

US EPA ARCHIVE DOCUMENT

Introduction to the GEOSS Registries: Components, Services, and Standards

Doug Nebert
U.S. Federal Geographic Data
Committee

June 2007

Group of
Earth Observations

Approach

- GEO Process and GEOSS architecture required registration of contributed components from Members and Participating Organizations
- To facilitate access to GEOSS resources, the automation of the Component registration process and service information was recommended with reference to registered standards
- This supports GEOSS Clearinghouse and GEOSS Web Portal discovery and usage of online services

Registry credits

- George Mason University contributed this implementation based on open source registry implementations (Sun Service Registry, GMU CSW service)
- FGDC staff and AR-07-01 and -02 participants have provided design guidance, testing, and comments

Managed information resources

- GEOSSE Components Registry
- GEOSSE Services Registry
- GEOSSE Standards Registry (external, hosted by IEEE) for service types, data formats, schemas, and other standards
- Identification of “special arrangements” (non-standard practice)

GEOSS Registries

GEO Registries Context

Populating the Registers

- Populate the GEOSS registers
 - Identify the standards, interface protocols and interoperability agreements in use
 - Provide information to the Clearinghouse as it is brought online
- Analyze successful data integration projects, showing
 - why and how interoperability arrangements were made and maintained
 - how the interoperability arrangements worked under the computer and network environment of the time
 - what the impacts were of these arrangements

Group on
Earth Observations

The Standards and Interoperability Forum

- A Standards and Interoperability Forum (SIF) is being formed to carry out impartial review of GEOSS interoperability issues and to recommend solutions.
- Helping to establish the SIF and refining its protocols and procedures is one of the key objectives of the IP3.

Demo of GEOSS Component and Service Registry

- The following slides are screenshots of interaction with the GEOSS Component and Service Registry
- Content reflects on-line capabilities as of June 1, 2007
- Changes are being made constantly in response to requests and comments

GEOSS Registry Publication Portal

[Component Registration](#)

A "GEOSS Component" is a part of GEOSS contributed by a GEO Member or Participating organization. Example types of components include observing systems, data processing systems, dissemination systems, educational programmes, or other initiatives. Components may expose service interfaces to provide access to earth observation-related functions and/or data. Components are described in the GEOSS Component Registry.

[Service Registration](#)

A "Service" in GEOSS is functionality provided by a component through component system interfaces. Services communicate primarily using structured messages, based on the Services Oriented Architecture view of complex systems. Services may be associated with GEOSS-registered standards to promote interoperability. Services are described, along with information about their operating organizations, in the GEOSS Service Registry.

[Search and Modify](#)

The "Search and Modify" feature allows a user to locate components and services that have been registered with GEOSS, primarily to update them. This basic search interface can be emulated and

Once logged in, these are the choices shown. Although this user interface allows for limited search, the capabilities are intended only for identifying and updating entries internally. The GEOSS Web Portal and Clearinghouse are designed to handle primary public interaction

Once registered as a user, one can enter Component information.

GEOSS Component Registration

* Required Fields

Component Basic Infomation

Component Name*:

U.S. Geospatial One-Stop

Abbreviation:

geodata.gov

Description*:

This Component provides comprehensive access to U.S. geospatial data and services. It enables publishing of data sets through the collection or harvest of descriptive metadata and enables search and visualization of geospatial data through certain standards-based services.

GEO Sponsor*:

United States

Responsible
Organisation:

U.S. Geological Survey

URL to Component
Information:

http://geodata.gov

Component Contact Information

Contact Name*:

GEOSS Component Registration Confirmation

You have successfully registered a GEOSS Component.

Component Id: urn:uuid:4509b59b-ce95-4d71-ae1c-a7dc04867606

Component Name: U.S. Geospatial One-Stop

[Register a Service for this Component](#)

Once a Component entry is complete, it is saved and can be edited and/or approved by the GEO Secretariat as having come from a GEO Member or Participating Organization.

Next Step: Enter Service or Quit.

