NCA Northeast Year 2004 Sediment Total Organic Carbon Data

***These data have not passed final QA and should be considered provisional.***

To download Ascii Text data files, select state, view data, then use your browser's "File" "Save As..." option. All data files are comma delineated CSV files.

To download SAS Export files in Zipped SAS Export Format, select from list then "Save it to disk". Several software packages are available to unzip files. The SAS software system is needed to process unzipped SAS XPORT files.

The individual state datasets contain the results of Sediment Grain Size analyses. These data files contain the following:

STATION	Station Identifier
STAT_ALT	Alternate Site Sampled (A, B, or C)
EVNTDATE	Date of Sampling Event
TOC	Total Organic Carbon (%)

STATION and STAT\_ALT should be used to link test results with Station locations recorded in the STATIONS dataset. EVNTDATE is the date the samples were collected. TOC is the Total Organic Carbon, given as (%).
