Re: PCB Groundwater Quality Assessment Program
1st Quarter 2010 Data Report
Solutia Inc., W. G. Krummrich Plant, Sauget, IL

Dear Mr. Bardo:

Enclosed please find the PCB Groundwater Quality Assessment Program 1st Quarter 2010 Data Report for Solutia Inc.'s W. G. Krummrich Plant, Sauget, IL.

If you have any questions or comments regarding this report, please contact me at (314) 674-3312 or gmrina@solutia.com

Sincerely,

Gerald M. Rinaldi
Manager, Remediation Services

1.0 INTRODUCTION

This report presents the results of the 1st Quarter 2010 (1Q10) sampling event performed at the Solutia Inc. (Solutia) W.G. Krummrich Facility located in Sauget, Illinois (Site). This sampling event was conducted in accordance with the Revised PCB Groundwater Quality Assessment Program Work Plan (Solutia 2009). The Site location map is presented in **Figure 1**.

The PCB Groundwater Quality Assessment Program well network consists of ten monitoring wells, as follows (**Figure 2**):

- Two source area wells, PMA-MW-4S and PMA-MW-4D, are screened in the Shallow Hydrogeologic Unit (SHU) (designated with an "S") and Deep Hydrogeologic Unit (DHU) (designated with a "D"), respectively.
- Three well clusters (PMA-MW-1S/M, PMA-MW-2S/M and PMA-MW-3S/M) are located down-gradient of the source area. These clusters include wells screened in the SHU and Middle Hydrogeologic Unit (MHU) (designated with an "M").
- Two individual wells designated PMA-MW-5M and PMA-MW-6D are located further down-gradient of the source area, with PMA-MW-5M screened in the MHU and PMA-MW-6D screened in the DHU.

Groundwater samples were collected from the ten monitoring wells during the 1Q10 sampling event.

Field sampling activities were conducted in accordance with the procedures outlined in the Revised PCB Groundwater Quality Assessment Program Work Plan, including the collection of appropriate quality assurance and quality control (QA/QC) samples. The following section summarizes the field investigative procedures.

2.0 FIELD PROCEDURES

URS Corporation (URS) conducted the 1Q10 PCB Groundwater Quality Assessment Program field activities between February 12 and 23, 2010.

Groundwater Level Measurements – An oil/water interface probe was used to measure depth to static groundwater levels and determine the presence of non-aqueous phase liquids (NAPL) in the PCB Groundwater Quality Assessment Program well network. Depth to groundwater measurements were collected from accessible existing wells (i.e., GM-, K- , PSMW- and PMA-series) and piezometers clusters (installed for the Sauget Area 2 RI/FS and WGK CA-750 Environmental Indicator projects) specified in the Revised PCB Groundwater Quality Assessment Program Work Plan.

Well gauging information for the 1Q10 event is presented in **Table 1**. As the middle and deep hydrogeologic units are the primary migration pathway for constituents present in groundwater at the WGK Facility, a groundwater potentiometric surface map based on water level data from wells screened in the MHU and DHU is presented as **Figure 3**.

Groundwater Sampling - Low-flow sampling techniques were used for groundwater sample collection. At each monitoring well, disposable, low-density polyethylene tubing was attached to a submersible pump, which was then lowered into the well to the middle of the screened interval. Monitoring wells were purged at a rate no more than 400 mL/minute to minimize drawdown. If significant drawdown occurred, flow rates were reduced.

Drawdown was measured periodically throughout purging to ensure that it did not exceed 25% of the distance between the pump intake and the top of the screen. Once the flow rate and drawdown were stable, field measurements were collected approximately every three to five minutes. Purging of a well was considered complete when the following water quality parameters remained stable over three consecutive flow-thru cell volumes:

Parameter	Stabilization Guidelines
Dissolved Oxygen (DO)	+/- 10% or +/-0.2 mg/L, whichever is greatest
Oxidation-Reduction Potential (ORP)	+/- 20 mV
pH	+/- 0.2 units
Specific Conductivity	+/- 3%

Sampling commenced upon completion of purging. Prior to sample collection, the flow-thru cell was bypassed to allow for collection of uncompromised groundwater. Consistent with the work plan, samples were collected at a flow rate less than or equal to the rate at which stabilization was achieved.

