This Final Rule does not govern employment eligibility verification, nor does it seek to change, for purposes of H–2A labor certification, the basic responsibility of employers under the INA. As we strongly cautioned in the NPRM, a SWA's responsibility to perform threshold, pre-referral verification exists separate from an employer's independent obligation under the Immigration Reform and Control Act of 1986 to verify the identity and employment authorization of every worker to whom it has extended a job offer. However, the governing statute does permit employers to rely on an employment verification conducted by the SWA to fulfill their statutory responsibilities. The INA—at sec. 274A(a)(5)—exempts employers from the verification requirement and provides a ''safe harbor'' from legal liability to employers, regardless of industry, who unwittingly hire an unauthorized worker where the hire is based on a SWA referral made in compliance with 8 CFR 274a.6, requiring appropriate documentation from the SWA certifying that verification has taken place. As discussed more fully below, the Department requires in this Final Rule that SWAs provide documentation meeting the requirements of sec. 274A(a)(5) of the INA and 8 CFR 274a.6 to each employer at the time the SWA refers the verified worker to the employer. Employers must retain a copy of the SWA certificate of verification just as it would retain a copy of Form I–9. Employers must still verify employment eligibility for workers who do not have a state certification that complies with all of the applicable statutory and regulatory requirements.

Some commenters were concerned that employers who hire SWA-referred workers may seek to hold SWAs responsible for referring unauthorized workers. The Department expects that any referrals a SWA makes to individual employers will comply with the requirements of Federal law, including those established in this Final Rule. For example, the preamble to the proposed rule directs SWAs to provide all referred employees with adequate documentation that verification of their employment has taken place, and clarifies that employers may invoke ''safe harbor'' protection only where the documentation complies with all statutory and regulatory requirements. We have clarified in the Final Rule the SWA's obligation to complete Form I–9 and provide evidence of such completion by providing the employer with a certification that complies with the DHS requirements for such certificate at 8 CFR 274a.6. However, employers have no obligation to hire a job applicant, whether or not referred by the SWA, who does not present the employer with appropriate documentation evidencing the applicant's work eligibility. As stated in the NPRM, an employer will not be penalized by the Department for turning away applicants who are not authorized to work. Additionally, as long as a SWA complies with the process established by DHS for State Workforce Agencies and undertakes good faith efforts to establish the employment eligibility of referred workers, it will not incur any potential liability. Although the Department certainly intends to hold SWAs responsible for complying with all program requirements, just as it has in the past, the Department is not aware of any basis under which SWAs could be held liable to third parties for failing to properly perform their employment verification responsibilities in the absence of willful or malicious conduct.

Many commenters raised a concern that these new procedures would have an unlawful, disparate impact on a protected class, or at least make states vulnerable to legal claims of disparate impact that would require the expenditure of significant resources to defend. More specifically, these commenters felt that to the extent the verification process is not applied to non-agricultural workers, it would have a disparate impact on agricultural workers, many of whom are Hispanic, and that could be perceived as unlawful discrimination on the basis of race or ethnicity. Some commenters were concerned that states would be forced to expend significant resources to defend lawsuits or, alternatively, that in order to protect against lawsuits, would be forced to apply the verification procedures to all job referrals.

The requirement to verify employment eligibility does not violate constitutional prohibitions against disparate impact. The eligibility requirement is established by statute and is similar to verification requirements to gain access to other similar public benefits. *See*, e.g., Section 432, Personal Responsibility and Work Opportunity Reconciliation Act of 1996, Public Law 104–193, 110 Stat. 2105 (employment eligibility verification requirement for most federal public benefits for needy families). As this regulation governs the H–2A foreign labor certification program, the clarification made here is limited to that program and to agricultural job referrals, but the Department proposed an analogous provision in the H–2B NPRM published on May 22, 2008, seeking to extend the same procedural employment verification requirements to that program. More generally, the clarification of the requirement in this regulation does not mean the Department's policy is limited only to agricultural referrals, as the Department's expectation is that SWAs will do what they can, including exercising their authority under 8 U.S.C. 1324a, to avoid expending public resources to refer unauthorized workers to any job opportunities, regardless of program area. The employment verification provisions included in this regulation are part of a much broader, concerted effort—one that includes regulation, written guidance, and outreach and education—to address longstanding weaknesses in the system and to strengthen the integrity of foreign labor certification activities.

Some commenters opined that the employment eligibility verification requirement presents an obstacle to employment for, and will reduce the pool of, the U.S. workers it is designed to protect. For example, these commenters stated that States are increasingly moving toward web-based employment services. The commenters believe an in-person verification requirement will require potentially

onerous visits by job seekers who they believe currently could be referred to work without ever visiting a workforce center. The commenters stated that, especially in the larger States, this will present a greater and perhaps insurmountable hurdle for a larger number of U.S. workers, who will be discouraged from travelling great distances to obtain a job referral.

In practice, an in-person verification requirement will not significantly change the operation of referrals in most States. In the Department's program experience, States often require that agricultural job applicants visit the workforce center to receive information on the terms and conditions of the job, which must be provided prior to referral. *See* 20 CFR 653.501(f) (placement of the form within local offices). While we do not disagree that an in-person verification requirement may impact the decisions of a limited number of otherwise eligible workers, at this juncture the impact is speculative and does not outweigh the significant value of verification. Moreover, it is a problem that SWAs may be able to adjust to by designating or creating additional in-person locations where eligibility can be verified. This is not a problem unique to SWAs given that workers often must travel great distances to reach a prospective employer, who then (absent a SWA certification) would be required to verify work eligibility. Although employment eligibility verification does require some amount of time and effort, Congress has determined that simple convenience must cede to the overarching goal of achieving a legal workforce and the Department has drafted its regulations accordingly.

Commenters opposing the eligibility provision uniformly complained that the verification requirement would add potentially significant workload and strain the already inadequate resources of many State Workforce Agencies. Many saw it as an unfunded federal mandate in violation of the Unfunded Mandates Reform Act. More than one referred to the Department's recent inclusion of the requirement as a condition for receiving further labor certification grant funding.

As stated in the preamble to the NPRM, the Department is not insensitive to the resource constraints facing state agencies in their administration of the H–2A program. However, as we stated in the NPRM, we do not believe that the requirement will result in a significant increase in workload or administrative burden. We have provided training to SWAs to meet their obligations in this context and will continue to do so.

In addition, notwithstanding funding limitations, there is a strong, longstanding need for a consistent and uniform verification requirement at the state government level. Verification is a statutory responsibility of the Department and the SWAs under the INA and the Wagner-Peyser Act, and the Department has further determined employment verification is a logical and necessary condition for the issuance of foreign labor certification grants to states. Precisely to ensure that available federal funding supports verification activities, the Department has added the verification requirement as an allowable cost under the foreign labor certification grant agreement. While cognizant of the challenges posed by funding limitations, we expect states to comply as they do with other regulatory requirements and other terms and conditions of their grant.

Commenters raised a number of concerns with the use of E-Verify, including potential system problems, delays and inaccuracies. The Department strongly encourages state agencies to use the system, which provides an additional layer of accuracy and security over and above the basic I–9 process, but it has not mandated use of E-Verify. SWAs can comply with this Final Rule without the use of E-Verify.

One commenter pointed out that the regulation does not describe the penalties to SWAs for non-compliance or delayed compliance with this requirement, or the implications for H–2A employers who may seek services from SWAs that are not in compliance with the requirement. For instance, the commenter inquired whether, if the Department were to suspend Foreign Labor Certification grant funding, employers would be required to accept referrals funded exclusively by Wagner-Peyser funding. The commenter also inquired whether the SWA in an employer's state would be required to verify the work eligibility of a worker that was referred to it by a non-compliant out-of-State SWA. As the verification requirement is implemented, the Department's guidance will evolve in response to the experience of the regulated community and our own. We do note that these problems already exist under the Department's current regulations and policies, and the Department is working through them as they arise. The problems are substantially alleviated by the fact that virtually every State and territory administering the H–2A program has already agreed to come into compliance with the employment eligibility verification requirements established by current Departmental policies, minimizing the chance that a State will need to be de-funded due to non-compliance or that non-compliant referrals will be made by out-of-State SWAs. Nevertheless, we do not discount the importance of the questions posed by the commenter, but see them as issues of implementation that should be addressed, as they arise, through appropriate guidance.

In addition, we note that the SWA may not refuse to make a referral and the employer may not refuse to accept a referral because of an E-Verify tentative nonconfirmation (TNC), unless the job seeker decides not to contest the TNC. SWAs and employers may not take any adverse action, such as delaying a referral or start date, against a job seeker or referred worker based on the fact that E-Verify may not yet have generated a final confirmation of employment eligibility.

(k) Section 655.102(k) Recruitment Report

The Department proposed requiring employers to submit an initial recruitment report with their applications and to supplement that report with a final recruitment report documenting all recruitment activities related to the job opportunity that took place subsequent to the filing of the application. The Department proposed that the initial recruitment report to be filed with the application be prepared not more than 60 days before the date of need, and that the supplemental, final report be completed within 48 hours of the date H–2A workers depart for the worksite or 3 days prior to the date of need, whichever is later. Many individuals and members of agricultural associations expressed concern that recruitment reports will not simplify the application process and will instead inflict an undue burden on employees of small farms. Some agricultural associations argued that having two recruitment reports will double the work for employers and stated that the supplemental report is not justified because of its limited utility in resolving compliance issues.

The Department disagrees that a supplemental recruitment report will have limited benefit, given the Department's intended use of supplemental reports in the event of an audit. The supplemental recruitment report will provide assurance to the Department that an employer has complied with all of its obligations with respect to the domestic workforce. Compliance throughout the program, including after filing of an application,

is necessary for the appropriate enforcement of the H–2A program and its requirements. By requiring a supplemental report, the Department is not requiring a duplicative effort but is in fact effectively requiring employers to split the current comprehensive total report (of all referrals that are required to be reported) into two smaller, more manageable reports. The Department does not believe that this splitting of the comprehensive total report will require significantly more effort on the part of employers.

Several commenters specifically mentioned the timing of the recruitment report as the biggest problem with the requirement. One farm association noted that since the initial application cannot be submitted without the recruitment report, and the recruitment report must be prepared not more than 60 days prior to the date of need, the application itself cannot be filed until 60 days ahead of time. In order to rectify this issue, the commenter believed the application itself should be required to be filed not more than 60 days prior to the date of need. Another farm association suggested that the timeline for the recruitment report be moved up to no later than 45 days before the date of need, rather than 60 days before the date of need. The Department also received comments in support of the supplemental recruitment reports.

The Department has learned through experience that if recruitment is begun no more than 45 days before the date of need, it is virtually impossible for the Department to receive an adequate recruitment report by the time it is statutorily required to make a certification determination 30 days before the date of need. As discussed above, we have in response to comments amended the timeframe for pre-filing recruitment to reflect a recruitment period closer to the date the workers are needed. In addition, in accordance with the revisions to the time frame specified in § 655.102(e) for submitting job orders, the original proposal regarding the timing of the filing of recruitment reports has been revised in the Final Rule and now provides that the initial recruitment report may not be prepared more than 50 days prior to the employer's date of need. The Final Rule also revises the proposed timing for the completion of the supplemental recruitment report, and now requires the employer to update the recruitment report within 2 business days following the last date that the employer is required to accept referrals; that is, the end of the recruitment period as specified in § 655.102(f)(3). With respect to employers who wish to file an *Application for Temporary Employment Certification* prior to 50 days before the date of need, they are welcome to do so to initiate processing of the application, but the application will not be considered to be complete, and thus eligible for a final determination, until the initial recruitment report is submitted.

Finally, the Department has made additional clarifying edits to the regulatory text. These edits are to ensure this provision comports with other sections of this Final Rule, to improve readability, and to clarify its requirements. These include the deletion of the redundant phrase ''who applied or was referred to the job opportunity'' which appeared twice in the NPRM paragraph (k)(2) (which is now (k)(1)(iii)); simplifying the reference to the contents of the supplemental recruitment report through the use of cross-references; and placing the paragraph regarding the updating of recruitment reports before the paragraph regarding document retention requirements. In addition, the Department has added a requirement that the recruitment report must contain the original number of openings advertised. This last addition will enable the Department to grant an employer a partial certification in the event it can meet part but not all of its need through the recruitment of U.S. workers.

Section 655.103 Advertising Requirements

The Department proposed detailed instructions for the content of the newspaper advertisements to be placed by employers as part of the required pre-filing recruitment in § 655.103. A few comments were received on the specific contents of the ads. Other comments regarding the rule's advertising requirements are discussed in the section of the preamble pertaining to § 655.102(g).

An association of growers/producers commented that the advertising requirements are inefficient and wasteful, particularly when ''numerous virtually identical ads are appearing at the same time.'' Another association suggested that employers be allowed to advertise jobs by simply referencing the job order placed with the SWA, and suggested that employers should not be required to include all of the detailed information contained in the proposed regulation. Another association suggested that if more than one grower is simultaneously recruiting in an area covered by only one newspaper, their ads should be combined and placed by the SWA. The association suggested that the names of the growers could all be provided in the ad, but applicants would be directed to the SWA to get additional information about the jobs and referrals to the employers.

The Department has considered but declines to adopt these suggestions at this time. The Final Rule significantly clarifies the H–2A advertising requirements. The Department believes that it has struck a careful and appropriate balance, based on its program experience, between the expense of advertising to employers and workers' need for basic job information when considering whether to pursue advertised employment opportunities.

The Final Rule contains several clarifying and conforming changes to the proposed text for § 655.103, none of which are substantive. The Final Rule also paraphrases in § 655.103 the equal treatment requirement already stated in § 655.104(a). Section 655.103 requires that an employer's recruitment ''must contain terms and conditions of employment which are not less favorable than those that will be offered to the H–2A workers.''

Section 655.104 Contents of Job Offers

(a) Section 655.104(a) Preferential Treatment of Aliens

The Department's proposed regulation stated: ''The employer's job offer shall offer no less than the same benefits, wages, and working conditions that the employer is offering, intends to offer, or will provide to H–2A workers.'' A group of farmworker advocacy organizations opposed the removal of the words ''U.S. worker'' from this section of the rule. This commenter believes that the proposed wording allows employers to treat U.S. workers less favorably than H–2A workers.

While the Department does not agree that the new wording would have allowed employers to treat U.S. workers any less favorably than H–2A workers, the words ''U.S. worker'' have been reinserted.

(b) Section 655.104(b) No Less Than Minimum Offered

The NPRM proposed that the ''job duties and requirements specified in the job offer shall be consistent with the normal and accepted duties and requirements of non-H2A employers in the same or comparable occupations and crops in the area of intended employment and shall not require a combination of duties not normal to the occupation.'' Several commenters expressed concern that the proposed requirements would prove unworkable,

unadministrable, and exceedingly difficult for employers to comply with, as what is ''normal'' and ''accepted'' are substantially subjective determinations. All of the commenters who provided input on this provision suggested that the Department should not second guess an employer's business decision regarding an occupation's job duties when they are unique to that employer. These commenters believe that the Department's proposal would give the Department more discretion to deny an application than is contemplated by the statute.

The Department agrees with the basic thrust of these comments. Section 218(c)(3)(A) of the INA requires the Department, when determining whether an employer's asserted job qualifications are appropriate, to apply ''the normal and accepted qualifications required by non-H–2A employers in the same or comparable occupations and crops.'' There is a substantial difference, however, between job duties and job qualifications; job qualifications typically describe the minimum skills and experience that an employee must have to secure a job, while job duties describe the tasks that qualified workers are expected to perform. The Department agrees that, as a general matter, employers are in a far better position than the Department to assess what job duties workers at a particular establishment in a particular area can reasonably be required to perform in an H–2A eligible position.

The Department is therefore altering this provision to conform more closely to the language of the statute, and is limiting the restriction in § 655.104(b) to job qualifications. The Department is aware that this may mean that at times a U.S. worker wishing to perform one type of job duty, such as picking asparagus, may be required by an employer to perform an additional job duty, such as harvesting tobacco, in order to secure an agricultural job. It is not at all uncommon, however, for jobs in the United States to include multiple job duties, some of which workers may view as more desirable than others. There is nothing in the statute governing the H–2A program indicating that Congress intended to require agricultural employers to allow prospective workers to selectively choose which job duties they want to perform and which job duties they do not, with regard to a particular job opportunity. In the Final Rule, this provision states that ''[e]ach job qualification listed in the job offer must not substantially deviate from the normal and accepted qualifications required by employers that do not use H–2A workers in the same or comparable occupations and crops.''

The Department is sensitive, however, that in certain circumstances a listed job duty may act as a de facto job qualification, because the listed duty requires skills or experience that agricultural workers may not typically possess. When such circumstances arise, the Department reserves the right to treat the listed job duty as a job qualification, and to apply the ''normal'' and ''accepted'' standard that is set forth in the statute and restated in the regulations in determining whether the qualification is appropriate.

One commenter suggested that this provision should be made consistent with those in the PERM regulations at 20 CFR 656.17. The Department declines to apply the PERM standard to the H–2A program, as that standard is based on a substantially different statutory structure. The Department is confident that the revised standard for § 655.104(b) that is set forth in the Final Rule, which hews closely to the language of sec. 218(c)(3)(A) of the INA, is appropriately tailored to the H–2A program and will prove workable in practice.

(c) Section 655.104(c) Minimum Benefits

A group of farmworker advocacy organizations pointed out that proposed § 655.104 does not correlate exactly to current § 655.102(b). Specifically, in this commenter's opinion the proposed section does not require the employer to pay the worker at least the adverse effect wage rate in effect at the time the work is performed, the prevailing hourly wage rate, or the legal federal or State minimum wage rate, whichever is highest, for every hour or portion thereof worked during a pay period as required in the current regulation. According to this commenter, under the proposed rule, H–2A workers would have only contract law as their primary enforcement tool. With proposed § 655.104(c) stating that every job offer must include the wage provisions listed in paragraphs (d) through (i) of this section but no longer requiring precisely what the current § 655.102(b)(9)(i) requires, this commenter argued that workers will be left at a disadvantage if the employer fails to specify the required wage provisions in the work contract.

The Department appreciates this commenter's analysis. However, we do not agree that the employer will no longer be bound to pay the employee the wage promised, nor that the only enforcement tool available is through contract law. Under the new program the employer's attestation required under § 655.105(g) is an enforceable program requirement. The failure of an employer to comply with any program requirement subjects the employer to the Department's enforcement regime.

A commenter pointed out the illogical consequences of rigid rules governing wages for agricultural workers. It is the commenter's contention that the Department should add a phrase at the end of § 655.104(c) that would not force employers to pay the NPC prescribed wage until the date of need and instead would allow employers to pay U.S. workers a mutually agreed upon wage between the time they recruit the workers and the date the H–2A workers are needed in order to train the U.S. worker and retain them until and throughout the period of the H–2A contract. The commenter reports that if they do not offer those U.S. workers employment immediately, they will most likely not be available when the H–2A work begins. The commenter believes that any employment prior to the date of need and prior to the date that foreign H–2A workers arrive should not be governed by the H–2A contract or its wage provisions.

The Department agrees that the H–2A required wage takes effect on the effective start date of the H–2A contract period. However, the Department does not believe that any changes to the regulatory text need to be made under this section because § 655.105(g) provides that the requirement to pay the offered wage applies only during the valid period of the approved labor certification. U.S. workers who are hired in response to H–2A recruitment and who perform work for an employer before the date of need specified in the H–2A labor certification are not required by these regulations (but may be required by contract) to be paid the H–2A wage until the period of the H–2A contract begins, without regard to the type of work performed.

A group of farmworker advocacy organizations argued that under the proposed rule, employers would no longer be required to disclose in job offers their obligation to provide housing to workers. That is incorrect. Section 655.104(c) provides that ''[e]very job offer accompanying an H–2A application must include each of the minimum benefit, wage, and working condition provisions listed in paragraphs (d) through (q) of this section.'' Paragraph (d) of that section provides, in turn, that ''[t]he employer must provide housing at no cost to the worker, except for those U.S. workers who are reasonably able to return to

their permanent residence at the end of the work day.''

(d) Section 655.104(d) Housing

Section 218(c)(4) of the INA requires employers to furnish housing in accordance with specific regulations. The employer may fulfill this obligation by providing housing which meets the applicable Federal standards for temporary labor camps or providing housing which meets the local standards for rental and/or public accommodations or other substantially similar class of housing. In the absence of local standards, the rental and/or public accommodations or other substantially similar class of housing must meet State standards, and in the absence of State standards, such housing must meet Federal temporary labor camp standards. By statute, the determination of whether employer-provided housing meets the applicable standards must be made no later than 30 days before the date of need. The Department proposed three changes to the current housing requirements.

First, the Department proposed allowing employers to request housing inspections no more than 75 and no fewer than 60 days before the date of need. The Department further proposed that the NPC would, as required by statute, make determinations on H–2A applications 30 days before the employer's date of need, even if the housing referenced in the application had not yet been physically inspected by the SWA, so long as (1) the employer requested a housing inspection within the time frame specified by the regulations and (2) the SWA failed to conduct the inspection for reasons beyond the employer's control. Under the Department's proposal, SWAs would have the authority and the responsibility under such circumstances to conduct post-certification housing inspections prior to or during occupancy. If such a post-certification housing inspection identified deficiencies that the employer failed to act promptly to correct, the proposal provided that the SWA would inform the NPC of the deficiencies in writing so that the NPC could take appropriate corrective action, potentially including revocation of the labor certification. The Department proposed these changes in part to alleviate the problems SWAs currently face in trying to conduct large numbers of required housing inspections during the short 15-day window provided by the statute between the time that applications are required to be filed (45 days before the date of need) and the time that the Department is required to make a determination on the application (30 days before the date of need). The changes were also intended to avoid penalizing employers for the failure of SWAs to comply with their legal duty to meet the timeframes established by the statute.

The Department heard from a number of SWAs on the issue of timely housing inspections, many of which declared their ability to conduct housing inspections within the 15-day window. One SWA acknowledged that at times delays may occur in conducting housing inspections, but attributed those delays to incomplete or inaccurate information being provided to inspectors. This SWA suggested that providing a copy of the job order with the housing inspection request would alleviate the problem of inspectors investigating the wrong housing. Finally, an anonymous commenter tied the delays in housing inspections to a lack of funding at the state level.

The Department recognizes that many SWAs conduct housing inspections in advance of the statutory deadline of 30 days before the date of need, but cannot ignore the fact that SWA delays in conducting housing inspection have in many instances resulted in labor certification determinations being made by the Department outside of the statutorily required timeframes. This result is not acceptable to the Department or to employers seeking H–2A certification. As one employer commenter stated:

> [u]ntimely housing inspections are one of the most common reasons for delays in making labor certification determinations. Therefore, the provision in the proposed regulations for making a pre-application housing inspection, and the provision that certification will not be delayed if a timely housing inspection is not made, and that occupancy of the housing is permitted, are important improvements in the program.

While employers and employer associations favored the proposed conditional labor certifications, several commenters representing employer interests had concerns with the proposed requirement that housing inspections be requested no fewer than 60 days before the date of need. Employers stated that in some parts of the U.S., housing may still be winterized 60 days before the date of need and therefore may be unavailable for inspection, or unable to pass inspection. In certain areas, inspection agencies require that the employer rent the housing before an inspection is conducted and the earlier time frame for requesting an inspection requires employers to pay an additional month or two of rent for the housing, substantially adding to the cost of providing housing. Other growers stated that current inspection procedures prohibit the inspection of occupied housing and therefore this proposal would require that regulations be adjusted to permit inspection of occupied housing. Some said that the earlier time frame for requesting housing inspections may be before many farmers plant their crops, let alone know the dates of the harvest.

Commenters representing employer interests also included questions concerning implementation of the proposal. Many argued that employers should be provided a specific and reasonable period of time for abatement of violations found in post-determination inspections conducted by SWAs, and that employers who correct violations within the specified period should not be penalized for the violations. One employer association argued that ''the fact that employers continue to face consequences for having deficient housing will prevent any adverse effects for workers.'' Employers also questioned the proposed requirement that housing inspection requests be made in writing, and some employers recommended that the Department provide training to SWA staff on conducting housing inspections of occupied housing. Finally, one employer commented that in the state in which he operates, the state's Department of Health conducts inspections of temporary labor camps and that to require SWAs to conduct these inspections would result in confusion.

Employee advocacy organizations and state agencies expressed concern that the granting of pre-inspection labor certification determinations could potentially result in cases where housing is not inspected prior to occupancy, which in turn could result in workers being housed in substandard conditions. Several commenters objected to this proposed revision stating that pre-occupancy housing inspections are an effective incentive for employers to take corrective action, thus ensuring that workers are housed in safe and sanitary housing. Other commenters urged the Department to continue the requirement that housing be inspected before workers arrive.

A few comments from both organizations representing employer interests and from organizations representing employee interests questioned the Department's legal authority to establish a requirement that housing inspections be requested more than 45 days before the date of need, which is the earliest date that the

Department may under the statute require applications to be filed. One commenter asserted that the proposed changes contradict the Department's Wagner-Peyser regulations requiring that the housing be inspected to determine compliance with applicable housing safety and health standards before a job order can be posted (and, thus, before the housing can be occupied).

The Department has carefully considered the comments and has determined that the framework of the Department's original proposal strikes an appropriate balance between the need to ensure that housing for H–2A workers meets all applicable safety and health standards, that agricultural employers are able to secure H–2A workers in a timely manner, and that the Department complies with the statutory requirement to render a determination no fewer than 30 days before the date of need. To ensure that SWAs have adequate time to complete housing inspections before the statutory deadline of 30 days before the date of need, the Final Rule requires employers to request housing inspections no fewer than 60 days before the date of need, except when the emergency provisions contained in § 655.101(d) are used. The Department is eliminating in the Final Rule the proposed restriction on housing inspections being requested more than 75 days before date of need. Eliminating this restriction will provide SWAs additional flexibility to manage the workload of completing required inspections with respect to those cases where an employer's housing is ready for inspection well in advance of the date of need.

The INA at 8 U.S.C. 1188(c)(3)(A) expressly requires the Secretary of Labor to make a determination on an employer's application for temporary labor certification no fewer than 30 days before the employer's date of need. The INA also requires that the Secretary make a determination as to whether employer-provided housing meets the applicable housing standards by the same deadline—no fewer than 30 days before the employer's date of need. Although the Department has delegated its statutory housing inspection responsibilities to the SWAs, the statutory deadline applicable to that responsibility continues to apply. This is made explicit by § 655.104(d)(6)(iii) of the Final Rule, which states that ''[t]he SWA must make its determination that the housing meets the statutory criteria applicable to the type of housing provided prior to the date on which the Secretary is required to make a certification determination under sec. 218(c)(3)(A) of the INA, which is 30 days before the employer's date of need.''

Some commenters read the language of sec. 218(c)(4) of the INA as prohibiting the Secretary from making a determination on an employer's application for temporary labor certification until the employer's housing has been physically inspected. The Department strongly disagrees with that interpretation. The language of sec. 218(c)(4) is not phrased as a limitation on the Secretary's duty under sec. 218(c)(3)(A) to make determinations on applications no later than 30 days before the employer's date of need. In fact, the language of sec. 218(c)(4) does not require that housing inspections be completed prior to the Secretary's certification determination, although Congress certainly could have phrased the requirement that way had it wanted to do so. Instead, the language of sec. 218(c)(4) is most naturally read as imposing a statutory duty on the Department to complete required housing inspections ''prior to the date specified in paragraph (3)(A)''—which, as noted previously, is 30 days before the employer's date of need. The provision does not specify what consequence should follow in the event that the Department fails to comply with this mandate. Presumably, however, if Congress had intended that the primary consequence of the government's failure to meet its statutory responsibility to complete housing inspections in a timely manner would be to penalize employers by releasing the Department from its independent statutory responsibility to make determinations on applications no later than 30 days before the employer's date of need—a deadline that was indisputably established to ensure that employers can secure needed H–2A workers in a timely fashion without undue delays caused by the government—it would have said so explicitly.

Of course, the Department greatly prefers that housing inspections be conducted prior to certification, as this gives the Department the strongest possible assurance that ''the employer has complied with the criteria for certification'' as required by sec. 218(c)(3)(A)(i) of the INA. To this end, the Final Rule requires that employers make requests for housing inspections no fewer than 60 days before the employer's date of need, ensuring that SWAs have adequate time to meet the statutory deadline for conducting housing inspections. Moreover, SWAs remain under an express statutory and regulatory mandate to complete housing inspections by 30 days before the employer's date of need, an obligation that the Department expects SWAs will not take lightly. The Department therefore believes that under the Final Rule, post-certification housing inspections will be the very rare exception rather than the rule.

The Department has never read sec. 218(c)(3)(A)(i), however, as requiring that the government directly observe for itself that the employer has satisfied all of the statutory criteria for certification. For example, under the current regulations a substantial portion of required recruitment takes place after a certification has been made, and SWAs typically do not conduct pre-certification inspections of rental housing or public accommodations secured by employers pursuant to sec. 218(c)(4). It is important to note that under the Final Rule employers are required to provide or secure housing that meets all applicable standards, and that a certification cannot be granted, with or without an inspection, unless the employer has attested that its housing fully complies with those standards. Sanctions and penalties may be imposed for violations of the attestation requirements and the housing standards, including revocation of a labor certification, regardless of whether a pre-certification housing inspection was conducted.

As to commenters who argued that it is unacceptable that housing might in some rare circumstances be occupied by H–2A workers before it is inspected, the Department notes that under MSPA, U.S. workers often occupy agricultural housing before it is inspected, and the Department has not seen any data indicating that this arrangement has caused harm to U.S. workers. The Department does not believe that H–2A workers will be harmed by this rule when being afforded the same level of protection that Congress has afforded to U.S. workers. Moreover, the Department believes that any chance that H–2A workers would be placed in substandard housing under the Final Rule—a possibility that can never fully be guarded against as a practical matter, and occurs on occasion even under the current rule—is minimized by the fact that a certification cannot be granted unless the employer has attested that its housing fully complies with all applicable standards. If this attestation is later shown to be false, the employer risks substantial penalties, including the possibility of a revoked labor certification and/or debarment.

The Department is not persuaded by employers' arguments for specific language allowing employers in all cases to abate housing violations

without penalties where the housing has already been occupied. Penalties for failing to meet the applicable standards help ensure compliance. As with all Department investigations to determine compliance with Federal safety and health standards for housing, however, the employer is as a matter of practice provided a reasonable opportunity to correct or abate any violations that are found. This also is true when the SWA or other state agency conducts the inspection. Time frames for abatement are directly related to the severity of the violation and its potential impact on the safety and health of the workers. Therefore, language in this regulation specifying an abatement period for the correction of housing violations is unnecessary. Current regulations at 29 CFR 501.19(b) and the Final Rule at §§ 655.117 and 655.118 address the factors considered by the Department in determining the appropriateness of penalties and sanctions. The Department will continue to ensure that the penalties assessed and sanctions imposed for violations of housing safety and health standards are appropriate to the violation.

The Department is cognizant that requiring employers to request housing inspections no fewer than 60 days before the date of need may present a challenge to some employers. However, we believe that overall this requirement will be beneficial to employers, workers and the SWAs by allowing more time for the SWAs to schedule and conduct pre-occupancy housing inspections, and more time for employers to correct any deficiencies prior to the arrival of the workers. The Department expects that SWAs will continue to work with employers on the scheduling of housing inspections and that SWAs will endeavor to minimize the expense to the SWA and maximize the benefit to the employer and workers by avoiding scheduling inspections of facilities at times that they are not winterized or otherwise unlikely to pass inspection. In response to comments about obstacles that currently exist in some jurisdictions to securing timely housing inspections, the Department has also included an instruction to SWAs in the Final Rule not to adopt rules or restrictions that would inhibit their ability to conduct inspections by 30 days before the date of need, such as requirements that rental housing already be formally leased by the employer before the SWA will conduct an inspection, or rules that occupied housing will not be inspected. It is solely the employer's responsibility, however, to ensure that the SWA has access to the housing to be inspected so that the inspection may take place. For the reasons set forth in the discussion of § 102(a) concerning the Final Rule's pre-filing recruitment requirements, the Department does not agree that the statute prohibits the Department from requiring that housing inspection requests be submitted to SWAs prior to the date that applications must be submitted to the NPC.

The Department also disagrees that the possibility that some housing inspections will take place after certification under the Final Rule violates the Wagner-Peyser regulations. The current regulations at 20 CFR 654.403 already permit job orders to be posted prior to the completion of a housing inspection. If an SWA identifies violations during a subsequent housing inspection, and the employer does not cure the violations after being provided a reasonable opportunity to do so, the corresponding job order may be revoked. Although some commenters expressed the view that the regulatory process under § 654.403 is more protective of workers because § 654.403(e) requires that the SWA ''shall assure that the housing is inspected no later than the date by which the employer has promised to have its housing in compliance with the requirements of this subpart,'' that provision is actually less protective of workers than the Final Rule. The Final Rule unequivocally recapitulates the statutory requirement that housing inspections be completed no later than 30 days before the employer's date of need, a date that is actually earlier than that required by the conditional access provisions set forth in § 654.403. Thus, both the Final Rule and § 654.403 contain clear mandates for pre-occupancy inspections. Significantly, however, § 654.403 does not specify any particular consequence if an SWA fails in its duty to conduct the required pre-occupancy inspection; under that provision, it is only if the SWA fulfills its duty to conduct the required inspection and finds violations that the employer's job order is removed from clearance. Thus, in specifying that the Department will adhere to its statutory obligation to make certification determinations on applications no later than 30 days before the employer's date of need even where an SWA has failed in its statutory duty to conduct the required housing inspection in a timely fashion, the Department is not depriving workers of any protections that they have under § 654.403. Both provisions fundamentally depend on SWAs to protect workers by fulfilling their responsibilities under the law—and the Department notes that in its experience, the SWAs take those responsibilities very seriously.

The Department is retaining the proposed requirement that the employer's request for housing inspections must be in writing. This requirement provides the employer with the documentation necessary to demonstrate that their request for a housing inspection was made within the required time frame.

While the Department refers to the SWAs as the entities responsible for making housing inspections related to labor certification determinations, the Department does not intend to limit the flexibility afforded SWAs in fulfilling this requirement. For example, some SWAs have agreements with other State agencies for conducting housing inspections and it is not the Department's intention to change such arrangements.

Finally, in response to concerns that SWA staff is not sufficiently trained to conduct inspections of occupied housing, the Department anticipates that there will be additional training of SWA staff on the conduct of housing inspections.

The Department's second housing-related proposal was the creation of a housing voucher as an additional option employers could use to meet the H–2A housing requirements. The Department did not explain in detail in the NPRM how such a voucher program would work, but instead requested suggestions and comment from the public about how the program should be constructed and operated. The Department's NPRM did, however, propose to include several safeguards in the voucher program to ensure that workers would be provided housing meeting the applicable safety and health standards, including requirements that the voucher could not be used in an area where the Governor of the State has certified that there is inadequate housing available in the area of intended employment. Other safeguards included the provision that the voucher could only be redeemed for cash paid by the employer to a third party, that the housing obtained with the voucher had to be within a reasonable commuting distance of the place of employment and that workers could ''pool'' their vouchers to secure housing (e.g., to secure a house instead of a motel room) but that such pooling may not result in a violation of the applicable safety and health standards. The Department also included as a safeguard the requirement that if acceptable housing could not be obtained with the voucher, the employer would be required to provide

housing meeting the applicable safety and health standards to the worker. The Department requested comments on whether such a program would adequately balance the needs of employers and workers and how such a program should operate. The Department received a number of comments from employers, employer associations, employee advocacy organizations and State agencies on the housing voucher option.

A number of comments from stakeholders representing both employer and employee interests led us to conclude that the proposal was not well understood. Several commenters stated that ''the voucher program would effectively eliminate the requirement that all housing for H–2A workers must meet health and safety standards.'' Some employer associations stated that they supported the concept of ''using vouchers to provide housing in lieu of actually providing housing'' while another commenter asserted that the housing voucher option would ''undermine Congressional intent by eliminating the requirement that employers provide non-local workers with free housing that meets the basic safety and health standards.''

While noting a few concerns with the proposal (e.g., the employer's responsibility for violations of safety and health standards at housing obtained by the voucher), employers and employer associations generally praised the Department for the much needed flexibility a voucher program would create. Some commenters opined that the use of housing vouchers would ''greatly stimulate H–2A participation'' and ''would encourage others to use legal workers.'' Other commenters stated that the H–2A current requirement to provide housing to workers is a serious impediment to program participation and that the implementation of a housing voucher option would make the H–2A program more usable and effective.

Comments from individuals and organizations representing employee interests criticized the voucher option, stating that the proposed safeguards were illusory and provided no substantive protections to workers. Virtually all criticism of the proposal, including from SWAs, misunderstood the Department's position and assumed health and safety standards would not apply to housing obtained with a voucher. Many commenters argued that the voucher idea ''ignores the reality of the situation for both U.S. and H–2A workers'' in that many farmworkers, particularly H–2A workers, do not have the resources to conduct a long-distance housing search, such as access to the Internet, knowledge of the area, and language difficulties. Several found it unreasonable to expect that a worker will travel from another country, or even across the State, for employment and be able to quickly find a motel or landlord that will accept vouchers for a short-term stay.

The comments received from SWAs on the housing voucher option were generally opposed to the proposal and also reflected a misunderstanding of the Department's proposal. One SWA cited concerns that a voucher would eliminate established standards that ensure safety and healthful conditions of housing. Another SWA argued that ''[t]he use of vouchers and the failure to cover the full cost of housing reflects an unrealistic understanding of the housing market for seasonal workers.'' Another SWA suggested that it would be impossible for the Governor to determine whether there was inadequate housing available in the area since the SWAs would not be the recipient of the labor condition applications, and therefore, would not know the number of workers in need of housing.

Some commenters criticized the Department's proposal on the grounds that many basic questions about how the voucher would function were not adequately addressed in the NPRM, including the lack of: A mechanism for determining the amount or value of the voucher; a definition of ''reasonable commuting distance;'' criteria to be used in determining whether the employer made a good faith effort to assist the worker in identifying, locating and securing housing in the area of intended employment; and standards to be used in the Governor's certification of insufficient housing for migrant workers and H–2A workers in the area of intended employment. Other commenters took issue with the Department's proposal to allow workers to ''pool'' the vouchers, claiming that such pooling would result in workers overpaying for overcrowded and/or substandard housing. Several commenters questioned the Department on the rationale for not allowing the voucher to be redeemed for cash by the employee to a third party.

The requirement that employers furnish housing that meets applicable safety and health standards is a statutory requirement in the INA. The Department does not have authority to waive this statutory requirement, nor did the Department intend to do so in proposing a voucher option. In proposing a voucher option, the Department sought comment on how best to provide much needed flexibility to employers in fulfilling their obligation to furnish housing while ensuring that workers are not housed in substandard conditions. After reviewing the comments received on this proposal, the Department is persuaded that it should drop the proposal at this time because it would be extremely difficult to implement. The extent to which the Department's proposal was misunderstood by commenters on all sides also caused the Department concern that, if implemented, the proposal would result in numerous program violations and become a substantial enforcement problem. If, in the future, the Department is able to design an effective, enforceable and viable alternative, it will develop a proposal and request public comment.

We are sympathetic to the concerns of many growers and employer associations who supported the proposal and noted that the cost of providing housing is a major deterrent for many to participate in the H–2A program and that in many parts of the country, restrictive building and zoning codes can prevent growers from building housing to accommodate workers. The Department notes that many of these problems can be overcome by employers under the statute and the Final Rule by securing ''housing which meets the local standards for rental and/or public accommodations or other substantially similar class of habitation.'' These options do not require employers to build and furnish their own housing. As is noted in ETA Handbook No. 398, there is nothing to preclude an employer who does not actually own housing on his/her property from renting non-commercial housing from other individuals or entities. If there are areas where rental and public accommodation options, including non-commercial housing, are not readily available, it is difficult to imagine how workers could have secured housing in those areas through the use of a voucher, such that the voucher program would not have been viable in those areas anyway.

Third, the Department proposed in the NPRM to clarify and codify additional limited flexibility under certain circumstances to make post-certification changes to housing. The Department's current policy [4] allows the employer to substitute rental or public accommodations for certified housing in the event that certified housing becomes unexpectedly unavailable for reasons

[4] Training and Employment Guidance Letter 11–07, Change 1 (November 14, 2007).

outside of the employer's control. The employer is required to notify the SWA in writing of the housing change and the qualifying reason(s) for the change, and provide evidence that the substituted housing meets the applicable safety and health standards. The SWA may inspect the substitute housing to determine compliance with applicable safety and health standards. The NPRM sought to clarify and codify this policy and included a provision for the SWA to notify the CO of any housing changes and the results of housing inspections conducted on substitute housing. Employer commenters and commenters representing employer interests universally favored the clarification in the proposal:

> The inclusion of language that permits employers to use substitute housing in the event that their approved housing becomes unavailable for reasons beyond their control will be beneficial for the obvious reason that in the rare circumstances where this occurs, an employer has a housing option without being in violation.

Commenters on behalf of employees questioned the Department's authority to propose such a change and thought the proposed change would result in workers being housed in substandard housing saying:

> [T]his change is not permitted by the statute [INA 218(c)(4)] and would encourage potentially fraudulent ''bait and switch'' tactics perpetrated by H–2A employers with respect to employer-provided housing.

Commenters also questioned which standards are the applicable standards to the substitute housing.

The Department maintains that this additional limited flexibility with respect to substitute housing is the best approach in those rare circumstances where the certified housing becomes unavailable for reasons beyond the employer's control. The Department believes that the requirements that the substitute housing be rental or other public accommodations and that the employer provide evidence that the new housing meets the applicable safety and health standards offer workers the necessary protections. Indeed, the proposal in no way lessens the applicable housing standards, as substitute housing must meet the standards that typically apply to H–2A housing of the same type. Failure to create a substitute housing provision could leave H–2A employers in the untenable position of having workers arrive at the worksite and having no permissible place to house them. Therefore, the Department has included this provision in the Final Rule. This Final Rule specifically references the applicable standards to which rental or public accommodation housing, including substitute housing, is subject.

The Department has made several modifications to this provision in the Final Rule for purposes of clarity and to conform the standard to the structure of the rest of the Final Rule. First, the proposal states that the unavailability provision would apply in ''situations in which housing certified by the SWA later becomes unavailable.'' To ensure that the full range of applicable situations is covered, the Final Rule provides that the unavailability provision applies where housing becomes unavailable ''after a request to certify housing (but before certification), or after certification of housing.'' There is no reason to exclude housing that has not yet been inspected from the scope of the provision, since the initially designated housing has become unavailable anyway. Second, the phrase ''applicable housing standards'' has been replaced in the Final Rule with ''the local, State, or Federal housing standards applicable under paragraph (d)(1)(ii) of this section,'' which is more specific. Third, the phrase ''in accordance with the requirements of paragraph (d)(1)(ii) of this section'' has been added to the end of the second sentence of the provision, and the phrase ''from the appropriate local or State agency responsible for determining compliance'' has accordingly been deleted as unnecessary; as noted in the discussion of paragraph (d)(1)(ii), that paragraph has been separately modified to reflect the evidentiary standard that is currently in place in ETA Handbook No. 398. For the same reason, the proposal's admonition that SWAs ''should make every effort to inspect the accommodations prior to occupation, but may also conduct inspections during occupation, to ensure that they meet applicable housing standards'' has been removed in the Final Rule. As current ETA Handbook No. 398 explains at page II–15, ''[i]f DOL standards are not applicable, no pre-occupancy inspections need be conducted, and the employer need only document to the RA's satisfaction that the housing complies with the local or State standards which apply to the situation.'' To the extent that some SWAs may typically inspect rental or public accommodation housing despite the fact that they are not required by these rules to do so, they should make every effort to inspect substitute housing prior to occupation.

The Department received comments on other housing-related issues for which no changes were proposed. A number of commenters noted that the text of proposed § 655.104(d)(1)(i) referred to employer-owned housing, whereas the current regulation at § 655.102(b)(1)(i) and the preamble to the proposed rule referenced employer-provided housing. The Department did not intend to change the current requirements for employer-provided housing and has corrected this inadvertent reference to ''employer-owned'' housing in the regulatory text.

A group of farmworker advocacy organizations commented that, in its view, all rental and/or public accommodations should be required by the Department, at a minimum, to meet the Federal standards for temporary labor camps. The commenter asserted that State and local standards for rental and/or public accommodation housing may in many instances be grossly inadequate, and that the application of Federal minimum standards is therefore essential. The Department does not believe, however, that it has the authority under the INA to impose such a minimum requirement. Section 218(c)(4) of the INA expressly provides that to satisfy their housing obligation employers may, at their option, either ''provide housing meeting applicable Federal standards for temporary labor camps'' or ''secure housing which meets the local standards for rental and/or public accommodations or other substantially similar class of habitation.'' An employer that secures rental and/or public accommodations that meet all of the applicable local standards has satisfied its housing obligation under the statute. The statute provides that rental and/or public accommodation housing does not need to meet Federal temporary labor camp standards unless there are no ''applicable local or State standards.'' The Department is not at liberty to issue regulations that are inconsistent with the structure of employer housing obligations under the INA.

A few commenters urged the Department to relieve employers in certain border communities (e.g., Yuma, AZ) of the requirement to provide housing to H–2A workers from Mexico who are able to commute back to their homes across the border on a daily basis. According to one association commenter, Yuma, Arizona employers have traditionally attracted tens of thousands of seasonal workers daily, approximately half of whom reside in the U.S. while the other half choose to maintain their residences in Mexico. This association believes that requiring employers in such instances to provide housing and transportation not only hinders participation but ignores reality.

The INA at sec. 218(c)(4) requires employers to provide housing to all H–2A workers. The Department does not believe it has a legal basis upon which to permit employers to employ H–2A workers without providing those workers with housing. Of course, there is no statutory requirement that workers actually reside in the employer-provided housing. So, an H–2A worker who resides within commuting distance of a home across the border could presumably return home each night if the worker wanted to, provided the employer didn't require its workers to reside in specific housing as a condition of the work agreement. Nevertheless, the employer would be required by statute to make appropriate housing available to the worker.

Some commenters suggested that U.S. Department of Agriculture sec. 514 Farm Labor Housing Loans should be made available for the construction of housing used for H–2A workers. The Department has no authority to allocate Farm Labor Housing Loans, but has passed along the comment to the USDA.

Several commenters raised specific concerns about the attestation process as related to housing for agricultural workers. These commenters believe that the attestation process will lead to abuses in housing because there is no process in place for establishing compliance with the housing inspection request. Pursuant to the Final Rule, housing inspections are still required to be completed by SWAs. The Department believes that the extended timeframes for required pre-certification housing inspections will give the housing inspectors more time to complete inspections and should actually lead to more thorough inspections that in turn will help ensure violations are corrected.

So as not to inadvertently alter the availability of the conditional access provisions of § 654.403, which were cited favorably by some commenters, the Department has added language to § 655.104(d)(6)(i) clarifying that the required attestation ''may include an attestation that the employer is complying with the procedures set forth in § 654.403.''

Finally, the Department notes it has made several non-substantive changes to the text of § 655.104(d) to provide clarity. For example, the NPRM noted the obligation to provide housing to those workers who are not reasonably able to return to their permanent residence ''within the same day.'' The Department has amended this phrase to ''at the end of the work day'' to clarify that a work day may go beyond the same 24-hour period (for example, a late shift may not necessarily end within the same day but would still be considered part of the same work day after which an H–2A worker could not be reasonably expected to return to the home residence). For the same reason, the term ''without charge'' has been amended to read ''at no cost to the worker,'' in order to ensure clarity and understanding. The Department has also included language in § 655.104(d)(1)(ii) to clarify the kind of documentation that employers are expected to retain if they secure rental and/or public accommodations for their workers to show that the accommodations comply with the applicable legal standards. The language is taken directly from ETA Handbook No. 398, which provides at page I–26 that such documentation ''may be in the form of a certificate from the local or State Department of Health office or a statement from the manager or owner of the housing.'' In addition, non-substantive changes have been made to comport with plain English standards (for example, the use of active voice, such as the change in § 655.104(d)(6)(iii) to read ''The SWA is required by Section 218(c)(4) of the INA to make its determination''). Finally, a provision that is in the current regulation regarding charges for public housing, which was inadvertently omitted from the NPRM and whose absence was noted by several commenters, has been restored.

(e) Section 655.104(e) Workers' compensation

The NPRM proposed to continue the current requirement that the job offer must contain a statement promising that workers' compensation insurance will be provided. This is a statutory requirement. The INA at Section 218(b)(3) requires the employer to provide the Secretary with satisfactory assurances that ''if the employment for which certification is sought is not covered by State workers' compensation law, the employer will provide, at no cost to the worker, insurance covering injury and disease arising out of and in the course of the worker's employment which will provide benefits at least equal to those provided under the State workers' compensation law for comparable employment.'' One commenter noted the State of Washington has an unusual Worker's Compensation statute that requires workers to contribute 50 percent of the premium unless the employer is self-insured, whereas the NPRM required the employer to provide such insurance at no cost to the worker. The intent of the workers' compensation provision in the INA is to ensure that no worker is left without insurance in those States that exclude agricultural work from coverage. In fact, Section 218(b)(3) provides that if ''employment for which the certification is sought *is not covered* by State workers' compensation law, the employer will provide, at no cost to the worker, insurance covering injury and disease arising out of and in the course of the workers' employment which will provide benefits at least equal to those provided under the State workers' compensation law for comparable employment'' (emphasis added). Where the employment in question is covered by State workers' compensation law, but subject to certain rules applied by the State, the statutory provision is inapplicable. Therefore, the Department has modified language in § 655.104(e) to clarify that the employer should follow State law, but if the State excludes the type of employment for which the certification is being sought, then the employer must purchase the insurance at no cost to the worker.

Other commenters complained that the Department no longer requires submission of proof of Worker's Compensation Insurance. These commenters believe that employers circumvent this requirement by having inadequate coverage or by allowing the coverage to lapse after receiving certification, or by not buying it at all because State law does not require it. The Department is confident that the attestation-based application system will allow the Department to enforce these provisions because these attestations are made under penalty of perjury. If it is revealed during an audit that an employer fraudulently claimed to have met all program requirements, the employer would be subject to penalties, including debarment from the program.

Other changes made to the language of this provision were non-substantive, and made for purposes of clarification, or (as in the case of the recordkeeping language) to conform to changes made elsewhere in the rule.

(f) Section 655.104(f) Employer-Provided Items

The NPRM proposed to continue the current requirement that employers provide workers with ''all tools, supplies, and equipment required'' to perform the duties of the job. The NPRM allowed employers to require workers to provide tools or equipment where the employer can demonstrate such a practice was ''common'' in the area of employment.

The Department received one comment relating to its proposal, asserting that the Department should

not have deleted the current language mandating approval from the Department if employers seek to require employees to purchase any tools and equipment because it is common practice to do so. The ''common practice'' standard is not new, but has been carried over from the current regulation. Whether a common practice exists will still be a determination of fact to be decided by the Department and not by the employer. The only change in this determination is that the employer will now bear the burden of proof in the event of an audit or investigation to show that the practice claimed is common. In determining whether a practice is ''common'' in a particular area, the Department will apply a simple mathematical formula. If an employer can demonstrate that 25 percent of non-H–2A workers in the crop activity and occupation in the particular area are required to provide tools or equipment, the Department will consider the practice to be ''common.'' This simple standard will be relatively easy to administer, and will ensure that employers have fair notice of their legal obligations.

Clarifying language was also inserted referencing the requirements of sec. 3(m) of the Fair Labor Standards Act, 29 U.S.C. 203(m) (FLSA), which does not permit deductions for tools or equipment primarily for the benefit of the employer that reduce an employee's wage below the wage required under the minimum wage, or, where applicable, the overtime provisions of the FLSA.

(g) Section 655.104(g) Meals

Section 655.104 (g) concerns the provision of meals to workers and the amount employers may charge workers for meals each day. Although the Department proposed no changes to this section, a few comments were received stating that the amount allowed to be charged/reimbursed does not reflect the true cost of the employer's providing or the worker's purchase of meals. Section 655.114 provides for annual adjustments of the previous year's allowable meal charges based upon Consumer Price Index (CPI) data. Each year the maximum charges allowed are adjusted from the charges allotted the previous year by the same percentage as the twelve-month percent change in the CPI for all Urban Consumers for Food (CPI–U for Food) between December of the year just concluded and December of the year prior to that. The Department reminds employers of their ability to petition for higher meal charges, a practice that has been continued in the Final Rule in § 655.114. The amount of the meal charge, which in the NPRM was listed in § 655.104(g), has for purposes of clarity been listed instead in § 655.114.

(h) Section 655.104(h) Transportation

Existing regulations at § 655.102(b)(5) require employers to provide or pay for workers' daily subsistence and transportation from the place from which the worker has come to the place of employment. The employer is to advance these costs to the worker when it is the prevailing practice of non-H–2A employers in the occupation and area to do so. If the employer has not advanced transportation and subsistence costs or otherwise provided or paid for these costs and the worker completes 50 percent of the work contract period, the employer is required to reimburse the worker for these costs at that time. The Department proposed no change to this requirement, but sought comments and information on the costs and benefits to employers and workers of continuing to require employers to pay for the workers' inbound and outbound (return) subsistence and transportation costs.

The Department received several comments on this requirement. Some comments from employers and employer associations advocated that employers and employees should share the costs of workers' inbound subsistence and transportation. These commenters argued that both employees and employers benefit from the H–2A employment relationship and therefore should share the costs. Others suggested that the employees should bear the full cost of their inbound subsistence and transportation, arguing that the inbound travel employment once they are in the country. Some commenters also noted that no other nonimmigrant work-related program requires employers to pay for the workers' inbound subsistence and transportation.

Comments from employee advocates urged the Department to continue the requirement that employers provide or pay for workers inbound subsistence and transportation costs, asserting that inbound subsistence and transportation costs:

> [a]re necessary for many reasons—to attract U.S. workers; to encourage employers to fully employ the workers in whom they have invested and to recruit only those workers needed; * * * and, because farmworkers wages are so low, to prevent farmworkers from becoming even more deeply indebted (and more exploitable) or from seeking low-cost transportation that is often unregulated and deadly.

While there was disagreement among commenters on the current requirement that employers pay inbound subsistence and transportation, there was agreement that employers should continue to pay for workers' outbound transportation. Employer and worker advocate commenters agreed that payment of outbound travel is a critical means to help ensure that workers depart the U.S. at the end of their H–2A contract.

Many comments addressed the timing of reimbursement to workers for inbound subsistence and transportation costs. Most commenters referenced the appellate court's decision in *Arriaga* v. *Florida Pacific Farms,* L.L.C., 305 F.3d 1228 (11th Cir. 2002), which held that growers violated the minimum wage provisions of the FLSA by failing to reimburse farmworkers during their first workweek for travel expenses (and visa and immigration fees) paid by the workers employed by the growers under the H–2A program. Under the FLSA, pre-employment expenses incurred by workers that are properly business expenses of the employer and primarily for the benefit of the employer are considered ''kick-backs'' of wages to the employer and are treated as deductions from the employees' wages during the first workweek. 29 CFR 531.35. Such deductions must be reimbursed by the employer during the first workweek to the extent that they effectively result in workers' weekly wages being below the minimum wage. 29 CFR 531.36. Although the employer in the *Arriaga* case did not itself make direct deductions from the workers' wages, the Court held that the costs incurred by the workers amounted to ''de facto deductions'' that the workers absorbed, thereby driving the workers' wages below the statutory minimum. The Eleventh Circuit reasoned that the transportation and visa costs incurred by the workers were primarily for the benefit of the employer and necessary and incidental to the employment of the workers and stated that ''[t]ransportation charges are an inevitable and inescapable consequence of having H–2A foreign workers employed in the United States; these are costs which arise out of the employment of H–2A workers.'' Finally, the court held that the growers' practices violated the FLSA minimum wage provisions, even though the H–2A regulations provide that the transportation costs need not be repaid until the workers complete 50 percent of the contract work period. The Eleventh Circuit noted that the H–2A regulations require employers to comply with applicable federal laws, and in accepting the contract orders in this case, the ETA Regional Administrator informed the growers in writing that their obligation

to pay the full FLSA minimum wage is not overridden by the H–2A regulations.

Comments from employers recommended continuing the Department's requirement that workers be reimbursed at the 50 percent point of the work contract, stating that the current policy appropriately balances the interests of employers and employees by creating an incentive for employees to complete at least half of the contract. Many employers urged the Department not to require immediate reimbursement to workers and that the Department:

> should explicitly state that an employer of H–2A workers does not have an obligation under the INA, the Fair Labor Standards Act (''FLSA''), or DOL regulations to reimburse a worker's in-bound transportation expense until the 50 percent point of the work contract and that if a worker's payment of inbound transportation and subsistence costs reduces his/her first week's wage below the minimum wage, such reduction does not result in a violation of the FLSA.

Employee advocates, on the other hand, pressed the Department to require employers to comply with the FLSA which, they state, requires the reimbursement of costs at the beginning of employment when those costs are for the benefit of the employer and effectively reduce the workers' weekly income below the minimum wage. Another employee advocate suggested that the Department consider requiring H–2A employers to advance to workers inbound costs and to pay referral fees to domestic labor contractors to encourage the movement of low-wage U.S. workers to labor shortage areas.

After due consideration of the comments, the Department has determined to continue the current policy of requiring employers to provide or pay for workers' inbound and outbound subsistence and transportation and the corresponding requirement for reimbursement of such inbound costs upon the worker's completion of 50 percent of the work contract period. Thus, reimbursement at the 50 percent point is all that the Final Rule requires pursuant to the Department's rulemaking authority under the INA. Moreover, the Department believes that the better reading of the FLSA and the Department's own regulations is that relocation costs under the H–2A program are not primarily for the benefit of the employer, that relocation costs paid for by H–2A workers do not constitute kickbacks within the meaning of 29 CFR 531.35, and that reimbursement of workers for such costs in the first paycheck is not required by the FLSA.

The FLSA requires employers to pay their employees set minimum hourly wages. 29 U.S.C. 206(a). The FLSA allows employers to count as wages (and thus count toward the satisfaction of the minimum wage obligation) the reasonable cost of ''furnishing [an] employee with board, lodging, or other facilities, if such board, lodging, or other facilities are customarily furnished by such employer to his employees.'' 29 U.S.C. 203(m). The FLSA regulations provide that ''[t]he cost of furnishing 'facilities' found by the Administrator to be primarily for the benefit or convenience of the employer will not be recognized as reasonable [costs within the meaning of the statute] and may not therefore be included in computing wages.'' 29 CFR 531.3(d)(1). The FLSA regulations further provide examples of various items that the Department has deemed generally to be qualifying facilities within the meaning of 29 U.S.C. 203(m), see 29 CFR 531.32(a), as well as examples of various items that the Department has deemed generally not to be qualifying facilities, *see* 29 CFR 531.3(d)(2), 29 CFR 531.32(c).

Separate from the question whether items or expenses furnished or paid for by the employer can be counted as wages paid to the employee, the FLSA regulations contain provisions governing the treatment under the FLSA of costs and expenses incurred by employees. The regulations specify that wages, whether paid in cash or in facilities, cannot be considered to have been paid by the employer and received by the employee unless they are paid finally and unconditionally, or ''free and clear.'' 29 CFR 531.35. Thus, ''[t]he wage requirements of the Act will not be met where the employee 'kicks-back' directly or indirectly to the employer or to another person for the employer's benefit the whole or part of the wage delivered to the employee. This is true whether the 'kick-back' is made in cash or in other than cash. For example, if the employer requires that the employee must provide tools of the trade that will be used in or are specifically required for the performance of the employer's particular work, there would be a violation of the Act in any workweek when the cost of such tools purchased by the employee cuts into the minimum or overtime wages required to be paid him under the Act.'' *Id.* The regulations treat employer deductions from an employee's wages for costs incurred by the employer as though the deductions were a payment from the employee to the employer for the items furnished or services rendered by the employer, and applies the standards set forth in the ''kick-back'' provisions at 29 CFR 531.35 to those payments. Thus, ''[d]eductions for articles such as tools, miners' lamps, dynamite caps, and other items which do not constitute 'board, lodging, or other facilities' '' are illegal ''to the extent that they reduce the wages of the employee in any such workweek below the minimum required by the Act.'' 29 CFR 531.36(b).

In sum, where an employer has paid for a particular item or service, under certain circumstances it may pursuant to 29 U.S.C. 203(m) count that payment as wages paid to the employee. On the other hand, when an employee has paid for such an item or service, an analysis under 29 CFR 531.35 is required to determine whether the payment constitutes a ''kick-back'' of wages to the employer that should be treated as a deduction from the employee's wages.

The *Arriaga* court seems to have assumed that all expenses necessarily fall into one of these two categories—that either they qualify as wages under 29 U.S.C. 203(m) or they constitute a ''kick-back'' under 29 CFR 531.35. *See Arriaga,* 305 F.3d at 1241–42 (stating that if a payment ''may not be counted as wages'' under 29 U.S.C. 203(m), then ''the employer therefore would be required to reimburse the expense up to the point the FLSA minimum wage provisions have been met'' under 29 CFR 531.35 and 29 CFR 531.36). That is incorrect. For example, if an employer were to give an employee a valuable item that was not ''customarily furnished'' to his or her employees, the employer would not be able to count the value of that item as wages under 29 U.S.C. 203(m) unless the employer ''customarily furnished'' the item to his or her employees. Nevertheless, since the employee paid nothing for that item, it clearly would not constitute a ''kick-back'' of wages to the employer that would have to be deducted from the employee's wages for purposes of determining whether the employer met its minimum wage obligations under 29 U.S.C. 206(a). Similarly, if a grocery employee bought a loaf of bread off the shelf at the grocery store where he or she worked as part of an arms-length commercial transaction, the payment made by the employee to the employer would not constitute a ''kick-back'' of wages to the employer, nor would the loaf of bread sold by the employer to the employee be able to be counted toward the employee's wages under 29 U.S.C. 203(m). Both parties would presumably benefit equally from such a transaction—it would neither be primarily for the benefit of the employer, nor would it be primarily for the benefit of the employee.

Expenses paid by an employer that are primarily for the employer's benefit cannot be counted toward wages under 29 U.S.C. 203(m). *See* 29 CFR 531.3(d). Similarly, expenses paid by an employee cannot constitute a ''kick-back'' unless they are for the employer's benefit. *See* 29 CFR 531.35. An analysis conducted under 29 U.S.C. 203(m) determining that a particular kind of expense is primarily for the benefit of the employer will thus generally carry through to establish that the same kind of expense is primarily for the benefit of the employer under 29 CFR 531.35. Each expense, however, must be analyzed separately in its proper context.

The question at issue here is whether payments made by H–2A employees for the cost of relocating to the United States, whether paid to a third party transportation provider or paid directly to the employer, constitutes a ''kick-back'' of wages within the meaning of 29 CFR 531.35. If the payment does constitute a ''kick-back,'' then the payment must, as the *Arriaga* court decided, be counted as a deduction from the employee's first week of wages under the FLSA for purposes of determining whether the employer's minimum wage obligations have been met.

The Department does not believe that an H–2A worker's payment of his or her own relocation expenses constitutes a ''kick-back'' to the H–2A employer within the meaning of 29 CFR 531.35. It is a necessary condition to be considered a ''kick-back'' that an employee-paid expense be primarily for the benefit of the employer. The Department need not decide for present purposes whether an employee-paid expense's status as primarily for the benefit of the employer is a *sufficient* condition for it to qualify as a ''kick-back,'' because the Department does not consider an H–2A employee's payment of his or her own relocation expenses to be primarily for the benefit of the H–2A employer.

Both as a general matter and in the specific context of guest worker programs, employee relocation costs are not typically considered to be ''primarily for the benefit'' of the employer. Rather, in the Department's view, an H–2A worker's inbound transportation costs either primarily benefit the employee, or equally benefit the employee and the employer. In either case, the FLSA and its implementing regulations do not require H–2A employers to pay the relocation costs of H–2A employees. *Arriaga* misconstrued the Department's regulations and is wrongly decided.

As an initial matter, any weighing of the relative balance of benefits derived by H–2A employers and employees from inbound transportation costs must take into account the fact that H–2A workers derive very substantial benefits from their relocation. Foreign workers seeking employment under the H–2A nonimmigrant visa program often travel great distances, far from family, friends, and home, to accept the offer of employment. Their travel not only allows them to earn money—typically far more money than they could have in their home country over a similar period of time—but also allows them to live and engage in non-work activities in the U.S. These twin benefits are so valuable to foreign workers that these workers have proven willing in many instances to pay recruiters thousands of dollars (a practice that the Department is now taking measures to curtail) just to gain access to the job opportunities, at times going to great lengths to raise the necessary funds. The fact that H–2A farmworkers travel such great distances and make such substantial sacrifices to obtain work in the United States indicates that the travel greatly benefits those employees. Many of the comments received by the Department support this conclusion.

Most significantly, however, the Department's regulations explicitly state that ''transportation furnished employees between their homes and work where the travel time does not constitute hours worked compensable under the Act and the transportation is not an incident of and necessary to the employment'' are qualifying ''facilities'' under 29 U.S.C. 203(m). 29 CFR 531.32(a). As qualifying facilities, such expenses cannot by definition be primarily for the benefit of the employer. 29 CFR 531.32(c). The wording of the regulation does not distinguish between commuting and relocation costs, and in the context of the H–2A program, inbound relocation costs fit well within the definition as they are between the employee's home country and the place of work.

The *Arriaga* court ruled that H–2A relocation expenses are primarily for the benefit of the employer in part because it believed that under 29 CFR 531.32, ''a consistent line'' is drawn ''between those costs arising from the employment itself and those that would arise in the ordinary course of life.'' 305 F.3d at 1242. The court held that relocation costs do not arise in the ordinary course of life, but rather arise from employment. *Id.* Commuting costs and relocation costs cannot be distinguished on those grounds, however. Both kinds of expenses are incurred by employees for the purpose of getting to a work site to work. Moreover, an employee would not rationally incur either kind of expense but for the existence of the job. Both the employer and the employee derive benefits from the employment relationship, and, absent unusual circumstances, an employee's relocation costs to start a new job cannot be said to be primarily for the benefit of the employer.

That is not to say that travel and relocation costs are never properly considered to be primarily for the benefit of an employer. The regulations state that travel costs will be considered to be primarily for the benefit of the employer when they are ''an incident of and necessary to the employment.'' 29 CFR 531.32(c). This might include, for example, a business trip, or an employer-imposed requirement that an employee relocate in order to retain his or her job. Relocation costs to start a new job will rarely satisfy this test, however.

In a literal sense it may be necessary to travel to a new job opportunity in order to perform the work, but that fact, without more, does not render the travel an ''incident'' of the employment. Inbound relocation costs are not, absent unusual circumstances, any more an ''incident of * * * employment'' than is commuting to a job each day. Indeed, inbound relocation costs are quite similar to commuting costs in many respects, which generally are not considered compensable. Cf. DOL Opinion Letter WH–538 (August 5, 1994) (stating that travel time from home to work is ''ordinary home-to-work travel and is not compensable'' under the FLSA); *Vega ex rel. Trevino* v. *Gasper,* 36 F.3d 417 (5th Cir. 1994) (finding travel to and from work and home not compensable activity under Portal-to-Portal Act). In fact, there is no reason to believe that the drafters of 29 U.S.C. 203(m) and 206(a) ever intended for those provisions to indirectly require employers to pay for their employees' relocation and commuting expenses. To qualify as an ''incident of * * * employment'' under the Department's regulations, transportation costs must have a more direct and palpable connection to the job in question than merely serving to bring the employee to the work site.

Taking the *Arriaga* court's logic to its ultimate conclusion would potentially subject employers across the U.S. to a requirement to pay relocation expenses for all newly hired employees—or at least to pay relocation expenses for all newly hired foreign employees, since international relocation is perhaps less ''ordinary'' than intranational

relocation. That simply cannot be correct. The language of 29 U.S.C. 203(m) and 206(a) and their implementing regulations provide a very thin reed on which to hang such a seismic shift in hiring practices, particularly so many years after those provisions have gone into effect. Nor does the fact that H–2A workers are temporary guest workers change the equation. Even assuming that H–2A workers derive somewhat less benefit from their jobs because they are only temporary, that fact alone would not render the worker's relocation expenses an ''incident'' of the temporary job. If it did, ski resorts, camp grounds, shore businesses, and hotels would all be legally required to pay relocation costs for their employees at the beginning of each season—again, a result that is very difficult to square with the language and purpose of 29 U.S.C. 203(m) and 29 CFR 531.35.

A stronger argument could be made, perhaps, that employers derive a greater-than-usual benefit from relocation costs when they hire foreign guest workers such as H–2A workers, because employers generally are not allowed to hire guest workers unless they have first attempted but failed to recruit U.S. workers. Thus, such employers have specifically stated a need to hire non-local workers. Given the substantially greater benefit that foreign guest workers generally derive from work opportunities in the United States than they do from employment opportunities in their home countries, however, the Department believes that this at most brings the balance of benefits between the employer and the worker into equipoise. Moreover, the employer's need for non-local workers does nothing to transform the relocation costs into an ''incident'' of the job opportunity in a way that would render the employee's payment of the relocation expenses a ''kick-back'' to the employer. If it did, courts would soon be called upon every time an employer hired an out-of-state worker to assess just how great the employer's need for the out-of-state employee was in light of local labor market conditions. Conversely, the courts would also have to inquire into the employee's circumstances, and whether the employee had reasonably comparable job prospects in the area from which the employee relocated. Again, the Department does not believe such a result is consistent with the text or the intent of the FLSA or the Department's implementing regulations.

It is true, of course, that H–2A employers derive some benefit from an H–2A worker's inbound travel. To be compensable under the FLSA, however, the question is not whether an employer receives *some* benefit from an item or paid-for cost, but rather whether they receive the *primary* benefit. Significantly, despite the fact that employers nearly always derive some benefit from the hiring of state-side workers as well, such workers' relocation costs generally have not been considered to be ''primarily for the benefit of the employer.'' That is so because the worker benefits from the travel either more than or just as much as the employer.

The Department obligated H–2A employers to pay H–2A workers' transportation costs not because it believed that the workers were entitled to such payments under the FLSA, but rather in the discharge of its responsibilities under the INA to insure the integrity of the H–2A program. The Department carefully crafted its regulation to give H–2A workers a strong incentive to complete at least 50 percent of their work contract. The practical effect of the Arriaga decision, however, is to require H–2A employers to pay for H–2A workers' inbound transportation costs without any reciprocal guarantee that the workers will continue to work for the employer after the first workweek. The Department believes that the payment of such transportation costs unattached to a reciprocal guarantee that the needed work will ultimately be performed substantially diminishes the benefit of the travel to the employer, and certainly would not allow the travel to be considered primarily for the employer's benefit.

In sum, the Department believes that the costs of relocation to the site of the job opportunity generally is not an ''incident'' of an H–2A worker's employment within the meaning of 29 CFR 531.32, and is not primarily for the benefit of the H–2A employer. The Department has publicly stated that ''in enforcing the FLSA for H–2A workers, the Department's general policy is to ensure that workers receive transportation reimbursement by the time they complete 50 percent of their work contract period (or shortly thereafter) rather than insisting upon reimbursement at the first pay period.'' The Department continues to believe that this is the appropriate interpretation of the interplay between the H–2A program regulations and the FLSA in regards to transportation reimbursement. The Department states this as a definitive interpretation of its own regulations and expects that courts will defer to that interpretation.

The current regulation uses the phrase ''place from which the worker has departed'' to describe the beginning point from which employers are required to provide or pay for inbound transportation and subsistence, and, if the worker completes the work contract period, the ending point to which employers are required to provide or pay for outbound transportation and subsistence. This phrase has at times been interpreted by the Department to mean the worker's ''home,'' or the place from which the worker was recruited. Most recently, the phrase was addressed in ETA Training and Employment Guidance Letter No. 23–01, Change 1 (August 2, 2002): '' 'Home' is where the worker was originally recruited.'' While the Department proposed no changes to this regulatory language or interpretation, comments were received on this point. One agricultural association suggested that the Department clarify that transportation from and back to the place from which the worker came to work should be considered to require transportation from or to the site of the U.S. Consulate that issued the visa. This commenter stated:

> For the past 20 years the phrase ''from the place from which the worker has come to work for the employer to the place of employment,'' has meant payment of transportation from the location of the U.S. Consulate which issued the H–2A visa to the place of employment of the petitioning employer. Although the Department in its memoranda refers to ''place of recruitment'' its examples of how this rule works speaks only of transportation from and back to the worker's home country. There is no mention of the worker's village. This interpretation is in line with the INA and DHS regulations which do not allow a worker to enter the U.S. until that foreign worker has an H–2A visa. Thus, the worker cannot ''come to work for the employer'' until he or she has an H–2A visa. It is at the point that the worker has the H–2A visa that he or she is eligible to go to work for the employer.

The Department finds this to be a compelling argument. It is the Department's program experience that workers, particularly H–2A workers, gather in groups for processing and transfer to the U.S. The logical gathering point for these workers is at the U.S. Consulate location where the workers receive their visa. In most countries that send H–2A workers to the U.S., such processing is usually centrally located (in Monterrey, Mexico, for example, rather than in Mexico City or another Consulate location). Designating the Consulate location where the visa is issued provides the Department with an administratively consistent place from which to calculate charges and

obligations. We have therefore made corresponding changes in the regulatory text to clarify that the ''place from which the worker has departed'' for foreign workers outside of the U.S. is the appropriate U.S. Consulate or port of entry.

Finally, the Department sought to clarify that minimum safety standards required for employer provided transportation between the worker's living quarters (provided or secured by the employer pursuant to INA sec. 218(c)(4)) and the worksite are the standards contained in MSPA (29 U.S.C. 1841). The Department does not seek to apply MSPA to H–2A workers and has no authority to do so. This clarification is intended to remove any ambiguity concerning the appropriate minimum vehicle safety standards for H–2A employers and should simplify compliance for those H–2A employers that also employ MSPA workers.

Other changes to the language of the proposed provision—most significantly, the notation that an employer's return transportation obligation under § 655.104(h)(2) applies where ''the worker has no immediately subsequent H–2A employment''—are non-substantive and have been made for purposes of clarification.

(i) Section 655.104(i) Three-Fourths Guarantee

The Department chose, in the NPRM, to continue the so-called ''three-fourths guarantee,'' by which it ensures that H–2A workers are offered a certain guaranteed number of hours of work during the specified period of the contract, and that if they are not offered enough hours of work, that they are paid as though they had completed the specified minimum number of work hours. In doing so, the Department suggested some minor changes to make the guarantee easier to apply in practice.

One grower association objected to the continuation of the three-fourths guarantee. They stated that it needs to be eliminated because it is arcane, is seldom understood by the growers, and complicates the system by creating more ''red tape'' for the growers. Other commenters supported the rule, but commented on the nuances of the changes made to the rule under the NPRM. A few commenters expressed the view that the guarantee deters employers from over-recruiting, which may create an oversupply of workers and drive wages down, and also assures long-distance migrants that attractive job opportunities exist. However, some commenters also believe that the guarantee requirement results in employer abuses, such as employers misrepresenting the length of the season. They suggested the Department add language to allow workers to collect the three-fourths guarantee ''based on the average number of hours worked in a particular crop region and upon a showing of having worked through the last week in which the employer offered work to a full complement of his workforce.''

The Department believes the rule provides essential protection for both U.S. and H–2A workers, in that it ensures their commitment to a particular employer will result in real jobs that meet their reasonable expectations. The Department also believes the rule is not easy to abuse or circumvent, as it is based on a simple mathematical calculation. For those employers that might try to evade their responsibilities, the Department has enforcement measures and penalties to act as a deterrent.

Changing the three-fourths guarantee to be based on a per-crop harvest calculation using an average of hours worked rather than a contract period would make it nearly impossible to track and enforce the guarantee. To require employers to keep track of workers on a per-crop basis and allow the workers to collect money based on the three-fourths guarantee when the U.S. workers transition from one employer to another during the peak harvesting times appears patently unfair and the Department is not willing to create such an option.

Two commenters also suggested that the Department take out the reference to ''work hours'' and return the term ''workday'' because the commenters believed that the employer might otherwise submit job orders based on a ''bogus'' hourly work day or work week. The Department believes that this concern is misplaced. The new terminology proposed by the Department is no more susceptible to abuse than the old terminology is; under either phrasing, employer fraud requires submitting false calculations of work. The Department purposely added the sentence with ''work hours'' and kept the old references to ''workday'' in the NPRM to make the formula for calculation of the total amount guaranteed easier to understand and calculate. The end result is the same under either phrasing, however.

A farm bureau requested that we insert language at the end of § 655.104(i)(1) to protect employers from the costs resulting from U.S. workers who voluntarily abandon employment in the middle of the contract period and then return at the end of the contract period or from those U.S. workers who show up in the middle of the contract period. This commenter does not believe that an employer should have any liability under the three-fourths guarantee rule for such unreliable employees. The guarantee has never applied to workers who voluntarily abandon employment or who never show up for the work, provided notice of such abandonment or no-show is provided to DOL within the time frames for reporting an abandonment that are set forth in § 655.104(n). The Department has further clarified that provision in the Final Rule by defining abandonment of the job as the worker failing to report for work for 5 consecutive days.

Farmworker advocates expressed concern that the Department would not enforce this provision. The Department appreciates the concerns raised and assures the public it intends to enforce this provision fully, as it intends to implement the entire rule.

Another commenter requested clarification on what hours an employer may count toward the three-fourths guarantee when an employee voluntarily works more than the contract requires. The commenter asked for language to be inserted into § 655.104(i)(3) stating that all hours of work actually performed including voluntary work over and above the contract requirement can be counted by the employer. The Department believes that this principle was already made clear by § 655.104(i)(1), but it has added the requested language for purposes of clarification.

In proposed § 655.104(i)(4) the Department sought to reiterate the employer's obligation to provide housing and meals to workers during the entire contract period, notwithstanding the three-fourths guarantee. The proposed paragraph, while properly entitled ''Obligation to provide housing and meals,'' inadvertently discussed an obligation to provide meals and transportation. Two comments were received on this paragraph. One employer association suggested that the text of the paragraph be revised to reflect that employers are not obligated to provide housing to workers who quit or are terminated for cause. One employee advocacy organization commented that the clarification that the employer is not allowed to shut down the labor camp or the camp kitchen during the contract period is a positive change. The Department has modified the paragraph to clarify that it is the employer's obligation to provide housing and meals during the contract period that is not affected by the three-fourths guarantee,

and to clarify that employers are not obligated to provide housing to workers who voluntarily abandon employment or are terminated for cause.

Finally, in the NPRM the Department inadvertently deleted some qualifying phrases from this provision that are contained in the current regulation, and has accordingly in the Final Rule reverted to the language of the current regulation. Section 655.104(i)(3) discusses an employee's failure to work in the context of calculating whether the period of guaranteed employment has been met. The Final Rule reinserts the phrase currently in the regulations at § 655.102(b)(6)(iii) permitting an employer to count ''all hours of work actually performed (including voluntary work over 8 hours in a workday or the worker's Sabbath or Federal Holidays).'' The Final Rule also reinserts as § 655.104(i)(4) the statement found in the current regulation at § 655.102(b)(6)(iv) that an employer is not liable for payment of the three-quarters guarantee to an H–2A worker whom the CO certifies has been displaced because of the employer's compliance with its obligation under these rules, where applicable, to accept referrals of U.S. workers after its date of need.

(j) Section 655.104(j) Records

The NPRM proposed continuing the ''keeping of adequate and accurate records'' with respect to the payment of workers, making only minor modifications to the current regulation. The Department received several comments specific to the provisions of this section.

A commenter requested that the Department eliminate the requirement for employers to provide information to the worker through the worker's representative upon reasonable notice. The Department does not believe this requirement should be eliminated because it is the Department's goal to encourage the availability of information to workers. Another commenter suggested refinements to the provision, including suggesting that a ''worker's representative'' be defined and documented in some manner so as to prevent the theft of information under the guise of disclosure to worker's representatives, and also to require disclosure of records within five days instead of upon ''reasonable'' notice.

