

## Appendix V - PM CEMS Converted Data - Three-Hour Rolling Average

This appendix contains the three-hour rolling average developed from the converted data (in units of the standard, mg/dscm @ 7% O<sub>2</sub> ). The files are presented in a comma-delimited text (CSV) format file and compiled in the main directories using the PM CEMS names (e.g., ENVSA for the Environment SA monitor) with subdirectories “yyyyyzzzz.csv,” using abbreviations “yyyyy” for the PM CEMS name (e.g., durag) and “zzzz” for the month and year (e.g., 0996 for September 1996).

This appendix is merged with Appendix S.
