

US EPA ARCHIVE DOCUMENT

TABLE OF CONTENTS

Executive Summary: Background and Findings..... ES-1

- ES.1 GHGs and Climate Change ES-1
- ES.2 Climate Change Initiatives in the United States..... ES-2
- ES.3 Municipal Solid Waste and GHG Emissions ES-4
- ES.4 Genesis and Applications of the Report..... ES-5
- ES.5 The Impact of Municipal Solid Waste on GHG Emissions..... ES-6
- ES.6 Results of the Analysis ES-12
- ES.7 Other Life-Cycle GHG Analyses and Tools ES-17
- ES.8 Limitations of the Analysis ES-19

1. Life-Cycle Methodology 1

- 1.1 The Overall Framework: a Streamlined Life-Cycle Inventory 2
- 1.2 MSW Materials Considered in the Streamlined Life-Cycle Inventory 2
- 1.3 Key Inputs for the Streamlined Life-Cycle Inventory 5
- 1.4 Summary of the Life-Cycle Stages 8
- 1.5 Estimating and Comparing Net GHG Emissions 14

2. Raw Materials Acquisition and Manufacturing 17

- 2.1 GHG Emissions from Energy Use in Raw Materials Acquisition and Manufacturing 17
- 2.2 Nonenergy GHG Emissions from Manufacturing and Raw Materials Acquisition 21
- 2.3 Results 21
- 2.4 Limitations 21

3. Source Reduction and Recycling..... 31

- 3.1 GHG Implications of Source Reduction..... 31
- 3.2 GHG Implications of Recycling..... 32
- 3.3 Open Loop Recycling..... 36
- 3.4 Source Reduction Through Material Substitution..... 38
- 3.5 Forest Carbon Sequestration 38
- 3.6 Limitations 45

4. Composting 49

- 4.1 Potential GHG Emissions..... 49
- 4.2 Potential Carbon Storage..... 50
- 4.3 Net GHG Emissions From Composting..... 60
- 4.4 Limitations 61

5. Combustion 65

- 5.1 Methodology 67
- 5.2 Results 76
- 5.3 Limitations 76

6. Landfilling..... 79

- 6.1 CH₄ Generation and Carbon Storage for Organic Materials 80
- 6.2 Fates of Landfill CH₄ 86

6.3	Utility CO ₂ Emissions Avoided.....	88
6.4	Net GHG Emissions from Landfilling	88
6.5	Limitations	90
7.	Energy Impacts.....	97
7.1	Methodolgy for Developing Energy Factors	97
7.2	Energy Implications for Waste Management Options	98
7.3	Applying Energy Factors.....	99
7.4	Relating Energy Savings to GHG Benefits	100
8.	Energy and Emission Benefits.....	107
8.1	Net GHG Emissions for Each Waste Management Option.....	107
8.2	Applying GHG Emission Factors.....	109
8.3	Tools and Other Life-Cycle GHG Analyses	112
8.4	Opportunities for GHG Reductions.....	114
Appendix A. Raw Materials Extraction Reference Point		125
Appendix B. Carbon Dioxide Equivalent Emission Factors.....		127
Appendix C. Roadmap from the Second Edition		135

TABLE OF EXHIBITS

Exhibit ES-1 Net GHG Emissions from Source Reduction and MSW Management Options.....ES-8
 Exhibit ES-2 Components of Net Emissions for Various MSW Management StrategiesES-10
 Exhibit ES-3 Greenhouse Gas Sources and Sinks Associated with the Material Life Cycle.....ES-11
 Exhibit ES-4 Net GHG Emissions from Source Reduction and MSW Management Options.....ES-14
 Exhibit ES-5 GHG Emissions of MSW Management Options Compared to LandfillingES-15

Exhibit 1-1 Materials Analyzed and Energy-related Data Sources4
 Exhibit 1-2 Greenhouse Gas Sources and Sinks Associated with the Material Life Cycle.....9
 Exhibit 1-3 Components of Net Emissions for Various MSW Management Strategies10

Exhibit 2-1 Carbon Coefficients For Selected Fuels (Per Million Btu)23
 Exhibit 2-2 GHG Emissions from the Manufacture of Selected Materials24
 Exhibit 2-3 Process GHG Emissions Per Ton of Product Manufactured from Virgin Inputs.....26
 Exhibit 2-4 Transportation GHG Emissions Per Ton of Product Manufactured from Virgin Inputs27
 Exhibit 2-5 Process GHG Emissions Per Ton of Product Manufactured from Recycled Inputs28
 Exhibit 2-6 Transportation GHG Emissions Per Ton of Product Manufactured from Recycled
 Inputs29
 Exhibit 2-7 Retail Transport Energy and Emissions30

Exhibit 3-1 GHG Emissions for Source Reduction.....34
 Exhibit 3-2 Composition of Mixed Paper Categories35
 Exhibit 3-3 Loss Rates For Recovered Materials36
 Exhibit 3-4 Relationship Between Paper Recovery and Pulpwood Harvest40
 Exhibit 3-5 Increased Forest Carbon Storage per Unit of Reduced Pulpwood Harvest.....41
 Exhibit 3-6 Change, with respect to baseline, in carbon stocks for FORCARB II pools.....42
 Exhibit 3-7 Forest Carbon Storage from Recycling and Source Reduction.....43
 Exhibit 3-8 GHG Emissions for Recycling46

