I. Introduction

Mercury emissions and mercury-bearing wastes have been an item of concern for federal, state, and local jurisdictions for several years. Given health concerns about the toxicity of mercury, domestic mercury consumption should continue to decline as mercury is gradually eliminated in many products and as substitute products are developed. Recovery of mercury from obsolete or worn out items remains the primary source of domestic mercury. Domestic primary production is expected to remain limited to byproduct production where the mercury is recovered to avoid emissions to the environment¹. The Environmental Protection Agency (EPA) finalized a regulation on May 19, 1980 (55 *FR* 11798) that identified wastes with mercury concentrations above a threshold as characteristically hazardous (D009). D009 wastes are defined as any waste that is characteristically hazardous based on the concentration of mercury in its leachate as determined by the Toxicity Characteristic Leaching Procedure (TCLP).

The Hazardous and Solid Waste Amendments (HSWA) to the Resource Conservation and Recovery Act (RCRA) require the EPA to establish treatment standards for all listed and characteristic hazardous wastes destined for land disposal. As of the Third Third Rule (55 *FR* 22520, June 1, 1990), Land Disposal Restrictions (LDR) wastewater and nonwastewater treatment standards have been established for six waste codes (i.e., D009, K071, K106, P065, P092, and U151) which contain mercury as the primary hazardous constituent. Some of these standards were revised when EPA promulgated Universal Treatment Standards in the Phase II LDR Rule (59 *FR* 47980, September 19, 1994). Further revisions to the treatment standards for mercury-bearing wastes were made in the Phase IV Final Rule (63 *FR* 28556, May 26, 1998). Table 1 below presents the current LDR treatment standards for mercury-bearing wastes.

Table 1: Treatment Standards for Mercury-Bearing Wastes

Waste Code	Waste Description	Wastewater mg/l ³	Nonwastewater
D009	Nonwastewaters that exhibit, or are expected to exhibit, the characteristic of toxicity for mercury based on the toxic characteristic leaching procedure (TCLP) in SW846; and contain greater than or equal to 260 mg/kg total mercury that also contain organics and are not incinerator residuals (High Mercury-Organic Subcategory)	NA	IMERC; or RMERC
	Nonwastewaters that exhibit, or are expected to exhibit, the characteristic of toxicity for mercury based on the toxic characteristic leaching procedure (TCLP) in SW846; and contain greater than or equal to 260 mg/kg total mercury that are inorganic, including incinerator residues and residues from RMERC (High Mercury-Inorganic Subcategory)	NA	RMERC

¹ U.S. Department of the Interior, U.S. Geological Survey. Mineral Commodity Summaries 1998: Mercury. Pp 108-109. January 1998.

Waste Code	Waste Description	Wastewater mg/l ³	Nonwastewater
	Nonwastewaters that exhibit, or are expected to exhibit, the characteristic of toxicity for mercury based on the toxic characteristic leaching procedure (TCLP) in SW846; and contain less than 260 mg/kg total mercury and that are residues from RMERC only (Low Mercury Subcategory)	NA	0.20 mg/L TCLP and meet 268.48 standards
	Nonwastewaters that exhibit, or are expected to exhibit, the characteristic of toxicity for mercury based on the toxic characteristic leaching procedure (TCLP) in SW846; and contain less than 260 mg/kg total mercury and that are not residues from RMERC only (Low Mercury Subcategory)	NA	0.025 mg/L TCLP and meet 268.48 standards
	All D009 Wastewaters	0.15 & meet 268.48 stds	NA
	Elemental mercury contaminated with radioactive materials (Note this subcategory consists of nonwastewaters only)	NA	AMLGM
	Hydraulic oil contaminated with Mercury Contaminated Radioactive Materials Subcategory (Note this subcategory consists of nonwastewaters only)	NA	IMERC
K071	K071 nonwastewaters that are residues from RMERC	NA	0.20 mg/l TCLP
	K071 nonwastewaters that are not residues from RMERC	NA	0.025 mg/l TCLP
	All K071 wastewaters	0.15	NA
K106	K106 nonwastewaters that contain greater than or equal to 260 mg/kg total mercury	NA	RMERC
	K106 nonwastewaters that contain less than 260 mg/kg total mercury that are residues from RMERC	NA	0.20 mg/l TCLP
	Other K106 nonwastewaters that contain less than 260 mg/kg total mercury and are not residues from RMERC	NA	0.025 mg/l TCLP
	All K106 wastewaters	0.15	NA
P065	Mercury fulminate nonwastewaters, regardless of their total mercury content, that are not incinerator residues or are not residues from RMERC	NA	IMERC
	Mercury fulminate nonwastewaters that are either incinerator residues or are residues from RMERC; and contain greater than or equal to 260 mg/kg total mercury	NA	RMERC
	Mercury fulminate nonwastewaters that are residues from RMERC and contain less than 260 mg/kg total mercury	NA	0.20 mg/l TCLP
	Mercury fulminate nonwastewaters that are incinerator residues and contain less than 260 mg/kg total mercury	NA	0.025 mg/l TCLP
	All mercury fulminate wastewaters	0.15	NA

