Willamette-Ecosystem Services Project

“a place-based study”

**Linking Human Well-Being with
Ecosystem Services**

Willamette Ecosystem Services Project

Presenters:

- **Dixon Landers –Project Leader/Limnologist**
 - Introduction to WESD/Wrap-up
- **Jana Compton – Biogeochemist/Nitrogen**
 - Approach to ES Mapping for WESD
 - Knowledge Gaps
- **Bob McKane – Ecosystem Ecologist/modeler**
 - Quantification of ES Responses to Stressors and Trade-offs
 - Modeling Synthesis

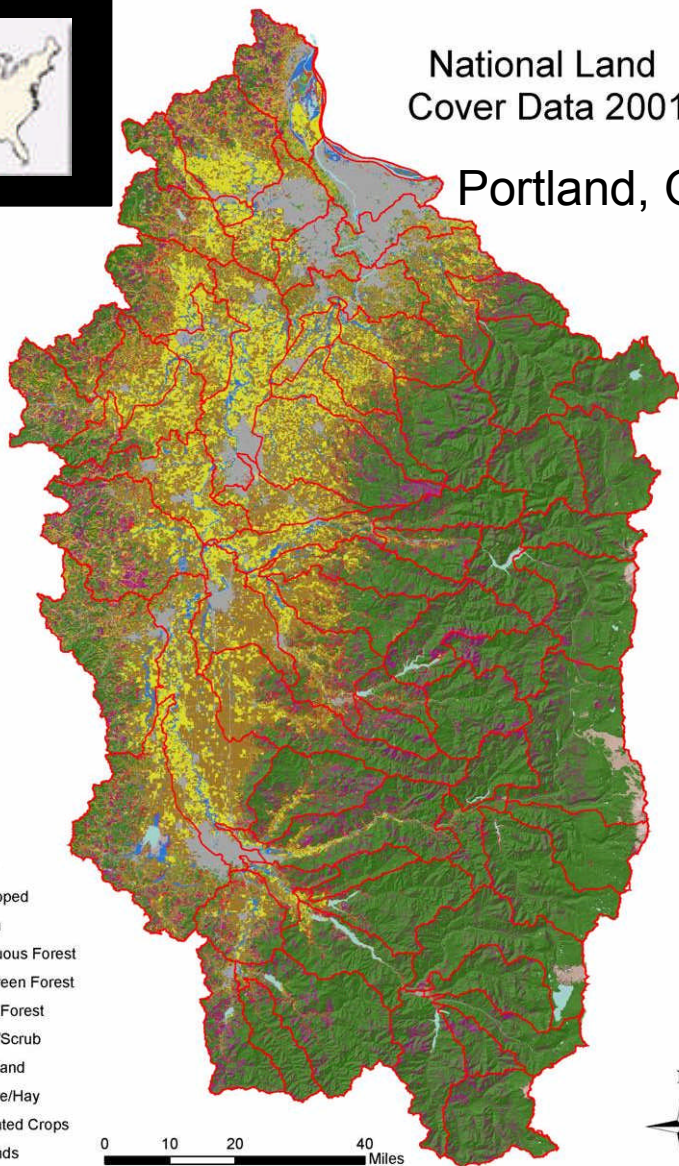

National Land
Cover Data 2001

Portland, OR

WESD Landscape

- Water
- Developed
- Barren
- Deciduous Forest
- Evergreen Forest
- Mixed Forest
- Shrub/Scrub
- Grassland
- Pasture/Hay
- Cultivated Crops
- Wetlands

- 70% forest
- 20% Ag; 8% urban
- Not all forests are equal
 - High elevation (N sensitive or N retentive?)
 - Broadleaf vs. Conifer
- Cultivated vs. grass seed crops
- Role of wetlands (riparian and isolated)

Overall Goal:

The W-ESP seeks to provide a scientific basis in the form of a decision support system for valuing and projecting ecological services resulting from alternative management decisions

Objectives:

Provide a model-based approach that predicts responses of ecosystem services to probable future conditions.

Identify critical knowledge gaps in the ecological processes underlying ecosystem services.

Quantify ecosystem services, including their distribution, status, and responses to current and projected future conditions.

Evaluate net benefits of bundled ecosystem services and tradeoffs among management actions that affect these services.