Exhibit 4-1 Soil Carbon Storage--Colorado and Iowa sites; 10, 20, and 40 tons-per-acre
 Application Rates56
 Exhibit 4-2 Incremental Carbon Storage as a Function of Nitrogen Application Rate57
 Exhibit 4-3 Total Soil C; Iowa Site, Corn Harvested for Grain58
 Exhibit 4-4 Incremental Carbon Storage: MTCE/Wet Ton Versus Time59
 Exhibit 4-5 Difference in Carbon Storage Between Compost Addition and Base Case60
 Exhibit 4-6 Net GHG Emissions from Composting61

Exhibit 5-1 Gross Emissions of GHGs from MSW Combustion70
 Exhibit 5-2 Avoided Utility GHG Emissions from Combustion at Mass Burn and RDF Facilities71
 Exhibit 5-3 Estimating the Weighted Average Carbon Coefficient of the U.S. Average Mix of
 Fuels Used to Generate Electricity73
 Exhibit 5-4 Estimating the Emission Factor for Utility Generated Electricity74
 Exhibit 5-5 Avoided GHG Emissions Due to Increased Steel Recovery from MSW at WTE
 Facilities75
 Exhibit 5-6 Net GHG Emissions from Combustion at WTE Facilities77

Exhibit 6-1 Landfill Carbon Mass Balance81
 Exhibit 6-2 Experimental and Adjusted Values for CH₄ Yield and Carbon Storage84
 Exhibit 6-3 CH₄ Yield for Solid Waste Components85
 Exhibit 6-4 Carbon Storage for Solid Waste Components85

Exhibit 6-5 Composition of Mixed Paper Categories from Barlaz Experiments87

Exhibit 6-6 GHG Emissions from CH₄ Generation.....89

Exhibit 6-7 Calculation to Estimate Utility GHGs Avoided through Combustion of Landfill CH₄92

Exhibit 6-8 Net GHG Emissions from Landfilling93

Exhibit 6-9 Net GHG Emissions from CH₄ Generation at Landfills with Recovery94

Exhibit 6-10 Net GHG Emissions from CH₄ Generation at Landfills with Recovery95

Exhibit 7-1 Energy Savings per Ton Recycled98

Exhibit 7-2 Recycling GHG Benefits Attributable to Energy Savings (Recycling vs. Landfilling)99

Exhibit 7-3 Energy Consumed/Avoided for Source Reduction101

Exhibit 7-4 Energy Consumed/Avoided for Recycling.....102

Exhibit 7-5 Energy Consumed/Avoided for Combustion103

Exhibit 7-6 Energy Consumed/Avoided for Landfilling104

Exhibit 7-7 Net Energy Consumed/Avoided from Source Reduction and MSW Management
Options105

Exhibit 7-8 Energy Consumed/Avoided for MSW Management Options Compared to Landfilling106

Exhibit 8-1 Recommended Surrogates for Voluntary Reporting108

Exhibit 8-2 GHG Emissions for Source Reduction.....116

Exhibit 8-3 GHG Emissions for Recycling117

Exhibit 8-4 GHG Emissions for Composting.....118

Exhibit 8-5 GHG Emissions for Combustion.....119

Exhibit 8-6 GHG Emissions for Landfilling120

Exhibit 8-7 Net GHG Emissions from Source Reduction and MSW Management Options121

Exhibit 8-8 Net GHG Emissions of MSW Management Options Compared to Landfilling122

Exhibit A-1 Net GHG Emissions from Source Reduction and MSW Management Options -
Emissions Counted from a Raw Materials Extraction Reference Point.....125

Exhibit A-2 Net GHG Emissions from Source Reduction and MSW Management Options - Emissions
Counted from a Raw Materials Extraction Reference Point126

Exhibit B-1 Net GHG Emissions from Source Reduction and MSW Management Options -
Emissions Counted from a Waste Generation Reference Point (MTCO₂E/Ton).....127

Exhibit B-2 GHG Emissions of MSW Management Options Compared to Landfilling
(MTCO₂E/Ton)128

Exhibit B-3 GHG Emissions for Source Reduction (MTCO₂E/Ton of Material Source Reduced)129

Exhibit B-4 Recycling (GHG Emissions in MTCO₂E/Ton).....130

Exhibit B-5 Composting (GHG Emissions in MTCO₂E/Ton)131

Exhibit B-6 Combustion (GHG Emissions in MTCO₂E/Ton)132

Exhibit B-7 Landfilling (GHG Emissions in MTCO₂E/Ton)133

Exhibit C-1 GHG Emissions for Source Reduction137

Exhibit C-2 GHG Emissions for Recycling138

Exhibit C-3 Net GHG Emissions from Composting139

Exhibit C-4 Gross Emissions of GHGs from MSW Combustion139

Exhibit C-5 Net GHG Emissions from Landfilling.....140