Waste Code	Waste Description	Wastewater mg/l ³	Nonwastewater
P092	Phenyl mercuric acetate nonwastewaters, regardless of their total mercury content, that are not incinerator residues or are not residues from RMERC	NA	IMERC; or RMERC
	Phenyl mercuric acetate nonwastewaters that are either incinerator residues or are residues from RMERC; and still contain greater than or equal to 260 mg/kg total mercury	NA	RMERC
	Phenyl mercuric acetate nonwastewaters that are residues from RMERC and contain less than 260 mg/kg total mercury	NA	0.20 mg/l TCLP
	Phenyl mercuric acetate nonwastewaters that are incinerator residues and contain less than 260 mg/kg total mercury	NA	0.025 mg/l TCLP
	All phenyl mercuric acetate wastewaters	0.15	NA
U151	U151 nonwastewaters that contain greater than or equal to 260 mg/kg total mercury	NA	RMERC
	U151 nonwastewaters that contain less than 260 mg/kg total mercury and that are residues from RMERC only	NA	0.20 mg/l TCLP
	U151 nonwastewaters that contain less than 260 mg/kg total mercury and that are not residues from RMERC	NA	0.025 mg/l TCLP
	All U151 wastewaters	0.15	NA
	Elemental Mercury contaminated with radioactive materials	NA	AMLGM

Since promulgating these rules, the Agency has become aware of information and data indicating that the treatment standards for some categories of these wastes may be inappropriate. This paper analyzes the current status of mercury waste generation and treatment in light of the new information and the implementation of full Subtitle C regulation.

Under the existing LDRs, treatment by stabilization and subsequent disposal is not an option for wastes containing greater than or equal to 260 mg/kg total mercury. The reason given in the Third Third rule for this regulation is that there is a “strong preference in the land disposal restrictions legislation for treatment standards to be based on recovery where possible” (55 *FR* 22570, June 1, 1990). In addition, the Third Third proposed rule states that for high mercury subcategory nonwastewaters, the leachability of mercury actually increases with the addition of alkaline stabilization reagents (54 *FR* 48440, November 22, 1989).

Retorting is currently the required treatment technology for organic and inorganic high mercury subcategory wastes (note: incineration is also specified as a technology that can be, or in some cases is required to be, used for organic high mercury wastes). Retorting or roasting (RMERC) occurs in a thermal processing unit capable of volatilizing mercury and subsequently condensing the volatilized mercury for recovery. The RMERC unit (or facility) must comply with

one or more emission standards for mercury², while all wastewater and nonwastewater residues derived from this process must then comply with the corresponding treatment standards per waste code, with consideration of any applicable subcategories.

IMERC is the incineration of wastes containing organics and mercury in units operated in accordance with the technical operating requirements of 40 CFR Part 264 Subpart 0 and Part 265 Subpart 0. IMERC is currently either required or allowed as an option to RMERC for organic high-mercury wastes. The rationale for this standard given in the Third Third rule is that incineration will destroy the organic component of organomercury complexes or mixtures, so that the mercury present in the waste can be subsequently recovered from the incineration residuals.

New information has become available to suggest that mercury and organomercury compounds will be vaporized by IMERC, rather than remaining in the ash. Further, mercury air emissions may not be adequately controlled. In light of EPA's current recognition of mercury as a high priority pollutant, it appears that the general preference for recovery instead of immobilization may not be appropriate for some categories of mercury wastes.

