# GoMOOS

Toward an integrated environmental  
information system in the Gulf of Maine

Philip Bogden, CEO  
GoMOOS, Inc

# Integrating...in a Distributed Way

1. GoMOOS – User-Driven Nonprofit  
(Bridging the valley of death)
  2. Toward a Regional Association  
(System of interoperable systems)
  3. What makes you think it can happen?  
(Standards enable innovation)
-

# Integrating...in a Distributed Way

1. GoMOOS – User-Driven Nonprofit  
(Bridging the valley of death)
  2. Toward a Regional Association  
(System of interoperable systems)
  3. What makes you think it can happen?  
(Standards enable innovation)
-

# Operational Goals

---

To provide data and information that serve public and private sector needs to:

- Solve practical problems,
  - Predict events, and
  - Further understand natural systems...  
...in the Gulf of Maine.
- 

A Coastal Oceanic Analog of...  
...the National Weather Service.

# GoMOOS is

## Regional and Multisector

---

Serving all Gulf of Maine states and provinces:  
Nova Scotia, New Brunswick, Maine,  
New Hampshire, Massachusetts, on south...

Partners:

- Research Institutions
- Government Agencies
- Educational Institutions
- Private Industry
- Nonprofits

# User Needs

---

- Mariners – safety, rescue
- Shipping – safety & efficiency
- Mammals – endangered species assessment
- Aquaculture – site selection & water quality
- Lobster fishing – recruitment prediction
- Petroleum Industry – spill response
- Shellfishing – spat collection, site selection
- Military – national security, operations test bed
- Coastal Management – eutrophication
- Commercial & Sport Fishing – stock assessments
- Research – long-term observations, infrastructure

# GoMOOS Members

---

## Research/Education:

Bedford Institute of Oceanography (Canada)

Bigelow Laboratory for Ocean Science

Bowdoin College

Dalhousie University (Canada)

Maine Maritime Academy

Rutgers University

University of Maine

University of Massachusetts

University of New Hampshire

University of Rhode Island

Woods Hole Oceanographic Institution

## Government:

Maine Dept. of Marine Resources

Maine Science & Technology Foundation

Maine State Planning Office

Massachusetts Coastal Zone Management

Massachusetts Water Resources Authority

Stellwagen Bank National Marine Sanctuary

## Industry:

Bath Iron Works

James W. Sewall Company

Maine Lobstermen's Association

Portland Pipe Line Corporation

Satlantic, Inc. (Canada)

RD Instruments, Inc.

## Marine Operations:

Atlantic Pilotage Authority (Canada)

Eastport Port Authority

Federal Marine Terminals (Canada)

Penobscot Bay & River Pilots Assoc.

Saint John Marine Pilots (Canada)

Saint John Port Authority (Canada)

## Nonprofit:

Gulf of Maine Aquarium

Island Institute

New England Aquarium

# Technical Program

---

## Real-time data acquisition:

Weather – surface winds, air temperature, visibility(fog),  
light flux, cloud conditions

Ocean conditions – current, waves, temperature, salinity

Water quality – dissolved oxygen, water clarity,  
turbidity, nutrients

Ocean biology – irradiance, algal biomass, productivity,  
community structure, acoustics (whales)

## Modeling & Prediction: circulation & waves

## Data & Information Management: adding value

# Science Team

---

## University of Maine

- **Neal Pettigrew** (Chief Scientist): Buoys & Currents
- **David Townsend** – Nutrient measurements
- **Andrew Thomas** – Satellite remote sensing
- **Huijie Xue** – Circulation modeling
- **Lewis Incze** – Upper trophic levels

