

U.S. Environmental Protection Agency
 Final Plan for Periodic Retrospective Reviews of Existing Regulations
EO 13563 Progress Report, February 2015

Agency	Title of Initiative / Rule / ICR	RIN	Summary of Initiative	Status of Initiative	Target Completion Date	Does the Initiative include regulatory flexibilities?	What methods will you engage in to Identify Improvements?	If available, anticipated or realized savings in costs and/or burdens
EPA/OAR	Equipment and leak detection and repair: reducing burden	RIN 2060-AP66	This rule would apply to equipment such as pipes, valves, and flanges used to convey fluids at a variety of stationary sources, including petroleum refineries and chemical manufacturing plants. EPA intends to reduce burden on industry and streamline leak detection and repair (LDAR) by using an optical gas imaging instrument to find leaks.	Ongoing.	EPA is developing a protocol for using the optical gas imaging (OGI) instrument for the Alternative Work Practices for Leak Detection and Repair, but EPA expects that the revisions to the AWP will not occur until after the OGI protocol is finalized. See progress update for 2.1.2(b). A draft AWP is not expected until at least late 2017.	This project will streamline requirements by allowing the use of advanced imaging technology to identify leaks.	The proposed rule will be published and open for public comment.	Using the OGI instrument where permissible, may reduce monitoring time since the instrument can image multiple pieces of equipment simultaneously from a distance, which also removes the need to designate equipment as unsafe-to-monitor or difficult-to-monitor.
EPA/OAR	Equipment and leak detection and repair: reducing burden	RIN 2060-AR00	This rule would apply to equipment such as pipes, valves, and flanges used to convey fluids at a variety of stationary sources, including petroleum refineries and chemical manufacturing plants. EPA intends to reduce burden by developing and consolidating state-of-the-art uniform standards for controlling equipment leaks that will then become applicable when they are referenced in other regulatory actions.	Ongoing.	EPA proposed the Uniform Standards for Equipment Leaks and Ancillary Systems on March 26, 2012. The Uniform Standards proposal included the option to use OGI in lieu of the more traditional Method 21 for detecting equipment leaks. Due to resource constraints, the EPA does not have a timeline to finalize these Uniform Standards. However, EPA is moving forward with research and pilot studies using OGI under varying conditions. This information will then be used to develop the OGI protocol, tentatively targeted for proposal in early 2016. Where the EPA has an active rulemaking underway for a specific source category, if the EPA believes that the use of OGI as an alternative to Method 21 is appropriate for that source category, the EPA may propose the option to use OGI once the protocol is final. For example, EPA proposed to allow OGI (once the protocol is finalized) in the Refinery MACT amendments (79 FR 36879, June 30, 2014), to be finalized in June, 2015.	This project will streamline requirements by allowing the use of advanced imaging technology to identify leaks.	The proposed rule was open for public comment for over 90 days.	Burden reduction associated with the OGI will be dependent upon the requirements for using OGI that will be housed within the protocol under development. Once the protocol is final, the EPA will be able to estimate burden reductions for source categories where EPA plans to allow the OGI method in lieu of Method 21.
EPA/OCSPP	Modernizing science and technology methods in the chemical regulation arena: reducing whole animal testing, reducing costs and burdens and improving efficiencies	N/A	EPA seeks ways to more efficiently assess the health and environmental hazards, as well as the exposure potential, of chemicals while reducing costs and burdens. A new work plan would develop new science-based approaches like computational toxicology tools (e.g., in vitro and in silicomethods) to prioritize chemicals and focus on effects of concern for risk assessment/management purposes and to develop tools that allow the agency to base these risk management decisions on sufficient, credible data.	Ongoing.	EPA plans to finalize each analysis and apply these methods to prioritize the EDSP universe of chemicals. The Agency has presented new computational toxicological methods to prioritize the EDSP chemicals at multiple FIFRA Science Advisory Panel (SAP) meetings (Jan 2013, May 2013, June 2013, July 2013, July 2014 & Dec 2014). The FIFRA SAP is a Federal Advisory Committee (FACA) and provides scientific peer review to the EDSP. To that end, EPA anticipates additional external peer reviews (FIFRA SAP meetings) in 2015 and 2016 to demonstrate the use of advanced computational methods for chemical screening and to improve the science supporting the EDSP. For EDSP: http://www.epa.gov/endo For FIFRA SAP materials: http://www.epa.gov/scipoly/sap/index.htm For PPDC: http://www.epa.gov/pesticides/ppdc/testing/index.html EPA's policies that will reduce animal testing are available at http://www.epa.gov/oppfead1/cb/csb_page/updates/2013/new-testing-approach.html	Although this effort does not involve regulations per se, it will enhance the availability of additional regulatory and non-regulatory flexibilities that may be considered in implementing our chemical regulatory programs.	In November 2012, EPA released a white paper entitled, "The EDSP Universe of Chemicals and General Validation Principles" that describes some general validation concepts to analyze computational toxicology tools for regulatory decision making. The cross-agency EDSP21 work group performed several critical analyses to present a proof of concept for the use of quantitative structure activity relationship, physicochemical properties, exposure information and Tox21 high throughput assays in a comprehensive prioritization methodology. EPA released a white paper in July 2014 entitled "New High-throughput Methods to Estimate Chemical Exposure" (available at: http://www.regulations.gov/#documentDetail;D=EPA-HQ-OPP-2014-0331-0005). In support of the December 2014 FIFRA SAP, EPA published a white paper entitled "Integrated Bioactivity and Exposure Ranking: A Computational Approach for the Prioritization and Screening of Chemicals in the Endocrine Disruptor Screening Program (available at: http://www.regulations.gov/#documentDetail;D=EPA-HQ-OPP-2014-0614-0003). In 2012, EPA also established a stakeholder workgroup under the Pesticide Program Dialogue Committee (PPDC) that is addressing communication and transition issues as EPA phases these new test methods into its pesticide registration and review programs. This workgroup met seven times in 2013. On January 29, 2013 the multi parameter prioritization scheme was presented to the FIFRA Scientific Advisory Panel external peer review. On July 9, 2013 EPA held a workshop entitled "Where Vision Meets Action: Practical Application of 21st Century Methods" intended to	The initial benefits will be to decrease the time it takes to collect the necessary information to make decisions from years to months. The cost savings will come from reduced data generation and review times.