CLIMATE OF OPPORTUNITY

Why the Willamette?

- Willamette “Ecosystem Service District” provides a broad range of Land-Use/Land-Cover, stressors, gradients, and diverse, linked settings
- WED Alternative Futures research experience (mid 1990’s) = rich data sets, experienced researchers, potential collaborators (NRCS, USACE, USDA-FS, USGS, OWOW, etc.)
- Well Connected Research and Regulatory Entities now Working toward future Ecosystem Service trading (Region X)
- Multiple related Star Grant recipients (OSU, OU, PSU)
- Willamette Partnership (State Non-Profit)
- Trading Scenario for Temperature (riparian wetland ecosystem service) rapidly developing – EPA Funding with Region X oversight
- ORD Multi-Year Plan – Ecosystem Research Program: provides explicitly context

Outcomes:

- Clean rivers
- Fish & Wildlife
- Flood control
- Timber & Crops
- Wetlands

Forcing Variables:

- Predicted climate change
- Air pollution
- Land use management
- Population growth

Place-Based Societal Issues & Values

Research Targeted to Develop Ecological Response Functions (ERF) and Ecological Trade-off Functions (ETF)

Natural & Anthropogenic Stressors
Past Present & Future

Ecosystem Structure & Functioning
Production Pools
Decomposition Flows
Ag-/De-gradation
Land-Water Interactions

- C-Sequestration
- N-control
- Critical habitat
- Riparian wetland ES bundles
- Other services

Mapped Ecosystem Services

Inventory of Current Ecosystem Services: Approach and Knowledge Gaps

1. Identify key ecosystem services (ES) for WESD
2. Determine appropriate units for ES
3. Develop an approach to inventory and map ES
4. Identify knowledge gaps in assessing ES

1. *Identify key ecosystem services (ES)*

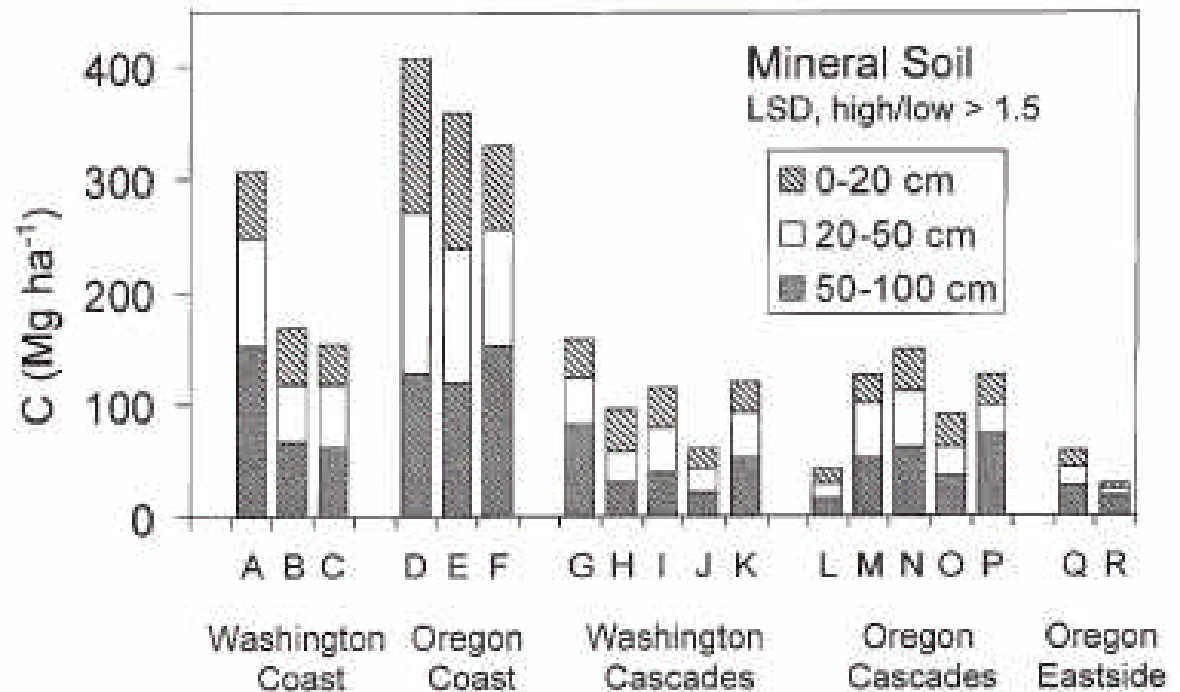

- Crop production
 - food and fiber

Stakeholder Interactions Ongoing...

