MEMO

Date: December 31, 2009

To: The Record

From: Jim Kohler

Subject: Tri-State Escalante Response to EPA Final Report

There are no coal combustion waste impoundments on-site. Impoundments on-site are for temporary storage of scrubber sludge to facilitate drying and wastewater evaporation. Coal combustion waste is disposed of in the on-site landfill. Most fly ash is shipped off site as commercial product. This facility was flagged for assessment based on the hazard ratings and survey responses for units thought to be used for permanent disposal of wet CCWs. A site visit revealed that no unit met the criteria for assessment. Accordingly, no response letter from Tri-State was required in response to EPA's Final Report.