EPA/OW	National Pollutant Discharge Elimination System (NPDES): coordinating permit requirements and removing outdated requirements	RIN 2040-AF25	EPA intends to review the regulations that apply to the issuance of NPDES permits, which are the wastewater permits that facility operators must obtain before they discharge pollutants to any water of the United States. EPA intends to revise or repeal outdated or ineffective regulatory requirements for wastewater facilities.	Ongoing.	EPA expects to propose modifications to NPDES permit regulations in November 2015 and a final rule is expected in November 2016.	The rule would remove outdated provisions that may be confusing for stakeholders. The rule would streamline application requirements by conforming them to current agency data standards.	EPA expects to conduct additional outreach with stakeholder groups, including state permitting authorities, environmental groups, and regulated entities. EPA will solicit public comments on the proposed rule.	EPA estimates that public notice of draft permits in newspapers for NPDES major facilities, sewage sludge facilities and general permits currently costs approximately \$1.6 million per year (this excludes the costs of preparing the content of the NPDES public notice, and the costs of the other methods to provide notice besides newspaper publication, such as direct mailing). Any savings from EPA's planned rule, however, are likely to be less than this amount. The new rule would allow, but not require states and the Federal Government to use electronic public notice instead of newspaper publication. Some states would continue to publish at least some notifications in newspapers. In addition, there would be offsetting costs to provide electronic notice, and EPA does not currently have estimates of those costs.

Agency	Title of Initiative / Rule / ICR	RIN	Summary of Initiative	Status of Initiative	Target Completion Date	Does the Initiative include regulatory flexibilities?	What methods will you engage in to Identify Improvements?	If available, anticipated or realized savings in costs and/or burdens
EPA/OW	National primary drinking water regulations - Long Term 2 Enhanced Surface Water Treatment: evaluating approaches that may maintain, or provide greater, public health protection	N/A	EPA intends to evaluate effective and practical approaches that may maintain or provide greater protection from Cryptosporidium and other pathogens in the water treated by public water systems for protection and stored prior to distribution to consumers. EPA plans to conduct this review expeditiously to protect public health while considering innovations and flexibility.	Ongoing.	The review process for LT2 will be completed in conjunction with the 6-year review process, no later than March 2016. The National Primary Drinking Water Regulations: Long Term 2 Enhanced Surface Water Treatment Rule RIN 2040-AD37 was promulgated, January 5, 2006.	The review process for LT2 will be completed in conjunction with the 6-year review process, no later than March 2016. If regulatory revisions are determined appropriate, a formal rulemaking will be initiated and options will be evaluated. If a formal rulemaking is initiated, regulatory flexibilities will be considered once options have been agency approved.	EPA held a stakeholder meeting on LT2 on December 7, 2011, which focused on analytical methods. The agency held a second stakeholder meeting on April 24, 2012, which focused on uncovered finished water reservoirs. EPA held a third stakeholder meeting on November 15, 2012, which focused on source water monitoring data and current LT2 treatment technique requirements (e.g., binning, microbial tool box options). EPA continues to collect and evaluate information/data pertinent to the review. EPA will consider input provided by stakeholders and any additional information/data collected by EPA as the agency determines options to enhance protection from pathogens in drinking water.	
EPA/OAR	New Source Performance Standards (NSPS) reviews and revisions under the CAA.	RIN 2060-AP06	In this action, EPA is prioritizing reviews of existing NSPS to focus on those that, in keeping with EO 13563, promote innovative technologies while upholding EPA's mission to protect human health and the environment.	Ongoing.	EPA issued an advanced notice of proposed rulemaking in October 2011 (76 FR 65653) asking for public comment on prioritizing 14 potential NSPS reviews. Subsequently, EPA conducted reviews of 5 of those NSPS, and proposed amendments on November 7, 2014 (79 FR 66511). A final rule is expected in July of 2015. The remaining 9 potential reviews will be addressed at a later date.	This project will streamline requirements and reduce burden by avoiding amendments that would have no environmental benefit.	The project was initiated with a broad invitation to the public (in the form of an ANPRM) to comment on our NSPS regulations. The public's response to this solicitation provided information that helped us prioritize our work.	This strategy will reduce the resource burden to the government and stakeholders by eliminating the need for costly and time consuming reviews of certain standards, which are not expected to result in any environmental benefits. This burden reduction will allow the government and stakeholders to focus on those NSPS with greater opportunities for meaningful improvements in air quality and public health.
EPA/OAR	CAA Title V Permit programs: simplifying and clarifying requirements	N/A	EPA is reviewing the Title V implementation process to determine whether changes can be made to simplify and clarify the process for industry, the public, and government resources. The changes will include a rulemaking to revise the Title V petition process and enable the public-review process to proceed electronically rather than via the print medium.	Ongoing.	EPA will propose rules revising the petition and public-review processes in 2016.	The project will significantly reduce permitting burden by moving the public-review process from paper to electronic media.	We are consulting stakeholders as we design the rule to effect this change, and the public will be able to comment on the draft rule once it has been proposed.	The petitions rulemaking will revise part 70 to streamline the process by which EPA receives and reviews title V petitions, thereby reducing burden on petitioners, sources, and state permitting authorities. The e-Public Notice rule will enable state/local permitting authorities to post public notice permit actions electronically and will be significantly more cost effective than use of newspapers.
EPA/OAR	New Source Performance Standards (NSPS) under the CAA for grain elevators: updating outmoded requirements and relieving burden	RIN 2060-AP06	The NSPS for Grain Elevators was promulgated in 1978 with the latest amendments made in 1984. Since that time there have been a number of changes in the technology used for storing and loading/unloading grain at elevators. The rule has seen increased activity of late, due to the increase in ethanol production that has led to bumper crops of corn being grown, which, in turn, has led to a need for increased grain storage. For these reasons a review and potential change in certain definitions is necessary to ensure the appropriate standards are being applied consistently throughout the industry.	Ongoing.	The proposed amendments were published on 7/9/2014 - 79 FR 39241. The comment period initially closed on October 7, 2014 but was extended to Dec. 22, 2014. The final rule is expected in August 2015.	The project will reduce burden by bringing outdated existing regulations into line with modern technology.	The grain elevator trade coalition petitioned EPA in early February 2012 to review and repeal the NSPS. The Agency is evaluating the petition in conjunction with this lookback exercise. Numerous meetings with the industry trade coalition were held throughout 2012 and 2013 to update them on the progress of the rulemaking and hear their concerns as we proceed.	The industry will realize some benefits in regulatory certainty moving forward as the current regulation is being interpreted differently across the country. EPA is proposing revisions to the standards that will clarify issues related to temporary grain storage.