1. Identify key ecosystem services (ES)

- Crop production
- Carbon storage
 - climate and gas regulation

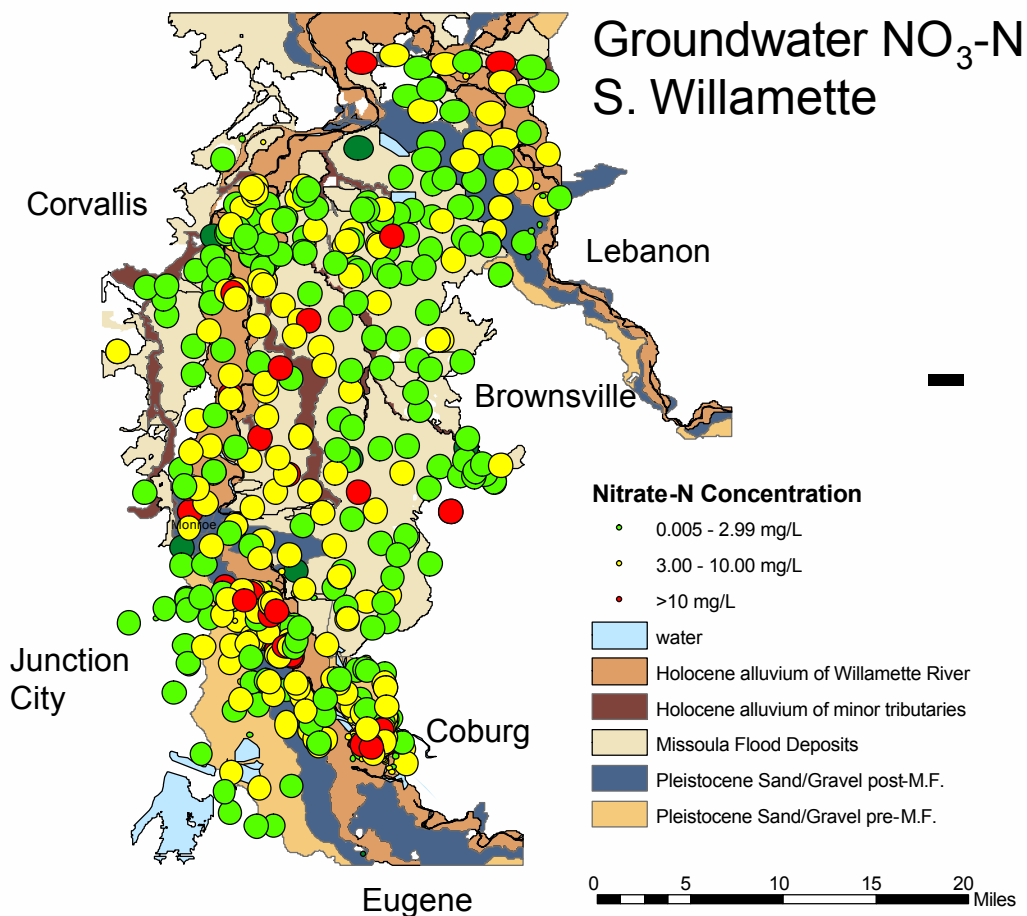

Homann et al. 1994 SSSAJ

1. Identify key ecosystem services (ES)

- Crop production
- Carbon storage
- Water purification and quality
 - focused on N removal
 - also includes mercury, temperature, P, DO and suspended sediments