Quality Assurance/Quality Control (QA/QC) samples consisting of analytical duplicates (AD) and equipment blanks (EB) were collected at a rate of 10% and matrix spike/matrix spike duplicates (MS/MSD) were collected at a rate of 5%, complying with the work plan. All samples were submitted to TestAmerica for PCB analysis.

Each sample was labeled immediately following collection. The sample identification system used for each sample involved the following nomenclature "PMA-MW#-MMYY-QAC" where:

- **PMA-MW#** – Monitoring Well Location (PCB Manufacturing Area (PMA)) and Number
- **MMYY** – Month and year of sampling quarter, e.g.: February (first quarter), 2010 (0210)
- **QAC** – denotes QA/QC samples (when applicable):
  - **EB** – equipment blank
  - **AD** – analytical duplicate
  - **MS or MSD** – Matrix Spike or Matrix Spike Duplicate

Upon collection and labeling, sample containers were immediately placed inside an iced cooler, packed in such a way as to help prevent breakage and maintain inside temperature at or below approximately 4^{o}C. Field personnel recorded the project identification and number, sample description/location, required analysis, date and time of sample collection, type and matrix of sample, number of sample containers, analysis requested/comments, and sampler signature/date/time, with permanent ink on the chain-of-custody (COC). Prior to shipment, coolers were sealed between the lid and sides of the cooler with a custody seal, and then shipped to TestAmerica in Savannah, Georgia by means of overnight delivery service (FedEx). Field sampling data sheets are included in **Appendix A**, COC forms are included in **Appendix B**.

3.0 LABORATORY PROCEDURES

Samples were analyzed by TestAmerica for PCBs using Method 680.

4.0 QUALITY ASSURANCE

Analytical data were reviewed for quality and completeness, as described in the Revised PCB Groundwater Quality Assessment Work Plan (Solutia 2009). Data qualifiers were added, as appropriate, and are included on the data tables and the laboratory result pages. The Quality Assurance report is included as **Appendix C**. Laboratory reports and data validation review sheets are included in **Appendix D**.

A total of 14 samples (ten investigative groundwater samples, one field duplicate, one MS/MSD pair, one equipment blank) were prepared and analyzed by TestAmerica for PCBs. Results for the various analyses were submitted as sample delivery group (SDG) KPM037.

The samples contained in SDG KPM037 are listed below:

KPM037

PMA-MW-1S-0210
PMA-MW-1M-0210
PMA-MW-2M-0210
PMA-MW-2M-0210-AD
PMA-MW-2S-0210-EB
PMA-MW-2S-0210
PMA-MW-5M-0210
PMA-MW-6D-0210
PMA-MW-3M-0210
PMA-MW-3S-0210
PMA-MW-4D-0210
PMA-MW-4S-0210

Evaluation of the analytical data followed procedures outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, (USEPA 2008) and the Revised PCB Groundwater Quality Assessment Work Plan (Solutia 2009). Based on the above mentioned criteria, results reported for the analyses performed were accepted for their intended use. Acceptable levels of accuracy and precision, based on MS/MSD, LCS, surrogate and field duplicate data were achieved for these SDGs to meet the project objectives. Completeness, which is defined to be the percentage of analytical results which are judged to be valid, including estimated detect/nondetect (**J/UJ**) data was 100 percent.

5.0 OBSERVATIONS

This section presents a brief summary of the groundwater analytical results from the 1Q10 PCB Groundwater Quality Assessment sampling event. A summary of the laboratory results is provided in **Table 2** and the entire laboratory data package is provided in **Appendix D.**

Shallow Hydrogeologic Unit

PCBs were detected in the source area SHU monitoring well PMA-MW-4S, at an estimated concentration of 200.55 µg/L. Historically, measurable DNAPL has been observed in PMA-MW-4S during previous sampling events.PCBs were not detected in the three down-gradient PCB Groundwater Quality Assessment Program SHU monitoring wells. Such data indicate that PCBs in the SHU are attenuating over the 300 to 400 ft distance between PMA-MW-4S and the three downgradient monitoring wells. PCB sampling results for the SHU are presented on **Figure 4**.