The Department agrees that it did not clarify in sufficient detail how a designated worker's representative should be identified so as to prevent unauthorized disclosure of records, and it accordingly has added language to the Final Rule stating that appropriate documentation of a designation of representative status must be provided to the employer.

Instead of changing the term ''reasonable'' notice in the Final Rule to refer to a specific number of days, however, the Department has instead decided to adopt in § 655.104(j)(2) of the Final Rule the standard for production of records that is currently found at 29 CFR 516.7 and that the WHD uses under the FLSA. The Secretary can already request most H–2A records kept pursuant to this rule under the FLSA, and having one standard will help to avoid confusion in the regulated community.

(k) Section 655.104(k) Hours and Earnings Statements

The Department did not receive any comments on this section. However, the Department made non-substantive punctuation changes to the provision in the Final Rule to reflect plain language standards.

(l) Section 655.104(l) Rates of Pay

In the NPRM, the Department proposed to require employers to pay the highest of the adverse effect wage rate, the prevailing wage rate, or the Federal, State, or local minimum wage. The Final Rule retains this requirement, with some minor non-substantive clarifications to the text of the provision; comments specific to the issue of actual rates that will be required and the timing of their application are dealt with in the discussion of § 655.108.

Because this provision discusses the use of piece rates, several commenters took the opportunity to suggest changes to how piece rates are treated within the H–2A program. Worker advocates argued for reinstitution of the pre-1986 rules regarding piece rate adjustments. Some employers argued that the Department should not attempt to regulate piece rates at all. As the NPRM did not propose changes to the now long-standing procedures for the regulation of piece rates, the Department did not adopt any of these suggested changes in the Final Rule.

The NPRM proposed a modest change to the regulation governing productivity standards. Under existing regulations, an employer who pays on a piece rate basis and utilizes a productivity standard as a condition of job retention must utilize the productivity standard in place in 1977 or the first year the employer entered the H–2A system with certain exceptions and qualifications. The NPRM proposed to simplify this provision by requiring that any productivity standard be no more than that normally required by other employers in the area.

No commenter explicitly opposed the change in the methodology by which acceptable productivity standards are determined, but several employers asked for additional flexibility to be allowed to use a productivity standard even if the majority of employers in the area do not utilize one. We believe the ''normal'' standard, which the Department will retain in the Final Rule, will provide adequate flexibility for employers while ensuring that the wages and working conditions of U.S. workers are not adversely affected by the use of productivity rates not normal in the area of intended employment. Clarifying language has been added to the provision supplying the Department's interpretation of the term ''normal'' to mean ''not unusual.'' The Department has long applied this meaning of the term ''normal'' In the H–2A context. *See, e.g.*, ETA Handbook No. 398 at II–7 (''The terms 'normal' and 'common', although difficult to quantify, for H–2A certification purposes mean situations which may be less than prevailing, but which clearly are not unusual or rare.''); *id.* at I–40 (noting that the Department will carefully examine job qualifications, which are required by statute to be ''normal'' and ''accepted,'' if the qualifications are ''unusual''). It is also within the range of generally accepted meanings of the term. *See, e.g.*, Black's Law Dictionary 1086 (8th ed. 2004) (''The term describes not just forces that are constantly and habitually operating but also forces that operate periodically or with some degree of frequency. In this sense, its common antonyms are *unusual* and *extraordinary*.''); Webster's Unabridged Dictionary 1321 (2d ed. 2001) (supplying ''not abnormal'' as one of several definitions). Thus, ''normal'' does not require that a majority of employers in the area use the same productivity standard. If there are no other workers in the area of intended employment that are performing the same work activity, the Department will look to workers outside the area of intended employment to assess the normality of an employer's proposed productivity standard.

With respect to other provisions in the NPRM, some commenters argued that the Department is required by statute to use a ''prevailing'' standard with respect to all practices permitted by the regulations. These commenters argued that the use of anything less than a ''prevailing practice'' standard necessarily adversely affects U.S. workers. The Department disagrees. The Department notes that with respect to

many types of practices, it may not even be possible to determine what the ''prevailing'' practice is. For example, there may be a wide range of productivity standards used by employers in a given area, none of which is used by 50 percent of employers or with respect to 50 percent of workers. Furthermore, many practices are not readily susceptible to averaging: For example, with respect to practices regarding the frequency with which workers are paid, some employers may pay workers at the end of each week, others at the end of every two weeks, and others twice a month. If one third of employers used each method, which practice would be ''prevailing''?

The Department has examined each type of employment practice and each type of working condition that is addressed by this rule to determine what parameters or limits are necessary to ensure that U.S. workers will not be adversely affected. With respect to productivity standards, the Department has determined that a range of practices are acceptable, and that it is unlikely that U.S. workers will be adversely affected if H–2A employers use a productivity standard that is not unusual for non-H–2A employers to apply to their U.S. workers. The Department will not, however, certify applications containing unusual productivity standards that are clearly prejudicial to U.S. workers.

(m) Section 655.104(m) Frequency of Pay

The Department proposed in the NPRM to continue the requirement of the current regulation that the employer must state in the job offer the rate of frequency that the worker is to be paid, based upon prevailing practice in the area but in no event less frequently than twice a month. The Department received one comment on this provision noting that weekly or daily earnings are ''always'' the prevailing practice in agriculture, never bi-weekly, and that the Department should accordingly require weekly payment. After considering this comment, the Department has determined that it would be difficult, and not at all cost-effective, to use surveys to determine the frequency with which employers in a given area typically pay their employees. The Department has therefore decided to retain the minimum requirement that employees must be paid at least twice monthly, but has dropped the reference to the use of prevailing practices. The Department notes that this modest change affects only the frequency with which workers are paid, and not the amount to which they are entitled.

(n) Section 655.104(n) Abandonment of Employment

The NPRM included a provision stating that the employer is not required to pay the transportation and subsistence expenses of employees who abandon employment, provided the employer notifies the Department or DHS within 2 workdays of abandonment. One association of farm employers argued that this requirement was unreasonable in that the typical practice is termination 3 days beyond the abandonment or ''no show'' of the worker. An employer opined that this requirement should create an obligation on the part of the Department to help employers locate and pursue remedies against employees who voluntarily abandon employment without returning to their home country.

The Department acknowledges the need for clarification in the provision to ensure that the requirement begins to run only when the abandonment or abscondment is discovered. The Department has therefore added language to the provision clarifying that the employer must notify DOL and DHS no later than 2 workdays ''after such abandonment or abscondment occurs.'' The Department has added further clarification to ensure that employers must meet the identical standards for notification to DOL as to DHS, so that a worker is deemed to have absconded when the worker has not reported for work for a period of 5 consecutive work days without the agreement of the employer. The Department has extended this standard to a worker's failure to report at the beginning of a work contract. This is intended to clarify for the employer that the same standard of reporting applies for both agencies. The Department declines to include provisions prescribing new employer remedies against workers who abandon the job, but notes that abandonment of a job may result in a worker being ineligible to return to the H–2A program.

(o) Section 655.104(o) Contract Impossibility

The current and proposed regulations contain a provision that allows an employer to ask permission from the Department to terminate an H–2A contract if there is an extraordinary, unforeseen, catastrophic event or ''Act of God'' such as a flood or hurricane (or other severe weather event) that makes it impossible for the business to continue.

One commenter noted that the proposed regulation eliminates a current requirement that ''the employer will make efforts to transfer the worker to other comparable employment acceptable to the worker,'' and stated that U.S. workers, in particular, would benefit from such an effort. The Department declines to adopt this suggestion, as it believes the workers themselves will be in a better position to find alternative job opportunities than an employer whose business enterprise has been substantially impacted by an Act of God. In response to this comment, the Department has, however, added language to the Final Rule specifying that the H–2A worker may choose whether the employer terminating the H–2A contract should pay to transport them ''to the place from which the worker (disregarding intervening employment) came to work for the employer, or transport the worker to the worker's next certified H–2A employer (but only if the worker can provide documentation supporting such employment).'' The limitation providing that a worker who requests transportation to the next employer must provide documentation of that employment will help to ensure that H–2A workers who do not have subsequent employment inside the United States return to the country from which they came to the United States rather than remaining in the United States illegally.

To conform to similar changes made elsewhere in the rule, the Final Rule clarifies that ''for an H–2A worker coming from outside of the U.S., the place from which the worker (disregarding intervening employment) came to work for the employer is the appropriate U.S. consulate or port of entry.''

Other changes to the language of the proposed rule are non-substantive and have been made for purposes of clarifying the provision or to conform to changes made elsewhere in the Final Rule.

(p) Section 655.104(p) Deductions

The Department, in the NPRM, proposed requiring employers to make assurances in their application that they will make all deductions from the workers' paychecks that are required by law. A group of farmworker advocacy organizations asserted that the Department was skirting its responsibility under *Arriaga* by allowing ''reasonable'' deductions to be taken from a worker's paycheck without any mention of the FLSA. This commenter believes that the Department inappropriately removed clarifying language in the current regulation that

''an employer subject to the Fair Labor Standards Act (FLSA) may not make deductions which will result in payments to workers of less than the federal minimum wage permitted by the FLSA.'' This commenter opined that workers under the H–2A program are entitled to full coverage under the FLSA, and that the Department should not make regulatory changes which suggest otherwise. By eliminating this language from the rule, this commenter believes the Department would effectively undermine the rights of farm workers to be paid the minimum wage free and clear of costs imposed on them for inbound transportation and visa costs, as established by case law.

The Department does not agree with this commenter's characterization of the applicability of the FLSA to H–2A workers, including regarding inbound transportation. Nevertheless, we have returned the deleted language to the Final Rule to clarify that employers must of course comply with all statutory requirements applicable to them.

(q) Section 655.104(q) Copy of Work Contract

The NPRM contained the provision found in the current regulation specifying that a copy of the work contract must be provided to the worker no later than the date the work commences. One group of farmworker advocacy organizations pointed out that this proposed regulation does not require that the work contract be given to the employee in the employee's native language and believed that these regulations as proposed are contrary to the requirements in MSPA for domestic workers. The Department has decided to make no substantive changes to this provision. Employers seeking to hire H–2A workers, as with all employers seeking to recruit agricultural workers under the Wagner/Peyser system, must file a Form ETA 790 with the SWA. This Form provides the necessary disclosures for MSPA purposes. The form itself is bilingual. In addition, section 10(a) of the Form specifically requires that the summary of the material job specifications be completed by the employer in both English and Spanish. The changes made to the language of the provision in the Final Rule are non-substantive and were made to provide better clarity.

Section 655.105 Assurances and Obligations of H–2A Employers

The Department proposed instituting an application requiring employers to attest to their adherence to the obligations of the H–2A program. The Department received many comments expressing approval of the new attestation-based process, and others opposed to such a change. Still other commenters expressed general approval of the new attestation-based approach but suggested changes to the attestations and the process of submitting such attestations.

The Department received two comments regarding the substantive obligations imposed on employers through the attestations. One commenter requested that the Department add another attestation that employers will not confiscate workers' passports. Another commenter requested that the Department impose substantial penalties on employers who lure H–2A workers away from contract jobs before the termination of their contracts. This commenter believes that such a practice victimizes both the employer, who loses laborers, and the employee, who loses status under U.S. law when they prematurely terminate a contract.

The Department is not aware that the confiscation of passports is a widespread practice among agricultural employers hiring H–2A workers. However, where evidence of such practice is found, it would likely indicate the presence of other practices prohibited by the H–2A regulations, such as the withholding of pay and other program entitlements. In such situations, the Department possesses mechanisms under this Final Rule to investigate and take appropriate action against such unscrupulous employers, both through program actions including revocation and debarment and through direct enforcement with civil fines and debarment.

On the subject of changes of employment, the proposed companion regulation to the Department's NPRM, issued by USCIS at 73 FR 8230, Feb. 13, 2008, underscored that H–2A workers are free to move between H–2A certified jobs, and proposed to provide even greater mobility toward that end. The ability of workers to move to new H–2A employment when the current H–2A contract is completed is not something the Department wishes to discourage. A worker who abandons a job before its conclusion must be reported to DOL and DHS, and, depending on the reason for the abandonment, such abandonment may result in a violation of H–2A status and the consequent inability to commence employment with another employer. Such abandonment may also adversely affect a worker's future eligibility to participate in the H–2A program.

One commenter requested that we allow substitution of H–2A workers at the port of entry without having to file a new petition. An *Application for Temporary Employment Certification* is filed without the names of the foreign workers. Substitution of workers is permitted by the DHS companion rule.

(a) Section 655.105(a)

The attestation obligation set forth in § 655.105(a) in the NPRM requires the employer to assure the Department that the job opportunity is open to any U.S. worker and that the employer conducted (or will conduct) the required recruitment, and was still unsuccessful in locating qualified U.S. applicants in sufficient numbers to fill its need. This assurance was criticized by a farm bureau because it believes that it is impossible for employers to state they ''will conduct'' recruitment as required in the regulations and at the same time attest that they were unsuccessful in finding any U.S. workers. The Department has clarified this language in the Final Rule to enable employers to attest that the employer ''has been'' unsuccessful in locating U.S. workers sufficient to fill the stated need.

One group of advocacy organizations believes the Department should retain the language from the current § 655.103(c), which states: ''Rejections and terminations of U.S. workers. No U.S. worker will be rejected for *or terminated from* employment for other than a lawful job-related reason, and notification of all rejections or terminations shall be made to the SWA.'' (Emphasis supplied.) This commenter requests that the provision against termination should be added to the assurance found in the new § 655.105(a), specifically where it states: ''Any U.S. workers who applied for the job were rejected for only lawful, job-related reasons.''

The Department declines to add language regarding terminations at this location in the regulations. The provision at issue is an attestation by an employer regarding the hiring of U.S. workers, not their termination. The termination of U.S. workers for inappropriate reasons is already covered under the regulations by the prohibition in § 655.105(j), discussed below.

The Department added several clarifications and conforming changes to the text of the proposed provisions. First, the Department added language clarifying that the employer must attest that it will keep the job opportunity open to qualified U.S. workers ''through the recruitment period,'' which is defined at § 655.102(f)(3). Second, the Department added language clarifying that the employer must attest that it has

hired and will hire all U.S. workers who apply for the job and are not rejected for lawful, job-related reasons. Third, and relatedly, the Department added language stating that an employer must attest that ''it will retain records of all rejections as required by § 655.119.'' Other changes to the language of the provision were minor and non-substantive, and made for purposes of providing additional clarity.

(b) Section 655.105(b)

The Department proposed in the NPRM that employers be required to offer terms and conditions that are ''normal to workers similarly employed'' and ''which are not less favorable than those offered to the H–2A workers.'' One commenter believed that this standard is not sufficiently protective of the wages and working conditions of U.S. farmworkers to meet the statutory precondition that the employment of foreign workers will not adversely affect the wages and working conditions of U.S. workers. According to this commenter, a practice applying to a small percentage of workers may still be considered ''normal.'' This commenter opined that this criterion violates the statute, because requiring anything less than the prevailing practices of non-H–2A employers with respect to job terms will necessarily harm U.S. workers, either by putting downward pressure on wages and conditions and/or by facilitating job offers that are meant to deter U.S. workers from applying and accepting work.

For reasons that have already been discussed above, the Department disagrees. Where the Department has identified particular terms or working conditions that have an important impact on U.S. workers—such as wages or the obligation to provide tools—it has inserted provisions addressing them directly. Not every term or condition attaching to a job, however, threatens to negatively impact the wages and working conditions of U.S. workers simply because it is not a ''prevailing'' condition. An employer may, for example, be the only employer in the area that grows a particular crop, or that requires the use of a particular tool. Such requirements generally do not threaten to adversely affect U.S. workers and are not improper for employers to impose. Moreover, as noted above, it is often very difficult, if not impossible, to determine what the ''prevailing practice'' is with respect to certain types of job terms and working conditions. Other specific provisions in the regulations safeguard against job qualifications, terms, and working conditions that are deliberately designed by employers to discourage U.S. workers from applying for job openings.

Because the Department has indicated in the Final Rule the specific standard (i.e., ''common,'' ''normal,'' ''prevailing'') that applies to each type of covered job term and working condition, the Department has deleted language from the proposed rule that might have been understood to apply a catch-all requirement to all job terms and working conditions that they be ''normal to workers similarly employed in the area of intended employment.'' Retaining this language would have resulted, in some instances, in application of different standards to the same job requirements, potentially creating substantial confusion. The deleted language might also have been misconstrued as applying to job terms and working conditions that are not elsewhere addressed in the Final Rule. The Department never intended for the deleted language to apply to such peripheral job requirements; those job terms and working conditions that the Department considers to be central to H–2A work and to preventing an adverse effect on U.S. workers—such as wages, housing, transportation, tools, and productivity requirements—have each been specifically addressed elsewhere in the Final Rule. The Final Rule retains the requirement that employers must offer job terms and working conditions that ''are not less than the minimum terms and conditions required by this subpart.'' This language ensures that employers must attest to their adherence to the standard specified in the Final Rule for each covered job term and working condition.

(c) Section 655.105(c)

The Department proposed in the NPRM to continue to require that the employer submitting an application attest that the job opportunity being offered to H–2A workers is not vacant because the former occupants are on strike or locked out in the course of a labor dispute involving a work stoppage. The language of the proposed provision has been modified in the Final Rule by reverting to the language in the current regulation at § 655.103(a), which provides that the employer must assure the Department that ''[t]he specific job opportunity for which the employer is requesting H–2A certification is not vacant because the former occupant is on strike or being locked out in the course of a labor dispute.'' The Department is reverting to the current regulatory language to clarify that the Department will evaluate whether job opportunities are vacant because of a strike, lockout, or work stoppage on an individual case-by-case basis. As the Department's current ETA Handbook No. 398 explains at page II–23, the Department must ensure that ''the specific positions vacant because of the dispute will not be included in any otherwise positive H–2A certification determination or redetermination.''

The purpose of the strike/lock-out provision is to ensure that striking U.S. workers are not replaced with temporary foreign workers, thereby adversely affecting such workers. However, if an agricultural employer needs twenty workers, and only ten of the positions are vacant because workers are on strike, the employer should not be prohibited from hiring H–2A workers to fill the ten job openings that are not strike-related. Hiring foreign workers to fill positions of U.S. workers that are on strike is likely to adversely affect the U.S. workers, but hiring H–2A workers to fill positions that are not vacant because of a strike would not. The language of this provision in the Final Rule is also more consistent with the Department's statutory authority to withhold a labor certification where granting the certification would adversely affect the wages and working conditions of U.S. workers.

Comments regarding the NPRM's labor dispute provisions, which overlap with the contents of § 655.109(b)(4)(i) of the NPRM, are addressed in the discussion of that section below.

(d) Section 655.105(d)

The NPRM included a provision that required the employer to attest it would continue to cooperate with the SWA by accepting referrals of all eligible and qualified U.S. workers who apply (or on whose behalf an application is made) for the job opportunity until the date the H–2A workers departed or three days prior to the date of need, whichever was later. The language of the provision in the Final Rule has been modified to render it consistent with § 655.102(f)(3), which specifies that employers must continue to accept referrals until the ''end of the recruitment period'' as defined in that provision.

The only comment that the Department received on this section is discussed in greater detail under the Department's discussion of the 50 percent rule in § 655.102(b), above.

(e) Section 655.105(e)

No comments were received on § 655.105(e)(1) regarding the attestation promising to comply with all labor laws. Comments received on § 655.105(e)(2)

pertaining to the housing attestation are addressed in the discussion of §§ 655.102(e) and 655.104(d). Comments received on § 655.105(e)(3) pertaining to the workers' compensation attestation are addressed in the discussion of § 655.104(e). Finally, comments received with respect to § 655.105(e)(4) about the transportation attestation are addressed in the discussion of § 655.104(h) and the comments received in connection with § 655.105(e)(4) regarding worker protections are addressed in the discussion of the section on revocation at § 655.117. Several minor non-substantive modifications have been made to the text of the provision for purposes of clarity and to conform to changes made elsewhere in the Rule.

(f) Section 655.105(f)

Several comments were received on § 655.105(f), which as published in the NPRM required employers to notify the Department and DHS within 48 hours if an H–2A worker leaves the employer's employ prior to the end date stipulated on the labor certification. The commenters thought that 48 hours was not enough time to accomplish this especially in light of DHS' requirement that proof of notification be kept for up to one year. The commenters thought it was unfair to require the employer to comply with this requirement and incur the added expense of sending the notice by certified mail. One commenter went on to say that such notice is not needed in all cases. The commenter cited the example of an employee transferring to another employer with approval to do so by the Department and DHS and asks why the employer should still be required to provide notification in such cases. According to this commenter, notification should only be required if the H–2A worker absconds from the work site.

The notification is necessary in all circumstances because the early separation of a worker impacts not only the rights and responsibilities of the employer and worker but also implicates DOL's and DHS's enforcement responsibilities. For instance, an employer would no longer be responsible for providing or paying for the subsequent transportation and subsistence expenses or the ''three-fourths guarantee'' for a worker who has separated prior to the end date stipulated on the labor certification, either through voluntary abandonment or termination for cause. There is no requirement that the notification be made by certified mail, however. A file copy of a letter sent by regular U.S. mail, with notation of the posting date, will suffice. In addition, the Department revised the notification requirement in the Final Rule to reflect that a report must be made no later than 2 workdays after the employee absconds, which, consistent with DHS, has been defined as 5 consecutive days of not reporting for work. The text of this provision has been modified accordingly.

The Department also received comments on this section relating to notification when H–2A workers leave their home country for the first place of intended employment. The Department believes those comments pertain to requirements in the DHS NPRM published February 13, 2008 rather than the Department's NPRM of the same date.

(g) Section 655.105(g) Offered Wage Assurances

Comments received pertaining to the offered wage are addressed in the response to comments on § 655.108. The Department added language to the text of this provision in the Final Rule to clarify that, as a matter of enforcement policy, the adverse effect wage rates that are in effect at the time that recruitment is initiated will remain valid for the entire period of the associated work contract. This enforcement policy will honor the settled expectations of workers and employers regarding their respective earnings and costs under an H–2A work contract and will avoid surprises that might give rise to disputes. It will also be an easy rule for the Department to administer, particularly when calculating payments due under the three-quarters guarantee. Because H–2A contracts never last more than a year, locking in wage rates for the duration of a contract in this manner will not significantly prejudice workers or employers in the event that wage rates happen to rise or fall during the middle of a work contract.

(h) Section 655.105(h) Wages Not Based on Commission

Comments pertaining to the offered wage are addressed in the response to comments on § 655.108.

(i) Section 655.105(i)

The NPRM contained an assurance requiring the employer to attest that it was offering a full-time temporary position whose qualifications are consistent with the ''normal and accepted qualifications required by non-H–2A employers in the same or comparable occupations or crops.'' This was a continuation of current obligations.

The Department received several comments relevant to this provision. One commenter opined that the Department should scrutinize employer applications that offer U.S. workers a 30-hour work week arguing that such a requirement is not normal and is meant to dissuade U.S. workers from applying when in reality H–2A workers would work 50–60 hours a week. The commenter argues, under the new rule, it will become impossible for the Department to deny an application because the standard for what is ''normal'' is so lax.

The word ''normal'' in § 655.105(i) does not refer to the requirement that the jobs be full-time, but rather to the qualifications provision in that section. Thirty hours a week is the minimum to be considered full-time employment in the H–2A program and the Department has, as a clarification, provided that definition of full-time in this section in the Final Rule. Moreover, other provisions in these regulations (see, e.g., §§ 655.103, 655.105(b)) prohibit giving H–2A workers more favorable job terms than were advertised to U.S. workers, which include the number of hours of employment.

Another commenter noted that requirements that the job duties be normal to the occupation and not include a combination of duties not normal to the occupation has led to frequent disputes, particularly in specialty areas of agriculture. This commenter noted that there is a distinction between restrictive requirements that are clearly contrived for the purpose of disqualifying domestic workers and those directly designed to producing specialized products, utilizing unusual production techniques or otherwise seeking to distinguish their products in the marketplace.

The Department agrees that the INA was not meant to require employers to adhere to timeworn formulas for production in the H–2A or any other employment-based category, and that job duties for which there is a legitimate business reason are permissible. The requirement that job qualifications be ''normal'' and ''accepted,'' however, is statutory and cannot be altered. Section 218(c)(3)(A) of the INA requires the Department, when determining whether an employer's asserted job qualifications are appropriate, to apply ''the normal and accepted qualifications required by non-H–2A employers in the same or comparable occupations and crops.'' For the reasons provided in the discussion of § 655.104(b) of the Final Rule above, the Department has deleted the phrase ''in that they shall not require a combination of duties not normal to the

occupation'' from the NPRM to conform to the language of the statute.

In the Final Rule, the language of this provision has been modified in one additional respect to conform to the language of § 655.104(b). The provision now states that job qualifications must not ''substantially deviate from the normal and accepted qualifications required by employers that do not use H–2A workers in the same or comparable occupations or crops.''

(j) Section 655.105(j) Layoffs

The Department in its NPRM added a new provision prohibiting employers from hiring H–2A workers if they laid off workers within a stated time frame, unless such laid-off workers were offered and rejected the H–2A positions. Two commenters saw the new provision on layoffs as unnecessary and unworkable. One commenter saw this as contrary to the section on unforeseeable events and also illogical because many employers request a contract period of ten months. This would mean that employers would be unable to lay off workers at the end of one season, because the new season begins within 60 days and the proposed 75-day requirement will not have lapsed. Another commenter suggested a change to the language in this section to include a caveat that such layoffs shall be permitted where the employer also attests that it will offer or has offered the opportunity to the laid-off U.S. worker(s) beginning on the date of need, and said U.S. worker(s) either refused the job opportunity or were rejected for the job opportunity for lawful, job-related reasons.

The Department agrees, in general, with the changes proposed by the commenters. We have accordingly modified the language of the provision in the Final Rule to limit the effect of the provision to 60 days on either side of an employer's date of need. This modification is also consistent with the revised timetables for recruitment in the Final Rule. This 120-day protective period will provide U.S. workers important protections during the period of time that H–2A workers are being recruited and through the beginning of the work season, which is the period of time that U.S. workers are most vulnerable to layoffs related to the hiring of H–2A workers, while avoiding most of the problems cited by the commenters. We also agree that a laid off worker must be qualified for the opportunity and that U.S. workers may only be rejected for lawful, job-related reasons, a limitation that preserves an employer's right to reject those workers it knows to be unreliable.

(k) Sections 655.105(k) and (l) Retaliation and Discharge

One commenter reasoned that the Department has weakened its own enforcement ability by eliminating the word ''discharge'' from the list of prohibited retaliatory acts against a worker who files a complaint or testifies against the employer, consults with an attorney, or asserts any rights on behalf of himself/herself or other workers.

The Department believes it has, in fact, strengthened its enforcement ability by addressing discharge separately in § 655.105(l). By making this a separate assurance, the employer acknowledges even more obviously the prohibition against discharge as retaliation.

One group of farmworker advocacy organizations commented that the NPRM's proposed language requiring employers to attest that they will not discharge any person ''for the sole reason'' that they engaged in protected activity under § 655.105(k) would substantially weaken the anti-retaliation language in the current regulations. The Department agrees with this commenter that a ''sole reason'' standard would impose an inappropriately high burden on retaliation claimants. A retaliation claimant should only be required to prove that protected activity was a contributing factor to the discharge. Thus, the Department has modified the language of § 655.105(l) to require employers to attest that they will not discharge any person ''because of'' protected activity under § 655.105(k).

Section 655.104(k)(4) provides that an employer may not retaliate against an employee who has consulted with an employee of a legal assistance program. This provision does not, however, provide employees license to aid or abet trespassing on an employer's property, including by persons offering advocacy or legal assistance. No matter how laudable the intent of those offering advocacy or legal services, an employee does not have the legal right to grant others access to the private property of an employer without the employer's permission. A farm owner is entitled to discipline employees who actively aid and abet those who engage in illegal activity such as trespassing. Absent any evidence of a workers' actively aiding or abetting such activity, however, an employer's adverse action against an employee in response to that employee meeting with a representative of an advocacy or legal services organization, particularly on the worker's own time and not on the employer's property, would be viewed as retaliation.

Several minor non-substantive modifications were made to the text of the provision for purposes of clarity and style.

(l) Section 655.105(m) Timeliness of Fee Payment

The Department received one comment on this section and has addressed it in the comments on § 655.118 on debarment, below.

(m) Section 655.105(n) Notification of Departure Requirements

The Department did not receive any comments on this provision. For purposes of simplicity, and to avoid any potential conflict with DHS's regulations, the phrase ''another employer and that employer has already filed and received a certified *Application for Temporary Employment Certification* and has filed that certification in support of a petition to employ that worker with DHS'' has been deleted from the Final Rule and replaced with the terms ''another subsequent employer.'' This change is non-substantive; subsequent employers still cannot legally employ H–2A workers without an approved labor certification.

(n) Section 655.105(o) and New Section 655.105(p) Prohibition on Cost-Shifting

The Department included in the NPRM a provision prohibiting employers from shifting costs for activities related to obtaining labor certification to the worker and further requiring the employer to contractually forbid its agents from accepting money from the H–2A worker for hiring him or her. The Department received several comments in relation to this provision.

A State Workforce Agency expressed concern that this prohibition will create another disincentive for U.S. employers to use the program because it gives the impression that workers will be able to request reimbursement from the employer for any monies paid to a recruiter. The Department notes in response that the H–2A rule does not require the employer to reimburse the H–2A worker for any recruitment-related fees he or she may pay. Rather, with an exception discussed below, the rule requires the employer to contractually forbid any foreign recruiters it hires from charging the H–2A worker any fees in order to be hired or considered for employment. This may mean that employers are required to pay foreign recruiters more than they do today for the services that they render, but the Department considers this a necessary step toward preventing

the exploitation of foreign workers, with its concomitant adverse effect on U.S. workers.

One group of farmworker advocacy organizations believes this rule does not go far enough to protect workers from exploitation by recruiters. The commenter specifically suggested that DOL should require employers to attest that they are ''directly paying the entire recruiting/processing fee charged to any foreign labor contractor whom they engage to perform international recruitment of H–2A workers.'' Employers are permitted to pay fees to recruiters for their recruiting services, and indeed the Department expects that they will have to do so, as it is unlikely that recruiters will work for free. The Department sees little value, however, in an over-complicated and over-prescriptive rule allowing foreign recruiters to charge H–2A workers recruiting fees, but then requiring the employer to pay the fee directly. Moreover, this rule represents the Department's first effort to regulate in this area under the H–2A program and we decline to go further, at this time. We will consider further actions if experience dictates that they are necessary, if specific actions are identified that would be effective, and if those actions are within the Department's enforcement authority, taking into account limits on the Department's territorial jurisdiction.

Several farmers commented that they need agents to find H–2A workers because they are unable to travel to different countries to find employees, interview them, and help them process all the necessary paperwork to obtain their visas. Employer commenters believe that an H–2A worker receives a substantial benefit from the job, including more money than he or she is able to earn in his or her home country. Therefore, workers should also bear some of the financial responsibility for the opportunity in the form of paying for the services that enable that worker to find his or her way through the bureaucratic maze both in the worker's country and the U.S. Consulate. According to these commenters, many of these workers would never be able to apply for H–2A visas without help because they do not have passports from their own countries and they may not have the required computer and internet access for applying to the U.S. Consulate for the visa.

While the Department does not disagree that this provision will result in an additional expense for employers, the Department is adamant that recruitment of the foreign worker is an expense to be borne by the employer and not by the foreign worker. Examples of exploitation of foreign workers, who in some instances have been required to give recruiters thousands of dollars to secure a job, have been widely reported. The Department is concerned that workers who have heavily indebted themselves to secure a place in the H–2A program may be subject to exploitation in ways that would adversely affect the wages and working conditions of U.S. workers by creating conditions resembling those akin to indentured servitude, driving down wages and working conditions for all workers, foreign and domestic. We believe that requiring employers to incur the costs of recruitment is reasonable, even when taking place in a foreign country. Employers may easily band together for purposes of recruitment to defray costs. To ensure that employers do not attempt to use surrogates to attempt to extract recruitment fees from H–2A workers, the Final Rule has been modified to specify that employers must attest that they and their ''agents'' have not sought or received payment of any kind for any activity related to obtaining labor certification, including payment of the employer's attorneys' fees, application fees, or recruitment costs.

The Department notes, however, that it is only prohibiting employers and their recruiter agents from shifting to workers the cost of recruiting for open job opportunities. This rule does not prevent a person or entity (which could be a ''facilitator'' under the DHS Final Rule) from charging workers reasonable fees for rendering assistance in applying for or securing services related to passports, visas, or transportation, so long as such fees are not made a condition of access to the job opportunity by the recruiter, employer, or facilitator. The Department will, however, monitor such activities to the extent possible to ensure that any such charges are not ''de facto'' recruitment fees charged for access to the H–2A program. In addition, government processing fees and document preparation fees related to securing a passport and visa to prepare for travel to the United States are the responsibility of the worker and the employer is not required to pay those fees. We note that the DHS Final H–2A Rule also precludes the approval of an H–2A petition, and provides for possible revocation of an already approved H–2A petition, if the employer knows or has reason to know that the worker has paid, or has agreed to pay fees to a recruiter or facilitator as a condition of gaining access to the H–2A program. Many employer advocates noted that there is no definition of ''recruiter'' and it is unclear whether ''facilitators'' who help the H–2A workers apply for visas are included in this prohibition. This is a concern to employers because DHS, in its companion H–2A proposed regulation, requires disclosure of payments to ''facilitators,'' whether by the alien or the employer. The Department, on the other hand, forbids employers and their agents from receiving remuneration from the H–2A worker for access to job opportunities and further requires the employer to contractually forbid its agents from accepting money from the H–2A worker for hiring him or her. To allay any confusion, we note that our own proposed regulation was intended to prohibit foreign labor contractors or recruiters, with whom an employer in the U.S. contracts, from soliciting or requiring payments from prospective H–2A workers to secure job opportunities in the U.S. The Department believes that this is consistent with the DHS position of disclosure, which is presumably intended to deter such payments. The Department has not defined ''recruiter'' as we believe this term is well understood by the regulated community. Many commenters believe that the new rule prohibits the use of foreign recruiters. It does not. It requires employers to contractually forbid foreign recruiters from receiving payments directly or indirectly from the foreign worker. Employers who would be unable to find workers without recruiters are not prohibited from hiring such recruiters. When they do, they must make it abundantly clear that the recruiter and its agents are not to receive remuneration from the alien recruited in exchange for access to a job opportunity. As noted above, reasonable payments from workers in exchange for rendering assistance in applying for or securing services related to passports, visas, or transportation is not prohibited by this rule.

Some commenters opined that the Department does not have the authority to regulate cost-shifting abroad. The Department recognizes that its power to enforce regulations across international borders is constrained. However, it can and should do as much as possible in the U.S. to protect workers from unscrupulous recruiters. Consequently, the Department is requiring that the employer make, as a condition of applying for labor certification, and therefore, as a condition to lawful H–2A employment within the U.S., the commitment that the employer is contractually forbidding any foreign

labor contractor or recruiter whom the employer engages in international recruitment of H–2A workers to seek or receive payments from prospective employees in exchange for access to job opportunities. As stated above, we will examine program experience in this area and will consider further actions as experience dictates.

One commenter suggested that we certify recruiting agencies to ensure against exploitation of workers whereas two other commenters thought we should make employers attest that the fee employees paid to foreign recruiters was reasonable or did not go above a reasonable market-based ceiling set by the Department. The Department simply does not have the infrastructure or expertise to assess on a country-by-country basis what a reasonable fee would be. The prophylactic rule adopted by the Department guards against worker exploitation in a manner that is enforceable. If a U.S. employer cannot find foreign workers without the help of a recruiter, then the U.S. employer must bear the cost of such recruitment efforts.

One commenter requested that we provide clarification on several terms used in this section. The first is ''received payment * * * as an incentive or inducement to file * * *.'' The second is ''* * * from the employee or any other party, except when work to be performed by the H–2A worker * * * will benefit or accrue to the person or entity making the payment, based on that person's or entity's established business relationship with the employer.'' For reasons discussed below, we have removed this language from the Final Rule to provide greater clarity to the provision's effect.

Some commenters expressed concern that the rule passed on too many costs in recruitment to the employer. One commenter estimated that the recruitment cost to each employer would be $1,000 per H–2A worker. We believe these estimates were not supported by data and note that employers can collaborate with respect to recruitment to defray costs.

A farmworker advocate argued that new labor contractors are often undercapitalized and can barely meet their payroll obligations. The commenter claimed that labor contractors' primary source of income is from the foreign recruiters who give them payments from the recruitment fees paid by the aliens. It is precisely this type of activity that the employer assurances are meant to prevent, for all of the reasons previously mentioned.

In addition, and based upon the comments received, the Department has revised the provision on cost-shifting to provide for greater clarity. As mentioned above, the Department has added language to the Final Rule clarifying that the provision only applies to payments by employees. This rendered the language providing an exemption for certain payments to employers by third-parties unnecessary, and it has accordingly been deleted to avoid confusion. We have also eliminated the qualifying language stating that the provision applied to payments made as an ''incentive and inducement to filing,'' again for purposes of simplification and clarity. By simplifying the provision to prohibit employers from seeking or receiving payment for any activity related to the recruitment of H–2A workers, the Department hopes to achieve consistent and enforceable compliance.

In the Final Rule the Department has separated the provision on cost-shifting into two sections, again to achieve clarity regarding the use of foreign contractors. The Rule's new § 655.105(p) now contains the language that requires the employer to contractually forbid any foreign labor contractor whom they engage from seeking or receiving payments from prospective employees in exchange for access to job opportunities. In this manner the Department hopes to achieve clear and consistent compliance with the prohibitions contained in the Rule. To make the provision on cost-shifting by recruiters consistent with DHS's Final Rule, we have added clarifying language stating that the prohibition does not apply where ''provided for in DHS regulations at 8 CFR 214.2(h)(5)(xi)(A).'' This language clarifies that the prohibition does not apply to worker expenses such as the cost of transportation and passport, visa, and inspection fees, except where such shifting of expenses to the worker is expressly forbidden by law.

Paragraph (p) from the NPRM has now been redesignated as paragraph (q). The Department did not receive any comments specifically addressing this provision. Several minor non-substantive modifications have been made to the text of the provision for purposes of clarity and to conform to changes made elsewhere in the Rule. We have deleted what was paragraph (q) in the NPRM, an assurance on housing vouchers, because, for the reasons given in the discussion of § 655.104(d), we have decided not to implement housing vouchers.

Section 655.106 Assurances and Obligations of Farm Labor Contractors

(a) General Comments

As discussed earlier, the definition of *Farm Labor Contractor* in the Proposed Rule has been rewritten and is for purposes of H–2A now an *H–2A Labor Contractor (H–2ALC).* The Farm Labor Contractor definition in the NPRM was borrowed from MSPA and the Department has determined that definition causes confusion when applied to the H–2A program. A fundamental distinction between these two terms is the requirement that an H–2A Labor Contractor must employ the workers. This distinction addresses the concerns of commenters who mistakenly believed that agents and attorneys would have to register as Farm Labor Contractors (FLC) as a requirement of the H–2A program. In order for a person or entity under H–2A to meet the definition of an H–2ALC, that person or entity would have to employ the workers who are subject to Section 218 of the INA.

Other commenters believed that the definition of farm labor contractor also includes the activities of the foreign recruiters and obligates the employers to take on liabilities for the acts of the foreign recruiters because the definition of FLC in the NPRM was taken directly from the MSPA. The definition of an H–2ALC is no longer taken directly from MSPA.

While the Department cannot reach the conduct of foreign recruiters abroad, it can regulate the conduct of U.S. employers participating in the foreign labor certification process who do business with these recruiters. The Department cannot by regulation impose strict liability on employers for labor contractors' activities abroad, but the Department, as a condition for an employer to obtain approval of a temporary labor certification application, can require the employer to contractually forbid foreign recruiters that an employer uses as its agent from seeking or receiving payments from prospective employees, as discussed in the discussion of § 655.105(o) and (p), addressing the prohibition on cost shifting.

There was considerable comment about the lack of a provision in the NPRM addressing ''override fees,'' which is essentially the commission paid by employers to labor contractors for their services. One commenter elaborated on this point by explaining that employers in an area where labor contractors with U.S. workers are well established could bypass the labor contractor by hiring H–2A workers

directly and thus not have to pay an override fee.

Labor contractors operate in the free market system, both in hiring workers and in providing contract labor services, and do not require any special government provisions to ensure they are paid for the services they provide. Whether an employer chooses to utilize a farm labor contractor or hire workers directly is a decision to be made by the employer based on what best suits his business needs. Labor contractors typically enter into contracts with fixed site employers in advance of the season. The Department does not seek to regulate private transactions between employers and labor contractors with regard to the appropriate price of contract services. Employers are required to advertise before they can apply for H–2A workers, and both H–2ALCs and the U.S. workers employed by the H–2ALCs will have an opportunity to take the advertised jobs at the wage rates and subject to the terms and working conditions required by the Department. The Department is confident that the required wage rates, job terms, and working conditions are sufficient to prevent any adverse effect on U.S. workers.

One group of farmworker advocacy organizations complained that the Department has eliminated all requirements that employers contact and recruit through established FLCs (now H–2ALCs). This commenter believes that the elimination of this requirement allows growers to bypass H–2ALCs in favor of filing H–2A applications. The Department disagrees. As previously mentioned, employers are required to spread information about job opportunities in a variety of ways, and there is nothing that would prevent an H–2ALC from responding to such advertisements by offering its services.

Many commenters advocated the removal of labor contractors from the H–2A program. The use of labor contractors to supply workers, however, is a reality in the agricultural industry, and reflects the substantial need for a flexible labor supply in a sector characterized by many different crops requiring different work at different times, all of which are subject to seasons, weather, and market conditions. To forbid labor contractors from utilizing the H–2A program would only encourage them to operate outside the system and potentially use undocumented workers to fill their ranks. Labor contractors desiring to hire H–2A workers must apply for a labor certification, recruit for U.S. workers, and attest to the terms and conditions of H–2A employment, just like any other employer desiring to hire H–2A workers, and must also list the sites where work will occur.

One group of farmworker advocacy organizations commented that H–2ALCs, under the new rule, are not required to have a physical presence in the U.S. This commenter points out that even under the current system, which does require physical locations in the U.S., there is still room for deception by H–2ALCs. The commenter misreads the rule. The definition of an H–2ALC in the Final Rule requires H–2ALCs to meet the definition of an ''employer,'' and the definition of employer requires a place of business in the United States.

(b) Description of H–2ALC obligations

The Department's review of comments regarding the obligations of labor contractors under the proposed rule persuaded the Department that these obligations were poorly understood. To provide a clearer description of those obligations, and to avoid confusion on the part of employers, SWAs, workers, and worker advocates alike, the Final Rule has collected, consolidated, and refined the NPRM's description of H–2ALC pre-filing recruiting obligations. The Final Rule therefore splits proposed § 655.106 into two separate parts. Section 655.106(a) of the Final Rule consolidates, refines, and explains H–2ALCs' recruitment obligations under the H–2A program. Section 655.106(b) of the Final Rule contains all of the provisions proposed in the NPRM that impose additional obligations on H–2ALCs that do not apply to other types of H–2A employers.

Although the language of § 655.106(a) of the Final Rule is new, the substantive obligations it imposes on H–2ALCs are derived from the basic requirements that apply to other H–2A employers under the NPRM. The fact that H–2ALCs do not stay at one fixed location but travel from one worksite to another over the course of a season, and the fact that they frequently rely on the fixed site employers with whom they contract to provide housing and transportation to their workers, makes it operationally problematic to shoehorn H–2ALCs into the exact same recruitment framework that applies to fixed site employers. New § 655.106(a) refines for H–2ALCs the core recruitment requirements that apply to all other H–2A employers, including requirements that job orders be submitted to SWAs, that referrals of qualified U.S. workers be accepted during the recruitment period, that positive recruitment be conducted in advance of H–2A workers performing work in a given area of intended employment, that workers from the previous season be contacted and offered employment before H–2A workers can be hired, and that housing inspections be conducted in a timely manner.

New § 655.106(a)(1) acknowledges that, because of the itinerant nature of H–2ALCs, their job orders ''may contain work locations in multiple areas of intended employment.'' As with other employers with multiple work locations, H–2ALCs may submit job orders ''to any one of the SWAs having jurisdiction over the anticipated work areas.'' The SWA receiving the job order is responsible for circulating the job order to ''all States listed in the application as anticipated worksites, as well as those States, if any, designated by the Secretary as traditional or expected labor supply States for each area in which the employer's work is to be performed.'' The provision further clarifies how long SWAs receiving multiple-area job orders should keep the job orders posted, and specifies that they ''may make referrals for job opportunities in any area of intended employment that is still in an active recruitment period.''

New § 655.106(a)(2) clarifies that H–2ALCs with multiple work locations in multiple areas of intended employment are required to conduct separate positive recruitment, following all of the normal rules specified in § 655.102(g)–(i), but are not required to conduct separate positive recruitment for each work location within a single area of intended employment. Instead, positive recruitment within each area of intended employment is required to ''list the name and location of each fixed-site agricultural business to which the H–2A Labor Contractor expects to provide H–2A workers, the expected beginning and end dates when the H–2A Labor Contractor will be providing workers to each fixed site, and a description of the crops and activities the workers are expected to perform at such fixed site.'' Positive recruitment for each area of intended employment, including positive recruitment in any designated labor supply states associated with each area of intended employment, must, in accordance with the standard rule under these regulations, be conducted no more than 75 and no fewer than 60 days before the listed arrival date applicable to that area of intended employment.

New § 655.106(a)(3) specifies that H–2ALC recruitment, including both positive recruitment and job orders, may require that workers applying for jobs in any given area of intended employment ''complete the remainder of the H–

2ALC's itinerary.'' H–2ALCs are by nature itinerant, and the work that they offer is thus itinerant as well. Workers applying for labor contractor jobs cannot expect to selectively choose which work locations they are willing to work at, unless the H–2ALC permits them to do so. Certainly, U.S. workers applying to work for farm labor contractors that are not H–2ALCs have no ability to selectively choose which portion of a job offer they want to accept and which they will reject.

Without this rule, H–2ALCs would at times be placed in impossibly difficult hiring situations. For example, an H–2ALC might enter into contracts to serve work locations in three different areas of intended employment, requiring twenty workers in each area. If the H–2ALC is unable to recruit any U.S. workers in the first and third areas of intended employment, but finds ten U.S. workers in the second area of intended employment who are willing to complete its itinerary, then the H–2ALC should be allowed to hire ten H–2A workers for the duration of its itinerary, and ten H–2A workers for the dates of need applicable to the first area of intended employment (or, if these ten H–2A workers were initially hired with the expectation that they would complete the itinerary, the H–2ALC would be permitted to release them at the time its subsequent positive recruitment for the second area of intended employment resulted in the hiring of ten additional U.S. workers), ensuring that the H–2ALC would at all times have the twenty workers needed to fulfill its contracts. If, however, the ten U.S. worker applicants for jobs in the second area of intended employment were not willing to complete the H–2ALC's itinerary, and if these regulations nevertheless required the H–2ALC to hire those workers, the H–2ALC would be forced to choose between releasing ten of its H–2A workers at the time it hired the ten U.S. workers since only twenty workers were needed in the second area of intended employment. As a result, the H–2ALC would be left with only ten workers total to fulfill its contracts when it got to the third area of intended employment, or, to avoid this consequence, would have to keep all thirty workers on its payrolls during its work in the second area of intended employment, thereby incurring the significant additional cost of paying ten unnecessary workers. The Department declines to force H–2ALCs to make that unnatural choice, which would place them at a competitive disadvantage vis-à-vis farm labor contractors that hire all U.S. workers and that are thus free to require prospective workers to complete their remaining itinerary.

The Department considered, as an alternative, requiring H–2ALCs to file a separate application for work to be performed in each separate area of intended employment, but rejected the idea for several reasons. First, it is far more administratively convenient for both the Department and the employer if all of the employer's seasonal work for the year with the same initial date of need is included in a single application. Filing multiple applications in such a situation is needlessly duplicative, wasting valuable time and resources. In theory, an H–2ALC could be conceived of as having a separate date of need for each new work site or for each new area of intended employment, but the reality of labor contract work is that the responsibilities of workers to the labor contractor employer, as well as their associated job duties, continue from work location to work location and do not re-start with each new work site. Second, the ''single application'' method will maximize recruitment of U.S. workers through posted job orders, since the SWAs for all the areas of intended employment will refer workers for jobs opportunities in all of the other areas of intended employment. Third and finally, the ''single application'' method will better manage the expectations of incoming H–2A workers, who will know at the outset whether the H–2ALC expects to employ them for the entire season, or rather only for a more limited duration.

H–2ALCs are free to file separate applications for separate areas of intended employment where it makes sense for them to do so. Indeed, they may be required to file separate applications where, for example, they need extra workers with a different date of need to report for work in areas of intended employment that they will reach later in the season. For purposes of administrative convenience, however, and to comport with the realities of the nature of the underlying job positions, the Department will permit single applications to be filed by H–2ALCs covering extended itineraries.

New § 655.106(a)(4) provides that H–2ALCs that hire U.S. workers part-way through the season, whether through referrals or some other form of recruitment, may discharge a like number of H–2A workers and, in accordance with § 655.104(i)(4), are released from the three-quarters guarantee with respect to those workers.

New § 655.106(a)(5) explains the rules that apply to an H–2ALC's amendment of its application under § 655.107(d)(3). Because H–2ALCs are itinerant and because the timing of agricultural work is difficult to predict with precision, H–2ALCs may often need to amend their applications mid-season to include additional work locations or additional areas of intended employment. Amendments will be readily permitted, but special responsibilities attach to such amendments for H–2ALCs. Where an amendment adds a new area of intended employment, or where an amendment adds a new work site in an already-listed area of employment and the job duties at the new work site(s) are substantially different from those already listed, additional recruitment will be required. Because amendments of H–2ALC applications may often need to be made at the last minute to take into account changing weather conditions, the required additional recruitment may be completed on an expedited schedule. Housing inspections of any new housing arrangements that have not yet been inspected must also be secured in a timely fashion.

H–2ALCs are encouraged to attempt to avoid needing to make last-minute amendments to their applications by listing all reasonably probable work locations in their original application and job order. In doing so, H–2ALCs are reminded that the ''reasonably probable'' standard should be closely adhered to—purely speculative employment should not be listed on an application. While U.S. workers benefit from seeing in an advertisement or job order a list of all the locations that the H–2ALC is reasonably likely to service, information that is intentionally misleading detracts from the ability of U.S workers to make intelligent decisions about whether to apply. The Department assumes that H–2ALCs will be deterred from listing purely speculative work sites on their applications by the three-quarters guarantee and by the requirement that H–2ALCs secure written statements from fixed-site employers regarding housing and transportation if the H–2ALC will not be providing the required housing and transportation itself.

New § 655.106(a)(6) reiterates the obligation of SWAs to complete required housing inspections ''no later than 30 days prior to the commencement of employment in each area of intended employment in the itinerary of an H–2ALC.''

New § 655.106(a)(7) provides that H–2ALCs must contact all U.S. workers that worked for the H–2ALC during the previous season, and must advise each such worker ''that a separate job opportunity exists for each area of

intended employment that is covered by the application.'' A worker who applies for a job opportunity in an area of intended employment may be required to complete the remainder of the itinerary.

The additional obligations that the Department proposed in the NPRM to impose on H–2ALC employers have been consolidated in new § 655.106(b). Each provision is discussed separately below.

(c) Proposed Sections 655.106(a) and (b), New Sections 655.106(b)(1) and (2) Provide MSPA Farm Labor Contractor Certificate of Registration Number and Identify Authorized Activities

One commenter opined that MSPA is not explicitly included in the rule even though it is mentioned throughout. This commenter believes that legal services groups that file lawsuits under these regulations will be able to include claims based on MSPA as well. This commenter believes there are enough protections in the H–2A rule without including MSPA.

While references to certain specific provisions of MSPA have been included in the H–2A regulations, such language is not intended to apply MSPA to H–2A workers or employers. The provisions of H–2A and MSPA operate independently from one another and the inclusion of terms used in MSPA does not provide a legal basis upon which to hold H–2A employers to MSPA standards. Nothing in this rule expands the scope of MSPA or increases liabilities under it.

Some clarifying, non-substantive modifications have been made to the language of these provisions in the Final Rule, and a statutory citation to MSPA has been added.

(d) Proposed Section 655.106(c), New Section 655.106(b)(3) Disclosure of All Locations

One agricultural employer association asserted that it is not reasonable to require H–2ALCs to disclose all customers, clients, dates, and services, and that providing evidence that the customers and clients of H–2ALCs are established business operations should be sufficient because the proposed requirement would otherwise subject the labor contractor to disclosure of its clientele should an FOIA request be made, and also because a labor contractor should not have to know all of the locations so far in advance and should have the flexibility to change plans. The disclosure requirement is contained in the current regulations and has been for many years. The Department requires such information not for the purpose of forcing a labor contractor to disclose its clientele, but to ensure that the labor contractor has real employment opportunities available for the prospective worker. A good-faith compilation of the roster of clients and dates of arrangements with each is integral to ensure there is work available requiring the use of H–2A workers. It is also essential to ensure that recruiting is properly performed and that U.S. workers are given access to all job opportunities. With respect to the commenter's concerns about disclosure, if the list of clientele is properly considered confidential business information under FOIA, it would be exempt from disclosure.

One commenter suggested that wording should be added to allow labor contractors to add or change out growers during the season by informing the Department. These comments have been addressed in the discussion of § 655.106(a)(5), pertaining to the amendment of H–2ALC applications, above.

(e) Proposed Section 655.106(d), New Section 655.106(b)(4) Surety Bonds

The Department required in its NPRM that FLCs (now H–2ALCs) secure a surety bond as proof of their ability to discharge their financial obligations under the H–2A program. We received some comments opposing the surety bond requirement, and others insisting that the requirement did not go far enough.

One commenter suggested that the Department has no statutory authority to require H–2ALCs to be bonded. This commenter believes that the Department has plenty of methods available to it to weed out the abusive H–2ALCs and does not need the provision for bonding. The bonding requirement for labor contractors, who may be transient and undercapitalized, provides a basis to assure compliance with an attestation-based program. The language in the INA in Section 218(g)(2) which authorizes the Secretary to take such action as may be necessary to assure employer compliance with the terms and conditions of the Act provides the authority for the bonding requirement.

Another commenter believes that the surety bond required is woefully inadequate to guarantee H–2ALC compliance with program requirements, and that it only applies to those cases that come before the Administrator of the Wage and Hour Division (herein referred to as Administrator/WHD) and not to civil actions filed in state or Federal court. Another commenter believes that all H–2A employers should be required to post a bond.

The Department believes that the procurement of a surety bond will show that an H–2ALC is serious about doing business legitimately, and that a surety bond gives the Department leverage over the employer so that if the employer fails in performing its obligations, the bond will be available for the government to recover unpaid wages. The surety bond is simply a device to ensure the Department has reasonable assurance that the labor contractor will adhere to its program obligations; the labor contractor's ability to retain its interest in the bond depends entirely upon its adherence to performance obligations. The commenter is correct that the surety bond applies only to those cases that come before the Administrator/WHD. We have no authority to require it for actions beyond the Department's jurisdiction.

One agricultural employer association states that the bonding requirement is unrealistic because underwriters will not provide the bonds to anyone but the largest labor contractors. This in effect will eliminate smaller labor contractors from the program. This commenter proposes that this requirement be eliminated or in the alternative that the discretion of the Administrator/WHD to increase the bond requirements should be limited to the use of reasonable and objective criteria.

There is no evidence that only large labor contractors will be able to obtain surety bonds. The bond is a necessary compliance mechanism to ensure compliance with program obligations, namely the assurance of payment of the wages of H–2A workers covered by Section 218 of the INA. The Department can adjust bonds as necessary through notice and comment rulemaking to balance the requirement against the financial constraints faced by smaller employers.

(f) Proposed Section 655.106(e), New Section 655.106(b)(5) Positive Recruitment in Each Fixed-Site Location of Services

In § 655.106(e) of the NPRM, the Department proposed to impose additional recruitment obligations on FLCs (now H–2ALCs). One commenter, a large agricultural employer association, believes that the positive recruitment requirements should be the same as they are for non-H–2ALCs who have several fixed-site locations. The Department believes that the recruitment standards for H–2ALCs in the Final Rule spring from the same principles that apply to fixed-site employers, but that some modification was necessary because of the level of mobility of H–2ALCs. To ensure that

U.S. workers are provided notice of all available job opportunities, H–2ALCs are expected to recruit in all areas in which employment will take place, rather than just the area where the work will begin or the greatest concentration of work will take place. The modified recruitment obligations of H–2ALCs under the Final Rule are examined at greater length in the discussion of new § 655.106(a) above.

(g) Proposed Section 106(f), New Section 106(b)(6) Housing and Transportation

The NPRM required a labor contractor to attest that it has obtained written assurances from fixed-site providers of housing and transportation that such housing and transportation complies with the applicable standards. One agricultural employer association observed that housing and transportation provided by H–2ALCs should be required to meet the same standards as the housing provided by any other H–2A employer. The Department agrees that H–2ALCs are to be held to the same standards, but disagrees that an H–2ALC can simply attest, without more, that housing it has not secured itself meets all of the applicable standards. Because many H–2ALC s rely upon the activities of others in meeting their own obligations, the Department requires the contractor to obtain written assurances so that the contractor can, in turn, fully attest to the conditions required to employ H–2A workers. The Department also deleted the reference to H–2A workers in this section to conform to § 655.104(d) and to clarify the issue raised by commenters on § 655.104(d) regarding the need to have housing meet local, State, and Federal standards and guidelines for all agricultural workers, not just H–2A workers. Other minor, non-substantive modifications have been made to the language of this provision to conform to other provisions of the Final Rule.

Section 655.107 Processing of Applications

The Department promulgated in its proposed rule the general parameters for the submission and processing of applications. Section 655.107 of the NPRM laid out the process by which the Department intends to review applications and included provision for the modification of deficient applications as well as the amendment of pending and approved applications. Several commenters expressed concern with this section, specifically in the area of deficient applications. These specific areas of concern are addressed below.

As a general matter, one employer suggested that § 655.107 should include a provision that the Department will have an adequately staffed information service to answer employer questions and help employers comply with the process. The Department appreciates the need for such services, particularly among first-time program users. However, existing program resources are limited and the funding of such a specialized information service does not appear possible at this time. The Department is committed to conducting briefings for users of the program to acquaint them with the terms and processes of the regulation prior to its implementation. The Department is also examining other ways to make program information and instructions available to users on an ongoing basis, particularly through its Web site.

(a) Proposed Sections 655.107(a)(1) and (a)(2) Review Criteria

The Department, in describing the review process for each application, stated in the NPRM that each application ''will be substantively reviewed for compliance with the criteria for certification'' and further defined criteria for certification to ''include, but not be limited to, the nature of the employer's need for the agricultural services or labor to be performed is temporary; all assurances and obligations outlined in § 655.105 in this part; compliance with the timeliness requirements as outlined in § 655.102 of this part; and a lack of errors in completing the application prior to submission, which would make the application otherwise non-certifiable.'' A major trade association of agricultural employers believed this language contained ambiguous phrases, particularly ''include but not be limited to'' and ''errors * * * which would make the application otherwise non-certifiable'' and, as a result, the phrase ''criteria for certification'' was largely undefined. A farmworker/community advocacy organization commented the language incorporates no actual determination of whether the application complies with the statutory requirements for labor certification unlike the current regulations, which require a determination at the outset as to whether an application is ''acceptable for consideration'' based on compliance with the adverse effect and timeliness criteria. This organization maintains that the lack of substantive review in processing attestation-based applications violates the statute. The Department has previously addressed that argument in the discussion of § 655.101, which has now been rewritten to address many of these concerns. To avoid the possibility that vague and ambiguous terminology in the provision could cause confusion, however, proposed § 655.107(a)(1) and (a)(2) have been combined in the Final Rule, and the applicable criteria for certification have been listed through cross-references. Furthermore, to avoid confusion regarding the timing requirements set forth in the NPRM, § 655.107(a)(2) of the Final Rule specifies that when the Department issues a notice or a request requiring a response by an employer, it will use means normally assuring next-day delivery, which may include e-mail and fax. It further specifies that an employer's response to such a notice or request will be considered to be filed with the Department on the date that it is sent to the Department, which may be established, for example, by a postmark.

The trade association also pointed out that, although the language related to the nature of the employer's need included ''temporary,'' it did not also include ''seasonal.'' In addition, the association suggested the phrase ''assurances and obligations related to the recruitment of U.S. workers'' in proposed § 655.107(a)(3) [new § 655.107(b)] be clarified and recommended that if the language is intended to be construed broadly, the Department should include all of the required assurances and obligations to make this clear.

The Department, as mentioned above, agrees this section of the NPRM was confusing and has accordingly clarified the regulatory text. The new § 655.107 references the general criteria for certification that ensures the application will be evaluated for whether the employer has ''established the need for the agricultural services or labor to be performed on a temporary or seasonal basis; made all the assurances and met all the obligations required by § 655.105, and/or, if an H–2ALC by § 655.106; complied with the timeliness requirements in § 655.102; and complied with the recruitment obligations required by § 655.102 and § 655.103.'' By referencing back to these sections rather than enumerating the assurances and obligations in this provision, the Department both provides a clear frame of reference for the evaluation of obligations and also puts employers on notice of the review process.

New language has been inserted in § 655.107(a) in the Final Rule stating that ''[a]pplications requesting that zero job opportunities be certified for H–2A employment because the employer has been able to recruit a sufficient number

of U.S. workers must comply with other requirements for H–2A applications and must be supported by a recruitment report, in which case the application will be denied.'' The reasons for the insertion of this new language are explained below in the discussion of § 655.110(e) of the Final Rule.

(b) Proposed Section 655.107(a)(3), New Section 655.107(b) Notice of Deficiencies

Several minor, non-substantive modifications were made to the language of the proposed provision for purposes of clarity and to conform it to changes made elsewhere in the Final Rule. One significant clarification was also added at § 655.107(b)(2)(iv) of the Final Rule to specifically address the handling of applications initially rejected for failure to comply with the Final Rule's recruitment obligations. Some employer and trade association commenters noted that the structure of the processing procedures in the NPRM would have required an employer whose application was rejected for failing to recruit properly to begin the entire pre-filing recruitment sequence over again. As a result, approval of the re-filed application would have been substantially delayed by the minimum period specified that positive recruitment must be conducted in advance of the date of need (75 days in the NPRM, 60 days in the Final Rule).

Recruitment is an essential part of the H–2A program, and is necessary for the Department to be able to certify that no qualified U.S. workers are able, willing, and available for the job opportunity, and that hiring H–2A workers would not adversely affect the wages and working conditions of U.S. workers similarly employed. Although the positive recruitment requirements will not be waived, the Department will allow re-recruitment to be conducted on an expedited schedule so that employers can secure H–2A workers in a timely fashion where no U.S. workers are available. Even with an expedited schedule, however, failure to properly recruit will inevitably delay approval of an application to at least some extent, and the Department encourages employers to be mindful of all of the recruitment requirements specified in the Final Rule.

(c) Proposed Section 655.107(a)(5), New Section 655.107(c) Modifications

The proposed regulations retain the process for issuance of a Notice of Deficiency by the CO and the submission of a modified application by the employer. However, under the current regulations, applications are received, modified if required, and accepted prior to the employer's recruitment efforts. Under the proposed rule, recruitment will be conducted prior to submission of the application.

A major trade association requested clarification on the effect a modification will have on the validity of the recruitment effort and recommended the regulations state that if an application is ultimately accepted, even after modification, any required modifications to the application will not invalidate any recruitment conducted based on the application as originally submitted. A professional association recommended that if an initial application contains a deficiency related to recruitment, the CO could require remedial recruitment efforts to be completed prior to the final determination and the remedial recruitment efforts and the date of need extended to accommodate the required recruitment efforts. This association believed such a process would be better than the issuance of a denial, which would require the employer to begin the process, including the pre-filing recruitment, over again and, therefore, be unable to complete the process in time to meet the employer's actual date of need. As discussed above, the Department has clarified the effect of deficient recruitment in § 655.107(b)(2)(iv) of the Final Rule. This revised procedure will allow modified applications to move forward after the application originally submitted is found to have deficient recruitment.

The NPRM proposed to revise the current timeframe for an employer to submit a modification to the application from 5 calendar days to 5 business days, and this change was supported by a major trade association. However, the association commented that 5 business days still is not sufficient time for an employer to decide whether to modify the application or submit a request for an expedited administrative judicial review. The association requested the timeframe for requesting an expedited review should be extended to 7 business days. The Department has decided to retain the requirement for submission of either a modification or a request for administrative review within 5 business days, as proposed, which will allow the Department to meet the timeframes for review that are established by statute. The Department believes that due to the time-sensitive nature of the H–2A program, the majority of employers also prefer a speedy timeline that ensures disputes and deficiencies are resolved as quickly as possible.

The Department also deleted the word ''amendment'' from the regulatory text in this section to prevent confusion. Modifications and amendments are, in fact, different actions under this Rule and amendments are described in § 655.107(d).

(d) Proposed Section 655.107(a)(6), New Section 655.107(d) Amendments

The Department did not propose to change the requirements from the current regulation for amendments to an application seeking additional workers. An association of growers/producers requested that the requirement in proposed § 655.107(a)(6)(i) limiting the increase in the number of workers to not more than 20 percent (or 50 percent for employers of fewer than 10 workers) be changed to allow employers of fewer than 10 workers to increase the number of workers in their initial application by up to 10 workers. A State government agency noted its agreement with retaining the current limitations.

The Department has decided to retain the provisions from the NPRM regarding the number of workers that may be requested through amendments. Our experience indicates these limits are necessary to discourage employers from requesting a lower number of workers than actually needed and subsequently submitting an amendment to increase the number. Moreover, the exception for employers of 10 or fewer H–2A workers has not been changed, as interest in such a change was not widespread.

In the NPRM the Department included new provisions relating to amendments to reflect the shift to an attestation-based process. A group of farmworker advocacy organizations commented that they believed the new language is weaker than the language in the current regulations. The organization objected to the deletion of language making explicit that labor certifications are subject to the conditions and assurances made during the application process and recommended this language be included. The Department did not deem this change necessary, as it is already clear from the text and structure of the Final Rule. The organization also recommended the language prohibiting changes to the benefits, wages, and working conditions as contained in the current regulation should be included in the new rule. The Department believes the language in the Final Rule specifying that in deciding whether to accept an amendment, the CO must ''take into account the effect(s) of a decision to approve on the adequacy of the underlying test of the domestic labor market for the job opportunity'' fulfills

this function. An amendment to effect a non-trivial increase in the offered wages, for example, would likely render the job more attractive to U.S. workers, and such an amendment would not be approved without new recruitment being conducted. However, the Final Rule clarifies that amendments should be approved by the CO ''if the CO determines the proposed amendment(s) are justified by a business reason and will not prevent the CO from making the labor certification determination required under § 655.109.''

Finally, the organization believed that the provision in proposed § 655.107(a)(6) (now § 655.107(d)(2)), which allows minor changes in the period of employment, and also requires an assurance that U.S. workers will be provided with housing and subsistence costs under certain circumstances when the season is delayed, does not go far enough because it does not address problems that H–2A workers might encounter related to housing, subsistence, lost work opportunities, and an employer's failure to meet its obligation under the three-fourths rule. The Department does not agree with this characterization. Both the DOL and DHS Final Rules allow for minor modifications in the period of employment that do not change any of the employer's responsibilities with respect to its workers. All of an employer's obligations, attested to in the original application, apply to any amendment thereto.

A sentence was added to the Final Rule clarifying that the CO will transmit accepted amendments to SWAs, where necessary, so that posted job orders can be modified. A further sentence was added clarifying that the Department will review proposed amendments as quickly as possible, ''taking into account revised dates of need for work locations associated with the amendment.''

(e) Proposed Section 655.107(a)(7), New Section 655.107(e) Appeal Procedures

Some minor, non-substantive changes were made to the language of this provision in the Final Rule for purposes of clarity and consistency. The language has also been modified to specify that ''the denial of a requested amendment under paragraph (d) of this section'' and ''a notice of denial issued under § 655.109(e)'' do not constitute final agency action, and may be appealed pursuant to the procedures set forth in § 655.115.

Section 655.108—Offered Wage Rate

A number of commenters questioned the continued need for an adverse effect wage rate (AEWR). An association of growers commented that ''there is no valid basis for setting an adverse effect wage rate, separate and distinct from the prevailing wage for the occupation in the area of intended employment, and requiring the payment of such a wage if it is higher than the prevailing wage.'' An association of growers commented that ''DOL's discussion in the preamble to the proposed regulation makes the case against an AEWR.'' Another grower's association doubts the Department's assertion ''in the preamble that the wages and working conditions of agricultural workers are depressed by the presence of a high proportion of illegal aliens.'' This organization further asserts that field and livestock workers' average wages have increased at a faster rate than those for non-farm workers. Other comments focused on an apparent inconsistency between the H–2A program and other temporary worker programs, none of which requires an AEWR in addition to a prevailing wage.

Congress did not mandate the creation of an adverse effect wage rate for the H–2A program. Rather, Congress provided in sec. 218(a)(1)(B) of the INA that before an employer is permitted to hire an H–2A worker, the Secretary of Labor must certify that the hiring of the H–2A worker ''will not adversely affect the wages and working conditions of workers in the United States similarly employed.'' This language is identical to the general labor certification language in sec. 212(a)(5)(A)(i) of the INA, which provides that ''[a]ny alien who seeks to enter the United States for the purpose of performing skilled or unskilled labor is inadmissible, unless the Secretary of Labor has determined'' that hiring that alien ''will not adversely affect the wages and working conditions of workers in the United States similarly employed.''

For most of its temporary and permanent foreign worker programs, the Department applies the assumption that U.S. workers in the same occupation will be adequately protected from having their wages adversely affected by the hiring of foreign workers so long as the workers are paid prevailing wage rates. Congress itself has applied this assumption by statute with respect to the granting of labor certifications under the H–1B program. See Sections 212(n)(1)(A) and 212(p) of the INA. For historical reasons, however, the Department established special ''adverse effect'' wage rates for the H–2A program. The Department comprehensively recounted the history of adverse effect wage rates in its last major rulemaking on the H–2A program in 1989. 54 FR 28037, 28039–28041 (July 5, 1989).

Adverse effect wage rates were established for the first time in 1961 pursuant to an agreement with Mexico, which provided that the wages offered under the Bracero program could be no less than an adverse effect wage rate determined by the Secretary of Labor. The H–2 program, which is the predecessor to the H–2A program, was initially created in 1952. H–2 workers were initially required to be paid only prevailing wage rates. Adverse effect wage rates were extended to the H–2 program for the first time, however, in 1963, as the Bracero program was being phased out. Two circumstances motivated the creation of these wage rates. First, the federal minimum wage had not yet been extended to agricultural workers. Second, concerns were raised that large numbers of foreign workers, many of whom were undocumented, had depressed wage rates in the agricultural sector. 54 FR 28041.

Between 1963 and 1989, the Department applied a variety of methodologies to determine how adverse effect wage rates should be set. It is clear that the Department has always been motivated in setting adverse effect wage rates to counteract the potential impact on the wages of U.S. workers of the large numbers of foreign workers, particularly undocumented workers, in the agricultural sector. *Id.* The Department's comprehensive 1989 study of adverse effect wage rates came to several important conclusions, however. First, none of the methodologies employed by the Department ''ever has purported to add an enhancement'' to wage rates calculated by the United States Department of Agriculture (USDA). 54 FR 28040. Second, although some adverse effect wage rates did exceed the wage rates set by the USDA, that was ''an unintended result of the application of the various methodologies used in the 1960s'' and ''cannot in any way be viewed as a measurement of the quantum of adverse effect.'' *Id.* Indeed, the Department concluded that some of its past methodologies for calculating adverse effect wage rates ''led to AEWRs which were higher than Statewide agricultural earning in some states and lower in others,'' a result that the Department labeled ''erratic.'' 54 FR 28041.

The Department stated in 1989 that the adverse effect wage rate ''is a 'method of avoiding wage deflation.' '' 54 FR 28045, citing *Williams* v. *Usery*, 531 F.2d 305, 306 (5th Cir. 1976). Thus, the Department performed a comprehensive study of the then-existing literature on agricultural wages

to determine whether wage depression in fact existed in the agricultural sector, and if so, what its likely sources were. The Department concluded that ''there is a tendency for illegal alien workers to adversely affect wage rates.'' 54 FR 28041. The Department relied in part on a General Accounting Office report finding that ''illegal aliens do, in some cases, exert downward pressure on wages and working conditions with low-wage low-skilled jobs in certain labor markets.'' 54 FR 28042, quoting General Accounting Office, *Illegal Aliens: Influence of Illegal Workers on Wages and Working Conditions of Legal Workers* (GAO/PEMD–88–13BR) (March 1988). The Department also relied on a study published by the National Commission for Employment Policy, which found that ''[u]ndocumented workers do displace some native-born U.S. workers and do lower wages and working conditions in some occupations and geographical areas.'' 54 FR 28042, quoting National Commission for Employment Policy, *Illegal Immigrants and Refugees—Their Economic Adaptation and Impact on Local U.S. Labor Markets: A Review of the Literature* (October 1986). The Department also relied on a study conducted by Dr. Phillip L. Martin, Professor of Agricultural Economics, University of California at Davis, who concluded that ''[t]he removal of illegal alien workers should raise farm wages.'' 54 FR 28043, *quoting* Dr. Phillip L. Martin, *IRCA and the U.S. Farm Labor Market* (February 1988).

There were, however, countervailing findings indicating that any adverse effects on agricultural wages caused by illegal alien workers at that time were ''minor and localized.'' 54 FR 28041. The Department noted that ''the only wage depression shown in agricultural employment in the GAO report appeared in two limited, localized studies of San Diego County, California, pole tomatoes and Ventura County, California, citrus,'' and that ''GAO itself noted that these studies were probably atypical.'' 54 FR 28042. The National Council for Employment Policy study found that ''[t]he evidence regarding the labor market impact of undocumented entrants is mixed and somewhat inconclusive.'' *Id., quoting Illegal Immigrants and Refugees, supra.* And Dr. Martin noted that ''the evidence of these possible wage-depressing effects of illegals is sparse.'' 54 FR 28043, *quoting* Martin, *supra.*

The Department thus drew three significant conclusions in the 1989 rulemaking. First, ''DOL views the data and literature as inconclusive on the issue of adverse effect or wage depression from the presence of illegal alien workers on the USDA data series.'' 54 FR 28043. Second, ''[t]o the extent that there is some anecdotal evidence of wage depression from these sources, the evidence also suggests that the adverse effects are highly localized and concentrated in specific areas and crop activities.'' *Id.* Third, an ''explicit enhancement'' to agricultural wages can only be justified ''if the extent of the depression can be measured.'' *Id.*

In 1989, the Department decided that, taking all of these considerations into account, ''setting the AEWR at the level of average agricultural wages, as determined by the USDA survey, is the correct approach.'' 54 FR 28043. The Department noted that the ''new methodology ties AEWRs directly to the average wage, as opposed to the old methodology which resulted in AEWRS substantially higher than agricultural earnings in many States, and lower for some States.'' 54 FR 28038. The Department found that the use of an average wage rate as the adverse effect wage rate was particularly appropriate because ''AEWRs, if set too high, might be a disincentive to the use of H–2A and U.S. workers, and could undermine efforts to eradicate the employment of illegal aliens.'' 54 FR 28044.

Having determined to use average agricultural wage rates to set the H–2A program's adverse effect wage rates, the Department chose the USDA survey to measure average agricultural wage rates for two main reasons. First, the Department found that at that time the USDA survey of farm and livestock workers ''presents the best available data on hourly wages in the agricultural sector.'' 54 FR 28041. The Department noted in this regard that ''all crops and activities now covered by the H–2A program will be included in the survey data and the peak work periods also will be covered.'' *Id.* Second, although the Department had found that evidence concerning wage depression in the agricultural sector caused by undocumented workers was inconclusive, ''[t]o the extent the wage depression does exist on a concentrated local basis, the average agricultural wage does not appear to be significantly affected by wage depression. Further, none of the studies reviewed by DOL here quantifies or measured any wage depression that might exist in the USDA series.'' 54 FR 28043. Thus, although ''the evidence is not conclusive on the existence of past adverse effect,'' any adverse effect ''which might have occurred may not be reflected in the USDA data series.'' *Id.*

The Department's decisions to use average agricultural wage rates to set the H–2A program's wage rates, and to use the USDA survey to measure average agricultural wage rates, were challenged but were upheld by the DC Circuit. *AFL-CIO* v. *Dole,* 923 F.2d 182 (DC Cir. 1991). The Court noted that there is no ''statutory requirement to adjust for past wage depression,'' and that in determining appropriate wage rates there is a ''range of reasonable methodological choices open to the Department.'' *Id.* at 187. The Court further noted that the Department had expressed that one of its objectives in adopting the new wage methodology was to avoid impeding ''IRCA's goal of replacing illegal aliens with documented foreign workers.'' *Id.* at 186. Where ''the data is inconclusive,'' the Department merely needs to ''identify the considerations it found persuasive in making its decision'' as to what methodology to apply. *Id.* at 187.

(a) Retaining the Adverse Effect Wage Rate

Many commenters who opposed retaining the adverse effect wage rate seemed to believe that the AEWR is intended to be an enhanced wage rate, and that its existence must be predicated on the existence of wage depression in the agricultural sector. Both of those views were squarely rejected by the Department in the 1989 rulemaking, when the Department expressly declined to adopt any form of enhancement to the average agricultural hourly wage rate, and when it retained the adverse effect wage rate despite its finding that evidence of generalized wage depression in the agricultural sector was inconclusive.

The Department is retaining the concept of the adverse effect wage rate, despite the fact that is adopting a methodology that will actually set AEWRs at prevailing wage rates, for three reasons. First, by definition, the adverse effect wage rate is the wage rate at which the wages of U.S. workers will not be adversely affected. The Department is firmly committed to the principle that the wage rates required by the H–2A program should ensure that the wages of U.S. workers will not be adversely affected by the hiring of H–2A workers, and therefore declines to jettison the ''adverse effect wage rate'' concept. Second, as is explained further below, the Department was guided in its choice of methodologies for determining prevailing wage rates, and in its ultimate selection of the Bureau of Labor Statistics (BLS) Occupational Employment Statistics (OES) survey, by its commitment to selecting the methodology that will best prevent an adverse effect on the wages of U.S.

workers. Thus, the adverse effect concept will continue to exert an important influence on the wage rates actually supplied by the H–2A program. Finally, § 655.108(a) of the Final Rule requires employers to pay ''the highest of the AEWR in effect at the time recruitment for a position is begun, the prevailing hourly wage or piece rate, or the Federal or State minimum wage.'' The ''prevailing hourly wage rate'' referred to in this provision is defined to mean ''the hourly wage determined by the SWA to be prevailing in the area in accordance with State-based wage surveys.'' A similar formulation is used under the current rule. Retaining the phrase ''adverse effect wage rate'' to describe the wage level that is determined by the Department to be prevailing in accordance with Federal wage surveys will retain this traditional State/Federal distinction and avoid the confusion that might result from calling two different wage levels both the ''prevailing'' wage rate.