EPA/OW	Water quality standard regulations: simplifying and clarifying requirements	RIN 2040-AF16	EPA has reviewed the water quality standard (WQS) regulations to identify ways to improve the Agency's effectiveness in helping restore and maintain the Nation's waters and to simplify standards. EPA intends for the revision to provide a better-defined pathway for states and authorized tribes to develop and implement WQS and to protect water quality.	Ongoing.	EPA proposed a targeted set of revisions to the WQS regulation 9/4/2013 (78 FR 54517). The comment period for the proposed rule closed 1/2/2014. EPA expects to issue a final rule in June 2015.	The revisions will enable states and authorized tribes to address complex water quality challenges to protect existing water quality and facilitate environmental improvements. In addition, the revisions will lead to better understanding and proper use of available CWA tools by promoting transparent and engaged public participation. The rule uses state flexibilities related to the clarification for antidegradation, designated uses, WQS variances, and compliance schedule authorizing provisions. For example, WQS variances and compliance schedule authorizing provisions are discretionary portions of the regulation, and the rule provides a clear pathway to retain the use of these tools. With regard to the antidegradation clarifications, the rule retains state flexibility to choose an approach to identify their high quality waters, and allows selection of any alternative from a range. Similarly, the rule retains flexibility for states on how to articulate a highest attainable use and provides several examples.	More information on this action, including the public listening sessions, public webinars, and public meeting held throughout the rulemaking can be found at http://water.epa.gov/lawsregs/lawsguidance/wqs_index.cfm .	States, tribes, stakeholders, and the public will benefit from the clarifications of the WQS regulations by ensuring better utilization of available WQS tools (variances & designated use change) that allow states and tribes the flexibility to implement their WQS in an efficient manner while providing transparency and open public participation. Although associated with potential administrative burden and costs in some areas, the proposal has the potential to partially offset these costs by reducing regulatory uncertainty and consequently increasing overall program efficiency. Furthermore, more efficient and effective implementation of state and tribal WQS has the potential to provide a variety of economic benefits associated with cleaner water including the availability of clean, safe, and affordable drinking water, water of adequate quality for agricultural and industrial use, and water quality that supports the commercial fishing industry and higher property values. Nonmarket benefits of the proposal include the protection and improvement of public health and greater recreational opportunities.

Agency	Title of Initiative / Rule / ICR	RIN	Summary of Initiative	Status of Initiative	Target Completion Date	Does the Initiative include regulatory flexibilities?	What methods will you engage in to Identify Improvements?	If available, anticipated or realized savings in costs and/or burdens
EPA/OAR	State Implementation Plan (SIP) process: reducing burden	N/A	EPA intends to take a number of actions to reduce SIP backlog and ensure that future SIPs are processed in a timely manner. All 10 regions have completed 4-year plans for reducing SIP backlog. Among the measures to be explored are reducing use of paper copies, assuring that hearings are held only when needed, minimizing expensive newspaper advertisements providing public notice, and exploring the potential for certain regulatory changes to be made with less process.	Ongoing.	The nature of the project is one of steady progress, and does not generally proceed via milestones with projected dates. Significant progress in reducing SIP backlog and in the areas mentioned is expected in 2015.	The project will afford significant state flexibilities and streamlined requirements, as outlined in the summary column of this report.	EPA is working with ECOS/NACAA SIP Reform Work Group to clear the SIP backlog and to improve SIP processing. All 10 EPA Regions are involved.	The benefits of this project include reducing SIP backlog, making it easier and less time-consuming to process SIPs, and moving the SIP system toward electronic processing. The improvements to the SIP development process will result in a noticeable cost and burden reduction for states. EPA Regions 3 and 5 estimate that such changes will result in approximately \$165,000 to \$180,000 per year in cost savings to their states.
EPA/OW	National primary drinking water regulations for lead and copper: simplifying and clarifying assumptions	RIN 2040-AF15	Efforts to revise the Lead and Copper Rule (LCR) have been ongoing. This review is part of the Retrospective Review Plan because, in addition to improving public health protection, EPA is seeking ways to simplify and clarify requirements imposed on drinking water systems to maintain safe levels of lead and copper in drinking water. EPA is also planning to address the revised definition of lead free plumbing materials from the 2011 Drinking Water Lead Reduction Act that becomes effective January 4, 2014. Industry and other stakeholders have been asking for clarification on new EPA plans to implement this statute.	Ongoing.	EPA currently expects to issue a proposed rulemaking in 2016. The 1991 National Primary Drinking Water Regulations for Lead and Copper RIN 2010-AB51, has been previously reviewed and revised in 2000 RIN 2140-AC27, and 2007 RIN 2040-AE83.	The agency is currently awaiting input on potential revisions to the LCR from the NDWAC working group and recommendations from the full NDWAC, which are anticipated in 2015. Regulatory flexibilities will be considered once options are agency approved.	A Small Business Advocacy Review Panel to obtain advice and recommendations of representatives of the small entities potentially subject to the rule's requirements was completed on April 16, 2013. EPA will conduct stakeholder engagement through a NDWAC working group. The NDWAC working group will provide input to the full NDWAC on 5 key issues of the LCR revisions. EPA expects to receive recommendations from the NDCWA in 2015.	
EPA/OCSP	Certification of pesticide applicators: eliminating uncertainties and improving efficiencies	RIN 2070-AJ20	A review of EPA's regulations on certification and training of pesticide applicators will help clarify requirements and modify potentially redundant or restrictive requirements.	Ongoing.	EPA intends to propose improvements to these regulations in 2015.	Yes. NPRM is pending, so details will be added once that is issued.	Improvements are based on extensive stakeholder engagement over several years. In addition, we will engage stakeholders during the public comment period, consult our FACAs; etc.	Savings may result from streamlining activities which could reduce the burden on the regulated community by promoting better coordination among the state, federal, and tribal partnerships; clarifying requirements; and modifying the regulation.
EPA/OSWER	Management Standards for Hazardous Waste Pharmaceuticals	RIN 2050-AG39	EPA intends to review the data and information in our possession about pharmaceutical products that may become wastes to address these issues as part of a rulemaking on pharmaceutical waste management.	Ongoing.	EPA expects to publish a proposed rulemaking in summer 2015.	This rule is expected to propose two conditional exemptions that provide regulatory relief: (1) for the hazardous wastes that are also DEA controlled substances, and (2) for certain types of containers that once held pharmaceuticals.	EPA has been and plans to continue conducting outreach on the pharmaceuticals proposed rule. This outreach includes site visits, participation in conferences, and engaging stakeholders, including states and industry. EPA will also analyze public comments on the proposed rule.	There will be cost savings in certain areas, including cost savings associated with longer accumulations times and the potential for burden reduction associated with changing how generator categories are defined. A benefit of the rule will be to ensure these pharmaceutical hazardous wastes are managed and disposed of safely. Another benefit will be to eliminate overlap in EPA and DEA regulations.
EPA/OW	National Primary Drinking Water Regulations: Group Regulation of Carcinogenic Volatile Organic Compounds (VOCs)	RIN 2040-AF29	EPA intends to coordinate drinking water regulatory requirements and regulate more cost-effectively by addressing contaminants as groups. The plan is to group contaminants into one regulation, which will utilize the same analytical methods for measurement and/or can be removed by the same treatments or control processes.	Ongoing.	EPA expects to issue a proposed rulemaking in 2018. This action may revise drinking water standards for up to 8 VOCs. The standards for the 8 regulated VOCs were promulgated in phases. Phase I: July 8, 1987 (Vol 52, No. 130) includes: TCE, 1,2-dichloroethane, vinyl chloride, benzene, carbon tetrachloride. Phase II&III: January 20, 1991 (Vol 56, No 20) & July 1, 1991 (Vol 52, No 126) includes: PCE and 1,2-dichloropropane. Phase V: July 17, 1992 (Vol 57, No 138) includes: dichloromethane.	Regulatory flexibilities will be considered once options are established (during 2016-17) and are agency approved.	EPA decided to wait for UCMR3 monitoring data on three cVOCs that are being considered for the group, before continuing regulatory development of the group. UCMR3 monitoring will be completed December 2015. EPA presented potential group MCL approaches to the NDWAC for consideration at its November 2014 meeting.	