Middle/Deep Hydrogeologic Unit

Laboratory analytical results for monitoring well PMA-MW-4D, located in the Former PCB Manufacturing Area, indicated a total PCB concentration of 0.54 µg/L for the 1Q10 sampling event. PCBs were also detected in four of the five downgradient monitoring wells at concentrations of 0.2 µg/L (PMA-MW-1M), 2.4 µg/L (PMA-MW-2M/duplicate), estimated 0.87 µg/L (PMA-MW-3M), and 0.19 µg/L (PMA-MW-6D). PCBs were not detected in the groundwater sample collected from monitoring well PMA-MW-5M. **Figure 5** displays the 1Q10 PCB sampling results for the MHU/DHU.

The 1Q10 sampling event was the seventh event conducted under the PCB Groundwater Quality Assessment Program. Mann-Kendall trend analyses of total PCBs in unfiltered samples of groundwater from monitoring wells within (PMA-MW-4D) or downgradient of (PMA-MW-1M, -2M, -3S, -3M, and -6D) the former PCB Manufacturing Area are presented in **Tables 3** through **8**. The data appear to exhibit an upward trend in concentrations at monitoring well PMA-MW-4D at this time, but no trends at any of the other wells.

After eight quarters of sampling under the PCB Groundwater Quality Assessment Program, the Mann-Whitney U Test will be performed to determine whether or not concentrations in the second four quarters were higher or lower than the first four quarters. Linear regression analysis will be done for the eight quarters of data provided the data distribution allows the use of parametric statistical analysis.

Groundwater Purging and Sampling Forms

LOW FLOW GROUNDWA AMPLING DATA SHEET

PROJECT NAME: PCB GW Quality Assessment PROJECT NUMBER: 215624G1 02001 FIELD PERSONNEL: Mike Corbett, Drew Brouk

DATE: 2/22/10 WEATHER: cloudy, 35°F

MONITORING WELL ID: PMANW01M SAMPLE ID: PMANW01M-0210

INITIAL DATA

Well Diameter: 2 in

Measured Well Depth (btoc): 59.61 ft

Constructed Well Depth (btoc): 59.30 ft

Depth to Water (btoc): 10.63 ft

Depth to LNAPL/DNAPL (btoc): — ft

Depth to Top of Screen (btoc): 54.30 ft

Screen Length: 5 ft

Water Column Height (do not include LNAPL or DNAPL): 48.98 ft

If Depth to Top of Screen > Depth to Water AND Screen Length is (4 feet.

Place Pump at: Total Well Depth – 0.5 (Screen Length + DNAPL Column Height) = 56.80 ft btoc

If Depth to Top of Screen > Depth to Water AND Water Column Height and Screen Length are (4ft.

Place Pump at: Total Well Depth – (0.5 X Water Column Height + DNAPL Column Height) = — ft btoc

If Screen Length and/or water column height is < 4 ft, Place Pump at Total Well Depth - 2 ft = — ft btoc

Volume of Flow Through Cell: 1,150 mL

Minimum Purge Volume = (3 x Flow Through Cell Volume): 3,450 mL

Ambient PID/FID Reading: 0.0 ppm

Wellbore PID/FID Reading: 0.0 ppm

PURGE DATA

Pump Type: Stainless Steel Monsoon

Purge Volume (mL)	Time	Depth to Water (ft)	Color	Odor	pH	Temp (°C)	Cond (mS/cm)	Turbidity (NTUs)	DO (mg/L)	ORP (mV)

1.0 INTRODUCTION

This Quality Assurance Report presents the findings of a review of analytical data for groundwater samples collected in February of 2010 at the Solutia W.G. Krummrich plant as part of the 1st Quarter 2010 PCB Groundwater Quality Assessment Program. The samples were collected by URS Corporation personnel and analyzed by TestAmerica Laboratories located in Savannah, Georgia using USEPA methodologies. Samples were analyzed for polychlorinated biphenyls (PCBs).