(b) Evidence of Wage Depression at the National Level

In 1989, the Department concluded that evidence of wage depression in the agricultural sector was inconclusive. 54 FR 28043. The Department noted that some studies had identified wage depression in specific agricultural labor markets, but labeled that evidence ''anecdotal.'' *Id.* The Department further noted that even this anecdotal evidence of wage depression was ''highly localized and concentrated in specific areas and crop activities.'' *Id.*

Evidence developed during the last 20 years has not added any additional clarity on the issue of wage depression. Some experts continue to claim that undocumented workers cause wage depression. *See, e.g.*, Michael J. Wishnie, *Prohibiting the Employment of Unauthorized Immigrants: The Experiment Fails,* 2007 U.Chic.Leg. For. 193, 215 (2007) (''[T]his has almost certainly contributed to the depression of wages and working conditions for U.S. workers.''). One comment submitted by a group of farmworker advocacy organizations acknowledged that the impact of undocumented workers on wages at a broad national level ''is under dispute,'' but asserted that wage depression is clearly evident in the agricultural sector. This commenter did not provide any wage data supporting this assertion, however. Rather, the commenter relied on data indicating that undocumented workers are more prevalent in the agricultural sector than they are in most other sectors of the labor force. In fact, none of the comments that were submitted to the Department and none of the studies that the Department reviewed in response to those comments provided a methodology that would allow for the quantification of any agricultural wage depression that might exist.

On the other hand, many experts assert that evidence indicating that undocumented workers cause wage depression remains mixed. For example, Jeffrey S. Passel of the Pew Hispanic Center recently stated that ''I don't know if there's anything in the data that clearly points one way or the other. At one level, it's a lot of people: 11.5 million to 12 million. But it's about one in 20 workers, so it's not a huge share of the labor market.'' *The Immigration Debate: Its Impact on Wages, Workers, and Employers,* in Knowledge@Wharton at p. 4 (May 17, 2006). Bernard Anderson, who served as Assistant Secretary for the Employment Standards Administration during the Clinton Administration, has opined that with respect to the question of ''what impact there is on wages, economic status and employment for American workers * * * you get a clear divide in the economic literature. The evidence produced by economists who have studied this question is mixed.'' *Id. See also several studies on the effects of immigration generally: Robert D. Emerson, Agricultural Labor Markets and Immigration* at p. 57 (Choices, 1st Quarter 2007) (''While some economists suggest that increased immigration has reduced wage rates for native-born, unskilled workers * * * most have found negative wage effects of increased immigration extremely difficult to demonstrate once all appropriate adjustments are made.''); Pia Orrenius, *The Impact of Immigration,* Commentary, The Wall Street Journal (April 25, 2006) (''[M]ost studies find immigrants have little effect on average wages.''); Gianmarco I.P. Ottaviao and Giovannit Peri, *Rethinking the Gains from Immigration: Theory and Evidence from the U.S.* at 28 (August 2005) (''It turns out empirically and theoretically that immigration, as we have known it during the nineties, had a sizeable beneficial effect on wages of U.S born workers.''). Several grower and employer groups commented that they do not believe there is reliable evidence of wage depression in the agricultural sector. They did not, however, provide any data or analysis of existing studies to support this assertion.

The assertion of one group of farmworker advocacy organizations that the unusually high concentration of undocumented workers in the agricultural sector must necessarily result in a particularly depressive effect on the wages in that sector does not appear to be borne out by the facts. A study analyzing changes in the median weekly earnings for selected occupations between 1988 and 1999 found that median weekly earnings for ''farm occupations, except managerial'' had increased 21 percent between 1988 and 1993, and 20 percent between 1994 and 1999, while median earnings for ''farm workers'' increased 22 percent between 1988 and 1993, and 20 percent between 1994 and 1999. This compared favorably to increases in the median weekly earnings for all workers, which increased 20 percent between 1988 and 1993, and 18 percent between 1994 and 1999, as well as to workers in many other specific low-wage occupational categories (cooks: 17 percent and 19 percent; butchers: 13 percent and 22 percent; laundry and dry cleaning operators: 17 percent and 16 percent; sewing machine operators, 17 percent and 19 percent). *See* Philip Martin, *Guest Workers: New Solution, New Problem?* at Table A3–4 (Pew Hispanic Center Study, March 21, 2002). Although the Department assumes that it is true that undocumented workers are more prevalent in the agricultural sector than they are in many other sectors, the available data does not support the notion that they have had a disproportionately depressive impact on wages in the agricultural sector.

In sum, after considering the comments received on the subject of wage depression, and after reviewing relevant literature in an attempt to identify empirical support for the assertions made in those comments, the Department reaffirms its conclusion in the 1989 rulemaking that evidence of wage depression in the agricultural sector is inconclusive.

(c) Evidence of Wage Depression at the Local Level

In the 1989 rulemaking, the Department found that ''[t]o the extent that there is some anecdotal evidence of wage depression * * *, the evidence also suggests that the adverse effects are highly localized and concentrated in specific areas and crop activities.'' The Department did not find that there was in fact wage depression in local markets, specific areas, or specific crop activities, but rather noted that the anecdotal evidence of wage depression that existed at that time was confined to those settings. The relevant facts concerning concentrations of illegal workers in specific local markets and crop activities have changed substantially in the intervening 20 years, however.

A group of farmworker advocacy organizations commented that ''[t]imes have changed since 1987.'' This group stated that undocumented workers in the agricultural sector are now ''spread throughout the nation.'' This group noted that ''undocumented workers now dominate in the agricultural sector'' and ''constitute a majority of the farmworkers in the United States.'' This group argued that the factual change in the prevalence of undocumented workers in the agricultural sector is so significant that ''DOL may not legally ignore [it].'' It further provided an impressive compilation of statistics from a variety of studies showing that undocumented workers are now pervasive in the agricultural sector, rather than a sparse or localized phenomenon. Specifically, the studies cited found that ''[i]n California, where 35 percent of the nation's farmworkers are employed, 57 percent of farmworkers were undocumented as of 2003–05,'' that in Florida, ''50 percent of farmworkers were unauthorized immigrants [in 2004] and the percentage was increasing,'' that ''[m]ore than 60 percent of agricultural workers in Washington are believed to be undocumented,'' that ''in New York State approximately 70 percent of farmworkers are undocumented,'' and that ''45 percent of the Mountain region's farmworkers report they were working illegally in the U.S.''

A variety of experts have similarly concluded that the presence of undocumented workers in the United States is now a widespread phenomenon rather than a localized one. A 2005 study by the Pew Hispanic Center found that ''since the mid-1990s, the most rapid growth in the immigrant population in general and the unauthorized population in particular has taken place in new settlement areas where the foreign-born had previously been a relatively small presence.'' Jeffrey S. Passel, *Unauthorized Migrants: Numbers and Characteristics* at p. 11 (Pew Hispanic Center, June 14, 2005). ''The geographic diversification of the unauthorized population since 1990 is very evident * * * .'' *Id.* at p. 13. A 2006 study by the Department of Homeland Security reached a similar conclusion. *See* Michael Hoefer, Nancy Rytina, and Christopher Campbell, *Estimates of the Unauthorized Immigrant Population Residing in the United States: January 2006* at p. 4 (Office of Immigration Statistics, August 2007) (''Growing geographic dispersion of the unauthorized immigrant population is reflected by an increase in the share of the population living in all other states.''). In many respects the growing dispersion of unauthorized workers is unsurprising, as the number of unauthorized workers in the United States has dramatically increased from an estimated 2.5 million in the late 1980s to an estimated 12 million or more today. *See* Passel, *Unauthorized Migrants: Numbers and Characteristics* at p. 10, *supra*; Hoefer et al. at p. 1, *supra*.

Recent literature also suggests that, even if there are some areas in the agricultural sector in which particularly high concentrations of illegal immigrants remain, such concentrations may not adversely affect U.S. workers. Jeffrey S. Passel of the Pew Hispanic Center has noted that high concentrations of illegal workers in particular markets are generally correlated with lower local unemployment rates for native workers:

> The presence of illegals is not associated with higher unemployment among natives and it seems to me you would have to see that kind of thing for there to be true displacement in any sense. Geographically, it tends to be the reverse: Places with large numbers of illegals tend to have lower unemployment than places without illegals.

The Immigration Debate: Its Impact on Wages, Workers, and Employers, in Knowledge@Wharton at pp. 4–5 (May 17, 2006). And David Card concluded in a study analyzing the effects of immigration generally (rather the effects of unauthorized immigration in particular) on U.S. workers that ''[a]lthough immigration has a strong effect on relative supplies of different skill groups, local labor market outcomes of low skilled [U.S.] natives are not much affected by the relative supply shocks.'' David Card, *Is the New Immigration Really So Bad?*, National Bureau of Economic Research (August 2005).

The Department concludes that there is no conclusive evidence one way or the other regarding the existence of wage depression in localized agricultural labor markets. There is strong evidence that there has been a seismic shift in the demographics of the agricultural labor market in the United States since the Department's last rulemaking in 1989, and that undocumented workers have in the intervening years come to dominate that market throughout the United States. In light of the pervasive presence of undocumented workers in the agricultural sector today, it is substantially less likely than it was in 1989 that wage depression could uniquely be found in highly localized agricultural labor markets and specific crop activities. Moreover, even if pockets of unusually high concentrations of illegal workers continue to exist in some places in the agricultural sector, the evidence concerning the effect high concentrations of illegal workers have on the wages of U.S. workers itself remains equivocal.

(d) Inability To Measure Wage Depression

None of the commenters and none of the literature reviewed by the Department suggested a reliable methodology for measuring any wage depression that may exist in the agricultural sector. Indeed, one group of farmworker advocacy organizations submitted an analysis prepared by a PhD economist from the University of California, Berkeley, that concluded that ''[g]iven the extremely large share of illegal immigrants working in agriculture, it is unknowable, absent them, how many U.S. workers would be willing to and at what price work in the agricultural sector.'' As the Department explained in 1989, ''an explicit enhancement could only be justified if alien agricultural employment has depressed average agricultural earnings, and if the extent of the depression can be measured at the aggregate level.'' 54 FR 28043. With no conclusive evidence showing that wage depression exists in the agricultural sector, and with no reliable methodology to measure any wage depression that does exist, the Department declines to adopt an adverse effect wage rate that is deliberately set above market rates.

(e) The Impact of Undocumented Workers vs. Guest Workers on U.S. Worker Wages

To the extent that wage depression may exist in the agricultural sector, the evidence does not indicate that it has been caused by the H–2A program. Rather, all of the information available to the Department strongly indicates that the presence of large numbers of illegal, undocumented workers in the agricultural sector poses a much greater potential threat to the wages of U.S. workers than guest workers do.

The Department has reviewed anew the studies that it relied on in 1989 when it issued the last rule governing the adverse effect wage rate. Virtually all of those studies focused on the effect that undocumented alien workers have on the wages of U.S. workers. *See, e.g.*, National Commission for Employment Policy, *supra* (''Undocumented workers do displace some native-born U.S. workers and do lower wages and working conditions in some occupations and geographical areas.''); Martin, *IRCA*

and the U.S. Farm Labor Market, supra (''[t]he removal of illegal alien workers should raise farm wages.''). Indeed, the GAO study that was relied upon by the Department examined the impact of undocumented workers not just on the wages of U.S. citizen workers, but on all legal workers in the United States with low-wage, low-skilled jobs, including guest workers. *See Illegal Aliens: Influence of Illegal Workers on Wages and Working Conditions of Legal Workers* (GAO/PEMD–88–13BR) (March 1988) (''illegal aliens do, in some cases, exert downward pressure on wages and working conditions with low-wage low-skilled jobs in certain labor markets.'').

Other sources also support the notion that any threat that foreign workers may pose to the wages and working conditions of U.S. workers is primarily caused by direct competition from a large undocumented workforce within the United States. Illegal aliens may be willing to work for illegally low wages that are paid off the books, and may be reluctant to report an employer's violations of the labor and employment laws. A group of farmworker advocacy organizations submitted an analysis prepared by a PhD economist from the University of California, Berkeley, which stated that:

> There are other reasons that employers in the U.S. hire undocumented workers over U.S. workers. Undocumented workers—afraid of deportation—are perceived to be less demanding in terms of non-pecuniary benefits and are less likely to form unions or make demands from employers, as well as accept pay below legal standards.

Senators from both political parties remarked upon this phenomenon during the recent immigration debates in Congress.[5] As Senator Kennedy stated in May 2007,

> [W]e have, unfortunately, employers who—are prepared to exploit the current condition of undocumented workers in this country—potentially, close to 12 [and] ½ million are undocumented. Because they are undocumented, employers can have them in these kinds of conditions. If they don't like it, they tell them they will be reported to the immigration service and be deported. That is what is happening today.[6]

The U.S. Supreme Court has also noted the threat that undocumented workers pose to the wages and working conditions of U.S. workers. *See Sure-Tan* v. *NLRB,* 467 U.S. 883, 892 (1984) (''acceptance by illegal aliens of jobs on substandard terms as to wages and working conditions can seriously depress wage scales and working conditions of citizens and legally admitted aliens * * *'').

A group of farmworker advocacy organizations suggested that guest worker programs may also threaten the wages and working conditions of U.S. workers. These organizations primarily cited studies finding that between 1950 and 1964, the period of time during which the Bracero Program was operating, real wages for agricultural workers remained flat. Even if these studies are correct about the impact of the Bracero Program, however, the Department does not consider the Bracero Program to be representative of the impact of guest worker programs generally. The Bracero Program was notorious for rampant employer abuses and lack of government enforcement. *See, e.g.*, Alma M. Garcia, *The Mexican Americans* at pp. 30–33 (2002). If employers are regularly able to get away with violating program requirements and paying sub-standard wages, such rogue activity may of course have a depressive effect on overall wage rates. H–2A program enforcement, however, is more rigorous than Bracero Program enforcement was, and is substantially aided by watchdog farmworker advocacy organizations that help to ensure that workers hired through the H–2A program are paid properly.

The commenter cited only one other supposed example of wage depression caused by the H–2A program: The Florida sugar cane industry. The commenter noted that the sugar cane harvest in Florida was mechanized in the early 1990s, and that the industry therefore no longer uses substantial numbers of H–2A workers. The commenter asserted, however, that in the late 1980s and early 1990s, while H–2A workers were still being used, their presence depressed the wages of U.S. workers. As support for this proposition, the commenter cited statistics indicating that sugar cane producers that hired only U.S. workers paid their employees substantially more per hour than producers that hired H–2A workers. The Department does not consider this to be evidence of wage depression; if anything, the wage gap between U.S. workers and H–2A workers shows that the AEWR paid to H–2A sugar cane workers did not function as the maximum hourly rate that U.S. workers in the area could make. Rather, U.S. workers were able to secure jobs that paid substantially higher wages than H–2A workers. Economically speaking, that result is not at all surprising; employers generally should be willing to pay U.S. workers higher wages than the required wage rate for H–2A workers, since H–2A workers impose a number of additional costs on employers, including housing, transportation, and application fees, that make them relatively more expensive to employers than U.S. workers.

Whatever effect guest workers may have on the wages of U.S. workers, however, there appears to be virtually unanimous agreement among the experts and commenters that undocumented workers have a greater impact and pose a greater threat. Indeed, the very same group of farmworker advocacy organizations that argued that guest worker programs have a depressive effect on wages submitted a PhD economist's analysis concluding that ''the H–2A program and the AEWR are severely undermined by the employment of hundreds of thousands of undocumented immigrant workers.'' The economist further opined that ''[f]irst and foremost, it is in the best interest of U.S. domestic and H–2A workers to mitigate the effects that such a large share of illegal workers has on wages and employment conditions in the agricultural industry.'' *See also* Peter Cappelli, *The Immigration Debate: Its Impact on Wages, Workers, and Employers,* in Knowledge@Wharton at p. 3 (May 17, 2006) (''While it is true that low-skill workers who enter the United States legally also exert downward pressure on wages, there is a significant difference between them and their undocumented counterparts.''). Of course, guest worker programs could, in the abstract, pose a significant threat to the wages of U.S. workers, if, for example, the required wage rate was set substantially below the prevailing market rates, or if enforcement of the required wage rates was so lax that substantially below-market wages were regularly paid. There is no indication, however, that those conditions currently exist in the H–2A program, nor does the Department have any intention of allowing them to occur under the Final Rule.

Thus, the Department concludes that while evidence of wage depression in the agricultural sector remains inconclusive, it is quite clear that the most likely source of any wage depression that does exist is the hundreds of thousands of undocumented workers in the agricultural labor market.

(f) The Department's Decision To Use More Precise Adverse Effect Wage Rates

Although evidence of actual wage depression in the agricultural sector is equivocal, the Department believes it is appropriate to select a wage-

[5] *See e.g.,* 152 Cong. Rec. S9773 (2006) (statement of Senator Dianne Feinstein); 153 Cong. Rec. S441–S442 (2007) (statement of Senator Larry Craig); and 153 Cong. Rec. S6590 (2007) (statement of Senator Edward Kennedy).

[6] 153 Cong. Rec. S6590 (2007).

determination methodology that will help to prophylactically guard against wage depression. As the Department noted in the NPRM, one of the most significant actions it can take to protect the wages and working conditions of U.S. workers is to render the H–2A program sufficiently functional that agricultural employers will hire H–2A workers, with all their accompanying legal protections, rather than hiring undocumented workers. The Department has concluded that this can best be achieved by setting adverse effect wage rates that (1) are not below the prevailing wages being earned by U.S. workers and (2) are not so far above local market rates that they encourage employers to hire undocumented workers instead. Achieving these objectives requires setting AEWRs that appropriately reflect market realities and labor costs.

There are currently not nearly enough U.S. workers in the agricultural sector to perform all of the agricultural work that needs to be performed. When agricultural employers cannot find U.S. workers, they must of necessity turn to some other labor source. The H–2A program was created by Congress to be the alternate source of choice for agricultural labor. The program is clearly failing to fill the role envisioned for it, however, as approximately ten times more undocumented workers than H–2A workers are employed in the agricultural sector today. Agricultural employers may or may not realize that specific individuals they are hiring are in the United States illegally, but undocumented workers have clearly become the agricultural sector's alternate labor market of choice. The Department believes that the current methodology for determining adverse effect wage rates, which is not keyed to actual local labor market conditions, may be partly responsible for the program's failure.

It is obvious that an AEWR that is set too low is likely to harm U.S. workers. It is no secret that foreign workers may be willing to work for wages that are lower, and often substantially lower, than wages that are typically paid to U.S. workers. Allowing foreign workers to work at substandard wages would likely harm U.S. agricultural workers by causing them to be displaced or by forcing them to accept lower wages to secure jobs. As will be discussed later, there is reason to believe that in some geographic areas and for some occupations, current AEWRs are set artificially low, resulting in an adverse effect on U.S. workers similarly employed. *See* Gerald Mayer, *Temporary Farm Labor: The H–2A Program and the U.S. Department of Labor's Proposed Changes in the Adverse Effect Wage Rate* (''CRS Report'') at 8 (CRS Report for Congress, November 6, 2008) (''Currently, the AEWR applies equally to all crop workers, livestock workers, and farm equipment operators in a region or state. However, within a region or state, [market] wages for the same occupation may vary because of differences in the cost of living or in the relative supply of or demand for workers.'').

Conversely, an AEWR that is artificially set too high can also result in harm to U.S. workers. If the AEWR is set so high that it does not reflect actual local labor market conditions, many agricultural employers may be priced out of participating in the H–2A program. When employers cannot find U.S. workers, and also cannot afford H–2A workers because they are required to pay them above-market wage rates, some will inevitably end up hiring undocumented workers instead.

The resulting influx of undocumented foreign workers into the agricultural sector threatens to erode the earnings and employment opportunities of U.S. workers in agricultural occupations. U.S. workers may have a difficult time fairly competing against undocumented workers, who may accept work at below-market wages, are viewed by employers as less troublesome and less likely to assert their rights, and are cheaper to employ than H–2A workers because they do not require the additional payment of H–2A program costs such as transportation and housing. Although the threat of legal sanctions and attendant risks of work disruption will constrain some employers from knowingly employing undocumented workers,[7] the greater the gap between the true market rate for farm labor and the total cost to employers of H–2A workers, including artificially inflated wage rates plus all other attendant H–2A program costs, the greater the likelihood that employers will forego using the H–2A program and will instead risk hiring undocumented foreign labor. The undocumented foreign workers whose hiring is incentivized when AEWRs are artificially set too high lack the legally enforced protections and benefits that the H–2A program provides, further threatening to degrade U.S. workers' working conditions.

The Department was concerned about precisely this phenomenon in the 1989 rulemaking. The Department presciently observed that ''AEWRs, if set too high, might be a disincentive to the use of H–2A and U.S. workers, and could undermine efforts to eradicate the employment of illegal aliens.'' 54 FR 28044. The Department's choice of the USDA average agricultural wage to set AEWRs at the time was predicated on the assumption ''that IRCA will achieve its states purpose of removing illegal aliens from the labor force. * * * Agricultural employers who have employed illegal alien workers in the past then must fill their labor needs with U.S. workers * * * or with H–2A workers.'' *Id.* IRCA did not, of course, succeed in eradicating the employment of illegal aliens in the agricultural sector, a fact that the Department must now take into account in determining what wage-setting methodology is most appropriate.

As noted above, there is demand for hundreds of thousands of agricultural workers beyond what the domestic labor market is able to supply. If any wage depression does currently exist in the agricultural sector, the presence of a large number of undocumented workers is the most likely cause. Replacing the hundreds of thousands of undocumented agricultural workers currently employed in the U.S. either with U.S. workers or with H–2A program workers who are paid a legally required wage would substantially help to protect U.S. workers from adverse effects caused by the undocumented work force. For this reason, the Department believes that it should select a methodology for setting adverse effect wage rates that is as precise and refined as possible.

A group of farmworker advocacy organizations commented that rather than adopt a wage-setting methodology that may reduce required wage rates in some areas, the government should get rid of undocumented workers by more vigorously enforcing the immigration laws. Primary enforcement responsibility in these areas is entrusted to DHS and the Department of Justice. The Department notes, however, that during the last several years the federal government has in fact embarked upon unprecedented efforts to enforce the immigration laws, both at the border and in the interior. In fact, this rulemaking effort is part of a comprehensive 26-point immigration reform plan that was announced by the present Administration in August 2007.

[7] Some commenters noted that the Department's discussion of this point in the NPRM preamble appeared to suggest that the Department believed agricultural employers intentionally set out to hire illegal workers. The Department did not intend to suggest such motives. As noted above, many illegal workers in the U.S. possess documentation indicating they are legally authorized to work and all employers (not just those in agriculture) are required by current law to accept at face value documentation that appears valid.

See Fact Sheet: Improving Border Security and Immigration Within Existing Law, http://www.whitehouse.gov/news/releases/2007/08/20070810.html (August 10, 2007). This rulemaking is designed to work in tandem with those enforcement efforts. The Department does not believe that it is necessary to choose between a functional H–2A program and effective immigration enforcement; we can and should have both, as having both will maximize protections for U.S. workers.

The same commenter argued that if agricultural employers substantially hiked their wage rates, U.S. workers would re-enter the agricultural labor market to secure the higher wages, thus substantially reducing the need to resort to foreign labor in the agricultural sector. Although the Department assumes that substantially higher agricultural wages would indeed induce some reentry by U.S. workers into the agricultural labor market, the commenter did not provide any data suggesting what level of wage increases would be required to make such a re-entry phenomenon substantial, or whether agricultural employers could remain competitive if required to pay those wages. As the Department noted in 1989, there is an upper ceiling to how much U.S. agricultural employers can even theoretically afford to pay in labor costs, as they must ultimately compete not only with other U.S. producers, but also ''with foreign imports.'' 54 FR 28044. The Department believes that it is also relevant that U.S. workers have steadily left the agricultural sector over the last two decades, despite the fact that agricultural wages have increased during that time, suggesting that factors other than wages may be causing many U.S. workers to view agricultural jobs as undesirable.

Finally, the same commenter argued that the Department's rationale effectively calls for a continuous lowering of agricultural wage rates, because in this commenter's view (1) the Department's real objective is to lower wage rates and (2) the only way to actually replace undocumented workers with H–2A workers is to set adverse effect wage rates at the level of wages that undocumented workers are willing to accept. As an initial matter, the commenter misunderstands the Department's objective. The Department seeks to ensure that AEWRs are precisely tailored to the conditions of specific agricultural occupations in specific labor markets. Although it is true that the Department's preamble analysis in both the NPRM and the Final Rule explains in detail how artificially high AEWRs can hurt U.S. workers, that does not reflect any belief on the part of the Department that all AEWRs are currently artificially high and that they therefore should all be lowered. In fact, the Department's preamble analysis also explains how AEWRs that are set too low hurt U.S. workers. The Department seeks to avoid both effects by adopting a more precise methodology. Because the USDA survey that is currently used is an average wage rate that is set across broad, typically multi-state regions, the actual wages of individual labor markets within the USDA regions are necessarily in some instances above, and in some instances below, the USDA average. In fact, the statistics provided by this commenter show that even according to the commenter's calculations, the average BLS OES wage for crop workers is higher than the average USDA wage for field workers in several States, including three of the ten biggest H–2A using States (Louisiana, New York, and Virginia). A recent report of the Congressional Research found that even OES Level I wages are higher than the current AEWR for some occupations in some geographic areas. CRS Report *at 13–17*.

The Department also rejects the notion that the only way to replace undocumented workers with U.S. workers and H–2A workers is to lower AEWRs to the levels that undocumented workers are willing to accept. That might be true if agricultural employers viewed U.S. workers, H–2A workers, and undocumented workers as completely fungible, but they do not. Many employer and grower association commenters emphatically stated that they want to comply with the law, and that in fact they would generally prefer to hire U.S. workers over H–2A workers or undocumented workers if U.S. workers were available. Moreover, agricultural employers who even unknowingly hire undocumented workers risk losing their labor force part way through the season due to an immigration raid, and those who knowingly hire undocumented workers risk criminal penalties. These risks are particularly pronounced today because of the government's recent highly publicized increased worksite immigration enforcement efforts. For all of these reasons, agricultural employers are generally willing to pay substantially more to hire a U.S. worker or an H–2A worker than they are to hire an undocumented worker. This observation is borne out by actual data showing that undocumented workers typically make less than U.S. workers and H–2A workers do.

After reviewing the comments received, the Department continues to believe that precise tailoring of H–2A wages to local labor market conditions is the most critical factor in preventing an adverse effect on the wages of U.S. workers. For example, a single national AEWR applicable to all agricultural jobs in all geographic locations would prove to be below market rates in some areas and above market rates in other areas. If the AEWR in any given area does not reflect market wages, it will either harm U.S. workers directly by artificially lowering wages, or it will harm U.S. workers indirectly by providing an incentive for employers to hire undocumented workers. AEWRs covering large multi-state regions suffer from similar flaws. In an agricultural sector where prevailing labor conditions make the need for precision in AEWR determinations paramount, it is essential that a methodology be adopted that allows for as great a degree of geographic refinement as possible. Improving the geographic precision of the AEWR is essential to ensuring that the AEWR meets its statutory objective.

The Department is aware that its rationale for establishing precise, localized wage rates is quite different than the rationale that motivated it in 1989 to establish aggregated, regional wage rates.[8] That decision was reached under very different factual circumstances, however. In 1989, the Department found that there was no conclusive evidence of generalized wage depression in the agricultural sector, but noted that there was some anecdotal evidence suggesting that wages in particular local labor markets might be depressed. The Department chose at that time to use USDA data to set AEWRs largely because it believed that USDA's aggregation of wage data at broad regional levels would immunize the survey from the effects of any localized wage depression that might exist. 54 FR 28043. As discussed above, however, undocumented workers are substantially more dispersed throughout the agricultural sector today than they were in 1989. Not only are undocumented workers no longer confined to particularized local labor markets, but recent studies have also called into question whether the concentration of undocumented workers in particular labor markets actually causes localized wage depression.

In light of these developments, the one key advantage the Department believed in 1989 was afforded by the USDA survey's broadly aggregated data—its ability to avoid localized wage

[8] The Department's underlying motivation—to protect the wages and working conditions of U.S. workers—remains the same.

depression effects—has been substantially diminished. On the other hand, the fact that undocumented workers have come to dominate the agricultural labor force in the intervening years has rendered the imprecision of USDA wage data vis-à-vis local labor market conditions a substantial drawback that may sometimes actually encourage employers to hire undocumented workers. In fact, the Department expressed concern in the 1989 rulemaking that precisely this phenomenon might develop, stating that ''AEWRs, if set too high, might be a disincentive to the use of H–2A workers and U.S. workers, and could undermine efforts to eradicate the employment of illegal aliens.'' 54 FR 28044. Many commenters argued that the large numbers of undocumented workers in the agricultural sector adversely affects U.S. workers. After weighing all of these considerations, the Department has determined that under the present factual circumstances, the advantages of tailoring AEWRs to better reflect the actual wages earned by specific occupational categories in specific local labor markets outweigh the potential disadvantages.

(g) The Department's Decision To Use the Occupational Employment Statistics Survey

Having determined that the Department can best safeguard the wages and working conditions of U.S. workers from adverse effect by encouraging employers to replace undocumented workers with either U.S. workers or H–2A workers, and having further determined that tailoring AEWRs to local labor market conditions is the best way to foster this replacement process, the Department made two independent decisions. First, the Department decided to use the BLS OES survey to set AEWRs, rather than the USDA Farm Labor Survey (FLS). Second, the Department decided to attain further precision in setting AEWRs by breaking the OES wage rates down into four different skill levels, rather than using a single average OES wage rate for each agricultural occupation. While the Department viewed the ability to break OES data into four separate skill levels as an advantage of that survey, its decision to use the OES survey to set AEWRs was not dependent on this feature.

The FLS and the OES survey are the leading candidates among agricultural wage surveys potentially available to the Department to set AEWRs. Neither survey is perfect. In fact, both surveys have significant shortcomings. On balance, however, the Department has concluded that in light of the current prevalence of undocumented workers in the agricultural labor market, AEWRs derived from OES survey data will be more reflective of actual market wages than FLS data, and thus will best protect the wages and working conditions of U.S. workers from adverse effects.

The present methodology for settings AEWRs, which was established by the 1989 final rule, calculates regional AEWRs based on the previous year's annual combined average hourly wage rate for field and livestock workers in each of 15 multi-state regions and 3 stand-alone States, as compiled by the USDA quarterly FLS Reports. The aggregation of a widely diverse national agricultural landscape into just 15 regions (and 3 stand-alone states) results in extremely broad generalizations that fail to account for specific market conditions at the local level. Wage data collected at each individual State and even substate level would be more appropriate for purposes of computing an accurate, sub-regional AEWR that reflects local market conditions. Indeed, market-based wage survey data at the State or substate level is the standard for calculating comparison wages in other temporary worker programs administered by the Department, including the H–2B program that is the non-agricultural counterpart of H–2A and the H–1B specialty occupation worker program.[9]

The Department's reliance on USDA FLS data creates several problems for functional program administration. The USDA quarterly FLS does not provide refined wage data by occupations or geographic locale. Additionally, the USDA FLS does not account at all for different skill levels required by agriculture occupations. Moreover, the wage levels reported in the USDA FLS are skewed by the inclusion of wages that are paid to many agricultural occupations that are not typically filled by H–2A workers, such as inspectors, animal breeding technicians, and trained animal handlers.

The accuracy of AEWRs based on the USDA FLS is further diminished because the FLS is not based on reported hourly wage rates. Instead, USDA's FLS asks employers to report total gross wages and total hours worked for all hired workers for the two reference weeks of the survey. Based on this limited information, the survey constructs annual average wages for the broad general categories of field workers and livestock workers. The AEWR is then calculated by combining the average of the annual wage for field workers and the average annual wage for livestock workers into one annual wage rate covering both of those general occupational categories. The survey thus determines the hourly AEWR based not on reported hourly wages, but rather on the basis of the numerator (total gross wages for the combined occupations) and denominator (total hours for the combined occupations) derived from the information supplied by employers.

Moreover, the USDA FLS is administered and funded through USDA, giving the Department no direct control over its design and implementation. USDA could terminate the survey at any time and leave the Department without the basic data, problematic as it is, used to calculate the AEWR. In fact, USDA announced that it would suspend the survey in February 2007 due to budget constraints. Ultimately, USDA resumed the survey in May 2007. The possibility that USDA may suspend the survey at some point in the future adds a measure of instability and uncertainty for AEWR determinations in future years. USDA's control over the survey also prevents the Department from making improvements to it that could help to correct its shortcomings and set more market-reflective AEWRs.

In 1989, the Department determined that the USDA survey was the best available ''barometer'' for measuring farm wages on a nationwide basis. In the succeeding years, however, the Department has gained vast knowledge and experience in applying wage data that simply did not exist in 1989. The OES wage survey is among the largest on-going statistical survey programs of the Federal Government. The OES program surveys approximately 200,000 establishments every 6 months, and over 3 years collects the full sample of 1.2 million establishments. The OES program collects occupational employment and wage data in every State in the U.S. and the data are published annually. The OES wage data is already utilized by the Department for determining comparison wages in other temporary worker programs and has proven to be an accurate, statistically valid, and successful wage reference. In 1989, when the Department established the current AEWR methodology, the OES program was not well developed and thus was not an effective alternative for the USDA Labor Survey. In the intervening nearly 20 years the OES program has in several respects

[9] Calculation of the applicable wage by a SWA using the OES survey is, in fact, a ''safe harbor'' providing presumption of correctness in the H–1B labor condition application. 20 CFR 655.731(a)(2)(ii)(A)(3).

surpassed the USDA Labor Survey as a source for agricultural wage data.

Farm labor comprises a number of occupations and skills, and both the demand for and supply of farm workers with a particular skill or experience level varies significantly across geographic areas. The farm labor market is not a monolithic entity, but rather is a matrix of markets across a spectrum of occupations, skill or experience levels, and local areas. Effectively protecting U.S. workers from unfair competition by undocumented workers by setting an AEWR that is neither too high nor too low requires that the AEWR be specifically tailored to the local labor markets, and must take into account such factors as specific occupation, skill or experience, and geographic location. The Department thus strongly values the geographic and occupational precision of the OES estimates as well as the ability to establish four wage-level benchmarks commonly associated with the concepts of experience, skill, responsibility, and difficulty within a given occupation. These features are unique to the OES survey, and it is in part for this reason that the survey is also used in other foreign worker programs administered by the Department, including the H–1B and H–2B programs.

The Department acknowledges that OES agricultural wage data is far from perfect. Perhaps most significantly, as several opposed commenters pointed out, ''BLS OES data do not include wages paid by farms.'' Rather, ''[t]he OES focuses on establishments that support farm production, rather than engage in farm production, and many of these establishments are farm labor contractors.'' These commenters argued that ''[t]he employees of such non-farm establishments constitute a minority of the overall agricultural labor supply and are not representative of the farm labor supply.'' They argued that this effect is exacerbated by the fact that ''BLS OES results are obtained by using the results of a separate BLS survey, the National Compensation Survey (NCS),'' which ''does not survey any agricultural establishments.''

The Department is confident in the quality of the agricultural workers wage estimates calculated using the OES survey, even with its lack of direct coverage of agricultural establishments. As noted by one major farm association, ''the OES's agricultural wage information is based on data collected from farm labor suppliers, individuals who specialize in finding, pricing, and placing agricultural workers with local farm employers.'' Indeed, workers provided by farm labor suppliers are for most agriculture employers the closest substitute for H–2A workers; both represent an alternate labor source to which an agricultural employer can turn if it is unable to locate a sufficient numbers of U.S. workers through its own direct recruiting efforts.

Moreover, as one group of farmworker advocacy organizations noted, the USDA FLS shows that ''[a]gricultural service employees on farms and ranches made up * * * about 30 percent of hired workers.'' Such workers appear to be spread across virtually all geographical areas and crop activities, and 30 percent is certainly a statistically valid sample size. Nonetheless, the Department recognizes that it is reasonable to consider the survey's nonfarm scope to be a shortcoming, and the Department will work with BLS to expand the coverage of the OES to include agricultural establishments, in keeping with recommendations from various commenters, including such disparate entities as growers' associations and state workforce agencies. One significant advantage of the BLS OES is that because it is within the control of the Department, it can be refined and improved over time with the specific needs of the H–2A program in mind.

One opposed commenter argued that the high concentration of FLCs in the OES survey data will necessarily lead to depressed AEWRs, because FLCs employ disproportionately high concentrations of undocumented workers and typically pay their employees low wages. If this assertion was true, one would expect that average OES wage rates for crop workers would always be below, and in many cases substantially below, the average FLS wage rates. The data presented by this commenter, however, show that this is not the case. According to that data, the average OES crop worker wage rates in many States (although not in a majority of States) are actually higher than average FLS field worker wage rates, including Idaho (12.16 percent higher), Louisiana (13.3 percent higher), New York (6.73 percent higher), Washington (5.78 percent), and Virginia (5.45 percent higher). Louisiana, New York, and Virginia are all in the top ten States among H–2A users. Unsurprisingly, because OES data is more refined than FLS data, it produces wage rates that are higher than FLS wage rates in some places, and lower than FLS wage rates in other places. For example, a recent CRS Report found that FLS data ''may overestimate the wages of crop workers and underestimate the wages of livestock workers and farm equipment operators.'' CRS Report at 16. Because the OES survey disaggregates this wage data, it would be expected that moving from the FLS to the OES survey for the calculation of AEWRs would result in crop worker wage rates going down in some places, and livestock and farm equipment operator wages going up in some places. In fact, this is precisely the effect that the CRS Report concluded was likely to occur. *Id.* at 15–17.

The data simply does not support the picture painted by the commenter of an OES survey producing wage rates that are uniformly low and severely depressed. Although the Department assumes that it is true that the wages paid to unauthorized workers are reflected in some OES data, *see* CRS Report at 18 (''In labor markets with a large concentration of unauthorized farmworkers, wage data from the OES survey may, to some extent, reflect the wages paid to unauthorized workers.''), that is undoubtedly true of FLS data as well. The PhD economist's analysis submitted by one commenter, for example, found that ''[a] second limitation regarding the FLS is that undocumented workers are no doubt in the survey and their wage is used in the calculation of AEWRs.'' This does not provide a sound basis for choosing between the two surveys.

Some commenters questioned the statistical reliability of OES wage estimates for detailed geographic areas, noting that more detailed areas have reduced samples and high relative standard errors. The Department's Foreign Labor Certification Data Center takes data quality into account when updating its Online Wage Library and adjusts the geographic areas used to derive wage estimates as needed to ensure data reliability. A ''GeoLevel'' variable indicates the kind of adjustment, if any, that has been made:

> If the data used to calculate the wage estimate came from the actual metropolitan statistical area (MSA) or balance of state (BOS) area the GeoLevel code will equal ''1.''
>
> If there were no releasable estimates for the desired area then the wages are for the area indicated plus its contiguous areas. This is signified by a GeoLevel ''2.''
>
> If there were no releasable estimates for the area, or for the area plus contiguous areas the wage is calculated from statewide data, indicated by a GeoLevel equaling ''3.''
>
> Finally, if there is no releasable estimate for the state, the national average is used. This is indicated by GeoLevel ''4.''

The application of these statistically sound methodologies takes into account the fact that wage data in some local labor markets is limited, and provides the best wage rate approximations available. No wage survey is perfect. The OES accounts for those places

where data is limited by borrowing aggregate data to produce the best local wage rate approximation possible. The OES surely is not always precisely correct as to the going wage rates for every occupation in every geographic locale, but its statistically sound methodology will on the whole produce wage rates that are far more refined and accurate than the broad, region-based FLS.

One commenter considered the Department's criticism of the multi-state nature of the USDA surveys to be misplaced: ''[w]hile agricultural labor markets for seasonal, labor-intensive crops have a local component, an interstate character to these markets emerges in the presence of migratory workers that move from State-to-State and crop-to-crop.'' The commenter went on to note that ''Broad regional wage standards are appropriate in this context, where more localized rates might unfairly disadvantage workers employed in areas with only a small number of potential employers, who can collude to keep wages low.'' Even if the commenter's view about an interstate market for wages of migratory workers were correct, however, the current structure of the AEWR offers no support for the argument that the USDA survey should be retained. The FLS's regional divisions bear virtually no resemblance to any traditional interstate agricultural markets or traditional migratory work patterns or flows. Wage estimates from the OES are well suited to capture substate wage differences such that the Department may tailor H–2A certification decisions and required wage rates to reflect local labor market conditions.

A group of farmworker advocacy organizations criticized the Department for failing to provide a better explanation of how AEWRs will be calculated using OES data. The calculation of OES wage rates is no great mystery, as OES wage rates are currently used for both the H–1B and H–2B programs. A recent CRS report explains how wage rates are determined using FLS and OES survey data. *See* CRS Report at 3–10. The underlying statistical methodologies for determining OES wage rates are, of course, quite complex. Nevertheless, the Department will attempt to distill the process for determining wage rates using both the FLS and the OES survey here:

The FLS surveys between 11,000 and 13,000 farms and ranches each quarter on multiple subjects, including the number of hired farm workers, the gross wages paid to workers, and their total hours worked. Only farms and ranches with value of sales of $1,000 or more are within the scope of the survey. ''Hired farm workers'' are defined as ''anyone, other than an agricultural service worker, who was paid for at least one hour of agricultural work on a farm or ranch.'' The survey seeks data on four types of hired workers: field workers, livestock workers, supervisors, and other workers.

USDA, through the National Association of State Departments of Agriculture, uses four collection methods for the FLS: mail, CATI (computer-assisted telephone interviews), personal visits (for larger operations), and online (only about 2 percent of respondents). The FLS sample is distributed across the entire country; however, the geographic detail covers just 15 multi-state regions and 3 stand alone states and thus is much more limited than the OES survey. The table below lists the sample size by region.

QUARTERLY FARM LABOR SAMPLE SIZE, BY REGION, 2008–09 [1] (OCTOBER, JANUARY, AND APRIL) [2]

Region	Sample
Northeast I	570
Northeast II	498
Appalachian I	546
Appalachian II	654
Southeast	588
Florida	604
Lake	846
Corn Belt I	840
Corn Belt II	672
Delta	534
Northern Plains	846
Southern Plains	960
Mountain I	354
Mountain II	309
Mountain III	263
Pacific	526
California	1,329
Hawaii	404
U.S.	11,343

USDA calculates and publishes average wage rates for four categories of workers each quarter. Wage rates are not calculated and published for supervisors or other workers, but just for field workers, livestock workers, field and livestock workers combined, and total hired workers. Within the FLS, the ''wage rates,'' or average hourly wage, by category are defined as the ratio of gross wages to total hours worked. To the extent workers receive overtime or other types of incentive pay, the average wage rate would exceed the workers actual wage rate. Because the ratio of gross pay to hours worked may be greater than a workers' actual wage rate, other statistics agencies, such as BLS, refer to the ratio as ''average hourly earnings,'' and not as hourly wages or wage rate.

The FLS-derived wage rate estimate for the four categories is published quarterly, and annual averages are published as well. With wage information on just two agricultural occupation categories, the FLS has very little occupational detail relative to OES. The FLS also calculates average wage rates in two other categories by combining the average wages of other types of workers. The Department uses the regional annual average for the category ''field and livestock workers combined'' as the annual AEWR for each state within a given geographic region.

In contrast, the OES survey directly collects a wage rate (within given intervals) by occupations defined by the Office of Management and Budget's (OMB) occupational classification system, the Standard Occupational Classification (SOC) system code. Specifically, ''wages for the OES survey are straight-time, gross pay, exclusive of premium pay. Base rate, cost-of-living allowances, guaranteed pay, hazardous-duty pay, incentive pay including commissions and production bonuses, tips, and on-call pay are included. Excluded is back pay, jury duty pay, overtime pay, severance pay, shift differentials, nonproduction bonuses, employer cost for supplementary benefits, and tuition reimbursements.''

The OES survey collects occupational employment and wage data by means of a matrix in which employers report the number of employees in an occupation and in a given wage range. The wage intervals used for the May 2007 estimates are as follows:

Interval	Hourly wages	Annual wages
Range A	Under $7.50	Under $15,600
Range B	$7.50 to $9.49	$15,600 to $19,759
Range C	$9.50 to $11.99	$19,760 to $24,959

Interval	Hourly wages	Annual wages
Range D	$12.00 to $15.24	$24,960 to $31,719
Range E	$15.25 to $19.24	$31,720 to $40,039
Range F	$19.25 to $24.49	$40,040 to $50,959
Range G	$24.50 to $30.99	$50,960 to $64,479
Range H	$31.00 to $39.24	$64,480 to $81,639
Range I	$39.25 to $49.74	$81,640 to $103,749
Range J	$49.75 to $63.24	$103,480 to $131,559
Range K	$63.25 to $79.99	$131,560 to $166,399
Range L	$80.00 and over	$166,400 and over

The mean hourly wage rate for all workers in any given wage interval cannot be computed using grouped data collected by the OES survey. Instead, the mean hourly wage rate for each of the 12 intervals is calculated using data from BLS's National Compensation Survey (NCS). Although smaller than the OES survey in terms of sample size, the NCS program, unlike OES, collects individual wage data.

Once the mean hourly wage rates for the 12 intervals are determined, the mean hourly wage rate for a given occupation is calculated. It is defined as:

> Total weighted wages that all workers in the occupation earn in an hour/ total weighted survey employment of the occupation.

Because the OES wage data are collected in intervals (grouped), it does not capture the exact wage of each worker. Therefore, some components of the wage variance are approximated using factors developed from NCS data. A Taylor Series Linearization technique is used to develop a variance estimator appropriate for OES mean wage estimates. The primary component of the mean wage variance, which accounts for the variability of the observed OES sample data, is estimated using the standard estimator of variance for a ratio estimate. Within each wage interval, there are also three types of variance estimated from the NCS. They represent the variability of the wage value imputed to each worker; the variability of wages across establishments; and the variability of wages within establishments. In short, the estimates of OES relative standard errors for wages take into account the sampling error associated with OES components of the wage estimator and also error associated with the NCS components of the estimator that are used for the mean wages for each interval.

The Department hopes this explanation helps.

Some commenters critiqued the OES survey as not being as timely as the FLS. A group of farmworker advocacy organizations claims that ''OES is out of date and harms U.S. workers.'' It is true that the lag between the survey reference period and data publication can be greater for OES than for FLS. But such lag simply reflects the greater scope of the OES survey, which collects detailed employment and wage data from approximately 200,000 establishments every six months. The rolling three-year sample used in OES reduces year-to-year volatility in the wage estimates, and as a result, it is highly unlikely that the one-year period between the reference period and data publication would result in substantively different wage estimates if the lag were reduced.

One commenter considered it problematic that the OES reference months are May and November, which they said ''may not be the best approach if one is interested in farm workers.'' This commenter's presumption appears to be that farm workers on payrolls in some other unspecified months may have higher wages than those during the OES reference months. The Department did not identify any evidence, however, to support this hypothesis. The criticism could be equally applied to the reference months used in the USDA FLS. Available data indicates that virtually all workers are paid a constant minimum hourly rate during their tenure and are not paid different rates in different months. Estimates from the FLS do not show a clear cyclical pattern in wage rates, suggesting that there is little seasonal variation at an aggregate level.

The Department has considered these comments and re-examined the wage surveys. Taking into account the pros and cons of both surveys, the Department concludes that the advantages to the OES survey make it the best data source available for determining applicable wages in the H–2A program. In fact, a recent CRS Report found that the Department's proposal to use the OES survey to calculate AEWRs would likely have precisely the effect the Department intends it to. The report concluded that ''[u]nder the proposed rule, the AEWR should more closely reflect the wages of farmworkers in local labor markets.'' CRS Report at 18. Furthermore, in those local labor markets where AEWRs are currently above true market rates, and the Final Rule's new wage-setting methodology therefore results in lower AEWRs, ''the rule should create an incentive for employers to hire more H–2A, as opposed to unauthorized, workers.'' *Id.* at 13. While the full impact of the new wage-setting methodology cannot be forecast with precision, *id.* at 18, the Department on the whole believes that these predicted changes will better protect the wages and working conditions of U.S. workers.

Therefore, the Final Rule adopts the NPRM's proposal to institute an alternative methodology for determining the AEWR that will more accurately measure market-based wages by occupation, skill level, and geographic location. A more accurate and refined AEWR methodology will produce an AEWR that more closely approximates actual market conditions, which will, in turn, help protect the wages and working conditions of U.S. workers. Under the Final Rule, the Department will utilize the BLS OES data instead of USDA FLS data.

(h) The Department's Decision To Set Wages for Four Skill Levels

Independent of its decision to use the OES survey to set AEWRs, the Department has decided to take advantage of the OES data feature that allows wage levels for each occupational category in each geographic locale to be set at four skill levels. The Department made this decision for a variety of legal and policy reasons.

First, the Department believes that it is required by statute to supply wages at the four separate skill levels. Section 212(p)(4) of the INA states that ''[w]here the Secretary of Labor uses, or makes available to employers, a governmental survey to determine the prevailing wage, such survey shall provide at least 4 levels of wages commensurate with experience, education, and the level of supervision.'' Although this provision was enacted in the context of H–1B

reform, it is the only paragraph in Section 212(p) that does not reference any specific immigration programs to which it applies, and there is no legislative history indicating that it was meant to apply only to the H–1B program. Although OES data is being used in this particular instance to set AEWRs, the provision on its face still seems to apply, since the OES is ''a governmental survey to determine the prevailing wage,'' and since the Department has decided to set AEWRs at prevailing wage rates. Thus, the Department believes that it is bound by Section 212(p)(4) to offer four wage levels.

Second, even if the Department were not legally required by Section 212(p)(4), the provision does represent a congressionally approved method for setting prevailing wage rates. The Department uses four wage levels both in the H–1B program, which is limited to skilled workers, and the H–2B program, which primarily serves low-skilled jobs. The Department is thus familiar with the administration of a four-level wage system, and believes that its use in these other programs has proved successful.

Finally, the use of four wage levels that are roughly tied to skills and experience will add further precision to the AEWRs, thus serving the Department's above-discussed objectives. Although the four wage levels are determined arithmetically rather than by surveying the actual skill levels of workers, the resulting wage rates reflect the Department's experience that within occupational categories, workers that are more skilled and more experienced tend to earn higher wages than those that are less skilled and less experienced. This is apparently Congress's experience as well, as it has expressly approved the use of four wage levels when setting prevailing wages.

The CRS Report on the Department's proposal, for example, found that the Level I wage for agricultural equipment operators is above the current AEWR in many areas, and that the Level III and Level IV wages for agricultural equipment operators were generally much higher. CRS Report at 17. The Department believes that more highly skilled and experienced agricultural equipment operators generally are paid higher wages than novice ones, and the wage scale that will be used by the Department thus seems fully appropriate. Indeed, if the Department failed to set higher adverse effect wage rates jobs requiring greater skills and experience, U.S. workers capable of performing such jobs might find their ''true market'' wages undercut by employers' ability to fill the jobs with H–2A workers making merely average wages.

A group of farmworker advocacy organizations, as well as many other commenters, argued that allowing employers to pay wage rates that are below the average for an occupational category will necessarily adversely affect U.S. workers. The purpose of the four-tier wage system, however, is to generate the best approximation possible of the actual prevailing wage rate for jobs requiring various levels of experience or skill. When the required wage rates are accurate, they do not represent a below-average wage rate, but rather represent the wage rate that is prevailing for that particular kind of job. Using a single average wage rate for all jobs performed within a particular occupational category ignores the fact that certain jobs require higher levels of experience and skill, and may adversely affect U.S. workers who are capable of performing such jobs. It is also worth noting that Congress has directed that, when determining prevailing wage rates, the Department should ''provide at least 4 levels of wages commensurate with experience, education, and the level of supervision.'' Although this Final Rule is actually changing the methodology for determining adverse effect wage rates, the Department's determination to set AEWRs at locally prevailing wage rates makes it fully appropriate to borrow Congress's prescribed prevailing wage rate methodology.

The same commenter objected that the ''proposed methodology for the wage levels is purely an arithmetical formula'' and ''does not relate to skills or experience in agriculture.'' It is true, as the Department has already noted, that the skills-based wage levels are not determined by surveying the actual skill level of workers, but rather by applying an arithmetic formula. Congress has explicitly endorsed the use of such an arithmetic approach, however: ''Where an existing government survey has only 2 levels, 2 intermediate levels may be created by dividing by 3, the difference between the 2 levels offered, adding the quotient thus obtained to the first level and subtracting that quotient from the last level.'' INA sec. 212(p)(4). No methodology for determining prevailing wage rates will be perfect, but this methodology is currently used in both the H–1B and the H–2B programs. Moreover, the recent CRS Report that studied the Department's proposal in detail did not conclude that use of the congressionally created arithmetic formula is particularly problematic.

The same commenter argued that the use of four wage levels would be too complicated for the Department to administer. This comment ignores the fact that the Department already administers a four wage level system for the H–1B and H–2B programs.

For purposes of clarity, and in response to comments questioning the application of a four-tiered wage system, the Department has inserted text into the Final Rule specifying how the four H–2A wage levels will be applied. The inserted language is substantially similar to existing provisions establishing the four skill levels for the H–1B and H–2B programs, which most commenters assumed would apply. The four skill levels will afford the Department and employers using the H–2A program the same opportunity that is available under other similar programs administered by the Department to more closely associate the level of skill required for the job opportunity. This skill level precision complements the geographic and occupational specificity of the OES wage estimates. The Department considers the lack of such precision to be a shortcoming of the current AEWR.

There also appeared to be some confusion among some of the commenters who believe the NPRM language allows an employer to choose the level and the wage survey and propose its ''offered wage rate'' to the NPC for approval. That is not the case. After reviewing the employer's request for a wage rate, including job description and skill level, the Department will compare the AEWR, state and federal minimum wage, and piece rate to determine the highest wage applicable to the job opportunity described in the employer's request. The Department will assign the appropriate wage (the offered wage rate) to the employer's job opportunity and that wage must be utilized in recruiting for the position.

(i) Other Considerations Affecting the Department's Decision

Although the changes in wage rates that will result from the Department's decision presumably will make local AEWRs more reflective of actual local labor market conditions, to counteract the potential for wage reductions in some areas, the Department has decided to retain in the Final Rule the NPRM's proposal to use the future (effective July 24, 2009) FLSA minimum wage of $7.25 as the floor for any OES-derived AEWR. This basic wage floor will provide a fundamental protection to both foreign temporary workers and U.S. workers that will ensure that AEWRs cannot be

lower than the new federal minimum wage even though that wage will not be legally required until 2009.

Moreover, even in those instances where the use of OES data may result in lower AEWRs for H–2A workers in the short term as compared to the current AEWR methodology, the Department is confident that the wages and working conditions of U.S. workers will be protected because the total costs of hiring H–2A workers are higher than the hourly AEWR alone reflects, and employers focus not only on wages when making hiring decisions, but on a workers' total cost.[10] The program requirement that employers pay for H–2A workers' transportation and lodging, as well as the administrative expense of filing H–2A applications with several different Government agencies, add substantial additional costs to the employment of H–2A workers. The additional costs beyond wages associated with utilization of foreign labor under the H–2A program are an important consideration that provides significant protection for U.S. workers.[11] It is expected that U.S. workers in similar occupations, with similar skills and working in the same locality, would likely be able to command higher hourly wages than H–2A workers and at least equivalent benefits because the additional cost considerations associated with utilization of the H–2A program provide an economic incentive for employers to seek out and hire U.S. workers instead of H–2A workers.[12] And of course, U.S. workers also have the protection of the rule requiring agricultural employers to first attempt to recruit U.S. workers before they can employ H–2A workers.[13]

A group of farmworker advocacy organizations commented that many employers use piece rates abusively and in a manner that undermines the AEWR. Of course, as the commenter acknowledges, piece rates cannot in and of themselves lead to the payment of sub-standard wages, since § 655.104(l)(2)(i) requires an employer to supplement a piece-rate worker's effective hourly rate of pay to the level of the applicable AEWR if the pay would otherwise be less. This commenter argued that many employers avoid the obligation to supplement by deliberately underreporting the number of hours worked by piece-rate workers during a pay period. Such fraud is already clearly prohibited by the Final Rule, however. The commenter also argued that piece rates are abusive because they ''induce workers to higher levels of productivity'' by providing ''the opportunity to earn more than the worker would earn on an hourly rate.'' The Department does not consider the opportunity to earn average hourly wages that are higher than the AEWR through more industrious work to be abusive; it is an opportunity to earn higher pay, nothing more.[14] If the worker fails to earn enough under the offered piece rate to meet the applicable AEWR, the worker is not penalized for it; to the contrary, as mentioned previously, under such circumstances the worker's pay is required to be supplemented to the level of the AEWR. Of course, if the worker was in fact penalized by the employer in some way for failing to accomplish enough piece rate work, the penalty would effectively convert the piece rate into a productivity standard. Such productivity standards are policed through § 655.104(l)(2)(ii) and (iii) of the Final Rule, however, which require that piece rates be no less than the piece rates prevailing and that productivity standards be normal, meaning that productivity standards may not be unusual for workers performing the same activity in the area of intended employment.

For the reasons discussed above with respect to § 655.105(g) of the Final Rule, the Department has inserted language in this section specifying that employers are required to adhere for the duration of a work contract to the AEWR rate that is in effect at the time recruitment for a position is begun. Newly published AEWRs shall not apply to ongoing contracts, but only to new contracts the recruitment for which is begun after the publication of the new AEWR. The Department has also added a new § 655.108(h) specifying that employers are required to retain NPC wage determinations for a period of three years, which is consistent with the general record keeping provisions of the Final Rule. Other changes to the text of this section in the Final Rule are non-substantive and were made for purposes of clarity.

Section 655.109—Labor Certification Determinations

(a) Section 655.109(b)—Timeframes for Determination

The Department did not propose any changes to the requirement that it issue a determination on an application no later than 30 calendar days before the date of need. An individual employer suggested that certifications should be issued 60 to 90 days before the employer's date of need rather than the 30 days currently required. A State government representative suggested the CO should be required to issue the determination by the earlier of 15 days after receipt of a complete application or 30 days before the date of need to allow USCIS and the State Department more time to process a petition. A professional association suggested no more than 40 days and no less than 30 days before the date of need for issuance of the final determination. An association of growers/producers recommended the timeframes should be simplified and standardized to encourage grower participation. Specifically, it recommended the pre-filing recruitment be conducted 90 days prior to the date of need and approval occur no later than 45 days prior to the date of need.

The requirement that, if an application is timely filed, complete and approvable, or is modified to be approvable within the statutory timeframes, the Department issue a certification no later than 30 days prior to the date of need, is statutory and cannot be changed by regulation. While employers can file earlier in anticipation of their date of need, statutory limitations prevent the Department from requiring employers to file any more than 45 days before their date of need. The Department believes the adjustments made to recruitment and filing timeframes adequately address the issue of filing times. Employers are encouraged to file as early as possible and to take care that their submitted applications are complete to minimize potential delays.

[10] *See* CRS Report at 18.

[11] One commenter pointed out that H–2A workers are also relatively cheaper than U.S. workers in some respects, because employers do not have to pay Social Security or unemployment insurance taxes for H–2A workers. On the whole, however, the substantial costs to house and transport H–2A workers, together with the not insignificant costs of the application process, substantially exceeds these savings, making H–2A workers on the whole more expensive to employ than U.S. workers who are being paid the same wage rates.

[12] U.S. workers hired in response to recruitment required by the H–2A program are entitled to at least the same benefits received as those received by H–2A workers.

[13] A group of farm worker advocacy organizations argued that the AEWR becomes the effective maximum wage for U.S. workers. Available data does not support this assertion, however. Indeed, this same commenter stated that a Pennsylvania tomato farmer paid his workers $16.59 an hour on average, even though the 2008 AEWR in Pennsylvania is only $9.70.

[14] The Department notes that the same opportunity to earn average hourly rates of pay that are above the AEWR must under the Final Rule be offered to U.S. workers before it can be offered to H–2A workers.

(b) Section 655.109(b)—Criteria for Determination

The Department included a provision in the NPRM to outline the criteria upon which a determination is made. As commenters noted, however, the criteria stated in this provision were redundant of other provisions in the regulation. The Department has accordingly revised this provision to eliminate unnecessary duplication within the rule, which could have caused confusion among program applicants.

(1) Labor Disputes—§ 655.109(b)(4)(i)

Two associations of growers commented on the certification criteria in proposed § 655.109(b)(4)(i). These commenters stated that labor disputes in agricultural employment are not covered by the National Labor Relations Act and, therefore, there is no official process for determining the existence of a labor dispute. The proposed language in § 655.109(b)(4)(i) of the NPRM was intended to replicate the language in the current regulations at § 655.103(a), which examines whether the ''specific'' job opportunity for which the employer is requesting H–2A certification is vacant because ''the former occupant'' is on strike or being locked out in the course of a labor dispute. That provision was carefully crafted to bar only certification of the single job opportunity vacated by each particular worker who went on strike or was locked out, and not all jobs requested to be certified. However, proposed § 655.109(b)(4)(i) was in conflict with proposed § 655.105(c). The Department has removed the language in § 655.109 of the NPRM regarding labor disputes because of the redundancy and overlap with the labor dispute provision in § 655.105. As explained in the discussion of § 655.105(c), the Department has also reverted in § 655.105(c) to the language concerning labor disputes that is found in the current regulations. The Department believes these changes adequately address the comments on this provision.

(2) Job Opportunity—§ 655.109(b)(4)(vi)

A professional association commented that the job requirements, combinations of duties, or other factors that may make a specific application unique should be acceptable if justified by business necessity. This association asserted that nothing in the INA requires that a specific employer perform any job in exactly the same way as other employers perform the job. An association of growers/producers agreed and also pointed out that under the proposed provisions a grower using technology not yet considered normal practice could be denied H–2A workers due to its job requirements and/or combination of duties.

As is explained above in the discussion of § 655.104(b), the Department agrees that, as a general matter, employers are in a far better position than the Department to assess what job duties workers at a particular establishment in a particular area can reasonably be required to perform. The Department has therefore altered § 655.104(b) to conform more closely to the language of the statute, and has limited its application to job qualifications. Where a listed job duty serves as a de facto job qualification because the listed duty requires skills or experience that agricultural workers do not typically possess, however, the Department reserves the right under § 655.104(b) to treat the listed job duty as a job qualification, and to apply the ''normal'' and ''accepted'' standard that is set forth in the statute and recapitulated in the regulations in determining whether the qualification is appropriate. Because § 655.104(b) of the Final Rule contains the Final Rule's restrictions on job duties and job qualifications, § 655.109(b)(4)(vi) of the NPRM has been eliminated as redundant.

(3) Extrinsic Evidence

A group of farmworker advocacy organizations suggested the regulation should be clear that the CO can consider extrinsic evidence in making a final determination. The organization believed the CO should be able to deny certification to an employer who has engaged in violations of employment-related laws whether or not there has been a final finding to that effect and whether or not the employer has previously participated in the H–2A program. The commenter also suggested that if the CO has reason to doubt the accuracy of any of the attestations or assurances, the CO should have the authority to request additional information and the authority to deny the certification. In the same vein, the commenter recommended the regulations should include a process by which the CO will receive and consider supplemental information from SWAs, workers and others.

The Department does not agree that adding explicit language to provide the CO with authority to consider extrinsic evidence is necessary. The Final Rule allows for certification to be based solely on the criteria outlined in § 655.107(a). Adding a process for the provision of extrinsic evidence would create an adversary process for the granting of a benefit, with COs at a loss as to how to evaluate such evidence in the context of the application and unable to evaluate its authenticity, particularly in light of the tight statutory timeframes given to the Department to adjudicate applications. Workers who are affected by an agricultural clearance order have a complete process in 20 CFR Part 658, subpart E (incorporated by reference in § 655.116) through which to submit and obtain resolution of their complaints. Anyone having information bearing upon an H–2A employer may avail themselves of the protections contained within these regulations and all other mechanisms, such as filing a complaint with WHD. Following these procedures will ensure that the Department receives the information in a way in which it can be most useful.

(c) Section 655.109(d)—Accepting Referrals of U.S. Workers

A large association of agricultural employers suggested that the proposed regulations and the Final Determination letter should clarify that the obligation to continue to accept referrals of eligible U.S. workers continues only until the employer has accepted the number of referrals of eligible U.S. workers equal to the number job openings on the *Application for Temporary Employment Certification.* The Department agrees with this statement and has included new language to that effect in § 655.109(d). The Department has also modified the provision to conform to the Final Rule's new definition of the ''end of the recruitment period'' that is set forth in § 655.102(f)(3).

(d) Section 655.109(e)—Denial Letters

A major trade association pointed out the proposed regulation at § 655.109(e) states that if the certification is denied the Final Determination letter will state ''the reasons the application is not accepted for consideration.'' The association commented it was their presumption this language was used inadvertently but asked for clarification if its use was intentional. The Department's use of the language ''not accepted for consideration'' was, in fact, inadvertent. Section 655.109(e) has now been revised to read: ''the reasons certification is denied.'' The Final Rule also clarifies that the Department will send determination letters to employers ''by means normally assuring next-day delivery,'' which may include e-mail or fax.

(e) Sections 655.109(e), (f), and (g)—Appeal Process for Denied and Partial Certifications

The proposed regulation did not explicitly reference appeal procedures in either the Denied Certification (§ 655.109(e)) or Partial Certification (§ 655.109(f)) provisions. Although the proposed ''Administrative review and de novo hearing'' procedures (§ 655.115) do reference a decision by the CO to deny, a major trade association commented that the regulation should be clarified by specifying the appeal procedures in § 655.109. The Department appreciates this comment and has inserted text in paragraphs 655.109(e), 655.109(f), and 655.109(g) stating that the final determination letter will provide the procedures for appeal in either situation. Employers should be aware that, if a partial certification is received, only the period of need or the availability of U.S. workers are at issue and thus subject to appeal.

(f) Partial Certifications—§ 655.109(f)

The proposed regulations contained a provision at § 655.109(f) for partial certifications. The provision stated that ''the CO may, in his/her discretion, and to ensure compliance with all regulatory requirements, issue a partial certification, reducing either the period of need or the number of H–2A workers being requested or both for certification, based upon information the CO receives in the course of processing the temporary labor certification application, an audit, or otherwise.'' Although the current regulations at § 655.106(b)(1) do not contain the phrase ''partial certification,'' they do provide that the Administrator/OFLC shall grant the temporary agricultural labor certification request ''for enough H–2A workers to fill the employer's job opportunities for which U.S. workers are not available.'' A farmworker/community advocacy organization voiced its concern that the deletion of the language in the current regulation and the addition of language providing for discretionary partial certifications violates the statutory precondition for certification that the employer not have U.S. workers available to fill its job opportunities. This organization expressed the opinion that the new language would allow employers to import more foreign labor than they actually needed.

The Department has retained the provision regarding partial certifications, with one modification. The Department believes that the language describing partial certifications provides more clarity regarding the process of obtaining a certification where the Department determines that fewer workers than were originally requested in the application are required. A lack of available U.S. workers is a necessary precondition to filing an application. Allowing a partial certification covers situations where the employer recruited for a need of X workers, finds sufficient workers to meet only a part of its need, and thus still needs X workers minus the number of workers successfully recruited. An employer who finds sufficient workers to meet its entire need cannot, by statute and this pre-filing recruitment model, receive a certification. The Department retains the authority to reduce the number of positions requested in the event the information contained in the application demonstrates an availability of workers who were eligible and applied for the position. Since a partial certification is issued by subtracting the number of available workers from the total number of workers requested, the Department does not believe this provision will allow employers to import more workers than they actually need. To make it clear that the deduction of able, willing, qualified, and available U.S. workers is non-discretionary, the Department has added language to the provision stating that ''[t]he number of workers certified shall be reduced by one for each referred U.S. worker who is qualified, able, available, and willing.''

A major trade association commented that the proposed provision has no counterpart in the existing regulations and that the Department articulates no rationale for why such a provision is necessary or how it will ensure compliance. The association recommended the provision be deleted from the final regulations. The association also expressed concern that there was no due process for an employer whose application was arbitrarily changed. This association believed the CO should issue a Notice of Deficiency, require the submission of a modification and offer an appeal process.

As explained above, the ability to issue a partial certification is necessary where the Department receives an application with respect to which eligible and qualified U.S. workers have been or are subsequently successfully recruited prior to certification. A modification process is one option the Department considered to address such a situation, but given the likely time frame of filing by employers, a modification would often not be possible. In response to the comment regarding an appeal process, the Department has added language regarding appeal provisions to this provision in the Final Rule.

(g) Proposed § 655.109(g), New § 655.109(h)—Fees for Certified Applications

The Department proposed the following new fee structure: an application fee of $200 for each employer receiving a temporary agricultural labor certification plus $100 for each H–2A worker certified; an application fee of $200 for each employer-member of a joint employer association receiving a certification plus $100 for each H–2A worker certified for that employer-member; and a processing fee of $100 for any amendments accepted for processing plus $100 for each additional H–2A worker certified. The proposal did not set a cap on the amount of fees to be charged as provided in the current regulations. The Department received numerous comments about the proposed fees. Many of the commenters acknowledged that an increase was warranted but strongly objected to the amount of the increase. Several commenters requested a justification for the amount of the increase and further detail regarding the activities and related costs involved in processing since the Department stated in the preamble to the proposed rule that it was updating the fees to align with ''the reasonable costs of processing'' H–2A applications, as authorized by the INA. Also in this context, commenters questioned why the fees would increase to such an extent since the Department was proposing to improve and increase access to the H–2A program. One association of growers/producers recommended that the Department determine a more reasonable processing fee and explore adding to those revenues from another source rather than seeking to recover processing costs through processing fees. A State government agency suggested that fees should be used to fund program costs incurred by the SWA instead of being deposited in the Treasury. Another commenter asserted that under the Treaty of Guadalupe Hidalgo, the application and processing of the application for H–2A temporary workers who are Mexican citizens must be free of charge and, therefore, employers seeking to employ such nonimmigrant workers should not be charged processing fees.

A number of associations of growers/producers, a trade association, and several individual employers commented that the increased fees would add to the cost of an already

expensive program and, if the application process is to become more efficient as proposed, believed a fee increase would be counterproductive. Some commenters stated the increase in fees, when coupled with other increased costs, could drive farmers out of business or dissuade many from participating in the program at all. Another association of growers/producers suggested the fee structure should take into consideration all of the fees growers must pay and suggested a fair compromise would be to reduce the fees for farmers using H–2A workers, ask workers to pay for costs incurred in traveling to the U.S. port of entry closest to the employer, and require the employer to bear the costs from the point of entry to the farm. A trade association also commented that many growers utilize workers for a short period only and that they believed under the proposed regulations a grower's cost for 10 H–2A workers would increase to $10,000 in application fees and the total cost could rise to almost $20,000 before any revenue would be gained through harvesting of the crop.

Several commenters offered specific suggestions for setting the fee amounts. One association of growers/producers suggested that any increase in fees should be tied to the cost of inflation or the consumer price index and not related to the cost of processing. A United States Senator and others stated a doubling of the fees would be acceptable. One individual employer/farmer suggested the fees should remain at current levels. A trade association commented that fees should be based on the number of employers certified rather than the number of applications.

Many commenters specifically requested the inclusion of a cap on the amount of fees and commented that the elimination of a cap might cause participants to abandon the program.

Following consideration of all the comments, the Department has decided to retain the current fee structure rather than that proposed in the NPRM. At this time, the Department believes that it is of utmost importance to increase accessibility to the program and recognizes that the proposed increase in fees could have discouraged both potential new users and current users of the program. Accordingly, the Department has reverted to the current fee structure for both employers and for associations. Moreover, the increased fee would not have helped the program operate more efficiently at this time because the H–2A fees received by the Department are, pursuant to statute, deposited directly in the Treasury as miscellaneous receipts. Any change in that requirement would require a statutory change by Congress.

The Department may, in the future, revisit the fee structure and propose changes in the amount of the processing fees. The Department appreciates the many comments received requesting additional information on the actual costs involved in the processing of applications and finds these requests to be reasonable. Since the Department is changing the program to an attestation-based process, it does not have experience with the actual operation of the program under the new process and, therefore, agrees that it should not revise fees until cost information using the new model is available.

As noted above, the Department has decided to retain the current fee structure, which includes a limit on the fee amount to be paid by one employer. The Department agrees with the commenters and believes a cap on fees paid by an applicant is appropriate and should be included in any future proposal. The failure to include such a cap in this proposal was an oversight.

The Department also received comments on the proposed $100 processing fee for an amendment, coupled with a fee of $100 for each additional H–2A worker certified on the amendment. A trade association noted that amendments to applications can be for many reasons, including increasing the number of workers requested, adjusting the date of need, and making minor technical amendments to the application. It commented further that while it is reasonable to charge the additional certification fee for an amendment to increase the number of workers in order to avoid creating a disincentive for understating the number of workers on the original application, it is not reasonable to charge a fee for other amendments, including minor technical amendments.

The parenthetical phrase ''(except joint employer associations)'' was clarified in the Final Rule by replacing it with ''(except joint employer associations, which shall not be assessed a fee in addition to the fees assessed to the members of the association).''

In keeping with the retention of the current fee structure, no fee for amendments is included in the final regulation.

Section 655.110—Validity and Scope of Temporary Labor Certifications

Several minor, non-substantive changes were made to the language of this provision for purposes of clarity and to conform to other provisions of the Final Rule. All substantive changes to the text of this provision are addressed below.

(a) Scope of Validity—Associations—§ 655.110(c)

The Department made no changes in the proposed regulation regarding certifications provided to associations acting as joint employers. A farmworker/community advocacy organization suggested that the Department should include language currently in the H–2A Program Handbook limiting such applications (and certifications) to those involving ''virtually identical job opportunities.'' The Department declines to adopt this suggestion. The governing statute expressly provides at § 218(d)(1) of the INA for the filing of H–2A applications by associations of agricultural producers, but does not provide a ''virtually identical'' limitation. Individual employers are permitted under the current regulations to offer job opportunities with a variety of non-identical job duties, and the Department has seen no evidence that this has adversely affected U.S. workers.

Section 655.104(b) of the Final Rule limits the job qualifications that employers may impose to those that are normal and accepted qualifications required by non H–2A employers in the same or comparable occupations and crops. Where a combination of job duties or job opportunities serves as a de facto job qualification because the listed duties and opportunities require skills or experience that agricultural workers do not typically possess, the Department reserves the right under § 655.104(b) to treat the listed job duties or job opportunities as job qualifications, and to apply the ''normal'' and ''accepted'' standard that is set forth in the statute and recapitulated in the regulations. The Department believes that this framework is most consistent with the statute and will adequately protect U.S. workers from adverse effects.

(b) Redetermination of Need—Section 655.110(e)

The proposed regulations omitted the provision in current regulations allowing employers to request an expedited ''redetermination of need'' if a labor certification is denied, or a partial certification is granted, because U.S. workers are available and, subsequent to the denial or partial certification, the U.S. workers identified as available are no longer available. The Department received several comments objecting to the deletion of this provision and requesting its inclusion in

the final regulations. Two commenters pointed out the requirement in Section 218(e) of the INA mandating a new determination within 72 hours in cases of unavailability. A trade association also mentioned that Congress was sufficiently concerned about the failure of domestic workers to report that it included a heavy obligation on the Department to re-establish need. Others commented that the need for a redetermination procedure is even greater since the pre-filing recruitment efforts will put job commitments farther in advance of the dates of need and thereby increase the likelihood of U.S. workers not reporting. A trade association provided data from a farmer to illustrate the need for a process for redetermination and also described a procedure they would like implemented wherein U.S. workers referred by the SWA would be asked to sign a form indicating their intention to return for work on the date of need and to work for the duration of the contract. The goal of this process would be to not have the number of jobs certified be reduced by the total number of referrals but rather by the number of workers who signed the form.

In response to the comments, the Department has included a new section, § 655.110(e), addressing the procedures for requesting a redetermination of need. The Department appreciates the suggestion for an additional requirement for U.S. workers to sign a form stating they will report to work but has determined such a requirement does not appear likely to alleviate the problem of ''no-shows'' among the U.S. worker population the employers seek to address. The Department, therefore, did not add the requirement.

A trade association also posed a question about handling a situation where the employer obtains sufficient commitments from qualified U.S. workers for the job opportunity during the pre-filing recruitment and is precluded from filing an application but subsequently learns that some of these workers will not honor their commitments. Since no application was filed, technically, the employer in this situation would not be able to request a redetermination. The association claimed the Congress clearly did not intend to leave employers without an adequate workforce and stated it is incumbent upon the Department to accommodate employers who are in this situation.

While the Department agrees it is unlikely Congress intended that employers should be left without an adequate workforce, the Department cannot add a provision to allow an employer who does not submit an application due to the availability of able, willing and qualified U.S. workers sufficient to meet their needs, but who subsequently discovers that not all the workers will be able to honor their commitments, to request an expedited redetermination. The Department lacks such authority under the INA; Section 218(e)(2) of the INA only authorizes the Secretary to make such expedited determinations for a certification that was denied in whole or in part because of the availability of qualified workers. However, The Department will permit an employer to file an application requesting that zero job opportunities be certified for H–2A employment because the employer has been able to recruit a sufficient number of U.S. workers. Such applications must comply with other requirements for H–2A applications to be considered complete and must be supported by a recruitment report, in which case the application will be denied. Such a denial will provide no immediate benefit to the employer, but the employer will thereafter be permitted under the statute and regulations to request an emergency reconsideration of the denial should the U.S. workers fail to show up or later abscond, leaving the employer with a rejuvenated need for H–2A workers. Language to this effect has been added to § 655.107(a) of the Final Rule.

Section 655.111—Required Departure

The Department included language in the NPRM explaining the relationship between the labor certification's validity period and the foreign worker's period of stay in the U.S. and informing employers of their obligation to notify H–2A workers who begin employment with them of the worker's responsibility to register their departure if and when required by the DHS. A trade association questioned the inclusion of this section in the Department's regulations. This association commented that it has no bearing on either the issue of the availability of U.S. workers, or whether the employment of aliens will adversely affect U.S. workers, the two issues which are within the statutory purview of the Department. A professional association commented that the Department's language in the proposed § 655.111 did not allow for transit time for workers after the expiration of the labor certification and was, therefore, in conflict with the USCIS requirements which provide a specified period of time after expiration of the labor certification before departure from the country is required.

The Department believes the provision is useful, as it strikes at the heart of the relationship between the Department's findings and the entry of workers to fulfill the terms of the labor certification. This provision does not usurp any role held under the statute by another agency; it merely emphasizes for the employer its obligation to notify workers to return home at the end of their authorized period of stay. Moreover, the Department does have an interest in ensuring that H–2A workers return to their home country at the end of their authorized work period, as they would otherwise become undocumented workers inside the United States. As described in the discussion of § 655.108, undocumented workers compete with U.S. workers for agricultural job openings without any of the protections associated with the H–2A program applying, and thus are likely to have an adverse effect on the wages and working conditions of U.S. workers.

The Department does agree, however, with the comment regarding the lack of clarity in the language used in the proposed rule. The Department notes that DHS provisions (in current regulations) require the worker be given a period of 10 days of valid status beyond the validity period of the labor certification in which to depart, and has extended that time to 30 days in their recent companion H–2A rulemaking. We have revised the regulation to acknowledge this period granted by DHS, to provide greater certainty for both employer and worker.

Section 655.112—Audits and Referrals

In the NPRM, the Department proposed the initiation of post-certification audits of applications to ensure quality control, to review compliance, and to identify abusers of the program, among other goals. The Department received several comments on these audit provisions.

One commenter felt that there was no policy or legal rationale given by the Department for this new system that includes audits. The Department believes that a sufficient policy rationale for the necessity of audits was provided in the NPRM. Reviewing the documentation attached to and supporting the attestations made by an employer in the context of an H–2A application is an essential element of the shift of the program to an attestation-based certification system. The Department, to protect the basic integrity of the process of H–2A certifications, must ensure the applications are filed in accordance with the basic obligations of the

program. The Department has the authority to enforce program responsibilities with respect to those who seek its benefits, and in particular with respect to those who receive them. The audit provides reassurance to the employer, the Department, and the affected employees that all program obligations are understood and followed.

Another commenter stated that 30 days to respond to the audit request was not enough time during growing season. The Department does not believe that audit requests will be so burdensome that they cannot be complied with relatively quickly as long as the employer has retained the required documentation contemporaneously with performing the required actions, such as keeping the tear sheet of the advertising, and retaining the final recruitment report. To partially address this commenter's concern, however, language has been added to the Final Rule specifying that employers will be provided at least 14 days to comply with an audit request.