EPA/OSWER	Hazardous waste export-import revisions	2050-AG77	To help meet the objectives of EO 13659 "Streamlining Export/Import Process for America's Businesses", this action would propose revisions to the hazardous waste export-import requirements under RCRA to improve consistency with those for the Organization for Economic Cooperation and Development (OECD) members; enable electronic submittal of all export and import-related documents; and enable electronic validation of export shipment data prior to export.	Ongoing.	EPA expects to issue a proposed rulemaking by June 2015.	This information will be available upon publication of the proposed rule.	EPA will conduct target outreach to those businesses involved in or associated with import/exports of hazardous wastes. We will also notify foreign governments of the proposed changes through our regular communications channels.	TBD as ICR for the proposal is under development.

Agency	Title of Initiative / Rule / ICR	RIN	Summary of Initiative	Status of Initiative	Target Completion Date	Does the Initiative include regulatory flexibilities?	What methods will you engage in to Identify Improvements?	If available, anticipated or realized savings in costs and/or burdens
EPA/OCSPP	Confidential Statement of Product Specification for Pesticides	N/A	Under the aegis of the US-Canada Regulatory Cooperation Council, EPA and Canada's Pest Management Regulatory Agency (PMRA) have developed an action plan to, among other things, address obstacles to joint pesticide registrations. As part of that plan, EPA and PMRA launched an effort to harmonize the product specification forms and facilitate joint submissions of the harmonized form. The harmonized EPA-PMRA Confidential Statement of Product Specifications (CSPS) will reflect the current level of information already submitted to either agency and allow applicants to submit the same form to both Agencies with potentially much of the same information and reduce the number of errors received. EPA will also investigate whether and how product specification forms could be submitted electronically.	Ongoing.	To be determined, subject to completion of discussions with PMRA and approval of an information collection request by OMB under the Paperwork Reduction Act.	OPP will work with PMRA to develop a pilot project after initial testing and validation/proof of concept has been completed. Based on the results of this initial pilot, OPP will work with stakeholders to develop an implementation/release strategy based on comments and test results. Once the ICR is approved by OMB, the new electronic form will be launched as an additional pilot program. The current paper form will remain available for registrants to complete while the new electronic form will be made available as a pilot project.	OPP plans on soliciting comments from 9 registrants on the electronic form. This will inform our finalization of the electronic form. In addition, OPP intends to work with registrants on a pilot project after the initial testing of the software has been completed.	TBD as ICR and paperwork analysis is currently being developed. EPA and PMRA receive many of the same errors on numerous product chemistry form (Confidential Statement of Formula). These errors result in the form being sent back to the registrants for revisions. The availability of a joint electronic CSPS is expected to sharply curtail or eliminate the need for registrants to engage in extensive and time-consuming revisions to the specification forms submitted in both countries.
EPA/OCSPP	FIFRA Pesticide Import Revisions Rule, preproposal stage	N/A	Section 17(c) of the Federal Insecticide, Fungicide, and Rodenticide Act (7 U.S.C 136e(c)) governs the importation of pesticides and devices. Under the current Customs and Border Protection regulations in 19 CFR part 12 that implement FIFRA section 17(c)(1), prior to a pesticide or device being imported into the U.S., importers or their broker submit to EPA a paper Notice of Arrival (NOA) form. EPA reviews and evaluates the information on the NOA and determines the disposition of the shipment upon its arrival in the U.S. The determination is indicated on the NOA form, which is signed and returned to the importer. Upon arrival of the shipment, the importer must present the signed NOA form to CBP. CBP will, in consultation with EPA, propose revisions to the current regulations that would modernize the existing pre-arrival notice import procedures for pesticides and devices. Such revisions are necessary to fully implement International Trade Data System and leverage the Automated Commercial Environment.	Ongoing.	Publication of CBP's proposed rule is anticipated by December 2015. Promulgation of CBP's final rule is anticipated by December 2016, consistent with EO 13659, entitled <i>Streamlining the Export/Import Process for America's Businesses</i> , which requires the Federal government to create, make available, and utilize a single system for the sharing of export and import data from industry and Federal agencies.	The EPA referral is pending, so details will be added once CBP determines what it will propose.	Consulted stakeholders and may conduct further consultations during the public comment period once CBP issues their NPRM.	TBD as ICR is currently being revised. Expected Benefits of this rule are the following: will make the import requirements more consistent and efficient, facilitate submittal of the Notice of Arrival (NOA) electronically through ACE, and improve ability to monitor shipments for FIFRA compliance.
EPA/OCSPP	TSCA Chemical Import Revisions Rule, preproposal stage	N/A	Section 13 of the Toxic Substances Control Act (15 U.S.C. 2612) governs the importation of chemicals, mixtures, and articles containing a chemical substance or mixture. Under the current CBP regulations in 19 CFR part 12 that implement TSCA section 13, an importer of a chemical substance imported in bulk or as part of a mixture, or as part of an article where specified by an appropriate TSCA rule promulgated by EPA, or the authorized agent of such an importer, must certify either that the chemical shipment is subject to TSCA and complies with all applicable rules and orders thereunder, or that the chemical shipment is not subject to TSCA. CBP will, in consultation with EPA, propose revisions to the current regulations that would modernize the existing chemical import procedures. Such revisions are necessary to fully implement International Trade Data System and leverage the Automated Commercial Environment.	Ongoing.	Publication of CBP's proposed rule is anticipated by September 2015. Promulgation of CBP's final rule is anticipated by November 2016, consistent with EO 13659, entitled <i>Streamlining the Export/Import Process for America's Businesses</i> , which requires the Federal government to create, make available, and utilize a single system for the sharing of export and import data from industry and Federal agencies by December 2016.	The EPA referral is pending, so details will be added once CBP determines what it will propose.	Consulted stakeholders and may conduct further consultations during the public comment period once CBP issues their NPRM.	TBD as ICR is currently being developed (the original regulations had an ICR waiver). Expected Benefits of this rule are the following: will make the import requirements more consistent and efficient, facilitate submittal of the TSCA certifications electronically through ACE, and improve ability to monitor shipments for TSCA compliance.