One hundred percent of the data were subjected to a data quality review (Level III validation). The Level III reviews were performed in order to confirm that the analytical data provided by TestAmerica were acceptable in quality for their intended use.

A total of 14 samples (ten investigative groundwater samples, one field duplicate pair, one matrix spike and matrix spike duplicate (MS/MSD) pair, and one equipment blank) were analyzed by TestAmerica. These samples were analyzed as part of Sample Delivery Group (SDG) KPM037 utilizing the following USEPA Methods:

- Method 680 for PCBs

Samples were reviewed following procedures outlined in the USEPA National Functional Guidelines for Superfund Organic Methods Data Review (USEPA 2008) and the Revised PCB Groundwater Quality Assessment Work Plan (Solutia 2009).

The above guidelines provided the criteria to review the data. Additional quantitative criteria are given in the analytical methods. Data was qualified based on the data quality review. Qualifiers assigned indicate data that did not meet acceptance criteria and for which corrective actions were not successful or not performed. The various qualifiers are explained in **Tables 1** and **2** below:

TABLE 1 Laboratory Data Qualifiers

Lab Qualifier	Definition
U	Analyte was not detected at or above the reporting limit.
*****	LCS, LCSD, MS, MSD, MD or surrogate exceeds the control limits.
E	Result exceeded the calibration range, secondary dilution required.
D	Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution will be flagged with a D.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
N	MS, MSD: Spike recovery exceeds upper or lower control limits.
H	Sample was prepped or analyzed beyond the specified holding time.
B	Compound was found in the blank and sample.
4	MS, MSD: The analyte present in the original sample is 4 times greater than the matrix spike concentration; therefore, control limits are not applicable.

TABLE 2 URS Data Qualifiers

URS Qualifier	Definition
U	The analyte was analyzed for but was not detected.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

Based on the criteria outlined, it is recommended that the results reported for these analyses are accepted for their intended use. Acceptable levels of accuracy, precision, and representativeness (based on MS/MSD, LCS, surrogate compounds and field duplicate results) were achieved for this data set, except where noted in this report. In addition, analytical completeness, defined to be the percentage of analytical results which are judged to be valid, including estimated detect/nondetect (J/UJ) values was 100 percent, which meets the completeness goal of 95 percent.

The data review included evaluation of the following criteria:

Organics

- Receipt condition and sample holding times
- Laboratory method blanks, and field equipment blank samples
- Surrogate spike recoveries
- Laboratory control sample (LCS) recoveries
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) sample recoveries and Relative Percent Difference (RPD) values
- Field duplicate results
- Results reported from dilutions
- Internal standard responses

2.0 RECEIPT CONDITION AND SAMPLE HOLDING TIMES

Sample holding time requirements for the analyses performed are presented in the methods and/or in the data review guidelines. Review of the sample collection, extraction and analysis dates involved comparing the chain-of-custody and the laboratory data summary forms for accuracy, consistency, and holding time compliance. Upon review of SDG KPM037, sample PMA-MW-3S-

0210 was re-extracted approximately 23 days outside of holding time criteria (7 days) due to loss of internal standards from the original extract. Professional judgment was used to qualify, but not reject data, due to the stability of PCBs. Analytical data that required qualification based on holding time criteria are summarized in the following table:

Field ID	Parameter	Analyte	Qualification
PMA-MW-3S-0210	PCBs	Monochlorobiphenyl	**UJ**
PMA-MW-3S-0210	PCBs	Dichlorobiphenyl	**UJ**
PMA-MW-3S-0210	PCBs	Trichlorobiphenyl	**UJ**
PMA-MW-3S-0210	PCBs	Tetrachlorobiphenyl	**UJ**
PMA-MW-3S-0210	PCBs	Pentachlorobiphenyl	**UJ**
PMA-MW-3S-0210	PCBs	Hexachlorobiphenyl	**UJ**
PMA-MW-3S-0210	PCBs	Heptachlorobiphenyl	**UJ**
PMA-MW-3S-0210	PCBs	Octachlorobiphenyl	**UJ**
PMA-MW-3S-0210	PCBs	Nonachlorobiphenyl	**UJ**
PMA-MW-3S-0210	PCBs	DCB Decachlorobiphenyl	**UJ**

