

Appendix V - PM CEMS Converted Data - Three-Hour Rolling Average

This appendix contains the three-hour rolling average developed from the converted data (in units of the standard, mg/dscm @ 7% O₂). The files are presented in a comma-delimited text (CSV) format file and compiled in a main directory named "RollAvg" with subdirectories "yyyyyyzzzz.csv," using abbreviations "yyyyyy" for the PM CEMS name (e.g., durag) and "zzzz" for the month and year (e.g., 0996 for September 1996).