Ecosystem service: Nitrogen removal from water flowpaths

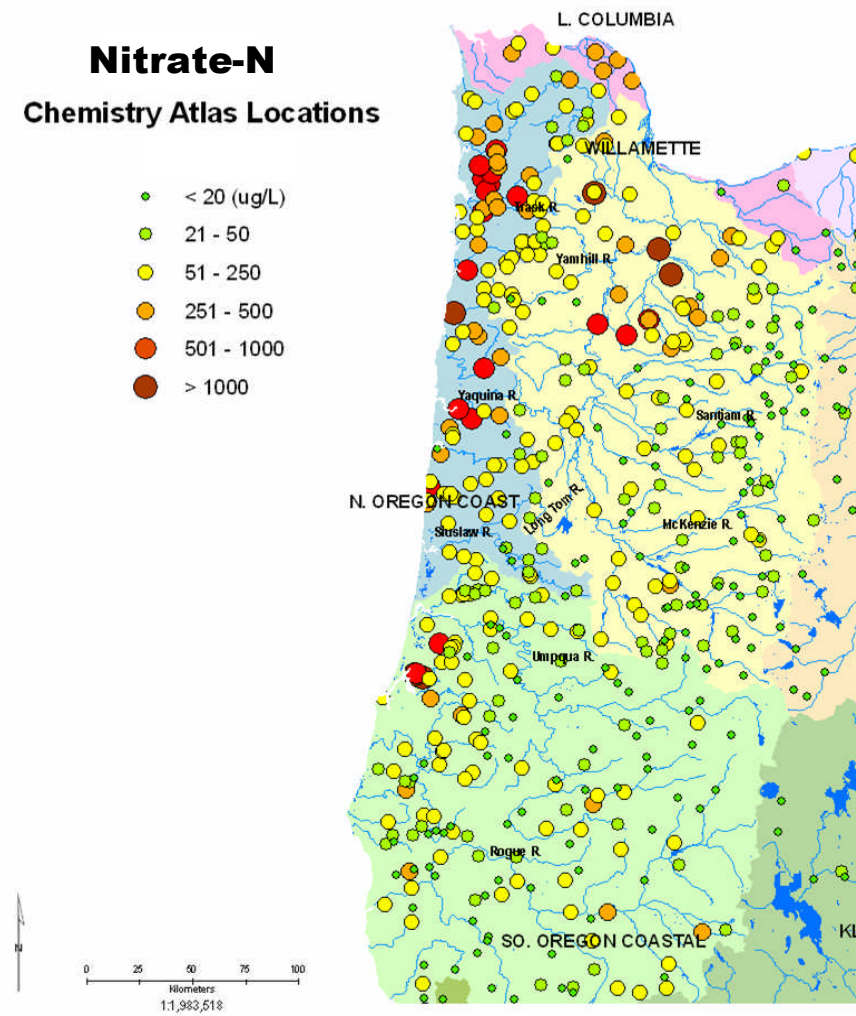

- Drinking water wells >10 mg nitrate-N L⁻¹
- Sources?
- Ecosystem service of N removal along flowpaths
 - Agroecosystems
 - Riparian areas
 - Groundwater****
 - Research gap

Relating Landscapes and stream N

- Many data points available, time resolution is poor
- Loading from atmospheric deposition models, USDA-ARS collaborators, ATtILA
- In-stream processing – models like SPARROW