EPA/OCSPP	Lead-based Paint Program, Amendment to Jurisdictions and Renovator Refresher Training Requirements	2070-AK02	EPA proposed several minor amendments to the EPA lead-based paint program that would improve efficiencies and save resources for those involved. These revisions are based on our implementation experiences. Under the EPA renovation, repair and painting rule, renovators must take a certification training course every 5 years. The renovator refresher training requires an hour of hands-on learning and therefore cannot be completed online. Currently, with the initial online course, students take the classroom portion online and then travel to a training facility to complete the hands-on skill portion of the training. EPA anticipates removing the "hands-on" component from the refresher training requirements. In addition, under the lead-based paint abatement program, firms, training providers and individuals must apply for and be certified or accredited in each jurisdiction where they work (i.e., state, tribe or territory where EPA runs the abatement program). Each individual certification or accreditation must be approved by the regional office that oversees that jurisdiction. EPA anticipates the elimination of jurisdictions, and instead allowing these entities to operate under a single EPA-approved certification or accreditation wherever EPA administers the program.	Ongoing.	The proposed rule was published on January 14, 2015. Promulgation of the final rule is anticipated by November 2015.	Yes. NPRM reflects streamlined requirements, added state flexibilities and use of similar strategies to reduce burden while maintaining protections.	Stakeholder consultations led to NPRM. Public comment period closed on February 13, 2015.	Removing the hands-on training requirement is estimated to reduce the tuition for renovator refresher training courses by an average of \$37. Removing the hands-on requirement is also expected to make online renovator refresher training more attractive to training providers and renovators. If renovators become recertified solely by taking an e-learning course (i.e., without an in-person component) they are estimated to save an additional \$165 by avoiding the time and associated expenses needed to travel to a training site. EPA estimates more than \$9 million per year in savings. In addition, EPA estimates that removing the \$35 jurisdiction fee will result in total estimated cost savings of approximately \$15,000 per year to entities that apply for additional jurisdictions.

Agency	Title of Initiative / Rule / ICR	RIN	Summary of Initiative	Status of Initiative	Target Completion Date	Does the Initiative include regulatory flexibilities?	What methods will you engage in to Identify Improvements?	If available, anticipated or realized savings in costs and/or burdens
EPA/OAR	SNAP Submittal Review Process Improvements	N/A	Through it's Significant New Alternatives Program (SNAP), EPA reviews potential alternatives to ozone-depleting chemicals that manufacturers could use in consumer products such as aerosol cans, adhesives, cleaning solvents, refrigeration and air conditioning systems. The potential chemical alternatives are submitted by the producing manufacturers, and EPA reviews and approves those that have lower detrimental impacts on the ozone while reducing the overall risk to human health and the environment. It is in the interest of both the environment and the industries that this review and approval process proceed expeditiously. In this project, EPA will undertake a number of process improvements to reduce the time it takes to get potential chemical alternatives approved. Examples include use of case managers responsible for specific submissions, training for staff on relevant technical topics, improving effectiveness of meetings with submitters, clarifying steps for reviews, creating and using templates for correspondence and listing decisions, updating submission forms and instructions to reduce requests for further information and clarification, improving tracking of submittals received to ensure prompt processing and communication with submitters, and working together more closely and more systematically with EPA's Office of Chemical Safety and Pollution Prevention (OCSPP) on SNAP submittals that are also submitted to OCSPP through pre-manufacture notices for new chemicals.	New/Ongoing.	December 2015.	The project streamlines and clarifies the SNAP process in a number of ways, as discussed in the summary column of this report.	EPA will reach out to submitters and potential submitters to solicit proposed alternatives.	We are confident the improvements will reduce EPA's review time for SNAP submittals from an average of 65 weeks to an average of 19-24 weeks (60-70% improvement), even greater reductions are likely as the process improvements are fully implemented.
EPA/OSWER	Improvements to the Hazardous Waste Generator Regulatory Program (Parts 261-265)	2050-AG70	The Hazardous Waste Generator Improvements Proposed Rule will provide a much needed face lift to the regulations in order to keep pace with the needs of today's regulated community. For example EPA expects to update the RCRA emergency preparedness and response regulations to fit in with current emergency response infrastructure and to request comment on how next generation compliance can be used to assist with compliance. Through the rule, we seek to improve understanding of the regulations, for example, by updating the biennial reporting and hazardous waste determination provisions to reflect current EPA guidance and instructions. Additionally, we expect to reorganize the regulations to make it easier for the regulated community to find applicable regulations and to reduce onerous cross-referencing.	New/Ongoing.	EPA expects to publish a proposed rulemaking in summer 2015.	The Hazardous Waste Generator Improvements Proposed Rule will propose a number of regulatory changes and improvements to the generator program, including regulatory relief and burden reduction associated with changing how generator categories are defined.	EPA published an ANPRM (69 FR 21800, April 22, 2004) that solicited public comment on the effectiveness of the generator program. EPA also held four public meetings during this time. Over the last decade, EPA has issued several guidance documents and website updates to address public comments received on the ANPRM. However, some comments received on the NODA can only be resolved through rulemaking. The Hazardous Waste Generator Improvements Proposed Rule will request public comment on a number of regulatory changes and improvements to the generator program. EPA plans to conduct outreach on the proposed rule, which includes meetings, participation in conferences and targeted outreach. EPA will also analyze public comments on the proposed rule.	There will be cost savings associated with certain provisions of the Hazardous Waste Generator Improvements rule that provide additional flexibilities for generators managing hazardous waste.
EPA/OW	Reinterpreting Treatment in a Manner Similar to a State For Clean Water Act Regulatory Programs	N/A	The purpose of this action is to request comments on a proposed reinterpretation of one element of the regulations issued in 1991 implementing section 518(e) of the Clean Water Act. This section authorizes EPA to treat eligible tribes in the same manner as a state for administering specified Clean Water Act programs. The purpose of the reinterpretation is to reflect changes since 1991 in case law and EPA's experience. The reinterpretation would remove the current requirement for applicant tribes to show inherent regulatory authority, however, it would retain the requirement for tribes to identify water bodies for which jurisdiction is being asserted.	New/Ongoing.	Proposal March 2015.	EPA proposes to streamline how tribes apply for TAS for the water quality standards program and other Clean Water Act regulatory programs.	EPA conducted consultation and coordination with federally recognized tribes and with states (including intergovernmental associations) during April-September 2014. The input received helped EPA shape the proposal to answer common questions and concerns. EPA will accept comments on the proposal for 60 days following publication in the Federal Register and will offer an informational webinar within the first month to assist the comment process. At the same time, EPA will offer further consultation and coordination opportunities to tribes and states.	The proposal would reduce the administrative costs for an applicant tribe by an estimated 39% and advance cooperative federalism by facilitating tribal involvement in the protection of reservation water quality as intended by Congress.
EPA/OAR	Gasoline and diesel regulations: reducing reporting and recordkeeping. Vehicle regulations: harmonizing criteria air pollutant requirements with CARB	RIN 2060-AQ86	As part of the Tier 3 vehicle and fuel standards rule, EPA is reviewing existing gasoline and diesel regulations that apply to fuel producers, ethanol blenders, fuel distributors, and others for areas where recordkeeping and reporting obligations can be modified to reduce burden. In regard to vehicle regulations, EPA is assessing opportunities to harmonize testing and compliance requirements with CARB's vehicle emission standards.	Completed.	Final rule published 4/28/2014 (79 FR 23413). http://www.epa.gov/otaq/tier3.htm 40 CFR Part 80 - Regulation of Fuels and Fuel Additives. Subpart D - Reformulated Gasoline (80.40 through 80.89) Subpart E - Anti-Dumping (Conventional Gasoline) (80.90 through 80.124) Subpart H - Gasoline Sulfur (80.180 through 80.415) Subpart J - Gasoline Toxics (MSATI) (80.800 - 80.1045) Subpart L - Gasoline Benzene (MSAT2) (80.1200 - 80.1363)		A Small Business Advocacy Review Panel to obtain advice and recommendations of representatives of the small entities potentially subject to the rule's requirements was completed on October 3, 2011.	