The cooler receipt form indicated that four out of five coolers were received by the laboratory at temperatures below the 4ºC ± 2ºC criteria. Samples received were in good condition and not frozen; therefore, no qualification of data was required.

3.0 LABORATORY METHOD BLANK AND EQUIPMENT BLANK SAMPLES

Laboratory method blank samples evaluate the existence and magnitude of contamination problems resulting from laboratory activities. All laboratory method blank samples were analyzed at the method prescribed frequencies. No analytes were detected in the method blanks.

Equipment blank samples are used to assess the effectiveness of equipment decontamination procedures. No analytes were detected in the equipment blank sample.

4.0 SURROGATE SPIKE RECOVERIES

Surrogate compounds are used to evaluate overall laboratory performance for sample preparation efficiency on a per sample basis. All samples analyzed for PCBs were spiked with surrogate compounds during sample preparation. USEPA National Functional Guidelines for Superfund Organic Methods Data Review state how data is qualified, if surrogate spike recoveries do not meet evaluation criteria. Surrogate recoveries were within evaluation criteria with the exception of those surrogates in data reviews discussed further in Appendix D. No qualifications of data were required due to surrogate recoveries.

5.0 LABORATORY CONTROL SAMPLE RECOVERIES

Laboratory control samples (LCS) are analyzed with each analytical batch to assess the accuracy of the analytical process. All LCS recoveries were within evaluation criteria. No qualification of data was required.

6.0 MATRIX SPIKE/MATRIX SPIKE DUPLICATE (MS/MSD) SAMPLES

MS/MSD samples are analyzed to assess the accuracy and precision of the analytical process on an analytical sample in a particular matrix. MS/MSD samples were required to be collected at a frequency of one per 20 investigative samples in accordance with the work plan (one per 20 investigative samples or 5%). URS Corporation submitted one MS/MSD sample set for ten investigative samples, meeting the work plan frequency requirement.

No qualifications were made to the data if the MS/MSD percent recoveries were zero due to dilutions or if the Relative Percent Difference (RPD) was the only factor outside of criteria. Also, USEPA National Functional Guidelines for Superfund Organic Methods Data Review (2008) states that organic data does not need qualification based on MS/MSD criteria alone. Therefore, if recoveries were outside evaluation criteria due to matrix interference or abundance of analytes, no qualifiers were assigned unless these analytes had other quality control criteria outside evaluation criteria.

Sample PMA-MW-1S-0210 was spiked and analyzed for PCBs in SDG KPM037. All MS/MSD recoveries were within evaluation criteria. No qualification of data was required.

7.0 FIELD DUPLICATE RESULTS

Field duplicate results are used to evaluate precision of the entire data collection activity, including sampling, analysis and site heterogeneity. When results for both duplicate and sample values are greater than five times the practical quantitation limit (PQL), satisfactory precision is indicated by an RPD less than or equal to 25 percent for aqueous samples. Where one or both of the results of a field duplicate pair are reported at less than five times the PQL, satisfactory precision is indicated if the field duplicate results agree within 2 times the quantitation limit. Field duplicate results that do not meet these criteria may indicate unsatisfactory precision of the results.

One field duplicate sample was collected for the ten investigative samples. This satisfies the requirement in the work plan (one per 10 investigative samples or 10 percent). Field duplicate results were within evaluation criteria. No qualifications of data were required.

8.0 INTERNAL STANDARD RESPONSES

Internal standard (IS) performance criteria ensure that the GC/MS sensitivity and response are stable during each analytical run. For the PCBs (Method 680), the IS areas must be within +/- 30 percent of the preceding calibration verification (CV) IS value. Also, the IS retention times must be within 30 seconds of the preceding IS CV retention time. If the IS area count is outside criteria, Method 680 indicates the mean IS area obtained during the initial calibration (ICAL) (+/- 50 percent) should be used.