Nitrate-N
Chemistry Atlas Locations

1. *Identify key ecosystem services (ES)*

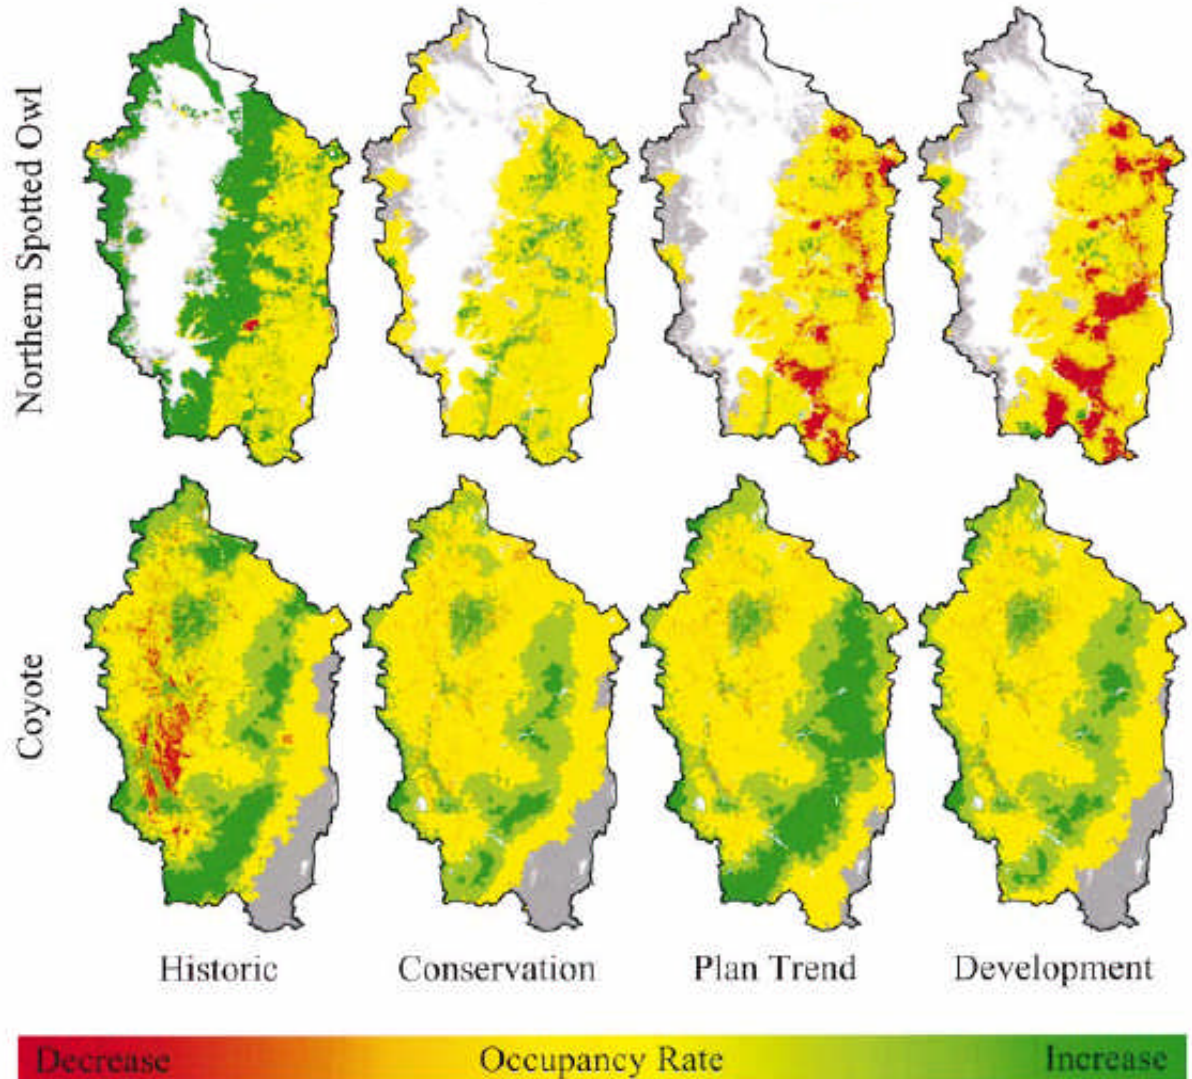

- Crop production
- Carbon storage
- Water purification
- **Water provision**
 - Quantity and timing

1. Identify key ecosystem services (ES)

- Crop production
- Carbon storage
- Water purification
- Water provision
- **Habitat provision**
 - Aquatic (Collaboration with EPA-NERL Athens)
 - Terrestrial

Existing maps of habitat, water and crop values from the Willamette Alternative Futures work.

1. *Identify key ecosystem services (ES)*

- Crop production
- Carbon storage
- Water purification
- Water provision
- Habitat provision
- Others?

1. *Identify key ecosystem services (ES)*

- Crop production
- Carbon storage
- Water purification
- Water provision
- Habitat provision
- Others?

Your face here?

