Errata EMD-003 p.1

14 September 2006

To: John M. Carley
Program Analyst
U.S. Environmental Protection Agency
Office of Pesticide Programs

From: Scott P. Carroll, Ph.D.
Study Director

MEMORANDUM of ERRATA and CORRECTIONS, EMD-003

Page 11

8.1 Treatment Groups:

To more accurately describe the proposed study design, the text

There are two experimental groups, namely 1) a 'treated' group of subjects treated with the test products, of which there are three formulations, and 2) an untreated ('negative') control group.

is replaced with

There is one experimental group consisting of subjects testing repellent formulations, with their own untreated skin serving as a negative control.

Page 19

9.1.6 Enrollment of alternate subjects and its relation to individual privacy:

The second to last sentence is corrected by the insertion of the underlined text

Separate forms would also assume that we may fairly treat individual subjects unequally on the basis of postulated gender-based differences in the information they merit receiving in order to arrive at their informed consent decision.

Page 22

10.2 When Variable will be Assessed:

Text in the last paragraph is corrected by the insertion of the underlined text

Subjects will record any Crossings as they occur. Data are recorded in three-minute exposures at 15- minute intervals

Page 33 & 34

11.3.2. Repellency:

Text in the second paragraph of section is corrected by the deleted (struck through) and underlined text

Complete protection time (CPT) is measured as the length of time from initial application to the First Confirmed Crossing. A FCC is a Crossing followed by another Crossing within 30 minutes. For example, a Crossing at ~~120~~ 90 minutes followed by another at 135 minutes is not confirmed, but a third Crossing

Text in the fourth paragraph is corrected by replacing the word 'the' with 'that' (underlined)

Such complementary information is important because it gives a rate function for performance that is intuitively explicable,

13 QUALITY ASSURANCE:

For better accuracy, first two words 'An independent' have been replaced with those underlined

A separate, professional Quality Assurance Unit (QAU) will inspect