Agency	Title of Initiative / Rule / ICR	RIN	Summary of Initiative	Status of Initiative	Target Completion Date	Does the Initiative include regulatory flexibilities?	What methods will you engage in to Identify Improvements?	If available, anticipated or realized savings in costs and/or burdens
EPA/OECA and EPA/OW	Regulatory certainty for farmers: working with the U.S. Department of Agriculture (USDA) and states		EPA worked with USDA and state governments to explore flexible, voluntary approaches for farmers to achieve water quality improvements.	Completed.	January 2013.		In October, 2012, EPA met with Chesapeake Bay State Agriculture and Environment Directors. In November, 2012, EPA met with Bay state officials and key stakeholder groups. An anticipated outcome is that one or more of these states adopt certainty programs that encourage more farmers to adopt BMPs to reduce runoff of excess nutrients and sediment. In January, 2012, EPA signed an agreement with Minnesota on "Engaging in a State and Federal Partnership in Support of the Minnesota Agricultural Water Quality Certification Program." EPA and USDA have met with officials from Vermont and communicated with Maryland and Delaware who have indicated their intentions to move forward with certainty programs. EPA's Region 3 office will provide support to that effort. We will coordinate with USDA as needed as they work with their state partners to develop agricultural certainty programs.	Anticipated benefits include increased adoption of best management practices (BMPs) that reduce runoff of excess nutrients and sediment.
EPA/OCSP	Electronic online reporting of health and safety data under TSCA, FIFRA and FTDC: reducing burden and improving efficiencies. Quick changes to some TSCA reporting requirements, reducing burden.	RIN 2070-AJ75	EPA is exploring transitioning from paper-based reporting to electronic reporting for industries regulated under TSCA, FIFRA, and FTDC. Online electronic reporting can reduce burden and costs for regulated entities. The changes to TSCA reporting requirements are intended to reduce reporting burdens and to clarify reporting requirements. Considerations include the submission of an electronic copy in the place of 6 paper copies, the additional requirement of including "Robust Summaries" of test results with test data, and the use of the Inventory Update Reporting Form to format submission of preliminary assessment information.	Completed.	EPA issued a final rule related to Electronic reporting under TSCA on December 4, 2013. (78 FR 72818) With regard to electronic reporting under FIFRA & FTDC, on October 14, 2011, EPA implemented an electronic submission option via CD/DVD that covers many aspects of the pesticides registration processes. EPA provided detailed guidance and a down-loadable tool to facilitate electronic submission via CD/DVD of registration and endocrine disruptor screening program orders.		Online electronic reporting is expected to reduce burden and costs for the regulated entities by eliminating the costs associated with printing and mailing reports to EPA, many of which are required in multiple copies, completing the forms through look-up features and error checks, and maintaining paper records. It is also providing the opportunity for increased efficiencies in terms of record retrieval and information sharing within the company. At the same time, it will improve EPA's efficiency in reviewing the submissions, in particular for lengthy scientific studies. The regulated community has indicated that these savings could be substantial, but there may be an initial offset from burden related to initial registration into the system that will be used for the online reporting portal.	
EPA/OSWER	National Priorities List rules: improving transparency		EPA will improve transparency in the NPL listing process by considering ways for states, local govts, and tribes to have meaningful input to listing decisions.	Completed.	January 2013. See: http://www.epa.gov/superfund/sites/query/queryhtm/nplstcor.htm	EPA is initiating a more structured approach for the process by which state and tribal input on NPL listing decisions is solicited. A model letter has been developed for use when requesting state and tribal support for NPL listing. The model letter 1) explains the concerns at the site and the EPA's rationale for proceeding; 2) requests an explanation of how the state intends to address the site if placement on the NPL is not favored; and 3) emphasizes the transparent nature of the process by informing states that information on their responses will be publicly available.		
EPA/OW	Integrated planning for municipal wastewater and stormwater sources.	N/A	When EPA requested public comments on how we should meet the Executive Order 13563, several commentors raised concerns that EPA, states and municipalities often focus on Clean Water Act requirements applicable to municipalities, including requirements for CSOs, SSOs and other wet weather discharges, individually, assessing and implementing the best alternative to solve one problem at a time without adequate consideration of the entire water quality challenge facing a community. This review is included in the Plan so that EPA can gather additional information on how to better promote green infrastructure, to promote more cost-effective remedies to CSO, SSO and other wet weather violations and to identify additional approaches that balance competing CWA requirements and allows municipalities to develop a comprehensive plan that addresses CSOs, SSOs, stormwater and other municipal CWA requirements in a way that focuses their resources on the most pressing public health and environmental protection issues first.	Completed.	EPA issued the Integrated Municipal Stormwater and Wastewater Planning Approach framework document on June 5, 2012 that more fully describes the integrated planning concept. http://water.epa.gov/polwaste/rpdes/stormwater/upload/integrated_planning_framework.pdf		This effort gives municipalities the opportunity to develop and implement plans that will help them meet their water quality objectives in the most cost-effective way. It allows municipalities to take advantage of some innovative practices, such as green infrastructure, that can be used to address several issues, such as CSOs, SSOs, and stormwater discharges. Green infrastructure offers municipalities other benefits as well, such as making their communities more liveable, reducing the urban heat island effect, and saving energy.	
EPA/OAR	Vehicle Regulations: harmonizing requirements for GHG and Fuel Economy Standards	RIN 2060-AQ54	The National Program for greenhouse gas emissions (GHG) and fuel economy standards was developed jointly by the Environmental Protection Agency (EPA) and the National Highway Traffic Safety Administration (NHTSA) and applies to light duty cars and trucks in model years 2012-2016 (first phase) and 2017-2025 (second phase).	Completed.	Final joint rulemaking published 10/15/2012 - 77 FR 62623. http://www.epa.gov/otaq/climate/regs-light-duty.htm		The rulemaking is directly responsive to requests from the auto industry to harmonize DOT's fuel economy standards, EPA's greenhouse gas standards and CARB's greenhouse gas standards. This will allow the auto manufacturers to more efficiently produce one vehicle fleet to meet the requirements of the "National Program."	
EPA/OAR	Multiple air pollutants: coordinating emission reduction regulations and using innovative technologies	RIN 2060-AQ41	EPA intends to explore ways to reduce emissions of multiple air pollutants through the use of technologies and practices that achieve multiple benefits, such as controlling hazardous air pollutant emissions while also controlling particulate matter and its precursor pollutants. An early example of this approach is a rule amending pollution-control requirements for the pulp and paper industry.	Completed.	Final rule issued 9/11/2012 - 77 FR 55698.		Market analysis found that the proposal is likely to induce minimal changes in the average national price of paper and paperboard products. The control costs for the proposed rule amendments are estimated to be approximately \$4.1M per year with associated emission reductions of approximately 4,100 tons per year of HAP. Total industry costs (repeat testing/monitoring and incremental reporting/recordkeeping requirements in addition to controls) are estimated to be approximately \$2.1M per year.	