The internal standards area responses for PCBs were verified for the data reviews. IS responses met the criteria as described above, with the exception of the IS responses in the data reviews discussed further in Appendix D.

Analytical data that required qualification based on internal standard (IS) data are included in the table below. Analytical data reported as non-detect and associated with internal standard recoveries above evaluation criteria, indicating a possible high bias, did not require qualification.

Sample ID	Parameter	Analyte	Qualification
PMA-MW-3M-0210	PCBs	Monochlorobiphenyl	**J**
PMA-MW-1S-0210	PCBs	All PCB nondetects	**UJ**
PMA-MW-4S-0210	PCBs	Monochlorobiphenyl	**J**
PMA-MW-4S-0210	PCBs	Dichlorobiphenyl	**J**
PMA-MW-4S-0210	PCBs	Tetrachlorobiphenyl	**J**
PMA-MW-4S-0210	PCBs	Pentachlorobiphenyl	**J**
PMA-MW-4S-0210	PCBs	Heptachlorobiphenyl	**J**
PMA-MW-4S-0210	PCBs	Octachlorobiphenyl	**J**
PMA-MW-4S-0210	PCBs	Nonachlorobiphenyl	**J**
PMA-MW-4S-0210	PCBs	DCB Decachlorobiphenyl	**J**
PMA-MW-4S-0210-DL	PCBs	Trichlorobiphenyl	**J**
PMA-MW-4S-0210-DL	PCBs	Hexachlorobiphenyl	**J**

9.0 RESULTS REPORTED FROM DILUTIONS

Sample PMA-MW-4S-0210 was diluted due to abundance of target analytes. The diluted sample results for PCBs were reported at the lowest possible reporting limit.

1.0 Data Package Completeness

Were all items delivered as specified in the QAPP and COC as appropriate?

Yes

2.0 Laboratory Case Narrative \ Cooler Receipt Form

Were problems noted in the laboratory case narrative or cooler receipt form?

Yes, the laboratory case narrative indicated that PCB surrogates were diluted out and not recovered in sample PMA-MW-4S-0210. Sample PMA-MW-3S-0210 was re-extracted outside holding time criteria. Additionally, PCB surrogates were outside evaluation criteria in sample PMA-MW-1S-0210 and the equipment blank. Internal standard recoveries were outside evaluation criteria in several samples. Sample PMA-MW-4S-0210 was diluted due to abundance of target analytes. These issues are addressed further in the appropriate sections below.

The cooler receipt form indicated that four out of five coolers were received by the laboratory at temperatures below the 4ºC ± 2ºC criteria. Samples received were in good condition and not frozen; therefore, no qualification of data was required.

3.0 Holding Times

Were samples extracted/analyzed within applicable limits?

No, sample PMA-MW-3S-0210 was re-extracted approximately 23 days outside holding time criteria (7 days) due to loss of internal standards from the original extract. Professional judgment was used to not reject data due to the stability of PCBs.

Qualifications due to hold time criteria are included in the table below:

Sample ID	Parameter	Analyte	Qualification
PMA-MW-3S-0210	PCBs	Monochlorobiphenyl	**UJ**
PMA-MW-3S-0210	PCBs	Dichlorobiphenyl	**UJ**
PMA-MW-3S-0210	PCBs	Trichlorobiphenyl	**UJ**
PMA-MW-3S-0210	PCBs	Tetrachlorobiphenyl	**UJ**
PMA-MW-3S-0210	PCBs	Pentachlrobiphenyl	**UJ**
PMA-MW-3S-0210	PCBs	Hexachlrobiphenyl	**UJ**
PMA-MW-3S-0210	PCBs	Heptachlorobiphenyl	**UJ**
PMA-MW-3S-0210	PCBs	Octachlorobiphenyl	**UJ**
PMA-MW-3S-0210	PCBs	Nonachlorobiphenyl	**UJ**
PMA-MW-3S-0210	PCBs	DCB Decachlorobiphenyl	**UJ**

4.0 Blank Contamination

Were any analytes detected in the Method Blanks, Field Blanks or Trip Blanks?

