**DEMONSTRATION PLAN FOR THE EVALUATION OF FIELD-TRANSPORTABLE
GAS CHROMATOGRAPHY/MASS SPECTROSCOPY TECHNOLOGIES**

Environmental Technology Evaluation Program
Consortium for Site Characterization Technologies

Sponsored by:
U.S. Environmental Protection Agency
National Exposure Research Laboratory
Characterization Research Division
Las Vegas, Nevada

APPROVAL SIGNATURES

This document is intended to ensure that all aspects of the demonstration are documented, scientifically sound, and that operational procedures are conducted within quality assurance and quality control specifications and health and safety regulations.

The signatures of the individuals below indicate concurrence with, and agreement to operate in compliance with, procedures specified in this document.

FINAL DEMONSTRATION PLAN

Art Verardo, Sandia National Laboratories Date
Project Manager

Grace Bujewski, Sandia National Laboratories Date
Project Leader

Susan Bender, Sandia National Laboratories Date
Technical Lead

Gary Brown, Sandia National Laboratories Date
QA/QC Officer

Bob Helgesen, Sandia National Laboratories Date
Field Operations Coordinator

Stephen Billets, EPA NERL-CRD-LV Date
Program Manager

Eric Koglin, EPA NERL-CRD-LV Date
Program Manager

Gary Robertson, EPA NERL-CRD-LV Date
Technical Lead

Mike Barcelona, National Center for Bioremediation Date
Research and Development, University of Michigan, Ann Arbor

Mike Lee, Wurtsmith AFB Date
Site Demonstration Safety Officer

Mark Henry, Wurtsmith AFB Date
Site Manager

Joe Rossabi, Westinghouse Savannah River Date
Site Safety Officer

APPROVAL SIGNATURES

The signatures of the developers below indicate that they have reviewed the experimental design of the demonstration plan and agree that the design will fairly represent and evaluate the developer's claims regarding performance of their technologies.

The signatures of the individuals below indicate concurrence with, and agreement to operate in compliance with procedures specified in this document.

FINAL DEMONSTRATION PLAN

Dr. Jochen Franzen Date
Bruker-Franzen Analytic

Rich Yelton Date
Teledyne Electronic Technologies

Lisa White Date
Viking Instruments Corporation

ACKNOWLEDGMENTS

The EPA gratefully acknowledges the efforts and technical expertise of Susan Bender, SNL, and Gary Robertson, NERL CRD-LV, in drafting, planning and coordinating this document. Special thanks to Cecilia Diniz, a student at Bryn Mawr College, for editing and making significant contributions in the preparation of this document

Appendix D

Commerce Business Daily Notice

EXECUTIVE SUMMARY

The purpose of this document is to provide a strategy for collecting data that can be used to fairly and thoroughly evaluate the performance of field transportable GC/MS technologies for measuring volatile organic compounds in soil, soil gas and ground water. This demonstration is being conducted under the auspices of the Consortium for Site Characterization Technology (CSCT). The planning and execution of the demonstration is a collaborative effort between the Department of Energy's Sandia National Laboratories (demonstration planning, execution, data evaluation, and report preparation), the environmental technology demonstration programs at the Savannah River Site (SRS) and Wurtsmith AFB, which help to coordinate site logistics, and the technology developers (demonstration plan preparation and review, technology operation, and data evaluation).

The primary objectives of the demonstration are: (1) to verify vendor claims regarding technology performance, (2) to determine how well each developer's technology performs in comparison to conventional laboratory analytical methods and protocols, (3) to determine the logistical and economic resources needed to operate each instrument, and (4) to produce a verified data set for use in considering the technology for future use in hazardous waste site investigations, for assessing the performance of remediation technologies, and for post-clean up monitoring.

The developers participating in this demonstration are Bruker-Franzen Analytical, Billerica, Massachusetts, Teledyne Electronic Technologies, Mountain View, California, and Viking Instruments Corporation, Chantilly, Virginia. The demonstration will be conducted at two different sites. The first demonstration will be conducted at the Department of Energy's Savannah River Site from July 16-21, 1995. The second demonstration will be conducted at Wurtsmith Air Force Base in Oscoda, Michigan, from September 11-15, 1995. The conditions at each of these sites represent what are considered typical conditions under which the technology would be expected to operate, but it is not considered all inclusive.

Both sites are contaminated with chlorinated solvents and have a wide range of levels of contamination in the media of interest.

This demonstration plan defines the:

- Roles and responsibilities of the demonstration participants
- Procedures governing demonstration activities such as sample collection, preparation, and analysis, and data collection and interpretation
- Experimental design
- Quality assurance/quality control (QA/QC) procedures for conducting the demonstration and for assessing the quality of the data generated
- Health and safety requirements for performing work at the two demonstration sites