2. Determine appropriate units for key ecosystem services

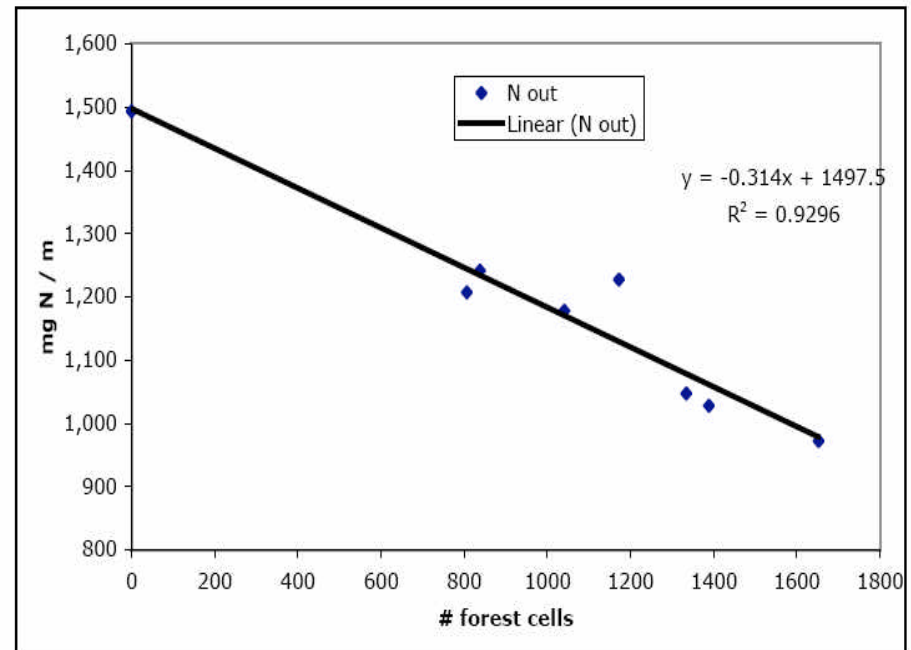

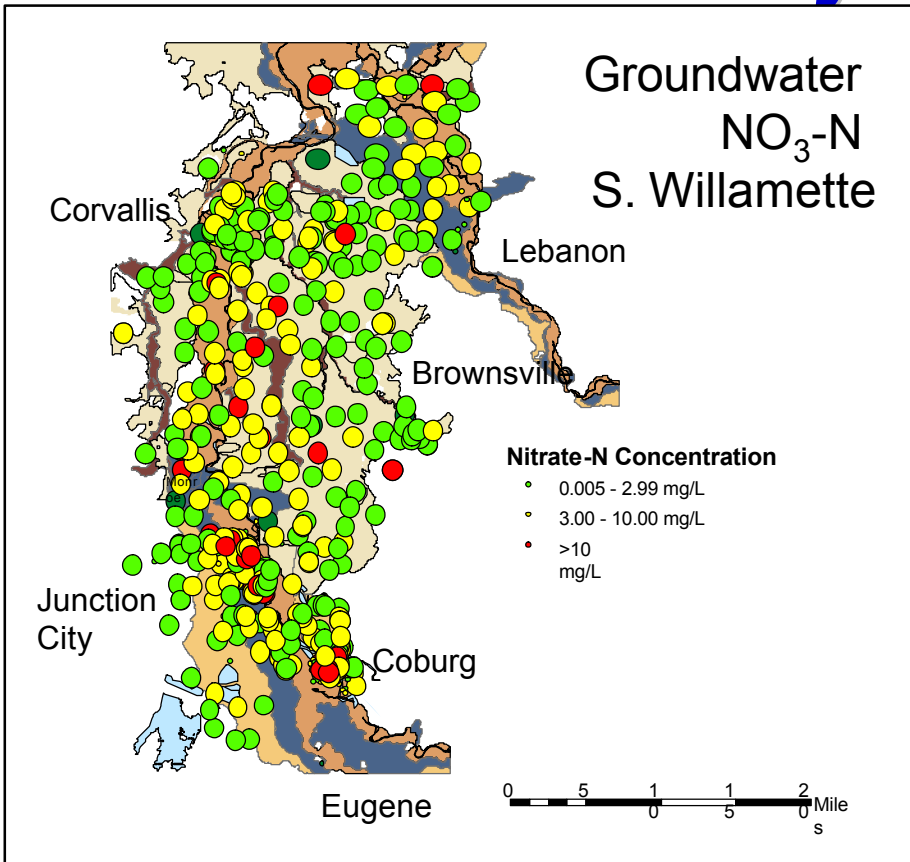

Figure 11: Response of total nitrogen in estuary to the number of forested cells on the watershed.