## Bigelow Laboratory

- **Collin Roesler** – Phytoplankton and bio-optics

## Woods Hole Oceanographic Institution

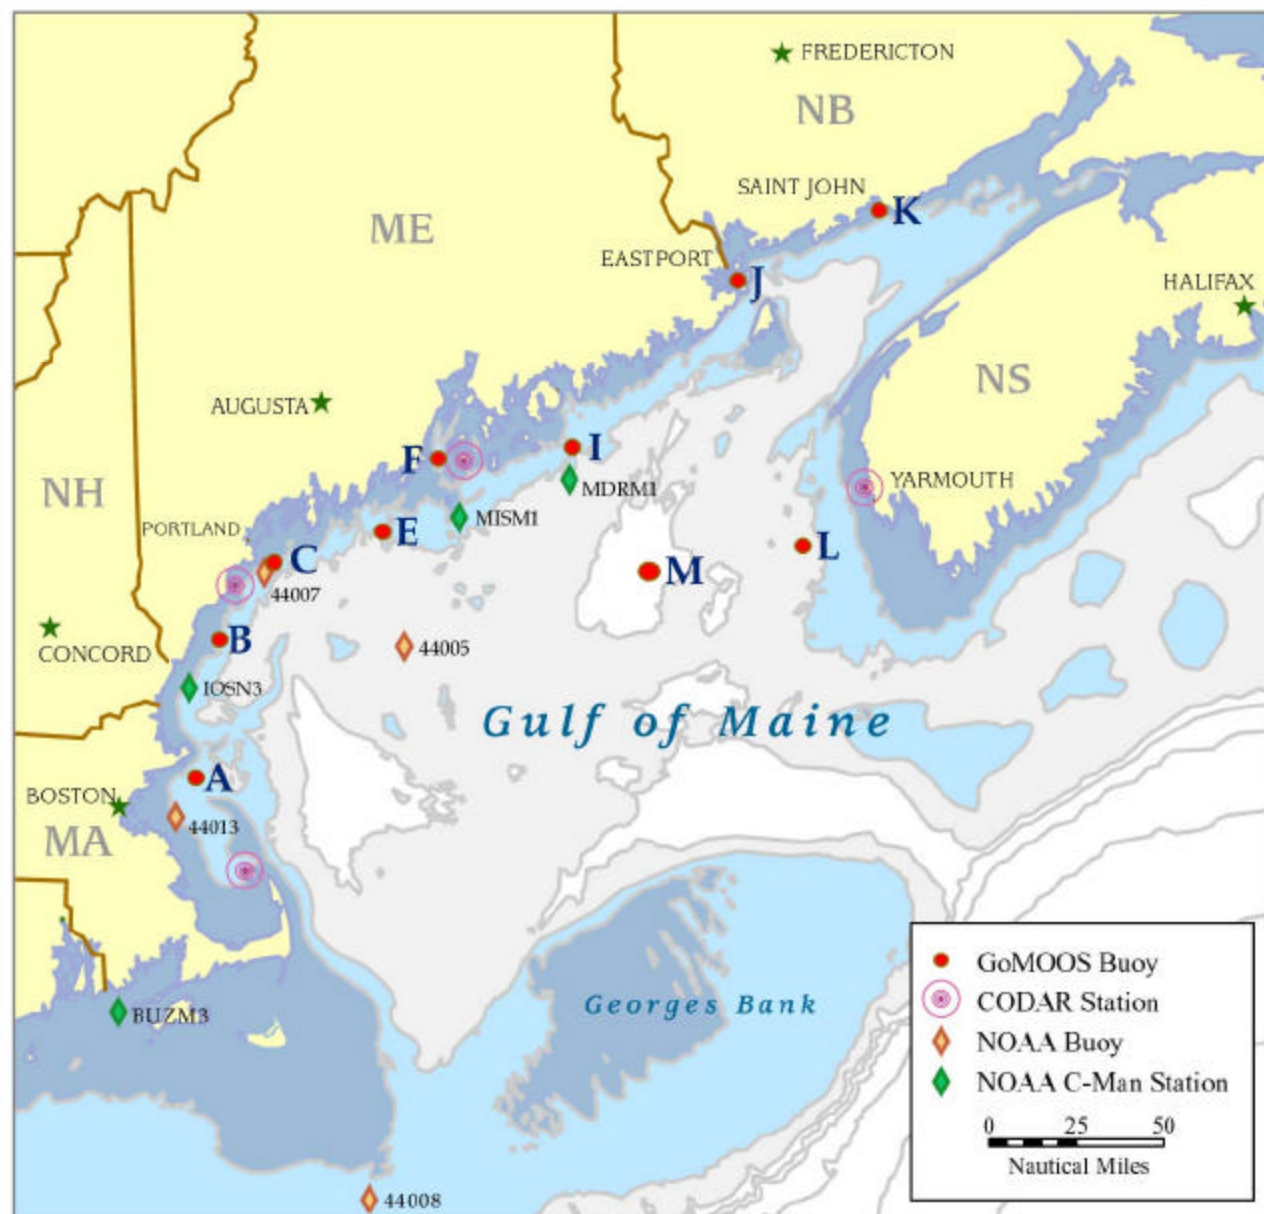

- **James Irish** – Wave measurements

## Bedford Institute of Oceanography

- **Peter Smith** – Wave modeling & prediction
- **William Perrie** – Wave modeling & prediction

