical methods will follow a performance-based approach, which involves continuous laboratory evaluation through the use of accuracy-certified reference materials (CRMs), laboratory-fortified sample matrices, reagent blanks, calibration standards and laboratory and field replicates.

#### 9.3 Quality Assessment Results

These in-house QC measures met the requirements established in the QA Plan.

#### 9.4 Unassessed Errors

NA

### 10. DATA ACCESS

#### 10.1 Data Access Procedures

Data can be downloaded from the WWW server.

10.2 Data Access Restrictions  
Data can only be accessed from the WWW server.

10.3 Data Access Contact Persons  
Ms. Darvene A. Adams  
U.S. EPA Region II

10.4 Data Set Format  
Tab-delimited

10.5 Information Concerning Anonymous FTP  
Data cannot be accessed via ftp.

10.6 Information Concerning WWW  
Data can be downloaded from the WWW servers.

10.7 EMAP CD-ROM Containing the Data Set  
Data are not available on CD-ROM