Costanza et al., NJ report

2. Determine appropriate units for key ecosystem services

Retention of ^{15}N varies by ecosystem type

$0.5 \text{ kg } ^{15}\text{N ha}^{-1}$

Fate

O horizon
Fine Roots (=1mm)
Coarse roots (>1mm)

SOM
CPOM
Charcoal
Microbial N
Extractable DIN/DON

2. Determine appropriate units for key ecosystem services

Retention of ^{15}N varies by ecosystem type

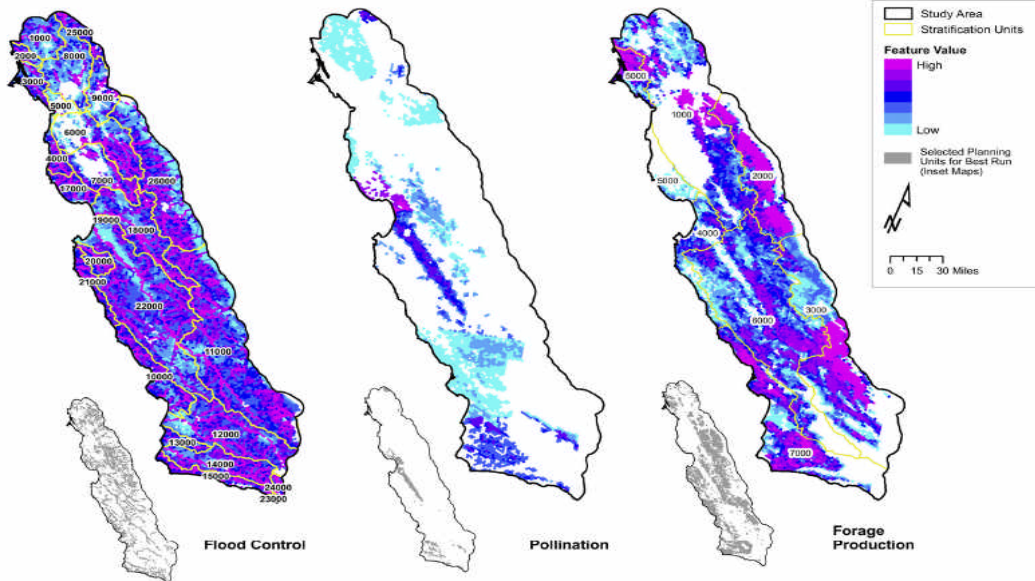

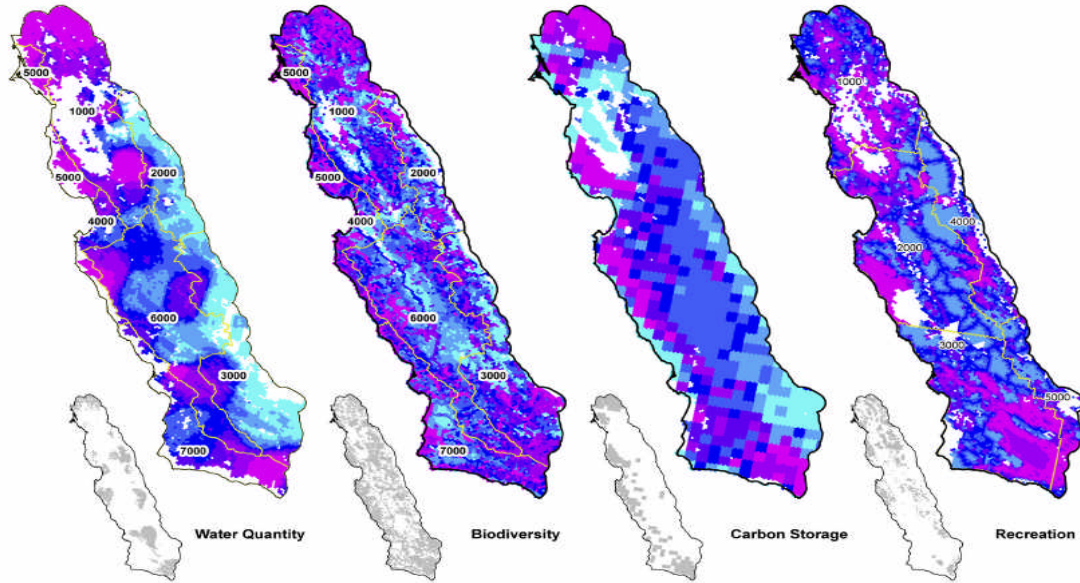

$0.5 \text{ kg } ^{15}\text{N ha}^{-1}$

- SOM**
- CPOM**
- Charcoal**
- Microbial N**
- Extractable DIN/DON**

Horizon
Roots (=1mm)
Coarse roots (>1mm)