# GoMOOS Buoy Program

# Mooring Team

“Have buoy, will travel”

**University of Maine**

**Dr. Neal Pettigrew**

**John Wallinga**

**Linda Magnum**

**Robert Stessel**

**Woods Hole Oceanographic Inst**

**Dr. James Irish**

**Bigelow Laboratory**

**Dr. Collin Roesler**

**Dr. Andrew Barnard**

  3. What makes you think it can happen?  
(Demos are here – EPA...?)
-

# Basic Science (old paradigm)

Exercise: Justify the infrastructure (\$) needed to enable testable hypotheses for all of:

- a) North Atlantic Oscillation
- b) Wind-Driven Circulation
- c) Bio-physical coupled models

*Correct answer must address two points:*

- *NSF can't afford it.*
- *Congress needs a cost/benefit analysis.*

# User-Driven Science (new paradigm)

a. North Atlantic Oscillation...

*Fisherman: “That NAO index looks like my revenues over the last 20 years.”*

b. Wind-Driven Circulation...

*Headline: “USCG improves search & rescue, saving \$30M in one year.”*

c. Bio-physical coupled models...

*Headline: “HAB warning saves lives!”*

*This System Must Operate 24/7!*

# Maritime Shipping Industry

3,500 transits/yr  
50 million tons

202,000 transit hrs  
\$43 million ops.

1% time savings  
= \$500,000/yr

# Commercial Fishing Industry

Time and safety

Average value per  
fishing day = \$4.1M

“...I check for the official gale warnings, then go to the [GoMOOS] web site to see if the wind is actually blowing now. I can get a day's work in...”  
--Scalloper from Stonington, Me.

# Connecting Fisheries to the Physical Environment

Climate change

Stock assessment

- chlorophyll/productivity
- circulation

Aquaculture siting

- dissolved oxygen
- salinity
- sea surface temp.
- currents

# Oil Spills: Contingency Planning, Prevention, and Recovery

Julie N –  
180,000-gal. spill,  
Portland Harbor  
September 1996

Real-time

- Wind
- Waves
- Currents
- Predictive models

# Search & Rescue

U. S. Coast Guard:

2<sup>nd</sup> largest user of  
GoMOOS web site

6000 missions/yr  
500 saved lives  
28 lives lost/yr

4% success after 2 hours,  
1% increase in effectiveness = 6 more lives saved per year

# 24/7 User Need For HF Radar:

Coast Guard Search & Rescue

# Wastewater Management

## New Boston Harbor Sewage Outfall

- Boundary conditions for nutrients & currents
- Dissolved oxygen

Helps meet costly monitoring requirements

# New Frontiers for Resource Management: Biological Observations

*Alexandrium  
tamarence:*

Agent of paralytic  
shellfish poisoning  
(red tide)

Experimental  
technologies

Future: Red Tide  
predictive index

# Cost-Effective System for Research and Operations

---

- The system must produce long-term research-quality data.
- The system must operate 24/7 to accommodate user needs.
- No individual user can afford to pay for the entire system.
- The U.S. national system will be a federation of linked regional systems.

# Estimated Annual Benefit Potential for 5 Sectors

---

1. Search and rescue (lives saved)
2. Oil spill mitigation
3. Efficiencies in commercial fisheries
4. Recreational fishing days
5. Maritime transportation – vessel operating costs

**\$33+ million per year**

Source: Kite-Powell and Colgan, 2001, for NOAA

# Estimated Annual Costs

## For a Regional Ocean Observing System

---

Capitalization (over 3 years):    +/- \$12M

- 10 – 13 buoy locations
- 4 CODAR units
- Data management system

Operation & Maintenance:    +/- \$4 M/yr

...Conservative cost-benefit ratio = 1:10.