Agency	Title of Initiative / Rule / ICR	RIN	Summary of Initiative	Status of Initiative	Target Completion Date	Does the Initiative include regulatory flexibilities?	What methods will you engage in to Identify Improvements?	If available, anticipated or realized savings in costs and/or burdens
EPA/OP	Innovative technology: seeking to spur new markets and utilize technology	N/A	EPA assessed technology during retrospective reviews and new rulemakings to help encourage development of innovative technologies that reduce costs. EPA also plans to update monitoring and testing protocols to allow the use of new methods and technologies, where feasible. Support for the newly formed regional water technology innovation cluster will continue.	Completed.	EPA completed the pilot(s) in 2012. The DfE market analysis pilot was completed in 2012 and was focused on understanding the drivers, needs, barriers, and selection criteria used by a company when an alternative flame retardant is considered or employed. A second pilot study was completed in December 2012 with OW focused on mountain top mining water pollution technologies.			This action was not designed to reduce costs or information burdens; its desired outcome is to stimulate the incorporation of the most up to date technology in regulatory programs. EPA hopes to explore the potential for expanding alternative technologies and processes in the market that will offer new possibilities for reducing environmental and health impacts.
EPA/OP	The costs of regulations: improving cost estimates	N/A	The goals of the Retrospective Cost Study are to evaluate whether ex-ante and ex-post cost estimates of regulations differ substantially and, if so, to explore the reasons causing the divergence. If systematic differences in between ex ante and ex post cost estimates are detected, we hope to identify the source of the differences and determine if there are defensible means of correcting for them in our ex-ante cost estimation methodology.	Completed.	After incorporating comments received from an SAB-EEAC review of EPA's Interim Report, EPA released "Retrospective Study of the Costs of EPA Regulations: A Report of Four Case Studies" in August 2014. The final report is available at: http://yosemite.epa.gov/eepa/ceerm.nsf/vwAN/EE-0575.pdf/\$file/EE-0575.pdf			The ultimate goals of this effort are to improve our ex-ante cost modeling and to inform future revisions to EPA's Guidelines for Preparing Economic Analyses.
EPA/OAR	Vehicle fuel vapor recovery systems: eliminating redundancy	RIN 2060-AQ97	EPA intends to seek burden reductions for gas stations by eliminating regulatory requirements that call for the use of redundant technology.	Completed.	Final rule published 5/16/2012 - 77 FR 28772.	The EPA projects that during 2013-2015, gasoline-dispensing facilities (GDFs) in up to 19 states and the District of Columbia could seek to decommission and remove Stage II systems from their dispensers. There are about 30,600 GDFs with Stage II in these 20 areas. If the states submit and EPA approves SIP revisions to remove Stage II systems from these GDFs, the EPA projects savings of about \$10.2 million in the first year, \$40.5 million in the second year, and \$70.9 million in the third year. Long-term savings are projected to be about \$91 million per year, compared to the current use of Stage II systems in these		EPA estimates the long-term cost savings associated with this rule to be approximately \$91 million per year (2015).
EPA/OSWER	E-Manifest: reducing burden	RIN 2050-AG20	This rule establishes the legal and policy framework for collecting hazardous waste shipment data electronically, thereby replacing the current, burdensome paper manifest system that requires 6-copy forms to be completed, carried and signed manually.	Completed.	The final rule was published on February 7, 2014 (79 FR 7517).			Implementation of e-Manifest could result in annual cost savings exceeding 75 million, and annual burden reductions of between 370,000 and 700,000.
EPA/OSWER	Electronic hazardous waste Site ID form: reducing burden	N/A	EPA explored ways to reduce burden for hazardous waste generators, transporters, and holders of waste permits.	Completed.	eSiteID was deployed and initial CROMERR approval from the Office of Environmental Information was provided to the Office of Resource Conservation and Recovery on 2/22/13.			Electronically submitting Site ID forms would: 1) save in mailing costs; 2) enable better data quality as the data would be entered by the facility itself; 3) increase efficiency of the notification process as the facility could easily submit updates of past submissions (rather than repeatedly filling out the form again and again); and 4) enable states and EPA to receive the updated data faster.
EPA/OW	Consumer confidence reports for primary drinking water regulations: providing for the open exchange of information	N/A	EPA explored ways to promote greater transparency and public participation in protecting the nation's drinking water, while at the same time looking for opportunities to reduce utility burden.	Completed.	On January 3, 2013, EPA released an interpretive memo allowing for electronic delivery of CCRs and a document summarizing CCR issues and recommended next steps for utilities to enhance public access to information on drinking water quality.		In FY 2012, EPA began review of the CCR, including an internal comparison of the statute and CCR rule language and formation of an EPA workgroup. EPA determined that the current rule language will allow for additional delivery options (e.g., electronic delivery). To gather information from stakeholders, a Listening Session was held on February 23, 2012. The web-based dialogue was opened for two weeks allowing for states, utilities, and consumers to provide feedback on CCR delivery and on other issues. EPA held a public meeting in October 2012 to obtain feedback on its draft framework for electronic delivery of CCRs. The draft was available for a 30-day public comment period. On January 3, 2013, EPA released an interpretive memo on CCR delivery options, with an attachment describing electronic delivery considerations for states and utilities, and a summary of issues raised by stakeholders.	EPA estimated a cost savings of approximately \$1,000,000 (2010\$) per year, based on the anticipated reduction in postage and paper costs for systems serving ≥10,000 customers. EPA developed estimated cost savings to utilities for several different electronic delivery scenarios.
EPA/OW	Reporting requirements under Section 303(d) of the Clean Water Act (CWA): reducing burden	N/A	EPA explored ways to reduce the burden on state governments when reporting on the quality of the nation's water bodies.	Completed.	The report for this effort was completed in April 2013. See http://water.epa.gov/lawsregs/lawsguidance/cwa/tmdl/guidance.cfm	Burden reduction is anticipated through clarifying processes and providing opportunities for States and EPA Regions to be more efficient in handling data.	Although this effort is completed, EPA has continued to engage with states to identify opportunities to improve the reporting process under CWA Sections 303(d) and 305(b). This engagement has occurred via workgroups and meetings.	Not available at this time.
EPA/OCSPP	Export notification for chemicals and pesticides: reducing burden and improving efficiencies	N/A	EPA evaluated options to reduce regulatory burden on pesticide exporters and foreign countries monitoring these exports, as industry suggests that these requirements do not appear to provide comparable benefits to public health or the environment.	Completed.	In 2009/2010, EPA's Office of Inspector General (OIG) conducted an evaluation entitled, "EPA Needs to Comply with the Federal Insecticide, Fungicide, and Rodenticide Act and Improve its Oversight of Exported Never-Registered Pesticides (Report No. 10-P-0026)." EPA evaluated the OIG report and in response to the audit, developed a "Corrective Action Plan," which has since been implemented.			