No

5.0 Laboratory Control Sample

Were LCS recoveries within evaluation criteria?

Yes

6.0 Surrogate Recoveries

Were surrogate recoveries within evaluation criteria?

No, surrogates were diluted out and not recovered in sample PMA-MW-4S-0210-DL. No qualification of data was required.

Sample ID	Parameter	Surrogate	Recovery	Criteria
PMA-MW-1S-0210	PCBs	Decachlorobiphenyl-13C_{12}	**128**	25-113
PMA-MW-2S-0210-EB	PCBs	Decachlorobiphenyl-13C_{12}	**179**	25-113

Analytical data reported as non-detect and associated with surrogate recoveries above evaluation criteria indicating a possible high bias did not require qualification. Equipment blank, PMA-MW-2S-0210-EB is a quality control sample and does not require qualification. No qualification of data was required.

7.0 Matrix Spike and Matrix Spike Duplicate Recoveries

Were MS/MSD samples collected as part of this SDG?

Yes, sample PMA-MW-1S-0210 was spiked and analyzed for PCBs.

Were MS/MSD recoveries within evaluation criteria?

Yes

8.0 Internal Standard (IS) Recoveries

Were internal standard area recoveries within evaluation criteria?

No

Sample ID	Parameter	Analyte	IS Area Recovery	IS Criteria
MB 680-161622/17-A	PCBs	Phenanthrene-d_{10}	**5,149**	8,678-12,397
LCS 680-161622/18-A	PCBs	Chrysene-d_{12}	**49,796**	22,917-42,561

PMA-MW-3M-0210	PCBs	Chrysene-d_{12}	**87,871**	22,917-42,561
PMA-MW-1S-0210	PCBs	Phenanthrene-d_{10}	**3,625**	11,033-20,491
PMA-MW-1S-0210-MS	PCBs	Chrysene-d_{12}	**68,490**	33,335-61,909
PMA-MW-2M-0210	PCBs	Chrysene-d_{12}	**72,314**	33,335-61,909
PMA-MW-2M-0210-AD	PCBs	Phenanthrene-d_{10}	**10,393**	11,033-20,491
PMA-MW-2S-0210-EB	PCBs	Phenanthrene-d_{10}	**3,787**	11,033-20,491
PMA-MW-2S-0210	PCBs	Chrysene-d_{12}	**69,037**	33,335-61,909
PMA-MW-5M-0210	PCBs	Chrysene-d_{12}	**65,494**	33,335-61,909
PMA-MW-4D-0210	PCBs	Phenanthrene-d_{10}	**17,590**	8,350-15,506
PMA-MW-4D-0210	PCBs	Chrysene-d_{12}	**75,665**	31,603-58,691
PMA-MW-4S-0210	PCBs	Phenanthrene-d_{10}	**74,984**	8,350-15,506
PMA-MW-4S-0210	PCBs	Chrysene-d_{12}	**84,222**	31,603-58,691
PMA-MW-4S-0210-DL	PCBs	Phenanthrene-d_{10}	**36,001**	11,910-22,118
PMA-MW-3S-0210	PCBs	Chrysene-d_{12}	**58,905**	31,603-58,691
LCSD 680-163986/5-A	PCBs	Phenanthrene-d_{10}	**16,840**	8,350-15,506
LCSD 680-163986/5-A	PCBs	Chrysene-d_{12}	**63,198**	31,603-58,691

Analytical data that required qualification based on internal standard (IS) data are included in the table below. Analytical data reported as non-detect and associated with internal standard recoveries above evaluation criteria, indicating a possible high bias, did not require qualification. MB 680-161622/17-A, LCS 680-161622/18-A, PMA-MW-1S-0210-MS, PMA-MW-2S-0210-EB, and LCSD 680-163986/5-A are quality control samples and do not require qualification. Internal standard areas for phenanthrene-d_{10} and chrysene-d_{12} recovered within the initial calibration average internal standard area in samples PMA-MW-6D-0210, PMA-MW-2M-0210, PMA-MW-2M-0210-AD, PMA-MW-2S-0210, PMA-MW-5M-0210, PMA-MW-4D-0210, and PMA-MW-3S-0210; therefore, no qualification of data was required. [Chrysene-d_{12} was used in the calibration and quantification of the target compounds and surrogate].