A SWA suggested that every application be audited and some SWAs suggested they should participate in audits, and should be provided funds to do so. The Department declines to delegate the audit function to the SWAs. Audits will be conducted by the Department based on the presence or absence of certain criteria, as well as on a random basis to ensure program integrity. Moreover, dispersing audit activity among SWAs, would be at odds with the re-engineering of the H–2A process. SWAs will no longer possess the underlying documentation necessary to adequately evaluate the audit factors that will be built into the new program.

One commenter stated that ''non-program'' participants should not be included in the audit process. The Department believes participation by others in the audit process would be disruptive to program operations and therefore declines to add such a provision in the Final Rule.

A farm worker advocacy organization expressed the belief that the proposed increase in audits and penalties would not adequately address concerns related to worker protections and remarked the penalties would come too late in the process to benefit U.S. workers searching for work.

The Department believes, on the contrary, that the audit process will address concerns about worker protections. The Department will audit applications based on selected criteria as well as on a random basis. Worker protections are at the root of the H–2A program and will provide many of the criteria for audits. In addition, WHD's investigative authority is an additional and comprehensive tool to address these concerns and benefit U.S. workers. U.S. workers, additionally, have at their disposal a complaint system (found in the Job Service Complaint system regulations at 20 CFR 658 *et seq.*) to address complaints arising from agricultural job orders, such as an improper failure to accept a referral. The use of all such tools will help to ensure employer compliance with the requirements of the program.

Another commenter stated that the penalties enumerated will do little to deter abuses and that the Department should consider the complementary tool of civil money penalties for lesser violations found in the audit process. The Department cannot assess civil monetary penalties without statutory authority to do so.

One commenter stated that the enumerated penalties are so severe that farmers could go out of business and that employers should therefore be informed, in detail and in advance, about the methods, criteria and scope on which these audits and potential sanctions will be based. In addition to the explanation of the audit procedures and sanctions already provided in the Rule, the Department will develop materials for employers to assist them in understanding the various aspects of the program, including audits. However, the Department cannot reveal its audit criteria, which must be kept confidential to ensure program integrity.

One commenter suggested that the Department conduct pre-audit inspections of applications and issue a notice of violations so that there is an opportunity to correct mistakes without penalty. The Department will be reviewing applications prior to certification (and thus prior to any potential audit) as part of the approval process, and intends to issue Notices of Deficiency when such correctable deficiencies are found. We cannot, however, complete full audits in the 15 day statutory window the Department is afforded to review and certify applications.

Many commenters expressed skepticism about enforcement, saying the Department's prior enforcement in the H–2A arena has not been as vigorous as they would like. One commenter also doubted the ability of adjudicators to discover fraud and did not believe that sufficient resources existed to accomplish this function.

This Rule introduces new enforcement measures, such as certification revocation, and new grounds for the Department to impose sanctions to more effectively address violations of the terms and conditions of the labor certification. Accordingly, the Department will have greater flexibility than under the current regulation to initiate and impose sanctions. Additionally, the Department has assigned dedicated resources for these enforcement and compliance activities.

Several commenters opined that the rule will not prevent international recruitment system abuses. The Department has little control over international recruitment system abuses unless U.S. employers or their agents are involved. The new rule allows the Department to sanction the U.S. parties involved in abuses.

One commenter believed that the Department should create a new division within ETA to conduct audits and report to the Secretary on the efficacy of the H–2A program. A new division is unnecessary as the audits will be undertaken in connection with OFLC program operations and, as noted above, the Department has assigned additional resources to perform the audit function.

A farm bureau offered a rewrite of § 655.112, believing that audits should only be conducted on the recruitment portion of the application and employers should be told specifically what criteria could lead to an audit. We thank the commenter for its detailed analysis of the audit requirements, but we do not agree with its premise that audits should be limited to the recruitment portion of the application. The Department has been consistent in its refusal to disclose its audit criteria in its foreign labor programs; it cannot disclose these without risking the very integrity of the programs. The Final Rule delineates more clearly which documents employers are required to retain during the document retention period, and any of these documents may be requested during an audit.

Other changes to the language of this provision are minor and non-substantive, and were made for purposes of clarity, to insert cross-references, or to conform to changes made elsewhere in the Final Rule. For example, the reference to auditing of denied applications has been deleted to reflect the decision not to require employers whose applications are denied to retain records, explained in the discussion of § 655.102(c). Similarly, the statement that an employer's obligation to comply with the Department's audit process includes ''providing documentation within the specified time period'' has been deleted as superfluous, as the consequences of

an employer's failure to comply with the audit process are now more explicitly addressed in §§ 655.117 and 655.118.

Section 655.113–H–2A Applications Involving Fraud or Willful Misrepresentation

The NPRM proposed a new § 655.113, creating a process whereby a finding of fraud or willful misrepresentation would result in termination of processing of current applications.

One commenter expressed concern that proposed § 655.113 did not go far enough to give the CO explicit authority to deny an application because of suspected fraud or factual inaccuracy. The commenter suggested that the regulation should set forth a process that allows SWAs, workers, and others to send in information and allow the CO to consider such documentation. The same commenter feared that without a definition of ''possible fraud or willful misrepresentation'' that the Department will only use a criminal standard of guilt and thereby allow many employers who engage in lesser fraud to go unsanctioned. The Department agrees and will define such terms and evidence to be used in policy guidance rather than in the rule itself. The Department declines to permit COs to deny applications based solely on suspicion of wrongdoing. Such an undefined standard fails to put program users on notice of what is expected of them. The CO must articulate the specific criteria the applicant failed to meet and which resulted in the application being denied, as explained in § 655.109(e).

Another commenter believed that it is unfair to put the full burden on the employer for employing undocumented workers if the employer has limited capacity to verify the legality of the worker documents and whether or not they are fraudulent.

The rule is not meant to and will not punish the employer for complying with the requirements in the I–9 form to verify employment eligibility. There is nothing in the Department's regulation that would impose liability on an employer for unknowingly accepting fraudulent documents that appear authentic.

The Department has added language to this provision in the Final Rule clarifying that ''[i]f a certification has been granted, a finding under [§ 655.113(b)] will be cause to revoke the certification.'' Paragraph (b) of the NPRM has been deleted in the Final Rule as unnecessary and redundant.

Section 655.114—Setting Meal Charges; Petition for Higher Meal Charges

In the NPRM, the Department outlined the procedures for employers to petition to charge more than the established amount for meals and for appealing the denial of such a petition. In the Final Rule, the Department has revised the section to more clearly address both the establishment of the annual allowable meal charge amount and the procedures for petitioning for a higher amount. One commenter noted that the allowable amount published in the NPRM was out-of-date. This commenter is correct and the Department has updated the amount in the Final Rule. Another commenter requested that the Department define ''representative pay period'' as used in § 655.114(b). The Department believes that no further definition is necessary since the term ''representative'' is commonly defined to mean ''typical.'' In addition, the header for this section has been changed to indicate both topics that are discussed.

In addition, this section has been revised for clarity in the Final Rule. The language about petitions for higher meal charges has been removed from the first sentence of paragraph (a). All material about petition for higher meal charges is found in paragraph (b). The effective date provision concerning granted petitions for higher meal charges has been separated out and provided its own paragraph in order to enable employers to more easily understand when the higher meal charge applies. The material on the procedures for appealing denied petitions has been moved from proposed paragraph (a) to a new paragraph (c). A new sentence has also been added to the end of paragraph (a) reminding employers that all deductions for meal charges under this provision must comply with the FLSA's recordkeeping requirements, which will become relevant if the deductions bring the employee's hourly wages below the federal minimum wage.

Section 655.115—Administrative Review and De Novo Hearing Before an Administrative Law Judge

The NPRM contained a provision setting out the procedure by which an employer could request a review on the record of a certification denial, including a de novo hearing. The Department received several comments on this section.

One commenter requested that copies of certified case files should be delivered to the employer within two business days. This would require the additional expense for overnight courier service, and the Department declines to adopt such a requirement. The Department also notes that an employer would be expected to already possess copies of all of the relevant documents relating to his application.

The same commenter suggested that the rule be amended to include explicit language that hearings for debarments are available and specify the procedures for them, and state that all relevant documents and other evidentiary material, including exculpatory evidence, must be provided to the employer. The Department has adopted the suggestions of the commenter but has done so outside of § 655.115. Given the severity of debarment and revocation, the short timeframes set forth in § 655.115 are neither necessary nor appropriate for these types of determinations. Accordingly, the Department has addressed the administrative appeals procedures for debarment and revocation in § 655.118 and § 655.117, respectively. Under the Final Rule, debarment decisions are stayed pending the outcome of any requested administrative hearing and subsequent appeals.

Another commenter suggested that workers and their representatives should be allowed to intervene in administrative review proceedings. The Department does not agree that determinations on labor certification applications should be turned into multiparty adversary proceedings, which would likely become unwieldy and time-consuming. Workers and their representatives may file complaints as appropriate in accordance with other provisions in the Final Rule.

One commenter suggested the rule should also specify that the removal of the requirement to answer the notice of complaint in the de novo hearing does not preclude the ALJ from requiring an answer or its equivalent as a matter of discretion or from limiting the discoverability of information. The same commenter believed the rule should specify that the Department bears the burden of proof in the proceedings, because otherwise the employer would effectively be presumed guilty and required to prove its innocence.

The Department does not believe there is any reason to add additional language to the rule, which already states that 29 CFR part 18 governs the rules of procedure. Specifically, 29 CFR 18.1(b) and 18.5(e) cover the ALJ's discretion to request an answer or require discovery. The burden of proof is governed by common law principles in which the moving party has the burden of proof. In this case, the burden

would be on the applicant to provide a complete application in the first instance, and if it is found to be incomplete by the Department's Certifying Officer, then it is the appellant/applicant's burden to prove that it submitted the requisite information. The burden does not shift to the government because it is not the government that is requesting a benefit.

To ensure an expeditious review process, the Final Rule provides that ALJs conducting de novo hearings must schedule such hearings within 5 calendar days, rather than 5 business days, at the employer's request. It further clarifies that new evidence may be introduced at such hearings. Employers will not be prejudiced by this provision, since the expedited scheduling is to be performed only at the appealing employer's request. The Final Rule further provides that ALJs must render decisions within 10 calendar days after a de novo hearing.

Section 655.116—Job Service Complaint System; Enforcement of Work Contracts

The NPRM contained the provision in the current regulations regarding complaints filed through the Job Service Complaint system. Several commenters suggested that site visits be implemented, employer and worker interviews be added, a 24/7 anonymous call-in number be created, and mediation offices (called ''work visa representational offices'' by the commenter) be created where contract disputes can be discussed between the employer and laborer. The Department declines to create such additional measures as a complaint system already exists in the Job Service complaint system found in 20 CFR Part 658, subpart E, and any similar system specific to H–2A agricultural clearance orders or applications would result in the duplication of effort and be a waste of already scarce government resources.

Some commenters believe that this rule is still too onerous, and that the audits and compliance requirements will continue to discourage farmers from using the program. The program is complex due to statutory requirements and historical practice. However, the Department has attempted, in this Final Rule, to simplify the procedures where appropriate while still ensuring program integrity and worker protection. The Department believes that this rule is significantly easier to understand and comply with than its predecessor.

One commenter stated that workers should be punished by being permanently barred from the program if they move to an unauthorized employer or overstay their visa. This is not an issue for the Department, which certifies positions as being available to be filled by H–2A workers. The Department does not control the work status of H–2A workers; that is a function performed by DHS.

Another commenter suggested that a mechanism should be created to pre-certify employers as being in compliance with program requirements and obligations prior to the issuance of the Labor Certification. This is something the Department will consider implementing at a future time, when employers have compiled an established record of compliance with program requirements.

A commenter suggested that the Department institute procedures for workers and their advocates to raise grievances or lodge complaints for Departmental review and expedited resolution. The Department again notes that the Job Service complaint system referenced in § 655.116 and detailed in 20 CFR part 658, subpart E, which handles complaints arising from employer actions, and WHD's authority under 29 CFR part 501, whose provisions include the investigation and prosecution of valid complaints, provide two effective mechanisms for resolving complaints. The commenter also requested that a graduated system of fines be created, allowing a ''learning curve'' for agricultural employers to become more familiar with the H–2A requirements. The Final Rule at 29 CFR 501.19 provides a number of factors that the WHD takes into consideration when assessing CMPs, including the type of violation committed, efforts made in good faith to comply, and the explanation of the person charged with the violation.

Section 655.117—Revocation of Approved Labor Certifications

Several minor, non-substantive changes were made to the language of this provision for purposes of clarity and to conform to other provisions of the Final Rule. All substantive changes made to the text of this provision are addressed below.

(a) Comments Opposing Revocation Because Other Penalties Sufficient

Several employers and employer associations objected to revocation of labor certifications on the grounds that other penalties for non-compliance are sufficient, citing the Department's increase in both the penalties for non-compliance and the bases upon which non-compliance can be asserted, along with the new document retention, audit process, and expanded bases for debarment. Similarly, several commenters cited the Department's existing ability to provide evidence to the DHS supporting the revocation of a petition.

We disagree that the existence of these other penalties makes revocation an unnecessary remedy. The Department's obligation to ensure program integrity is self-evident. The Department's ability to revoke an application is essential to maintaining and enhancing program integrity and a necessary companion to the flexibility of a self-attestation model. The Department should not have to rely on DHS to ensure the integrity of its programs.

(b) Revocation Too Severe a Penalty

Several employers and employer associations objected to revocation of labor certifications because of the negative impact that it would have on an employer's business. A commenter also stated that revocation could effectively result in an employer violating state law in Wyoming, which assertedly prohibits sheepherders from abandoning sheep. Given that revocation is meant to be a sanction against employers who have violated the terms and conditions of the certification or for whom the initial certification is demonstrated to have been unwarranted, it should be no surprise that the employer may face serious consequences as a result. It is in the best interest of the Department to ensure that the integrity of the H–2A labor certification program is upheld. If the granting of a labor certification was not justified, revocation of such certification is a reasonable measure for the Department to take.

(c) Interference With DHS Authority

An association of growers requested that the Department clarify the legal basis for exercising the enforcement of DHS regulations and the rationale for doing so, stating that employers should not have to face two enforcement authorities with different policy objectives enforcing the same regulations. We agree with the commenter's concern that the Department should not be enforcing DHS regulations and accordingly have deleted the reference to 8 CFR 214.2(h)(5) in § 655.117(a)(1).

(d) Grounds for Revocation

(1) Certification Not Justified—§ 655.117(a)(1)

A law firm questioned the Department's authority to revoke a labor certification application under Section 218 of the INA simply because the Department has decided to revisit the

merits of the application, stating that the Department would need authority comparable to that provided in Section 205 of the INA to do so. Additionally, one law firm interprets Section 218(e) to authorize the Department to revoke certifications only in the case of fraud or criminal misconduct. We disagree. Section 218(e) of the INA addresses the authority to revoke a certification and does not specify any limitations on the bases for which such authority may be exercised.

Nevertheless, the Department does agree that it should not revisit the merits of a labor certification determination in the absence of some form of willful misconduct on the part of the employer. Taking this concern into account, as well as the seriousness of revocation as a penalty, the Department has decided to impose a stricter standard on revocation as a penalty based upon the CO's finding that a certification was not justified. Given the immediate and devastating consequences revocation could have on an employer's business, the Department has determined that revocation based on a finding that the certification was not justified at the time it was granted is appropriate only when the employer made a willful misrepresentation on the labor certification application. In such an instance, the employer's willful misconduct has presumably contributed to the Department's initial erroneous determination, making revocation fully appropriate. Accordingly, we have removed ''based on the criteria set forth in the INA'' so that § 655.117(a)(1) now reads ''The CO finds that issuance of the Temporary Agricultural Labor Certification was not justified due to a willful misrepresentation on the application.''

(2) Violation of Terms and Conditions of Labor Certification—§ 655.117(a)(2)

An employer suggested that the employer's violation of the terms and conditions of the labor certification under § 655.117(a)(2) should be qualified with ''knowingly and willfully.'' An association of growers suggested that the revocation could only be exercised when the employer willfully misrepresents a material fact in the application. Similarly, an association of growers suggested that the Department should clarify that technical or good faith violations of the regulation should not result in an enforcement action. After reviewing these comments, the Department agrees that the standard set forth in the NPRM allowing revocation for any violation of an approved temporary agricultural labor certification was too broad. The Department has attempted to address the commenters' concerns by setting forth in greater detail the types of violations warranting revocation. Given the seriousness of revocation as a penalty, and in response to the comments, we added in this Final Rule an intent requirement (''willfully'') with respect to violations of the terms or conditions of the labor certification, and we also added the condition that the violation must be of a material term or condition. We have also listed separately in paragraphs 655.117(a)(2)(ii)—(v) other serious violations which the Department would have few other available remedies to enforce and which may not necessarily involve a willful violation of a material term or condition of the labor certification. These violations include: The failure to cooperate with a DOL investigation into the current certification; the failure to comply with one or more sanctions or remedies imposed by the ESA or one or more decisions or orders of the Secretary or a court order secured by the Secretary resulting from Department-initiated legal action (not private suits) regarding the current certification; and the failure to cure, after notification, a substantial violation of the applicable housing standards regarding the current certification.

A group of farmworker advocacy organizations suggested that the regulations should clarify that a revocation may occur where the employer does not offer the job terms required in the regulations or does not comply with the job terms required in the regulations. Assuming that the employer's actions were willful, we believe that this basis for revocation is already covered by § 655.117(a)(2), since the terms and conditions of the labor certification incorporate the employer attestations set forth in the regulations under § 655.105.

A group of farmworker advocacy organizations suggested that revocation should be utilized when an employer has an active certification and intends to bring additional workers but is unwilling or unable to provide the terms and conditions of the work promised. We believe that the grounds that the commenter cited for revocation are incorporated in § 655.117(a)(2), assuming that the employer's unwillingness or inability to provide the terms and conditions of the work promised manifests itself in the willful violation of a material term or condition of the labor certification.

A group of farmworker advocacy organizations suggested that revocation should be used if a timely audit discovers that U.S. workers had been discouraged or denied employment. Again, we interpret § 655.117(a)(2) to cover such a violation, if willful, since an employer must attest on its labor certification application that any U.S. workers who applied for the job were rejected only for lawful, job-related reasons.

A group of farm worker advocacy organizations suggested that revocation of a current job order should be allowed based on violations of prior job orders. Substantial violations of prior job orders are covered in the debarment section at § 655.118. We believe that debarment is the more appropriate remedy for substantial violations of prior job orders since a revocation is meant to address problems with the existing labor certification.

(3) Referrals From WHD—§ 655.117(a)(3)

A private citizen objected to the inclusion of a recommendation by WHD as a ground for revocation. The Department believes that WHD plays a critical role in upholding the integrity of the labor certification process by enforcing an employer's obligation to provide the wages, benefits, and working conditions required under the terms and conditions of a labor certification. Accordingly, their input in the revocation process would help to protect workers from additional violations or abuse by unscrupulous employers. However, we have clarified that the CO must actually find a violation of sufficient gravity that leads to the recommendation of revocation by WHD and that 29 CFR 501.20 sets forth the grounds under which WHD may recommend revocation, which are nearly identical to ETA's grounds for revocation provided under § 655.117(a)(2). Any WHD recommendation for revocation must be based on violations of the certification in effect at the time of the recommended revocation.

(4) Fraud or Willful Misrepresentation—§ 655.117(a)(4)

The Department has included an additional provision which sets forth the Department's authority to revoke a labor certification based on a finding of fraud or willful misrepresentation in that certification, as provided in §§ 655.112 and 655.113. Section 655.117(a)(4) provides that the Department may revoke a certification if a court or the DHS, or, as a result of an audit, the CO, determines that there was fraud or willful misrepresentation involving the application.

(e) Procedure—§ 655.117(b) and Hearing—§ 655.117(c)

An association of growers suggested that the Notice of Intent to Revoke should include the statement of factual grounds for the alleged basis for revocation. The regulation already provides that the Notice of Intent to Revoke is to contain a detailed statement of the grounds for the proposed revocation and thereby would include the factual grounds for the proposed revocation. Accordingly, we do not believe that it is necessary to change the proposed language of the provision.

One commenter suggested that employers should be able to request a hearing with respect to the Notice of Intent to Revoke. The Department does not believe that a hearing is strictly necessary in all cases, but has added language to § 655.117(a) of the Final Rule specifying that a revocation may only be made ''after notice and opportunity for a hearing (or rebuttal).'' The regulations also allow an employer to file an administrative appeal of a revocation and provides for notice of the opportunity to appeal in the CO's final decision.

While a group of farm worker advocacy organizations expressed concern that a final determination should not be required to revoke a labor certification, the Department received a number of comments from a large number of employers and employer associations objecting to revocation taking effect immediately at the end of the 14-day window for the employer to submit rebuttal evidence, if the employer fails to do so. The commenters cited due process concerns and the devastating and irreversible impact that revocation would have on farms while the matter was being adjudicated. The Department does not agree that allowing the CO's decision to become final if the employer fails to submit rebuttal evidence within 14 days constitutes a violation of due process; an employer should reasonably be able to compile a response to the CO's notice within 14 days.

To address legitimate due process concerns, however, the Department has changed the language in § 655.117(b)(3) to provide that the filing of an administrative appeal stays revocation. Accordingly, an association of growers' suggestion that the effective date of revocation should be one day after the appeal period expires so that the employer would not be required to cease employing the worker while it decides whether to appeal is no longer relevant.

Two commenters expressed concern about the Department's ability to revoke a labor certification on a very broad range of criteria and suggested that the Department provide a standard for the Department's decision to revoke when the employer submits rebuttal evidence. We understand the commenters' concern and have articulated the standard for which the Department may revoke an application when the employer submits rebuttal evidence. Specifically, the regulations have now been revised to provide that the CO must determine that the employer more likely than not meets one or more of the bases for revocation under 655.117(a) in order to revoke the application.

An association of growers suggested extending the employer's rebuttal period from 14 days to 30 days with extensions granted by the CO on a reasonable basis, and if such a request is denied unjustifiably, the denial may be a basis of, or an additional reason for, reversal by the Department. Similarly, an association of growers suggested that employers should be given 14 instead of 10 days to file an administrative appeal. We disagree with the proposal to extend the time period for rebuttal with indefinite extensions by the CO, and particularly the suggestion that the denial of such a request for an extension should be a basis for reversal of the revocation, all of which would unnecessarily delay the revocation process. We also disagree with the proposal to extend the time period for an administrative appeal. We carefully considered what time period would be appropriate for employers to rebut the notice of intent to revoke and to file an administrative appeal. We would not be issuing a notice of intent to revoke if the reason for doing so did not seriously jeopardize the integrity of the H–2A labor certification process. Accordingly, it is imperative for the Department to be able to act quickly, especially if the livelihood of the workers and an employer's ability to plan for its labor needs are at stake. The addition of at least a minimum of 20 days to the process would not only impede the efficiency of the labor certification system but also prolong the period of time for which employers would be subject to uncertainty regarding their labor needs, a concern that was as raised by a commenter. As a result, we are maintaining the proposed rule's 14-day period for rebuttal and 10-day period for filing an administrative appeal.

An association of growers also suggested that the CO should have more than 14 days to reach a final decision—that the CO should in fact have all the time that he or she believes is necessary to reach the best possible decision on the record as it is presented. While we appreciate an association of growers' concern that the Department have a sufficient amount of time to render its decision, 14 days is an adequate amount of time for the Department to consider all the facts at hand to make a decision and to ensure that the revocation proceedings move along in an expeditious manner for the reasons stated in the previous paragraph.

The Department takes very seriously the commenters' concerns about having enough time and opportunity to reach the best decision possible pertaining to revocation. As a result, as discussed in the preamble to § 655.115, given the seriousness of the revocation penalty, the Department is creating a separate appeals process for revocation which allows for greater time for deliberation at the administrative appeals level. Instead of applying the administrative appeals process at § 655.115 to revocation, as provided in the NPRM, we have lengthened the timeframes for hearings, to 15 calendar days after the ALJ's receipt of the ETA case file, and for decisions, to 20 calendar days after the hearing. This appeals process provides the right balance between ensuring that revocation occurs in a timely manner before the expiration of the labor certification, while also providing a sufficient amount of time for deliberation.

Two commenters suggested revising the regulation so that an employer be provided 14 days from the date that it receives the Notice of Intent to Revoke to provide rebuttal evidence instead of from the date of the Notice. Given that the Notice will be sent by means ensuring next day delivery, the employer will essentially have 13 days, which is a reasonable amount of time to provide rebuttal evidence. In addition, because the date the employer actually receives the Notice is virtually impossible to verify, we have decided to retain the date of the Notice as the starting point for the 14 day rebuttal period.

One commenter suggested phasing-in the Department's compliance and control measures so that employers have the opportunity to adapt to the program. We do not believe that it is necessary to phase-in such measures. Employers have received notice of, and have had an opportunity to comment on, the measures that the Department has proposed. Employers certainly have had an opportunity to plan for such changes, and we do not believe that providing any additional time for employers to adjust to the new requirements is warranted.

(f) Worker Protections

A group of farm worker advocacy organizations suggested that ETA require employers with open job orders to accept the referral of H–2A workers who are already present in the U.S. and have been affected by revocation, and that ETA should deny job orders to employers who refuse such H–2A workers. We understand the serious toll revocation of a labor certification can take on an employer's workforce—both U.S. and H–2A workers alike—and agree that certain worker protections should be triggered in the event of revocation. We do not agree that the SWAs should be in the business of using taxpayer money to make referrals of temporary foreign workers to open job opportunities. However, we have added a new provision at § 655.117(c) setting forth an employer's obligation to its H–2A workers in the event of revocation. Upon revocation, if the workers have already departed the place of recruitment, the employer will be responsible for reimbursing each worker's inbound transportation and subsistence expenses, outbound transportation expenses unless the worker accepts other H–2A work in the U.S., any payments due to the worker under the three-fourths guarantee, and any other wages, benefits, and working conditions due or owing the worker under the regulations.

(g) Beyond the Scope of the Regulation

We received several comments that were clearly beyond the scope of the revocation provision. Among them were several comments regarding issues that touch upon agencies with responsibility for H–2A issues that have nothing to do with the labor certification process or the enforcement of the obligations and assurances made by employers with respect to H–2A workers.

For example, a group of farmworker advocacy organizations suggested that the Department should establish an MOU with ICE to alert ICE upon revocation that an employer's request for workers has been denied and to heighten inspections of that employer's I–9 forms to ensure that the employer does not attempt to recruit undocumented workers to fill the positions originally designated for H–2A workers. While we understand the concern of the commenter, we do not believe that the regulation is the appropriate place to address the details of the Department's coordination and communication with DHS in the event of revocation.

Section 655.118—Debarment

(a) The Department's Debarment Authority

The Department revised § 655.118(a) of the proposed rule to more closely parallel the language in Section 218 of the INA setting forth the Department's debarment authority. The Department is also clarifying that it interprets the requirement that ''the Secretary of Labor has determined, after notice and opportunity for a hearing, that the employer during the previous two-year period substantially violated a material term or condition of the labor certification'' to mean that the Department must notify the employer of the Department's intent to debar no later than two years after the occurrence of the violation (or in the case of a pattern or practice, two years after the occurrence of the most recent violation). The Department's rationale for this interpretation is discussed in greater detail in the Debarment Proceedings (20 CFR 655.118(e)) section of this preamble.

(b) Parties Subject to Debarment—§ 655.118(a)

(1) Successors in Interest

One organization objected to the debarment of an employer's successor in interest, rather than only those entities with a substantial interest in the employer. This commenter expressed concern that because debarment can result in the dissolution of the employer's business, debarring a successor in interest would impede the sale of assets and business to others who are not complicit in the cause of debarment. The Department's primary objective in debarring successors in interest is to prevent persons or firms who were complicit in the cause of debarment from reconstituting themselves as a new entity to take over the debarred employer's business. The final regulation includes a definition of successor in which the culpability of the successor and its agents for the violations resulting in debarment must be considered. This definition will avoid harm to successors that were not culpable in the violations resulting in debarment.

(2) Attorneys and Agents

One commenter suggested that agents of employers should be debarrable as well as employers, given that the substantial violations listed in § 655.118(d) could be committed by either the employer or the employer's agent. Another commenter also expressed concern that agents could not be sanctioned even though they may commit debarrable activities. We agree that agents should be included as debarrable parties if they have committed a substantial violation. To be consistent with the Department's permanent labor certification program, we believe that substantial violations should include acts committed by attorneys of employers and, accordingly, that attorneys of employers be debarrable parties as well. Additionally, the Department would consider an attorney or agent who had knowledge of or had reason to know of the employer's substantial violation to be complicit in the employer's violation and accordingly, should also be subject to debarment.

The preamble to the NPRM expressed the Department's intention to include actions by agents and attorneys of employers as debarrable offenses, and include agents and attorneys as debarrable parties. The regulatory text, however, did not make this clear. Some commenters expressed concern that this language would render attorneys and agents strictly liable for debarrable offenses committed by their employer clients. That was never the Department's intent. To clarify the provision, the Department has broken § 655.118(a) of the NPRM into three paragraphs. New § 655.118(b) specifies that agents and attorneys may only be debarred if they ''participated in, had knowledge of, or had reason to know of, the employer's substantial violation.'' New § 655.118(c) establishes the maximum debarment period of three years, which applies to debarments of employers, attorneys, and agents.

(c) Bases for Debarment—§ 655.118(d)

(1) General Opposition

Several commenters objected to the debarment provision on the grounds that it was too severe a penalty and would discourage participation in the H–2A program. Additionally, another commenter expressed concern that overly circumscribed debarment regulations would continue to impede enforcement by the Department. As discussed in the preamble to the NPRM, the proposed changes to the debarment provision responded to the unnecessarily narrow definition of employer actions warranting debarment in the current regulation, which has hampered effective enforcement of the H–2A program, and is also an important part of the program's shift toward an attestation-based application process. We have carefully considered the comments that we received in response to the NPRM and believe that the debarment provisions in the Final Rule

will uphold the integrity of the H–2A labor certification program without unfairly punishing employers who utilize the program. We believe that ETA debarment authority and WHD's authority to recommend debarment will help to strengthen the Department's efforts to enforce the program regulations.

The Department has reorganized this provision in the Final Rule in order to provide additional clarity to program users. In the NPRM, the bases for debarment were enumerated in § 655.118(b); in the Final Rule they are enumerated in § 655.118(d). The NPRM listed several violations in proposed § 655.118(b)(1) that the Department would consider to be debarrable substantial violations if ''one or more acts of commission or omission on the part of the employer'' could be shown. For reasons discussed below, the Final Rule distinguishes between program violations that do not rise to the level of debarrable substantial violations unless ''a pattern of practice of acts of commission on the part of the employer'' can be shown, which are listed in paragraphs 655.118(d)(1)(i)–(v), and program violations that are subject to some other standard, which are listed in paragraphs 655.118(d)(2)–(6).

Failure to cooperate with a DOL investigation and failure to comply with sanctions, remedies, decisions, and orders issued by the Department were listed as debarrable offenses under § 655.118(b)(1) of the NPRM. Those provisions have been broken out separately in the Final Rule as § 655.118(d)(4) and § 655.118(d)(5), emphasizing that such violations are not subject to § 655.118(d)(1)'s ''pattern or practice'' standard. For reasons described below, a new § 655.118(d)(6) has been added to the rule allowing the Department to debar for ''[a] single heinous act showing such flagrant disregard for the law that future compliance with program requirements cannot reasonably be expected.''

(2) Standards for Debarrable Offenses—Additional Conditions and Clarification, Including Pattern and Practice

Several commenters requested greater clarification of what actions would be subject to debarment and suggested including additional qualifiers or conditions to the various grounds for debarment. Two commenters stated that the listed grounds for debarment seem to empower the Department to debar for actions that merely ''reflect'' unlawful activity, even though the actions might not actually be unlawful. These commenters requested additional clarification as to what sort of activities would result in debarment. We disagree with the commenters' characterization that the listed grounds for debarment do not require a finding that the entity to be debarred engaged in unlawful activity. Mere suspicion of a violation of the law is not sufficient to warrant debarment. Rather, an actual violation would be necessary, in accordance with Section 218 of the INA which authorizes debarment when an employer substantially violates a material term or condition of the labor certification with respect to the employment of domestic or nonimmigrant workers. In sum, the use of the term ''reflect'' in the Final Rule to describe debarrable ''pattern or practice'' violations in § 655.118(d)(1)(ii)–(v) does not mean that the Department is not required to prove actual underlying program violations.

Several commenters suggested that the Department should require a pattern or practice of substantial violations for debarment. Of particular concern was the prospect of debarment based on the commission of one violation which they alleged would deter participation in the program. Additionally, one of these commenters noted that employers who are less sophisticated in their business practices should be spared from debarment for innocent oversights or mistakes. We agree with commenters' concerns and have qualified the acts set forth under § 655.118(d)(1) with a pattern or practice requirement. However, the Department does not have any available remedy other than debarment to penalize and deter certain program violations, and believes that these violations constitute ''substantial violations'' warranting debarment even without a pattern or practice. These acts are set forth separately in paragraphs 655.118(d)(2)–(6). These include: fraud; the failure to pay the necessary fee in a timely manner; and the failure to cooperate with a DOL investigation or interference with a DOL official performing an investigation, inspection or law enforcement function; the failure to comply with one or more sanctions or remedies imposed by the ESA, or with one or more decisions of the Secretary or court (regarding a Department-initiated lawsuit); and a single heinous act showing such flagrant disregard for the law that future compliance with program requirements cannot reasonably be expected.

Several commenters requested that the Department clarify and distinguish what activity is debarrable from what activity is subject to other penalties. Many of the activities that would trigger debarment also trigger other penalties. We do not think that it is necessary to draw such a distinction. Generally, a non-willful violation will not be grounds for debarment unless it is part of a pattern or practice. Debarrable offenses are clearly delineated in § 655.118(d) of the Final Rule. Program violations that are subject to other penalties are listed elsewhere in the Final Rule.

(3) ''But Not Limited to''—Proposed § 655.118(b), New § 655.118(d)

Several commenters argued that the language ''but not limited to'' in proposed § 655.118(b)'s list of the available grounds for debarment was overly broad and raised due process concerns, as there would not be sufficient notice of what additional actions would be considered substantial violations. We agree with the commenters' concerns, and given that various grounds for debarment that are specified in the Final Rule, we do not believe that the ''but not limited to'' language is necessary. Accordingly it has been deleted from the regulatory text.

(4) Significant Injury to Wages, Benefits, and Working Conditions—Proposed § 655.118(b)(1)(i), New § 655.118(d)(1)(i)

An association of growers suggested that the Department clarify that the significant injury to wages, benefits, and working conditions be explicitly linked to the employer's hiring of H–2A workers, which the association interpreted as Congress's concern in establishing the labor certification process. Thus, in the opinion of this commenter, only significant injuries to U.S. workers that would not have occurred but for the hiring of H–2A workers in the occupation would be potentially relevant. We do not read Section 218 of the INA so narrowly. A substantial violation of a material term or condition of the labor certification with respect to the employment of U.S. or non-immigrant workers encompasses more than injuries arising directly from the hiring of H–2A workers. For instance, an employer may engage in a pattern or practice of intentionally paying its workers at a rate below the minimum wage. The debarment of the employer for such a flagrant violation both of the FLSA and the terms and conditions of the labor certification would be warranted under Section 218 of the INA, despite the fact the violation was not strictly dependent on the hiring of H–2A workers.

A group of farm worker advocacy organizations suggested that the Department should have the discretion to deny a certification to an employer who has previously engaged in

violations of employment-related laws, whether or not there has been a final administrative or judicial finding of such violations and whether the employer previously employed H–2A workers or sought to do so. The standard for debarment set forth under Section 218(b)(2)(A) of the INA provides that ''[t]he employer during the previous two-year period employed H–2A workers and the Secretary of Labor has determined, after notice and opportunity for a hearing, that the employer at any time during that period substantially violated a material term or condition of the labor certification with respect to the employment of domestic or non-immigrant workers.'' The commenter's suggestion that the employer only need to have engaged in a violation of employment-related laws, regardless of whether there has been a final finding of the violation or whether the employer previously employed H–2A workers clearly goes beyond the Department's statutory authority to debar. Accordingly, the Department declines to debar.

(5) Ten Percent Threshold—Proposed § 655.118(b)(1)(i), New § 655.118(d)(1)(i)

An association of growers expressed concern that under proposed § 655.118(b)(1)(i), an employer's change in the health or retirement plans or benefits offered to its employees could rise to the level of a debarrable violation, even though the employer is in full compliance with the job order. The Department does not intend to penalize employers who are in compliance with the job order. Rather, the Department intends to apply debarment to acts that are significantly injurious to benefits required to be offered to employees under the H–2A program, as opposed to all benefits, such as health and retirement plans, that an employer may offer to its employees. Accordingly, the Department has added in paragraph (d)(1)(i) of the Final Rule as a qualifier for ''benefits,'' ''required to be offered under the H–2A program.''

Several employers objected to the 10 percent threshold required for a significant injury under proposed § 655.118(b)(1)(i) because it would disproportionately affect small employers—i.e., an action taken against one employee might be enough to trigger a substantial violation against a small employer. A group of farm worker advocacy organizations objected to the figure because it might allow egregious actions to be taken against numbers of employees that don't meet the 10 percent threshold. We recognize the concerns of both the employers and worker advocates and have eliminated the 10 percent threshold and replaced it with ''a significant number.'' Thus, small employers would not be disproportionately affected by this provision. At the same time, the provision makes it possible for a substantial violation to occur even if the injury affects less than 10 percent of employees if the number of affected employees is significant.

(6) Substantial Number of U.S. Workers Similarly Employed—Proposed § 655.118(b)(1)(i), New § 655.118(d)(1)(i)

Two commenters objected to the language in proposed § 655.118(b)(1)(i) providing for debarment based on actions significantly injuring the wages, benefits, or working conditions of ''a substantial number of U.S. workers similarly employed in the area of intended employment.'' These commenters expressed concern that this language might be read to extend beyond U.S. workers potentially employable in H–2A occupations, which are the workers that the statutory ''adverse effect'' concept is supposed to protect. These commenters believed that this language might allow an employer who fully complied with all program requirements to be debarred based on a finding by an economic expert that the employment of H–2A workers depressed the wages of other employers' similarly employed workers in the area of intended employment. Another commenter also expressed concern that it would be impossible for an employer to know in advance whether its actions would be significantly injurious to such workers. We recognize these concerns. The Department's various program requirements of this Final Rule have been established to protect U.S. workers from adverse effects, and an employer that has complied with all of these program requirements should not be held responsible for any arguable adverse effects that were unforeseen by the Department. The Department has accordingly deleted the reference to ''a substantial number of U.S. workers similarly employed in the area of intended employment'' from § 655.118(d)(1)(i) of the Final Rule.

(7) Significant Failure To Offer Employment to U.S. Workers—Proposed § 655.118(b)(1)(ii), New § 655.118(d)(1)(ii)

A group of farm worker advocacy organizations expressed concern that the use of the term ''significant'' under proposed § 655.118(b)(1)(ii) limits the authority of the Administrator/OFLC to debar an employer who has taken actions injurious to workers or refused to offer jobs to U.S. workers. We believe that any violation by the employer no matter how minor or how egregious should be met with the appropriate penalty. Given the severity of debarment as a penalty for employers, however, the violations constituting the grounds for debarment must be significant. Employer sanctions for violations which do not rise to the level required for debarment are available through other penalties, including civil money penalties.

(8) Failure To Recruit U.S. Workers—Proposed § 655.118(b)(1)(iii), New § 655.118(d)(1)(iii)

An association of growers suggested that the Department clarify that a violation in the form of ''a willful failure to comply with the employer's obligations to recruit domestic workers'' be subject to the following qualifications: (1) That there are a significant number of qualified U.S. workers who, if recruited, would be willing to make themselves available for work at the time and place needed; and (2) such failure is material—that if the employer had done what was required, qualified U.S. workers willing to do the job would have been found. If an employer complies with the recruitment requirements of the Final Rule but fails to recruit U.S. workers due to the fact that such workers are unavailable, that would not violate the regulation. Where, however, an employer has willfully failed to comply with its obligations under the Final Rule to recruit U.S. workers, it may be difficult if not impossible for the Department to prove, after the fact, that workers would have been available if the proper steps had been taken. When an employer has purposely defaulted on its responsibility to recruit U.S. workers, a substantial violation of a material term of the labor certification exists and the debarment criteria are met. The Department therefore declines to adopt this suggested change.

(9) Failure To Comply With the Audit Process—§ 655.118(d)(1)(iv)

The Department has explicitly included in § 655.118(d)(1)(iv) of the Final Rule an additional ground for debarment for a significant failure to comply with the audit process. This potential ground of debarment was expressly stated in § 655.112 of the NPRM, but was inadvertently left out of the debarment provisions.

(10) Outside Area of Intended Employment—Proposed § 655.118(b)(1)(vi), New § 655.118(d)(1)(v)

A law firm questioned how the employment of an H–2A worker outside the area of intended employment would support debarment under Section 218(b) of the INA. As discussed earlier, the statute authorizes debarment when an employer substantially violates a material term or condition of the labor certification with respect to the employment of domestic or nonimmigrant workers. Section 655.105(b) requires the employer to attest that it is offering terms and working conditions normal to workers similarly employed in the area of intended employment and which are no less favorable than those offered to the H–2A workers and are not less than the minimum terms and conditions required under the regulations. Section 655.105(d) requires the employer to attest that it will continue to cooperate with the SWA by accepting referrals of all eligible U.S. workers who apply for the job opportunity until the end of the recruitment period. Finally, § 655.110(b) limits the scope of validity of a certification to ''the area of intended employment.'' The area of intended employment thus plays a key role in determining the employer's particular obligations with respect to the terms and working conditions offered. An employer would not be able to abide by these attestations if it places its workers outside the area of intended employment and, accordingly, would be committing a substantial violation of a material term and condition of the labor certification with respect to the U.S. and H–2A workers alike.

An association of growers suggested that the Department apply a ''common sense'' interpretation of the regulations, particularly with respect to where a certification describes an area of intended employment which, for example, is within a 25 mile radius of a particular city, but the worker ends up working a field for a new customer that is 27 miles from that city. The Department understands the commenter's concern and expects the CO to exercise the appropriate judgment in the face of such circumstances.

(11) Incidental Work—Proposed § 655.118(b)(1)(vi), New § 655.118(d)(1)(v)

A group of farm worker advocacy organizations supported the inclusion of the employment of H–2A workers in an activity not listed in the job order as a debarrable offense because it would guard against employers that ''have shown a total disregard for the very notion of corresponding employment, and the results are unfair to similarly employed U.S. workers.'' However, several commenters expressed concern that employers whose workers would be performing work that is incidental to the activity listed in the job order could be debarred under proposed § 655.118(b)(1)(vi) for ''the employment of an H–2A worker * * * in an activity not listed in the job order.'' ''Other work typically performed on a farm that is not specifically listed on the *Application for Temporary Employment Certification* and is minor (*i.e.*, less than 20 percent of the total time worked on the job duties and activities that are listed on the *Application for Temporary Employment Certification*) and incidental to the agricultural labor or services for which the H–2A worker was sought'' is included in the definition of agricultural labor and services at § 655.100(d)(1)(vi). Accordingly, work that is incidental to the particular agricultural labor or services that are listed in the job order would be considered to be part of the activity that is listed in the job order. Contrary to the assertion of some commenters, permitting H–2A workers to engage in incidental activity places those workers in the same position as similarly situated U.S. workers who would be expected to perform incidental agricultural work in addition to any specific tasks for which they may have been hired. The Final Rule therefore notes that the employment of H–2A workers in activities ''minor and incidental to the activity/activities listed in the job order'' does not constitute a program violation.

One commenter also suggested that the regulations should provide a means to modify the job description covered by a temporary agricultural labor certification should a situation arise that requires more than minor incidental work, such as an act of nature requiring structural repairs and/or clean-up, or the temporary incapacity of a worker due to illness or injury who could do other work. The Department agrees with the commenter's concern and believes the concern is adequately addressed by the amendment procedures provided at § 655.107(d)(3) of the Final Rule.

(12) After Expiration of Job Order—Proposed § 655.118(b)(1)(vi), New § 655.118(d)(1)(v)

Although the Department did not receive any comments relating to this issue, the Department has replaced ''after the expiration of the job order and any approved extension'' in § 655.118(d)(1)(v) with ''after the period of employment specified in the job order and any approved extension'' and revised the corresponding heading for greater clarity.

(13) Fees—Proposed § 655.118(b)(2), New § 655.118(d)(2)

Several commenters noted the inclusion of acts of commission or omission that reflect the employer's failure to pay the necessary fee in a timely manner as being too severe a ground for debarment and questioned whether the inclusion of these grounds were within the Department's authority under the INA. The INA authorizes debarment for a substantial violation of a material term or condition of a labor condition application with respect to the employment of domestic or non-immigrant workers. Section 655.109(h) specifically provides that as a condition of the issuance of the labor certification, the employer must pay the processing fee in a timely manner, and § 655.105(m) provides that an employer must attest that all fees associated with processing the temporary labor certification will be processed in a timely manner. Additionally, a law firm objected to the inclusion of an employer's failure to pay the necessary fee in a timely manner because it does not comport with longstanding practice in other existing immigration procedures. However, an employer's failure to pay the necessary fee in a timely manner has been a ground for debarment under the H–2A regulations since July 1987, and the Department does not consider the absence of such a practice in other program areas to constitute a persuasive reason to eliminate it. Accordingly, the Department's retention of this ground for debarment supports the Department's longstanding practice and is necessary for the Department to administer effectively the H–2A labor certification process.

Additionally, a wool growers association was concerned that if the check arrived one day late, then the employer could be debarred under proposed § 655.118(b)(2). We do not read the provision to be that absolute and inflexible. Even though § 655.109(h)(2) provides that fees received by the CO no more than 30 days after the date the temporary labor certification is granted will be considered timely, the language of ''timely manner'' provides the Department with some discretion so that a check that arrives on the 31st day would not automatically result in the debarment of the employer. The Department takes seriously its

responsibility to administer the H–2A program in a fair and reasonable manner.

The Department, however, has decided to add the qualifier of ''persistent and prolonged'' for the failure to pay fees in a timely manner in § 655.118(d)(2) to ensure a farmer cannot have a certification revoked for a single instance of a failure to timely pay the fee upon certification. Furthermore, the regulation now provides for the issuance of a deficiency notice to the applicant, allowing for a reasonable opportunity to pay its fees before the issuance of the Notice of Intent to Debar.

(14) Fraud and Material Misrepresentation—Proposed § 655.118(b)(3), New § 655.118(d)(3)

Although no comments were received with respect to this provision, we have simplified the language to eliminate redundant references to fraud and included fraud involving the *Application for Temporary Employment Certification* as a ground for debarment in accordance with § 655.112(d).

(15) Significant Failure To Cooperate With Investigations—Proposed § 655.118(b)(1)(v), New § 655.118(d)(4)

Several commenters objected to the inclusion of acts of commission or omission that reflect action impeding an investigation. Full cooperation with investigations to determine compliance with the terms of the labor certification application and the regulations is essential to the viability of the H–2A program. Accordingly, the labor certification application provides that the employer will cooperate fully with any investigation undertaken pursuant to statute or regulation. Impeding an investigation would therefore qualify as a substantial violation of a material term of the labor certification application.

The Department has revised the language in this provision to clarify that not only impeding an investigation but also a significant failure to cooperate with a DOL investigation would constitute a substantial violation. Accordingly, the Department has replaced ''actions impeding an investigation of an employer'' with ''[a] significant failure to cooperate with a DOL investigation or with a DOL official performing an investigation, inspection, or law enforcement function'' and revised the heading accordingly.

(16) Civil Judgment/Court Orders—Proposed, § 655.118(b)(1)(iv), New § 655.118(d)(5)

A group of farm worker advocacy organizations suggested that an employer's failure to pay or comply with the terms of a civil judgment or court order in favor of any migrant or seasonal agricultural workers or H–2A workers should be an additional ground for debarment and that such debarment should remain indefinitely until an employer has paid all wages due and owing former workers. A group of farm worker advocacy organizations also suggested that at a minimum, the regulations should specify that an employer who has not paid assessed back wages or civil money penalties or complied with an injunction sought by the Department or paid a judgment for employment-related claims should not be permitted to receive a certification.

Several of the grounds for debarment suggested by these commenters reflecting substantial violations are already encompassed by these regulations. The three year time limit on debarment is specified in Section 218(b) of the INA; indefinite debarment is not permitted. Otherwise, the Department declines to interject any claim or remedy sought or any judgment awarded in private litigation into the labor certification process. To assure employers that the heavy sanction of debarment will not be imposed for trivial instances of non-compliance, the Department has clarified in the Final Rule that debarment is applicable only where an employer's non-compliance is ''significant.''

The Department has clarified that the failure ''to comply with one or more decisions or orders of * * * a court'' means that the order must be secured by the Secretary under Section 218 of the INA. Accordingly, the Department has replaced the reference to ''a court'' with ''a court order secured by the Secretary'' in § 655.118(d)(5).

(17) A Single Heinous Act—§ 655.118(d)(6)

As discussed earlier, a group of farm worker advocacy organizations objected to the 10 percent threshold in proposed § 655.118(b)(1)(i) because such a figure might allow egregious actions to be taken against a number of employees that don't meet the 10 percent threshold. The Department agreed and eliminated the 10 percent threshold and replaced it with ''a significant number'' under § 655.118(d)(1)(i). However, in further considering the commenter's concern, the Department decided that it was also necessary to address situations where a single egregious action would constitute a debarrable offense, yet, given the seriousness of debarment as a penalty, ensure that only the most serious violators would be subject to debarment. Accordingly, the Department has included as an additional ground for debarment a single heinous act showing such flagrant disregard for the law that future compliance with program requirements cannot reasonably be expected.

(d) Debarment Proceedings—Proposed § 655.118(c), New § 655.118(e)

(1) Statutory Authority—Requirement for Notice and Hearing

Some commenters expressed concern that the regulations exceeded the statutory grant of authority for debarment provided to the Department under the INA. These commenters questioned whether the regulations were consistent with the statutory requirement that a determination of a violation can only be made after notice and an opportunity for hearing. We believe that the regulations as proposed were consistent with the statutory requirement for notice and an opportunity for a hearing. However, the Department has now included a Notice of Intent to Debar in the procedure to provide an additional opportunity for notice and rebuttal, which is consistent with the procedure under the Department's revocation provision at § 655.117. If the employer fails to rebut the allegations provided in the Notice of Intent to Debar, the Department will issue a Notice of Debarment. The employer may then request a hearing through the administrative appeals process. Accordingly, the regulation's debarment procedures are consistent with the statutory requirement that a determination of a violation be made after notice and an opportunity for hearing. These additional procedures provide even greater due process protections to employers facing debarment.

Additionally, several commenters questioned whether the Department was exceeding its statutory authority under the INA, given that a final determination of the violation would likely not occur until more than two years have passed since the violation. The INA provides that ''(A) the employer during the previous two-year period employed H–2A workers and the Secretary of Labor has determined, after notice and opportunity for hearing, that the employer at any time during that period substantially violated a material term or condition of the labor certification with respect to the employment of domestic or nonimmigrant workers. (B) No employer may be denied certification under subpart (A) for more than three years for any violation described in such subparagraph.'' 8 U.S.C. 1188(b)(2).

The statute presents three requirements for denial of a certification. First, the employer must have employed H–2A workers within ''the previous two-year period;'' second, the Secretary must determine, after notice and hearing, that a substantial violation occurred during that two-year period; and third, denial of certification based on a finding of violations may not extend for more than three years. However, the statute does not place a time limit on when the Secretary's must issue a final determination that a substantial violation occurred. While a substantial violation must have occurred within the two-year period, so long as a determination is ultimately made that a violation occurred, a certification may be denied based on that violation. The most reasonable reading of the debarment provision, giving effect to all its language, is that Congress intended the Secretary to initiate an investigation leading to debarment within two years of the alleged violation and, by referring in Section 218(b)(2)(B) of the INA to a maximum three-year period, to permit any eventual debarment action to be for up to three years. The Department's interpretation of this provision was codified in the prior regulations at 20 CFR 655.110(a) and upheld in Matter of Global Horizons Manpower, Inc. and Mordechai Orian, ALJ No. 2005–TAE–00001 (June 16, 2006).

Several farm bureaus and growers' associations suggested that employers be provided with an opportunity to be heard before the issuance of a Notice of Debarment due to the concern that parties opposed to the H–2A program would initiate investigations that are not aimed at improving working conditions but rather seek to end an employer's ability to hire H–2A workers when qualified workers are unavailable. As discussed above, the Department already provides employers with an opportunity to be heard through the rebuttal process and with an opportunity for a hearing through the appeals process, and debarment is stayed upon the administrative appeal by an employer. Having an additional level of hearings would be overly cumbersome and impede the Department's administration of the H–2A program. Based on our experience with the permanent labor certification program, after which the H–2A program's debarment provision was modeled, we have concluded that the procedures set forth in the Final Rule, which provide the employer an opportunity to present rebuttal evidence before a Notice of Debarment is issued and an opportunity to appeal a debarment decision, provide employers sufficient protection against meritless claims.

The Department has also made several minor, non-substantive modifications to the text of this provision in the Final Rule for purposes of clarity.

(2) Timing

Commenters expressed conflicting concerns over the amount of time debarment procedures would entail. Two employer associations expressed concern that because of the length of the process, an employer could face uncertainty as to its debarment status and that the employer's ability to plan for its labor needs would be adversely affected. An association of growers proposed a much more drawn-out procedure starting with a detailed notice of an intent to debar from the Department, a disclosure of the full evidentiary record by the Department, a pre-notice hearing with a minimum of 30 days (with extensions), issuance of a formal notice of debarment by the Department which should include the factual and legal grounds for the intended action, prescribe an effective date that is after the time period for filing a timely appeal, provide at least 14 days to appeal, and administrative appeal by the employer, with the proceedings to be governed by 29 CFR part 18. We have already discussed the reasons we have not included a pre-notice hearing. The Final Rule already requires a Notice of Intent to Debar and a Notice of Debarment, both of which are required to state the reason for the debarment finding, including a detailed explanation of the grounds for the debarment. We believe that the commenters raised a valid point about prescribing an effective date that is after the time period for filing a timely appeal, and we have added to the regulation the requirement that the Notice of Debarment specify that the employer have 30 days from the date the notice is issued to file an administrative appeal before debarment becomes effective. Additionally, as we discussed in the preamble to § 655.115, the Department is creating a separate appeals process for debarment which allows for greater time for deliberation at the administrative appeals level, given the seriousness of debarment as a penalty. Accordingly, we have deleted the reference to § 655.115 as governing administrative appeal rights. Under the Final Rule, a debarred party may request a hearing which would be governed by the procedures set forth at 29 CFR part 18, and administrative law judge decisions are no longer required to be issued within a set period of time. We believe that the procedures set forth in these regulations provide a middle ground between these two sets of concerns by providing a period of time that is both sufficient for thorough consideration of the grounds for debarment and expedient enough so as to allow the Department to debar bad actors before they can cause any additional harm while also minimizing the period of uncertainty for employers in the case of a successful appeal.

(3) Review by the Administrative Review Board

Concerns by the commenters about the seriousness of debarment as a penalty has prompted the Department to include an additional level of Departmental review for debarment decisions. Accordingly, we are providing a debarred party with an opportunity to request a review of the decision of the administrative law judge with the Administrative Review Board (ARB). The procedures for ARB review are nearly identical to those provided at 29 CFR 501.42 through 501.45 for WHD. However, one major difference is that if the ARB fails to issue a final decision within 90 days from the notice granting the petition, the decision of the administrative law judge will be the final decision of the Secretary.

(4) Phasing In/Grace Period

Two commenters suggested phasing in the Department's compliance and control measures so that employers have the opportunity to adapt to the program. We have addressed this comment in the preamble discussion of § 655.117, which governs revocation of labor certifications.

(e) Debarment Involving Members of Associations—Proposed § 655.118(d), (e), and (f), New § 655.118(f), (g), and (h)

A group of farm worker advocacy organizations suggested that debarment should also apply to an association and its members' successors in interest so that associations and their principals will not be able to re-constitute themselves and continue business as usual. Because associations and/or their members operate as employers under the various scenarios addressed by the regulations in § 655.118(f), (g), and (h), the successor in interest language for employers in § 655.118(a) would also apply to associations and their members as well. Accordingly, we do not believe that it is necessary to change the language in § 655.118(f), (g), or (h).

Although the Department did not receive any other comments relating to these provisions, the Department has

decided that when a members of an associations or an association acting as a joint employer is disbarred, other members of the association who ''had knowledge of'' or ''had reason to know of'' the violation shall not be subject to debarment unless they participated in the violation. Because Section 218 of the INA requires that the employer substantially violate a material term or condition of the labor certification, an employer that merely had knowledge of, but did not actually participate in, the violation could not be debarred. The Department has never established program obligations requiring members of associations to report violations of other members or of associations that they have ''knowledge of,'' and mere knowledge of another entity's violation does not constitute a debarrable offense. Accordingly, the Department is removing the references to ''had knowledge of'' and ''had reason to know of'' from § 655.118(f) and (g). Where a member of an association both had knowledge of a violation and directly benefitted from that violation, however, the member will be considered to be complicit in the violation.

(f) Protections to Workers of Debarred Employers

A legal services provider suggested that the Department establish a system allowing H–2A workers from a debarred or decertified employer to be transferred to the next available H–2A employer in the state or region to protect these workers from becoming jobless due to enforcement actions against their employer. Because debarment applies only to an employer's ability to obtain future labor certifications, we believe that it is neither necessary nor useful to set up such a system, as a debarred employer would not have any H–2A workers.

(m) Beyond the Scope of the Regulation

Two grower associations suggested that the Department provide technical assistance to employers on complying with the H–2A program through training and a 1–800 hotline on selecting agents. The Department will provide guidance materials and training to the public to help explain how the H–2A program works. The Department does not intend at this time to establish a 1–800 phone number or referral system for selecting agents.

Timeline for Anticipated Training and Education Outreach Initiatives

Commenters suggested that the Department include a timeline for training and education outreach initiatives in the Final Rule and indicate who would be responsible for such training and outreach—the Department or the SWAs. The commenters also provided specific ideas for training and educational materials, including training on how to respond to the threat of litigation; how to respond to audits; how to comply with all program functions; the application process, and how to avoid violations and penalties. There were also requests for training in both English and Spanish.

The Department appreciates the input from commenters and the Office of Foreign Labor Certification will prepare and provide training based on these comments although at this time cannot describe the precise content and timing of such training.

B. Revisions to 29 CFR Part 501

Comments received that discussed whether the commenter was generally in favor of or generally opposed the proposed regulations typically did not differentiate between the proposed changes to 20 CFR part 655, Subpart B and 29 CFR part 501. Comments received on proposed changes in 29 CFR part 501 typically commented on a specific change proposed in this part. These are addressed below.

Section 218(g)(2) of the INA authorizes the Secretary of Labor to take such actions, including imposing appropriate penalties, seeking appropriate injunctive relief, and requiring specific performance of contractual obligations, as may be necessary to ensure employer-compliance with the terms and conditions of employment under this section of the statute. The Secretary has determined that the enforcement of the contractual obligations of employers under the H–2A Program is the responsibility of the Wage and Hour Division (WHD). Regulations at 29 CFR part 501 were issued to implement the WHD's responsibilities under the H–2A Program and the amendment of these regulations is part of this proposed rulemaking.

Concurrent with the Department's finalization of the proposed amendments to its regulations in 20 CFR part 655, Subpart B to modernize the certification of temporary employment of nonimmigrant H–2A workers, the Department is finalizing the proposed amendments to its regulations at 29 CFR part 501 regarding enforcement under the H–2A Program.

The changes proposed for enhanced enforcement to complement the modernized certification process, so that workers are appropriately protected when employers fail to meet the requirements of the H–2A Program, are incorporated into this Final Rule. Given the number of changes proposed for 29 CFR part 501 and the number of sections affected by the proposed changes, we have included the entire text of the regulation and not just the sections changed. We note that a number of comments suggested changes but that the existing text of the regulation, which was to remain unchanged, already addressed such issues in the manner raised in the comments. We will discuss comments received and any changes to the regulatory text in the NPRM in response to comments.

Based on comments received and our recognition of the need for clarification, we made changes to the following sections of the proposed rule: Sections 501.0, 501.1, 501.3 through 501.6, 501.8, 501.10, 501.15, 501.16, 501.19 through 501.22, 501.30 through 501.32, 501.41, and 501.42.

The following sections have not been changed from the notice of proposed rulemaking (other than inserting non-substantive references to the Administrative Review Board): Sections 501.2, 501.33, and 501.43 through 501.45.

The following sections were not included in the proposed rule and have not been amended (other than inserting non-substantive references to the Administrative Review Board) since publication in 52 FR 20527, June 1, 1987: Sections 501.7, 501.17, 501.18, 501.34 through 501.40, 501.46, and 501.47.

Nomenclature Changes

The proposed rule made a number of non-substantive nomenclature changes and technical corrections to 29 CFR part 501. These include: reflecting that the INA was amended in 1988 while the current regulations were published in June 1987 and H–2A provisions that were in section 216 are now codified in Section 218 of the INA; changing references from the State Employment Service offices to the SWA; reflecting that appeals from administrative law judge decisions are made to the Department's Administrative Review Board; and replacing in some sections references to the Secretary with references to the Administrative Review Board.

Section 501.0 Introduction

Language was added to the proposed introduction § 501.0 to update the reference to Section 218 of the Immigration and Nationality Act (INA) and provide that corresponding employment only includes U.S. workers who are newly hired by employers

participating in the H–2A Program. Two commenters disagreed with this change. One found the Department's argument for removing U.S. farm workers who are not newly hired from the protection of the H–2A provisions unpersuasive. The other noted that, while the Department justifies these changes by noting situations where H–2A workers are paid more than similarly employed U.S. workers will arise very rarely, if ever, in practice, the fact that an irrational result arises only rarely does not serve as a justification for ever allowing it to occur and requested the Department to withdraw this proposed change. As we stated in the preamble to the proposed rule, the INA only requires that the employment of the alien in such labor or services not adversely affect the wages and working conditions of workers in the United States similarly employed. Where an employee has agreed to work at a certain wage, and begins to receive that wage prior to the time an employer has hired an H–2A worker, the subsequent hiring and payment of the H–2A worker at a rate that is higher than the wage received by the U.S. worker will not adversely affect the wages and working conditions of the U.S. worker—rather, the U.S. worker will be paid precisely what he or she would have had the H–2A worker not been hired at all. As such, the Department lacks the authority to require that H–2A employers pay existing workers the rates paid to subsequently hired H–2A workers. The Department has clarified in the Final Rule that the phrase ''in the occupations'' in proposed § 501.0 means ''workers in the same occupations as the H–workers.''

One commenter proposed that the definition of ''corresponding employment'' be clarified to exclude those persons who may be willing to work limited hours or fewer days than those for which full-time workers are sought under an H–2A job order. These regulations are applicable to the employment of U.S. workers newly hired by employers of H–2A workers in the same occupations during the period of time set forth in the labor certification approved by ETA. These workers are engaged in corresponding employment. Any U.S. worker who is hired in corresponding employment must receive the benefits and protections outlined in the H–2A job order, the work contract, and the applicable regulations. Consequently, an employee who is hired to perform any work covered by the job order during the contract period is entitled to all the material terms and conditions of the job order or work contract for the corresponding employment, but not for any time spent in work not covered by the job order or work contract. If part-time workers are engaged in corresponding employment, they are entitled to the same rights as the H–2A workers, including payment of the AEWR (or highest applicable H–2A-required rate). The H–2A record keeping requirements mandate the recording of all hours offered. Hours offered but not worked by a part-time employee would count towards the employer's three-fourths guarantee obligation. Some minor, non-substantive changes were made to the language of this provision for purposes of clarity.

Section 501.1 Purpose and Scope

One commenter suggested that the Wage and Hour Division does not need to be an enforcement authority in connection with the H–2A Program. As discussed above, the Secretary determined that the enforcement of the contractual obligations of employers under the H–2A Program is the responsibility of the WHD and there is no clear rationale for discontinuing WHD's responsibilities.

This section in the regulations previously listed as an ETA responsibility determining whether employment had been offered to U.S. workers for up to 50 percent of the contract period. The proposed rule requested comments on this requirement and proposed eliminating the 50 percent rule and replacing it with expanded, up-front recruitment requirements. In the final rule in 20 CFR part 655, Subpart B, the requirement will now be whether employment has been offered to U.S. workers until the end of the recruitment period specified in § 655.102(f)(3), a change that is more fully discussed in the preamble to the final rule for 20 CFR part 655, Subpart B. The language regarding this requirement in the Final Rule has been modified accordingly. Language in this section also clarifies the WHD's role when U.S. workers are laid off or displaced, in light of § 501.19(e) discussing WHD's authority to assess civil money penalties for violations of these requirements. Also, a commenter noted that the statutory language indicated that the Secretary was authorized to take action as described in § 501.1(c) and the language has been changed to reflect the statute.

One commenter suggested that the proposed language for § 501.1(c)(2) could be interpreted as disjunctive. The comment contends that clarifying language would deter violations by preventing employers from shifting liability to other entities and ensure workers' access to a meaningful recovery from either a FLC (see § 501.10 definitions for H–2A Labor Contractor (H–2ALC) definition) or its bond insurer. Accordingly, § 501.1(c)(2) includes the term ''and/or'' to demonstrate the liability of H–2ALCs as well as their surety for violations of the H–2A rules and regulations. This change is intended to clarify the surety's and the H–2ALC's liability and to provide an additional means of wage recovery.

The language of this provision has also been modified to conform to changes that have been made in § 501.20 of the Final Rule to WHD's debarment authority. The Final Rule provides that WHD may ''recommend * * * debarment from future certifications,'' as WHD will not have authority under the Final Rule to itself debar from certifications.

Section 501.2 Coordination of Intake Between DOL Agencies

The proposed rule clarified the procedure for addressing contractual H–2A labor complaints filed with either the ETA or any State Workforce Agency (SWA). Such complaints will be forwarded to the WHD office of the Department and will be administratively addressed as provided in these regulations. No changes have been made to § 501.2 in the Final Rule.

Section 501.3 Discrimination

Proposed § 501.3(b) added two provisions to the existing regulation prohibiting discrimination against persons exercising rights under the H–2A statute. The section modified the debarment remedy to conform to proposed § 501.20, which provided the WHD with authority to debar violators under certain conditions. The section also added language codifying the existing procedure for forwarding complaints based on citizenship or immigration status to the Department of Justice, Civil Rights Division, Office of Special Counsel for Immigration-Related Unfair Employment Practices. Under this procedure, complaints based on citizenship or immigration status are forwarded to the Department of Justice, while aspects of the complaints which allege a violation of this section, or any other portion of the H–2A statute or regulations, are investigated by the WHD.

The Department received four comments on § 501.3. One private citizen stated that guest workers should be protected from discrimination on the same terms as U.S. workers. One non-profit legal aid firm stated that H–2A

employers have a reputation for mistreating U.S. farm workers and urged the Department to closely monitor hiring and employment practices and severely penalize employers who discriminate against U.S. workers.

One agricultural organization stated that the Department has not explained the legal basis for this authority or the proposed new procedures for handling discrimination claims. The agricultural organization also stated that Congressional intent is contrary to the Department's assertion of broad authority over undefined forms of discrimination with an uncapped make whole remedy.

The final regulation does not contain new procedures for the investigation of discrimination complaints. As part of the *Application for Temporary Employment Certification,* an employer attests that it will not discriminate against persons who exercise their rights under the H–2A statute and regulations. Authority for the current regulation is found in Section 218(g)(2) of the INA which authorizes the Secretary of Labor to take such actions, including imposing appropriate penalties and seeking appropriate injunctive relief and specific performance of contractual obligations, as may be necessary to ensure employer compliance with terms and conditions of employment.

The agricultural organization further stated that employment discrimination claims should be handled by the Equal Employment Opportunity Commission (EEOC). On the other hand, one farm worker advocacy organization argued that the Office of Special Counsel (OSC) has no statutory authority to enforce the rights of long-term, lawful permanent residents. This commenter proposed that § 501.3 should be modified to empower the WHD to investigate and prosecute complaints of discrimination on all unlawful grounds, including citizenship or immigrant status.

The Department has clarified the final regulation to make clear that the WHD will continue to investigate all alleged violations of the H–2A statute and regulations, and forward complaints of citizenship and immigration status, which it lacks authority to enforce, to the Department of Justice. Similarly, discrimination claims subject to EEOC jurisdiction will be forwarded to that agency. As noted above, where the same operative facts that support an allegation of citizenship discrimination or any other type of discrimination also support a claim of discrimination under the H–2A statute and regulations, which generally relate to retaliation for exercising rights under the program, the WHD will investigate the claim of discrimination under the H–2A statute and regulations and refer the claim of citizenship or other discrimination to the Department of Justice or to any other appropriate agency.

The language of this provision has been modified to conform to the changes made in § 501.20 of the Final Rule to WHD's debarment authority. The Final Rule provides that WHD ''may recommend to ETA debarment of any such violator from future labor certification,'' rather than stating that WHD ''may initiate action to debar any such violator from future labor certification.''

Section 501.3(a)(5) of the Final Rule provides, consistent with the proposed rule, that an employer may not retaliate or discriminate against an employee who has consulted with an attorney or an employee of a legal assistance program. This provision does not, however, provide employees license to aid or abet trespassing on an employer's property, including by persons offering advocacy or legal assistance. No matter how laudable the intent of those offering advocacy or legal services, an employee does not have the legal right to grant others access to the private property of an employer. A farm owner is entitled to discipline employees who actively aid and abet those who engage in illegal activity such as trespassing. Absent any evidence of a workers' actively aiding or abetting such activity, however, an employer's adverse action against an employee in response to that employee meeting with a representative of an advocacy or legal services organization, particularly on the worker's own time and not on the employer's property, would be viewed as retaliation.

Section 501.4 Waiver of Rights Prohibited

Proposed § 501.4 proposed a change to the existing regulation to conform to the modified definition of corresponding employment in § 501.0 and to remove language that was not necessary to the meaning or interpretation of the regulation. No other change was intended. The final regulation adds language that was included in the prior regulation to make clear that the prohibition on the waiver of rights does not prevent agreements to settle private litigation.

An agricultural organization expressed concern that this provision prohibits anyone from seeking a waiver of rights and recommended that the Department clarify that this does not preclude offering a settlement, proposing a waiver or general release, or informally resolving disputes in the workplace. As noted above, the Department has included language from the current regulation stating that agreements to settle private litigation are not prohibited. In other contexts employees may not waive statutory or regulatory rights.

Section 501.5 Investigation Authority of Secretary

This section reflects a change from the proposed rule to reflect that WHD will recommend debarment to ETA. *See* 29 CFR 501.20. In addition, the proposed rule provided that sanctions may be imposed on any employer that does not cooperate with an H–2A investigation. One commenter stated that the proposed rule changed the broader term *person* to *employer* and recommended the use of the prior language. The term *employer* is used to conform to the statutory language. To be consistent with language used elsewhere in the part and in 20 CFR 655 Subpart B, this section now includes the employer's attorney or agent.

Section 501.6 Cooperation With DOL Officials

The proposed changes to § 501.6 were intended to ensure that DOL officials receive cooperation from employers participating in the H–2A Program in conducting audits, investigations, and other enforcement procedures intended to ensure the efficiency and effectiveness of the Program and included language specifically addressing WHD's authority to debar under the H–2A Program. The regulation was changed to reflect the fact that WHD will make debarment recommendations to ETA and has been clarified to require all persons to cooperate with investigations so that a failure to cooperate, which encompasses interference with an investigation, would warrant appropriate action by WHD.

Section 501.8 Surety Bond

In order to assure compliance with the H–2A labor provisions and to ensure the safety and security of workers under the H–2A Program, proposed § 501.8 requires all H–2ALCs seeking H–2A labor certification to obtain a surety bond for $10,000, where the H–2ALC employs fewer than 50 employees, or for $20,000, where the H–2ALC's employees number 50 or more. The purpose of § 501.8 is to ensure that workers employed under the H–2A Program receive all wages and benefits owed to them by an H–2ALC who is found to have violated the provisions of the H–2A Program during the period for which it was certified. Rather than requiring H–2ALC applicants to remit

the bonds directly to the Department, however, proposed § 501.8 requires that the H–2ALC attest to having obtained the required bond and to provide the specific bond and bonding company information in conjunction with the H–2A certification application.

The proposed requirement for a surety bond from H–2ALCs was met with approval from two commenters. A worker advocacy organization suggested that the Department consider other associated worker costs in addition to the number of employees to compute the amount of the bond that the H–2ALC would have to obtain.

Other commenters disagreed with the surety bond requirement. An agricultural organization that disagreed with § 501.8, as it was proposed, argued that the surety bonds will not be financially feasible for any but the largest H–2A contractors. It contends that such bonds are not only financially constrictive but are also difficult to obtain in the bond underwriting market. The Department notes, however, that several states, including California, Illinois, Oregon, and Idaho, have adopted similar state regulations requiring comparable surety bond amounts from employers and labor contractors without causing any significant impediments to employers and agricultural labor contractors. The Final Rule has been modified in response to these comments, however, to create a smaller bonding requirement of $5,000 for small H–2ALCs with fewer than 25 employees.

Several commenters argued that the Department's ability to increase the bond amounts based only on its discretion is unreasonable and is outside the scope of the Department's authority. Instead, they suggest that the regulation provide more objective criteria for setting the bond levels instead of relying solely on the discretion of the Secretary of Labor.

The Department has determined that it has the authority, where warranted by the circumstances and supported by objective criteria, to require that an H–2ALC obtain an increase in a bond amount if it is deemed necessary to effectuate the purposes of ensuring that the H–2ALC comply with the requirements and obligations of the H–2A Program. A clarification that objective criteria are required to support an increase in the bond amount has been added to the Final Rule. The due process rights of H–2ALCs are further preserved through the H–2ALC's right to request a hearing pursuant to § 501.33 regarding the Department's determination that the amount of a bond is to be increased in order to be allowed to participate in the H–2A Program. By reviewing the historic bonding requirements in conjunction with worker claims, the Department preserves the discretionary authority needed to ensure that the obligations owed by the H–2ALCs to workers employed under the H–2A program are fulfilled, including wages paid, and to ensure that the protections offered to those workers by the H–2A Program are maintained.

Section 501.10 Definitions

Section 501.10 incorporates the definitions listed in 20 CFR part 655, Subpart B that pertain to 29 CFR part 501. The discussion of definitions that are common to both 20 CFR 655.100 and 29 CFR 501.10 can be found in the preamble for 20 CFR 655, Subpart B above. Several changes were made to the definitions in § 501.10 to conform to changes to the definitions in 20 CFR 655, Subpart B.

As noted in two comments, the definition of *employ* in proposed 29 CFR 501.10 was defined as *to suffer or permit to work,* whereas the terms *employer* and *employee* were defined in terms of the common law test. Since the two concepts are different and the use of *suffer or permit to work* is precluded by the Supreme Court opinion in *Nationwide Mutual Ins.* v. *Darden,* 503 U.S. 318, 322–323 (1992), the reference to suffer or permit to work has been removed.

The definition of work contract has been updated to reflect language used in the proposed changes to 20 CFR part 655, Subpart B.

The proposal, like the Final Rule, utilized the term *successor in interest* in § 501.20. A definition of the term has therefore been added to the Final Rule.

Section 501.15 Enforcement

This section updated references to Section 218 of the INA and changed language addressing corresponding employment. Minor, non-substantive changes have been made to the language of the provision in the Final Rule for purposes of clarity and to update cross-references.

Section 501.16 Sanctions and Remedies

The proposed rule modified the current language to conform to the proposed regulation at § 501.20, which provided authority to the WHD to debar violators under certain circumstances and to conform to the bonding requirements in 20 CFR part 655, Subpart B.

A farm worker advocacy organization comments that the proposed rule can be read to restrict payment of back wages to fixed-site employers in the event that a joint employment relationship exists between a fixed-site employer and an H–2ALC. Since it is the Department's intent to hold both employers in a joint employment relationship liable for back wages, the regulation has been clarified to make that point plain.

The farm worker advocacy organization also commented that the distinction between the WHD's jurisdiction to debar and the ETA's jurisdiction to debar is unclear, and expressed concern that some violations that may merit debarment would not be acted upon. The commenter suggested that debarment authority be concurrent to assure that all appropriate allegations would be addressed. After careful consideration of this alternative, the Department has determined that WHD will make debarment recommendations to ETA. See preamble to § 501.20. The Final Rule has been modified accordingly. Because debarment is addressed explicitly in § 655.118, and because recommendations of debarment are addressed explicitly in § 501.20, the language from § 501.16 of the NPRM has been deleted to avoid potential confusion.

The rule has also been clarified to make explicit that back wages may be assessed in the event a U.S. worker is adversely affected by a layoff or displacement. This clarification conforms the regulation to the provisions of the proposed civil money penalty and debarment regulations which provide for penalties in the event a U.S. worker is adversely affected by a layoff or displacement. Assessment of back wages in the event of a layoff or displacement that is prohibited by these regulations will help to ensure that the employment of the alien in such labor or services will not adversely affect the wages and working conditions of U.S. workers similarly employed. While the authority to assess back wages is already provided in the proposed regulation, the clarification is useful in light of the explicit penalty provisions in §§ 501.19 and 501.20.

Finally, the final rule modifies § 501.16 to make clear that injunctions may be sought to reinstate U.S. workers who are laid off or displaced in violation of the attestation provision found at § 655.105(j), where the Administrator/WHD has found a violation and the employer has refused reinstatement.

Section 501.19 Civil Money Penalty Assessment

Section 218(g)(2) of the INA authorizes the Secretary to set

appropriate penalties to assure compliance with the terms and conditions of employment under the H–2A statute. Proposed § 501.19 increased the maximum civil money penalties from the current maximum of $1,000 per violation. Section 501.19(c)(1) proposed an increase to a maximum penalty to $5,000 per worker for a willful failure to meet a condition of the work contract or for discrimination against a U.S. or H–2A worker who filed a complaint, has testified or is about to testify, or has exercised or asserted a protected right. Section 501.19(d) proposed a change to the maximum penalty for interference with a WHD investigation to $5,000 per investigation. Section 501.19(e) proposed an increase to $15,000 for the maximum penalty for a willful failure to meet a condition of the work contract that results in displacing a U.S. worker employed by the employer during the period of employment on the employer's application, or during the period of 75 days preceding such period of employment. Section 501.19(c)(2) proposed a new penalty of up to $50,000 per worker for a violation of an applicable housing or transportation safety and health provision of the work contract that causes the death or serious injury of any worker. The section also proposed a new penalty of up to $100,000 per worker where the violation of a safety and health provision involving death or serious injury is repeated or willful.

Three worker advocacy organizations and a U.S. Senator supported the Department's proposal to increase the amount of fines and penalties for noncompliance with H–2A rules. One commenter stated that enhanced enforcement activities are key to an effective attestation-based application program and encouraged the Department to utilize all fines levied for noncompliance to further enhance enforcement measures. Similarly, one worker advocacy organization stated that the increased money penalties are welcomed and may have some tangible deterrent effect; however, it did not think they were adequate to achieve meaningful assurance of employer compliance.

Fourteen commenters opposed the proposed increases in penalties and fines, arguing that the increases are excessive. Six commenters argued that the excessive increases in fines and penalties would discourage employers, especially new employers, from using the H–2A Program. Some agricultural organizations raised concerns that the increased penalties would deter employers from participating in the program out of fear that excessive penalties could end a business. Similarly, some agricultural organizations argued that the increased penalties are excessive given the complicated nature of the program and the likelihood of an inadvertent mistake on the part of the employer that could prove to be financially disastrous. One farm labor contractor argued that the fines are unnecessary since employers strive to treat all workers fairly and attempt to follow the rules.