Agency	Title of Initiative / Rule / ICR	RIN	Summary of Initiative	Status of Initiative	Target Completion Date	Does the Initiative include regulatory flexibilities?	What methods will you engage in to Identify Improvements?	If available, anticipated or realized savings in costs and/or burdens
EPA/OSWER	Adjusting threshold planning quantities (TPQs) for solids in solution: reducing burden and relying on scientific objectivity	RIN 2050-AF08	EPA is reviewed the manner by which the regulated community would apply the threshold planning quantities (TPQs) for those extremely hazardous substances (EHSs) that are non-reactive solid chemicals in solution. This would allow facilities reporting EHSs for the first time to have larger quantities on-site and not be subject to the reporting requirements.	Completed.	Final rule published 3/22/2012 (77 FR 16679).			EPA has revised the manner by which the regulated community would apply the threshold planning quantities (TPQs) for those extremely hazardous substances (EHSs) that are non-reactive solid chemicals in solution. This allows facilities reporting EHSs for the first time to have larger quantities on-site and not be subject to the emergency planning notification reporting requirements. This final rule allows facilities to have larger amounts of EHS solids in solution on site than before without being subject to certain emergency planning notification requirements. In addition, the changes in reporting will allow state and local emergency planners to better focus limited resources on amounts of chemicals that will potentially cause the greatest harm and to spend fewer resources on those that pose less harm when released.
EPA/OCSPP	Integrated pesticide registration reviews: reducing burden and improving efficiencies	N/A	EPA reviewed the pesticide registration review process, as well as other FIFRA requirements.	Completed.	The new procedure were put in place in March 2013. This is an ongoing program, so the efforts and commitments described apply to future activities.		EPA has bundled several sets of chemicals together as part of registration review, including the organophosphates, the carbamates, the pyrethroids, the noncotinoid insecticides, and the sulfonylurea herbicides. In addition, to enhance label clarity and potentially reduce regulatory burdens on industry refining data requirements to support pesticide re-evaluation, EPA began holding "Focus meetings." "Focus meetings" ensured that EPA and all interested stakeholders begin communicating early in the process to ensure the accuracy of information about pesticide use, as well as early identification of data needs to support re-evaluation decisions.	
EPA/OSWER	Polychlorinated biphenyls (PCB) reforms: improving efficiencies and effectiveness	N/A	EPA examined existing PCB guidance and regulations to harmonize regulatory requirements related to harmful PCB uses and to PCB cleanup. The disposal and cleanup requirements for PCB-contaminated building material depend on whether the material is classified as PCB bulk product waste or PCB remediation waste. The Agency intends to issue a Federal Register notice that solicits comment on guidance that reinterprets the definition of PCB bulk product waste. EPA believes that this proposed reinterpretation would allow for accelerated cleanups of PCB-contaminated building material by providing a more straightforward path for disposal pursuant to the regulations. Speeding up removal and disposal of the PCB-contaminated material is critical for reducing exposure potential, such as in schools or other locations where such PCB-contaminated building materials are currently in place.	Completed.	On October 24, 2012, OSWER released the final PCB Bulk Waste Reinterpretation. The reinterpretation is available to the public at http://www.epa.gov/epawaste/hazard/tsd/pcbs/pcbs/caulk/rinterpret.htm			Increased number and speed of cleanups of PCB caulk and PCB paint contamination
EPA/OSWER	Hazardous waste requirements for retail products: clarifying and making the program more effective	N/A	EPA intended to review its regulations to determine whether to issue guidance in the short term concerning certain pharmaceutical containers. One of the top priorities identified through further conversations with retailers was clarity on how to manage containers such as pill bottles that once contained a p-listed pharmaceutical hazardous waste since the containers usually have some sort of residue. Under the RCRA regulations these containers are NOT considered empty unless they are triple rinsed. EPA committed to investigate whether guidance in this area was feasible and appropriate.	Completed.	EPA decided that guidance was needed to provide clarity and national voice on how to manage these containers that once held p-listed hazardous waste pharmaceuticals. States had taken a wide variety of approaches and stakeholders beyond retailers were asking for assistance on this issue. After talking with various stakeholders including Walmart and gathering limited available data on the p-listed pharmaceutical residues inside these containers, EPA issued a guidance memorandum on November 4, 2011.			The guidance on how to manage containers that contain residues from pharmaceuticals that were p-listed hazardous waste when discarded provides regulated entities with various options on how to approach the management of these containers. We anticipate that some generators, who were becoming large quantity generators due to courting the residue and container weight towards their generator status, will be able to maintain a lower generator status by managing their containers according to the memo, resulting in costs savings associated with paperwork and training.
EPA/OSWER	Hazardous Waste Requirements for Retail Products	RIN 2050-AG72	This NODA is part of the Agency's effort to better understand concerns from all stakeholders about RCRA's applicability to the retail sector, what materials may be affected, what the full scope of the issues are, and what options may exist for addressing the issues.	Completed.	EPA published a Notice of Data Availability (NODA) on February 14, 2014 (79 FR 8926). EPA anticipates publishing two proposed rules, the Hazardous Waste Generator Improvements Rule and the Pharmaceuticals Rule, (which are specific listed items in this report), in summer 2015. These rules respond to many of the comments received in the NODA. In addition, EPA is developing a retail-sector strategy to address other comments from the NODA. EPA expects to make this strategy publicly available in spring 2015.	There will be regulatory relief associated with the Hazardous Waste Generator Improvements Rule and Pharmaceuticals proposed rule in terms of burden reduction associated with changing how generator categories are defined.	Prior to publishing the NODA, EPA previously conducted outreach activities with various stakeholders in the retail community to gather additional information regarding the hazardous waste issues they are facing and to better understand challenges faced by the retail sector in complying with the RCRA hazardous waste generator regulations. EPA plans to conduct outreach on the proposed rules and is developing a strategy to engage the regulated community on remaining issues. This strategy includes site visits, meetings, participation in conferences and targeted outreach. EPA will also analyze public comments on the proposed rules.	There will be cost savings associated with the Hazardous Waste Generator Improvements and Pharmaceuticals proposed rules in terms of burden reduction associated with changing how generator categories are defined.
EPA/OP	Section 610 reviews: coordinating requirements	N/A	To the extent practicable, EPA will coordinate Section 610 reviews with other statutorily or Presidentially mandated retrospective reviews.	Completed.	The list of rules for which upcoming 610 reviews are required are posted on EPA's Small Entities and Rulemaking website (http://www.epa.gov/rfa/section-610.html). Other required retrospective reviews for each rule will be indicated. EPA is committed to maintaining the public list and coordinating reviews when practicable.			Each specific Section 610 review that can be coordinated with another review requirement will save Agency resources and reduce burden on the public responding to and commenting on reviews.