II. Mercury Waste Generation and Treatment

The primary source of information for this report is the 1995 Biennial Reporting System (BRS) database. Under RCRA, large quantity generators, and treatment, storage, and disposal facilities (TSDFs) of hazardous waste are required to provide information concerning their waste generation and management to their state environmental agencies. This data collection occurs every two years, and data are passed on to EPA to assist in assessing the generation and management of hazardous waste on a national basis.

Many variables can affect the interpretation and reliability of BRS data, particularly at a facility-specific level. For instance, the BRS does not collect treatment data at the treatment unit level. A single waste may undergo several treatment steps in different units (i.e., a treatment train) prior to land disposal. This can result in a "generalization" of actual waste treatment steps and requires facilities to pick among the BRS system-type codes to find the one that best describes the treatment system. Also, generators who treat wastes at their own facilities can "double-count" waste streams in BRS. In order to lessen the degree of overlap in the generation data calculations, BRS data was compiled from facilities sending wastes to be treated. Appendix A describes the methodology used to extract the data from the BRS.

A. Mercury Waste Generation

This section identifies the general industry sectors, and specific generators producing mercury wastes. Table 2 lists the total generation rate for each waste type and for the six main mercury

² RMERC facilities are subjected to: a) National Emissions Standard for Hazardous Air Pollutants (NESHAP); b) Best Available Control Technology (BACT) or a Lowest Achievable Emission Rate (LAER) standard imposed pursuant to a Prevention of Significant Deterioration (PSD) permit; or, c) state permit that establishes emission limitations (within section 302 of the Clean Air Act).

waste codes. The five waste type categories were determined by BRS Form Codes (B Codes) which are codes used to describe the waste's form³. The elemental mercury category is defined as BRS form code B117; inorganic sludges are form codes B501-B516 and B519; inorganic solids other than soil are form codes B303 - B316 and B319; soils are form codes B301 and B302; and lab packs are form codes B001 - B004, and B009. "Inorganic Solids Other Than Soil" is the largest category, by volume, of mercury-bearing hazardous wastes generated and D009 was reported as the highest produced waste code. However, the D009 quantity may be overestimated due to reporting of waste streams with multiple codes (i.e., wastes may be reported twice, once to a specific waste code, and again to D009 which is a general mercury characteristic waste code). Appendix 1 contains a complete list of generators, the amount of waste generated, and the SIC codes of the waste generated.

Table 2: Generation of Mercury-Bearing Hazardous Wastes in 1995 by Waste Code (Tons) and Waste Form⁴

Waste Type	TOTAL	D009	K071	K106	P065	P092	U151
Elemental Mercury	1,374	1,359	0	0	0	2	116
Inorganic Sludges	20,655	17,104	3,393	991	0	6	853
Inorganic Solids Other Than Soil	190,342	187,531	9,259	9,128	9,607	9,607	26,079
Soil	24,863	22,700	6,293	6,364	14	6,299	8,464
Lab Packs	6,358	6,339	1	10	189	397	933
Total	243,592	235,033	18,946	16,493	9,810	16,311	36,445

Source: 1995 Biennial Reporting System, GM Form Data

Appendix B lists the 589 generators (12.4%) that produce more than 10 tons of mercury waste a year. The facilities in this appendix account for 13,468,515.88 tons (99.9%) of the total

³Although the Form Code is not required to be reported in all 50 states, most mercury waste streams from the GM form did report a form code.

⁴Columns do not sum to the total for all waste codes because waste streams may carry more than one waste code, resulting in double-counting.

mercury waste generated.⁵ Overall, there are 4,758 total mercury waste generators, producing 13,472,985.77 tons of mercury waste.

Table 3 is a summary table of the information presented in full in Appendix B. The table is organized by SIC code in order to show the major generation of mercury wastes by industry.

