MEMORANDUM

Subject: 10/15/01 Voice Mail Message for Jill Knickerbocker, Waste Management, Inc. from Laurie Solomon, EPA

I left a voice mail message for Jill Knickerbocker inquiring whether Waste Management's Model City facility had an on-site incinerator or whether it received all of its incinerator ash from other locations. If it is the latter, I requested Ms. Knickerbocker to provide us with a list of facilities that send their ash to the Model City facility for treatment and disposal or simply disposal.

Subject: 10/16/01 Voice Mail Message from Jill Knickerbocker, Waste Management, Inc.

Ms. Knickerbocker said that the Model City facility does not have an on-site incinerator. Some of the ash that they currently have is from Trade Waste's incinerator in Sauget, IL and some of it is from Waste Technologies Industries' (WTI) incinerator in East Liverpool, OH. In the future, the WTI facility may have more K088 that they would like to burn and send the ash to Model City. In addition, the Onyx incinerator in Port Arthur, TX has K088 derived-from waste that they would like to burn. The resulting ash may go to Model City.