# Lessons Learned So Far...

---

1. Useful information is Critical
  - Data ? Information. The path is **not** obvious.
  - Users must be engaged – we're market driven.
2. Operational needs (24/7) are strenuous!
  - Just ask the scientists involved in the system.
  - The model is new to researchers, and evolving.
3. Research & Operations must be linked!
  - System must be based on sound science.
  - Real-time QA/QC can't wait for peer review.

If GoMOOS were a car...?

...Honda Insight, Volvo, Chrysler

# Ocean Observing Systems

## -- The GoMOOS Prototype --

---

1. GoMOOS Overview
  2. User-Driven Nonprofit  
(Governance with Accountability)
  3. Economic Reality  
(Bridging the Valley of Death)
  4. National Scene & Ocean.US  
(Governance at the National Level)
-

# A Revolution Is Approaching In Coastal Ocean Science.

--

## Is GoMOOS a Regional Prototype?

- Congress is discussing legislation that will establish the agency framework for a national coastal ocean observing system.
- The U. S. Ocean Commission on Ocean Policy is making the recommendation.
- Ocean.US, under the auspices of NOPP and the NORLC, is preparing the plan.

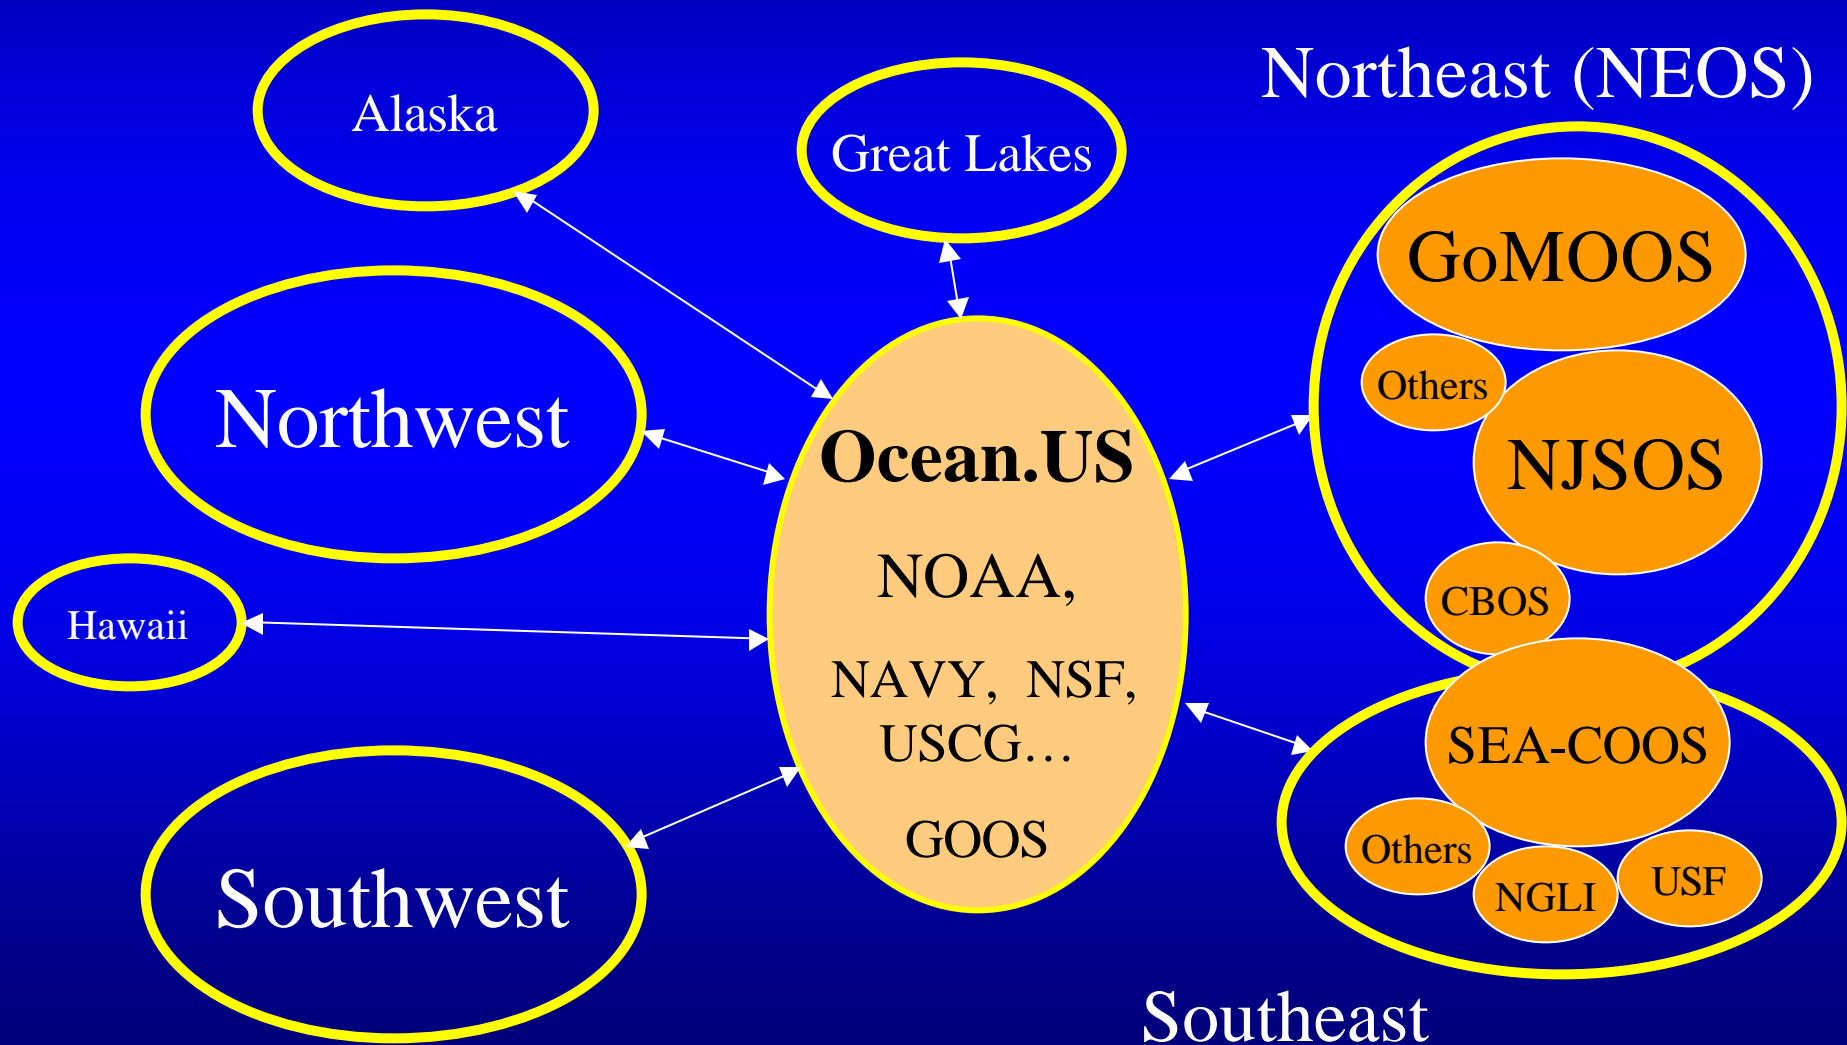

# Present Status of National OOS

sources
- Resolution,
- Variables

# Why GoMOOS, Inc?

---

GoMOOS provides a single voice to:

- **Link research & operations**
  - Leverage local infrastructure via partnerships
  - Work efficiently with operational agencies
- **Provide governance with accountability**
  - Respond to subregional user needs
  - Respond quickly & remain innovative
- **Justify long-term funding**
  - Engage local constituencies
  - Provide a multipurpose utility, based on sound science, to support research and the public good

CODAR Sea Surface Currents

Gulf of Maine

Project Overview

Photo: Karl Schlenker

CODAR transmitting antenna located on the coast of Maine.

CODAR or Coastal Ocean Dynamics Application Radar

- Is a land-based high-frequency radar system
- Makes long-range measurements of sea surface currents
- Measures sea surface currents independent of fog or cloud cover
- Can measure currents for areas where two or more stations overlap

[View map of Gulf of Maine CODAR stations](#)

Uses of CODAR sea surface current measurements

- Provides real-time information to assist with search and rescue operations
- Predicting oil and hazardous material spill movement
- Safe and efficient navigation and marine operations
- Monitoring large ocean currents that transport lobster and other larvae around the Gulf
- Education