Some commenters suggested that the Department not assess a $5,000 civil money penalty against employers new to the H–2A Program and the certification requirements. While one commenter endorsed and encouraged the Department's ability to utilize all fines and penalties for noncompliance with the H–2A rules, he raised some concern that the proposal does not provide any leeway to new users of the program. The commenter recommended a graduated system of fines to allow for a learning curve for new users. Similarly, one agricultural organization suggested that the civil money penalties be graduated for the first, second, and third offenses to allow for a learning curve due to the complexity of the program.

Initially, it should be noted that the current regulation at 29 CFR 501.19(c) provides penalties in the maximum amount of $1,000 for *each act* of discrimination or interference. While the Final Rule will result in increased penalties in some cases, it will also limit penalties for discrimination to $5,000 per worker and penalties for failure to cooperate to $5,000 *per investigation*, creating new caps for these penalties. The Department has revised 29 CFR 501.19(d) to cover a ''failure to cooperate with an investigation'' so that the language of the violation is consistent with §§ 501.6, 501.20, and 501.21.

The Department does not believe that higher penalties, where applicable, will prevent employers from participating in the H–2A Program. Rather, the Department agrees with this commenter that enhanced enforcement activities are key to an effective attestation-based application program and will assist the Department in enforcing worker protections. The higher penalties are an important and effective deterrent against violators who disregard their obligations under the attestation program and/or who discriminate against workers.

It is worth noting that some commenters believe that the penalties are excessive, while others claim they are inadequate. The Department believes that the general penalties of no more than $1,000 for each violation, and $5,000 for each willful failure to meet a covered condition of the work contract or for willful discrimination, are fully appropriate, and those penalties have been left unchanged in the Final Rule. To clear up ambiguities in the proposed rule, however, the Department has inserted clarifying language specifying how it is that the existence of separate violations subject to those penalties will be determined.

While the new sections increase the amount of the penalties that the Department may seek for some violations, they do not modify or change in any way the relevant factors that the Administrator/WHD will use in determining the amount of the penalty as listed in the prior rule. The Administrator/WHD will not seek the maximum amount for every violation. Rather, the Administrator/WHD will continue to evaluate the relevant factors listed in § 501.19(b), and the totality of the circumstances, when determining the amount of the penalty. The factors that will be considered include, but are not limited to, the previous history of violation(s) of the H–2A provisions of the Act and the regulations; the number of H–2A employees, corresponding U.S. employees or those U.S. workers individually rejected for employment affected by the violation(s); the gravity of the violation(s); efforts made in good faith to comply with the H–2A provisions of the Act and these regulations; explanation of the person charged with the violation(s); commitment to future compliance, taking into account the public health, interest or safety, and whether the person has previously violated the H–2A provisions of the Act; and the extent to which the violator achieved a financial gain due to the violation, or the potential financial loss or potential injury to the worker. The phrase ''H–2A employees, corresponding U.S. employees or those U.S. workers individually rejected for employment'' has been substituted for the phrase ''workers'' in § 501.19(b)(2) of the current regulation to clarify the scope of potentially impacted workers that the Department will examine in determining an appropriate penalty, and to make clear that workers will not be considered unless they were sufficiently proximate to the violation in question that the Department can fairly consider the workers to have suffered a direct adverse effect. These criteria assure that excessive penalties will not be assessed and that penalties will be appropriately tailored when minor or inadvertent violations are committed.

As previously noted, the Department's proposal also allows the Administrator/WHD to seek higher civil money penalties for a violation of an applicable housing or transportation safety and health provision of the work contract that causes death or serious injury of any worker. The Department has corrected a typographical error in § 501.19(c)(3), which inadvertently stated that ''[f]or purposes of paragraph (c)(3) of this section, the term *serious injury* means.'' The proposed section should have referenced paragraph (c)(2).

One agricultural organization supported increased prosecution of repeat or flagrant violators of the H–2A Program instead of implementing excessive fines for inadvertent violations. Some commenters disagreed with the $50,000 penalty per worker for these violations, and one agricultural organization opposed additional penalties of $50,000, and $100,000 for violations that result in injury and death. These commenters expressed concerns that in some circumstances an employer could have no reasonable means of knowing about housing or transportation defects or an employee's misbehavior or carelessness that could lead to serious injury or death. One agricultural organization argued that these penalty increases would not reduce accidents but would rather deter employers from participating in the H–2A Program.

The Department is sensitive to the fact that the proposed penalties represent increases of up to 100 times the current maximum penalty amount. Nevertheless, the Department believes that the current penalties are grossly inadequate to address serious program violations that kill or seriously injure workers. In light of the concerns expressed, however, and to better tailor the proposed very substantial penalties to the employer's actual level of culpability, the Department has modified the penalties in the Final Rule. The Final Rule provides that ''[f]or a violation of a housing or transportation safety and health provision of the work contract that proximately causes the death or serious injury of any worker, the civil money penalty shall not exceed $25,000 per worker, unless the violation is a repeat or willful violation, in which case the penalty shall not exceed $50,000 per worker, or unless the employer failed, after notification, to cure the specific violation, in which case the penalty shall not exceed $100,000 per worker.''

The Department also notes in response to these commenters that the Administrator/WHD will not seek the full amount in every circumstance. The Department will continue to evaluate the relevant factors listed in § 501.19(b), and the totality of the circumstances, to determine the civil money penalty assessment for these violations. For instance, the gravity of the violation(s); efforts made in good faith to comply with the H–2A provisions of the Act and these regulations; explanation of the person charged with the violation(s); and the extent to which the violator achieved a financial gain due to the violation, or the potential financial loss or potential injury to the worker will be considered by the Department in determining the civil money penalty assessment against an employer for a violation of an applicable housing or transportation safety and health provision of the work contract that causes death or serious injury of any worker. The Department believes that evaluating these relevant factors, along with the totality of the circumstances, should alleviate the commenter's concerns that excessive penalties will be assessed for inadvertent violations. Furthermore, one commenter expressed concern that serious injury is not further defined. It is the Department's view that § 501.19(c)(3), which defines serious injury as the permanent loss or substantial impairment of the senses, function of a bodily member, organ, or mental faculty, or the loss of movement of a body part, is sufficient to put employers on notice as to the types of injuries that the Department will consider when assessing a penalty.

One agricultural organization stated that penalties are not the proper deterrent to stop safety violations because they are imposed after an accident and recommended greater emphasis on preventing accidents. Similarly, two agricultural organizations requested a specified time period for employers to correct violations before penalties would be assessed. One agricultural organization stated that employers who make good faith efforts to comply with the revised H–2A Program should be allowed a 60 day compliance period to correct the error without the assessment of fines and penalties.

While the Department recognizes the need to prevent accidents before they happen, the Department believes that the burden to do so should rest with the employer who has attested that the housing and/or transportation provided to the workers meets all applicable requirements. Furthermore, the ability to assess a civil money penalty where violations have been found will serve as an important incentive for employers to ensure that the housing and transportation that they provide are safe to the H–2A and U.S. workers and meet all applicable safety and health requirements. The Department does not believe that a 60 day compliance period after a violation has been discovered would ensure that employers fulfill their obligations to provide safe housing and transportation. Rather, the 60 day compliance period would not be an effective deterrent for employers who might not cure safety violations until discovered by the Department.

One law firm argued that, to the extent that the Department contemplates issuing fines for violations of other laws, such as the Occupational Safety and Health Act or Fair Labor Standards Act, those fines would be duplicative and not authorized by law. The law firm also argued that there is no justifiable basis for treating H–2A employers more harshly than non-H–2A employers for violations of the same statute, but even if special treatment for violations of other laws by H–2A employers could be justified, any enhanced enforcement through heavier penalties or other punitive action for failure to comply fully with other laws as violations of the H–2A regulations should at least be deferred for at least 3 years after any new rules are implemented. The Department does not and will not assess penalties for the same housing violation under multiple laws at the same time. Where an employer violates an OSHA Temporary Labor Camp standard, which could also be a violation of the H–2A housing regulations, a violation will be charged under only one of those statutes. WHD follows this practice in enforcing OSHA temporary labor camp standards and MSPA housing standards that can apply to the same facility. However, an employer has an obligation to follow all applicable laws and regulations. To the extent that an employer is covered by the FLSA, the Division may enforce and seek remedies under both the H–2A program and the FLSA. Of course, payment of the AWER, or the prevailing hourly wage or piece rate under the H–2A Program, would also satisfy the obligation to pay the minimum wage under the FLSA. While all of the facts and circumstances of a given case will be considered in the assessment of any penalty, the Department has determined that a blanket 3 year deferral of penalty assessments is not warranted.

The proposed § 501.19(e) states that the civil money penalty shall not exceed $15,000 per worker for willful layoff or displacement of any similarly situated U.S. worker employed in the occupation that is the subject of the *Application for Temporary Employment Certification* in the area of intended employment within

the period beginning 75 days before the date of need. A civil money penalty will not be assessed for layoffs where the employer has offered the opportunity to the laid-off U.S. worker, and the U.S. worker(s) either refused the job opportunity or was rejected for the job opportunity for lawful, job-related reasons. The Final Rule has changed the 75 day period to a period within 60 days of the date of need in conformity with the change to § 655.100(a)(1)(ii) which modified the requirement that the employer begin advertising within 75 days of the date of need to within 60 days of the date of need.

Some commenters argued that $15,000 for displacement of a domestic worker was excessive and could put a small farm out of business. The Department is sensitive to the fact that this penalty represents a fifteen-fold increase in the maximum penalty provided for any offense under the current regulations. Nevertheless, unlawfully displacing a domestic worker is a serious offense that has a substantial adverse effect on the displaced worker, and thus falls within the core of the Department's enforcement responsibilities. Balancing these competing concerns, the Department has decided to adopt a $10,000 maximum penalty for displacement of a U.S. worker in the Final Rule, a tenfold increase over the current maximum penalty for any violation. This penalty will provide the Department with an important enforcement tool under this attestation-based program. The Department believes that a significant penalty will serve as an important deterrent for employers who might turn away qualified U.S. workers from an occupation covered by an *Application for Temporary Employment Certification.* As discussed above, the Department will continue to evaluate the relevant factors listed in § 501.19(b), as well as the totality of the circumstances, to determine the civil money penalty assessment for these violations.

One commenter argued that the Department was purporting to legalize the displacement of U.S. farm workers based on nothing more than an employer's unscrutinized, self-serving statement that U.S. workers did not want, or were unqualified for, the job. The Department did not intend this consequence, and on further consideration has determined that such an expansive safe harbor provision for layoffs is not necessary. Layoffs that are for lawful, job-related reasons are already protected under the text of the Final Rule, and the Department does not believe that it is appropriate to allow an employer to legitimize an otherwise illegal layoff simply by later offering the laid-off employee a new position. The Department has therefore limited the application of the safe harbor provision to situations ''where all H–2A workers were laid off'' before any U.S. workers were. In such a situation, the employment of H–2A workers will not have factored into the layoff of the U.S. workers.

One agricultural organization argued that the safe harbor provision seems to require an actual offer and would not be satisfied by a good faith, but unsuccessful, attempt to locate the domestic worker. The agricultural organization noted that it may be difficult to locate domestic workers to make the offer and recommended that the attestation could be satisfied with reasonable, good-faith efforts to contact these workers through a written communication to the worker's last known address or any other reasonably specific attempt to make contact. In light of the modifications to the safe harbor provision, these comments have been rendered moot.

The agricultural organization also argued that this section should be revised because the maximum period of admission under the H–2A Program for one employer is 10 months, making it possible that the employer could discharge the domestic worker at the end of the employer's period of need and then begin a new employment period 2 months later. This employer would have discharged the domestic worker within the displacement provision timeline, notwithstanding the fact that the employer was in compliance with the H–2A Program. The agricultural organization argued that this could expose employers to large fines for no reason other than the timing of the seasons. The agricultural organization recommended that the section be revised to reflect the time frames inherent in the H–2A regulations to avoid this inequitable outcome. As noted above, the time frames have been modified to prohibit displacement and layoff within 60 days of the date of need. In any event, in light of the modifications to the safe harbor provision, these comments have been rendered moot.

One law firm requested that the Department remove what they considered improper, substantial new penalties against agents and attorneys of H–2A employers who are found or accused of making material misrepresentations in the certification application process. The law firm stated that such disciplinary measures are usually handled through the state bar association and that imposing substantial penalties, including debarment merely for accusations of material misrepresentations, is a violation of due process principles. There is no explicit reference in this provision to attorneys or agents. As is discussed at greater length in the preamble to Part 655, the Department will not hold attorneys and agents strictly liable under the Final Rule for the misconduct of their clients. Rather, the Department will require some degree of personal culpability on the part of attorneys and agents before applying any form of penalty to them.

Some commenters argued that the new regulations failed to provide an appeals process for violations or fines and requested that procedures be developed to allow employers to appeal violations and fines when good faith efforts were taken to comply with the rules. The Department already provides such a process in Subpart C—Administrative Proceedings. The current § 501.30 provides the administrative proceedings that will be applied with respect to a determination to impose an assessment of civil money penalties. Under current and proposed § 501.33(a), any person who desires review of a civil money penalty determination shall make written request for an administrative hearing no later than 30 days after issuance of the notice to the official who issued the determination at the Wage and Hour Division. Such timely filing of an administrative appeal stays the determination pending the outcome of the appeals process pursuant to proposed § 501.33(d).

Section 501.20—Debarment and Revocation

The current regulations provide ETA with the authority to deny certification (i.e., debarment) and revoke certificates while requiring the WHD to report findings and make recommendations to ETA to deny future certifications and revoke current certificates. The NPRM proposed providing debarment authority for issues arising from WHD investigations to the Administrator/WHD, while debarment authority for issues arising out of the attestation process would have remained with ETA. The Final Rule modifies the proposal by adhering to the current practice, providing ETA authority for debarment and revocation, and providing the Wage and Hour Division authority to make a debarment recommendation.

A number of commenters opposed extending debarment authority to the

WHD. These commenters requested that debarment authority remain with ETA to avoid inconsistencies in the interpretation of the H–2A regulations between WHD and ETA. One of these commenters stated that extending debarment authority to the WHD would enhance enforcement, while recommending regulatory language requiring coordination between the two agencies. One commenter stated that the WHD should have concurrent debarment authority with ETA to ensure that debarment is available for all appropriate violations.

After a careful review of the comments, the Department has concluded that providing debarment authority to two different agencies within the Department for different, though potentially overlapping types of violations could result in unnecessary confusion. Debarment authority will therefore remain with ETA, which will entertain recommendations from WHD.

However, under the current system the Board of Alien Labor Certification Appeals (BALCA) adjudicates appeals of ETA debarment determinations based upon WHD recommendations, while appeals of WHD back wage and civil money penalty assessments are adjudicated by the Administrative Review Board (ARB). WHD debarment recommendations generally arise from the same set of facts, involving the same evidence as WHD back wage and civil money penalty assessments. To conserve resources and avoid unnecessary duplication of litigation, the Final Rule specifies at § 501.20(e) that ''In considering a recommendation made by the Wage and Hour Division to debar an employer or to revoke a temporary agricultural labor certification, the Administrator/OFLC shall treat final agency determinations that the employer has committed a violation as *res judicata* and shall not reconsider those determinations.''

The standards for debarment recommendations used by WHD have been conformed to ensure that they are identical to the standards used by ETA for debarment actions under 20 CFR 655, Subpart B, thus ensuring consistency in application, though ETA has some additional standards that are not applicable to the WHD role and will not be utilized by WHD.

The proposed rule did not include a change to the current revocation procedures, under which WHD provides recommendations to ETA for certificate revocation. That procedure is adopted in the Final Rule, together with more specific revocation criteria, which have been modified to conform to the criteria set forth in 20 CFR 655, Subpart B.

Section 501.21 Failure To Cooperate With Investigations

Section 501.21 has been modified in the Final Rule to conform to the changes made in § 501.20 regarding WHD's authority to make debarment and revocation recommendations to ETA. The relevant language in the Final Rule now provides that ''a civil money penalty may be assessed for each failure to cooperate with an investigation, and other appropriate relief may be sought. In addition, the WHD shall report each such occurrence to ETA, and ETA may debar the employer from future certification. The WHD may also recommend to ETA that an existing certification be revoked.''

Section 501.22 Payment and Collection of Civil Money Penalties

No changes to this section were proposed in the NPRM. The text of the current regulation has been included in the Final Rule with only one alteration, specifying that a ''penalty is due within 30 days.''

Section 501.30 Applicability of Procedures and Rules

The language in § 501.30 was revised in the proposed rule to illustrate the administrative process for assessing civil money penalties and seeking a debarment under the H–2A Program. With the exception of civil money penalty assessments and debarment disputes, the Department of Labor may file an action directly in Federal court seeking enforcement. Section 501.30 has been modified in the Final Rule to conform to the changes made in § 501.20 regarding WHD's authority to make debarment recommendations to ETA.

Section 501.31 Written Notice of Determination Required

The administrative process was revised in the proposed rule to reference WHD's authority to debar. Section 501.31 has been modified by deleting the phrase ''to debar'' to reflect the fact that WHD recommendations for debarment do not constitute ''determinations'' of the Administrator/WHD that are subject to hearing requests under § 501.33.

Section 501.32 Contents of Notice

This section was revised in the proposed rule to reference WHD's authority to debar. Section 501.32 has been modified by deleting the phrase ''whether to debar and the length of the debarment'' to reflect the fact that WHD recommendations for debarment do not constitute ''determinations'' of the Administrator/WHD that are subject to hearing requests under § 501.33.

Section 501.33 Requests for Hearing

The proposed rule added language to the regulation to make clear that exhaustion of the appeal of the Administrator/WHD's determination is required before a party may appeal an agency ruling to Federal court. No comments were received and the Final Rule is adopted as proposed.

Section 501.41 Decision and Order of Administrative Law Judge

Some minor, non-substantive changes were made to paragraph (c) of this provision, including the creation of a new paragraph (d), for purposes of clarity and consistency with § 501.42.

Section 501.42 Exhaustion of Administrative Remedies

Proposed § 501.42 clarified the current regulation to assure that the exhaustion of all administrative remedies is required before an appeal of the decision of the administrative law judge can be taken to the Federal courts pursuant to the Administrative Procedure Act.

One commenter noted that the additional language, stating that the decision of the administrative law judge shall be inoperative pending final review of the Administrative Review Board's (ARB) decision, was unnecessary to ensure exhaustion and harmful to workers. In *Darby* v. *Cisneros,* 509 U.S. 137, 152 (1993), the Supreme Court decided that agencies may not require exhaustion of administrative remedies before an appeal may be filed with a federal district court unless a rule is adopted that an agency appeal must be taken before judicial review is available, and it is provided that the initial decision is *inoperative* pending appeal. *Id.* Accordingly, the additional language is necessary to the exhaustion requirement. Further, it is unclear what harm may result from requiring that workers await a decision by the ARB before appealing to Federal court. There is a distinct public benefit from the uniform agency decision making process accorded by ARB review. Additional language has been added to this provision to clarify when an administrative law judge's decision becomes final agency action.

C. Revisions to 29 CFR Parts 780 and 788

In the notice of proposed rulemaking (NPRM) published February 13, 2008, the Department proposed a modification to Parts 780 and 788 of the FLSA

regulations to recognize that the production of ''Christmas'' trees through the application of agricultural and horticultural techniques to be harvested and sold for seasonal ornamental use constitutes agriculture as the term is defined under the FLSA. As explained in the preamble to the NPRM, the Department deemed this change necessary in light of the Fourth Circuit Court of Appeals' decision in *U.S. Department of Labor* v. *North Carolina Growers Association,* 377 F.3d 345 (4th Cir. 2004), and because it recognizes that modern production of such trees typically involves extensive care and management.

Many individual employers, trade associations, and associations of growers approved of the Department's proposed rule to classify Christmas tree farming as an agricultural activity under FLSA. Several commenters noted that the Christmas tree industry had undergone significant changes, such as no longer harvesting from natural stands, in the time since the FLSA was first passed in 1938. Commenters also listed a range of current common practices shared by Christmas tree producers and other row crop farmers, such as planting, pruning, weed control, pest control, transplanting, and harvesting under a deadline. The insight provided by these comments further confirms that the determination to classify Christmas tree farming as agriculture under the FLSA is appropriate.

Two commenters suggested that many of these activities were also covered by the 1938 FLSA primary definition of agriculture. Moreover, the commenters maintained that, since the FLSA classifies nursery activities as an agricultural activity, Christmas tree production and harvesting, which the commenters believed to be nearly identical to those in nursery production and harvesting, must also be classified as agricultural activity.

Several commenters expressed appreciation for the Department's attempt to establish a national standard for Christmas tree labor status. Several others maintained that the ambiguity surrounding the industry's status had hurt Christmas tree growers nationally because laws were not being applied in a uniform fashion across the states. In addition, many commenters pointed to the Fourth Circuit's 2004 decision in *North Carolina Growers Association,* in which the court held that Christmas tree farming fit the definition of agriculture as proof that Christmas tree production was an agricultural activity. *See* 377 F.3d at 352. This holding created confusion between the Department's classification and federal law. Two commenters noted that Christmas tree growers located in the Fourth Circuit may have achieved clarity with respect to their status as agricultural producers, but the status of all other Christmas tree growers not within the jurisdiction of the Fourth Circuit remained unclear until now.

Other commenters added that, under many other federal rules including property tax, sales tax, and agricultural worker's protection standards for pesticide use, Christmas tree growers were already considered to be agricultural. Several commenters acknowledged that certain Christmas tree growers may dig trees with a soil ball, which is considered a nursery activity and therefore an agricultural activity, but may also produce trees for harvesting by cutting, which has, historically, not been considered to be agricultural activity. The commenters noted that the decision to dig or cut a tree depends on market conditions at the time of harvest, and the same employees could hypothetically participate in both scenarios. Two commenters concluded, however, that this difference between nursery and Christmas tree harvesting was irrelevant because the production practices remained the same and should be construed as agriculture. Likewise, one commenter wrote that the same equipment was often used for both Christmas tree production and nursery projects.

Three commenters offered suggestions for minor changes to the rule stating that the proposed language offered overly specific timeframes for horticultural operations. The commenters argued that such timeframes may vary according to region and tree species and that future changes to horticultural procedures might affect some of the listed activities in the rule. One commenter further stated that removing the timeframes would not affect the Christmas tree industry's ability to operate within the FLSA's definition of agriculture, but would possibly eliminate an unnecessary rigidity that might otherwise disqualify Christmas tree production that appropriately qualifies for agricultural status. The Fourth Circuit's reasoning in the *North Carolina Growers Association* case clearly articulated that performance of certain actions on the plants is an important indicator that what is being produced is a seasonal ornamental horticultural commodity. *See* 377 F.3d at 345. The regulatory language addressing timeframes is sufficiently flexible to allow for variation in timeframes due to region, species, and procedural differences. Indeed, the Final Rule expressly qualifies the listed timeframes by saying that the agricultural techniques applied must be those ''such as the following.'' The Department will not apply the listed timeframes with undue rigidity.

One commenter, commenting on its own behalf and on behalf of numerous advocacy groups, opposed the rule, asserting that, while the H–2A program offered more comprehensive protections for workers than did the H–2B classification (under which many Christmas tree harvest workers had previously been allowed into the country to work), Christmas tree workers under the H–2A Program would lose their coverage under MSPA as well as their claims to overtime. The commenter added that the matter of overtime pay was critical because the Christmas tree harvest season can be extremely intense with extensive overtime work. Temporary, non-immigrant workers for Christmas tree production have been brought in under the H–2A Program and not the H–2B non-agricultural Program for many years now based on the IRC definition of agriculture, which the H–2A regulations use (as well as the FLSA definition of agriculture), and would not have been within the definition of a worker subject to MSPA. The proposed rule insures equity within the industry in that employers across the country will be bound by the same requirements under the FLSA in the wake of the Fourth Circuit's *North Carolina Growers Association decision. See id.* The Department is adopting the proposed changes for 29 CFR Part 780 without change.

No comments were received with respect to the proposed change to 29 CFR Part 788.10. Therefore, the Department is adopting the proposed rule without change in the Final Rule.

III. Administrative Information

A. Executive Order 12866—Regulatory Planning and Review

Under Executive Order (E.O.) 12866, the Department must determine whether a regulatory action is ''significant'' and therefore subject to the requirements of the E.O. and subject to review by the Office of Management and Budget (OMB). Section 3(f) of the E.O. defines a ''significant regulatory action'' as an action that is likely to result in a rule (1) having an annual effect on the economy of $100 million or more, or adversely and materially affecting a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local or

tribal governments or communities (also referred to as ''economically significant''); (2) creating serious inconsistency or otherwise interfering with an action taken or planned by another agency; (3) materially altering the budgetary impacts of entitlement grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raising novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the E.O. The Department has determined that this Final Rule is not an ''economically significant regulatory action'' under Section 3(f)(1) of E.O.12866. The procedures for filing an *Application for Temporary Employment Certification* under the H–2A visa category on behalf of nonimmigrant temporary agricultural workers, under this regulation, will not have an economic impact of $100 million or more. The regulation will not adversely affect the economy or any sector thereof, productivity, competition, jobs, the environment, nor public health or safety in a material way. In fact, this Final Rule is intended to provide relief to affected employers both directly, by modernizing the process by which they can apply for H–2A labor certification, and indirectly, by increasing the available legal workforce. The Department, however, has determined that this Final Rule is a ''significant regulatory action'' under Section 3(f)(4) of the E.O. Summary of Impacts. The changes in this Final Rule are expected to have little net direct cost impact on employers, above and beyond the baseline of the current costs required by the program as it is currently implemented. The re-engineering of the program requirements, including attestation-based applications and pre-application recruitment, will have the effect of reducing employer application costs in time and resources and introduce processing efficiencies that will reduce costs for employers, particularly costs associated with loss of labor due to delayed certifications.

Employer costs for newspaper advertising will increase slightly, as the Final Rule will require that one of the two currently required advertisements be run on a Sunday. However, the Department believes that this cost increase will be offset by the certainty the Final Rule will provide regarding total recruitment costs. Most significantly, the Final Rule has eliminated the possibility that additional, unstated recruitment measures may be imposed on program users at the last minute, and further provides program users an annual list of traditional labor supply states that will inform them in advance of precisely where they will be required to engage in out-of-state newspaper advertising.

Civil money penalties have increased substantially under the Final Rule, but these represent avoidable costs, and the Department believes that they will have the deterrent effect of fostering greater program compliance under the Final Rule.

The biggest cost to employers under the Final Rule is likely to be an increased cost of foreign recruitment, since employers can no longer allow foreign recruiters with whom they are in privity of contract to charge foreign workers fees for recruitment. The Department believes that this cost can be substantially offset by collaborative recruitment, however, and that it will not be so large as to overcome employers' cost savings resulting from streamlining of the application process and program efficiencies. The Department requested comment on what costs these policies introduce and what efficiencies may be gained from adopting these new procedures, to foster a thorough consideration and discussion of the rule's costs and benefits before its finalization. Several commenters believed that the proposed changes could increase costs for employers and doubted that they would achieve the proposed objectives. Many of these concerns have been addressed by changes in the Final Rule, including reductions in the newspaper advertising and record retention requirements.

The additional record retention costs for employers are minimal and the Final Rule includes a three-year requirement as compared to the originally proposed five-year requirement. The new record retention requirements will require a burden of approximately ten minutes per year per application to retain the application and supporting documents above and beyond the one year of retention required by regulations of the Equal Employment Opportunity Commission (EEOC) at 29 CFR 1602.14, promulgated pursuant to Title VII of the Civil Rights Act and the Americans With Disabilities Act, and 29 CFR 1627.3(b)(3), promulgated pursuant to the Age Discrimination in Employment Act. In FY 2007, 7,725 employers filed requests for 80,294 workers. Using standard administrative wage rates, including benefits, of $60.42 [15] per hour, this additional burden for each of the two years following the mandated year above is approximately $77,791 total per year (or approximately $10 per applicant per year) if the current number of requests remains constant. Any increase in the use of the program would result in the same ultimate burden to each individual applicant.

Employers will experience efficiencies as a result of the reengineering of the process. These savings are expected to result primarily from the simplified attestation-based application. While the Department cannot precisely estimate the cost savings as a result of this time saved, it believes that employers will experience economic benefits as a result of this reengineering of the application process to an attestation-based submission, including lower advertising costs and fewer unanticipated labor costs due to post-date-of-need hiring requirements. Savings to employers will be universal to new users as well as current participants. Savings from efficiency gains may be impacted, however, by increased usage of the program by agricultural employers, which could delay processing times within the Department.

B. Regulatory Flexibility Analysis

When an agency issues a rulemaking proposal, the Regulatory Flexibility Act (RFA) requires that a regulatory flexibility analysis be prepared and made available for public comment. The RFA must describe the impact of the rule on small entities. *See* 5 U.S.C. 603(a). Section 605 of the RFA allows an agency to certify a rule, in lieu of preparing an analysis, if the rulemaking is not expected to have significant economic impact on a substantial number of small entities. The Assistant Secretary of ETA has notified the Chief Counsel for Advocacy, Small Business Administration (SBA), and certifies under the RFA at 5 U.S.C. 605(b), that this rule will not have a significant economic impact on a substantial number of small entities. The rule does not substantively change existing obligations for employers who choose to participate in the H–2A temporary agricultural worker program.

The factual basis for such a certification is that even though this rule can and does affect small entities, there are not a substantial number of small entities that will be affected, nor is there a significant economic impact upon those small entities that are affected. Of the total 2,089,790 farms in the United States, 98 percent have sales of less than $750,000 per year and fall within SBA's definition of small entities. In FY 2007, however, only

[15] Derived by utilizing the Bureau of Labor Statistics 2006 median wage for Human Resources Manager wage of $42.55 and a 1.42 factor for the cost of benefits and taxes.

7,725 employers filed requests for only 80,294 workers. That represents fewer than 1 percent of all farms in the United States. Even if all of the 7,725 employers who filed applications under H–2A in FY2007 were small entities, that is still a relatively small number of employers affected. The Department does anticipate a substantial increase in program usage as a result of the Final Rule, but even a doubling in program usage would mean the participation of only about 15,500 employers, not all of whom would be small entities.

Even more important than the number of small entities affected, however, the Department believes that the costs incurred by employers under this Final Rule will not be substantially different from those incurred under the current application filing process. Employers seeking to hire foreign workers on a temporary basis under the H–2A program must continue to establish to the Secretary of Labor's satisfaction that their recruitment attempts have not yielded enough qualified and available U.S. workers and that their hiring of foreign workers will not adversely affect the wages and working conditions of similarly employed U.S. workers. Similar to the current process, employers under this newly reengineered H–2A process will file a standardized application for temporary labor certification and will retain recruitment documentation, a recruitment report, and any supporting evidence or documentation justifying the temporary need for the services or labor to be performed.

To estimate the cost of this reformed H–2A process on employers, the Department calculated the current costs each employer likely pays in the range of $124.00–$170.00 to meet the advertising and recruitment requirements for a job opportunity, and spends approximately 3 hours of staff time preparing the standardized applications for the required offered wage rate and for temporary labor certification, final recruitment report, and retaining all other required documentation (e.g., newspaper ads, job orders, business necessity) in a file for audit purposes that is not otherwise required to be retained in the normal course of business. In estimating employer staff time costs, the Department used the median hourly wage rate for a Human Resources Manager ($42.55), as published by the U.S. Department of Labor's Occupational Employment Statistics survey, O*Net OnLine,[16] and increased it by a factor of 1.42 to account for employee benefits and other compensation for a total staff time cost of $181.26 per applicant.

The Department acknowledges that there might be some extremely small businesses that may incur additional costs to file their application on-line if and when the Department moves to an electronic processing model. The total costs for the small entities affected by this program will most likely be reduced or stay the same as the costs for participating in the current program. Even assuming that all entities who file H–2A labor certification applications are considered to be small businesses, the net economic effect is not significant.

The Department invited comments from members of the public who believed there will be a significant impact on a substantial number of small entities or who disagree with the size standard used by the Department in certifying that this Final Rule will not have a significant impact on a substantial number of small entities. Several small farmers and ranchers offered that the proposal could have substantial impact on sheepherding operations and other small farmers. However, the comments offered addressed costs arising from requirements that were either already in place or were required by statute and therefore were unchanged by this rulemaking. Several other commenters from farming enterprises voiced concern that the Department's determination that the rulemaking was not economically significant was a judgment as to the economic significance of the industry. This was clearly a misconstruction of the Department's intent. The Department recognizes the economic importance of the agricultural and farming sector of the economy and has embarked on this rulemaking to ensure that there are sufficient workers available to ensure the economic success of both individual farms and the agricultural sector as a whole.

Several other commenters, including individual farmers and a law firm representing farming concerns, objected to what they saw as high costs of compliance with the new changes when taken together with the increased costs of filing applications with DHS. The Department appreciates and recognizes the strong cost pressures on American agricultural firms and has taken steps to reduce the costs of compliance wherever possible to ensure that farms of all sizes have the ability to participate in the program and have access to a reliable and legal workforce. We believe the improvements to this Final Rule address many of these concerns, while ensuring program integrity and worker protections.

C. Unfunded Mandates Reform Act of 1995

Section 202 of the Unfunded Mandates Reform Act (UMRA) of 1995 (2 U.S.C. 1501 et seq.) directs agencies to assess the effects of a Federal regulatory action on State, local, and tribal governments, and the private sector to determine whether the regulatory action imposes a Federal mandate. A Federal mandate is defined in the Act at 2 U.S.C. 658(5)–(7) to include any provision in a regulation that imposes an enforceable duty upon State, local, or tribal governments, or imposes a duty upon the private sector which is not voluntary. Further, each agency is required to provide a process where State, local, and tribal governments may comment on the regulation as it develops, which further promotes coordination between the Federal and the State, local, and tribal governments.

The Department of Labor provided several opportunities for State, local, and tribal government input. Representatives from the Department in OFLC hosted webinars with the States on December 2 and 5, 2007, and then again on March 12 and 25, 2008, to discuss the issues outlined in Training and Employment Guidance Letter (TEGL) 11–07, Change 1 (November 14, 2007) that are now codified in the regulation. In addition, the Department hosted and continues to host regular conference calls to discuss these issues. Further, the Department fielded questions about the verification process from the States and posted the responses to them as Frequently Asked Questions on the program office Web site. Finally, the Department invited comments from all individuals, which includes State representatives, through the comment process for this regulation. As a result of these efforts, the Department received only six (6) comments from State agencies on unfunded mandates.

Each of the commenters stated that the regulation imposes an unfunded mandate because there are insufficient funds to support the H–2A activities at the State level. One commenter stated that the State would have difficulty maintaining the same level of quality in the program. Another commenter stated that the rule represents an unfunded mandate because there is no funding for litigation defense.

The Department disagrees that this final rule imposes an unfunded

[16] *Source:* Bureau of Labor Statistics 2006 wage data.

mandate. As noted in the proposed rule, the SWAs are required to perform certain activities for the Federal government under this program, and are compensated for the resources used in performing these activities. Further, under this final rule, the SWAs responsibilities are streamlined and generally reduced because they no longer are responsible for the substantive review of H–2A applications, which will allow the States to use grant funds for other program purposes. The Department recognizes that certain States may see an increase in the use of the program, as two commenters discussed, and as a result, may experience an increase in activities over another State with less H–2A activity. The Department addressed this issue in the proposed rule when it stated that it would analyze the amount of grants to each State to fund H–2A activities. The Department believes it would be premature to make a blanket statement regarding any increases the States may experience until after the new requirements are implemented. Therefore, the Department intends to make funding determinations based on that analysis and after an analysis of any increased usage trends among particular States as part of its normal program management operations. The Department believes it is also premature to presume that the States will have to bear a significant cost to defend against any potential litigation associated with the implementation of this final rule, and which is typically considered part of a grantee's programmatic responsibility, should it occur. A more substantive discussion on the Department's position on defending any potential litigation is located in other sections of the preamble.

Several commenters expressed a concern about using already limited Wagner-Peyser Act funds to compensate for H–2A activities. Although the Department understands the commenters' concern that Wagner-Peyser Act funds may be discontinued, such arguments are not relevant at this time given that the Department currently funds Wagner-Peyser Act activities and intends to continue doing so in the future.

Another commenter stated that TEGL 11–07, Change 1 imposes an unfunded mandate because compliance with the TEGL, which is now codified in the final rule, is a condition for the continued receipt of Wagner-Peyser Act funds. That same commenter also noted that the rule is more restrictive than H.R. 4088 (introduced in the 110th Congress), which is similar to the TEGL.

With regard to this comment, the Department included references to this TEGL in the proposed rule merely to inform the public that the provisions of the TEGL were clarified and codified in this rule. Because the Department already requires States under current program guidance to verify the employment authorization of workers before making H–2A referrals, the Final Rule's codification of these verification requirements will not impose significant new costs on States. The fact that a State may lose its funding for failing to comply with the program requirements, including those in the TEGL and now codified in this final rule, does not rise to the level of an unfunded mandate. The Department notes that this program is voluntary and like all voluntary Federal programs, it comes with responsibilities for managing the program and penalties for failing to adhere to those program requirements. There were no comments from the private sector on this issue. Therefore, for the reasons stated above, the Department has determined that this final rule does not impose any unfunded mandates.

D. Executive Order 13132—Federalism

Executive Order 13132 addresses the Federalism impact of an agency's regulations on the States' authority. Under E.O. 13132, Federal agencies are required to consult with States prior to and during the implementation of national policies that have a direct effect on the States, the relationship between the Federal Government and the States, or on the distribution of power and responsibilities among the various levels of government. Further, an agency is permitted to limit a State's discretion when it has statutory authority and the regulation is a national activity that addresses a problem of national significance. The Department received one comment on this section. This commenter stated that the Department's reversal of a long-standing position on U.S. worker self-attestation creates a Federalism impact. According to this commenter, TEGL 11–07, Change 1, mandates that SWAs perform pre-employment eligibility verifications on every U.S. worker that requests a referral to an H–2A job order. This commenter requests that the Department prepare a summary impact statement and acknowledge that many States currently have attestation-based systems for U.S. worker access to public labor exchange services.

The Department disagrees with this commenter's assessment of a Federalism impact and therefore, the need for a summary impact statement. In this case there is no direct effect on the States. The H–2A program is a Federal program that regulates work visas for temporary agriculture workers, protects employment opportunities for U.S. workers, and prevents an adverse effect on the wages and working conditions of U.S. workers. As noted elsewhere in this preamble, the Department has not reviewed the H–2A program comprehensively since its inception in 1986. These changes are consistent with the Department's review, program experience, and years of stakeholder feedback on longstanding concerns about the integrity of the prior program. Therefore, as a program of national scope, the Department is implementing requirements that apply uniformly to all States.

Even if there were an argument that the Department should defer to the States on the eligibility verification requirements, the Department is authorized by the INA to implement Federal regulations to ensure consistency across States on immigration matters. In addition, given that the H–2A program is an immigration program, it also is a program related to national security with national significance requiring Federal oversight and uniformity. Further, the relationship the States have with this program and the Federal government is by grants from the Department to the States for the sole purpose of maintaining consistency across States. As a voluntary Federal program, the Department may change the direction from time to time as dictated by the changes to immigration concerns, but at the same time are consistent with the underlying legislation.

Furthermore, the Department consulted with the States on the eligibility verification requirements by several means. Representatives from the Department in OFLC hosted webinars with the States on December 2 and 5, 2007, and then again on March 12 and 25, 2008, to discuss the issues outlined in the TEGL that are now codified in the regulation. In addition, the Department hosted and continues to host regular conference calls to discuss these issues. Further, the Department fielded questions about the verification process from the States and posted the responses to them as Frequently Asked Questions on the program office Web site. Finally, the Department invited comments from all individuals, which includes State representatives, through the comment process for this regulation.

Therefore, for the reasons stated, the Department has determined that this rule does not have sufficient Federalism

implications to warrant the preparation of a summary impact statement.

E. Executive Order 13175—Indian Tribal Governments

Executive Order 13175 requires Federal agencies to develop policies in consultation with tribal officials when those policies have tribal implications. This final rule regulates the H–2A visa program and does not have tribal implications. Therefore, the Department has determined that this E.O. does not apply to this rulemaking. The Department did not receive any comments related to this section.

F. Assessment of Federal Regulations and Policies on Families

Section 654 of the Treasury and General Government Appropriations Act of 1999 (5 U.S.C. 601 note) requires agencies to assess the impact of Federal regulations and policies on families. The assessment must address whether the regulation strengthens or erodes the stability, integrity, autonomy, or safety of the family.

The final rule does not have an impact on the autonomy or integrity of the family as an institution, as it is described under this provision. The Department has determined that although there may be some costs associated with the final rule, they are not of a magnitude to adversely affect family well-being. The Department did not receive any comments related to this section.

G. Executive Order 12630—Protected Property Rights

Executive Order 12630, Governmental Actions and the Interference with Constitutionality Protected Property Rights, prevents the Federal government from taking private property for public use without compensation. It further institutes an affirmative obligation that agencies evaluate all policies and regulations to ensure there is no impact on constitutionally protected property rights. Such policies include rules and regulations that propose or implement licensing, permitting, or other condition requirements or limitations on private property use, or that require dedications or exactions from owners of private property.

The Department received one comment on this section. This commenter stated that this rule would have a ''takings'' implication if farmers are forced out of business under this rule. The Department disagrees with this assessment. Although the cost associated with this regulatory action has an impact on commerce, it is not the type of impact addressed by the E.O. This final rule does not propose or implement licensing, permitting or other condition requirements on the use of private property nor does it require dedications or exactions from owners of private property. Accordingly, the Department has determined this rule does not have takings implications.

H. Executive Order 12988—Civil Justice Reform

Section 3 of E.O. 12988, Civil Justice Reform, requires Federal agencies to draft regulations in a manner that will reduce needless litigation and will not unduly burden the Federal court system. Therefore, agencies are required to review regulations for drafting errors and ambiguity; to minimize litigation; ensure that it provides a clear legal standard for affected conduct rather than a general standard; and promote simplification and burden reduction.

The rule has been drafted in clear language and with detailed provisions that aim to minimize litigation. The purpose of this final rule is to streamline the H–2A program and simplify the application process. Therefore, the Department has determined that the regulation meets the applicable standards set forth in Section 3 of E.O. 12988. The Department received no comments regarding this section.

I. Plain Language

Every Federal agency is required to draft regulations that are written in plain language to better inform the public about policies. The Department has assessed this final rule under the plain language requirements and determined that it follows the Government's standards requiring documents to be accessible and understandable to the public. The Department did not receive any comments related to this section.

J. Executive Order 13211—Energy Supply

This final rule is not subject to E.O. 13211, which assesses whether a regulation is likely to have a significant adverse effect on the supply, distribution, or use of energy. Accordingly, the Department has determined that this rule does not represent a significant energy action and does not warrant a Statement of Energy Effects. The Department did not receive any comments related to this section.

K. Paperwork Reduction Act

1. Summary

The Paperwork Reduction Act (44 U.S.C. 3501) information collection requirements, which must be implemented as a result of this regulation, were submitted to OMB on February 14, 2008, in conjunction with the NPRM. Persons are not required to respond to a collection of information unless it displays a currently valid OMB control number as required in 5 CFR 1320.11(l). The public was given 60 days to comment on this information collection under the NPRM even though originally the Department gave the public only 45 days to comment on the rest of the NPRM. On March 27, 2008, the Department published a notice in the **Federal Register** extending the comment period to April 14, 2008, for the rest of the NPRM, which then coincided with the comment period for the information collection. This same information collection was again submitted for public comment under another NPRM for a different program. The comments received pertaining to this rule were taken into consideration and a final package with the forms needed to implement this rule was submitted to OMB and received final approval on November 21, 2008, under OMB control number 1205–0466. The approval will expire on November 30, 2011. The information required under this collection is mandated in this final rule at §§ 655.100(a), 655.101, 655.102(c), 655.104(d), 655.105, 655.106, 655.107, 655.108, and 655.109.

The collection of information for the current H–2A program under the regulations in effect prior to the effective date of this rule were approved under OMB control number 1205–0015 (Form ETA 750) and OMB Control Number 1205–0134 (Form ETA 790). The Form ETA 750 will be gradually phased out and will no longer be used for the H–2A program for applications filed with a beginning date of need of July 1, 2009 or later. The Form ETA 790 will continue to be used in the H–2A program as it is required under 20 CFR 653.501 for all agricultural job orders.

As noted above, this final rule implements the use of the new information collection that OMB approved on November 21, 2008, under OMB control number 1205–0466. The approval will expire on November 30, 2011. The new Form ETA 9142, with instructions and appendices, has a public reporting burden estimated to average 2.17 hours for Form ETA 9142 per response or application filed. The Department has made changes to this final rule after receiving comments to the proposed rule and has made changes to the forms for clarity and program functionality. However, these changes do not impact the overall annual burden hours for the H–2A program information collection. The total costs associated

with the form, as defined by the Paperwork Reduction Act, is a maximum of $1,100 per employer for the Form ETA 9142. For an additional explanation of how the Department calculated the burden hours and related costs, the Paperwork Reduction Act package for this information collection may be obtained from the RegInfo.gov Web site at *http://www.reginfo.gov/public/do/PRAMain* or by contacting the Department at: Office of Policy and Research, Department of Labor, 200 Constitution Ave., NW., Washington, DC 20210 or by phone request to 202–693–3700 (this is not a toll-free number) or by e-mail at *DOL_PRA_PUBLIC@dol.gov*.

2. Comments

The Department received only a few comments on this section of the NPRM. In each case, the commenters noted that there appeared to be an increase in the number of hours required under the new regulations, especially for the second recruitment report. One commenter estimated that it would take approximately 6.5 hours for an employer to complete two (2) recruitment reports, but did not provide data or a supporting rationale for this estimate. Most of the commenters did not specifically address the issue of our methodology or assumptions.

The combined paperwork burden estimate for the forms used for the H–2A program under the regulations in effect prior to the effective date of this final rule, Forms ETA 750 and ETA 790, was approximately 2.5 hours. Under this new collection of information, the Department estimates that the burden will be approximately 2.17 hours for Form ETA 9142, which includes one hour on average per employer to prepare the recruitment reports. There will be some employers who only require a few minutes to complete the recruitment report if only a few (or no) workers apply for the job opportunity, while other employers may spend two or more hours compiling the recruitment report if many workers apply for the job opportunity. As for other information requirements, the Department estimates that the affidavits of publication or tear sheets, which should be requested at the time of publication, require only one extra minute of time. Further, the Department estimates that requesting notice from the SWA confirming distribution of the job order will also only take an extra minute of time. Therefore, without more persuasive analysis rebutting the analysis used by the Department, we assume our calculations are representative of the actual hourly burden for the new collection.

Another commenter stated that the form itself lacked sufficient space and the ''description for complying * * * [is] inadequate and materially misleading of the terms and conditions employers need to provide * * *.'' The Department notes, however, that this comment is related to the Form ETA 750, which will be discontinued, rather than the new collection form, ETA 9142. In addition, the Department added a notation to the new form that permits employers to submit additional pages of information if there is not sufficient space on the form for a response. In such cases, the information must clearly correspond to the appropriate section and question number noted on the form.

A couple of commenters on this section asked if any of the paperwork could be shifted to the Department, such as making copies of job orders, placing advertisements, and obtaining the tear sheets. Although the Department appreciates these comments, we find no reasonable justification for assuming this type of expense or responsibility. The responsibility for the applicable reporting requirements lies with program participant, which in this case is the applicant. The Department will continue to seek ways to improve program management efficiency and as noted elsewhere in this preamble, will be looking to implement an online application process in the future.

List of Subjects

20 CFR Part 655

Administrative practice and procedure, Foreign workers, Employment, Employment and training, Enforcement, Forest and forest products, Fraud, Health professions, Immigration, Labor, Passports and visas, Penalties, Reporting and recordkeeping requirements, Unemployment, Wages, Working conditions.

29 CFR Part 501

Administrative practice and procedure, Agriculture, Aliens, Employment, Housing, Housing standards, Immigration, Labor, Migrant labor, Penalties, Transportation, Wages.

29 CFR Part 780

Agricultural commodities, Agriculture, Employment, Forests and forest products, Labor, Minimum wages, Nursery stock, Overtime pay, Wages.

29 CFR Part 788

Employment, Forests and forest products, Labor, Overtime pay, Wages.

■ For the reasons stated in the preamble, the Department of Labor amends 20 CFR part 655 and 29 CFR parts 501, 780, and 788 as follows:

TITLE 20—EMPLOYEES' BENEFITS

PART 655—TEMPORARY EMPLOYMENT OF FOREIGN WORKERS IN THE UNITED STATES

■ 1. The authority citation for part 655 is revised to read as follows:

Authority: Section 655.0 issued under 8 U.S.C. 1101(a)(15)(E)(iii), 1101(a)(15)(H)(i) and (ii), 1182(m), (n) and (t), 1184(c), (g), and (j), 1188, and 1288(c) and (d); sec. 3(c)(1), Pub. L. 101–238, 103 Stat. 2099, 2102 (8 U.S.C. 1182 note); sec. 221(a), Pub. L. 101–649, 104 Stat. 4978, 5027 (8 U.S.C. 1184 note); sec. 303(a)(8), Pub. L. 102–232, 105 Stat. 1733, 1748 (8 U.S.C. 1101 note); sec. 323(c), Pub. L. 103–206, 107 Stat. 2428; sec. 412(e), Pub. L. 105–277, 112 Stat. 2681 (8 U.S.C. 1182 note); sec. 2(d), Pub. L. 106–95, 113 Stat. 1312, 1316 (8 U.S.C. 1182 note); Pub. L. 109–423, 120 Stat. 2900; and 8 CFR 214.2(h)(4)(i).

Section 655.00 issued under 8 U.S.C. 1101(a)(15)(H)(ii), 1184(c), and 1188; and 8 CFR 214.2(h).

Subparts A and C issued under 8 CFR 214.2(h).

Subpart B issued under 8 U.S.C. 1101(a)(15)(H)(ii)(a), 1184(c), and 1188; and 8 CFR 214.2(h).

Subparts D and E authority repealed.

Subparts F and G issued under 8 U.S.C. 1288(c) and (d); and sec. 323(c), Pub. L. 103–206, 107 Stat. 2428.

Subparts H and I issued under 8 U.S.C. 1101(a)(15)(H)(i)(b) and (b)(1), 1182(n) and (t), and 1184(g) and (j); sec. 303(a)(8), Pub. L. 102–232, 105 Stat. 1733, 1748 (8 U.S.C. 1101 note); sec. 412(e), Pub. L. 105–277, 112 Stat. 2681; and 8 CFR 214.2(h).

Subparts J and K authority repealed.

Subparts L and M issued under 8 U.S.C. 1101(a)(15)(H)(i)(c) and 1182(m); sec. 2(d), Pub. L. 106–95, 113 Stat. 1312, 1316 (8 U.S.C. 1182 note); Pub. L. 109–423, 120 Stat. 2900; and 8 CFR 214.2(h).

■ 2. Revise the heading to part 655 to read as set forth above.

■ 3. Revise § 655.1 to read as follows:

§ 655.1 Purpose and scope of subpart A.

This subpart sets forth the procedures governing the labor certification process for the temporary employment of nonimmigrant foreign workers in the United States (U.S.) in occupations other than agriculture or registered nursing.

■ 4. Revise subpart B to read as follows:

Subpart B—Labor Certification Process for Temporary Agricultural Employment in the United States (H–2A Workers)

Sec.

§ 655.90 Purpose and scope of subpart B.

This subpart sets out the procedures established by the Secretary of the United States Department of Labor (the Secretary) to acquire information sufficient to make factual determinations of:

(a) Whether there are sufficient able, willing, and qualified U.S. workers available to perform the temporary and seasonal agricultural employment for which an employer desires to import nonimmigrant foreign workers (H–2A workers); and

(b) Whether the employment of H–2A workers will adversely affect the wages and working conditions of workers in the U.S. similarly employed.

§ 655.92 Authority of ETA–OFLC.

Temporary agricultural labor certification determinations are made by the Administrator, Office of Foreign Labor Certification (OFLC) in the Department of Labor's (the Department or DOL) Employment & Training Administration (ETA), who, in turn, may delegate this responsibility to a designated staff member; e.g., a Certifying Officer (CO).

§ 655.93 Special procedures.

(a) *Systematic process.* This subpart provides procedures for the processing of applications from agricultural employers and associations of employers for the certification of employment of nonimmigrant workers in agricultural employment.

(b) *Establishment of special procedures.* To provide for a limited degree of flexibility in carrying out the Secretary's responsibilities under the Immigration and Nationality Act (INA), while not deviating from statutory requirements, the Administrator, OFLC has the authority to establish or to devise, continue, revise, or revoke special procedures in the form of variances for processing certain H–2A applications when employers can demonstrate upon written application to the Administrator, OFLC that special procedures are necessary. These include special procedures in effect for the handling of applications for sheepherders in the Western States (and adaptation of such procedures to occupations in the range production of other livestock), and for custom combine crews. In a like manner, for work in occupations characterized by other than a reasonably regular workday or workweek, such as the range production of sheep or other livestock, the Administrator, OFLC has the authority to establish monthly, weekly, or bi-weekly adverse effect wage rates (AEWR) for those occupations for a statewide or other geographical area. Prior to making determinations under this section, the Administrator, OFLC will consult with employer and worker representatives.

§ 655.100 Overview of subpart B and definition of terms.

(a) *Overview.* (1) *Application filing process.* (i) This subpart provides guidance to employers desiring to apply for a labor certification for the employment of H–2A workers to perform agricultural employment of a temporary or seasonal nature. The regulations in this subpart provide that such employers must file with the Administrator, OFLC an H–2A application on forms prescribed by the ETA that describe the material terms and conditions of employment to be offered and afforded to U.S. and H–2A workers. The application must be filed with the Administrator, OFLC at least 45 calendar days before the first date the employer requires the services of the H–2A workers. The application must contain attestations of the employer's compliance or promise to comply with program requirements regarding recruitment of eligible U.S. workers, the payment of an appropriate wage, and terms and conditions of employment.

(ii) No more than 75 and no fewer than 60 calendar days before the first date the employer requires the services of the H–2A workers, and as a precursor to the filing of an *Application for Temporary Employment Certification,* the employer must initiate positive recruitment of eligible U.S. workers and cooperate with the local office of the State Workforce Agency (SWA) which serves the area of intended employment to place a job order into intrastate and interstate recruitment. Prior to commencing recruitment an employer must obtain the appropriate wage for the position directly from the ETA National Processing Center (NPC). The employer must then place a job order with the SWA; place print advertisements meeting the requirements of this regulation; contact former U.S. employees; and, when so designated by the Secretary, recruit in other States of traditional or expected labor supply with a significant number of U.S. workers who, if recruited, would be willing to make themselves available at the time and place needed. The SWA will post the job order locally, as well as in all States listed in the application as anticipated work sites, and in any additional States designated by the Secretary as States of traditional or expected labor supply. The SWA will keep the job order open until the end of the designated recruitment period. No more than 50 days prior to the first date the employer requires the services of the H–2A workers, the employer will prepare and sign an initial written recruitment report that it must submit with its *Application for Temporary Employment Certification (www.foreignlaborcert.doleta.gov).* The recruitment report must contain information regarding the original number of openings for which the employer recruited. The employer's obligation to engage in positive recruitment will end on the actual date on which the H–2A workers depart for the place of work, or 3 days prior to the first date the employer requires the services of the H–2A workers, whichever occurs first.

(iii) The *Application for Temporary Employment Certification* must be filed by mail unless the Department publishes a Notice in the **Federal Register** requiring that applications be filed electronically. Applications that meet threshold requirements for completeness and accuracy will be processed by NPC staff, who will review each application for compliance with the criteria for certification. Each application must meet requirements for timeliness and temporary need and must provide assurances and other safeguards against adverse impact on the wages and working conditions of U.S. workers. Employers receiving a labor certification must continue to cooperate with the SWA by accepting referrals—and have the obligation to hire qualified and eligible U.S. workers

who apply—until the end of the designated recruitment period.

(2) *Deficient applications.* The CO will promptly review the application and notify the applicant in writing if there are deficiencies that render the application not acceptable for certification, and afford the applicant a 5 calendar day period (from date of the employer's receipt) to resubmit a modified application or to file an appeal of the CO's decision not to approve the application as acceptable for consideration. Modified applications that fail to cure deficiencies will be denied.

(3) *Amendment of applications.* This subpart provides for the amendment of applications. Where the recruitment is not materially affected by such amendments, additional positive recruitment will not be required.

(4) *Determinations.* (i) *Determinations.* If the employer has complied with the criteria for certification, including recruitment of eligible U.S. workers, the CO must make a determination on the application by 30 days before the first date the employer requires the services of the H–2A workers. An employer's failure to comply with any of the certification criteria or to cure deficiencies identified by the CO may lengthen the time required for processing, resulting in a final determination less than 30 days prior to the stated date of need.

(ii) *Certified applications.* This subpart provides that an application for temporary agricultural labor certification will be certified if the CO finds that the employer has not offered and does not intend to offer foreign workers higher wages, better working conditions, or fewer restrictions than those offered and afforded to U.S. workers; that sufficient U.S. workers who are able, willing, qualified, and eligible will not be available at the time and place needed to perform the work for which H–2A workers are being requested; and that the employment of such nonimmigrants will not adversely affect the wages and working conditions of similarly employed U.S. workers.

(iii) *Fees.* (A) *Amount.* This subpart provides that each employer (except joint employer associations) of H–2A workers will pay the appropriate fees to the Department for each temporary agricultural labor certification received.

(B) *Timeliness of payment.* The fee must be received by the CO no later than 30 calendar days after the granting of each temporary agricultural labor certification. Fees received any later are untimely. A persistent or prolonged failure to pay fees in a timely manner is a substantial program violation which may result in the denial of future temporary agricultural labor certifications and/or program debarment.

(iv) *Denied applications.* This subpart provides that if the application for temporary agricultural labor certification is denied, in whole or in part, the employer may seek expedited review of the denial, or a de novo hearing, by an administrative law judge as provided in this subpart.

(b) *Transition of filing procedures from current regulations.* (1) *Compliance with these regulations.* Employers with a date of need for H–2A workers for temporary or seasonal agricultural services on or after July 1, 2009 must comply with all of the obligations and assurances required in this subpart.

(2) *Transition from former regulations.* Employers with a date of need for H–2A workers for temporary or seasonal agricultural services prior to July 1, 2009 will file applications in the following manner:

(i) *Obtaining required wage rate.* An employer will not obtain an offered wage rate through the NPC prior to filing an application, but will complete and submit Form ETA–9142, *Application for Temporary Employment Certification* no less than 45 days prior to their date of need. The employer will simultaneously submit Form ETA–790 *Agricultural and Food Processing Clearance Order,* along with the *Application for Temporary Employment Certification,* directly to the NPC having jurisdiction over H–2A applications.

(ii) *Pre-filing activities.* Activities required to be conducted prior to filing under the final rule will be conducted post-filing during this transition period. The employer will be expected to make attestations in its application applicable to its future activities concerning recruitment, payment of the offered wage rate, etc. Employers will not be required to complete an initial recruitment report for submission with the application, but will be required to complete a recruitment report for submission to the NPC prior to certification, and will also be required to complete a final recruitment report covering the entire recruitment period.

(iii) *Acceptance of application.* Upon receipt, the NPC will provide the employer with the wage rate to be offered, at a minimum, by the employer, and will process the application in a manner consistent with new § 655.107, issuing a notification of deficiencies for any curable deficiencies within 7 calendar days.

(iv) *Processing of application.* Once the application and job order have been accepted, the NPC will transmit a copy of the job order to the SWA(s) serving the area of intended employment to initiate intrastate and interstate clearance, request that the SWA(s) schedule an inspection of the housing, and provide instructions to the employer to commence positive recruitment in a manner consistent with § 655.102(d)(2) through (4). The NPC will designate labor supply States during this period on a case-by-case basis. Such designations must be based on information provided by State agencies or by other sources, and will to the extent information is available take into account the success of recent efforts by out-of-State employers to recruit in that State.

(c) *Definitions of terms used in this subpart.* For the purposes of this subpart:

Administrative Law Judge (ALJ) means a person within the DOL's Office of Administrative Law Judges appointed pursuant to 5 U.S.C. 3105, or a panel of such persons designated by the Chief Administrative Law Judge from the Board of Alien Labor Certification Appeals (BALCA) established by part 656 of this chapter, which will hear and decide appeals as set forth in § 655.115.

Administrator, OFLC means the primary official of the Office of Foreign Labor Certification (*OFLC*), or the Administrator, OFLC 's designee.

Adverse effect wage rate (AEWR) means the minimum wage rate that the Administrator, OFLC has determined must be offered and paid to every H–2A worker employed under the DOL-approved *Application for Temporary Employment Certification* in a particular occupation and/or area, as well as to U.S. workers hired by employers into corresponding employment during the H–2A recruitment period, to ensure that the wages of similarly employed U.S. workers will not be adversely affected.

Agent means a legal entity or person, such as an association of agricultural employers, or an attorney for an association, that:

(1) Is authorized to act on behalf of the employer for temporary agricultural labor certification purposes;

(2) Is not itself an employer, or a joint employer, as defined in this paragraph (c) of this section with respect to a specific application; and

(3) Is not under suspension, debarment, expulsion, or disbarment from practice before any court or the Department, the Board of Immigration Appeals, the immigration judges, or the Department of Homeland Security (DHS) under 8 CFR 292.3 or 1003.101.

Agricultural association means any nonprofit or cooperative association of

farmers, growers, or ranchers (including but not limited to processing establishments, canneries, gins, packing sheds, nurseries, or other fixed-site agricultural employers), incorporated or qualified under applicable State law, that recruits, solicits, hires, employs, furnishes, houses or transports any worker that is subject to sec. 218 of the INA. An agricultural association may act as the agent of an employer for purposes of filing an *Application for Temporary Employment Certification*, and may also act as the sole or joint employer of H–2A workers.

Application for Temporary Employment Certification means the Office of Management and Budget (OMB)-approved form submitted by an employer to secure a temporary agricultural labor certification determination from DOL. A complete submission of the *Application for Temporary Employment Certification* includes both the form and the employer's initial recruitment report.

Area of intended employment means the geographic area within normal commuting distance of the place (worksite address) of the job opportunity for which the certification is sought. There is no rigid measure of distance which constitutes a normal commuting distance or normal commuting area, because there may be widely varying factual circumstances among different areas (e.g., average commuting times, barriers to reaching the worksite, quality of the regional transportation network, etc.). If the place of intended employment is within a Metropolitan Statistical Area (MSA), including a multistate MSA, any place within the MSA is deemed to be within normal commuting distance of the place of intended employment. The borders of MSAs are not controlling in the identification of the normal commuting area; a location outside of an MSA may be within normal commuting distance of a location that is inside (e.g., near the border of) the MSA.

Attorney means any person who is a member in good standing of the bar of the highest court of any State, possession, territory, or commonwealth of the U.S., or the District of Columbia, and who is not under suspension, debarment, expulsion, or disbarment from practice before any court or the Department, the Board of Immigration Appeals, the immigration judges, or DHS under 8 CFR. 292.3 or 1003.101. Such a person is permitted to act as an agent or attorney for an employer and/or foreign worker under this subpart.

Certifying Officer (CO) means the person designated by the Administrator, OFLC to make determinations on applications filed under the H–2A program.

Chief Administrative Law Judge means the chief official of the DOL Office of Administrative Law Judges or the Chief Administrative Law Judge's designee.

Date of need means the first date the employer requires the services of H–2A worker as indicated in the employer's *Application for Temporary Employment Certification*.

Department of Homeland Security (DHS) means the Federal agency having control over certain immigration functions that, through its sub-agency, *United States Citizenship and Immigration Services* (USCIS), makes the determination under the INA on whether to grant visa petitions filed by employers seeking H–2A workers to perform temporary agricultural work in the U.S.

DOL or Department means the United States Department of Labor.

Eligible worker means an individual who is not an unauthorized alien (as defined in sec. 274A(h)(3) of the INA, 8 U.S.C. 1324a(h)(3)) with respect to the employment in which the worker is engaging.

Employee means employee as defined under the general common law of agency. Some of the factors relevant to the determination of employee status include: the hiring party's right to control the manner and means by which the work is accomplished; the skill required to perform the work; the source of the instrumentalities and tools for accomplishing the work; the location of the work; the hiring party's discretion over when and how long to work; and whether the work is part of the regular business of the hiring party. Other applicable factors may be considered and no one factor is dispositive.

Employer means a person, firm, corporation or other association or organization that:

(1) Has a place of business (physical location) in the U.S. and a means by which it may be contacted for employment;

(2) Has an employer relationship with respect to H–2A employees or related U.S. workers under this subpart; and

(3) Possesses, for purposes of filing an *Application for Temporary Employment Certification,* a valid Federal Employer Identification Number (FEIN).

Employment Standards Administration (ESA) means the agency within DOL that includes the Wage and Hour Division (WHD), and which is charged with carrying out certain investigative and enforcement functions of the Secretary under the INA.

Employment Service (ES) refers to the system of Federal and State entities responsible for administration of the labor certification process for temporary and seasonal agricultural employment of nonimmigrant foreign workers. This includes the SWAs and the OFLC, including the NPCs.

Employment and Training Administration (ETA) means the agency within the DOL that includes OFLC.

Federal holiday means a legal public holiday as defined at 5 U.S.C. 6103.

Fixed-site employer means any person engaged in agriculture who meets the definition of an employer as those terms are defined in this subpart who owns or operates a farm, ranch, processing establishment, cannery, gin, packing shed, nursery, or other similar fixed-site location where agricultural activities are performed and who recruits, solicits, hires, employs, houses, or transports any worker subject to sec. 218 of the INA or these regulations as incident to or in conjunction with the owner's or operator's own agricultural operation. For purposes of this subpart, *person* includes any individual, partnership, association, corporation, cooperative, joint stock company, trust, or other organization with legal rights and duties.

H–2A Labor Contractor (H–2ALC) means any person who meets the definition of employer under this paragraph (c) of this section and is not a fixed-site employer, an agricultural association, or an employee of a fixed-site employer or agricultural association, as those terms are used in this part, who recruits, solicits, hires, employs, furnishes, houses, or transports any worker subject to sec. 218 of the INA or these regulations.

H–2A worker means any temporary foreign worker who is lawfully present in the U.S. to perform agricultural labor or services of a temporary or seasonal nature pursuant to sec. 101(a)(15)(H)(ii)(a) of the INA, as amended.

INA means the Immigration and Nationality Act, as amended, 8 U.S.C. 1101 *et seq*.

Job offer means the offer made by an employer or potential employer of H–2A workers to eligible workers describing all the material terms and conditions of employment, including those relating to wages, working conditions, and other benefits.

Job opportunity means a job opening for temporary, full-time employment at a place in the U.S. to which a U.S. worker can be referred.

Joint employment means that where two or more employers each have sufficient definitional indicia of

employment to be considered the employer of an employee, those employers will be considered to jointly employ that employee. Each employer in a joint employment relationship to an employee is considered a joint employer of that employee.

Occupational Safety and Health Administration (OSHA) means the organizational component of the Department that assures the safety and health of America's workers by setting and enforcing standards; providing training, outreach, and education; establishing partnerships; and encouraging continual improvement in workplace safety and health under the Occupational Safety and Health Act, as amended.

Office of Foreign Labor Certification (OFLC) means the organizational component of the ETA that provides national leadership and policy guidance and develops regulations and procedures to carry out the responsibilities of the Secretary under the INA concerning the admission of foreign workers to the U.S. to perform work described in sec. 101(a)(15)(H)(ii)(a) of the INA, as amended.

Positive recruitment means the active participation of an employer or its authorized hiring agent in recruiting and interviewing qualified and eligible individuals in the area where the employer's job opportunity is located and any other State designated by the Secretary as an area of traditional or expected labor supply with respect to the area where the employer's job opportunity is located, in an effort to fill specific job openings with U.S. workers.

Prevailing means, with respect to practices engaged in by employers and benefits other than wages provided by employers, that:

(1) Fifty percent or more of employers in an area and for an occupation engage in the practice or offer the benefit; but only if

(2) This 50 percent or more of employers also employs in aggregate 50 percent or more of U.S. workers in the occupation and area (including H–2A and non-H–2A employers for purposes of determinations concerning the provision of family housing, frequency of wage payments, and workers supplying their own bedding, but non-H–2A employers only for determinations concerning the provision of advance transportation).

Prevailing piece rate means that amount that is typically paid to an agricultural worker per piece (which includes, but is not limited to, a load, bin, pallet, bag, bushel, etc.), to be determined by the SWA according to a methodology published by the Department. As is currently the case, the unit of production will be required to be clearly described; e.g., a field box of oranges (1½ bushels), a bushel of potatoes, and Eastern apple box (1½ metric bushels), a flat of strawberries (twelve quarts), etc.

Prevailing hourly wage means the hourly wage determined by the SWA to be prevailing in the area in accordance with State-based wage surveys.

Representative means a person or entity employed by, or duly authorized to act on behalf of, the employer with respect to activities entered into for, and/or attestations made with respect to, the *Application for Temporary Employment Certification.*

Secretary means the Secretary of the United States Department of Labor, or the Secretary's designee.

Secretary of Homeland Security means the chief official of the United States Department of Homeland Security (DHS) or the Secretary of Homeland Security's designee.

Secretary of State means the chief official of the United States Department of State (DOS) or the Secretary of State's designee.

State Workforce Agency (SWA) means the State government agency that receives funds pursuant to the Wagner-Peyser Act to administer the public labor exchange delivered through the State's One-Stop delivery system in accordance with the Wagner-Peyser Act at 29 U.S.C. 49 *et seq.* Separately, SWAs receive ETA grants, administered by OFLC, to assist them in performing certain activities related to foreign labor certification, including conducting housing inspections.

Strike means a labor dispute wherein employees engage in a concerted stoppage of work (including stoppage by reason of the expiration of a collective-bargaining agreement) or engage in any concerted slowdown or other concerted interruption of operation. Whether a job opportunity is vacant by reason of a strike or lock out will be determined by evaluating for each position identified as vacant in the *Application for Temporary Employment Certification* whether the specific vacancy has been caused by the strike or lock out.

Successor in interest means that, in determining whether an employer is a successor in interest, the factors used under Title VII of the Civil Rights Act and the Vietnam Era Veterans' Readjustment Assistance Act will be considered. When considering whether an employer is a successor for purposes of § 655.118, the primary consideration will be the personal involvement of the firm's ownership, management, supervisors, and others associated with the firm in the violations resulting in a debarment recommendation. Normally, wholly new management or ownership of the same business operation, one in which the former management or owner does not retain a direct or indirect interest, will not be deemed to be a successor in interest for purposes of debarment. A determination of whether or not a successor in interest exists is based on the entire circumstances viewed in their totality. The factors to be considered include:

(1) Substantial continuity of the same business operations;

(2) Use of the same facilities;

(3) Continuity of the work force;

(4) Similarity of jobs and working conditions;

(5) Similarity of supervisory personnel;

(6) Similarity in machinery, equipment, and production methods;

(7) Similarity of products and services; and

(8) The ability of the predecessor to provide relief.

Temporary agricultural labor certification means the certification made by the Secretary with respect to an employer seeking to file with DHS a visa petition to employ one or more foreign nationals as an H–2A worker, pursuant to secs. 101(a)(15)(H)(ii)(a), 214(a) and (c), and 218 of the INA that:

(1) There are not sufficient workers who are able, willing, and qualified, and who will be available at the time and place needed, to perform the agricultural labor or services involved in the petition, and

(2) The employment of the foreign worker in such agricultural labor or services will not adversely affect the wages and working conditions of workers in the U.S. similarly employed (8 U.S.C. 1101(a)(15)(H)(ii)(a), 1184(a) and (c), and 1188).

United States (U.S.), when used in a geographic sense, means the continental United States, Alaska, Hawaii, the Commonwealth of Puerto Rico, and the territories of Guam, the Virgin Islands, and, as of the transition program effective date, as defined in the Consolidated Natural Resources Act of 2008, Public Law 110–229, Title VII, the Commonwealth of the Northern Mariana Islands.

United States Citizenship and Immigration Services (USCIS) means the Federal agency making the determination under the INA whether to grant petitions filed by employers seeking H–2A workers to perform temporary agricultural work in the U.S.

United States worker (U.S. worker) means a worker who is

(1) A citizen or national of the U.S., or

(2) An alien who is lawfully admitted for permanent residence in the U.S., is admitted as a refugee under sec. 207 of the INA, is granted asylum under sec. 208 of the INA, or is an immigrant otherwise authorized (by the INA or by DHS) to be employed in the U.S.

Wages means all forms of cash remuneration to a worker by an employer in payment for personal services.

Within [number and type] days means, for purposes of determining an employer's compliance with the timing requirements for appeals and requests for review, a period that begins to run on the first business day after the Department sends a notice to the employer by means normally assuring next-day delivery, and will end on the day that the employer sends whatever communication is required by these rules back to the Department, as evidenced by a postal mark or other similar receipt.

Work contract means all the material terms and conditions of employment relating to wages, hours, working conditions, and other benefits, required by the applicable regulations in Subpart B of 20 CFR part 655, *Labor Certification for Temporary Agricultural Employment of H–2A Aliens in the U.S. (H–2A Workers),* or these regulations, including those terms and conditions attested to by the H–2A employer, which contract between the employer and the worker may be in the form of a separate written document. In the absence of a separate written work contract incorporating the required terms and conditions of employment, agreed to by both the employer and the worker, the work contract at a minimum shall be the terms of the job order, as provided in 20 CFR part 653, Subpart F, and covered provisions of the work contract shall be enforced in accordance with these regulations.

(d) *Definition of agricultural labor or services of a temporary or seasonal nature.* For the purposes of this subpart means the following:

(1) *Agricultural labor or services,* pursuant to sec. 101(a)(15)(H)(ii)(a) of the INA at 8 U.S.C. 1101(a)(15)(H)(ii)(a), is defined as:

(i) Agricultural labor as defined and applied in sec. 3121(g) of the Internal Revenue Code of 1954 at 26 U.S.C. 3121(g);

(ii) Agriculture as defined and applied in sec. 3(f) of the Fair Labor Standards Act of 1938 (FLSA) at 29 U.S.C. 203(f). Work performed by H–2A workers, or workers in corresponding employment, that is not defined as agriculture in sec. 3(f) is subject to the provisions of the FLSA as provided therein, including the overtime provisions in sec. 7(a) 29 U.S.C. 207(a);

(iii) The pressing of apples for cider on a farm;

(iv) Logging employment; or

(v) Handling, planting, drying, packing, packaging, processing, freezing, grading, storing, or delivering to storage or to market or to a carrier for transportation to market, in its unmanufactured state, any agricultural or horticultural commodity while in the employ of the operator of a farm where no H–2B workers are employed to perform the same work at the same establishment; or

(vi) Other work typically performed on a farm that is not specifically listed on the *Application for Temporary Employment Certification* and is minor (i.e., less than 20 percent of the total time worked on the job duties and activities that are listed on the *Application for Temporary Employment Certification*) and incidental to the agricultural labor or services for which the H–2A worker was sought.

(2) An occupation included in either of the statutory definitions cited in paragraphs (d)(1)(i) and (ii) of this section is *agricultural labor or services,* notwithstanding the exclusion of that occupation from the other statutory definition.

(i) *Agricultural labor.* For purposes of paragraph (d)(1)(i) of this section means all services performed:

(A) On a farm, in the employ of any person, in connection with cultivating the soil, or in connection with raising or harvesting any agricultural or horticultural commodity, including the raising, shearing, feeding, caring for, training, and management of livestock, bees, poultry, and furbearing animals and wildlife;

(B) In the employ of the owner or tenant or other operator of a farm, in connection with the operation or maintenance of such farm and its tools and equipment, or in salvaging timber or clearing land of brush and other debris left by a hurricane, if the major part of such service is performed on a farm;

(C) In connection with the production or harvesting of any commodity defined as an agricultural commodity in sec. 15(g) of the Agricultural Marketing Act, as amended at 12 U.S.C. 1141j, or in connection with the ginning of cotton, or in connection with the operation or maintenance of ditches, canals, reservoirs, or waterways, not owned or operated for profit, used exclusively for supplying and storing water for farming purposes;

(D)(*1*) In the employ of the operator of a farm in handling, planting, drying, packing, packaging, processing, freezing, grading, storing, or delivering to storage or to market or to a carrier for transportation to market, in its unmanufactured state, any agricultural or horticultural commodity, but only if such operator produced more than one-half of the commodity with respect to which such service is performed;

(*2*) In the employ of a group of operators of farms (other than a cooperative organization) in the performance of service described in paragraph (d)(2)(i)(D)(*1*) of this section, but only if such operators produced all of the commodity with respect to which such service is performed. For purposes of this paragraph, any unincorporated group of operators will be deemed a cooperative organization if the number of operators comprising such group is more than 20 at any time during the calendar quarter in which such service is performed;

(*3*) The provisions of paragraphs (d)(2)(i)(D)(*1*) and (*2*) of this section do not apply to services performed in connection with commercial canning or commercial freezing or in connection with any agricultural or horticultural commodity after its delivery to a terminal market for distribution for consumption; or

(*4*) On a farm operated for profit if such service is not in the course of the employer's trade or business and is not domestic service in a private home of the employer.

(E) For purposes of (d)(2)(i) of this section, the term farm includes stock, dairy, poultry, fruit, fur-bearing animal, and truck farms, plantations, ranches, nurseries, ranges, greenhouses or other similar structures used primarily for the raising of agricultural or horticultural commodities, and orchards. See sec. 3121(g) of the Internal Revenue Code of 1986 at 26 U.S.C. 3121(g).

(ii) *Agriculture.* For purposes of paragraph (d)(1)(ii) of this section agriculture means farming in all its branches and among other things includes the cultivation and tillage of the soil, dairying, the production, cultivation, growing, and harvesting of any agricultural or horticultural commodities (including commodities as defined as agricultural commodities in 12 U.S.C. 1141j(g)), the raising of livestock, bees, fur-bearing animals, or poultry, and any practices (including any forestry or lumbering operations) performed by a farmer or on a farm as an incident to or in conjunction with such farming operations, including preparation for market, delivery to storage or to market or to carriers for

transportation to market. See 29 U.S.C. 203(f), as amended.

(iii) *Agricultural commodity.* For purposes of paragraph (d)(2)(ii) of this section agricultural commodity includes, in addition to other agricultural commodities, crude gum (oleoresin) from a living tree, and gum spirits of turpentine and gum rosin as processed by the original producer of the crude gum (oleoresin) from which derived. *Gum spirits of turpentine* means spirits of turpentine made from gum (oleoresin) from a living tree and *gum rosin* means rosin remaining after the distillation of gum spirits of turpentine. See 12 U.S.C. 1141j(g), sec. 15(g) of the Agricultural Marketing Act, as amended, and 7 U.S.C. 92.

(3) *Of a temporary or seasonal nature.* (i) *On a seasonal or other temporary basis.* For the purposes of this subpart, of a temporary or seasonal nature means on a seasonal or other temporary basis, as defined in the WHD's regulation at 29 CFR 500.20 under the Migrant and Seasonal Agricultural Worker Protection Act (MSPA).

(ii) *MSPA definition.* The definition of *on a seasonal or other temporary basis* found in MSPA is summarized as follows:

(A) Labor is performed on a seasonal basis where, ordinarily, the employment pertains to or is of the kind exclusively performed at certain seasons or periods of the year and which, from its nature, may not be continuous or carried on throughout the year. A worker who moves from one seasonal activity to another, while employed in agriculture or performing agricultural labor, is employed on a seasonal basis even though the worker may continue to be employed during a major portion of the year.

(B) A worker is employed on other temporary basis where he or she is employed for a limited time only or the worker's performance is contemplated for a particular piece of work, usually of short duration. Generally, employment which is contemplated to continue indefinitely is not temporary.

