

US EPA ARCHIVE DOCUMENT

**APPENDIX E
COMMENTER DATA**

**EXHIBIT E-1
COMMENTS SUBMITTED IN RESPONSE TO THE ANPRM**

Commenter	Issues Addressed	Data Submitted
Koppers Industries, Inc.	F032/34 wastewaters are usually discharged to POTWs.	None.
Vulcan Chemicals	F032 wastes may be difficult to treat because of dioxins.	None.
American Wood Preserving Institute	Wood preserving waste generation and management. The number of wood preserving plants has declined. F035 wastewaters are recycled in process.	None.
James Graham Brown Foundation	Remedial actions at former wood preserving plants owned by the foundation.	One site has 8,000 cubic yards of contaminated soil.
Beazer East	Remedial actions at wood preserving sites. Incineration capacity will be overwhelmed by contaminated soil. F032 wastes may contain dioxins and be very difficult to treat. Impact of LDRs on closed wood preserving sites.	At 31 wood preserving sites, 2,180,800 cubic yards of contaminated soil was removed. The entire wood preserving universe could generate 85,300,000 cubic yards of contaminated soil through remedial actions.
Hazardous Waste Treatment Council	F032 wastes may contain dioxins and be very difficult to treat.	None.
Beazer East (Second Comment)	Biotreatment for wood preserving soils is currently prohibited as land disposal.	One remedial site in Montana has 75,000 cubic yards of contaminated soil and rock.
