## Early Achievements in Air Quality and Health

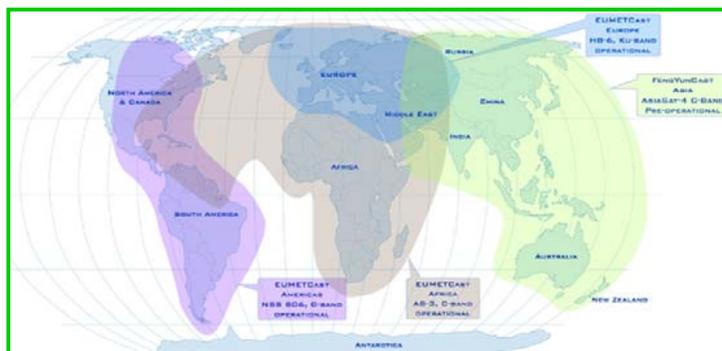

Progress in dust forecasting and early warning for populations at risk for cardiovascular and chronic respiratory diseases like asthma and myocardial infarction

Examples of air quality and /health models based on geospatial techniques, satellite data assimilation techniques, and bio-statistical techniques from air quality centers and laboratories in the United States and European Union. These are all produced by GEO members and participating organizations to facilitate health decisions.

**Global weather services for health alerts**

GEONETCast (EUMETSAT)

Orange boxes = emerging products;  
 Red boxes = developmental;  
 Green boxes = collaborations