Table 3: Generation of Mercury-Bearing Hazardous Wastes in 1995, by SIC Code (Tons)⁶

SIC Code	Waste Description	Quantity Generated	Number of Waste Streams	Number of Facilities
2869	Industrial organic chemicals, nec	5,001,509	315	161
4953	Refuse systems	3,235,221	1,756	82

B. Mercury Waste Treatment

⁵ Four facilities generated 51% of the mercury wastes. These facilities also account for a large fraction of the on-site treatment quantities. DOW Chemical Company, Freeport TX generates 3,094,394.60 tons/year wastewaters, and manages 1,475,699.20 (47.7%) tons on-site by M085 (Other aqueous organic treatment). Kennecott Utah Copper-Smelter of Magna Utah generates 1,378,836.53 tons/year of wastewaters and manages all of it on-site by M078 (Other aqueous inorganic treatment). Rollins Environmental Services, Baton Rouge LA generates 1,265,740.78 tons/year of nonwastewaters, which it manages by M121 (Neutralization only). And Rollins Environmental of Bridgeport, NJ generates 1,136,965.40 of nonwastewaters and manages 99.4% of the waste on-site by M136 (Direct discharge to surface water under NPDES--no prior treatment).

⁶Only SIC codes with a total generation greater than 10,000 tons are included in this table.

This section discusses and provides tables for mercury waste treatment practices. Treatment data are presented separately for nonwastewaters and wastewaters since LDR treatment requirements are specific to nonwastewaters and wastewaters.

Table 4 compares the quantities of waste managed by different treatment technologies, based on 1993 and 1995 BRS data. Although inconclusive, some large differences exist between the data sets. 1995 incineration rates are, in some cases, more than double 1993 reports. 1995 data also states that aqueous organic and inorganic treatment practices have decreased by half since 1993. Three anomalies exist in the 1993 and 1995 data: almost 1.5 million tons of waste were reported in 1995 to be air/stream stripped and 1.1 million tons was discharged directly to surface water under NPDES with no prior treatment, while no wastes were reported to be managed by these technologies in 1993; and in 1995 an additional 1.5 million tons were reported to be neutralized only, a substantial increase from the 12,335 tons reported in 1993.

Table 4: Comparison of Mercury Wastes Total Quantity, 1993 and 1995 (Tons)

BRS Treatment Outcome Category	BRS System Code	BRS System Description	Total Quantity (1993) (tons)	Total Quantity (1995) (tons)
Metals Recovery (for reuse)	M011	High temperature metals recovery	6.42	5.95
	M012	Retorting	1,572.24	3,202.51
	M014	Other metals recovery for reuse: e.g., ion exchange, reverse osmosis, acid leaching, etc.	1,873.75	1,655.56
	M019	Unknown metals recovery	74.96	219.84

Transfer Facility Storage	M141	Transfer facility storage, waste was shipped off site with no on-site TDR activity		103,779.72

Source: 1995 Biennial Reporting System Database, GM Form Data

As was seen in Table 1, mercury waste generation and treatment standards are dependent on whether the waste is a wastewater or a nonwastewater. As defined in CFR 40 Part 268.2, wastewaters are wastes that contain less than one percent by weight total organic carbon (TOC) and less than one percent by weight total suspended solids (TSS). Nonwastewaters are wastes that do not meet the criteria for wastewaters.

1. Wastewaters

Because the BRS does not provide waste characterization data, it is difficult to accurately determine whether or not a waste meets the LDR definition of wastewater. Therefore, using engineering judgement, each BRS waste stream was assigned to either the wastewater or nonwastewater category. Similar to the form coding system, BRS also uses treatment categories (M Codes) to describe a waste stream's treatment. Using BRS treatment categories, all wastes were considered to be wastewaters if they were treated using the following processes:

- Aqueous Inorganic Treatment (M071-M079)
- Aqueous Organic Treatment (M081 - M083, M085)
- Aqueous Organic and Inorganic Treatment (M091, M092, M094, M099)
- Other Treatment (M121, M122, M124)
- Disposal (M134 - 136)

Refer to Appendix C-1 for a complete list of mercury wastewater treaters. 140 facilities treat wastewaters on- and off-site. A total of 11,623,887 tons/year are treated on-site while a total of 38,030 tons/year are treated off-site.

Table 5 presents treatment information on mercury waste wastewaters treated on-site and off-site. The table is organized by treatment outcome category, and then broken down by specific management system.