Most pages have an option for a user to enter feedback in the form of bugs, enhancements, or questions that will be considered in Registry deployment

GEOSS Service Instance Registration

* Required Fields

Service Basic Information

Component ID*: Service Instance Name*: Abbreviation:

“Help” is available on most entry fields in the forms in the form of a blue question mark that causes a pop-up note to appear

The page at <http://uddi.csiss.gmu.edu> says:

The URL used to invoke the service.

OK

eodata.gov

mscsw/csw2.0?service=CSW&request=getcapabilities eodata.gov  

Click in the box to enter value in decimal format, e.g. 37.234)

Extent is specified
in EPSG:4326

Description*:

This interface provides standard access to the Geospatial One Stop national metadata catalog through the Open Geospatial Consortium (OGC) Catalogue Service interface, Version 2.0.1 supporting the FGDC Profile.

The geographic extent of service coverage can be captured here and will be supplemented with a javascript placename gazetteer and map search widget

- Service Geographic Extent is specified in EPSG:4326 (Lat/Long) CRS.
- The valid latitude values are from -90.0 to 90.0.
- The valid longitude values are from -180.0 to 180.0.

-180

71

-65

18

Service Time Period of Information Content (Click in the box to enter value or use a calendar)

- e.g. 2001
- e.g. 2001-01-01

Start Date:

Begin Date

or

Indefinite Start

End Date:

End Date

or

GOOURLs to Registries

GEOSS Component and Service Registry

- <http://uddi.csiss.gmu.edu/geosspub>

GEOSS Standards Registry

- <http://seabass.ieee.org/groups/geoss/>

The banner features the GEOSS logo on the left, which consists of the letters 'GEO' in a stylized, overlapping blue and green font. To the right of the logo, the text 'GEOSS Web Portals' is written in a large, bold, blue sans-serif font. The background of the banner is a light blue and green abstract design with a faint image of the Earth's surface and a satellite dish on the right side.

GEOSS Web Portals

- General and adaptive user interface capabilities sought to organize access to GEO information
- Could be deployed as a GEO front-end to all GEOSS resources and SBA
- Could be re-deployed by any entity to provide standards based access to GEO-wide and community resources.

Functional Requirements

- Support client access to catalogs, map services, and data services through standards-based interfaces
- Provides user interface for search on the GEOSS Registry
- Low/minimal cost of re-deployment
- Readily customizable and extensible

Group for
Earth Observations

Nice-to-haves

- Community-management tools and portlets
- Content management capabilities including teaching materials, documents
- Ability to integrate multiple disparate resources and services
- Place to reference or host end-user support applications

GEOS Web Portals

- RFI issued to identify capabilities in late 2006 of re-deployable geospatial portals
- Call for Participation issued in early 2007 to identify offers of portal solutions
- Web Portal offers will be technically qualified in fall 2007
- Opportunity for usability analysis and further user community engagement into 2008

FOCUS ON

IGARSS, 23-27 July 2007, Barcelona, Spain

The 27th International Geoscience And Remote Sensing Symposium (IGARSS) will be held this year in Barcelona, Spain. IGARSS has become an international focus for remote sensing theory, programs, applications and state of the

SHOWCASE

The Elbe region in Saxony was affected by heavy flooding following strong rainfall in conjunction with snowmelt in the Krkonose Mountains (Czech Republic). The Elbe river rose to a level of 7.45 meters. In the city of Dresden, areas near the river had to be evacuated. Along the Elbe, whole districts of several towns were flooded. A state of emergency was declared in

Breaking News

Widespread flooding, the worse since 1954, over 24 Chinese provinces caused over 500 deaths and 3 million evacuations, with enormous damage to dams, roads, buildings and crops. In Mengwa, near Chongqing in the Fujian basin, about 150,000 people were stranded on high ground when the Wangjia dam was opened to evacuate floodwaters. In Chongqing Municipality about 29,500 houses collapsed between 17 and 18 July.

About

NASA's Earth Science Gateway (ESG) streamlines access to remote geospatial data,

imagery, models, and visualizations through open, standard Web protocols. By organizing detailed metadata about online resources into a flexible, searchable registry, it lets scientists, decision-makers, and others access a wide variety of observations and predictions of natural and human phenomena related to Earth Science, from NASA and other sources.