3. *Develop an approach to inventory and map ES*

Inventory and mapping the location and value of Ecosystem Services is an essential component of W-ESP (Chan et al. 2006)

3. Develop an approach to inventory and map ES

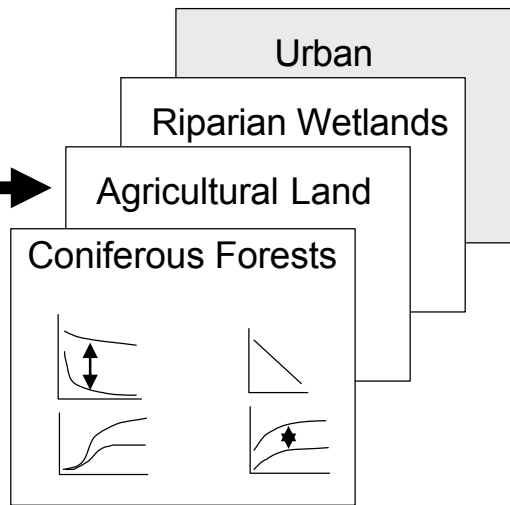

- Early Product for W-ESP
- Cuts across all place-based research
- Illustrates the natural “bundling” of services by land use
- Provides a visual of ecosystem services
- Good way to share information with stakeholders

4. Identify knowledge gaps in assessing WESD ecosystem services

- Ecosystem type
- Stressor
- Ecosystem service

Approach to Conceptualizing W-ESP Forcing Variables and Their Priority

Definition of Terms

- **Forcing Variables (Stressors)**
 - Factors, both natural and anthropogenic, affecting quantifiable changes in the status (e.g. amounts & fluxes) of ecosystem processes

- **ERF: Ecological Response Function**
 - The response of an ecosystem service to a particular forcing variable

- **ETF: Ecological Trade-off Function**
 - The relationships between two (or more) ecosystem services in response to the same forcing variable (...and, eventually, multiple forcing variables)

Ecosystem Service vs. Forcing Variable = ERF

ERF Y-axis: Ecosystem Services

- Crop Yield
- Water Quality
- Water Quantity
- Carbon Sequestration
- N_2O , NO_x , CH_4

ERF X-axis: Forcing Variables

- N Fertilization (amount, timing)
- Harvest (interval, intensity, residues)
- Climate (Temp, Precip, Light, CO_2)
- Cover type (% landscape coverage)
- Riparian buffers (width, age, species)

EVOLAND, <http://evoland.bioe.orst.edu/>

"I think you should be more explicit here in step two."

Evoland – General Structure

Willamette Ecosystem Services Project

Annual Performance Goals

Year 1 APG (FY 2008) Apply the Environmental Decision Toolkit to existing Willamette alternative futures data sets to determine its feasibility as a preliminary decision support tool for WESP.

Year 2 APG (FY 2009) Map and inventory of status and trends for key ecosystem components and processes in the Willamette River Basin.

Year 3 APG (FY 2010) Address critical knowledge gaps between ecological processes and ecosystem services, so that measured processes can be translated into quantifiable ecosystem services.

Year 4 APG (2011) At an appropriate scale, determine the location and value of bundled ecosystem services in the Willamette Valley incorporating W- ESP research outputs that link Ecosystem service indicators and functions.

Year 5 APG (FY 2012) **Provide tool(s) that are used by Region X decision makers during FY 2013 to evaluate bundles of ecosystem services and options for their management and protection in the Willamette ecosystem services**

61 **district.**

GRANDIOSE MODEL!!

Status Assessment

■ Strengths

- - ~ 7 Ecology (aqua., terr., soil, plant)/3 Modeling FTE
- Strong research experience and buy-in to WESP
- Strong Division Support
- Excellent and engaged research community and pledges of collaboration
- Engaged 1^o Client – Region X

■ Weaknesses

- Thin in some critical skill areas: valuation, spatial eco-economics
- Current projected budget is restrictive