Table 5: Mercury Waste Wastewater Managed On-Site and Off-Site, 1995 (Tons)

BRS Treatment Outcome Category	BRS System Code	BRS System Description	Quantity Managed On-Site (tons)	Quantity Managed Off-Site (tons)
Aqueous Inorganic Treatment	M071	Chrome reduction followed by chemical precipitation	2,670.27	75.47
	M072	Cyanide destruction followed by chemical precipitation		525.81
	M073	Cyanide destruction only		2.03
	M074	Chemical oxidation followed by chemical precipitation	26,318.31	6.03
	M077	Chemical precipitation	2,857,365.87	14,143.38
	M078	Other aqueous inorganic treatment (e.g., ion exchange, reverse osmosis)	2,188,212.39	4.85
	M079	Aqueous inorganic treatment - type unknown	3.03	7.03
Aqueous Organic Treatment	M081	Biological treatment	768,726.10	1.15
	M082	Carbon adsorption	1,403.51	130.53
	M083	Air/stream stripping	1,475,699.20	
	M085	Other aqueous organic treatment		3,393.42
Aqueous Organic and Inorganic Treatment	M091	Chemical precipitation in combination with biological treatment	844,463.01	118.91
	M092	Chemical precipitation in combination with carbon adsorption	3300.79	
	M094	Other organic/inorganic treatment		7,124.38
	M099	Aqueous organic and inorganic treatment - type unknown	530.73	
Other Treatment	M121	Neutralization only	1,465,704.95	1,459.90
	M122	Evaporation only	1,142.41	0.12
	M124	Phase separation (e.g., emulsion breaking, filtration) only	4,066.42	612.10
Disposal	M134	Deepwell/Underground injection	853,692.84	10,379.76
	M135	Direct discharge to sewer/POTW (no prior treatment)		45.55

BRS Treatment Outcome Category	BRS System Code	BRS System Description	Quantity Managed On-Site (tons)	Quantity Managed Off-Site (tons)
	M136	Direct discharge to surface water under NPDES (no prior treatment)	1,130,587.99	

Source: 1995 Biennial Reporting System Database, GM and WR Form Data

2. Nonwastewaters

Using BRS treatment categories, all wastes were considered to be nonwastewaters if they were treated using the following processes:

- Metals Recovery (for reuse) (M011, M012, M014, M019)
- Solvents Recovery (M021-M023)
- Other Recovery (M032, M039)
- Incineration (M041-M044, M049)
- Energy Recovery (reuse as fuel)(M051-M053)
- Fuel Blending (M061)
- Sludge Treatment (M101)
- Stabilization (M111, M112, M119)
- Other Treatment (M125, M129)
- Disposal (M132, M137)
- Transfer Facility Storage (M141)

Appendix C-2 consists of a complete list of mercury nonwastewater treaters. 623 facilities treat mercury waste nonwastewaters. 1,736,036.55 tons/year is managed on-site while 725,766.91 tons/year is managed off-site.

Table 6 quantifies the mercury-waste nonwastewater treated on-site and off-site. The table is organized by treatment outcome category, and then broken down by specific management systems. It appears that generally more nonwastewater is treated on-site than off-site.

Table 6: Mercury Waste - Non-Wastewater Managed On-Site and Off-Site, 1995 (Tons)

BRS Treatment Outcome Category	BRS System Code	BRS System Description	Quantity Managed On-Site (tons)	Quantity Managed Off-Site (tons)
Metals Recovery (for reuse)	M011	High temperature metals recovery	1.14	4.81
	M012	Retorting	470.94	2,731.57
	M014	Other metals recovery for reuse: e.g., ion exchange, reverse osmosis, acid leaching, etc.	33.02	1,622.54
	M019	Unknown metals recovery	85.54	134.30

C. Facilities Generating and Treating High Mercury Wastes

As mentioned earlier, a waste is considered a high mercury waste its total mercury content is greater than or equal to 260 mg/kg. Since waste concentration data are not available through the BRS, wastes managed with treatment technologies that are typically used for high mercury wastes (e.g., roasting and retorting, and incineration) were assigned to the high mercury waste category. These technologies are only used for wastes that have high enough levels of mercury in order to be recoverable. Incineration may include low mercury wastes, because the wastes may need to be incinerated due to their high inorganics content (i.e., PCBs and dioxins). However, no high mercury wastes will be left out of the count.

