

Appendix T - Flue Gas Parameters

This appendix contains data for the stack gas parameters (temperature, pressure, moisture, and O₂) that were used to convert the raw PM CEMS response into units of the standard (mg/dscm @ 7% O₂). These data are contained in a directory named “parameters” in a comma-delimited text (CSV) format with two subdirectories. One subdirectory has the pressure, moisture, and O₂ data organized on a monthly basis in files named “xxxsum.csv” with “xxx” representing monthly abbreviations (e.g., oct). A second file is for the 1-minute average temperature data organized monthly in files named “tempxxx.csv” with “xxx” representing monthly abbreviations.