(C) On a seasonal or other temporary basis does not include (i) the employment of any foreman or other supervisory employee who is employed by a specific agricultural employer or agricultural association essentially on a year round basis; or (ii) the employment of any worker who is living at his or her permanent place of residence, when that worker is employed by a specific agricultural employer or agricultural association on essentially a year round basis to perform a variety of tasks for his or her employer and is not primarily employed to do field work.

(iii) *Temporary.* For the purposes of this subpart, the definition of ''temporary'' in paragraph (d)(3) of this section refers to any job opportunity covered by this subpart where the employer needs a worker for a position for a limited period of time, including, but not limited to, a peakload need, which is generally less than 1 year, unless the original temporary agricultural labor certification is extended pursuant to § 655.110.

§ 655.101 Applications for temporary employment certification in agriculture.

(a) *Application Filing Requirements.* (1) An employer that desires to apply for temporary employment certification of one or more nonimmigrant foreign workers must file a completed DOL *Application for Temporary Employment Certification* form and, unless a specific exemption applies, the initial recruitment report. If an association of agricultural producers files the application, the association must identify whether it is the sole employer, a joint employer with its employer-member employers, or the agent of its employer-members. The association must retain documentation substantiating the employer or agency status of the association and be prepared to submit such documentation to the CO in the event of an audit.

(2) If an H–2ALC intends to file an application, the H–2ALC must meet all of the requirements of the definition of employer in § 655.100(b), and comply with all the assurances, guarantees, and other requirements contained in this part and in part 653, subpart F, of this chapter. The H–2ALC must have a place of business (physical location) in the U.S. and a means by which it may be contacted for employment. H–2A workers employed by an H–2ALC may not perform services for a fixed-site employer unless the H–2ALC is itself providing the housing and transportation required by § 655.104(d) and (h), or has filed a statement confirming that the fixed-site employer will provide compliant housing and/or transportation, as required by § 655.106, with the OFLC, for each fixed-site employer listed on the application. The H–2ALC must retain a copy of the statement of compliance required by § 655.106(b)(6).

(3) An association of agricultural producers may submit a master application covering a variety of job opportunities available with a number of employers in multiple areas of intended employment, just as though all of the covered employers were in fact a single employer, as long as a single date of need is provided for all workers requested by the application and the combination of job opportunities is supported by an explanation demonstrating a business reason for the combination. The association must identify on the *Application for Temporary Employment Certification,* by name and address, each employer that will employ H–2A workers. If the association is acting solely as an agent, each employer will receive a separate labor certification.

(b) *Filing.* The employer may send the *Application for Temporary Employment Certification* and all supporting documentation by U.S. Mail or private mail courier to the NPC. The Department will publish a Notice in the **Federal Register** identifying the address(es), and any future address changes, to which applications must be mailed, and will also post these addresses on the DOL Internet Web site at *http://www.foreignlaborcert.doleta.gov/.* The form must bear the original signature of the employer (and that of the employer's authorized attorney or agent if the employer is represented by an attorney or agent). An association filing a master application as a joint employer may sign on behalf of its employer members. The Department may also require applications to be filed electronically in addition to or instead of by mail.

(c) *Timeliness.* A completed *Application for Temporary Employment Certification* must be filed no less than 45 calendar days before date of need.

(d) *Emergency situations.* (1) *Waiver of time period and required pre-filing activity.* The CO may waive the time period for filing and pre-filing wage and recruitment requirements set forth in § 655.102, along with their associated attestations, for employers who did not make use of temporary alien agricultural workers during the prior year's agricultural season or for any employer that has other good and substantial cause (which may include unforeseen changes in market conditions), provided that the CO can timely make the determinations required by § 655.109(b).

(2) *Employer requirements.* The employer requesting a waiver of the required time period and pre-filing wage and recruitment requirements must submit to the NPC a completed *Application for Temporary Employment Certification,* a completed job offer on the ETA Form 790 *Agricultural and Food Processing Clearance Order,* and a statement justifying the request for a waiver of the time period requirement. The statement must indicate whether the waiver request is due to the fact that the employer did not use H–2A workers during the prior agricultural season or

whether the request is for other good and substantial cause. If the waiver is requested for good and substantial cause, the employer's statement must also include detailed information describing the good and substantial cause which has necessitated the waiver request. Good and substantial cause may include, but is not limited to, such things as the substantial loss of U.S. workers due to weather-related activities or other reasons, unforeseen events affecting the work activities to be performed, pandemic health issues, or similar conditions.

(3) *Processing of Applications.* The CO shall promptly transmit the job order, on behalf of the employer, to the SWA serving the area of intended employment and request an expedited review of the job order in accordance with § 655.102(e) and an inspection of housing in accordance with § 655.104(d)(6)(iii). The CO shall process the application and job order in accordance with § 655.107, issue a wage determination in accordance with § 655.108 and, upon acceptance, require the employer to engage in positive recruitment consistent with § 655.102(d)(2), (3), and (4). The CO shall require the SWA to transmit the job order for interstate clearance consistent with § 655.102(f). The CO shall specify a date on which the employer will be required to submit a recruitment report in accordance with § 655.102(k). The CO will make a determination on the application in accordance with § 655.109.

§ 655.102 Required pre-filing activity.

(a) *Time of filing of application.* An employer may not file an *Application for Temporary Employment Certification* before all of the pre-filing recruitment steps set forth in this section have been fully satisfied, except where specifically exempted from some or all of those requirements by these regulations. Modifications to these requirements for H–2ALCs are set forth in § 655.106.

(b) *General Attestation Obligation.* An employer must attest on the *Application for Temporary Employment Certification* that it will comply with all of the assurances and obligations of this subpart and to performing all necessary steps of the recruitment process as specified in this section.

(c) *Retention of documentation.* An employer filing an *Application for Temporary Employment Certification* must maintain documentation of its advertising and recruitment efforts as required in this subpart and be prepared to submit this documentation in response to a Notice of Deficiency from the CO prior to the CO rendering a Final Determination, or in the event of an audit. The documentation required in this subpart must be retained for a period of no less than 3 years from the date of the certification. There is no record retention requirement for any application (and supporting documentation) after the Secretary has made a final decision to deny the application.

(d) *Positive recruitment steps.* An employer filing an application must:

(1) Submit a job order to the SWA serving the area of intended employment;

(2) Run two print advertisements (one of which must be on a Sunday, except as provided in paragraph (g) of this section);

(3) Contact former U.S. employees who were employed within the last year as described in paragraph (h) of this section; and

(4) Based on an annual determination made by the Secretary, as described in paragraph (i) of this section, recruit in all States currently designated as a State of traditional or expected labor supply with respect to each area of intended employment in which the employer's work is to be performed as required in paragraph (i)(2) of this section.

(e) *Job order.* (1) The employer must submit a job order to the SWA serving the area of intended employment no more than 75 calendar days and no fewer than 60 calendar days before the date of need for intrastate and interstate clearance, identifying it as a job order to be placed in connection with a future application for H–2A workers. If the job opportunity is located in more than one State, the employer may submit a job order to any one of the SWAs having jurisdiction over the anticipated worksites. Where a future master application will be filed by an association of agricultural employers, the SWA will prepare a single job order in the name of the association on behalf of all employers that will be duly named on the *Application for Temporary Employment Certification.* Documentation of this step by the applicant is satisfied by maintaining proof of posting from the SWA identifying the job order number(s) with the start and end dates of the posting of the job order.

(2) The job order submitted to the SWA must satisfy all the requirements for newspaper advertisements contained in § 655.103 and comply with the requirements for agricultural clearance orders in 20 CFR part 653 Subpart F and the requirements set forth in § 655.104.

(3) The SWA will review the contents of the job order as provided in 20 CFR part 653 Subpart F and will work with the employer to address any deficiencies, except that the order may be placed prior to completion of the housing inspection required by 20 CFR 653.501(d)(6) where necessary to meet the timeframes required by statute and regulation. However, the SWA must ensure that housing within its jurisdiction is inspected as expeditiously as possible thereafter. Any issue with regard to whether a job order may properly be placed in the job service system that cannot be resolved with the applicable SWA may be brought to the attention of the NPC, which may direct that the job order be placed in the system where the NPC determines that the applicable program requirements have been met. If the NPC concludes that the job order is not acceptable, it shall so inform the employer using the procedures applicable to a denial of certification set forth in § 655.109(e).

(f) *Intrastate/Interstate recruitment.* (1) Upon receipt and acceptance of the job order, the SWA must promptly place the job order in intrastate clearance on its active file and begin recruitment of eligible U.S. workers. The SWA receiving the job order under paragraph (e) of this section will promptly transmit, on behalf of the employer, a copy of its active job order to all States listed in the job order as anticipated worksites. The SWA must also transmit a copy of all active job orders to no fewer than three States, which must include those States, if any, designated by the Secretary as traditional or expected labor supply States (''out-of-State recruitment States'') for the area of intended employment in which the employer's work is to be performed as defined in paragraph (i) of this section.

(2) Unless otherwise directed by the CO, the SWA must keep the job order open for interstate clearance until the end of the recruitment period, as set forth in § 655.102(f)(3). Each of the SWAs to which the job order was referred must keep the job order open for that same period of time and must refer each eligible U.S. worker who applies (or on whose behalf an application is made) for the job opportunity.

(3) (i) For the first 5 years after the effective date of this rule, the recruitment period shall end 30 days after the first date the employer requires the services of the H–2A workers, or on the last day the employer requires the services of H–2A workers in the applicable area of intended employment, whichever is sooner (the 30-day rule). During that 5-year period, the Department will endeavor to study

the costs and benefits of providing for continuing recruitment of U.S. workers after the H–2A workers have already entered the country. Unless prior to the expiration of the 5-year period the Department conducts a study and publishes a notice determining that the economic benefits of such extended recruitment period outweigh its costs, the recruitment period will, after the expiration of the 5-year period, end on the first date the employer requires the services of the H–2A worker.

(ii) Withholding of U.S. workers prohibited. The provisions of this paragraph shall apply so as long as the 30-day rule is in place.

(A) *Complaints.* Any employer who has reason to believe that a person or entity has willfully and knowingly withheld U.S. workers prior to the arrival at the job site of H–2A workers in order to force the hiring of U.S. workers during the 30-day rule under paragraph (f)(3)(i) of this section may submit a written complaint to the CO. The complaint must clearly identify the person or entity who the employer believes has withheld the U.S. workers, and must specify sufficient facts to support the allegation (e.g., dates, places, numbers and names of U.S. workers) which will permit an investigation to be conducted by the CO.

(B) *Investigations.* The CO must immediately investigate the complaint. The investigation must include interviews with the employer who has submitted the complaint, the person or entity named as responsible for withholding the U.S. workers, and the individual U.S. workers whose availability has purportedly been withheld.

(C) *Written findings.* Where the CO determines, after conducting the interviews required by this paragraph, that the employer's complaint is valid and justified, the CO shall immediately suspend the application of the 30-day rule under paragraph (f)(3)(i) of this section to the employer. The CO's determination shall be the final decision of the Secretary.

(g) *Newspaper advertisements.* (1) During the period of time that the job order is being circulated by the SWA(s) for interstate clearance under paragraph (f) of this section, the employer must place an advertisement on 2 separate days, which may be consecutive, one of which must be a Sunday (except as provided in paragraph (g)(2) of this section), in a newspaper of general circulation serving the area of intended employment that has a reasonable distribution and is appropriate to the occupation and the workers likely to apply for the job opportunity. Both newspaper advertisements must be published only after the job order is accepted by the SWA for intrastate/interstate clearance.

(2) If the job opportunity is located in a rural area that does not have a newspaper with a Sunday edition, the employer must, in place of a Sunday edition, advertise in the regularly published daily edition with the widest circulation in the area of intended employment.

(3) The newspaper advertisements must satisfy the requirements of §§ 655.103 and 655.104. The employer must maintain copies of newspaper pages (with date of publication and full copy of ad), or tear sheets of the pages of the publication in which the advertisements appeared, or other proof of publication containing the text of the printed advertisements and the dates of publication furnished by the newspaper.

(4) If a professional, trade or ethnic publication is more appropriate for the occupation and the workers likely to apply for the job opportunity than a general circulation newspaper, and is the most likely source to bring responses from able, willing, qualified, and available U.S. workers, the employer may use a professional, trade or ethnic publication in place of one of the newspaper advertisements, but may not replace the Sunday advertisement (or the substitute required by paragraph (g)(2) of this section).

(h) *Contact with former U.S. employees.* The employer must contact by mail or other effective means its former U.S. employees (except those who were dismissed for cause, abandoned the worksite, or were provided documentation at the end of their previous period of employment explaining the lawful, job-related reasons they would not be re-contacted) employed by the employer in the occupation at the place of employment during the previous year and solicit their return to the job. The employer must maintain copies of correspondence signed and dated by the employer or, if other means are used, maintain dated logs demonstrating that each worker was contacted, including the phone number, e-mail address, or other means that was used to make contact. The employer must list in the recruitment report any workers who did not return to the employ of the employer because they were either unable or unwilling to return to the job or did not respond to the employer's request, and must retain documentation, if provided by the worker, showing evidence of their inability, unwillingness, or non-responsiveness.

(i) *Additional positive recruitment.* (1) Each year, the Secretary will make a determination with respect to each State whether there are other States (''traditional or expected labor supply States'') in which there are a significant number of able and qualified workers who, if recruited, would be willing to make themselves available for work in that State, as well as which newspapers in each traditional or expected labor supply State that the employer may use to fulfill its obligation to run a newspaper advertisement in that State. Such determination must be based on information provided by State agencies or by other sources within the 120 days preceding the determination (which will be solicited by notice in the **Federal Register**), and will to the extent information is available take into account the success of recent efforts by out-of-State employers to recruit in that State. The Secretary will not designate a State as a traditional or expected labor supply State if the State has a significant number of employers that are recruiting for U.S. workers for the same types of occupations and comparable work. The Secretary's annual determination as to traditional or expected labor supply States, if any, from which applicants from each State must recruit will be published in the **Federal Register** and made available through the ETA Web site.

(2) Each employer must engage in positive recruitment in those States designated in accordance with paragraph (i)(1) with respect to the State in which the employer's work is to be performed. Such recruitment will consist of one newspaper advertisement in each State in one of the newspapers designated by the Secretary, published within the same period of time as the newspaper advertisements required under paragraph (g) of this section. An employer will not be required to conduct positive recruitment in more than three States designated in accordance with paragraph (i)(1) for each area of intended employment listed on the employer's application. The advertisement must refer applicants to the SWA nearest the area in which the advertisement was placed.

(j) *Referrals of U.S. workers.* SWAs may only refer for employment individuals for whom they have verified identity and employment authorization through the process for employment verification of all workers that is established by INA sec. 274A(b). SWAs must provide documentation certifying the employment verification that satisfies the standards of INA sec. 274A(a)(5) and its implementing regulations at 8 CFR 274a.6.

(k) *Recruitment report.* (1) No more than 50 days before the date of need the employer must prepare, sign, and date a written recruitment report. The recruitment report must be submitted with the *Application for Temporary Employment Certification.* The recruitment report must:

(i) List the original number of openings for which the employer recruited;

(ii) Identify each recruitment source by name;

(iii) State the name and contact information of each U.S. worker who applied or was referred to the job opportunity up to the date of the preparation of the recruitment report, and the disposition of each worker;

(iv) Confirm that former employees were contacted and by what means; and

(v) If applicable, explain the lawful job-related reason(s) for not hiring any U.S. workers who applied for the position.

(2) The employer must update the recruitment report within 48 hours of the date that is the end of the recruitment period as specified in § 655.102(f)(3). This supplement to the recruitment report must meet the requirements of paragraph (k)(1) of this section. The employer must sign and date this supplement to the recruitment report and retain it for a period of no less than 3 years. The supplement to the recruitment report must be provided in the event of an audit.

(3) The employer must retain resumes (if provided) of, and evidence of contact with (which may be in the form of an attestation), each U.S. worker who applied or was referred to the job opportunity. Such resumes and evidence of contact must be retained along with the recruitment report and the supplemental recruitment report for a period of no less than 3 years, and must be provided in response to a Notice of Deficiency or in the event of an audit.

§ 655.103 Advertising requirements.

All advertising conducted to satisfy the required recruitment steps under § 655.102 before filing the *Application for Temporary Employment Certification* must meet the requirements set forth in this section and at § 655.104 and must contain terms and conditions of employment which are not less favorable than those that will be offered to the H–2A workers. All advertising must contain the following information:

(a) The employer's name and location(s) of work, or in the event that a master application will be filed by an association, a statement indicating that the name and location of each member of the association can be obtained from the SWA of the State in which the advertisement is run;

(b) The geographic area(s) of employment with enough specificity to apprise applicants of any travel requirements and where applicants will likely have to reside to perform the services or labor;

(c) A description of the job opportunity for which certification is sought with sufficient information to apprise U.S. workers of services or labor to be performed and the anticipated period of employment of the job opportunity;

(d) The wage offer, or in the event that there are multiple wage offers (such as where a master application will be filed by an association and/or where there are multiple crop activities for a single employer), the range of applicable wage offers and, where a master application will be filed by an association, a statement indicating that the rate(s) applicable to each employer can be obtained from the SWA;

(e) The three-fourths guarantee specified in § 655.104(i);

(f) If applicable, a statement that work tools, supplies, and equipment will be provided at no cost to the worker;

(g) A statement that housing will be made available at no cost to workers, including U.S. workers, who cannot reasonably return to their permanent residence at the end of each working day;

(h) If applicable, a statement that transportation and subsistence expenses to the worksite will be provided by the employer;

(i) A statement that the position is temporary and a specification of the total number of job openings the employer intends to fill;

(j) A statement directing applicants to report or send resumes to the SWA of the State in which the advertisement is run for referral to the employer;

(k) Contact information for the applicable SWA and the job order number.

§ 655.104 Contents of job offers.

(a) *Preferential treatment of aliens prohibited.* The employer's job offer must offer to U.S. workers no less than the same benefits, wages, and working conditions that the employer is offering, intends to offer, or will provide to H–2A workers. Except where otherwise permitted under this section, no job offer may impose on U.S. workers any restrictions or obligations that will not be imposed on the employer's H–2A workers.

(b) *Job qualifications.* Each job qualification listed in the job offer must not substantially deviate from the normal and accepted qualifications required by employers that do not use H–2A workers in the same or comparable occupations and crops.

(c) *Minimum benefits, wages, and working conditions.* Every job offer accompanying an H–2A application must include each of the minimum benefit, wage, and working condition provisions listed in paragraphs (d) through (q) of this section.

(d) *Housing.* (1) *Obligation to provide housing.* The employer must provide housing at no cost to the worker, except for those U.S. workers who are reasonably able to return to their permanent residence at the end of the work day. Housing must be provided through one of the following means:

(i) *Employer-provided housing.* Employer-provided housing that meets the full set of DOL OSHA standards set forth at 29 CFR 1910.142, or the full set of standards at §§ 654.404 through 654.417 of this chapter, whichever are applicable under § 654.401; or

(ii) *Rental and/or public accommodations.* Rental or public accommodations or other substantially similar class of habitation that meets applicable local standards for such housing. In the absence of applicable local standards, State standards will apply. In the absence of applicable local or State standards, DOL OSHA standards at 29 CFR 1910.142 will apply. Any charges for rental housing must be paid directly by the employer to the owner or operator of the housing. The employer must document that the housing complies with the local, State, or Federal housing standards. Such documentation may include but is not limited to a certificate from a State Department of Health or other State or local agency or a statement from the manager or owner of the housing.

(2) *Standards for range housing.* Housing for workers principally engaged in the range production of livestock shall meet standards of DOL OSHA for such housing. In the absence of such standards, range housing for sheepherders and other workers engaged in the range production of livestock must meet guidelines issued by ETA.

(3) *Deposit charges.* Charges in the form of deposits for bedding or other similar incidentals related to housing must not be levied upon workers. However, employers may require workers to reimburse them for damage caused to housing, bedding, or other property by the individual workers found to have been responsible for

damage which is not the result of normal wear and tear related to habitation.

(4) *Charges for public housing.* If public housing provided for migrant agricultural workers under the auspices of a local, county, or State government is secured by the employer, the employer must pay any charges normally required for use of the public housing units (but need not pay for optional, extra services) directly to the housing's management.

(5) *Family housing.* When it is the prevailing practice in the area of intended employment and the occupation to provide family housing, family housing must be provided to workers with families who request it.

(6) *Housing inspection.* In order to ensure that the housing provided by an employer under this section meets the relevant standard:

(i) An employer must make the required attestation, which may include an attestation that the employer is complying with the procedures set forth in § 654.403, at the time of filing the *Application for Temporary Employment Certification* pursuant to § 655.105(e)(2).

(ii) The employer must make a request to the SWA for a housing inspection no less than 60 days before the date of need, except where otherwise provided under this part.

(iii) The SWA must make its determination that the housing meets the statutory criteria applicable to the type of housing provided prior to the date on which the Secretary is required to make a certification determination under INA sec. 218(c)(3)(A), which is 30 days before the employer's date of need. SWAs must not adopt rules or restrictions on housing inspections that unreasonably prevent inspections from being completed in the required time frame, such as rules that no inspections will be conducted where the housing is already occupied or is not yet leased. If the employer has attested to and met all other criteria for certification, and the employer has made a timely request for a housing inspection under this paragraph, and the SWA has failed to complete a housing inspection by the statutory deadline of 30 days prior to date of need, the certification will not be withheld on account of the SWA's failure to meet the statutory deadline. The SWA must in such cases inspect the housing prior to or during occupation to ensure it meets applicable housing standards. If, upon inspection, the SWA determines the supplied housing does not meet the applicable housing standards, the SWA must promptly provide written notification to the employer and the CO. The CO will take appropriate action, including notice to the employer to cure deficiencies. An employer's failure to cure substantial violations can result in revocation of the temporary labor certification.

(7) *Certified housing that becomes unavailable.* If after a request to certify housing (but before certification), or after certification of housing, such housing becomes unavailable for reasons outside the employer's control, the employer may substitute other rental or public accommodation housing that is in compliance with the local, State, or Federal housing standards applicable under paragraph (d)(1)(ii) of this section and for which the employer is able to submit evidence of such compliance. The employer must notify the SWA in writing of the change in accommodations and the reason(s) for such change and provide the SWA evidence of compliance with the applicable local, State or Federal safety and health standards, in accordance with the requirements of paragraph (d)(1)(ii) of this section. The SWA must notify the CO of all housing changes and of any noncompliance with the standards set forth in paragraph (d)(1)(ii) of this section. Substantial noncompliance can result in revocation of the temporary labor certification under § 655.117.

(e) *Workers' compensation.* The employer must provide workers' compensation insurance coverage in compliance with State law covering injury and disease arising out of and in the course of the worker's employment. If the type of employment for which the certification is sought is not covered by or is exempt from the State's workers' compensation law, the employer must provide, at no cost to the worker, insurance covering injury and disease arising out of and in the course of the worker's employment that will provide benefits at least equal to those provided under the State workers' compensation law for other comparable employment. The employer must retain for 3 years from the date of certification of the application, the name of the insurance carrier, the insurance policy number, and proof of insurance for the dates of need, or, if appropriate, proof of State law coverage.

(f) *Employer-provided items.* Except as provided in this paragraph, the employer must provide to the worker, without charge or deposit charge, all tools, supplies, and equipment required to perform the duties assigned. The employer may charge the worker for reasonable costs related to the worker's refusal or negligent failure to return any property furnished by the employer or due to such worker's willful damage or destruction of such property. Where it is a common practice in the particular area, crop activity and occupation for workers to provide tools and equipment, with or without the employer reimbursing the workers for the cost of providing them, such an arrangement will be permitted, provided that the requirements of sec. 3(m) of the FLSA at 29 U.S.C. 203(m) are met. Section 3(m) does not permit deductions for tools or equipment primarily for the benefit of the employer that reduce an employee's wage below the wage required under the minimum wage, or, where applicable, the overtime provisions of the FLSA.

(g) *Meals.* The employer either must provide each worker with three meals a day or must furnish free and convenient cooking and kitchen facilities to the workers that will enable the workers to prepare their own meals. Where the employer provides the meals, the job offer must state the charge, if any, to the worker for such meals. The amount of meal charges is governed by § 655.114.

(h) *Transportation; daily subsistence.* (1) *Transportation to place of employment.* If the employer has not previously advanced such transportation and subsistence costs to the worker or otherwise provided such transportation or subsistence directly to the worker by other means and if the worker completes 50 percent of the work contract period, the employer must pay the worker for reasonable costs incurred by the worker for transportation and daily subsistence from the place from which the worker has departed to the employer's place of employment. For an H–2A worker coming from outside of the U.S., the place from which the worker has departed is the place of recruitment, which the Department interprets to mean the appropriate U.S. consulate or port of entry. When it is the prevailing practice of non-H–2A agricultural employers in the occupation in the area to do so, or when the employer extends such benefits to similarly situated H–2A workers, the employer must advance the required transportation and subsistence costs (or otherwise provide them) to U.S. workers. The amount of the transportation payment must be no less (and is not required to be more) than the most economical and reasonable common carrier transportation charges for the distances involved. The amount of the daily subsistence payment must be at least as much as the employer would charge the worker for providing the worker with three meals a day during employment (if applicable), but in no event less than the amount

permitted under paragraph (g) of this section.

(2) *Transportation from last place of employment to home country.* If the worker completes the work contract period, and the worker has no immediately subsequent H–2A employment, the employer must provide or pay for the worker's transportation and daily subsistence from the place of employment to the place from which the worker, disregarding intervening employment, departed to work for the employer. For an H–2A worker coming from outside of the U.S., the place from which the worker has departed will be considered to be the appropriate U.S. consulate or port of entry.

(3) *Transportation between living quarters and worksite.* The employer must provide transportation between the worker's living quarters (i.e., housing provided or secured by the employer pursuant to paragraph (d) of this section) and the employer's worksite at no cost to the worker, and such transportation must comply with all applicable Federal, State or local laws and regulations, and must provide, at a minimum, the same vehicle safety standards, driver licensure, and vehicle insurance as required under 29 U.S.C. 1841 and 29 CFR part 500, subpart D. If workers' compensation is used to cover such transportation, in lieu of vehicle insurance, the employer must either ensure that the workers' compensation covers all travel or that vehicle insurance exists to provide coverage for travel not covered by workers' compensation.

(i) *Three-fourths guarantee.* (1) *Offer to worker.* The employer must guarantee to offer the worker employment for a total number of work hours equal to at least three-fourths of the workdays of the total period beginning with the first workday after the arrival of the worker at the place of employment or the advertised contractual first date of need, whichever is later, and ending on the expiration date specified in the work contract or in its extensions, if any. For purposes of this paragraph a workday means the number of hours in a workday as stated in the job order and excludes the worker's Sabbath and Federal holidays. The employer must offer a total number of hours to ensure the provision of sufficient work to reach the three-fourths guarantee. The work hours must be offered during the work period specified in the work contract, or during any modified work contract period to which the worker and employer have mutually agreed and has been approved by the CO. The work contract period can be shortened by agreement of the parties only with the approval of the CO. In the event the worker begins working later than the specified beginning date of the contract, the guarantee period begins with the first workday after the arrival of the worker at the place of employment, and continues until the last day during which the work contract and all extensions thereof are in effect. Therefore, if, for example, a work contract is for a 10-week period, during which a normal workweek is specified as 6 days a week, 8 hours per day, the worker would have to be guaranteed employment for at least 360 hours (e.g., 10 weeks × 48 hours/week = 480-hours × 75 percent = 360). If a Federal holiday occurred during the 10-week span, the 8 hours would be deducted from the total guaranteed. A worker may be offered more than the specified hours of work on a single workday. For purposes of meeting the guarantee, however, the worker will not be required to work for more than the number of hours specified in the job order for a workday, or on the worker's Sabbath or Federal holidays. However, all hours of work actually performed may be counted by the employer in calculating whether the period of guaranteed employment has been met. If the employer affords the U.S. or H–2A worker during the total work contract period less employment than that required under this paragraph, the employer must pay such worker the amount the worker would have earned had the worker, in fact, worked for the guaranteed number of days.

(2) *Guarantee for piece rate paid worker.* If the worker will be paid on a piece rate basis, the employer must use the worker's average hourly piece rate earnings or the AEWR, whichever is higher, to calculate the amount due under the guarantee.

(3) *Failure to work.* Any hours the worker fails to work, up to a maximum of the number of hours specified in the job order for a workday, when the worker has been offered an opportunity to do so in accordance with paragraph (i)(1) of this section, and all hours of work actually performed (including voluntary work over 8 hours in a workday or on the worker's Sabbath or Federal holidays), may be counted by the employer in calculating whether the period of guaranteed employment has been met. An employer seeking to calculate whether the number of hours has been met must maintain the payroll records in accordance with paragraph (j)(2) of this section.

(4) *Displaced H–2A worker.* The employer is not liable for payment under paragraph (i)(1) of this section to an H–2A worker whom the CO certifies is displaced because of the employer's compliance with § 655.105(d) with respect to referrals made after the employer's date of need. The employer is, however, liable for return transportation for any such displaced worker in accordance with paragraph (h)(2) of this section.

(5) *Obligation to provide housing and meals.* Notwithstanding the three-fourths guarantee contained in this section, employers are obligated to provide housing and subsistence for each day of the contract period up until the day the workers depart for other H–2A employment, depart to the place outside of the U.S. from which the worker came, or, if the worker voluntarily abandons employment or is terminated for cause, the day of such abandonment or termination.

(j) *Earnings records.* (1) The employer must keep accurate and adequate records with respect to the workers' earnings, including but not limited to field tally records, supporting summary payroll records, and records showing the nature and amount of the work performed; the number of hours of work offered each day by the employer (broken out by hours offered both in accordance with and over and above the three-fourths guarantee at paragraph (i)(3) of this section); the hours actually worked each day by the worker; the time the worker began and ended each workday; the rate of pay (both piece rate and hourly, if applicable); the worker's earnings per pay period; the worker's home address; and the amount of and reasons for any and all deductions taken from the worker's wages.

(2) Each employer must keep the records required by this part, including field tally records and supporting summary payroll records, safe and accessible at the place or places of employment, or at one or more established central recordkeeping offices where such records are customarily maintained. All records must be available for inspection and transcription by the Secretary or a duly authorized and designated representative, and by the worker and representatives designated by the worker as evidenced by appropriate documentation (an Entry of Appearance as Attorney or Representative, Form G–28, signed by the worker, or an affidavit signed by the worker confirming such representation). Where the records are maintained at a central recordkeeping office, other than in the place or places of employment, such records must be made available for inspection and copying within 72 hours following notice from the Secretary, or a duly authorized and designated

representative, and by the worker and designated representatives as described in this paragraph.

(3) To assist in determining whether the three-fourths guarantee in paragraph (i) of this section has been met, if the number of hours worked by the worker on a day during the work contract period is less than the number of hours offered, as specified in the job offer, the records must state the reason or reasons therefore.

(4) The employer must retain the records for not less than 3 years after the completion of the work contract.

(k) *Hours and earnings statements.* The employer must furnish to the worker on or before each payday in one or more written statements the following information:

(1) The worker's total earnings for the pay period;

(2) The worker's hourly rate and/or piece rate of pay;

(3) The hours of employment offered to the worker (broken out by offers in accordance with, and over and above, the guarantee);

(4) The hours actually worked by the worker;

(5) An itemization of all deductions made from the worker's wages; and

(6) If piece rates are used, the units produced daily.

(l) *Rates of pay.* (1) If the worker is paid by the hour, the employer must pay the worker at least the AEWR in effect at the time recruitment for the position was begun, the prevailing hourly wage rate, the prevailing piece rate, or the Federal or State minimum wage rate, whichever is highest, for every hour or portion thereof worked during a pay period; or

(2)(i) If the worker is paid on a piece rate basis and the piece rate does not result at the end of the pay period in average hourly piece rate earnings during the pay period at least equal to the amount the worker would have earned had the worker been paid at the appropriate hourly rate, the worker's pay must be supplemented at that time so that the worker's earnings are at least as much as the worker would have earned during the pay period if the worker had instead been paid at the appropriate hourly wage rate for each hour worked;

(ii) The piece rate must be no less than the piece rate prevailing for the activity in the area of intended employment; and

(iii) If the employer who pays by the piece rate requires one or more minimum productivity standards of workers as a condition of job retention, such standards must be specified in the job offer and must be normal, meaning that they may not be unusual for workers performing the same activity in the area of intended employment.

(m) *Frequency of pay.* The employer must state in the job offer the frequency with which the worker will be paid, which must be at least twice monthly.

(n) *Abandonment of employment or termination for cause.* If the worker voluntarily abandons employment before the end of the contract period, fails to report for employment at the beginning of the contract period, or is terminated for cause, and the employer notifies the Department and DHS in writing or by any other method specified by the Department or DHS in a manner specified in a notice published in the **Federal Register** not later than 2 working days after such abandonment or abscondment occurs, the employer will not be responsible for providing or paying for the subsequent transportation and subsistence expenses of that worker under paragraph (h) of this section, and that worker is not entitled to the three-fourths guarantee described in paragraph (i) of this section. An abandonment or abscondment shall be deemed to begin after a worker fails to report for work at the regularly scheduled time for 5 consecutive working days without the consent of the employer. Employees may be terminated for cause, however, for shorter unexcused periods of time that shall not be considered abandonment or abscondment.

(o) *Contract impossibility.* If, before the expiration date specified in the work contract, the services of the worker are no longer required for reasons beyond the control of the employer due to fire, weather, or other Act of God that makes the fulfillment of the contract impossible, the employer may terminate the work contract. Whether such an event constitutes a contract impossibility will be determined by the CO. In the event of such termination of a contract, the employer must fulfill a three-fourths guarantee for the time that has elapsed from the start of the work contract to the time of its termination as described in paragraph (i)(1) of this section. The employer must:

(1) Return the worker, at the employer's expense, to the place from which the worker (disregarding intervening employment) came to work for the employer, or transport the worker to the worker's next certified H–2A employer (but only if the worker can provide documentation supporting such employment), whichever the worker prefers. For an H–2A worker coming from outside of the U.S., the place from which the worker (disregarding intervening employment) came to work for the employer is the appropriate U.S. consulate or port of entry;

(2) Reimburse the worker the full amount of any deductions made from the worker's pay by the employer for transportation and subsistence expenses to the place of employment; and

(3) Pay the worker for any costs incurred by the worker for transportation and daily subsistence to that employer's place of employment. Daily subsistence will be computed as set forth in paragraph (h) of this section. The amount of the transportation payment will be no less (and is not required to be more) than the most economical and reasonable common carrier transportation charges for the distances involved.

(p) *Deductions.* The employer must make all deductions from the worker's paycheck that are required by law. The job offer must specify all deductions not required by law which the employer will make from the worker's paycheck. All deductions must be reasonable. However, an employer subject to the FLSA may not make deductions that would violate the FLSA.

(q) *Copy of work contract.* The employer must provide to the worker, no later than on the day the work commences, a copy of the work contract between the employer and the worker. The work contract must contain all of the provisions required by paragraphs (a) through (p) of this section. In the absence of a separate, written work contract entered into between the employer and the worker, the job order, as provided in 20 CFR part 653, Subpart F, will be the work contract.

§ 655.105 Assurances and obligations of H–2A employers.

An employer seeking to employ H–2A workers must attest as part of the *Application for Temporary Employment Certification* that it will abide by the following conditions of this subpart:

(a) The job opportunity is and will continue through the recruitment period to be open to any qualified U.S. worker regardless of race, color, national origin, age, sex, religion, handicap, or citizenship, and the employer has conducted and will continue to conduct the required recruitment, in accordance with regulations, and has been unsuccessful in locating sufficient numbers of qualified U.S. applicants for the job opportunity for which certification is sought. Any U.S. workers who applied or apply for the job were or will be rejected only for lawful, job-related reasons, and those not rejected on this basis have been or will be hired. In addition, the employer attests that it

will retain records of all rejections as required by § 655.119.

(b) The employer is offering terms and working conditions which are not less favorable than those offered to the H–2A worker(s) and are not less than the minimum terms and conditions required by this subpart.

(c) The specific job opportunity for which the employer is requesting H–2A certification is not vacant because the former occupant is on strike or being locked out in the course of a labor dispute.

(d) The employer will continue to cooperate with the SWA by accepting referrals of all eligible U.S. workers who apply (or on whose behalf an application is made) for the job opportunity until the end of the recruitment period as specified in § 655.102(f)(3).

(e) During the period of employment that is the subject of the labor certification application, the employer will:

(1) Comply with applicable Federal, State and local employment-related laws and regulations, including employment-related health and safety laws;

(2) Provide for or secure housing for those workers who are not reasonably able to return to their permanent residence at the end of the work day, without charge to the worker, that complies with the applicable standards as set forth in § 655.104(d);

(3) Where required, has timely requested a preoccupancy inspection of the housing and, if one has been conducted, received certification;

(4) Provide insurance, without charge to the worker, under a State workers' compensation law or otherwise, that meets the requirements of § 655.104(e); and

(5) Provide transportation in compliance with all applicable Federal, State or local laws and regulations between the worker's living quarters (i.e., housing provided by the employer under § 655.104(d)) and the employer's worksite without cost to the worker.

(f) Upon the separation from employment of H–2A worker(s) employed under the labor certification application, if such separation occurs prior to the end date of the employment specified in the application, the employer will notify the Department and DHS in writing (or any other method specified by the Department or DHS) of the separation from employment not later than 2 work days after such separation is discovered by the employer. The procedures for reporting abandonments and abscondments are outlined in § 655.104(n) of this subpart.

(g) The offered wage rate is the highest of the AEWR in effect at the time recruitment is initiated, the prevailing hourly wage or piece rate, or the Federal or State minimum wage, and the employer will pay the offered wage during the entire period of the approved labor certification.

(h) The offered wage is not based on commission, bonuses, or other incentives, unless the employer guarantees a wage paid on a weekly, bi-weekly, or monthly basis that equals or exceeds the AEWR, prevailing hourly wage or piece rate, or the legal Federal or State minimum wage, whichever is highest.

(i) The job opportunity is a full-time temporary position, calculated to be at least 30 hours per work week, the qualifications for which do not substantially deviate from the normal and accepted qualifications required by employers that do not use H–2A workers in the same or comparable occupations or crops.

(j) The employer has not laid off and will not lay off any similarly employed U.S. worker in the occupation that is the subject of the *Application for Temporary Employment Certification* in the area of intended employment except for lawful, job related reasons within 60 days of the date of need, or if the employer has laid off such workers, it has offered the job opportunity that is the subject of the application to those laid-off U.S. worker(s) and the U.S. worker(s) either refused the job opportunity or was rejected for the job opportunity for lawful, job-related reasons.

(k) The employer has not and will not intimidate, threaten, restrain, coerce, blacklist, or in any manner discriminate against, and has not and will not cause any person to intimidate, threaten, restrain, coerce, blacklist, or in any manner discriminate against, any person who has with just cause:

(1) Filed a complaint under or related to sec. 218 of the INA at 8 U.S.C. 1188, or this subpart or any other Department regulation promulgated under sec. 218 of the INA;

(2) Instituted or caused to be instituted any proceeding under or related to sec. 218 of the INA, or this subpart or any other Department regulation promulgated under sec. 218 of the INA;

(3) Testified or is about to testify in any proceeding under or related to sec. 218 of the INA or this subpart or any other Department regulation promulgated under sec. 218 of the INA;

(4) Consulted with an employee of a legal assistance program or an attorney on matters related to sec. 218 of the INA or this subpart or any other Department regulation promulgated under sec. 218 of the INA; or

(5) Exercised or asserted on behalf of himself/herself or others any right or protection afforded by sec. 218 of the INA, or this subpart or any other Department regulation promulgated under sec. 218 of the INA.

(l) The employer shall not discharge any person because of that person's taking any action listed in paragraphs (k)(1) through (k)(5) of this section.

(m) All fees associated with processing the temporary labor certification will be paid in a timely manner.

(n) The employer will inform H–2A workers of the requirement that they leave the U.S. at the end of the period certified by the Department or separation from the employer, whichever is earlier, as required under § 655.111, unless the H–2A worker is being sponsored by another subsequent employer.

(o) The employer and its agents have not sought or received payment of any kind from the employee for any activity related to obtaining labor certification, including payment of the employer's attorneys' fees, application fees, or recruitment costs. For purposes of this paragraph, payment includes, but is not limited to, monetary payments, wage concessions (including deductions from wages, salary, or benefits), kickbacks, bribes, tributes, in kind payments, and free labor. This provision does not prohibit employers or their agents from receiving reimbursement for costs that are the responsibility of the worker, such as government required passport or visa fees.

(p) The employer has contractually forbidden any foreign labor contractor or recruiter whom the employer engages in international recruitment of H–2A workers to seek or receive payments from prospective employees, except as provided for in DHS regulations at 8 CFR 214.2(h)(5)(xi)(A).

(q) The applicant is either a fixed-site employer, an agent or recruiter, an H–2ALC (as defined in these regulations), or an association.

§ 655.106 Assurances and obligations of H–2A Labor Contractors.

(a) The pre-filing activity requirements set forth in § 655.102 are modified as follows for H–2ALCs:

(1) The job order for an H–2ALC may contain work locations in multiple areas of intended employment, and may be submitted to any one of the SWAs

having jurisdiction over the anticipated work areas. The SWA receiving the job order shall promptly transmit, on behalf of the employer, a copy of its active job order to all States listed in the application as anticipated worksites, as well as those States, if any, designated by the Secretary as traditional or expected labor supply States for each area in which the employer's work is to be performed. Each SWA shall keep the H–2ALC's job order posted until the end of the recruitment period, as set forth in § 655.102(f)(3), for the area of intended employment that is covered by the SWA. SWAs in States that have been designated as traditional or expected labor supply States for more than one area of intended of employment that are listed on an application shall keep the H–2ALC's job order posted until the end of the applicable recruitment period that is last in time, and may make referrals for job opportunities in any area of intended employment that is still in an active recruitment period, as defined by § 655.102(f)(3).

(2) The H–2ALC must conduct separate positive recruitment under § 655.102(g) through (i) for each area of intended employment in which the H–2ALC intends to perform work, but need not conduct separate recruitment for each work location within a single area of intended employment. The positive recruitment for each area of intended employment must list the name and location of each fixed-site agricultural business to which the H–2ALC expects to provide H–2A workers, the expected beginning and ending dates when the H–2ALC will be providing the workers to each fixed site, and a description of the crops and activities the workers are expected to perform at such fixed site. Such positive recruitment must be conducted pre-filing for the first area of intended employment, but must be started no more than 75 and no fewer than 60 days before the listed arrival date (or the amended date, if applicable) for each subsequent area of intended employment. For each area of intended employment, the advertising that must be placed in any applicable States designated as traditional or expected labor supply States must be placed at the same time as the placement of other positive recruitment for the area of intended employment in accordance with § 655.102(i)(2).

(3) The job order and the positive recruitment in each area of intended employment may require that workers complete the remainder of the H–2ALC's itinerary.

(4) An H–2ALC who hires U.S. workers during the course of its itinerary, and accordingly releases one or more of its H–2A workers, is eligible for the release from the three-quarters guarantee with respect to the released H–2A workers that is provided for in § 655.104(i)(4).

(5) An H–2ALC may amend its application subsequent to submission in accordance with § 655.107(d)(3) to account for new or changed worksites or areas of intended employment during the course of the itinerary in the following manner:

(i) If the additional worksite(s) are in the same area(s) of intended employment as represented on the *Application for Temporary Employment Certification,* the H–2ALC is not required to re-recruit in those areas of intended employment if that recruitment has been completed and if the job duties at the new work sites are similar to those already covered by the application.

(ii) If the additional worksite(s) are outside the area(s) of intended employment represented on the *Application for Temporary Employment Certification,* the H–2ALC must submit in writing the new area(s) of intended employment and explain the reasons for the amendment of the labor certification itinerary. The CO will order additional recruitment in accordance with § 655.102(d).

(iii) For any additional worksite not included on the original application that necessitates a change in housing of H–2A workers, the H–2ALC must secure the statement of housing as described in paragraph (b)(6) of this section and obtain an inspection of such housing from the SWA in the area of intended employment.

(iv) Where additional recruitment is required under paragraphs (a)(5)(i) or (a)(5)(ii) of this section, the CO shall allow it to take place on an expedited basis, where possible, so as to allow the amended dates of need to be met.

(6) Consistent with paragraph (a)(5) of this section, no later than 30 days prior to the commencement of employment in each area of intended employment in the itinerary of an H–2ALC, the SWA having jurisdiction over that area of intended employment must complete the housing inspections for any employer-provided housing to be used by the employees of the H–2ALC.

(7) To satisfy the requirements of § 655.102(h), the H–2ALC must contact all U.S employees that worked for the H–2ALC during the previous season, except those excluded by that section, before filing its application, and must advise those workers that a separate job opportunity exists for each area of intended employment that is covered by the application. The employer may advise contacted employees that for any given job opportunity, workers may be required to complete the remainder of the H–2ALC's itinerary.

(b) In addition to the assurances and obligations listed in § 655.105, H–2ALC applicants are also required to:

(1) Provide the MSPA Farm Labor Contractor (FLC) certificate of registration number and expiration date if required under MSPA at 29 U.S.C. 1801 *et seq.*, to have such a certificate;

(2) Identify the farm labor contracting activities the H–2ALC is authorized to perform as an FLC under MSPA as shown on the FLC certificate of registration, if required under MSPA at 29 U.S.C. 1801 *et seq.*, to have such a certificate of registration;

(3) List the name and location of each fixed-site agricultural business to which the H–2A Labor Contractor expects to provide H–2A workers, the expected beginning and ending dates when the H–2ALC will be providing the workers to each fixed site, and a description of the crops and activities the workers are expected to perform at such fixed site;

(4) Provide proof of its ability to discharge financial obligations under the H–2A program by attesting that it has obtained a surety bond as required by 29 CFR 501.8, stating on the application the name, address, phone number, and contact person for the surety, and providing the amount of the bond (as calculated pursuant to 29 CFR 501.8) and any identifying designation utilized by the surety for the bond;

(5) Attest that it has engaged in, or will engage in within the timeframes required by § 655.102 as modified by § 655.106(a), recruitment efforts in each area of intended employment in which it has listed a fixed-site agricultural business; and

(6) Attest that it will be providing housing and transportation that complies with the applicable housing standards in § 655.104(d) or that it has obtained from each fixed-site agricultural business that will provide housing or transportation to the workers a written statement stating that:

(i) All housing used by workers and owned, operated or secured by the fixed-site agricultural business complies with the applicable housing standards in § 655.104(d); and

(ii) All transportation between the worksite and the workers' living quarters that is provided by the fixed-site agricultural business complies with all applicable Federal, State, or local laws and regulations and will provide, at a minimum, the same vehicle safety standards, driver licensure, and vehicle insurance as required under 29 U.S.C. 1841 and 29 CFR part 500, subpart D,

except where workers' compensation is used to cover such transportation as described in § 655.104(h)(3).

§ 655.107 Processing of applications.

(a) *Processing.* (1) Upon receipt of the application, the CO will promptly review the application for completeness and an absence of errors that would prevent certification, and for compliance with the criteria for certification. The CO will make a determination to certify, deny, or issue a Notice of Deficiency prior to making a Final Determination on the application. Applications requesting that zero job opportunities be certified for H–2A employment because the employer has been able to recruit a sufficient number of U.S. workers must comply with other requirements for H–2A applications and must be supported by a recruitment report, in which case the application will be accepted but will then be denied. Criteria for certification, as used in this subpart, include, but are not limited to, whether the employer has established the need for the agricultural services or labor to be performed on a temporary or seasonal basis; made all the assurances and met all the obligations required by § 655.105, and/or, if an H–2ALC, by § 655.106; complied with the timeliness requirements in § 655.102; and complied with the recruitment obligations required by §§ 655.102 and 655.103.

(2) Unless otherwise noted, any notice or request sent by the CO or OFLC to an applicant requiring a response shall be sent by means normally assuring next-day delivery, to afford the applicant sufficient time to respond. The employer's response shall be considered filed with the Department when sent (by mail, certified mail, or any other means indicated to be acceptable by the CO) to the Department, which may be demonstrated, for example, by a postmark.

(b) *Notice of deficiencies.* (1) If the CO determines that the employer has made all necessary attestations and assurances, but the application fails to comply with one or more of the criteria for certification in paragraph (a) of this section, the CO will promptly notify the employer within 7 calendar days of the CO's receipt of the application.

(2) The notice will:

(i) State the reason(s) why the application fails to meet the criteria for temporary labor certification, citing the relevant regulatory standard(s);

(ii) Offer the employer an opportunity to submit a modified application within 5 business days from date of receipt, stating the modification that is needed for the CO to accept the application for consideration;

(iii) Except as provided for under paragraph (b)(2)(iv) of this section, state that the CO's determination on whether to grant or deny the *Application for Temporary Employment Certification* will be made no later than 30 calendar days before the date of need, provided that the employer submits the requested modification to the application within 5 business days and in a manner specified by the CO;

(iv) Where the CO determines the employer failed to comply with the recruitment obligations required by §§ 655.102 and 655.103, offer the employer an opportunity to correct its recruitment and conduct it on an expedited schedule. The CO shall specify the positive recruitment requirements, request the employer submit proof of corrected advertisement and an initial recruitment report meeting the requirements of § 655.102(k) no earlier than 48 hours after the last corrected advertisement is printed, and state that the CO's determination on whether to grant or deny the *Application for Temporary Employment Certification* will be made within 5 business days of receiving the required documentation, which may be a date later than 30 days before the date of need:

(v) Offer the employer an opportunity to request an expedited administrative review or a de novo administrative hearing before an ALJ, of the *Notice of Deficiency.* The notice will state that in order to obtain such a review or hearing, the employer, within 5 business days of the receipt of the notice, must file by facsimile or other means normally assuring next day delivery, a written request to the Chief Administrative Law Judge of DOL and simultaneously serve a copy on the CO. The notice will also state that the employer may submit any legal arguments that the employer believes will rebut the basis of the CO's action; and

(vi) State that if the employer does not comply with the requirements under paragraphs (b)(2)(ii) and (iv) of this section or request an expedited administrative judicial review or a de novo hearing before an ALJ within the 5 business days the CO will deny the application in accordance with the labor certification determination provisions in § 655.109.

(c) *Submission of modified applications.* (1) If the CO notifies the employer of any deficiencies within the 7 calendar day timeframe set forth in paragraph (b)(1) of this section, the date by which the CO's Final Determination is required by statute to be made will be postponed by 1 day for each day that passes beyond the 5 business-day period allowed under paragraph (b)(2)(ii) of this section to submit a modified application.

(2) Where the employer submits a modified application as required by the CO, and the CO approves the modified application, the CO will not deny the application based solely on the fact that it now does not meet the timeliness requirements for filing applications.

(3) If the modified application is not approved, the CO will deny the application in accordance with the labor certification determination provisions in § 655.109.

(d) *Amendments to applications.* (1) Applications may be amended at any time before the CO's certification determination to increase the number of workers requested in the initial application by not more than 20 percent (50 percent for employers requesting less than 10 workers) without requiring an additional recruitment period for U.S. workers. Requests for increases above the percent prescribed, without additional recruitment, may be approved by the CO only when the request is submitted in writing, the need for additional workers could not have been foreseen, and the crops or commodities will be in jeopardy prior to the expiration of an additional recruitment period.

(2) Applications may be amended to make minor changes in the total period of employment, but only if a written request is submitted to the CO and approved in advance. In considering whether to approve the request, the CO will review the reason(s) for the request, determine whether the reason(s) are on the whole justified, and take into account the effect(s) of a decision to approve on the adequacy of the underlying test of the domestic labor market for the job opportunity. If a request for a change in the start date of the total period of employment is made after workers have departed for the employer's place of work, the CO may only approve the change if the request is accompanied by a written assurance signed and dated by the employer that all such workers will be provided housing and subsistence, without cost to the workers, until work commences. Upon acceptance of an amendment, the CO will submit to the SWA any necessary modification to the job order.

(3) Other amendments to the application, including elements of the job offer and the place of work, may be approved by the CO if the CO determines the proposed amendment(s) are justified by a business reason and will not prevent the CO from making the

labor certification determination required under § 655.109. Requested amendments will be reviewed as quickly as possible, taking into account revised dates of need for work locations associated with the amendment.

(e) *Appeal procedures.* With respect to either a Notice of Deficiency issued under paragraph (b) of this section, the denial of a requested amendment under paragraph (d) of this section, or a notice of denial issued under § 655.109(e), if the employer timely requests an expedited administrative review or *de novo* hearing before an ALJ, the procedures set forth in § 655.115 will be followed.

§ 655.108 Offered wage rate.

(a) *Highest wage.* To comply with its obligation under § 655.105(g), an employer must offer a wage rate that is the highest of the AEWR in effect at the time recruitment for a position is begun, the prevailing hourly wage or piece rate, or the Federal or State minimum wage.

(b) *Wage rate request.* The employer must request and obtain a wage rate determination from the NPC, on a form prescribed by ETA, before commencing any recruitment under this subpart, except where specifically exempted from this requirement by these regulations.

(c) *Validity of wage rate.* The recruitment must begin within the validity period of the wage determination obtained from the NPC. Recruitment for this purpose begins when the job order is accepted by the SWA for posting.

(d) *Wage offer.* The employer must offer and advertise in its recruitment a wage at least equal to the wage rate required by paragraph (a) of this section.

(e) *Adverse effect wage rate.* The AEWR will be based on published wage data for the occupation, skill level, and geographical area from the Bureau of Labor Statistics (BLS), Occupational Employment Statistics (OES) survey. The NPC will obtain wage information on the AEWR using the On-line Wage Library (OWL) found on the Foreign Labor Certification Data Center Web site (*http://www.flcdatacenter.com/*). This wage shall not be less than the July 24, 2009 Federal minimum wage of $7.25.

(f) *Wage determination.* The NPC must enter the wage rate determination on a form it uses, indicate the source, and return the form with its endorsement to the employer.

(g) *Skill level.* (1) Level I wage rates are assigned to job offers for beginning level employees who have a basic understanding of the occupation. These employees perform routine tasks that require limited, if any, exercise of judgment. The tasks provide experience and familiarization with the employer's methods, practices, and programs. The employees may perform higher level work for training and developmental purposes. These employees work under close supervision and receive specific instructions on required tasks and results expected. Their work is closely monitored and reviewed for accuracy.

(2) Level II wage rates are assigned to job offers for employees who have attained, through education or experience, a good understanding of the occupation. These employees perform moderately complex tasks that require limited judgment. An indicator that the job request warrants a wage determination at Level II would be a requirement for years of education and/or experience that are generally required as described in the O*NET Job Zones.

(3) Level III wage rates are assigned to job offers for employees who have a sound understanding of the occupation and have attained, either through education or experience, special skills or knowledge. These employees perform tasks that require exercising judgment and may coordinate the activities of other staff. They may have supervisory authority over those staff. A requirement for years of experience or educational degrees that are at the higher ranges indicated in the O*NET Job Zones would be an indicator that a Level III wage should be considered. Frequently, key words in the job title can be used as indicators that an employer's job offer is for an experienced worker. Words such as lead, senior, crew chief, or journeyman would be indicators that a Level III wage should be considered.

(4) Level IV wage rates are assigned to job offers for employees who have sufficient experience in the occupation to plan and conduct work requiring judgment and the independent evaluation, selection, modification, and application of standard procedures and techniques. Such employees receive only minimal guidance and their work is reviewed only for application of sound judgment and effectiveness in meeting the establishment's procedures and expectations. They generally have management and/or supervisory responsibilities.

(h) *Retention of documentation.* An employer filing an *Application for Temporary Employment Certification* must maintain documentation of its wage determination from the NPC as required in this subpart and be prepared to submit this documentation with the filing of its application. The documentation required in this subpart must be retained for a period of no less than 3 years from the date of the certification. There is no record retention requirement for applications (and supporting documentation) that are denied.

§ 655.109 Labor certification determinations.

(a) *COs.* The Administrator, OFLC is the Department's National CO. The Administrator, OFLC, and the CO(s) in the NPC(s) (by virtue of delegation from the Administrator, OFLC), have the authority to certify or deny applications for temporary employment certification under the H–2A nonimmigrant classification. If the Administrator, OFLC has directed that certain types of temporary labor certification applications or specific applications under the H–2A nonimmigrant classification be handled by the National OFLC, the Director(s) of the NPC(s) will refer such applications to the Administrator, OFLC.

(b) *Determination.* No later than 30 calendar days before the date of need, as identified in the *Application for Temporary Employment Certification*, except as provided for under § 655.107(c) for modified applications, or applications not otherwise meeting certification criteria by that date, the CO will make a determination either to grant or deny the *Application for Temporary Employment Certification.* The CO will grant the application if and only if: the employer has met the requirements of this subpart, including the criteria for certification set forth in § 655.107(a), and thus the employment of the H–2A workers will not adversely affect the wages and working conditions of similarly employed U.S. workers.

(c) *Notification.* The CO will notify the employer in writing (either electronically or by mail) of the labor certification determination.

(d) *Approved certification.* If temporary labor certification is granted, the CO must send the certified *Application for Temporary Employment Certification* and a Final Determination letter to the employer, or, if appropriate, to the employer's agent or attorney. The Final Determination letter will notify the employer to file the certified application and any other documentation required by USCIS with the appropriate USCIS office and to continue to cooperate with the SWA by accepting all referrals of eligible U.S. workers who apply (or on whose behalf an application is made) for the job opportunity until the end of the recruitment period as set forth in § 655.102(f)(3). However, the employer will not be required to accept referrals of eligible U.S. workers once it has hired

or extended employment offers to eligible U.S. workers equal to the number of H–2A workers sought.

(e) *Denied certification.* If temporary labor certification is denied, the Final Determination letter will be sent to the employer by means normally assuring next-day delivery. The Final Determination Letter will:

(1) State the reasons certification is denied, citing the relevant regulatory standards and/or special procedures;

(2) If applicable, address the availability of U.S. workers in the occupation as well as the prevailing benefits, wages, and working conditions of similarly employed U.S. workers in the occupation and/or any applicable special procedures;

(3) Offer the applicant an opportunity to request an expedited administrative review, or a *de novo* administrative hearing before an ALJ, of the denial. The notice must state that in order to obtain such a review or hearing, the employer, within 7 calendar days of the date of the notice, must file by facsimile (fax), telegram, or other means normally assuring next day delivery, a written request to the Chief Administrative Law Judge of DOL (giving the address) and simultaneously serve a copy on the CO. The notice will also state that the employer may submit any legal arguments which the employer believes will rebut the basis of the CO's action; and

(4) State that if the employer does not request an expedited administrative judicial review or a *de novo* hearing before an ALJ within the 7 calendar days, the denial is final and the Department will not further consider that application for temporary alien agricultural labor certification.

(f) *Partial certification.* The CO may, to ensure compliance with all regulatory requirements, issue a partial certification, reducing either the period of need or the number of H–2A workers being requested or both for certification, based upon information the CO receives in the course of processing the temporary labor certification application, an audit, or otherwise. The number of workers certified shall be reduced by one for each referred U.S. worker who is qualified, able, available and willing. If a partial labor certification is issued, the Final Determination letter will:

(1) State the reasons for which either the period of need and/or the number of H–2A workers requested has been reduced, citing the relevant regulatory standards and/or special procedures;

(2) If applicable, address the availability of U.S. workers in the occupation;

(3) Offer the applicant an opportunity to request an expedited administrative review, or a *de novo* administrative hearing before an ALJ, of the decision. The notice will state that in order to obtain such a review or hearing, the employer, within 7 calendar days of the date of the notice, will file by facsimile or other means normally assuring next day delivery a written request to the Chief Administrative Law Judge of DOL (giving the address) and simultaneously serve a copy on the CO. The notice will also state that the employer may submit any legal arguments which the employer believes will rebut the basis of the CO's action; and

(4) State that if the employer does not request an expedited administrative judicial review or a *de novo* hearing before an ALJ within the 7 calendar days, the denial is final and the Department will not further consider that application for temporary alien agricultural labor certification.

(g) *Appeal procedures.* If the employer timely requests an expedited administrative review or *de novo* hearing before an ALJ under paragraph (e)(3) or (f)(3) of this section, the procedures at § 655.115 will be followed.

(h) *Payment of processing fees.* A determination by the CO to grant an *Application for Temporary Employment Certification* in whole or in part under paragraph (d) or (f) of this section will include a bill for the required fees. Each employer of H–2A workers under the *Application for Temporary Employment Certification* (except joint employer associations, which shall not be assessed a fee in addition to the fees assessed to the members of the association) must pay in a timely manner a non-refundable fee upon issuance of the certification granting the application (in whole or in part), as follows:

(1) *Amount.* The application fee for each employer receiving a temporary agricultural labor certification is $100 plus $10 for each H–2A worker certified under the *Application for Temporary Employment Certification*, provided that the fee to an employer for each temporary agricultural labor certification received will be no greater than $1,000. There is no additional fee to the association filing the application. The fees must be paid by check or money order made payable to ''United States Department of Labor.'' In the case of H–2A employers that are members of an agricultural association acting as a joint employer applying on their behalf, the aggregate fees for all employers of H–2A workers under the application must be paid by one check or money order.

(2) *Timeliness.* Fees received by the CO no more than 30 days after the date the temporary labor certification is granted will be considered timely. Non-payment of fees by the date that is 30 days after the issuance of the certification will be considered a substantial program violation and subject to the procedures in § 655.115.

§ 655.110 Validity and scope of temporary labor certifications.

(a) *Validity period.* A temporary labor certification is valid for the duration of the job opportunity for which certification is granted to the employer. Except as provided in paragraph and (d) of this section, the validity period is that time between the beginning and ending dates of certified employment, as listed on the *Application for Temporary Employment Certification.* The certification expires on the last day of authorized employment.

(b) *Scope of validity.* Except as provided in paragraphs (c) and (d) of this section, a temporary labor certification is valid only for the number of H–2A workers, the area of intended employment, the specific occupation and duties, and the employer(s) specified on the certified *Application for Temporary Employment Certification* (as originally filed or as amended) and may not be transferred from one employer to another.

(c) *Scope of validity—associations.* (1) *Certified applications.* If an association is requesting temporary labor certification as a joint employer, the certified *Application for Temporary Employment Certification* will be granted jointly to the association and to each of the association's employer members named on the application. Workers authorized by the temporary labor certification may be transferred among its certified employer members to perform work for which the temporary labor certification was granted, provided the association controls the assignment of such workers and maintains a record of such assignments. All temporary agricultural labor certifications to associations may be used for the certified job opportunities of any of its employer members named on the application. If an association is requesting temporary labor certification as a sole employer, the certified *Application for Temporary Employment Certification* is granted to the association only.

(2) *Ineligible employer-members.* Workers may not be transferred or referred to an association's employer member if that employer member has

been debarred from participation in the H–2A program.

(d) *Extensions on period of employment.* (1) *Short-term extension.* An employer who seeks an extension of 2 weeks or less of the certified *Application for Temporary Employment Certification* must apply for such extension to DHS. If DHS grants the extension, the corresponding *Application for Temporary Employment Certification* will be deemed extended for such period as is approved by DHS.

(2) *Long-term extension.* For extensions beyond 2 weeks, an employer may apply to the CO at any time for an extension of the period of employment on the certified *Application for Temporary Employment Certification* for reasons related to weather conditions or other factors beyond the control of the employer (which may include unforeseen changes in market conditions), provided that the employer's need for an extension is supported in writing, with documentation showing that the extension is needed and that the need could not have been reasonably foreseen by the employer. The CO will grant or deny the request for extension of the period of employment on the *Application for Temporary Employment Certification* based on the available information, and will notify the employer of the decision in writing. The employer may appeal a denial for a request of an extension in accordance with the procedures contained in § 655.115. The CO will not grant an extension where the total work contract period under that application and extensions would be 12 months or more, except in extraordinary circumstances.

(e) *Requests for determinations based on nonavailability of able, willing, available, eligible, and qualified U.S. workers.* (1) *Standards for requests.* If a temporary labor certification has been partially granted or denied based on the CO's determination that able, willing, available, eligible, and qualified U.S. workers are available, and, on or after 30 calendar days before the date of need, some or all of those U.S. workers are, in fact, no longer able, willing, eligible, qualified, or available, the employer may request a new temporary labor certification determination from the CO. Prior to making a new determination the CO will promptly ascertain (which may be through the SWA or other sources of information on U.S. worker availability) whether specific able, willing, eligible and qualified replacement U.S. workers are available or can be reasonably expected to be present at the employer's establishment within 72 hours from the date the employer's request was received. The CO will expeditiously, but in no case later than 72 hours after the time a complete request (including the signed statement included in paragraph (e)(2) of this section) is received, make a determination on the request. An employer may appeal a denial of such a determination in accordance with the procedures contained in § 655.115.

(2) *Unavailability of U.S. workers.* The employer's request for a new determination must be made directly to the CO by telephone or electronic mail, and must be confirmed by the employer in writing as required by this paragraph. If the employer telephonically or via electronic mail requests the new determination by asserting solely that U.S. workers have become unavailable, the employer must submit to the CO a signed statement confirming such assertion. If such signed statement is not received by the CO within 72 hours of the CO's receipt of the request for a new determination, the CO will deny the request.

(3) *Notification of determination.* If the CO determines that U.S. workers have become unavailable and cannot identify sufficient specific able, willing, eligible, and qualified U.S. workers who are or who are likely to be available, the CO will grant the employer's request for a new determination. However, this does not preclude an employer from submitting subsequent requests for new determinations, if warranted, based on subsequent facts concerning purported nonavailability of U.S. workers or referred workers not being eligible workers or not able, willing, or qualified because of lawful job-related reasons.

§ 655.111 Required departure.

(a) *Limit to worker's stay.* As defined further in DHS regulations, a temporary labor certification limits the authorized period of stay for an H–2A worker. *See* 8 CFR 214.2(h). A foreign worker may not remain beyond his or her authorized period of stay, as established by DHS, which is based upon the validity period of the labor certification under which the H–2A worker is employed, nor beyond separation from employment prior to completion of the H–2A contract, absent an extension or change of such worker's status under DHS regulations.

(b) *Notice to worker.* Upon establishment of a program by DHS for registration of departure, an employer must notify any H–2A worker that when the worker departs the U.S. by land at the conclusion of employment as provided in paragraph (a) of this section, the worker must register such departure at the place and in the manner prescribed by DHS.

§ 655.112 Audits.

(a) *Discretion.* The Department will conduct audits of temporary labor certification applications for which certification has been granted. The applications selected for audit will be chosen within the sole discretion of the Department.

(b) *Audit letter.* Where an application is selected for audit, the CO will issue an audit letter to the employer/applicant. The audit letter will:

(1) State the documentation that must be submitted by the employer;

(2) Specify a date, no fewer than 14 days and no more than 30 days from the date of the audit letter, by which the required documentation must be received by the CO; and

(3) Advise that failure to comply with the audit process may result in a finding by the CO to:

(i) Revoke the labor certification as provided in § 655.117 and/or

(ii) Debar the employer from future filings of H–2A temporary labor certification applications as provided in § 655.118.

(c) *Supplemental information request.* During the course of the audit examination, the CO may request supplemental information and/or documentation from the employer in order to complete the audit.

(d) *Audit violations.* If, as a result of the audit, the CO determines the employer failed to produce required documentation, or determines that the employer violated the standards set forth in § 655.117(a) with respect to the application, the employer's labor certification may be revoked under § 655.117 and/or the employer may be referred for debarment under § 655.118. The CO may determine to provide the audit findings and underlying documentation to DHS or another appropriate enforcement agency. The CO shall refer any findings that an employer discouraged an eligible U.S. worker from applying, or failed to hire, discharged, or otherwise discriminated against an eligible U.S. worker, to the Department of Justice, Civil Rights Division, Office of Special Counsel for Unfair Immigration Related Employment Practices.

§ 655.113 H–2A applications involving fraud or willful misrepresentation.

(a) *Referral for investigation.* If the CO discovers possible fraud or willful misrepresentation involving an *Application for Temporary Employment Certification* the CO may refer the matter to the DHS and the Department's Office of the Inspector General for investigation.

(b) *Terminated processing.* If a court or the DHS determines that there was fraud or willful misrepresentation involving an *Application for Temporary Employment Certification,* the application will be deemed invalid. The determination is not appealable. If a certification has been granted, a finding under this paragraph will be cause to revoke the certification.

§ 655.114 Setting meal charges; petition for higher meal charges.

(a) *Meal charges.* Until a new amount is set under this paragraph an employer may charge workers up to $9.90 for providing them with three meals per day. The maximum charge allowed by this paragraph (a) will be changed annually by the same percentage as the 12 month percentage change for the Consumer Price Index for all Urban Consumers for Food between December of the year just concluded and December of the year prior to that. The annual adjustments will be effective on the date of their publication by the Administrator, OFLC, as a Notice in the **Federal Register**. When a charge or deduction for the cost of meals would bring the employee's wage below the minimum wage set by the FLSA at 29 U.S.C. 206 (FLSA), the charge or deduction must meet the requirements of 29 U.S.C. 203(m) of the FLSA, including the recordkeeping requirements found at 29 CFR 516.27.

(b) *Filing petitions for higher meal charges.* The employer may file a petition with the CO to charge more than the applicable amount for meal charges if the employer justifies the charges and submits to the CO the documentation required by paragraph (b)(1) of this section.

(1) *Required documentation.* Documentation submitted must include the cost of goods and services directly related to the preparation and serving of meals, the number of workers fed, the number of meals served and the number of days meals were provided. The cost of the following items may be included: Food; kitchen supplies other than food, such as lunch bags and soap; labor costs that have a direct relation to food service operations, such as wages of cooks and dining hall supervisors; fuel, water, electricity, and other utilities used for the food service operation; and other costs directly related to the food service operation. Charges for transportation, depreciation, overhead and similar charges may not be included. Receipts and other cost records for a representative pay period must be retained and must be available for inspection by the CO for a period of 1 year.

(2) *Effective date for higher charge.* The employer may begin charging the higher rate upon receipt of a favorable decision from the CO unless the CO sets a later effective date in the decision.

(c) *Appeal.* In the event the employer's petition for a higher meal charge is denied in whole or in part, the employer may appeal the denial. Appeals will be filed with the Chief Administrative Law Judge. ALJ's will hear such appeals according to the procedures in 29 CFR part 18, except that the appeal will not be considered as a complaint to which an answer is required. The decision of the ALJ is the final decision of the Secretary.

§ 655.115 Administrative review and de novo hearing before an administrative law judge.

(a) *Administrative review.* (1) *Consideration.* Whenever an employer has requested an administrative review before an ALJ of a decision by the CO: Not to accept for consideration an *Application for Temporary Employment Certification;* to deny an *Application for Temporary Employment Certification;* to deny an amendment of an *Application for Temporary Employment Certification;* or to deny an extension of an *Application for Temporary Employment Certification,* the CO will send a certified copy of the ETA case file to the Chief Administrative Law Judge by means normally assuring next-day delivery. The Chief Administrative Law Judge will immediately assign an ALJ (which may be a panel of such persons designated by the Chief Administrative Law Judge from BALCA established by 20 CFR part 656, which will hear and decide the appeal as set forth in this section) to review the record for legal sufficiency. The ALJ may not remand the case and may not receive evidence in addition to what the CO used to make the determination.

(2) *Decision.* Within 5 business days after receipt of the ETA case file the ALJ will, on the basis of the written record and after due consideration of any written submissions (which may not include new evidence) from the parties involved or amici curiae, either affirm, reverse, or modify the CO's decision by written decision. The decision of the ALJ must specify the reasons for the action taken and must be immediately provided to the employer, the CO, the Administrator, OFLC, and DHS by means normally assuring next-day delivery. The ALJ's decision is the final decision of the Secretary.

(b) *De novo hearing.* (1) *Request for hearing; conduct of hearing.* Whenever an employer has requested a de novo hearing before an ALJ of a decision by the CO: Not to accept for consideration an *Application for Temporary Employment Certification;* to deny an *Application for Temporary Employment Certification;* to deny an amendment of an *Application for Temporary Employment Certification;* or to deny an extension of an *Application for Temporary Employment Certification,* the CO will send a certified copy of the ETA case file to the Chief Administrative Law Judge by means normally assuring next-day delivery. The Chief Administrative Law Judge will immediately assign an ALJ (which may be a panel of such persons designated by the Chief Administrative Law Judge from BALCA established by 20 CFR part 656 of this chapter, but which will hear and decide the appeal as provided in this section) to conduct the *de novo* hearing. The procedures in 29 CFR part 18 apply to such hearings, except that:

(i) The appeal will not be considered to be a complaint to which an answer is required;

(ii) The ALJ will ensure that the hearing is scheduled to take place within 5 calendar days after the ALJ's receipt of the ETA case file, if the employer so requests, and will allow for the introduction of new evidence; and

(iii) The ALJ's decision must be rendered within 10 calendar days after the hearing.

(2) *Decision.* After a *de novo* hearing, the ALJ must affirm, reverse, or modify the CO's determination, and the ALJ's decision must be provided immediately to the employer, CO, Administrator, OFLC, and DHS by means normally assuring next-day delivery. The ALJ's decision is the final decision of the Secretary.

§ 655.116 Job Service Complaint System; enforcement of work contracts.

(a) Complaints arising under this subpart may be filed through the Job Service Complaint System, as described in 20 CFR part 658, Subpart E. Complaints which involve worker contracts must be referred by the SWA to ESA for appropriate handling and resolution, as described in 29 CFR part 501. As part of this process, ESA may report the results of its investigation to the Administrator, OFLC for consideration of employer penalties or such other action as may be appropriate.

(b) Complaints alleging that an employer discouraged an eligible U.S. worker from applying, failed to hire, discharged, or otherwise discriminated against an eligible U.S. worker, or discovered violations involving the same, may be referred to the U.S. Department of Justice, Civil Rights

Division, Office of Special Counsel for Unfair Immigration Related Employment Practices (OSC), in addition to any activity, investigation, and/or enforcement action taken by ETA or an SWA. Likewise, if OSC becomes aware of a violation of these regulations, it may provide such information to the appropriate SWA and the CO.

§ 655.117 Revocation of approved labor certifications.

(a) *Basis for DOL revocation.* The CO, in consultation with the Administrator, OFLC, may revoke a temporary agricultural labor certification approved under this subpart, if, after notice and opportunity for a hearing (or failure to file rebuttal evidence), it is found that any of the following violations were committed with respect to that temporary agricultural labor certification:

(1) The CO finds that issuance of the temporary agricultural labor certification was not justified due to a willful misrepresentation on the application;

(2) The CO finds that the employer:

(i) Willfully violated a material term or condition of the approved temporary agricultural labor certification or the H–2A regulations, unless otherwise provided under paragraphs (a)(2)(ii) through (iv) of this section; or

(ii) Failed, after notification, to cure a substantial violation of the applicable housing standards set out in 20 CFR 655.104(d); or

(iii) Significantly failed to cooperate with a DOL investigation or with a DOL official performing an investigation, inspection, or law enforcement function under sec. 218 of the INA at 8 U.S.C. 1188, this subpart, or 29 CFR part 501 (ESA enforcement of contractual obligations); or

(iv) Failed to comply with one or more sanctions or remedies imposed by the ESA for violation(s) of obligations found by that agency, or with one or more decisions or orders of the Secretary or a court order secured by the Secretary under sec. 218 of the INA at 8 U.S.C. 1188, this subpart, or 29 CFR part 501 (ESA enforcement of contractual obligations).

(3) The CO determines after a recommendation is made by the WHD ESA in accordance with 29 CFR 501.20, which governs when a recommendation of revocation may be made to ETA, that the conduct complained of upon examination meets the standards of paragraph (a)(1) or (2) of this section; or

(4) If a court or the DHS, or, as a result of an audit, the CO, determines that there was fraud or willful misrepresentation involving the *Application for Temporary Employment Certification.*

(b) *DOL procedures for revocation.* (1) The CO will send to the employer (and his attorney or agent) a *Notice of Intent to Revoke* by means normally ensuring next-day delivery, which will contain a detailed statement of the grounds for the proposed revocation and the time period allowed for the employer's rebuttal. The employer may submit evidence in rebuttal within 14 calendar days of the date the notice is issued. The CO must consider all relevant evidence presented in deciding whether to revoke the temporary agricultural labor certification.

(2) If rebuttal evidence is not timely filed by the employer, the *Notice of Intent to Revoke* will become the final decision of the Secretary and take effect immediately at the end of the 14-day period.

(3) If, after reviewing the employer's timely filed rebuttal evidence, the CO finds that the employer more likely than not meets one or more of the bases for revocation under § 655.117(a), the CO will notify the employer, by means normally ensuring next-day delivery, within 14 calendar days after receiving such timely filed rebuttal evidence, of his/her final determination that the temporary agricultural labor certification should be revoked. The CO's notice will contain a detailed statement of the bases for the decision, and must offer the employer an opportunity to request a hearing. The notice must state that, to obtain such a hearing, the employer must, within 10 calendar days of the date of the notice file a written request to the Chief Administrative Law Judge, United States Department of Labor, 800 K Street, NW., Suite 400–N, Washington, DC 20001–8002, and simultaneously serve a copy to the Administrator, OFLC. The timely filing of a request for a hearing will stay the revocation pending the outcome of the hearing.

(c) *Hearing.* (1) Within 5 business days of receipt of the request for a hearing, the CO will send a certified copy of the ETA case file to the Chief Administrative Law Judge by means normally assuring next-day delivery. The Chief Administrative Law Judge will immediately assign an ALJ to conduct the hearing. The procedures in 29 CFR part 18 apply to such hearings, except that:

(i) The request for a hearing will not be considered to be a complaint to which an answer is required;

(ii) The ALJ will ensure that the hearing is scheduled to take place within 15 calendar days after the ALJ's receipt of the ETA case file, if the employer so requests, and will allow for the introduction of new evidence; and

(iii) The ALJ's decision must be rendered within 20 calendar days after the hearing.

(2) *Decision.* After the hearing, the ALJ must affirm, reverse, or modify the CO's determination. The ALJ's decision must be provided immediately to the employer, CO, Administrator, OFLC, DHS, and DOS by means normally assuring next-day delivery. The ALJ's decision is the final decision of the Secretary.

(d) *Employer's obligations in the event of revocation.* If an employer's temporary agricultural labor certification is revoked under this section, and the workers have departed the place of recruitment, the employer will be responsible for:

(1) Reimbursement of actual inbound transportation and subsistence expenses, as if the worker meets the requirements for payment under § 655.104(h)(1);

(2) The worker's outbound transportation expenses, as if the worker meets the requirements for payment under § 655.104(h)(2);

(3) Payment to the worker of the amount due under the three-fourths guarantee as required by § 655.104(i); and

(4) Any other wages, benefits, and working conditions due or owing to the worker under these regulations.

§ 655.118 Debarment.

(a) The Administrator, OFLC may not issue future labor certifications under this subpart to an employer and any successor in interest to the debarred employer, subject to the time limits set forth in paragraph (c) of this section, if:

(1) The Administrator, OFLC finds that the employer substantially violated a material term or condition of its temporary labor certification with respect to the employment of domestic or nonimmigrant workers; and

(2) The Administrator, OFLC issues a *Notice of Intent to Debar* no later than 2 years after the occurrence of the violation.

(b) The Administrator, OFLC may not issue future labor certifications under this subpart to an employer represented by an agent or attorney, subject to the time limits set forth in paragraph (c) of this section, if:

(1) The Administrator, OFLC finds that the agent or attorney participated in, had knowledge of, or had reason to know of, an employer's substantial violation; and

(2) The Administrator, OFLC issues the agent or attorney a *Notice of Intent to Debar* no later than 2 years after the occurrence of the violation.

(c) No employer, attorney, or agent may be debarred under this subpart for more than 3 years.