Sample ID	Parameter	Analyte	Qualification
PMA-MW-3M-0210	PCBs	Monochlorobiphenyl	**J**
PMA-MW-1S-0210	PCBs	All PCB nondetects	**UJ**
PMA-MW-4S-0210	PCBs	Monochlorobiphenyl	**J**
PMA-MW-4S-0210	PCBs	Dichlorobiphenyl	**J**
PMA-MW-4S-0210	PCBs	Tetrachlorobiphenyl	**J**
PMA-MW-4S-0210	PCBs	Pentachlorobiphenyl	**J**
PMA-MW-4S-0210	PCBs	Heptachlorobiphenyl	**J**
PMA-MW-4S-0210	PCBs	Octachlorobiphenyl	**J**

Sample ID	Parameter	Analyte	Qualification
PMA-MW-4S-0210	PCBs	Nonachlorobiphenyl	**J**
PMA-MW-4S-0210	PCBs	DCB Decachlorobiphenyl	**J**
PMA-MW-4S-0210-DL	PCBs	Trichlorobiphenyl	**J**
PMA-MW-4S-0210-DL	PCBs	Hexachlorobiphenyl	**J**

9.0 Laboratory Duplicate Results

Were laboratory duplicate samples collected as part of this SDG?

No

10.0 Field Duplicate Results

Were field duplicate samples collected as part of this SDG?

Yes

Field ID	Field Duplicate ID
PMA-MW-2M-0210	PMA-MW-2M-0210-AD

Were field duplicates within evaluation criteria?

Yes

11.0 Sample Dilutions

For samples that were diluted and nondetect, were undiluted results also reported?

Not applicable; analytes were detected in samples that were diluted.

12.0 Additional Qualifications

Were additional qualifications applied?

No

Job Narrative
680-55249-1 I SDG KPM031

Receipt
All samples were received in good condition within temperature requirements.

GC/MS Semi VOA
Method(s) 680: Sample PMA-MW-1S-0210 (680-55283-5) was diluted due to abundance of target analytes. As such, surrogate recoveries are not reported and elevated reporting limits (RLs) are provided.

Method(s) 680: Surrogate recovery for the following sample(s) was outside the upper control limit: PMA-MW-1S-0210 (680-55249-1); PMA-MW-75-0210-EB (680-55249-5). The sample did not contain any target analytes; therefore, re-extraction and/or re-analysis was not performed.

Method(s) 680: The internal standards in the original extract for PMA-MW-3S-0210 (680-55283-3) were lost in the extraction and/or concentration process in the initial extraction and a valid analysis could not be obtained from this extract. The sample was re-extracted outside of holding time and successfully analyzed with acceptable internal standard and surrogate recovery. The results for the extraction outside of holding time are presented in the report.

No other analytical or quality issues were noted.

Comments
No additional comments.

DATA REPORTING QUALIFIERS

Client: Solutia Inc

Job Number: 680-55249-1
Sdg Number: KPV007

Lab Section	Qualifier	Description
GCMS Semi VOA		
	U	Indicates the analyte was analyzed for but not detected
	E	Result exceeded calibration range
	H	Sample was prepped or analyzed beyond the specified holding time
	X	Surrogate is outside control limits
	D	Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D

Question	T/F/NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	3 coolers rec'd on ice
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	2.6, 1.8 and 1.8 C
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	N/A	
Samples do not require splitting or compositing.	N/A	
Is the Field Sampler's name present on COC?	N/A	
Sample Preservation Verified	True