⁷ 998,851.01, or 99.9%, of this waste has a form code of B119 - other inorganic liquids

1. Facilities Generating High Mercury Wastes

Appendix D identifies the 207 facilities that generate over 10 tons/year of high mercury wastes. These facilities generate 368,773.40 tons/year (99.5%) of the total high mercury waste. A total of 1198 facilities are determined to be high mercury waste generators, and generate a total of 370,004.99 tons/year.

2. Facilities Treating High Mercury Wastes

The following table identifies the 57 facilities treating high mercury wastes. This table is organized by state, and gives the facility name, EPA ID, address, SIC code, and the quantity of waste managed (either on-site or off-site). Data is from 1995 Biennial Reporting System, GM and WR Form Data.

D. Exports of High Mercury Wastes

The following table identifies the quantity of mercury wastes which were exported in 1995. An exported waste stream is identified by the EPA ID of the facility to which a waste is being shipped. On a BRS GM form, if the EPA ID number of the facility that the waste was shipped to is reported as “FC” followed by the name of a foreign country or other codes, then the waste stream is counted as an export. Approximately 71% of the wastes are exported to Canada. The remainder are exported to unspecified foreign countries.

Table 8: Quantity of Mercury-Bearing Hazardous Wastes Exported in 1995 By Waste Code (Tons)⁸

Waste Type	All Waste Codes	D009	K071	K106	P065	P092	U151
Elemental Mercury	<1	<1	0	0	0	0	0
Inorganic Sludges	507	507	0	0	0	0	458
Inorganic Solids Other Than Soil	3,016	2,769	0	449	0	0	0
Soil	1,270	1,270	0	0	0	0	0
Lab Packs	52	51	0	0	0	0	19
Other waste types ⁹	4,314	4,314	0	0	0	0	0
Total	9,159	8,911	0	449	0	0	477

Source: 1995 Biennial Reporting System, GM Form Data

Table 9 identifies the four facilities that export their high mercury waste, reported to the 1995 Biennial Reporting System, WR Form Data.

Table 9: Facilities Exporting High Mercury Wastes

EPA ID	Site/Company Name	City	State	Zip Code	Quantity Generated
MAD000604447	Laidlaw Environmental Services	Lawrence	MA	018401400	4,013.13
MAD053452637	Clean Harbors of Braintree, Inc.	Braintree	MA	021840000	114.44
OHD077786309	GSX Chemical Services of Ohio, Inc.	Cleveland	OH	441130000	138.57
WAD000812909	Burlington Environmental, Inc.	Seattle	WA	98108	994.99

⁸Columns do not sum to the total for all waste codes because waste streams may carry more than one waste code, resulting in double-counting.

⁹Approximately 76% of this quantity falls under the category of organic liquids/solvent solutions.

Appendix A: BRS Mercury Data Extraction Methodology

Mercury Data Extraction Methodology

The data used in the tables describing mercury waste streams were taken from the 1995 Biennial Reporting System (BRS). The data were downloaded from EPA's hazardous waste internet site (<http://www.epa.gov/epaoswer/hazwaste/data/>). The data are the "raw data" reported by the states, and have not been altered by EPA Headquarters or determined to be "RCRA-regulated" or "RCRA-exempt."

The BRS collects information on two types of waste streams: those that are generated on-site by large quantity generators (these wastes can then be either managed on-site or sent off-site for treatment), and those that are received by TSDFs from off-site and managed on-site. The former is collected on the GM form and the latter is collected on the WR form. Data from both the GM and WR forms were used in this report.

The BRS GM and WR form data were first limited to mercury-bearing wastes, or those wastes with the following EPA hazardous waste codes: D009, K071, K101, K102, K106, P065, P092, and U151. Generation quantities were extracted from the GM form. If a waste was managed on-site, the management system type code and corresponding on-site management quantity were also taken from the GM form data. The off-site management quantities were extracted from the WR form data for waste streams carrying one of the waste codes listed above. Similar to the GM form, a system type code and corresponding off-site (received) quantity are reported on the WR form.

Note: SIC codes are only reported on the GM form, therefore facilities who receive waste from off-site and manage it on-site may not be associated with a SIC code.