(d) For the purposes of this section, a substantial violation includes:

(1) A pattern or practice of acts of commission or omission on the part of the employer or the employer's agent which:

(i) Are significantly injurious to the wages or benefits required to be offered under the H–2A program, or working conditions of a significant number of the employer's U.S. or H–2A workers; or

(ii) Reflect a significant failure to offer employment to all qualified domestic workers who applied for the job opportunity for which certification was being sought, except for lawful job-related reasons; or

(iii) Reflect a willful failure to comply with the employer's obligations to recruit U.S. workers as set forth in this subpart; or

(iv) Reflect a significant failure to comply with the audit process in violation of § 655.112; or

(v) Reflect the employment of an H–2A worker outside the area of intended employment, or in an activity/activities, not listed in the job order (other than an activity minor and incidental to the activity/activities listed in the job order), or after the period of employment specified in the job order and any approved extension;

(2) The employer's persistent or prolonged failure to pay the necessary fee in a timely manner, following the issuance of a deficiency notice to the applicant and allowing for a reasonable period for response;

(3) Fraud involving the *Application for Temporary Employment Certification* or a response to an audit;

(4) A significant failure to cooperate with a DOL investigation or with a DOL official performing an investigation, inspection, or law enforcement function under sec. 218 of the INA at 8 U.S.C. 1188, this subpart, or 29 CFR part 501 (ESA enforcement of contractual obligations); or

(5) A significant failure to comply with one or more sanctions or remedies imposed by the ESA for violation(s) of obligations found by that agency (if applicable), or with one or more decisions or orders of the Secretary or a court order secured by the Secretary under sec. 218 of the INA at 8 U.S.C. 1188, this subpart, or 29 CFR part 501 (ESA enforcement of contractual obligations); or

(6) A single heinous act showing such flagrant disregard for the law that future compliance with program requirements cannot reasonably be expected.

(e) DOL procedures for debarment under this section will be as follows:

(1) The Administrator, OFLC will send to the employer, attorney, or agent a *Notice of Intent to Debar* by means normally ensuring next-day delivery, which will contain a detailed statement of the grounds for the proposed debarment. The employer, attorney or agent may submit evidence in rebuttal within 14 calendar days of the date the notice is issued. The Administrator, OFLC must consider all relevant evidence presented in deciding whether to debar the employer, attorney, or agent.

(2) If rebuttal evidence is not timely filed by the employer, attorney, or agent, the *Notice of Intent to Debar* will become the final decision of the Secretary and take effect immediately at the end of the 14-day period.

(3) If, after reviewing the employer's timely filed rebuttal evidence, the Administrator, OFLC determines that the employer, attorney, or agent more likely than not meets one or more of the bases for debarment under § 655.118(d), the Administrator, OFLC will notify the employer, by means normally ensuring next-day delivery, within 14 calendar days after receiving such timely filed rebuttal evidence, of his/her final determination of debarment and of the employer, attorney, or agent's right to appeal.

(4) The *Notice of Debarment* must be in writing, must state the reason for the debarment finding, including a detailed explanation of the grounds for and the duration of the debarment, and must offer the employer, attorney, or agent an opportunity to request a hearing. The notice must state that, to obtain such a hearing, the debarred party must, within 30 calendar days of the date of the notice, file a written request to the Chief Administrative Law Judge, United States Department of Labor, 800 K Street, NW., Suite 400–N, Washington, DC 20001–8002, and simultaneously serve a copy to the Administrator, OFLC. The debarment will take effect 30 days from the date the *Notice of Debarment* is issued unless a request for a hearing is properly filed within 30 days from the date the *Notice of Debarment* is issued. The timely filing of the request for a hearing stays the debarment pending the outcome of the hearing.

(5)(i) *Hearing.* Within 10 days of receipt of the request for a hearing, the Administrator, OFLC will send a certified copy of the ETA case file to the Chief Administrative Law Judge by means normally assuring next-day delivery. The Chief Administrative Law Judge will immediately assign an ALJ to conduct the hearing. The procedures in 29 CFR part 18 apply to such hearings, except that the request for a hearing will not be considered to be a complaint to which an answer is required;

(ii) *Decision.* After the hearing, the ALJ must affirm, reverse, or modify the Administrator, OFLC 's determination. The ALJ's decision must be provided immediately to the employer, Administrator, OFLC, DHS, and DOS by means normally assuring next-day delivery. The ALJ's decision is the final decision of the Secretary, unless either party, within 30 calendar days of the ALJ's decision, seeks review of the decision with the Administrative Review Board (ARB).

(iii) Review by the ARB.

(A) Any party wishing review of the decision of an ALJ must, within 30 days of the decision of the ALJ, petition the ARB to review the decision. Copies of the petition must be served on all parties and on the ALJ. The ARB must decide whether to accept the petition within 30 days of receipt. If the ARB declines to accept the petition or if the ARB does not issue a notice accepting a petition within 30 days after the receipt of a timely filing of the petition, the decision of the ALJ shall be deemed the final agency action. If a petition for review is accepted, the decision of the ALJ shall be stayed unless and until the ARB issues an order affirming the decision. The ARB must serve notice of its decision to accept or not to accept the petition upon the ALJ and upon all parties to the proceeding in person or by certified mail.

(B) Upon receipt of the ARB's notice to accept the petition, the Office of Administrative Law Judges shall promptly forward a copy of the complete hearing record to the ARB.

(C) Where the ARB has determined to review such decision and order, the ARB shall notify each party of:

(*1*) The issue or issues raised;

(*2*) The form in which submissions shall be made (i.e., briefs, oral argument, etc.); and

(*3*) The time within which such presentation shall be submitted.

(D) The ARB's final decision must be issued within 90 days from the notice granting the petition and served upon all parties and the ALJ, in person or by certified mail. If the ARB fails to provide a decision within 90 days from the notice granting the petition, the ALJ's decision will be the final decision of the Secretary.

(f) *Debarment involving members of associations.* If the Administrator, OFLC determines a substantial violation has occurred, and if an individual employer-member of an agricultural

association acting as a joint employer is determined to have committed the violation, the debarment determination will apply only to that member of the association unless the Administrator, OFLC determines that the association or other association members participated in the violation, in which case the debarment will be invoked against the complicit association or other association members.

(g) *Debarment involving agricultural associations acting as joint employers.* If the Administrator, OFLC determines a substantial violation has occurred, and if an agricultural association acting as a joint employer with its members is found to have committed the violation, the debarment determination will apply only to the association, and will not be applied to any individual employer-member of the association unless the Administrator, OFLC determines that the member participated in the violation, in which case the debarment will be invoked against any complicit association members as well. An association debarred from the H–2A temporary labor certification program will not be permitted to continue to file as a joint employer with its members during the period of the debarment.

(h) *Debarment involving agricultural associations acting as sole employers.* If the Administrator, OFLC determines a substantial violation has occurred, and if an agricultural association acting as a sole employer is determined to have committed the violation, the debarment determination will apply only to the association and any successor in interest to the debarred association.

§ 655.119 Document retention requirements.

(a) *Entities required to retain documents.* All employers receiving a certification of the *Application for Temporary Employment Certification* for agricultural workers under this subpart are required to retain the documents and records as provided in the regulations cited in paragraph (c) of this section.

(b) *Period of required retention.* Records and documents must be retained for a period of 3 years from the date of certification of the *Application for Temporary Employment Certification.*

(c) *Documents and records to be retained.* (1) All applicants must retain the following documentation:

(i) Proof of recruitment efforts including:

(A) Job order placement as specified in § 655.102(e)(1);

(B) Advertising as specified in § 655.102(g)(3), or, if used, professional, trade, or ethnic publications;

(C) Contact with former U.S. workers as specified in § 655.102(h);

(D) Multi-state recruitment efforts (if required under § 655.102(i)) as specified in § 655.102(g)(3);

(ii) Substantiation of information submitted in the recruitment report prepared in accordance with § 655.102(k)(2), such as evidence of non-applicability of contact of former employees as specified in § 655.102(h);

(iii) The supplemental recruitment report as specified in § 655.102(k) and any supporting resumes and contact information as specified in § 655.102(k)(3);

(iv) Proof of workers' compensation insurance or State law coverage as specified in § 655.104(e);

(v) Records of each worker's earnings as specified in § 655.104(j);

(vi) The work contract or a copy of the *Application for Temporary Employment Certification* as defined in 29 CFR 501.10 and specified in § 655.104(q);

(vii) The wage determination provided by the NPC as specified in § 655.108;

(viii) Copy of the request for housing inspection submitted to the SWA as specified in § 655.104(d); and

(2) In addition to the documentation specified in paragraph (c)(1) of this section, H–2ALCs must also retain:

(i) Statements of compliance with the housing and transportation obligations for each fixed-site employer which provided housing or transportation and to which the H–2ALC provided workers during the validity period of the certification, unless such housing and transportation obligations were met by the H–2ALC itself, in which case proof of compliance by the H–2ALC must be retained, as specified in § 655.101(a)(5);

(ii) Proof of surety bond coverage which includes the name, address, and phone number of the surety, the bond number of other identifying designation, the amount of coverage, and the payee, as specified in 29 CFR 501.8; and

(3) Associations filing must retain documentation substantiating their status as an employer or agent, as specified in § 655.101(a)(1).

Subpart C—[Removed and Reserved]

■ 5. Subpart C is removed and reserved.

TITLE 29—LABOR

■ 6. Revise part 501 to read as follows:

PART 501—ENFORCEMENT OF CONTRACTUAL OBLIGATIONS FOR TEMPORARY ALIEN AGRICULTURAL WORKERS ADMITTED UNDER SECTION 218 OF THE IMMIGRATION AND NATIONALITY ACT

Subpart A—General Provisions

Subpart B—Enforcement of Work Contracts

Subpart C—Administrative Proceedings

Procedures Relating to Hearing

Rules of Practice

Referral for Hearing

Procedures Before Administrative Law Judge

Post-Hearing Procedures

Review of Administrative Law Judge's Decision

Record

Authority: 8 U.S.C. 1101(a)(15)(H)(ii)(a), 1184(c), and 1188.

Subpart A—General Provisions

§ 501.0 Introduction.

These regulations cover the enforcement of all contractual obligation provisions applicable to the employment of H–2A workers under sec. 218 of the Immigration and Nationality Act (INA), as amended by the Immigration Reform and Control Act of 1986 (IRCA). These regulations are also applicable to the employment of United States (U.S.) workers newly hired by employers of H–2A workers in the same occupations as the H–2A workers during the period of time set forth in the labor certification approved by ETA as a condition for granting H–2A certification, including any extension thereof. Such U.S. workers hired by H–2A employers are hereafter referred to as engaged in corresponding employment.

§ 501.1 Purpose and scope.

(a) *Statutory standard.* Section 218(a) of the INA provides that:

(1) A petition to import an alien as an H–2A worker (as defined in the INA) may not be approved by the Secretary of the Department of Homeland Security (DHS) unless the petitioner has applied to the Secretary of the United States Department of Labor (Secretary) for a certification that:

(i) There are not sufficient workers who are able, willing, and qualified, and who will be available at the time and place needed, to perform the labor or services involved in the petition, and

(ii) The employment of the alien in such labor or services will not adversely affect the wages and working conditions of workers in the U.S. similarly employed.

(2) [Reserved]

(b) *Role of the Employment and Training Administration (ETA).* The issuance and denial of labor certification under sec. 218 of the INA has been delegated by the Secretary to ETA, an agency within the U.S. Department of Labor (the Department or DOL). In general, matters concerning the obligations of an employer of H–2A workers related to the labor certification process are administered and enforced by ETA. Included within ETA's jurisdiction are issues such as whether U.S. workers are available, whether adequate recruitment has been conducted, whether there is a strike or lockout, the methodology for establishing AEWR, whether workers' compensation insurance has been provided, whether employment was offered to U.S. workers as required by sec. 218 of the INA and regulations at 20 CFR part 655, Subpart B, and other similar matters. The regulations pertaining to the issuance and denial of labor certification for temporary alien workers by the ETA are found in 20 CFR part 655, Subpart B.

(c) *Role of the Employment Standards Administration (ESA), Wage and Hour Division (WHD).* (1) The Secretary is authorized to take actions that assure compliance with the terms and conditions of employment under sec. 218 of the INA, the regulations at 20 CFR part 655, Subpart B, or these regulations, including the assessment of civil money penalties and seeking injunctive relief and specific performance of contractual obligations. *See* 8 U.S.C. 1188(g)(2).

(2) Certain investigatory, inspection, and law enforcement functions to carry out the provisions of sec. 218 of the INA have been delegated by the Secretary to the ESA, WHD. In general, matters concerning the obligations under a work contract between an employer of H–2A workers and the H–2A workers and U.S. workers hired in corresponding employment by H–2A employers are enforced by ESA, including whether employment was offered to U.S. workers as required under sec. 218 of the INA or 20 CFR part 655, Subpart B, or whether U.S. workers were laid off or displaced in violation of program requirements. Included within the enforcement responsibility of WHD are such matters as the payment of required wages, transportation, meals, and housing provided during the employment. The WHD has the responsibility to carry out investigations, inspections, and law enforcement functions and in appropriate instances impose penalties, recommend revocation of existing certification(s) or debarment from future certifications, and seek injunctive relief and specific performance of contractual obligations, including recovery of unpaid wages (either directly from the employer or in the case of an H–2A Labor Contractors (H–2ALC), from the H–2ALC directly and/or from the insurer who issued the surety bond to the H–2ALC as required by 20 CFR part 655, Subpart B and 29 CFR 501.8).

(d) *Effect of regulations.* The amendments to the INA made by Title III of the IRCA apply to petitions and applications filed on and after June 1, 1987. Accordingly, the enforcement functions carried out by the WHD under the INA and these regulations apply to the employment of any H–2A worker and any other U.S. workers hired by H–2A employers in corresponding employment as the result of any application filed with the Department on and after June 1, 1987.

§ 501.2 Coordination of intake between DOL agencies.

Complaints received by ETA or any State Workforce Agency (SWA) regarding contractual H–2A labor standards between the employer and the employee will be immediately forwarded to the appropriate WHD office for appropriate action under these regulations.

§ 501.3 Discrimination prohibited.

(a) No person shall intimidate, threaten, restrain, coerce, blacklist, discharge, or in any manner discriminate against any person who has:

(1) Filed a complaint under or related to sec. 218 of the INA or these regulations;

(2) Instituted or caused to be instituted any proceedings related to sec. 218 of the INA or these regulations;

(3) Testified or is about to testify in any proceeding under or related to sec. 218 of the INA or these regulations;

(4) Exercised or asserted on behalf of himself or others any right or protection afforded by sec. 218 of the INA or these regulations; or

(5) Consulted with an employee of a legal assistance program or an attorney on matters related to sec. 218 of the INA, or to this subpart or any other Department regulation promulgated pursuant to sec. 218 of the INA.

(b) Allegations of discrimination against any person under paragraph (a) of this section will be investigated by the WHD. Where the WHD has determined through investigation that such allegations have been substantiated, appropriate remedies may be sought. The WHD may assess civil money penalties, seek injunctive relief, and/or seek additional remedies necessary to make the employee whole as a result of the discrimination, as appropriate, and may recommend to ETA debarment of any such violator from future labor certification. Complaints alleging discrimination against U.S. workers and immigrants based on citizenship or immigration status may also be forwarded by the WHD to the Department of Justice, Civil Rights Division, Office of Special Counsel for Immigration-Related Unfair Employment Practices.

§ 501.4 Waiver of rights prohibited.

No person shall seek to have an H–2A worker, or other U.S. worker hired in corresponding employment by an H–2A employer, waive any rights conferred under sec. 218 of the INA, the

regulations at 20 CFR part 655, Subpart B, or under these regulations. Any agreement by an employee purporting to waive or modify any rights inuring to said person under the INA or these regulations shall be void as contrary to public policy, except that a waiver or modification of rights or obligations hereunder in favor of the Secretary shall be valid for purposes of enforcement of the provisions of the INA or these regulations. This does not prevent agreements to settle private litigation.

§ 501.5 Investigation authority of Secretary.

(a) *General.* The Secretary, either pursuant to a complaint or otherwise, shall, as may be appropriate, investigate and, in connection therewith, enter and inspect such places (including housing) and such vehicles, and such records (and make transcriptions thereof), question such persons and gather such information as deemed necessary by the Secretary to determine compliance with contractual obligations under sec. 218 of the INA or these regulations.

(b) *Failure to cooperate with an investigation.* Where any employer (or employer's agent or attorney) using the services of an H–2A worker does not cooperate with an investigation concerning the employment of H–2A workers or U.S. workers hired in corresponding employment, the WHD shall report such occurrence to ETA and may recommend that ETA revoke the existing certification that is the basis for the employment of the H–2A workers giving rise to the investigation, and the WHD may recommend to ETA the debarment of the employer from future certification for up to 3 years. In addition, the WHD may take such action as may be appropriate, including the seeking of an injunction and/or assessing civil money penalties, against any person who has failed to permit the WHD to make an investigation.

(c) *Confidential investigation.* The Secretary shall conduct investigations in a manner that protects the confidentiality of any complainant or other person who provides information to the Secretary in good faith.

(d) *Report of violations.* Any person may report a violation of the work contract obligations of sec. 218 of the INA or these regulations to the Secretary by advising any local office of the SWA, ETA, WHD, or any other authorized representative of the Secretary. The office or person receiving such a report shall refer it to the appropriate office of DOL, WHD for the geographic area in which the reported violation is alleged to have occurred.

§ 501.6 Cooperation with DOL officials.

All persons must cooperate with any official of the DOL assigned to perform an investigation, inspection, or law enforcement function pursuant to the INA and these regulations during the performance of such duties. The WHD will take such action as it deems appropriate, including seeking an injunction to bar any failure to cooperate with an investigation and/or assessing a civil money penalty therefore. In addition, the WHD will report the matter to ETA, and the WHD may recommend to ETA the debarment of the employer from future certification and/or recommend that the person's existing labor certification be revoked. In addition, Federal statutes prohibiting persons from interfering with a Federal officer in the course of official duties are found at 18 U.S.C. 111 and 18 U.S.C. 1114.

§ 501.7 Accuracy of information, statements, data.

Information, statements and data submitted in compliance with provisions of the Act or these regulations are subject to 18 U.S.C. 1001, which provides, with regard to statements or entries generally, that whoever, in any matter within the jurisdiction of any department or agency of the U.S. knowingly and willfully falsifies, conceals or covers up by any trick, scheme, or device a material fact, or makes any false, fictitious or fraudulent statements or representations, or makes or uses any false writing or document knowing the same to contain any false, fictitious or fraudulent statement or entry, shall be fined not more than $10,000 or imprisoned not more than 5 years, or both.

§ 501.8 Surety bond.

(a) H–2ALCs shall obtain a surety bond to assure compliance with the provisions of this part and 20 CFR part 655, Subpart B for each labor certification being sought. The H–2ALC shall attest on the application for labor certification that such a bond meeting all the requirements of this section has been obtained and shall provide on the labor certification application form information that fully identifies the surety, including the name, address and phone number of the surety, and which identifies the bond by number or other identifying designation.

(b) The bond shall be payable to the Administrator, Wage and Hour Division, United States Department of Labor. It shall obligate the surety to pay any sums to the Administrator, WHD, for wages and benefits owed to H–2A and U.S. workers, based on a final decision finding a violation or violations of this part or 20 CFR part 655, Subpart B relating to the labor certification the bond is intended to cover. The aggregate liability of the surety shall not exceed the face amount of the bond. The bond shall be written to cover liability incurred during the term of the period listed in the application for labor certification made by the H–2ALC, and shall be amended to cover any extensions of the labor certification requested by the H–2ALC. Surety bonds may not be canceled or terminated unless 30 days' notice is provided by the surety to the Administrator, WHD.

(c) The bond shall be in the amount of $5,000 for a labor certification for which a H–2ALC will employ fewer than 25 employees, $10,000 for a labor certification for which a H–2ALC will employ 25 to 49 employees, and $20,000 for a labor certification for which a H–2ALC will employ 50 or more employees. The amount of the bond may be increased by the Administrator, WHD after notice and an opportunity for hearing when it is shown based on objective criteria that the amount of the bond is insufficient to meet potential liabilities.

§ 501.10 Definitions.

(a) Definitions of terms used in this part. For the purpose of this part:

Administrative Law Judge (ALJ) means a person within the Department's Office of Administrative Law Judges appointed pursuant to 5 U.S.C. 3105, or a panel of such persons designated by the Chief Administrative Law Judge from the Board of Alien Labor Certification Appeals (BALCA) established by part 656 of this chapter, which will hear and decide appeals as set forth at 20 CFR 655.115.

Administrator, WHD means the Administrator of the Wage and Hour Division (WHD), ESA and such authorized representatives as may be designated to perform any of the functions of the Administrator, WHD under this part.

Adverse effect wage rate (AEWR) means the minimum wage rate that the Administrator of the Office of Foreign Labor Certification (OFLC) has determined must be offered and paid to every H–2A worker employed under the DOL-approved *Application for Temporary Employment Certification* in a particular occupation and/or area, as well as to U.S. workers hired by employers into corresponding employment during the H–2A recruitment period, to ensure that the wages of similarly employed U.S. workers will not be adversely affected.

Agent means a legal entity or person, such as an association of agricultural employers, or an attorney for an association, that—

(1) Is authorized to act on behalf of the employer for temporary agricultural labor certification purposes;

(2) Is not itself an employer, or a joint employer, as defined in this section, with respect to a specific application; and

(3) Is not under suspension, debarment, expulsion, or disbarment from practice before any court or the Department, the Board of Immigration Appeals, the immigration judges, or DHS under 8 CFR 292.3, 1003.101.

Agricultural association means any nonprofit or cooperative association of farmers, growers, or ranchers (including but not limited to processing establishments, canneries, gins, packing sheds, nurseries, or other fixed-site agricultural employers), incorporated or qualified under applicable State law, that recruits, solicits, hires, employs, furnishes, houses or transports any worker that is subject to sec. 218 of the INA. An agricultural association may act as the agent of an employer for purposes of filing an H–2A *Application for Temporary Employment Certification*, and may also act as the sole or joint employer of H–2A workers.

Application for Temporary Employment Certification means the Office of Management and Budget (OMB)-approved form submitted by an employer to secure a temporary agricultural labor certification determination from DOL. A complete submission of the *Application for Temporary Employment Certification* includes the form and the initial recruitment report.

Area of intended employment means the geographic area within normal commuting distance of the place (worksite address) of the job opportunity for which the certification is sought. There is no rigid measure of distance which constitutes a normal commuting area, because there may be widely varying factual circumstances among different areas (e.g., average commuting times, barriers to reaching the worksite, quality of the regional transportation network, etc.). If the place of intended employment is within a Metropolitan Statistical Area (MSA), including a multistate MSA, any place within the MSA is deemed to be within normal commuting distance of the place of intended employment. The borders of MSAs are not controlling in the identification of the normal commuting area; a location outside of an MSA may be within normal commuting distance of a location that is inside (e.g., near the border of) the MSA.

Department of Homeland Security (DHS) means the Federal agency having control over certain immigration functions that, through its sub-agency, *United States Citizenship and Immigration Services (USCIS)*, makes the determination under the INA on whether to grant visa petitions filed by employers seeking H–2A workers to perform temporary agricultural work in the U.S.

DOL or Department means the United States Department of Labor.

Eligible worker means an individual who is not an unauthorized alien (as defined in sec. 274A(h)(3) of the INA, 8 U.S.C. 1324a(h)(3)) with respect to the employment in which the worker is engaging.

Employee means employee as defined under the general common law of agency. Some of the factors relevant to the determination of employee status include: the hiring party's right to control the manner and means by which the work is accomplished; the skill required to perform the work; the source of the instrumentalities and tools for accomplishing the work; the location of the work; the hiring party's discretion over when and how long to work; and whether the work is part of the regular business of the hiring party. Other applicable factors may be considered and no one factor is dispositive.

Employer means a person, firm, corporation or other association or organization that:

(1) Has a place of business (physical location) in the U.S. and a means by which it may be contacted for employment;

(2) Has an employer relationship with respect to H–2A employees or related U.S. workers under this part; and

(3) Possesses, for purposes of filing an *Application for Temporary Employment Certification*, a valid Federal Employer Identification Number (FEIN).

Employment Service (ES) refers to the system of Federal and state entities responsible for administration of the labor certification process for temporary and seasonal agricultural employment of nonimmigrant foreign workers. This includes the SWAs and OFLC, including the National Processing Centers (NPCs).

Employment Standards Administration (ESA) means the agency within DOL that includes the WHD, and which is charged with carrying out certain investigative and enforcement functions of the Secretary under the INA.

Employment and Training Administration (ETA) means the agency within the DOL that includes OFLC.

Federal holiday means a legal public holiday as defined at 5 U.S.C. 6103.

Fixed-site employer means any person engaged in agriculture who meets the definition of an employer as those terms are defined in this part who owns or operates a farm, ranch, processing establishment, cannery, gin, packing shed, nursery, or other similar fixed-site location where agricultural activities are performed and who recruits, solicits, hires, employs, houses, or transports any worker subject to sec. 218 of the INA or these regulations as incident to or in conjunction with the owner's or operator's own agricultural operation. For purposes of this part, *person* includes any individual, partnership, association, corporation, cooperative, joint stock company, trust, or other organization with legal rights and duties.

H–2A Labor Contractor (H–2ALC) means any person who meets the definition of employer in this section and is not a fixed-site employer, an agricultural association, or an employee of a fixed-site employer or agricultural association, as those terms are used in this part, who recruits, solicits, hires, employs, furnishes, houses, or transports any worker subject to sec. 218 of the INA or these regulations.

H–2A worker means any temporary foreign worker who is lawfully present in the U.S. to perform agricultural labor or services of a temporary or seasonal nature pursuant to sec. 101(a)(15)(H)(ii)(a) of the INA, as amended.

INA/Act means the Immigration and Nationality Act, as amended, 8 U.S.C. 1101 *et seq.*

Job offer means the offer made by an employer or potential employer of H–2A workers to eligible workers describing all the material terms and conditions of employment, including those relating to wages, working conditions, and other benefits.

Job opportunity means a job opening for temporary, full-time employment at a place in the U.S. to which a U.S. worker can be referred.

Joint employment means that where two or more employers each have sufficient definitional indicia of employment to be considered the employer of an employee, those employers will be considered to jointly employ that employee. Each employer in a joint employment relationship to an employee is considered a ''joint employer'' of that employee.

Office of Foreign Labor Certification (OFLC) means the organizational

component of the ETA that provides national leadership and policy guidance and develops regulations and procedures to carry out the responsibilities of the Secretary under the INA concerning the admission of foreign workers to the U.S. to perform work described in sec. 101(a)(15)(H)(ii)(a) of the INA, as amended.

Positive recruitment means the active participation of an employer or its authorized hiring agent in recruiting and interviewing qualified and eligible individuals in the area where the employer's job opportunity is located and any other State designated by the Secretary as an area of traditional or expected labor supply with respect to the area where the employer's job opportunity is located, in an effort to fill specific job openings with U.S. workers.

Prevailing means with respect to practices engaged in by employers and benefits other than wages provided by employers, that:

(1) Fifty percent or more of employers in an area and for an occupation engage in the practice or offer the benefit; but only if

(2) This 50 percent or more of employers also employs in aggregate 50 percent or more of U.S. workers in the occupation and area (including H–2A and non-H–2A employers for purposes of determinations concerning the provision of family housing, frequency of wage payments, and workers supplying their own bedding, but non-H–2A employers only for determinations concerning the provision of advance transportation and the utilization of H–2ALCs).

Prevailing hourly wage means the hourly wage determined by the SWA to be prevailing in the area in accordance with State-based wage surveys.

Prevailing piece rate means that amount that is typically paid to an agricultural worker per piece (which includes, but is not limited to, a load, bin, pallet, bag, bushel, etc.) to be determined by the SWA according to a methodology published by the Department. As is currently the case, the unit of production will be required to be clearly described; e.g., a field box of oranges (1½ bushels), a bushel of potatoes, and Eastern apple box (1½ metric bushels), a flat of strawberries (twelve quarts), etc.

Representative means a person or entity employed by, or duly authorized to act on behalf of, the employer with respect to activities entered into for, and/or attestations made with respect to, the *Application for Temporary Employment Certification*.

Secretary means the Secretary of the United States Department of Labor or the Secretary's designee.

State Workforce Agency (SWA) means the State government agency that receives funds pursuant to the Wagner-Peyser Act to administer the public labor exchange delivered through the State's One-Stop delivery system in accordance with the Wagner-Peyser Act, 29 U.S.C. 49, *et seq.* Separately, SWAs receive ETA grants, administered by OFLC, to assist them in performing certain activities related to foreign labor certification, including conducting housing inspections.

Successor in interest means that, in determining whether an employer is a successor in interest, the factors used under Title VII of the Civil Rights Act and the Vietnam Era Veterans' Readjustment Assistance Act will be considered. When considering whether an employer is a successor for purposes of this part, the primary consideration will be the personal involvement of the firm's ownership, management, supervisors, and others associated with the firm in the violations resulting in a debarment recommendation. Normally, wholly new management or ownership of the same business operation, one in which the former management or owner does not retain a direct or indirect interest, will not be deemed to be a successor in interest for purposes of debarment. A determination of whether or not a successor in interest exists is based on the entire circumstances viewed in their totality. The factors to be considered include:

(1) Substantial continuity of the same business operations;

(2) Use of the same facilities;

(3) Continuity of the work force;

(4) Similarity of jobs and working conditions;

(5) Similarity of supervisory personnel;

(6) Similarity in machinery, equipment, and production methods;

(7) Similarity of products and services; and

(8) The ability of the predecessor to provide relief.

Temporary agricultural labor certification means the certification made by the Secretary with respect to an employer seeking to file with DHS a visa petition to employ one or more foreign nationals as an H–2A worker, pursuant to secs. 101(a)(15)(H)(ii)(a), 214(a) and (c), and 218 of the INA that:

(1) There are not sufficient workers who are able, willing, and qualified, and who will be available at the time and place needed, to perform the agricultural labor or services involved in the petition, and

(2) The employment of the foreign worker in such agricultural labor or services will not adversely affect the wages and working conditions of workers in the U.S. similarly employed as stated at 8 U.S.C. 1101(a)(15)(H)(ii)(a), 1184(a) and (c), and 1188.

United States (U.S.), when used in a geographic sense, means the continental United States, Alaska, Hawaii, the Commonwealth of Puerto Rico, and the territories of Guam, the Virgin Islands, and, as of the transition program effective date, as defined in the Consolidated Natural Resources Act of 2008, Public Law 110–229, Title VII, the Commonwealth of the Northern Mariana Islands.

U.S. worker means a worker who is:

(1) A citizen or national of the U.S., or;

(2) An alien who is lawfully admitted for permanent residence in the U.S., is admitted as a refugee under sec. 207 of the INA, is granted asylum under sec. 208 of the INA, or is an immigrant otherwise authorized (by the INA or by DHS) to be employed in the U.S.

Wages means all forms of cash remuneration to a worker by an employer in payment for personal services.

Work contract means all the material terms and conditions of employment relating to wages, hours, working conditions, and other benefits, required by the applicable regulations in subpart B of 20 CFR part 655, *Labor Certification for Temporary Agricultural Employment of H–2A Aliens in the U.S. (H–2A Workers)*, or these regulations, including those terms and conditions attested to by the H–2A employer, which contract between the employer and the worker may be in the form of a separate written document. In the absence of a separate written work contract incorporating the required terms and conditions of employment, agreed to by both the employer and the worker, the work contract at a minimum shall be the terms of the job order, as provided in 20 CFR part 653, Subpart F, and covered provisions of the work contract shall be enforced in accordance with these regulations.

(b) *Definition of agricultural labor or services of a temporary or seasonal nature.* For the purposes of this part, *agricultural labor or services of a temporary or seasonal nature* means the following:

(1) *Agricultural labor or services,* pursuant to sec. 101(a)(15)(H)(ii)(a) of the INA (8 U.S.C. 1101(a)(15)(H)(ii)(a)), is defined as:

(i) *Agricultural labor* as defined and applied in sec. 3121(g) of the Internal

Revenue Code of 1954 at 26 U.S.C. 3121(g);

(ii) *Agriculture* as defined and applied in sec. 3(f) of the Fair Labor Standards Act of 1938 (FLSA) at 29 U.S.C. 203(f) (Work performed by H–2A workers, or workers in corresponding employment, that is not defined as agriculture in sec. 3(f) is subject to the provisions of the FLSA as provided therein, including the overtime provisions in sec. 7(a) at 29 U.S.C. 207(a));

(iii) The pressing of apples for cider on a farm;

(iv) Logging employment; or

(v) Handling, planting, drying, packing, packaging, processing, freezing, grading, storing, or delivering to storage or to market or to a carrier for transportation to market, in its unmanufactured state, any agricultural or horticultural commodity while in the employ of the operator of a farm where no H–2B workers are employed to perform the same work at the same establishment; or

(vi) Other work typically performed on a farm that is not specifically listed on the *Application for Temporary Employment Certification* and is minor (i.e., less than 20 percent of the total time worked on the job duties and activities that are listed on the *Application for Temporary Employment Certification*) and incidental to the agricultural labor or services for which the H–2A worker was sought.

(2) An occupation included in either of the statutory definitions cited in paragraphs (b)(1)(i) and (ii) of this section is *agricultural labor or services,* notwithstanding the exclusion of that occupation from the other statutory definition.

(i) *Agricultural labor* for purposes of paragraph (b)(1)(i) of this section means all services performed:

(A) On a farm, in the employ of any person, in connection with cultivating the soil, or in connection with raising or harvesting any agricultural or horticultural commodity, including the raising, shearing, feeding, caring for, training, and management of livestock, bees, poultry, and furbearing animals and wildlife;

(B) In the employ of the owner or tenant or other operator of a farm, in connection with the operation or maintenance of such farm and its tools and equipment, or in salvaging timber or clearing land of brush and other debris left by a hurricane, if the major part of such service is performed on a farm;

(C) In connection with the production or harvesting of any commodity defined as an agricultural commodity in sec. 15(g) of the Agricultural Marketing Act, as amended at 12 U.S.C. 1141j, or in connection with the ginning of cotton, or in connection with the operation or maintenance of ditches, canals, reservoirs, or waterways, not owned or operated for profit, used exclusively for supplying and storing water for farming purposes;

(D)(*1*) In the employ of the operator of a farm in handling, planting, drying, packing, packaging, processing, freezing, grading, storing, or delivering to storage or to market or to a carrier for transportation to market, in its unmanufactured state, any agricultural or horticultural commodity, but only if such operator produced more than one-half of the commodity with respect to which such service is performed;

(*2*) In the employ of a group of operators of farms (other than a cooperative organization) in the performance of service described in paragraph (b)(2)(i)(A) of this section, but only if such operators produced all of the commodity with respect to which such service is performed. For purposes of this paragraph, any unincorporated group of operators will be deemed a cooperative organization if the number of operators comprising such group is more than 20 at any time during the calendar quarter in which such service is performed;

(*3*) The provisions of paragraphs (b)(2)(i)(D)(*1*) and (*2*) of this section do not apply to services performed in connection with commercial canning or commercial freezing or in connection with any agricultural or horticultural commodity after its delivery to a terminal market for distribution for consumption; or

(*4*) On a farm operated for profit if such service is not in the course of the employer's trade or business and is not domestic service in a private home of the employer.

(E) For the purposes of this section, the term *farm* includes stock, dairy, poultry, fruit, fur-bearing animals, and truck farms, plantations, ranches, nurseries, ranges, greenhouses or other similar structures used primarily for the raising of agricultural or horticultural commodities, and orchards. See sec. 3121(g) of the Internal Revenue Code of 1986 (26 U.S.C. 3121(g)).

(ii) *Agriculture.* For purposes of paragraph (b)(1)(ii) of this section *agriculture* means farming in all its branches and among other things includes the cultivation and tillage of the soil, dairying, the production, cultivation, growing, and harvesting of any agricultural or horticultural commodities (including commodities as defined as agricultural commodities in 12 U.S.C. 1141j(g)), the raising of livestock, bees, fur-bearing animals, or poultry, and any practices (including any forestry or lumbering operations) performed by a farmer or on a farm as an incident to or in conjunction with such farming operations, including preparation for market, delivery to storage or to market or to carriers for transportation to market. *See sec.* 29 U.S.C. 203(f), as amended.

(iii) *Agricultural commodity.* For purposes of paragraph (b)(1)(ii) of this section, *agricultural commodity* includes, in addition to other agricultural commodities, crude gum (oleoresin) from a living tree, and gum spirits of turpentine and gum rosin as processed by the original producer of the crude gum (oleoresin) from which derived. *Gum spirits of turpentine* means spirits of turpentine made from gum (oleoresin) from a living tree and *gum rosin* means rosin remaining after the distillation of gum spirits of turpentine. *See* 12 U.S.C. 1141j(g) (sec. 15(g) of the Agricultural Marketing Act, as amended), and 7 U.S.C. 92.

(3) *Of a temporary or seasonal nature.* (i) *On a seasonal or other temporary basis.* For the purposes of this part, *of a temporary or seasonal nature* means *on a seasonal or other temporary basis,* as defined in the WHD's regulation at 29 CFR 500.20 under the Migrant and Seasonal Agricultural Worker Protection Act (MSPA).

(ii) *MSPA definition.* The definition of *on a seasonal or other temporary basis* found in MSPA is summarized as follows:

(A) Labor is performed on a seasonal basis where, ordinarily, the employment pertains to or is of the kind exclusively performed at certain seasons or periods of the year and which, from its nature, may not be continuous or carried on throughout the year. A worker who moves from one seasonal activity to another, while employed in agriculture or performing agricultural labor, is employed on a seasonal basis even though the worker may continue to be employed during a major portion of the year.

(B) A worker is employed on *other temporary basis* where the worker is employed for a limited time only or the worker's performance is contemplated for a particular piece of work, usually of short duration. Generally, employment which is contemplated to continue indefinitely is not temporary.

(C) *On a seasonal or other temporary basis* does not include

(*1*) The employment of any foreman or other supervisory employee who is employed by a specific agricultural employer or agricultural association essentially on a year round basis; or

(*2*) The employment of any worker who is living at his or her permanent place of residence, when that worker is employed by a specific agricultural employer or agricultural association on essentially a year round basis to perform a variety of tasks for his or her employer and is not primarily employed to do field work.

(iii) *Temporary.* For the purposes of this part, the definition of *temporary* in paragraph (b)(3) of this section refers to any job opportunity covered by this part where the employer needs a worker for a position for a limited period of time, including, but not limited, to a peakload need, which is generally less than 1 year, unless the original temporary agricultural labor certification is extended pursuant to 20 CFR 655.110.

Subpart B—Enforcement of Work Contracts

§ 501.15 Enforcement.

The investigation, inspections and law enforcement functions to carry out the provisions of sec. 218 of the INA, as provided in these regulations for enforcement by the WHD, pertain to the employment of any H–2A worker and any other U.S. worker hired in corresponding employment by an H–2A employer. Such enforcement includes work contract provisions as defined in § 501.10(a). The work contract also includes those employment benefits which are required to be stated in the job offer, as prescribed in 20 CFR 655.104.

§ 501.16 Sanctions and remedies—General.

Whenever the Secretary believes that the H–2A provisions of the INA or these regulations have been violated such action shall be taken and such proceedings instituted as deemed appropriate, including (but not limited to) the following:

(a) Institute appropriate administrative proceedings, including: The recovery of unpaid wages, including wages owed to U.S. workers as a result of a layoff or displacement prohibited by these rules (either directly from the employer, a successor in interest, or in the case of an H–2ALC also by claim against any surety who issued a bond to the H–2ALC); the enforcement of covered provisions of the work contract as set forth in 29 CFR 501.10(a); the assessment of a civil money penalty; reinstatement; or the recommendation of debarment for up to 3 years.

(b) Petition any appropriate District Court of the U.S. for temporary or permanent injunctive relief, including the withholding of unpaid wages and/or reinstatement, to restrain violation of the H–2A provisions of the INA, 20 CFR part 655, Subpart B, or these regulations by any person.

(c) Petition any appropriate District Court of the U.S. for specific performance of covered contractual obligations.

§ 501.17 Concurrent actions.

The taking of any one of the actions referred to above shall not be a bar to the concurrent taking of any other action authorized by the H–2A provisions of the Act and these regulations, or the regulations of 20 CFR part 655.

§ 501.18 Representation of the Secretary.

(a) Except as provided in 28 U.S.C. 518(a) relating to litigation before the Supreme Court, the Solicitor of Labor may appear for and represent the Secretary in any civil litigation brought under the Act.

(b) The Solicitor of Labor, through authorized representatives, shall represent the Administrator, WHD and the Secretary in all administrative hearings under the H–2A provisions of the Act and these regulations.

§ 501.19 Civil money penalty assessment.

(a) A civil money penalty may be assessed by the Administrator, WHD for each violation of the work contract as set forth in § 501.10(a) of these regulations.

(b) In determining the amount of penalty to be assessed for any violation of the work contract as provided in the H–2A provisions of the Act or these regulations the Administrator, WHD shall consider the type of violation committed and other relevant factors. The matters which may be considered include, but are not limited to, the following:

(1) Previous history of violation or violations of the H–2A provisions of the Act and these regulations;

(2) The number of H–2A employees, corresponding U.S. employees or those U.S. workers individually rejected for employment affected by the violation or violations;

(3) The gravity of the violation or violations;

(4) Efforts made in good faith to comply with the H–2A provisions of the Act and these regulations;

(5) Explanation of person charged with the violation or violations;

(6) Commitment to future compliance, taking into account the public health, interest or safety, and whether the person has previously violated the H–2A provisions of the Act;

(7) The extent to which the violator achieved a financial gain due to the violation, or the potential financial loss or potential injury to the workers.

(c) A civil money penalty for violation of the work contract will not exceed $1,000 for each violation committed (with each failure to pay a worker properly or to honor the terms or conditions of a worker's employment that is required by sec. 218 of the INA, 20 CFR 655, Subpart B, or these regulations constituting a separate violation), with the following exceptions:

(1) For a willful failure to meet a covered condition of the work contract, or for willful discrimination, the civil money penalty shall not exceed $5,000 for each such violation committed (with each willful failure to honor the terms or conditions of a worker's employment that are required by sec. 218 of the INA, 20 CFR 655, Subpart B, or these regulations constituting a separate violation);

(2) For a violation of a housing or transportation safety and health provision of the work contract that proximately causes the death or serious injury of any worker, the civil money penalty shall not exceed $25,000 per worker, unless the violation is a repeat or willful violation, in which case the penalty shall not exceed $50,000 per worker, or unless the employer failed, after notification, to cure the specific violation, in which case the penalty shall not exceed $100,000 per worker.

(3) For purposes of paragraph (c)(2) of this section, the term *serious injury* means:

(i) Permanent loss or substantial impairment of one of the senses (sight, hearing, taste, smell, tactile sensation);

(ii) Permanent loss or substantial impairment of the function of a bodily member, organ, or mental faculty, including the loss of all or part of an arm, leg, foot, hand or other body part; or

(iii) Permanent paralysis or substantial impairment that causes loss of movement or mobility of an arm, leg, foot, hand or other body part.

(d) A civil money penalty for failure to cooperate with a WHD investigation shall not exceed $5,000 per investigation;

(e) For a willful layoff or displacement of any similarly employed U.S. worker in the occupation that is the subject of the *Application for Temporary Employment Certification* in the area of intended employment within 60 days of the date of need other than for a lawful, job-related reason, except that such layoff shall be permitted where all H–2A workers were laid off

first, the civil penalty shall not exceed $10,000 per violation per worker.

§ 501.20 Debarment and revocation.

(a) The WHD shall recommend to the Administrator, OFLC the debarment of any employer and any successor in interest to that employer (or the employer's attorney or agent if they are a responsible party) if the WHD finds that the employer substantially violated a material term or condition of its temporary labor certification for the employment of domestic or nonimmigrant workers.

(b) For purposes of this section, a substantial violation includes:

(1) A pattern or practice of acts of commission or omission on the part of the employer or the employer's agent which:

(i) Are significantly injurious to the wages, benefits required to be offered under the H–2A program, or working conditions of a significant number of the employer's U.S. or H–2A workers;

(ii) Reflect a significant failure to offer employment to all qualified domestic workers who applied for the job opportunity for which certification was being sought, except for lawful job-related reasons;

(iii) Reflect a willful failure to comply with the employer's obligations to recruit U.S. workers as set forth in this subpart; or

(iv) Reflect the employment of an H–2A worker outside the area of intended employment, or in an activity/activities, not listed in the job order (other than an activity minor and incidental to the activity/activities listed in the job order), or after the period of employment specified in the job order and any approved extension;

(2) A significant failure to cooperate with a DOL investigation or with a DOL official performing an investigation, inspection, or law enforcement function under sec. 218 of the INA, 8 U.S.C. 1188, this subpart, or 29 CFR part 501 (ESA enforcement of contractual obligations); or

(3) A significant failure to comply with one or more sanctions or remedies imposed by the ESA for violation(s) of obligations found by that agency (if applicable), or with one or more decisions or orders of the Secretary or a court order secured by the Secretary under sec. 218 of the INA, 8 U.S.C. 1188, this subpart, or 29 CFR part 501 (ESA enforcement of contractual obligations); or

(4) A single heinous act showing such flagrant disregard for the law that future compliance with program requirements cannot reasonably be expected.

(c) Procedures for Debarment Recommendation. The WHD will send to the employer a *Notice of Recommended Debarment.* The *Notice of Recommended Debarment* must be in writing, must state the reason for the debarment recommendation, including a detailed explanation of the grounds for and the duration of the recommended debarment. The debarment recommendation will be forwarded to the Administrator, OFLC. The *Notice of Recommended Debarment* shall be issued no later than 2 years after the occurrence of the violation.

(d) The WHD may recommend to the Administrator, OFLC the revocation of a temporary agricultural labor certification if the WHD finds that the employer:

(1) Willfully violated a material term or condition of the approved temporary agricultural labor certification, work contract, or this part, unless otherwise provided under paragraphs (d)(2) through (4) of this section.

(2) Failed, after notification, to cure a substantial violation of the applicable housing standards set out in 20 CFR 655.104(d);

(3) Failed to cooperate with a DOL investigation or with a DOL official performing an investigation, inspection, or law enforcement function under sec. 218 of the INA, 8 U.S.C. 1188, this subpart, or 29 CFR part 501 (ESA enforcement of contractual obligations); or

(4) Failed to comply with one or more sanctions or remedies imposed by the ESA for violation(s) of obligations found by that agency (if applicable), or with one or more decisions or orders of the Secretary or a court order Secured by the Secretary under sec. 218 of the INA, 8 U.S.C. 1188, this subpart, or 29 CFR part 501 (ESA enforcement of contractual obligations).

(e) In considering a recommendation made by the WHD to debar an employer or to revoke a temporary agricultural labor certification, the Administrator, OFLC shall treat final agency determinations that the employer has committed a violation as res judicata and shall not reconsider those determinations.

§ 501.21 Failure to cooperate with investigations.

No person shall refuse to cooperate with any employee of the Secretary who is exercising or attempting to exercise this investigative or enforcement authority. As stated in §§ 501.6 and 501.19 of this part, a civil money penalty may be assessed for each failure to cooperate with an investigation, and other appropriate relief may be sought. In addition, the WHD shall report each such occurrence to ETA, and ETA may debar the employer from future certification. The WHD may also recommend to ETA that an existing certification be revoked. The taking of any one action shall not bar the taking of any additional action.

§ 501.22 Civil money penalties—payment and collection.

Where the assessment is directed in a final order by the Administrator, WHD, by an ALJ, or by the ARB, the amount of the penalty is due within 30 days and payable to the United States Department of Labor. The person assessed such penalty shall remit promptly the amount thereof as finally determined, to the Administrator, WHD by certified check or by money order, made payable to the order of *Wage and Hour Division, United States Department of Labor.* The remittance shall be delivered or mailed to the WHD Regional Office for the area in which the violations occurred.

Subpart C—Administrative Proceedings

§ 501.30 Applicability of procedures and rules.

The procedures and rules contained herein prescribe the administrative process that will be applied with respect to a determination to impose an assessment of civil money penalties, and which may be applied to the enforcement of covered provisions of the work contract as set forth in § 501.10(a), including the collection of unpaid wages due as a result of any violation of the H–2A provisions of the Act or of these regulations. Except with respect to the imposition of civil money penalties, the Secretary may, in the Secretary's discretion, seek enforcement action in Federal court without resort to any administrative proceedings.

Procedures Relating to Hearing

§ 501.31 Written notice of determination required.

Whenever the Administrator, WHD decides to assess a civil money penalty or to proceed administratively to enforce covered contractual obligations, including the recovery of unpaid wages, the person against whom such action is taken shall be notified in writing of such determination.

§ 501.32 Contents of notice.

The notice required by § 501.31 shall:

(a) Set forth the determination of the Administrator, WHD including the amount of any unpaid wages due or actions necessary to fulfill a covered contractual obligation, the amount of

any civil money penalty assessment and the reason or reasons therefore.

(b) Set forth the right to request a hearing on such determination.

(c) Inform any affected person or persons that in the absence of a timely request for a hearing, the determination of the Administrator, WHD shall become final and unappealable.

(d) Set forth the time and method for requesting a hearing, and the procedures relating thereto, as set forth in § 501.33.

§ 501.33 Request for hearing.

(a) Any person desiring review of a determination referred to in § 501.32, including judicial review, shall make a written request for an administrative hearing to the official who issued the determination at the WHD address appearing on the determination notice, no later than 30 days after issuance of the notice referred to in § 501.32.

(b) No particular form is prescribed for any request for hearing permitted by this part. However, any such request shall:

(1) Be typewritten or legibly written;

(2) Specify the issue or issues stated in the notice of determination giving rise to such request;

(3) State the specific reason or reasons why the person requesting the hearing believes such determination is in error;

(4) Be signed by the person making the request or by an authorized representative of such person; and

(5) Include the address at which such person or authorized representative desires to receive further communications relating thereto.

(c) The request for such hearing must be received by the official who issued the determination, at the WHD address appearing on the determination notice, within the time set forth in paragraph (a) of this section. For the affected person's protection, if the request is by mail, it should be by certified mail.

(d) The determination shall take effect on the start date identified in the determination, unless an administrative appeal is properly filed. The timely filing of an administrative appeal stays the determination pending the outcome of the appeal proceedings.

Rules of Practice

§ 501.34 General.

Except as specifically provided in these regulations, the *Rules of Practice and Procedure for Administrative Hearings Before the Office of Administrative Law Judges* established by the Secretary at 29 CFR part 18 shall apply to administrative proceedings described in this part.

§ 501.35 Commencement of proceeding.

Each administrative proceeding permitted under the Act and these regulations shall be commenced upon receipt of a timely request for hearing filed in accordance with § 501.33.

§ 501.36 Caption of proceeding.

(a) Each administrative proceeding instituted under the Act and these regulations shall be captioned in the name of the person requesting such hearing, and shall be styled as follows:

In the Matter of __, Respondent.

(b) For the purposes of such administrative proceedings the Administrator, WHD shall be identified as plaintiff and the person requesting such hearing shall be named as respondent.

Referral for Hearing

§ 501.37 Referral to Administrative Law Judge.

(a) Upon receipt of a timely request for a hearing filed pursuant to and in accordance with § 501.33, the Administrator, WHD, by the Associate Solicitor for the Division of Fair Labor Standards or by the Regional Solicitor for the Region in which the action arose, shall, by *Order of Reference,* promptly refer a copy of the notice of administrative determination complained of, and the original or a duplicate copy of the request for hearing signed by the person requesting such hearing or by the authorized representative of such person, to the Chief Administrative Law Judge, for a determination in an administrative proceeding as provided herein. The notice of administrative determination and request for hearing shall be filed of record in the Office of the Chief Administrative Law Judge and shall, respectively, be given the effect of a complaint and answer thereto for purposes of the administrative proceeding, subject to any amendment that may be permitted under these regulations or 29 CFR part 18.

(b) A copy of the *Order of Reference,* together with a copy of these regulations, shall be served by counsel for the Administrator, WHD upon the person requesting the hearing, in the manner provided in 29 CFR 18.3.

§ 501.38 Notice of docketing.

Upon receipt of an *Order of Reference,* the Chief Administrative Law Judge shall appoint an ALJ to hear the case. The ALJ shall promptly notify all interested parties of the docketing of the matter and shall set the time and place of the hearing. The date of the hearing shall be not more than 60 days from the date on which the *Order of Reference* was filed.

§ 501.39 Service upon attorneys for the Department of Labor—number of copies.

Two copies of all pleadings and other documents required for any administrative proceeding provided herein shall be served on the attorneys for the DOL. One copy shall be served on the Associate Solicitor, Division of Fair Labor Standards, Office of the Solicitor, U.S. Department of Labor, 200 Constitution Avenue, NW., Washington, DC 20210, and one copy on the Attorney representing the Department in the proceeding.

Procedures Before Administrative Law Judge

§ 501.40 Consent findings and order.

(a) *General.* At any time after the commencement of a proceeding under this part, but prior to the reception of evidence in any such proceeding, a party may move to defer the receipt of any evidence for a reasonable time to permit negotiation of an agreement containing consent findings and an order disposing of the whole or any part of the proceeding. The allowance of such deferment and the duration thereof shall be at the discretion of the ALJ, after consideration of the nature of the proceeding, the requirements of the public interest, the representations of the parties, and the probability of an agreement being reached which will result in a just disposition of the issues involved.

(b) *Content.* Any agreement containing consent findings and an order disposing of a proceeding or any part thereof shall also provide:

(1) That the order shall have the same force and effect as an order made after full hearing;

(2) That the entire record on which any order may be based shall consist solely of the notice of administrative determination (or amended notice, if one is filed), and the agreement;

(3) A waiver of any further procedural steps before the ALJ; and

(4) A waiver of any right to challenge or contest the validity of the findings and order entered into in accordance with the agreement.

(c) *Submission.* On or before the expiration of the time granted for negotiations, the parties or their authorized representatives or their counsel may:

(1) Submit the proposed agreement for consideration by the ALJ; or

(2) Inform the ALJ that agreement cannot be reached.

(d) *Disposition.* In the event an agreement containing consent findings

and an order is submitted within the time allowed therefor, the ALJ, within 30 days thereafter, shall, if satisfied with its form and substance, accept such agreement by issuing a decision based upon the agreed findings.

Post-Hearing Procedures

§ 501.41 Decision and order of Administrative Law Judge.

(a) The ALJ shall prepare, within 60 days after completion of the hearing and closing of the record, a decision on the issues referred by the Administrator, WHD.

(b) The decision of the ALJ shall include a statement of findings and conclusions, with reasons and basis therefor, upon each material issue presented on the record. The decision shall also include an appropriate order which may affirm, deny, reverse, or modify, in whole or in part, the determination of the Administrator, WHD. The reason or reasons for such order shall be stated in the decision.

(c) The decision shall be served on all parties and the Administrative Review Board (ARB) in person or by certified mail.

(d) The decision concerning civil money penalties and/or back wages when served by the ALJ shall constitute the final agency order unless the ARB, as provided for in § 501.42, determines to review the decision.

Review of Administrative Law Judge's Decision

§ 501.42 Procedures for initiating and undertaking review.

(a) A respondent, the WHD, or any other party wishing review, including judicial review, of the decision of an ALJ shall, within 30 days of the decision of the ALJ, petition the ARB to review the decision. Copies of the petition shall be served on all parties and on the ALJ. If the ARB does not issue a notice accepting a petition for review of the decision concerning civil money penalties and/or back wages within 30 days after receipt of a timely filing of the petition, or within 30 days of the date of the decision if no petition has been received, the decision of the ALJ shall be deemed the final agency action. If the ARB does not issue a notice accepting a petition for review of the decision concerning the debarment recommendation within 30 days after the receipt of a timely filing of the petition, or if no petition has been received by the ARB within 30 days of the date of the decision, the decision of the ALJ shall be deemed the final agency action. If a petition for review is accepted, the decision of the ALJ shall be inoperative unless and until the ARB issues an order affirming the decision.

(b) Whenever the ARB, either on the ARB's own motion or by acceptance of a party's petition, determines to review the decision of an ALJ, a notice of the same shall be served upon the ALJ and upon all parties to the proceeding in person or by certified mail.

§ 501.43 Responsibility of the Office of Administrative Law Judges.

Upon receipt of the ARB's Notice pursuant to § 501.42 of these regulations, the Office of ALJ shall promptly forward a copy of the complete hearing record to the ARB.

§ 501.44 Additional information, if required.

Where the ARB has determined to review such decision and order, the ARB shall notify each party of:

(a) The issue or issues raised;

(b) The form in which submissions shall be made (i.e., briefs, oral argument, etc.); and

(c) The time within which such presentation shall be submitted.

§ 501.45 Final decision of the Administrative Review Board.

The ARB's final decision shall be issued within 90 days from the notice granting the petition and served upon all parties and the ALJ, in person or by certified mail.

Record

§ 501.46 Retention of official record.

The official record of every completed administrative hearing provided by these regulations shall be maintained and filed under the custody and control of the Chief Administrative Law Judge, or, where the case has been the subject of administrative review, the ARB.

§ 501.47 Certification.

Upon receipt of a complaint seeking review of a decision issued pursuant to this part filed in a U.S. District Court, after the administrative remedies have been exhausted, the Chief Administrative Law Judge or, where the case has been the subject of administrative review, the ARB shall promptly index, certify and file with the appropriate U.S. District Court, a full, true, and correct copy of the entire record, including the transcript of proceedings.

PART 780—EXEMPTIONS APPLICABLE TO AGRICULTURE, PROCESSING OF AGRICULTURAL COMMODITIES, AND RELATED SUBJECTS UNDER THE FAIR LABOR STANDARDS ACT

■ 9. The authority citation for part 780 is revised to read as follows:

Authority: Sections 1–19, 52 Stat. 1060, as amended; 29 U.S.C. 201–219.

■ 10. Revise § 780.115 to read as follows:

§ 780.115 Forest products.

Trees grown in forests and the lumber derived therefrom are not agricultural or horticultural commodities, for the purpose of the FLSA. (*See* § 780.205 regarding production of Christmas trees.) It follows that employment in the production, cultivation, growing, and harvesting of such trees or timber products is not sufficient to bring an employee within sec. 3(f) unless the operation is performed by a farmer or on a farm as an incident to or in conjunction with his or its farming operations. On the latter point, see §§ 780.200 through 780.209 discussing the question of when forestry or lumbering operations are incident to or in conjunction with farming operations so as to constitute agriculture. For a discussion of the exemption in sec. 13(b)(28) of the Act for certain forestry and logging operations in which not more than eight employees are employed, see part 788 of this chapter.

■ 11. Revise § 780.201 to read as follows:

§ 780.201 Meaning of forestry or lumbering operations.

The term forestry or lumbering operations refers to the cultivation and management of forests, the felling and trimming of timber, the cutting, hauling, and transportation of timber, logs, pulpwood, cordwood, lumber, and like products, the sawing of logs into lumber or the conversion of logs into ties, posts, and similar products, and similar operations. It also includes the piling, stacking, and storing of all such products. The gathering of wild plants and of wild Christmas trees is included. (*See* the related discussion in §§ 780.205 through 780.209 and in part 788 of this chapter which considers the sec. 13(b)(28) exemption for forestry or logging operations in which not more than eight employees are employed.) Wood working as such is not included in forestry or lumbering operations. The manufacture of charcoal under modern methods is neither a forestry nor lumbering operation and cannot be regarded as agriculture.

■ 12. Revise § 780.205 to read as follows:

§ 780.205 Nursery activities generally and Christmas tree production.

(a) The employees of a nursery who are engaged in the following activities are employed in agriculture:

(1) Sowing seeds and otherwise propagating fruit, nut, shade, vegetable, and ornamental plants or trees, and shrubs, vines, and flowers;

(2) Handling such plants from propagating frames to the field;

(3) Planting, cultivating, watering, spraying, fertilizing, pruning, bracing, and feeding the growing crop.

(b) Trees produced through the application of extensive agricultural or horticulture techniques to be harvested and sold for seasonal ornamental use as Christmas trees are considered to be agricultural or horticultural commodities. Employees engaged in the application of agricultural and horticultural techniques to produce Christmas trees as ornamental horticultural commodities such as the following are employed in agriculture:

(1) Planting seedlings in a nursery; on-going treatment with fertilizer, herbicides, and pesticides as necessary;

(2) After approximately three years, re-planting in lineout beds;

(3) After two more seasons, lifting and re-planting the small trees in cultivated soil with continued treatment with fertilizers, herbicides, and pesticides as indicated by testing to see if such applications are necessary;

(4) Pruning or shearing yearly;

(5) Harvesting of the tree for seasonal ornamental use, typically within 7 to 10 years of planting.

(c) Trees to be used as Christmas trees which are gathered in the wild, such as from forests or uncultivated land and not produced through the application of agricultural or horticultural techniques are not agricultural or horticultural commodities for purposes of sec. 3(f).

■ 13. Revise § 780.208 to read as follows:

§ 780.208 Forestry activities.

Operations in a forest tree nursery such as seeding new beds and growing and transplanting forest seedlings are not farming operations. For such operations to fall within sec. 3(f), they must qualify under the second part of the definition dealing with incidental practices. *See* § 780.201.

PART 788—FORESTRY OR LOGGING OPERATIONS IN WHICH NOT MORE THAN EIGHT EMPLOYEES ARE EMPLOYED

■ 14. Revise § 788.10 to read as follows:

§ 788.10 Preparing other forestry products.

As used in the exemption, other forestry products means plants of the forest and the natural properties or substances of such plants and trees. Included among these are decorative greens such as holly, ferns, roots, stems, leaves, Spanish moss, wild fruit, and brush. Christmas trees are only included where they are gathered in the wild from forests or from uncultivated land and not produced through the application of extensive agricultural or horticultural techniques. *See* 29 CFR 780.205 for further discussion. Gathering and preparing such forestry products as well as transporting them to the mill, processing plant, railroad, or other transportation terminal are among the described operations. Preparing such forestry products does not include operations that change the natural physical or chemical condition of the products or that amount to extracting (as distinguished from gathering) such as shelling nuts, or that mash berries to obtain juices.

Signed in Washington this 5th day of December 2008.

Brent R. Orrell,

Deputy Assistant Secretary, Employment and Training.

Victoria A. Lipnic,

Assistant Secretary, Employment Standards Administration.

Alexander J. Passantino,

Acting Administrator, Wage and Hour Division.

Note: The following appendix will not appear in the Code of Federal Regulations.

BILLING CODE 4510–FP–P

OMB Approval: 1205-0466
Expiration Date: XX/XX/XXXX

Application for Temporary Employment Certification
ETA Form 9142
U.S. Department of Labor

Please read and review the filing instructions carefully before completing the ETA Form 9142. A copy of the instructions can be found at http://www.foreignlaborcert.doleta.gov/. In accordance with Federal Regulations, incomplete or obviously inaccurate applications will not be certified by the Department of Labor. If submitting this form non-electronically, ALL required fields/items containing an asterisk (*) must be completed as well as any fields/items where a response is conditional as indicated by the section (§) symbol.

A. Employment-Based Nonimmigrant Visa Information

1. Indicate the type of visa classification supported by this application *(Write classification symbol)*: *	

B. Temporary Need Information

1. Job Title *		
2. SOC (ONET/OES) code *	3. SOC (ONET/OES) occupation title *	
4. Is this a full-time position? * ☐ Yes ☐ No	**Period of Intended Employment**	
	5. Begin Date * *(mm/dd/yyyy)*	6. End Date * *(mm/dd/yyyy)*

7. Worker positions needed/basis for the visa classification supported by this application

☐ **Total Worker Positions Being Requested for Certification ***

Basis for the visa classification supported by this application
(*indicate the total workers in each applicable category based on the total workers identified above*)

☐ a. New employment *	☐ d. New concurrent employment *
☐ b. Continuation of previously approved employment * without change with the same employer	☐ e. Change in employer *
☐ c. Change in previously approved employment *	☐ f. Amended petition *

8. Nature of Temporary Need: (Choose only one of the standards) *

☐ Seasonal ☐ Peakload ☐ One-Time Occurrence ☐ Intermittent

9. Statement of Temporary Need *

ETA Form 9142
U.S. Department of Labor

I. Declaration of Employer and Attorney/Agent

In accordance with Federal regulations, the employer must attest that it will abide by certain terms, assurances and obligations as a condition for receiving a temporary labor certification from the U.S. Department of Labor. Applications that fail to attach Appendix A.2 or Appendix B.1 will be considered incomplete and not accepted for processing by the ETA application processing center.

1. For H-2A Applications ONLY, please confirm that you have read and agree to all the applicable terms, assurances and obligations contained in **Appendix A.2.** *§*	❑ Yes ❑ No ❑ N/A
2. For H-2B Applications ONLY, please confirm that you have read and agree to all the applicable terms, assurances and obligations contained in **Appendix B.1.** *§*	❑ Yes ❑ No ❑ N/A

J. Preparer

Complete this section if the preparer of this application is a person other than the one identified in either Section D (employer point of contact) or E (attorney or agent) of this application.

1. Last (family) name *§*	2. First (given) name *§*	3. Middle initial *§*
4. Job Title *§*		
5. Firm/Business name *§*		
6. E-Mail address *§*		

K. U.S. Government Agency Use (ONLY)

Pursuant to the provisions of Section 101 (a)(15)(h)(ii) of the Immigration and Nationality Act, as amended, I hereby certify that there are not sufficient U.S. workers available and the employment of the above will not adversely affect the wages and working conditions of workers in the U.S. similarly employed. By virtue of the signature below, the Department of Labor hereby acknowledges the following:

This certification is valid from _____ to _____.

Application for Temporary Employment Certification
ETA Form 9142 – General Instructions for the 9142
U.S. Department of Labor

IMPORTANT: Please read these instructions carefully before completing the ETA Form 9142 –Application for Temporary Employment Certification. These instructions contain full explanations of the questions and attestations that make up the ETA Form 9142. ***In accordance with Federal Regulations, incomplete or obviously inaccurate applications will not be certified by the Department of Labor. If the employer received approval by the Department of Labor to submit this form non-electronically, ALL required fields/items must be completed as well as any fields/items where is a response is conditioned on the response to another required field/item.***

Anyone, who knowingly and willingly furnishes any false information in the preparation of ETA Form 9142 and any supporting documentation, or aids, abets, or counsels another to do so is committing a federal offense, punishable by fine or imprisonment up to five years or both (18 U.S.C. §§ 2, 1001). Other penalties apply as well to fraud or misuse of this immigration document and to perjury with respect to this form (18 U.S.C. §§ 1546, 1621).

OMB Notice: These reporting instructions have been approved under the Paperwork Reduction Act of 1995. Persons are not required to respond to this collection of information unless it displays a currently valid OMB control number. Respondent's reply to these reporting requirements is mandatory to obtain the benefits of temporary employment certification (Immigration and Nationality Act, Section 101 (a)(15)(H)(ii)). Public reporting burden for this collection of information is estimated to average 2 hours and 10 mintues for H-2A and 2 hours and 45 minutes for H-2B per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate to the Office of Foreign Labor Certification * U.S. Department of Labor * Room C4312 * 200 Constitution Ave., NW * Washington, DC * 20210. **Do NOT send the completed application to this address.**

Section A
Employment - Based Nonimmigrant Visa Information

1. Enter the following classification symbol to indicate the type of visa supported by this application: **"H-2A"** or **"H-2B"**

Section B
Temporary Need Information

1. Enter the title of the job opportunity for which the application for temporary employment certification is being sought by the employer.

2. Enter the six or eight-digit Standard Occupational Classification (SOC)/Occupational Network (O*NET) code for the occupation, which most clearly describes the work to be performed.. For example, the six-digit SOC code for a fruit or vegetable harvester or orchard worker is 45-2092.02 (Farmworkers and Laborers, Crop).

3. Enter the occupational title associated with the SOC/O*NET (OES) code. For example, the occupational title associated with SOC/O*NET code 45-2092.02 is "Farmworkers and Laborers, Crop".

4. Enter whether this position is full-time by indicating "Yes" or "No". Although there is no regulatory definition for full-time employment, the Department generally considers 35 hours per week as the distinction point between full-time and part-time.

5. Enter the beginning date for the worker's period of employment. Use a month/day/full year (MM/DD/YYYY) format.

6. Enter the end date for the worker's period of employment. Use a month/day/full year (MM/DD/YYYY) format.

7. The collection of this item contains two parts. First, enter the number of workers being requested for certification. Second, use collection items (a) through (f) to enter the number of workers in each applicable category based on the answer to the first part of this item. Every box MUST be filled. If the employer has no workers in a particular category, please indicate "0 (zero)."

OMB Approval: 1205-0466
Expiration Date: XX/XX/XXXX

Application for Temporary Employment Certification
ETA Form 9142 – General Instructions for the 9142
U.S. Department of Labor

8. Mark the appropriate box to indicate the nature of the employer's temporary need for the services or labor to be performed. Only one standard of temporary need may be selected. The following definitions generally apply to temporary agricultural and non-agricultural work:

   Seasonal Need: The employer must establish that the services or labor is traditionally tied to a season of the year by an event or pattern and is of a recurring nature. The employer shall specify the period(s) of time during each year in which it does not need the services or labor. The employment is not seasonal if the period during which the services or labor is not needed is unpredictable or subject to change or is considered a vacation period for the employer's permanent employees.

   Peakload Need: The employer must establish that (1) it regularly employs permanent workers to perform the services or labor at the place of employment and that it needs to supplement its permanent staff at the place of employment on a temporary basis due to a seasonal or short-term demand, and (2) the temporary additions to staff will not become a part of the employer's regular operation.

   One-Time Occurrence: The employer must establish that either (1) it has not employed workers to perform the services or labor in the past and that it will not need workers to perform the services or labor in the future, or (2) it has an employment situation that is otherwise permanent, but a temporary event of short duration has created the need for a temporary worker(s).

   Intermittent Need: The employer must establish that it has not employed permanent or full-time workers to perform the services or labor, but occasionally or intermittently needs temporary workers to perform services or labor for short periods.

9. Provide a statement clearly describing the employer's temporary need for the services or labor to be performed. The employer's statement must explain (a) the nature of the employer's business or operations, (b) why the job opportunity and number of workers being requested for certification reflect a temporary need, and (b) how the employer's request for the services or labor to be performed meets the chosen standard under Question 8 of a seasonal, peakload, one-time occurrence, or an intermittent basis.

Section C
Employer Information

1. Enter the full legal name of the business, person, association, firm, corporation, or organization, i.e., the employer filing this application. The employer's full legal name is the exact name of the individual, corporation, LLC, partnership, or other organization that is reported to the Internal Revenue Service. For master applications filed on behalf of more than one employer under the H-2A program, submit a separate attachment that identifies each employer, by name, mailing address, and total worker positions needed, under the application

2. Enter the full trade name or "Doing Business As" (DBA) name, if applicable, of the business, person, association, firm, corporation, or organization, i.e., the employer filing this application.

3. Enter the street address of the employer's principal place of business.

4. If additional space is needed for the street address, use this line to complete the employer's street address.

5. Enter the city of the employer's principal place of business. If the city and country are the same, the name must still be entered in both fields.

6. Enter the state of the employer's principal place of business.

7. Enter the postal (zip) code of the employer's principal place of business.

8. Enter the country of the employer's principal place of business. If the city and country are the same, the name must still be entered in both fields.

OMB Approval: 1205-0466
Expiration Date: XX/XX/XXXX

Application for Temporary Employment Certification
ETA Form 9142 – General Instructions for the 9142
U.S. Department of Labor

9. Enter the province of the employer's principal place of business, if applicable.

10. Enter the area code and telephone number for the employer's principal place of business. Include country code, if applicable.

11. Enter the extension of the telephone number for the employer's principal place of business, if applicable.

12. Enter the nine-digit Federal Employer identification Number (FEIN) as assigned by the IRS. Do not enter a social security number.

    Note: All employers, including private households, MUST obtain an FEIN from the IRS before completing this application. Information on obtaining an FEIN can be found at www.IRS.gov.

13. Enter the four to six-digit North American Industry Classification System (NAICS) code that best describes the employer's business, not the alien's job. A listing of NAICS codes can be found at http://www.census.gov/epcd/www/naics.html

14. Mark the appropriate to indicate the type of application being filed for temporary employment certification. Only one application type can be selected.

Section D
Employer Point of Contact Information

An employer point of contact is an employee of the employer whose position authorizes the employee to provide information and supporting documentation concerning this Application for Temporary Employment Certification and to communicate with the Department of Labor on behalf of the employer. The employer point of contact should be the individual most familiar with the content of this application and circumstances of the foreign worker's employment.

Note: The employer point of contact information in this Section, specifically the name, telephone number, and email address, must be different from the attorney/agent information listed in Section E, unless the attorney is an employee of the employer.

1. Enter the last (family) name of the employer's point of contact.

2. Enter the first (given) name of the employer's point of contact.

3. Enter the middle initial of the employer's point of contact.

4. Enter the job title of the employer's point of contact.

5. Enter the business street address for the employer's point of contact.

6. If additional space is needed for the street address, use this line to complete the street address.

7. Enter the city of the employer's point of contact. If the city and country are the same, the name must still be entered in both fields.

8. Enter the state of the employer's point of contact.

9. Enter the postal (zip) code of the employer's point of contact.

10. Enter the country of the employer's point of contact. If the city and country are the same, the name must still be entered in both fields.

11. Enter the province of the employer's point of contact, if applicable.

12. Enter the area code and business telephone number of the employer's point of contact. Include country code, if applicable.

OMB Approval: 1205-0466
Expiration Date: XX/XX/XXXX

Application for Temporary Employment Certification
ETA Form 9142 – General Instructions for the 9142
U.S. Department of Labor

13. Enter the extension of the telephone number of the employer's point of contact, if applicable.

14. Enter the business e-mail address of the employer's point of contact in the format name@emailaddress.top-level domain.

OMB Approval: 1205-0466
Expiration Date: XX/XX/XXXX

U.S. Department of Labor

Section E
Attorney or Agent Information (if applicable)

Note: The attorney/agent information in this Section, specifically the name, telephone number, and email address, must be different from the employer's point of contact information in Section D, unless the attorney is an employee of the employer.

1. Identify whether the employer is represented by an attorney or agent in the process of filing this application. Only mark one box. If "Yes" complete the remainder of Section E. If "No" in question 1, skip questions 2 to 19 and continue to Section F. Associations filing H-2A applications as an agent on behalf of one or more of its grower members must mark "Yes" to this question.

2. Enter the last (family) name of the attorney/agent.

3. Enter the first (given) name of the attorney/agent.

4. Enter the middle initial of the attorney/agent.

5. Enter the street address of the attorney/agent.

6. If additional space is needed for the street address, use this line to complete the attorney/agent's street address.

7. Enter the city of the attorney/agent. If the city and country are the same, the name must still be entered in both fields.

8. Enter the state of the attorney/agent.

9. Enter the postal (zip) code of the attorney/agent.

10. Enter the country of the attorney/agent. If the city and country are the same, the name must still be entered in both fields.

11. Enter the province of the attorney/agent, if applicable.

12. Enter the area code and telephone number of the attorney/agent. Include country code, if applicable.

13. Enter the extension of the telephone number of the attorney/agent, if applicable.

14. Enter the e-mail address of the attorney/agent in the format name@emailaddress.top-level domain .

15. Enter the attorney/agent's law firm or business name.

16. Enter the attorney/agent's law firm or business nine-digit FEIN as assigned by the IRS.

17. Enter the attorney's state Bar number. If the attorney is licensed in more than one state, enter only one state Bar number. If submitting this form electronically and the attorney is licensed in a state which does not issue state Bar numbers, leave the field blank and once confirmed it will be automatically prepopulated with "N/A."

Note: The answers to questions 18 and 19 below should correspond to the same state for which a Bar number was provided in question 17, if any.

18. Enter the state of the highest court where the attorney is in good standing.

19. Enter the name of the highest court in the state where the attorney is in good standing.

U.S. Department of Labor

Section F
Job Offer Information

a. Job Description

1. Enter the same job title as the one entered under Section B question 1.

2. Enter the basic hours of work required per week and, if applicable, overtime hours per week in accordance with State and Federal law for the work and area of employment.

3. Enter the daily work schedule for the job opportunity (e.g., 9 a.m. to 5 p.m., 7 a.m. to 11 a.m. and 4 p.m. to 8 p. m.).

4. Mark "Yes" or "No" as to whether the job opportunity supervises the work of other employees.

5. If "Yes" is marked in question 4, enter the total number of employees the job opportunity will supervise.

6. Describe the job duties, in detail, to be performed by any worker filling the job opportunity. Specify any equipment to be used and pertinent working conditions.

b. Minimum Requirements

1. Identify whether the minimum U.S. diploma or degree required by the employer for the job opportunity is none, high school/GED, Associates, Bachelor's, Master's, Doctorate, or Other. Only mark one box.

1-A. If "Other" in question 1, enter the specific U.S. diploma or degree required. (Example: JD, MD, DDS, etc.). If the answer to question 1 is not "Other," enter "N/A."

1-B. Enter the major(s) and/or field(s) of study required by the employer for the job opportunity. You may list more than one field and/or more than one related major. If the answer to question 1 is "None" or "High School", enter "N/A."

2. If the employer requires a second U.S. diploma or degree for the job opportunity, mark "Yes." Otherwise, mark "No."

2-A. If "Yes" in question 2, enter the specific second U.S. diploma or degree required. If the answer to question 2 is "No", enter "N/A."

3. If the employer requires training for the job opportunity, mark "Yes." Otherwise, mark "No." Training may include, but is not limited to: programs, coursework, or training experience (other than employment). When answering this question, do not duplicate requirements – the training required should not be counted as education or experience required.

3-A. If "Yes" in question 3, enter the number of months of training required by the employer for the job opportunity. If the answer to question 3 is "No", enter "0" (zero). When answering this question, do not duplicate time requirements – the training time required should not be counted as (added to) education or experience time required.

3-B. If "Yes" in question 3, enter the field(s) and/or name(s) of the training required by the employer for the job opportunity. You may list more than one field and/or more than one name. If the answer to question 3 is "No", enter "N/A."

4. If the employer requires employment experience, mark "Yes." Otherwise, mark "No."

4-A. If "Yes" in question 4, enter the number of months of experience required by the employer. If the answer to question 4 is "No", enter "0" (zero).

4-B. If "Yes" in question 4, enter the occupation in which experience is required by the employer for the job opportunity. If the answer to question 4 is "No", enter "N/A."

Section F
Job Offer Information *(continued)*

c. Place of Employment

It is important for the employer to define the area of intended employment with as much geographic specificity as possible. This information is used for purposes of reviewing and verifying regulatory compliance with advertising, positive recruitment requirements, and prevailing wage determinations.

Important Note: For farm labor or job contractors filing under the H-2A or H-2B visa programs where multiple worksites are involved or where special procedures apply, submit a separate attachment identifying, by business name and address, all physical locations where the services or labor is expected to be performed. Enter the address of the first worksite location on the form using questions 1 through 7, and then use question 7-A to identify the business name for the first worksite location and write the words "See attached worksites".

1. Enter the street address of the worksite location identified in question1, where work will be performed. The worksite address must be a physical location and cannot be a P.O. Box.

2. If additional space is needed for the street address, use this line. If no additional space is needed, enter "N/A."

3. Enter the city of the worksite location.

4. Enter the county of the worksite location.

5. Enter the state/district/territory of the worksite location.

6. Enter the postal (zip) code of the worksite location.

7. If work will be performed in location(s) other than the address listed in questions 1-6 above, mark "Yes" and complete question 7-A. If work will not be performed in location(s) other than the address listed in questions 1-6 above, mark "No."

7-A. If "Yes" in question 7, identify the geographic place(s) of employment with as much specificity as possible, such as the
Metropolitan Statistical Areas (MSAs) or the city(ies)/township(s)/county(ies) and the corresponding state(s) where work will be performed. The employer must provide enough geographic detail to cover all the worksite locations of intended employment.

Section G
Rate of Pay

1. Enter the rate of pay to be paid to the nonimmigrant workers. If the wage offer is expressed as a range, enter the bottom of the wage range to be paid.

   Enter the top of the wage range to be paid to the nonimmigrant workers in the section indicating "To (Optional)."

1-A. Enter the rate of overtime pay, if applicable, to be paid to the nonimmigrant workers. If the wage offer is expressed as a range, enter the bottom of the wage range to be paid.

   Enter the top of the wage range to be paid to the nonimmigrant workers in the section indicating "To (Optional)."

2. Enter whether the rate of pay is in terms of per year, month, two weeks, week or hour in the section indicating "Rate is Per." Mark only one box.

2-A. If the answer to question 2 is "Piece Rate", enter the wage offer requirements. Describe the unit size that governs how the piece rate is paid, such as tree size/spacing, weight/size/number of boxes picked/packed, dimensions of bags or boxes filled. For example: 5/8 bushel, 90 pound bag or box, 10 box bin.

OMB Approval: 1205-0466
Expiration Date: XX/XX/XXXX

Application for Temporary Employment Certification
ETA Form 9142 – General Instructions for the 9142
U.S. Department of Labor

3. Enter any additional wage information covered by the job opportunity and the anticipated area(s) of intended employment (e.g., itinerant work, multi-state worksite locations). In order to expedite the application review process, employers are **strongly encouraged** to list all valid prevailing wage determinations received by the OFLC National Processing Center (NPC) in support of the application as well as all corresponding wage offers.

4. If the Application for Temporary Employment Certification is being filed under the H-2A program and the job offer and rate of pay will be based on multiple crop or agricultural activities, indicate whether Appendix A.1 is complete and being submitted with the filing of this application by answering "Yes" or "No". If the job opportunity is offering a single rate of pay, then mark "N/A".

Section H
Recruitment Information

1. Enter the name of the State Workforce Agency which received the job offer from the employer and placed a job order on its active file for recruitment of U.S. workers.

2. Enter the unique job order number provided by the State Workforce Agency.

2-A Enter the start date of the SWA job order. Use a month/day/full year (MM/DD/YYYY) format.

2-B Enter the end date of the SWA job order. Use a month/day/full year (MM/DD/YYYY) format.

3. Mark "Yes" or "No" whether there is a Sunday edition of a newspaper (of general circulation) in the area of intended employment.

   Note: Only if the job opportunity is located in a rural area of intended employment that does not have a newspaper that publishes a Sunday edition, is the employer permitted to use the newspaper edition with the widest circulation in the area of intended employment, and not a Sunday edition.

4. Enter the name of the newspaper of general circulation or other publication in which the employer placed an advertisement for the job opportunity.

   For the named newspaper/publication, enter the start and end dates in which the newspaper advertisement referenced was printed. Use a month/day/full year (MM/DD/YYYY) format. If the newspaper advertisement or publication took place on 1 day, then enter the same date in the "From:" and "To:".

5. Enter the name of the newspaper of general circulation or other publication in which the employer placed a second newspaper advertisement for the job opportunity.

   For the named newspaper/publication, enter the start and end dates in which the newspaper advertisement referenced was printed. Use a month/day/full year (MM/DD/YYYY) format. If the newspaper advertisement or publication took place on 1 day, then enter the same date in the "From:" and "To:".

6. Describe other efforts to positively recruit U.S. workers for the job opportunity. For each positive recruitment activity, identify the type or source of recruitment (e.g., additional SWA job orders, out-of-state newspaper, contact with former employees) and the date(s) on which the recruitment was conducted.

Section I
Declaration of Employer and Attorney/Agent

1. Employer must read and agree to all the applicable terms, assurances, and obligations as a condition for receiving a temporary labor certification from the U.S. Department of Labor. Mark "Yes" or "No" to confirm that Appendix A.2 is complete and being submitted with the filing of this application.

Section J
Preparer

This section must be completed if the preparer of this application is a person other than the one identified in either Section D (employer point of contact) or E (attorney or agent) of this application.

OMB Approval: 1205-0466
Expiration Date: XX/XX/XXXX

Application for Temporary Employment Certification
ETA Form 9142 – General Instructions for the 9142
U.S. Department of Labor

1. Enter the last (family) name of the person preparing this application by or on behalf of the employer.
2. Enter the first (given) name of the person preparing this application by or on behalf of the employer.
3. Enter the middle initial of the person with preparing this application by or on behalf of the employer.
4. Enter the Firm/Business name of the person with preparing this application by or on behalf of the employer.
5. Enter the email address of the person with preparing this application by or on behalf of the employer. Format must be in the format name@emailaddress.top-level domain.

Read this section. No entries required.

Section L
OMB *Paperwork Reduction Act/Information Control Number 1205-0*310

Read this section. No entries required.

APPENDIX A.1
Rate of Pay Information for Multiple Crop or Agricultural Activities

This appendix must only be completed for applications for temporary labor certification filed under the H-2A program. The rate of pay for each crop or agricultural activity covered by the application must be disclosed in this appendix. For each crop or agricultural activity, the following information must be disclosed (where applicable):

1. Enter the name of the crop or agricultural activity.
2. If applicable, enter the hourly rate of pay. In no event may rate be less than the applicable FLSA or State minimum, or the applicable prevailing hourly wage rate, whichever is higher.
3. If applicable, enter the piece rate of pay.
4. If a piece rate of pay is entered, describe the unit used when piece rates are being paid. Describe the unit size that governs how the piece rate is paid, such as tree size/spacing, weight/size/number of boxes picked/packed, dimensions of bags or boxes filled. For example: 5/8 bushel, 90 pound bag or box, 10 box bin.
5. Describe 1) Any bonus or incentives aside from the flat rate or piece rate, e.g., garden space, milk, eggs, meat, health insurance; 2) Special conditions on guaranteed weeks of work, under what conditions bonuses or incentives are to be paid, if any; 3) If the activity is covered by a "schedule of rates", indicate conditions under which each of the rates on the schedule applies; 4) Describe frequency of pay arrangements, e.g., daily, weekly, biweekly; 5) Indicate deductions to be made from workers' wages, such as Social Security, workers' compensation, health insurance, Federal or state tax. If applicable, note whether employer of record or farm labor contractor will be responsible for deductions.

APPENDIX A.2
Employer and Attorney/Agent Declarations (H-2A Applications ONLY)

A. Attorney/Agent Declaration

1. Enter the last (family) name of the attorney/agent representing the employer in the filing of this application.
2. Enter the first (given) name of the attorney/agent representing the employer in the filing of this application.
3. Enter the middle initial of the attorney/agent representing the employer in the filing of this application.

U.S. Department of Labor

4. Enter the Firm/Business name of the attorney/agent representing the employer in the filing of this application.

5. Enter the email address of the attorney/agent representing the employer in the filing of this application. Format must be in the format name@emailaddress.top-level domain.

6. The attorney/agent must sign the application. Read the entire application and verify all contained information prior to signing.

7. The attorney/agent must date the application. Use a month/day/full year (MM/DD/YYYY) format.

B. Employer Declaration

1. Enter the last (family) name of the person with authority to sign on behalf of the employer.

2. Enter the first (given) name of the person with authority to sign on behalf of the employer.

3. Enter the middle initial of the person with authority to sign on behalf of the employer.

4. Enter the job title of the person with authority to sign on behalf of the employer.

5. The person with authority to sign on behalf of the employer must sign the application. Read the entire application and verify all contained information prior to signing.

6. The person with authority to sign on behalf of the employer must date the application. Use a month/day/full year (MM/DD/YYYY) format.

APPENDIX B.1
Employer and Attorney/Agent Declarations (H-2B Applications ONLY)

A. Attorney/Agent Declaration

1. Enter the last (family) name of the attorney/agent representing the employer in the filing of this application.

2. Enter the first (given) name of the attorney/agent representing the employer in the filing of this application.

3. Enter the middle initial of the attorney/agent representing the employer in the filing of this application.

4. Enter the Firm/Business name of the attorney/agent representing the employer in the filing of this application.

5. Enter the email address of the attorney/agent representing the employer in the filing of this application. Format must be in the format name@emailaddress.top-level domain.

6. The attorney/agent must sign the application. Read the entire application and verify all contained information prior to signing.

7. The attorney/agent must date the application. Use a month/day/full year (MM/DD/YYYY) format.

B. Employer Declaration

1. Enter the last (family) name of the person with authority to sign on behalf of the employer.

2. Enter the first (given) name of the person with authority to sign on behalf of the employer.

3. Enter the middle initial of the person with authority to sign on behalf of the employer.

4. Enter the job title of the person with authority to sign on behalf of the employer.

5. The person with authority to sign on behalf of the employer must sign the application. Read the entire application and verify all contained information prior to signing.

ETA Form 9142 – APPENDIX A.2
U.S. Department of Labor

For Use in Filing Applications Under the H-2A Agricultural Program ONLY

A. Attorney or Agent Declaration

I hereby certify that I am an employee of, or hired by, the employer listed in Section C of the ETA Form 9142, and that I have been designated by that employer to act on its behalf in connection with this application. I also certify that to the best of my knowledge the information contained herein is true and correct. *I understand that to knowingly furnish false information in the preparation of this form and any supplement hereto or to aid, abet, or counsel another to do so is a felony punishable by a $250,000 fine or 5 years in a Federal penitentiary or both (18 U.S.C. 1001).*

1. Attorney or Agent's last (family) name	2. First (given) name	3. Middle initial
4. Firm/Business name		
5. E-Mail address		
6. Signature		7. Date signed

B. Employer Declaration

By virtue of my signature below, ***I HEREBY CERTIFY*** *the following conditions of employment:*

1. The job opportunity is a full-time temporary position, the qualifications for which do not substantially deviate from the normal and accepted qualifications required by non-H-2A employers in the same or comparable occupations and crops.
2. The specific job opportunity for which the employer is requesting H-2A certification is not vacant because the former occupant(s) is (are) on strike or locked out in the course of a labor dispute involving a work stoppage.
3. The job opportunity is open to any qualified U.S. worker regardless of race, color, national origin, age, sex, religion, handicap, or citizenship, and the employer has conducted and will continue to conduct the required recruitment, in accordance with regulations, and has been unsuccessful in locating sufficient numbers of qualified U.S. applicants for the job opportunity for which certification is sought. Any U.S. workers who applied or apply for the job were or will be rejected only for lawful, job-related reasons, and the employer must retain records of all rejections as required by 20 CFR 655.119.
4. The job opportunity offers U.S. workers no less than the same benefits, wages, and working conditions that the employer is offering, intends to offer, or will provide to H-2A workers and complies with the requirements at 20 CFR 655, Subpart B.
5. The offered wage rate is the highest of the adverse effect wage rate in effect at the time the application is certified, the prevailing hourly or piece rate, or the Federal or State minimum wage, and the employer will pay the offered wage during the entire period of the approved labor certification.
6. The offered wage is not based on commissions, bonuses or other incentives, unless the employer guarantees a wage paid on a weekly, bi-weekly, or monthly basis that equals or exceeds the adverse effect wage rate, prevailing wage rate, which may be a prevailing wage piece rate, or the legal Federal or State minimum wage, whichever is greatest.
7. There are no U.S. workers available in the area(s) capable of performing the temporary services or labor in the job opportunity, and the employer will continue to cooperate with the SWA by accepting referrals of all eligible U.S. workers who apply (or on whose behalf an application is made) for the job opportunity until the date that is 30 days after the first date the employer requires the services of the H-2A worker.
8. All fees associated with processing the temporary labor certification will be paid in a timely manner.

OMB Approval: 1205-0466
Expiration Date: XX/XX/XXXX

Application for Temporary Employment Certification

ETA Form 9142 – APPENDIX A.2
U.S. Department of Labor

9. During the period of employment that is the subject of the labor certification application, the employer will:
   (i) Comply with applicable Federal, State and local employment-related laws and regulations, including employment-related health and safety laws;
   (ii) Provide for or secure housing for workers who are not reasonably able to return to their permanent residence at the end of the work day that complies with the applicable local, State, or Federal standards and guidelines for housing without charge to the worker;
   (iii) Where required, has timely requested a preoccupancy inspection of the housing and, if one has been conducted, received certification;
   (iv) Provide insurance, without charge to the worker, under a State workers' compensation law or otherwise, that meets the requirements of 20 CFR 655.104(e).
   (v) Provide transportation in compliance with all applicable Federal, State or local laws and regulations between the worker's living quarters (i.e., housing provided by the employer under 20 CFR 655.104(d)) and the employer's worksite without cost to the worker.
10. The employer has not laid off and will not lay off any similarly employed U.S. worker in the occupation that is the subject of the Application for Temporary Employment Certification in the area of intended employment except for lawful, job related reasons within 60 days of the date of need, or if the employer has laid off such workers, it has offered the job opportunity that is the subject of the application to those laid-off U.S. worker(s) and the U.S. worker(s) either refused the job opportunity or was rejected for the job opportunity for lawful, job-related reasons.
11. The employer and its agents have not sought or received payment of any kind from the employee for any activity related to obtaining labor certification, including payment of the employer's attorneys' fees, application fees, or recruitment costs. For purposes of this paragraph, payment includes, but is not limited to, monetary payments, wage concessions (including deductions from wages, salary, or benefits), kickbacks, bribes, tributes, in kind payments, and free labor.
12. The employer has and will contractually forbid any foreign labor contractor or recruiter whom the employer engages in international recruitment of H-2A workers to seek or receive payments from prospective employees, except as provided for in DHS regulations.
13. The employer has not and will not intimidate, threaten, restrain, coerce, blacklist, or in any manner discriminate against, and has not and will not cause any person to intimidate, threaten, restrain, coerce, blacklist, or in any manner discriminate against, any person who has with just cause:
   (i) Filed a complaint under or related to Sec. 218 of the INA (8 U.S.C. 1188), or this subpart or any other Department regulation promulgated under Sec. 218 of the INA;
   (ii) Instituted or caused to be instituted any proceeding under or related to Sec. 218 of the INA, or this subpart or any other Department regulation promulgated under Sec. 218 of the INA;
   (iii) Testified or is about to testify in any proceeding under or related to Sec. 218 of the INA or this subpart or any other Department regulation promulgated under Sec. 218 of the INA;
   (iv) Consulted with an employee of a legal assistance program or an attorney on matters related to Sec. 218 of the INA or this subpart or any other Department regulation promulgated under Sec. 218 of the INA; or
   (v) Exercised or asserted on behalf of himself/herself or others any right or protection afforded by Sec. 218 of the INA, or this subpart or any other Department regulation promulgated under Sec. 218 of the INA.
14. The employer has not and will not discharge any person because of that person's taking any action listed in paragraph 14(i) through (v) listed above.
15. The employer will inform H-2A workers of the requirement that they leave the U.S. at the end of the period certified by the Department or separation from the employer, whichever is earlier, as required under 20 CFR 655.111, unless the H-2A worker is being sponsored by another subsequent employer.
16. Upon the separation from employment of any H-2A worker(s) employed under the labor certification application, if such separation occurs prior to the end date of the employment specified in the application, the employer will notify the Department and DHS in writing or any other method specified of the separation from employment not later than two work days after such separation is effective under 20 CFR 655.104(n).
17. If the application is being filed as an H-2A Labor Contractor the following additional attestations and obligations apply under 20 CFR 655.106:
   (i) The H-2A Labor Contractor will provide upon request the MSPA Farm Labor Contractor (FLC) certificate of registration number and expiration date if required under MSPA, 1801 U.S.C. et seq., to have such a certificate;
   (ii) The H-2A Labor Contractor will identify upon request the farm labor contracting activities it is authorized to perform as an FLC under MSPA as shown on the FLC certificate of registration, if required under MSPA, 1801 U.S.C. et seq., to have such a certificate of registration;

ETA Form 9142 – APPENDIX A.2
U.S. Department of Labor

(iii) The H-2A Labor Contractor will provide with this application a list of the names and locations of each fixed-site agricultural business to which the H-2A Labor Contractor expects to provide H-2A workers, the expected beginning and ending dates when the H-2A Labor Contractor will be providing the workers to each fixed site, and a description of the crops and activities the workers are expected to perform at such fixed site;

(iv) The H-2A Labor Contractor is able to provide proof of its ability to discharge financial obligations under the H-2A program by agreeing to secure and to present, upon request, a surety bond as required by 29 CFR 501.8, stating on the application the name, address, phone number, and contact person for the surety, and providing the amount of the bond (as calculated pursuant to 29 CFR 501.8) and any identifying designation utilized by the surety for the bond;

(v) The H-2A Labor Contractor has engaged in, or will engage in within the timeframes required by 20 CFR 655.102 as modified by 20 CFR 655.106(a), recruitment efforts in each area of intended employment in which it has listed a fixed-site agricultural business; and

(vi) The H-2A Labor Contractor has obtained from each fixed-site agricultural business that will provide housing or transportation to the workers a written statement stating that:

a. All housing used by workers and owned, operated or secured by the fixed-site agricultural business complies with the applicable housing standards in 20 CFR 655.104(d); and

b. All transportation between the worksite and the workers' living quarters that is provided by the fixed-site agricultural business complies with all applicable Federal, State, or local laws and regulations and will provide, at a minimum, the same vehicle safety standards, driver licensure, and vehicle insurance as required under 29 U.S.C. 1841 and 29 CFR part 500, except where workers' compensation is used to cover such transportation as described in 20 CFR 655.104(h)(3).

I hereby designate the agent or attorney identified in section E (if any) of the ETA Form 9142 and section A above to represent me for the purpose of labor certification and, by virtue of my signature in Block 5 below, **I take full responsibility** for the accuracy of any representations made by my agent or attorney.

I declare under penalty of perjury that I have read and reviewed this application and that to the best of my knowledge the information contained therein is true and accurate. *I understand that to knowingly furnish false information in the preparation of this form and any supplement thereto or to aid, abet, or counsel another to do so is a felony punishable by a $250,000 fine or 5 years in the Federal penitentiary or both (18 U.S.C. 1001).*

RIN 1018–AV73

Endangered and Threatened Wildlife and Plants; 12-Month Finding on a Petition To List Four Penguin Species as Threatened or Endangered Under the Endangered Species Act and Proposed Rule To List the Southern Rockhopper Penguin in the Campbell Plateau Portion of Its Range

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Proposed rule and notice of 12-month petition finding.

SUMMARY: We, the U.S. Fish and Wildlife Service (Service), announce a 12-month finding on a petition to list four species of penguins as threatened or endangered under the Endangered Species Act of 1973, as amended (Act). After a thorough review of all available scientific and commercial information, we find that the petitioned action for the Campbell Plateau portion of the range of the New Zealand/Australia Distinct Population Segment (DPS) of the southern rockhopper penguin (*Eudyptes chrysocome*) is warranted, and we propose to list this species as threatened under the Act in the Campbell Plateau portion of its range. This proposal, if made final, would extend the Act's protection to this species in that portion of its range. In addition, we find that listing under the Act is not warranted for the remainder of the range of the southern rockhopper penguin and throughout all or any portion of the range for the northern rockhopper penguin (*Eudyptes moseleyi*), macaroni penguin (*Eudyptes chrysolophus*), and emperor penguin (*Aptenodytes forsteri*).

DATES: We made the finding announced in this document on December 18, 2008. We will accept comments and information on the proposed rule received or postmarked on or before February 17, 2009. We must receive requests for public hearings on the proposed rule, in writing, at the address shown in the **FOR FURTHER INFORMATION CONTACT** section by February 2, 2009.

ADDRESSES: *Comments on Proposed Rule*: If you wish to comment on the proposed rule to list the southern rockhopper penguin in the Campbell Plateau portion of its range, you may submit comments by one of the following methods:

- Federal eRulemaking Portal: *http://www.regulations.gov*. Follow the instructions for submitting comments.
- U.S. mail or hand-delivery: Public Comments Processing, Attn: [FWS–R9–IA–2008–0069]; Division of Policy and Directives Management; U.S. Fish and Wildlife Service; 4401 N. Fairfax Drive, Suite 222; Arlington, VA 22203.

We will not accept comments by e-mail or fax. We will post all comments on *http://www.regulations.gov*. This generally means that we will post any personal information you provide us (see the Public Comments Solicited section below for more information).

Supporting Documents for 12-Month Finding: Supporting documentation we used in preparing this finding is available for public inspection, by appointment, during normal business hours at the U.S. Fish and Wildlife Service, Division of Scientific Authority, 4401 N. Fairfax Drive, Room 110, Arlington, VA 22203; telephone 703–358–1708; facsimile 703–358–2276. Please submit any new information, materials, comments, or questions concerning this finding to the above address.

FOR FURTHER INFORMATION CONTACT: Pamela Hall, Branch Chief, Division of Scientific Authority, U.S. Fish and Wildlife Service, 4401 N. Fairfax Drive, Room 110, Arlington, VA 22203; telephone 703–358–1708; facsimile 703–358–2276. If you use a telecommunications device for the deaf (TDD), call the Federal Information Relay Service (FIRS) at 800–877–8339.

SUPPLEMENTARY INFORMATION:

Background

Section 4(b)(3)(A) of the Act (16 U.S.C. 1533(b)(3)(A)) requires the Service to make a finding known as a ''90-day finding,'' on whether a petition to add, remove, or reclassify a species from the list of endangered or threatened species has presented substantial information indicating that the requested action may be warranted. To the maximum extent practicable, the finding shall be made within 90 days following receipt of the petition and published promptly in the **Federal Register**. If the Service finds that the petition has presented substantial information indicating that the requested action may be warranted (referred to as a positive finding), section 4(b)(3)(A) of the Act requires the Service to commence a status review of the species if one has not already been initiated under the Service's internal candidate assessment process. In addition, section 4(b)(3)(B) of the Act requires the Service to make a finding within 12 months following receipt of the petition on whether the requested action is warranted, not warranted, or warranted but precluded by higher-priority listing actions (this finding is referred to as the ''12-month finding''). Section 4(b)(3)(C) of the Act requires that a finding of warranted but precluded for petitioned species should be treated as having been resubmitted on the date of the warranted but precluded finding, and is, therefore, subject to a new finding within 1 year and subsequently thereafter until we take action on a proposal to list or withdraw our original finding. The Service publishes an annual notice of resubmitted petition findings (annual notice) for all foreign species for which listings were previously found to be warranted but precluded.

In this notice, we announce a 12-month finding on the petition to list four penguins: southern rockhopper penguin, northern rockhopper penguin, macaroni penguin, and emperor penguin. We will announce the 12-month findings for the African penguin (*Spheniscus demersus*), yellow-eyed penguin (*Megadyptes antipodes*), white-flippered penguin (*Eudyptula minor albosignata*), Fiordland crested penguin (Eudyptes pachyrhynchus), Humboldt penguin (*Spheniscus humboldti*), and erect-crested penguin (*Eudyptes sclateri*) in one or more separate **Federal Register** notice(s).

Previous Federal Actions

On November 29, 2006, the Service received a petition from the Center for Biological Diversity to list 12 penguin species under the Act: Emperor penguin, southern rockhopper penguin, northern rockhopper penguin, Fiordland crested penguin, snares crested penguin (*Eudyptes robustus*), erect-crested penguin, macaroni penguin, royal penguin (*Eudyptes schlegeli*), white-flippered penguin, yellow-eyed penguin, African penguin, and Humboldt penguin. Among them, the ranges of the 12 penguin species include Antarctica, Argentina, Australian Territory Islands, Chile, French Territory Islands, Namibia, New Zealand, Peru, South Africa, and United Kingdom Territory Islands. The petition is clearly identified as such, and contains detailed information on the natural history, biology, status, and distribution of each of the 12 species. It also contains information on what the petitioner reported as potential threats to the species from climate change and changes to the marine environment, commercial fishing activities, contaminants and pollution, guano extraction, habitat loss, hunting,

nonnative predator species, and other factors. The petition also discusses existing regulatory mechanisms and the perceived inadequacies to protect these species.

In the **Federal Register** of July 11, 2007 (72 FR 37695), we published a 90-day finding in which we determined that the petition presented substantial scientific or commercial information to indicate that listing 10 species of penguins as endangered or threatened may be warranted: Emperor penguin, southern rockhopper penguin, northern rockhopper penguin, Fiordland crested penguin, erect-crested penguin, macaroni penguin, white-flippered penguin, yellow-eyed penguin, African penguin, and Humboldt penguin. Furthermore, we determined that the petition did not provide substantial scientific or commercial information indicating that listing the snares crested penguin and the royal penguin as threatened or endangered species may be warranted.

Following the publication of our 90-day finding on this petition, we initiated a status review to determine if listing each of the 10 species is warranted, and opened a 60-day public comment period to allow all interested parties an opportunity to provide information on the status of the 10 species of penguins. The public comment period closed on September 10, 2007. In addition, we attended the International Penguin Conference in Hobart, Tasmania, Australia, a quadrennial meeting of penguin scientists from September 3–7, 2007 (during the open public comment period), to gather information and to ensure that experts were aware of the status review and the open comment period. We also consulted with other agencies and range countries in an effort to gather the best available scientific and commercial information on these species.

During the public comment period, we received over 4,450 submissions from the public, concerned governmental agencies, the scientific community, industry, and other interested parties. Approximately 4,324 e-mails and 31 letters received by U.S. mail or facsimile were part of one letter-writing campaign and were substantively identical. Each letter supported listing under the Act, included a statement identifying ''the threat to penguins from global warming, industrial fishing, oil spills and other factors,'' and listed the 10 species included in the Service's 90-day finding. A further group of 73 letters included the same information plus information concerning the impact of ''abnormally warm ocean temperatures and diminished sea ice'' on penguin food availability and stated that this has led to population declines in southern rockhopper, Humboldt, African, and emperor penguins. These letters stated that the emperor penguin colony at Point Geologie has declined more than 50 percent due to global warming and provided information on krill declines in large areas of the Southern Ocean. They stated that continued warming over the coming decades will dramatically affect Antarctica, the sub-Antarctic islands, the Southern Ocean and the penguins dependent on these ecosystems for survival. A small number of general letters and e-mails drew particular attention to the conservation status of the southern rockhopper penguin in the Falkland Islands.

Twenty submissions provided detailed, substantive information on one or more of the 10 species. These included information from the governments, or government-affiliated scientists, of Argentina, Australia, Namibia, New Zealand, Peru, South Africa, and the United Kingdom, from scientists, from 18 members of the U.S. Congress, and from one non-governmental organization (the original petitioner).

On December 3, 2007, the Service received a 60-day Notice of Intent To Sue from the Center for Biological Diversity (CBD). CBD filed a complaint against the Department of the Interior on February 27, 2008, for failure to make a 12-month finding on the petition. On September 8, 2008, the Service entered into a Settlement Agreement with CBD, in which we agreed to submit to the **Federal Register** 12-month findings for the 10 species of penguins, including the five penguin taxa that are the subject of this proposed rule, on or before December 19, 2008.

We base our findings on a review of the best scientific and commercial information available, including all information received during the public comment period. Under section 4(b)(3)(B) of the Act, we are required to make a finding as to whether listing each of the 10 species of penguins is warranted, not warranted, or warranted but precluded by higher priority listing actions.

Introduction

In this notice, for each of the four species addressed, we first provide background information on the biology of the species. Next, we address each of the categories of factors listed in section 4(a)(1) of the Act. For each factor, we first determine whether any stressors appear to be causing declines in numbers of the species at issue anywhere within the species' range. If we determine they are, then we evaluate whether these stressors are causing population-level declines that are significant to the determination of the conservation status of the species. If so, we describe it as a ''threat.'' In the subsequent finding section, we then consider each of the stressors and threats, individually and cumulatively, and make a determination with respect to whether the species is endangered or threatened according to the statutory standard.

The term ''threatened species'' means any species (or subspecies or, for vertebrates, distinct population segments) that is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range. The Act does not define the term ''foreseeable future.'' For the purpose of this notice, we define the ''foreseeable future'' to be the extent to which, given the amount and substance of available data, we can anticipate events or effects, or reliably extrapolate threat trends, such that we reasonably believe that reliable predictions can be made concerning the future as it relates to the status of the species at issue.

Species Information and Factors Affecting the Species

Section 4 of the Act (16 U.S.C. 1533), and its implementing regulations at 50 CFR part 424, set forth the procedures for adding species to the Federal Lists of Endangered and Threatened Wildlife and Plants. A species may be determined to be an endangered or threatened species due to one or more of the five factors described in section 4(a)(1) of the Act. The five factors are: (A) The present or threatened destruction, modification, or curtailment of its habitat or range; (B) overutilization for commercial, recreational, scientific, or educational purposes; (C) disease or predation; (D) the inadequacy of existing regulatory mechanisms; and (E) other natural or manmade factors affecting its continued existence.

Southern Rockhopper Penguin and Northern Rockhopper Penguins

Taxonomy

Rockhopper penguins are among the smallest of the world's penguins, averaging 20 inches (in) (52 centimeters (cm)) in length and 6.6 pounds (lbs) (3 kilograms (kg)) in weight. They are the most widespread of the crested penguins (genus *Eudyptes*), and are so named because of the way they hop from boulder to boulder when moving

around their rocky colonies. Rockhopper penguins are found on islands from near the Antarctic Polar Front to near the Subtropical Convergence in the South Atlantic and Indian Oceans (Marchant and Higgins 1990, p. 183).

The taxonomy of the rockhopper complex is contentious. Formerly treated as three subspecies (Marchant and Higgins 1990, p. 182), recent papers suggested that these should be treated as two species (Jouventin *et al.* 2006, pp. 3,413–3,423) or three species (Banks *et al.* 2006, pp. 61–67).

Jouventin *et al.* (2006, pp. 3,413–3,423), following up on recorded differences in breeding phenology, song characteristics, and head ornaments used as mating signals, conducted genetic analysis between northern subtropical rockhopper penguins and southern sub-Antarctic penguins using the Subtropical Convergence, a major ecological boundary for marine organisms, as the dividing line between them. Their results supported the separation of *E. chrysocome* into two species, the southern rockhopper (*E. chrysocome*) and the northern rockhopper (*E. moseleyi*).

Another recently published paper in the journal *Polar Biology* confirmed that there is more than one species of rockhopper penguins. Banks *et al.* (2006, pp. 61–67) compared the genetic distances between the three rockhopper subspecies and compared them with such sister species as macaroni penguins. Banks *et al.* (2006, pp. 61–67) suggested that three rockhopper subspecies—southern rockhopper (currently *E. chrysocome chrysocome*), eastern rockhopper (currently *E. chrysocome filholi*), and northern rockhopper (currently *E. chrysocome moseleyi*)—should be split into three species.

BirdLife International (2007, p. 1) has reviewed these two papers and made the decision to adopt, for the purposes of their continued compilation of information on the status of birds, the conclusion of Jouventin *et al.* (2006, p. 3,419) that there are two species of rockhopper penguin. In doing so, they noted that the proposed splitting of an eastern rockhopper species from *E. chrysocome* has been rejected on account of weak morphological differentiations between the circumpolar populations south of the Subtropical Convergence (Banks *et al.* 2006, p. 67). Furthermore those two groups are more closely related to each other in terms of genetic distance than either is to the northern rockhopper penguin (Banks *et al.* 2006, p. 65).

We conclude that, while both analyses have merit, the split into a northern and southern species on the basis of both genetic and morphological differences represents the best available science. On the basis of our review, we accept the BirdLife International treatment of the rockhopper penguins as two species: The northern rockhopper penguin (*E. moseleyi*) and the southern rockhopper penguin (*E. chrysocome*).

Life History

The life histories of northern and southern rockhopper penguins are similar. Breeding begins in early October (the austral spring) when males arrive at the breeding site a few days before females. Breeding takes place as soon as the females arrive, and two eggs are laid 4–5 days apart in early November. The first egg laid is typically smaller than the second, 2.8 versus 3.9 ounces (oz) (80 versus 110 grams (g)), and is the first to hatch. Incubation lasts about 33 days and is divided into three roughly equal shifts. During the first 10-day shift, both parents are in attendance. Then, the male leaves to feed while the female incubates during the second shift. The male returns to take on the third shift. He generally remains for the duration of incubation and afterward to brood the chicks while the female leaves to forage and returns to feed the chicks. Such a system of extended shift duration requires lengthy fasts for both parents, but allows them to forage farther afield than would be the case if they had a daily change-over. The newly hatched chicks may have to wait up to a week before the female returns with their first feed. During this period, chicks are able to survive on existing yolk reserves, after which they begin receiving regular feedings of around 5 oz (150 g) in weight. By the end of the 25 days of brooding, chicks are receiving regular feedings averaging around 1 lb 5 oz (600 g). By this stage they are able to leave the nest and crèche with other chicks, allowing both adults to forage to meet the chicks' increasing demands for food (Marchant and Higgins 1990, p. 190).

Northern rockhopper penguins and birds in the eastern colonies of southern rockhopper penguins typically rear only one of the two chicks. However, southern rockhopper penguins near the Falkland Islands are capable of rearing both chicks to fledging when conditions are favorable (Guinard *et al.* 1998, p. 226). In spite of this difference, southern rockhopper penguins average successful breeding of one chick per pair annually for the colony as a whole. Chicks fledge at around 10 weeks of age, and adults then spend 20–25 days at sea building up body fat reserves in preparation for their annual molt. The molt lasts for around 25 days, and the birds then abandon the breeding site. They spend the winter feeding at sea, prior to returning the following spring (Marchant and Higgins 1990, p. 185).

The range of southern and northern rockhopper penguins includes breeding habitat on temperate and sub-Antarctic islands around the Southern Hemisphere and marine foraging areas. In the breeding season, these marine foraging areas may lie within as little as 6 miles (mi) (10 kilometers (km)) of the colony (as at the Crozet Archipelago in the Indian Ocean), as distant as 97 mi (157 km) (as at the Prince Edward Islands in the Indian Ocean), or for male rockhoppers foraging during the incubation stage at the Falkland Islands in the Southwest Atlantic, as much as 289 mi (466 km) away (Sagar *et al.* 2005, p. 79; Putz *et al.* 2003b, p. 141). Foraging ranges vary according to the geographic, geologic, and oceanographic location of the breeding sites and their proximity to sea floor features (such as the continental slope and its margins or the sub-Antarctic slope) and oceanographic features (such as the polar frontal zone or the Falkland current) (Sagar *et al.* 2005, pp. 79–80). Winter at-sea foraging areas are less well-documented, but penguins from the Staten Island breeding colony at the tip of South America dispersed over a range of 501,800 square miles (mi^2) (1.3 million square kilometers (km^2)) covering polar, sub-polar, and temperate waters in oceanic regions of the Atlantic and Pacific as well as shelf waters (Putz *et al.* 2006, p. 735) and traveled up to 1,242 mi (2,000 km) from the colony.

Southern Rockhopper Penguin

Distribution

The southern rockhopper penguin (*Eudyptes chrysocome*) is widely distributed around the Southern Ocean, breeding on many sub-Antarctic islands in the Indian and Atlantic Oceans (Shirihai 2002, p. 71). The species breeds on the Falkland Islands (United Kingdom, Argentina), Penguin and Staten Islands (Argentina) at the southern tip of South America, and islands of southern Chile. Farther to the east, the southern rockhopper penguin breeds on Prince Edward Islands (South Africa); Crozet and Kerguelen Islands (French Southern Territories); Heard, McDonald, and Macquarie Islands (Australia); and Campbell, Auckland, and Antipodes Islands (New Zealand) (BirdLife International 2007, pp. 2–3; Woehler 1993, pp. 58–61).

Population

Falkland Islands

At the Falkland Islands, between the census in 1932–33 and the census in 1995–96, there was a decline of more than 80 percent, with an overall rate of decline of 2.75 percent per year (Putz *et al.* 2003a, p. 174). Reports of even greater declines (Bingham 1998, p. 223) have been revised after re-analysis of the original 1930's census data, which recorded an estimated 1.5 million southern rockhopper breeding pairs (Putz *et al.* 2003a, p. 174). The census in 2000–01 of 272,000 breeding pairs indicated stable numbers since the mid-1990s (297,000 breeding pairs) in the Falkland Islands (Clausen and Huin 2003, p. 389), although further declines since then (Putz *et al.* 2006, p. 742), and a lower figure of 210,000 breeding pairs in 2005–06, have been cited (Kirkwood *et al.* 2007, p. 266).

The declines of southern rockhoppers in the Falkland Islands appear not to have been gradual. Clausen and Huin (2003, p. 394) state that ''circumstantial evidence'' suggests that in the early 1980s, there were no more than 500,000 pairs, a decline of 66 percent since the 1930s. By the mid-1990s, the total decline had reached 80 percent. A mass mortality event in the 1985–86 breeding season killed thousands of penguins and was linked to starvation before molt (Putz *et al.* 2003a, p. 174; Keyme *et al.* 2001, p. 168). In summary, although there has been a long-term decline in numbers at the Falkland Islands, numbers have not declined at a consistent rate, but rather, there have been periodic declines over a long period of time. As mentioned below, Schiavini (2000, p. 290) suggested that Falkland Island birds may be dispersing to Staten Island, potentially contributing to the stable or increasing numbers there.

Southern Tip of South America

In the region of the southern tip of South America, large numbers of southern rockhopper penguins are reported with approximately 180,000 breeding pairs in southern Argentina at Staten Island (Schiavini 2000, p. 286; Kirkwood *et al.* 2007, p. 266), 134,000 breeding pairs at Isla Noir (Oehler 2005, p. 7), 86,400 breeding pairs at Ildefonso Archipelago, and 132,721 breeding pairs at Diego Ramirez Archipelago (Kirkwood *et al.* 2007, p. 265). Kirkwood *et al.* (2007, p. 266) concluded that numbers for the southern tip of South America are approximately 555,000 breeding pairs. These relatively recent estimates are substantially larger than previous estimates of 175,000 breeding pairs reported in Woehler (1993, p. 61), but it is unclear whether this reflects population increases or more comprehensive surveys. In the Chilean archipelago, Kirkwood *et al.* (2007, p. 266) found no substantive evidence for overall changes in the number of penguins between the early 1980s and 2002, although one colony in the region (the Isla Recalada colony, a historical breeding site) declined from 10,000 pairs in 1989 to none in 2005 (Oehler *et al.* 2007, p. 505). On the Argentine side, Schiavini (2000, p. 290) stated that the numbers at Staten Island are stable or increasing, perhaps as a result of a flux of birds from the Falkland Islands. In summary, the overall number of southern rockhopper penguins at the Falklands and the southern tip of South America is estimated at 765,000 breeding pairs distributed as follows: Falkland Islands, 27 percent; Argentina, 24 percent; and Chile, 48 percent. Based on the available information, there does not appear to be a declining trend in southern rockhopper penguin numbers on the southern tip of South America. Although there may have been population increases in the region based on the reported population numbers, it is unclear if these higher numbers reflect true increases in numbers, more comprehensive surveys, or movement of other penguins from the Falkland Islands.

Prince Edward Islands

Two species of *Eudyptes* penguins breed at Marion Island (46.9 degrees (°) South (S) latitude, 37.9° East (E) longitude), one of two islands in the sub-Antarctic Prince Edward Islands group in the southwest Indian Ocean. They are the southern rockhopper penguin (*E. chrysocome*) and the macaroni penguin (*E. chrysolophus*). For southern rockhopper penguins, the numbers of birds estimated to breed at Marion Island decreased by 61 percent from 173,000 pairs in 1994–95 to 67,000 pairs in 2001–02 (Crawford *et al.* 2003, p. 490). The number of southern rockhopper penguins at nearby Prince Edward Island appears to have been stable since the 1980s with 35,000–45,000 pairs present (Crawford *et al.* 2003, p. 496). The decreases at Marion Island are thought to result from poor breeding success, with fledging rates lower than required for the colonies to remain in equilibrium; a decrease in the mass of males and females on arrival at the colony for breeding; and low mass of chicks at fledging (Crawford *et al.* 2003, p. 496). These changes are attributed to an inadequate supply of food for southern rockhopper penguins at Marion Island (Crawford *et al.* 2003, p. 487), presumably from a decrease in the availability of crustaceans or competition with other predators for food (Crawford *et al.* 2003, p. 496). Winter grounds of southern rockhopper penguins are not known. However, over-wintering conditions, which are reflected in the condition of birds arriving to breed, influence the proportion of adults that breed in the following summer and the outcome of breeding (Crawford *et al.* 2006, p. 185).

Crozet and Kerguelen Islands

Jouventin *et al.* (2006, p. 3,417) referenced 1984 data from French Indian Ocean territories that showed 264,000 breeding pairs at Crozet Islands and 200,000 breeding pairs at Kerguelen Island. These figures did not agree with those presented by Woehler (1993, pp. 59–60) and, if accurate, represent an increase of about 25 percent for the Crozet Islands and over 100 percent for Kerguelen. We are not aware of reported declines at the Crozet and Kerguelen Islands.

Heard, McDonald, and Macquarie Islands

Numbers at Heard and McDonald Islands (Australia) are reported as small, with an ''order of magnitude estimate'' of greater than 10,000 pairs for Heard Island and greater than 10 pairs for McDonald (Woehler 1993, p. 60). No information has been reported on trends in numbers in these areas. Order of magnitude estimates at Macquarie Island (Australia) reported 100,000–300,000 pairs in the early 1980s (Woehler 1993, p. 60; Taylor 2000, p. 54). The 2006 Management Plan for the Macquarie Island Nature Reserve and World Heritage Area reported that the total number of southern rockhopper penguins in this area may be as high as 100,000 breeding pairs, but estimates from 2006–07 indicate 32,000–43,000 breeding pairs at Macquarie Island (BirdLife International 2008b, p. 2). Given the large range in the earlier categorical estimate, we cannot evaluate whether the more recent estimate represents a decline in numbers or a more precise estimate.

Campbell, Auckland, and Antipodes Islands

In New Zealand territory, southern rockhopper numbers at Campbell Island declined by 94 percent between the early 1940s and 1985 from approximately 800,000 breeding pairs to 51,500 (Cunningham and Moors 1994, p. 34). The majority of the decline appears to have coincided with a period of warmed sea surface temperatures

between 1946 and 1956. It is widely inferred that warmer waters most likely affected southern rockhopper penguins through changes in the abundance, availability, and distribution of their food supply (Cunningham and Moors 1994, p. 34); recent research suggests they may have had to work harder to find the same food (Thompson and Sagar 2002, p. 11). According to standard photographic monitoring, numbers in most colonies at Campbell Island continued to decline from 1985 to the mid-1990s (Taylor 2000, p. 54), although the extent of such declines has not been quantified in the literature. The New Zealand Department of Conservation (DOC) provided preliminary information from a 2007 Campbell Island survey team that ''the population is still in decline'' (D. Houston 2008, p. 1), but quantitative analysis of these data have not yet been completed. At the Auckland Islands, a survey in 1990 found 10 colonies produced an estimate of 2,700–3,600 breeding pairs of southern rockhopper penguins (Cooper 1992, p. 66). This was a decrease from 1983, when 5,000–10,000 pairs were counted (Taylor 2000, p. 54). There has been a large decline at Antipodes Islands from 50,000 breeding pairs in 1978 to 3,400 pairs in 1995 (Taylor 2000, p. 54). There is no more recent data for Auckland or Antipodes Islands (D. Houston 2008, p. 1).

Other Status Classifications

The IUCN (International Union for Conservation of Nature) Red List classifies the southern rockhopper penguin as 'Vulnerable' due to rapid population declines, which ''appear to have worsened in recent years.''

Summary of Factors Affecting the Species

Factor A: The Present or Threatened Destruction, Modification, or Curtailment of Its Habitat or Range

Terrestrial Habitat

There are few reports of destruction, modification, or curtailment of the terrestrial habitat of the southern rockhopper penguin. Analyses of large-scale declines of southern rockhopper penguins have uniformly ruled out that impacts to the terrestrial habitat have been a limiting factor to the species (Cunningham and Moors 1994, p. 34; Keyme *et al.* 2001, pp. 159–169; Clausen and Huin 2003, p. 394), and we have no reason to believe threats to the terrestrial habitat will emerge in the foreseeable future.

Climate-Related Changes in the Marine Environment

Reports of major decreases in southern rockhopper penguin numbers have been linked to sea surface temperature changes and other apparent or assumed oceanographic or prey shifts in the vicinity of southern rockhopper penguin breeding colonies or their wintering grounds. Actual empirical evidence of changes has been difficult to compile, and conclusions of causality for observations at one site are often inferred from data from other studies at other sites, which may or may not be pertinent. In the most cited study, Cunningham and Moors (1994, pp. 27–36) concluded that drastic southern rockhopper penguin declines were related to increased sea surface temperature changes at Campbell Island in New Zealand. In another study, Crawford *et al.* (2003, p. 496) hypothesized altered distribution or decreased abundance of marine prey at Marion Island, where mean sea surface temperature increased by 2.5 degrees Fahrenheit (°F) (1.4 degrees Celsius (°C)) between 1949 and 2002, as a factor in a decline of southern rockhopper penguin numbers by 61 percent during that period (Crawford and Cooper 2003, p. 415). Clausen and Huin (2003, p. 394), in discussing the factors that may be responsible for large-scale declines in this species at the Falkland Islands since the 1930s (and especially in the mid-1980s), found the most plausible explanation to be changes in sea surface temperatures, which could in turn affect the available food supply (Clausen and Huin 2003, p. 394). Extreme El Niño-like warming of surface waters occurred during the 1985–86 period when the most severe decline occurred at the Falkland Islands (Boersma 1987, p. 96; Keyme *et al.* 2001, p. 168). None of these authors cites historical fisheries data to corroborate the hypothesis that prey abundance has been affected by changes in sea surface temperatures.

As noted above, changes in oceanographic conditions and their possible impact on prey have been cited in reports of southern rockhopper penguin declines around the world (Cunningham and Moors 1994, pp. 27–36; Crawford *et al.* 2003, p. 496; Crawford and Cooper 2003, p. 415; Clausen and Huin 2003, p. 394). We examine the case of Campbell Island in depth in the following paragraphs, since this provides the most studied example.

At Campbell Island, a 94-percent decrease in southern rockhopper penguin numbers occurred between the early 1940s and 1985. Cunningham and Moors (1994, pp. 27–36) compared the pattern of the penguin decline (from 800,000 breeding pairs in the early 1940s to 51,500 pairs in 1985) to patterns of sea surface temperature change. The authors concluded that drastic southern rockhopper penguin declines were related to increased sea surface temperature changes at Campbell Island. They found that peaks in temperature were related to the periods of largest decline in numbers within colonies, in particular in 1948–49 and 1953–54. One study colony rebounded in cooler temperatures in the 1960s; however, with temperature stabilization at higher levels (mean 49.5 °F (9.7 °C)) in the 1970s, declines continued. Colony sizes have continued to decline into the 1990s (Taylor 2000, p. 54), and preliminary survey data indicate that numbers at Campbell Island continue to decline (Houston 2008, p. 1).

Cunningham and Moors (1994, p. 34) concluded that warmer waters most likely affected the diet of the Campbell Island southern rockhopper penguins. In the absence of data on the 1940's diet of Campbell Island southern rockhopper penguins, the authors compared the 1980's diet of the species at Campbell Island to southern rockhopper penguins elsewhere. They found the Campbell Island penguins eating primarily fish—southern blue whiting (*Micromesisteus australis*), dwarf codling (*Austrophycis marginata*), and southern hake (*Merluccius australis*)—while elsewhere southern rockhopper penguins were reported to eat mainly euphausiid crustaceans (krill) and smaller amounts of fish and squid. Based on this comparison of different areas, the authors concluded that euphausiids left the Campbell Island area when temperatures changed, forcing the southern rockhopper penguins to adopt an apparently atypical, and presumably less nutritious, fish diet. The authors concluded that this led to lower departure weights of chicks and contributed to adult declines (Cunningham and Moors 1994, p. 34).

Subsequent research, however, has not supported the theory that southern rockhopper penguins at Campbell Island switched prey as their ''normal'' euphausiid prey moved to cooler waters (Cunningham and Moors 1994, pp. 34–35). This hypothesis has been tested through stable isotope studies, which can be used to extract historical dietary information from bird tissues (*e.g.*, feathers). In analyses of samples from the late 1800s to the present at Campbell Island and Antipodes Islands, Thompson and Sagar (2002, p. 11) found no evidence of a shift in southern rockhopper penguin diet during the

period of decline. They concluded that southern rockhopper penguins did not switch to a less suitable prey, but that overall marine productivity and the carrying capacity of the marine ecosystem declined beginning in the 1940s. With food abundance declining or food moving farther offshore or into deeper water, according to these authors, the southern rockhopper penguins maintained their diet over the long timescale, but were unable to find enough food in the less productive marine ecosystem (Thompson and Sagar 2002, p. 12).

Hilton *et al.* (2006, pp. 611–625) expanded the study of carbon isotope ratios in southern and northern rockhopper penguin feathers to most breeding areas, except those at the Falkland Islands and the tip of South America, to look for global trends that might help explain the declines observed at Campbell Island. They found no clear global-scale explanation for large spatial and temporal-scale rockhopper penguin declines. While they found general support for lower primary productivity in the ecosystems in which rockhopper penguins feed, there were significant differences between sites. There was evidence of a shift in diet to lower trophic levels over time and in warm years, but the data did not support the idea that the shift toward lower primary productivity reflected in the diet resulted from an overall trend of rising sea temperatures (Hilton *et al.* 2006, p. 620). No detectable relationship between carbon isotope ratios and annual mean sea surface temperatures was found (Hilton *et al.* 2006, p. 620).

In the absence of conclusive evidence for sea surface temperature changes as an explanation for reduced primary productivity, Hilton *et al.* (2006, p. 621) suggested that historical top-down effects in the food chain might have caused a reduction in phytoplankton growth rates. Reduced grazing pressure resulting from the large-scale removal of predators from the sub-Antarctic could have resulted in larger standing stocks of phytoplankton, which in turn could have led to lowered cell growth rates (which would be reflected in isotope ratios), with no effect on overall productivity of the system. Postulated top-down effects on the ecosystem of southern rockhopper penguins, which occurred in the time period before the warming first noted in the original Cunningham and Moors (1994, p. 34) study, are the hunting of pinniped populations to near extinction in the 18th and 19th centuries and the subsequent severe exploitation of baleen whale (Balaenopteridae) populations in the 19th and 20th centuries (Hilton *et al.* 2006, p. 621). While this top-down theory may explain the regional shift toward reduced primary productivity, it does not explain the decrease in abundance of food at specific penguin breeding and foraging areas.

Hilton *et al.* (2006, p. 621) concluded that considerably more development of the links between isotopic monitoring of rockhopper penguins and the analysis of larger-scale oceanographic data is needed to understand effects of human activities on the sub-Antarctic marine ecosystem and the links between rockhopper penguin demography, ecology, and environment.

Meteorologically, the events described for Campbell Island from the 1940s until 1985, including the period of oceanic warming, occurred after a record cool period in the New Zealand region between 1900 and 1935, the coldest period since record-keeping began (Cunningham and Moors 1994, p. 35). These historical temperature changes have been attributed to fluctuations in the position of the Antarctic Polar Front caused by changes in the westerly-wind belt (Cunningham and Moors 1994, p. 35). Photographic evidence suggests that southern rockhopper penguin numbers may have been significantly expanding as the early 1900s cool period came to an end (Cunningham and Moors 1994, p. 33) and just before the rapid decrease in numbers.

Without longer-term data sets on southern rockhopper fluctuations in numbers of penguins at Campbell Island and longer temperature data records at a scale appropriate to evaluating impacts on this particular breeding colony, it is difficult to draw conclusions on the situation described there. There are even fewer data for Auckland and Antipodes Islands.

For now, local-scale observations may be of more utility in explaining mass declines of southern rockhopper penguins. At the Falkland Islands, the mass starvation event of 1985–86 coincided with a Pacific El Niño event, and the unusually long and hot southern summer in the southwest Atlantic was analogous to the Pacific El Niño (Boersma 1987, p. 96; Keyme *et al.* 2001, p. 160). There was an influx of warm water seabirds from the north, indicating movement of warm water into the area, and it was hypothesized that warm weather negatively affected the growth and presence of food in a manner similar to what occurs when the warm El Niño current extends southwards off the Pacific coast of Peru. Perturbations of upwellings essential to sustaining the normal food chain appear to have been caused by unusually strong westerly winds in the Atlantic, with prey failure leading to a starvation event (Boersma 1987, p. 96; Keyme *et al.* 2001, p. 168). The severe El Niño event of 1996–97 has also been cited as a possible factor in the decline and disappearance of the small Isla Recalada colony in Chile, with the suggestion that response to this climatic event may have been one factor leading birds at this colony to disperse to other areas such as the large Isla Noir colony 75 mi (125 km) away (Oehler *et al.* 2007, pp. 502, 505).

In other local-scale observations, studies of winter behavior of southern rockhopper penguins foraging from colonies at Staten Island, Argentina, indicated that penguins respond behaviorally to different oceanographic conditions such as seasonal differences in sea surface temperatures by changing foraging strategies. Even with such behavioral plasticity, differences in winter foraging conditions (for example, between an average and a cold year) led to differences in adult survival, return rates to breeding colonies, and breeding success between years (Rey *et al.* 2007, p. 285).

Changes in the marine environment and possible shifts in food abundance or distribution in the marine environment have been cited as leading to historical and present-day declines in three areas within the distribution of southern rockhopper penguins around the world—the Falkland Islands in the South Atlantic (80-percent decline), Marion Island in the Indian Ocean (61-percent), and the New Zealand sub-Antarctic islands (Campbell Island (94-percent), Auckland Island (50-percent), and the Antipodes Islands (93-percent)).

While southern rockhopper penguin numbers have declined in some areas, there are significant areas of the southern rockhopper range (representing about one million pairs) where numbers have remained stable or increased. This indicates that the severity and pervasiveness of these factors in the marine environment are not uniform throughout the species' range. For example, declines have been reported at the Falkland Islands; however, nearby colonies at the southern tip of South America appear to have increased and now represent 72 percent of southern rockhopper abundance in the larger south Atlantic and southeast Pacific region. Similarly, at the Prince Edward Islands, declines have been documented at Marion Island; however, colonies at nearby Prince Edward Island have remained stable. As noted above, in large areas of the Indian Ocean, including the French Indian Ocean territories at Kerguelen

and Crozet Islands, large numbers are stable or increasing.

This difference in trends in locations within the species' range, and the limitation of declines to regional areas, illustrates that while temperature changes in the marine environment have been widely cited as an indicator of changing oceanographic conditions for southern rockhopper penguins, there is not a unitary explanation for phenomena observed in the widely scattered breeding locations across the Southern Hemisphere. In fact, as illustrated for the most studied example at Campbell Island, a detailed analysis of causality has so far led to further questions, rather than a narrowing down of answers. Nevertheless, in the absence of any major factors on land, the best available information indicates that some change in the oceanographic ecosystem has led to past declines in southern rockhopper penguins in some regions and has the potential to lead to future declines in southern rockhopper penguin colonies in those regions of New Zealand.

Large-scale measurements show that temperature changes have been occurring in the Southern Ocean since the 1960s. Overall, the upper ocean has warmed since the 1960s with dominant changes in the thick near-surface layers called ''sub-Antarctic Mode waters,'' located just north of the Antarctic Circumpolar Current (ACC) (Bindoff *et al.* 2007, p. 401). In mid-depth waters—2,952 feet (ft) (900 meters (m))—temperatures have increased throughout most of the Southern Ocean, having risen 0.31 °F (0.17 °C) between the 1950s and 1980s (Gille 2002, p. 1,275). However, the ocean temperature trends described are at too large a scale to relate meaningfully to the demographics of the southern rockhopper penguins, whether at any single penguin colony or breeding or foraging area, or to the variation in trends in colonies around the world at larger scales. We have noted above that attempts to ascribe trends in rockhopper penguin numbers to large-scale sea-temperature changes using biological measurements of southern rockhopper population and foraging parameters have been unsuccessful in revealing any causal links.

Despite larger-scale conclusions that Southern Ocean warming is occurring, we have not identified sea temperature data on an appropriate oceanographic scale to evaluate either historical trends or to make predictions on future trends and whether they will affect southern rockhoppers across the New Zealand/Australia region. For example, Gille (2002, p. 1,276) presented a figure of historical Southern Ocean deep-water temperatures to illustrate an overall warming trend. However, while the scale of measurement is too large to draw any conclusions at a local-scale, in the region of the New Zealand/Australia portion of the species' range, the figure provided appears to show that ocean temperatures have decreased on average from the 1950s to the 1990s.

Looking at the situation from the perspective of physical oceanography, attempts to describe the relationship between southern rockhopper penguin population trends and trends in ocean temperatures, based on large-scale oceanographic observations of temperature trends in the Southern Ocean, and to arrive at historical or predictive models of the impact of temperature trends on penguins are equally difficult. Such analyses are hampered by: (1) The fact that measurements of temperature and temperature trends are provided at an ocean-wide scale; (2) the measurement and averaging of temperatures over large water bodies or depths, which do not allow analysis of impacts at any one site or region or allow explanation of divergent trends between colonies in the same region; (3) lack of real-time data on temperature and trends at biologically meaningful geographical scales in the vicinity of breeding or foraging habitat for penguins; and (4) absence of consistent monitoring of southern rockhopper penguin abundance and demographic and biological parameters to relate to such oceanographic measurements. We have insufficient information to draw conclusions on whether directional changes in ocean temperatures are affecting southern rockhopper penguins throughout all of their range.

We have examined areas of the range of the southern rockhopper penguin where numbers have declined, such as at Campbell Island and the Falkland Islands. At the same time, numbers in the majority of the range of the southern rockhopper penguin have remained stable or increased. For example, in the region of the southern tip of South America, numbers have increased and now represent 72 percent of southern rockhopper abundance in the larger south Atlantic and southeast Pacific regions. At the Prince Edward Islands, declines at Marion Island have been accompanied by stability at nearby Prince Edward Island. At Kerguelen and Crozet Islands, numbers are increasing or stable.

Within the New Zealand/Australia portion of the species' range, the New Zealand islands have experienced severe declines; however, trend information for the Australian Macquarie Island colonies is much less certain, given the poor quality of the baseline estimate at Macquarie. Based on our review of the best available information (see above), we conclude that changes to the marine environment, which influence the southern rockhopper penguin, have affected the Campbell Plateau, but their effects on the Macquarie Ridge region are unknown. In the absence of identification of other significant threat factors and in light of the best available scientific information indicating that prey availability, productivity, or sea temperatures are affecting southern rockhopper penguins within the Campbell Plateau, we find that changes to the marine environment is a threat to the Campbell Plateau colonies of southern rockhopper penguins at Campbell, Auckland, and Antipodes Islands.

While rockhopper penguin numbers in certain areas of the species' range have been affected by changes to the marine environment, numbers in the majority of the range are stable or increasing. This indicates that the severity and pervasiveness of stressors in the marine environment are not uniform throughout the species' range, and we have not identified sea-temperature data on an appropriate oceanographic scale to be able to identify broad-scale trends or to make predictions on future trends about whether changes to the marine environment will affect southern rockhoppers penguins either across its range or within the New Zealand/Australia region.

On this basis, we find that the present or threatened destruction, modification, or curtailment of both its terrestrial and marine habitats is not a threat to the southern rockhopper penguin throughout all of its range now or in the future.

Factor B: Overutilization for Commercial, Recreational, Scientific, or Educational Purposes

Despite the overall increase in southern rockhopper penguin numbers in southern Chile, the Isla Recalada colony—a historical breeding site—declined from 10,000 pairs in 1989 to none in 2005 (Oehler *et al.* 2007, p. 505). In attempting to explain this local decline, Oehler *et al.* (2007, p. 505) cited the collection of adult penguins for export to zoological parks from 1984–1992 as a disturbance that may have caused adult penguins to move to other areas, but this has not been verified. The authors also reported that between 1992 and 1997, in times of shortage of fish

bait, local fishermen harvested adult southern rockhopper penguins at the Isla Recalada colony for bait for crab pots (Oehler *et al.* 2007, p. 505), but we have no information on the effect of this stressor in terms of numbers of individuals lost from the colony.

Collection for zoological parks is now prohibited, and the species is not found in trade (Ellis *et al.* 1998, p. 54). There is no information that suggests this ban will be lifted in the future.

Tourism and other human disturbance impacts are reported to have little effect on southern rockhopper penguins (BirdLife International 2007, p. 3).

In summary, although there is some evidence of historical and even relatively recent take of southern rockhopper penguins from the wild for human use, collection for zoological parks is no longer occurring, and other harvest that may be occurring for fish bait is not on a large enough scale to be a threat to this species. We have no reason to believe the levels of utilization will increase in the future. Therefore, we find that overutilization for commercial, recreational, scientific, or educational purposes is not a threat to the species in any portion of its range now or in the future.

Factor C: Disease or Predation

Investigations have ruled out disease as a significant factor in major population declines at Campbell Island in the 1940s and 1950s or in the sharp declines in the mid-1980s at the Falkland Islands. At Campbell Island, de Lisle *et al.* (1990, pp. 283–285) isolated avian cholera (*Pasteurella multocida*) from the lungs of dead chicks and adults sampled during the year of decline 1985–86 and the subsequent year 1986–87. They were unable to determine whether this was a natural infection in southern rockhopper penguins or one that had been introduced through the vectors of rats, domestic poultry, cats (*Felis catus*), dogs (*Canis familiaris*), or livestock that have been prevalent on the island in the past. While the disease was isolated in four separate colonies along the coast of Campbell Island, and there was evidence of very limited mortality from the disease, the authors concluded there was no evidence that mortality from this pathogen on its own may have caused the decline in numbers at Campbell Island (Cunningham and Moors 1994, p. 34). Assays for a variety of other infectious avian diseases found no antibody responses in southern rockhopper penguins at Campbell Island (de Lisle *et al.* 1990, pp. 284–285).

Following the precipitous decline of southern rockhopper penguins at the Falkland Islands in the 1985–86 breeding season, examinations and full necropsies were carried out for a large number of individuals. Mortality was primarily attributed to starvation. A large number of predisposing factors were ruled out, such as anthropogenic factors (oiling, fish net mortality, ingestion of plastic, trauma, or trapping at sea or on breeding grounds) or natural causes (heavy predation on or near breeding grounds, botulism at the breeding grounds, or dinoflagellate poisoning caused by red tides). Infectious diseases were considered in depth, but no specific disease was identified (Keyme *et al.* 2001, p. 166). A secondary factor, ''puffinosis,'' caused ulcers on the feet of some young penguins, but no mortality was associated with these lesions (Keyme *et al.* 2001, p. 167). Examination for potential toxic agents found high tissue concentrations for only cadmium; however, cadmium levels did not differ between the year of high mortality and the subsequent year when no unusual mortality occurred (Keyme *et al.* 2001, pp. 163–165).

Bester *et al.* (2003, pp. 549–554) reported on the recolonization of sub-Antarctic fur seals (*Arctocephalus tropicalis*) and Antarctic fur seals (*Arctocephalus gazelle*) at Prince Edward Island. Rapid fur seal recolonization is taking place at this island. There are now an estimated minimum 72,000 sub-Antarctic fur seals (Bester *et al.* 2003, p. 553); the population has grown 9.5 percent annually since 1997–98. Similarly, at Marion Island, sub-Antarctic fur seal populations increased exponentially between 1975 and 1995. Adult populations were 49,253 animals in 1994–95. Crawford and Cooper (2003, p. 418) expressed concern that the burgeoning presence of seals at Prince Edward and Marion Islands may be increasingly affecting southern rockhopper penguins through physical displacement from nesting sites, prevention of access to breeding sites, direct predation, and increasing competition between southern rockhopper penguins and seals for prey; however, these potential effects of fur seals on southern rockhopper penguins have not been investigated.

At Campbell Island in New Zealand, de Lisle *et al.* (1990, p. 283) ruled out Norway rats (*Rattus norvegicus*), which were present on the island at the time of precipitous declines, as a factor in those declines. Feral cats are present on Auckland Island, but have not been observed preying on chicks there (Taylor 2000, p. 55). Although it was suggested that introduced predators may affect breeding on Macquarie and Kerguelen Islands (Ellis *et al.* 1998, p. 49), no information was provided to support this idea.

In summary, based on our review of the best available information we find that neither disease nor predation is a threat to the southern rockhopper penguin in any portion of its range, and no information is available that suggests this will change in the future.

Factor D: The Inadequacy of Existing Regulatory Mechanisms

The majority of sub-Antarctic islands are under protected status. For example, all New Zealand sub-Antarctic islands are nationally protected and inscribed as the New Zealand Subantarctic Islands World Heritage sites; human visitation of the islands is tightly restricted at all sites where penguins occur (Taylor 2000, p. 54; BirdLife International 2007, p. 4; UNEP WCMC (United Nations Environmental Program, World Conservation Monitoring Center) 2008a, p. 5). The Australian islands of Macquarie, Heard, and McDonald are also World Heritage sites with limited or no visitation and with management plans in place (UNEP WCMC 2008b, p. 6; UNEP WCMC 2008c, p. 6). In 1995, the Prince Edward Islands Special Nature Preserve was declared and accompanied by the adoption of a formal management plan (Crawford and Cooper 2003, p. 420). Based on our review of the existing regulatory mechanisms in place for each of these areas and our analysis of other threat factors, we find that the only inadequacy in existing regulatory mechanisms regarding the conservation of the southern rockhopper penguin (BirdLife International 2007, p. 4; Ellis *et al.* 1998, pp. 49, 53) to be the inability to ameliorate the effects of changes to the marine environment on the species in the Campbell Plateau portion of its range.

In Chile, collection for zoological display, which used to be permitted, is now prohibited, and the species is not found in trade (Ellis *et al.* 1998, p. 54). Fisheries activities in the Falkland Islands, which have increased dramatically since the 1970s, are now closely regulated. A series of conservation zones has been established, and the number of vessels fishing within these zones is regulated to prevent fish and squid stocks from becoming depleted. The Falkland Island Seabird Monitoring Program has been established to collect baseline data essential to identifying and detecting potential threats to seabirds (Putz *et al.*

2001, p. 794). As discussed under Factor E, current licensing arrangements limit squid harvest to between the beginning of February and the end of May and the beginning of August and the end of October, which minimizes overlap with the southern rockhopper penguin breeding season, when feeding demands are high (October to February) (Putz *et al.* 2001, p. 803).

In summary, aside from the inadequacy of regulatory mechanisms to ameliorate the threat of changes in the marine environment in the Campbell Plateau portion of the species' range, we find that the existing national regulatory mechanisms are adequate regarding the conservation of southern rockhopper penguins in all other parts of the species' range. There is no information available to suggest these regulatory mechanisms will change in the future.

Factor E: Other Natural or Manmade Factors Affecting the Continued Existence of the Species

Fisheries

While competition for prey with commercial fisheries has been listed as a potential factor affecting southern rockhopper penguins in various portions of their range (Ellis *et al.* 1998, pp. 49, 53), we have found that it is only in the Falkland Islands where this potential competition between commercial fisheries and southern rockhopper penguins has emerged and been addressed. Bingham suggests that rapid southern rockhopper penguin declines at the Falkland Islands in the 1980's were a result of uncontrolled commercial fishing (but see analysis of El Niño under Factor A), but reports that following the establishment of a regulatory body in 1988, the effects of over-fishing at the Falkland Islands have been greatly mitigated (Bingham 2002, p. 815), and southern rockhopper penguin populations have stopped declining. At the Falkland Islands, the inshore area adjacent to colonies is not subject to fishing activities (Putz *et al.* 2002, p. 282). The diet of southern rockhopper penguins, in general, is dominated by crustaceans, with fish and squid varying in importance. At the Falkland Islands, squid, in particular Patagonian squid (*Loligo gahi*), is of greater importance in the diet than in other rockhopper penguins (Putz *et al.* 2001, p. 802). The Patagonian squid is also an important commercial species fished around the Falkland Islands. Current licensing arrangements limit squid harvest to between the beginning of February and the end of May and the beginning of August and the end of October, which minimizes overlap with the southern rockhopper penguin breeding season, when feeding demands are high (October to February). Nevertheless, reports of decreasing catch per unit of effort for squid indicate a declining squid stock over the 1990s (Putz *et al.* 2001, p. 803). Coincidentally, Patagonian squid has declined in southern rockhopper penguin diets. However, southern rockhopper penguin diets have shifted to notothenid fish, a prey that has higher nutritional value than squid and that has become more common. It is not certain whether squid abundance or fish abundance is driving the switch. Bingham (1998, p. 6) reported that there is no direct evidence that food availability has been affected by commercial fishing, but both he and Putz *et al.* (2003b, p. 143) drew attention to the need for careful monitoring of southern rockhopper penguin prey availability in the face of commercial fisheries development.

The winter foraging range of southern rockhopper penguins breeding at the Falkland Islands takes them into the area of longline fishing at Burdwood Bank and onto the northern Patagonian shelf. Birds are not in direct competition for fish prey species there. The risk of bycatch from longline fishing is not a threat to penguins, as it is to other seabird species, and on the northern Patagonian shelf where jigging is the primary fishing method, bycatch is not a significant threat (Putz *et al.* 2002, p. 282).

In our review of fisheries activities, we found no other reports of documented fisheries interaction or possible competition for prey between southern rockhopper penguins and commercial fisheries or of documented fisheries bycatch in any other areas of the range of the southern rockhopper penguin.

In summary, while fisheries activities have the potential to compete for the prey of southern rockhopper penguins, we find that there are adequate monitoring regimes and fisheries controls in place to manage fisheries interactions with southern rockhopper penguins throughout all of its range, and we have not reason to believe this will change in the future.

Oil Spills

Oil development is a present and future activity in the range of southern rockhopper penguins breeding at the Falkland Islands. A favorite winter foraging area of southern rockhopper penguins is the Puerto Deseado area along the coast of Argentina, which lies just to the south of Commodoro Rivadavia, a major refinery and oil shipment port. Oil pollution and ballast tank cleaning have been a significant threat to Magellanic penguins (*Spheniscus magellanicus*) north of this zone (Ellis *et al.* 1998, pp. 111–112). In 1986, 800 southern rockhopper penguins were found dead near Puerto Deseado, to the south of Commodoro Rivadavia, but consistent with trends for that year elsewhere in the range, the birds appeared to have starved and there were no signs of oiling (Ellis *et al.* 1998, p. 54). At the Falkland Islands, hydrocarbon development is planned for areas north and southwest of the Falkland Islands. As of 2002, oil-related activities in the Falkland Islands were suspended, but exploration and production may start again in the near future (Putz *et al.* 2002, p. 281). We have no information on petroleum development in other areas of the southern rockhopper penguin's range.

We recognize that an oil spill near a breeding colony could have local effects on southern rockhopper penguin colonies now and in the future. However, on the basis of the species' widespread distribution and its robust population numbers, we believe the species can withstand the potential impacts from oil spills. Therefore, we do not believe that oiling or impacts from oil-related activities are factors affecting the southern rockhopper penguin throughout all of its range now or in the future.

On the basis of analysis of potential fisheries impacts and possible impacts of petroleum development, we find that other natural or manmade factors are not threats to the southern rockhopper penguin in any portion of its range now or in the future.

Foreseeable Future

In considering the foreseeable future as it relates to the status of the southern rockhopper penguin, we considered the stressors and threats acting on the species. We considered the historical data to identify any relevant existing trends that might allow for reliable prediction of the future (in the form of extrapolating the trends). We also considered whether we could reliably predict any future events (not yet acting on the species and therefore not yet manifested in a trend) that might affect the status of the species.

With respect to the southern rockhopper penguin, the available data do not support a conclusion that there is a current overall trend in population numbers, and the overall population numbers are high. As discussed above in the five-factor analysis, we were also unable to identify any significant trends affecting the species as a whole, with

respect to the stressors and threats we identified. There is no evidence that any of the stressors or threats are growing in magnitude. Thus, the foreseeable future includes consideration of the ongoing effects of current stressors and threats at comparable levels.

There remains the question of whether we can reliably predict future events (as opposed to ongoing trends) that will likely cause the species to become endangered. As we discuss in the finding below, we can reliably predict that changes to the marine environment will continue to affect some southern rockhopper penguins in some areas, but we have no reason to believe they will have overall population-level impacts. Thus, the foreseeable future includes consideration of the effects of such factors on the viability of the species.

Southern Rockhopper Penguin Finding Throughout Its Range

We identified a number of likely stressors to this species, including: (1) Changes in the marine environment, (2) human use and disturbance, (3) disease, (4) competition with fisheries, and (5) oil spills. To determine whether these stressors individually or collectively rise to a ''threat'' level such that the southern rockhopper penguin is in danger of extinction throughout its range, or likely to become so within the foreseeable future, we first considered whether the stressors to the species were causing a long-term, population-scale declines in penguin numbers, or were likely to do so in the future.

Based on a tally of estimated numbers of southern rockhopper penguins in each region of the species' range, there are approximately 1.4 million breeding pairs in the overall species' population. While there have been major declines in penguin numbers in some areas, particularly at the Falkland Islands and at Campbell Island and other New Zealand islands, colonies in the major portion of the species' range have experienced lesser declines, remained stable, or appear to have increased. Therefore, based on the best available data, we do not find an overall declining trend in the species' population. In other words, the combined effects of the likely stressors are not causing an overall long-term decline in the southern rockhopper penguin numbers. Because there appears to be no ongoing long-term decline, the species is neither endangered nor threatened due to factors causing ongoing population declines, and the overall population of about 1.4 million pairs or more appears robust.

We also considered whether any of the stressors began recently enough that their effects are not yet manifested in a long-term decline in species' population numbers, but are likely to have that effect in the future. Given that the effects of stressors have either been ameliorated (*e.g.*, human use, competition with fisheries), or because their effects appear to be restricted to a small portion of the species' range, we do not believe their effects would be manifested in overall population declines in the future. Therefore, the southern rockhopper penguin is not threatened or endangered due to threats that began recently enough that their effects are not yet manifested in a long-term decline.

Next, we considered whether any of the stressors were likely to increase within the foreseeable future, such that the species is likely to become an endangered species in the foreseeable future. As discussed above, we concluded that none of the stressors was likely to increase significantly.

Having determined that a current or future declining trend does not justify listing the southern rockhopper penguin, we next considered whether the species met the definition of an endangered species or threatened species on account of its present or likely future absolute numbers. The total population of about 1.4 million pairs appears robust. It is not so low that, despite our conclusion that there is no ongoing decline, the species is at such risk from stochastic events that it is currently in danger of extinction.

Finally, we considered whether, even if the size of the current population makes the species viable, it is likely to become endangered in the foreseeable future because stochastic events might reduce its current numbers to the point where its viability would be in question. Because of the wide distribution of this species, combined with its high population numbers, even if a stochastic event were to occur within the foreseeable future, negatively affecting this species, the population would still be unlikely to be reduced to such a low level that it would then be in danger of extinction.

Despite regional declines in numbers of southern rockhopper penguins, the species has thus far maintained what appears to be high population levels, while being subject to most if not all of the current stressors. The best available information suggests that the overall southern rockhopper penguin population is not declining, despite regional changes in population numbers. Therefore, we conclude that the southern rockhopper penguin is neither an endangered species nor likely to become an endangered species in the foreseeable future throughout all of its range.

Distinct Population Segment

Section 2(16) of the Act defines ''species'' to include ''any distinct population segment of any species of vertebrate fish or wildlife which interbreeds when mature.'' To interpret and implement the DPS provisions of the Act and Congressional guidance, the Service and National Marine Fisheries Service published a Policy regarding the recognition of Distinct Vertebrate Population Segments in the **Federal Register** (DPS Policy) on February 7, 1996 (61 FR 4722). Under the DPS policy, three factors are considered in a decision concerning the establishment and classification of a possible DPS. These are applied similarly to endangered and threatened species. The first two factors—discreteness of the population segment in relation to the remainder of the taxon and the significance of the population segment to the taxon to which it belongs—bear on whether the population segment is a valid DPS. If a population meets both tests, it is a DPS, and then the third factor is applied—the population segment's conservation status in relation to the Act's standards for listing, delisting, or reclassification (*i.e.*, is the population segment endangered or threatened).

Discreteness Analysis

Under the DPS policy, a population segment of a vertebrate taxon may be considered discrete if it satisfies either of the following conditions: (1) It is markedly separated from other populations of the same taxon as a consequence of physical, physiological, ecological, or behavioral factors (quantitative measures of genetic or morphological discontinuity may provide evidence of this separation) or (2) it is delimited by international boundaries within which differences in control of exploitation, management of habitat, conservation status, or regulatory mechanisms exist that are significant in light of section 4(a)(1)(D) of the Act.

Southern Rockhopper penguins are widely dispersed throughout the sub-Antarctic in colonies located on isolated island groups. With respect to discreteness criterion 1, many of these areas are clearly separated from others. Differences in physical appearance or plumage patterns have been described between the nominate *chrysocome* type, which breeds in the Falkland Islands and off the southern tip of South

America, and the eastern *filholi* type, which breeds in the Indian Ocean and southwest Pacific south of Australia and New Zealand, but we are unaware of further differences in physiological, ecological, or behavioral factors among any groups within the overall range (Marchant and Higgins 1990, p. 191). Among the prominent breeding areas of the southern rockhopper penguin, we have identified two areas that may be markedly separated from other populations of the same taxon or face significant differences in conservation status from other southern rockhopper populations: (1) The Falkland Islands, and (2) the islands to the south of Australia and New Zealand, including Macquarie, Campbell, Auckland, and Antipodes Islands, where southern rockhopper penguins breed.

Falkland Islands: The southern rockhopper penguin breeds at about 52 locations around the Falkland Islands in aggregations numbering from a few hundred to more than 95,000 nests or breeding pairs. The most recent population estimates are of approximately 210,000 breeding pairs (Kirkwood *et al.* 2007, p. 266). The Falkland Islands breeding sites are separated from the nearest major southern rockhopper penguin breeding concentrations at Staten Island, Argentina, by about 264 mi (425 km). At Staten Island, there are reported to be 180,000 breeding pairs (Schiavini 2000, p. 288). It is not known to what extent interbreeding or movement of breeding pairs occurs between the Falkland Islands and the extensive breeding colonies in southern Argentina and Chile, although the possibility of movement of breeding birds from the Falkland Islands to Staten Island has been suggested (Schiavini 2000, p. 290).

Winter foraging studies show that the relatively short distance between these colonies allows for interchange between the southern rockhopper penguins at the Falkland Islands and those at the southern tip of South America (Putz *et al.* 2006, p. 741). This overlap is by no means complete; at least half of the breeding rockhopper penguins from both the Falkland Islands and Staten Island forage in distinct winter foraging areas that are not used by birds from the other region (Putz *et al.* 2006, p. 741). However, in other areas there is extensive mixing on the winter foraging grounds. For example, about 17 percent of the birds from Staten Island foraged in the region of Burdwood Bank, an isolated extension of the Patagonian continental shelf, due east of Staten Island and due south of the Falkland Islands. About 25 percent of the birds from the southern colonies on the Falkland Islands also foraged in the Burdwood Bank region. Thus, Burdwood Bank is a foraging area for some 90,000 breeding southern rockhopper penguins over the winter period; about 31,000 originating from the Falklands and 60,000 from Staten Island. There is also mixing, although made up of a smaller percentage of Falkland Islands birds (6 percent), in the winter foraging areas along the northeastern coast of Tierra del Fuego.

While Falkland Islands colonies have historically been considered a significant stronghold of the southern rockhopper penguin in the southwestern Atlantic Ocean and declines there have been of significant concern, recent research has identified major previously undocumented colonies in the same region that are as significant, or more significant, in abundance, and occupy portions of the same ecological region. These include colonies at nearby Staten Island in Argentina and at Ildefonso and Diego Ramirez Archipelagos in Chile, which are about 149 miles (240 km) further west. The overall southern rockhopper penguin numbers in this region, including the Falkland Islands, total about 765,000 breeding pairs (Kirkwood *et al.* 2007, p. 266), with Falkland Islands colonies constituting 27 percent of this total. As discussed above, extensive ecological overlap in foraging range between Falkland Islands birds and the Staten Island colonies has been documented, with overlap in use of the Burdwood Bank and some shared foraging range on the Patagonian shelf. In turn, the foraging ranges of Staten Island birds are likely to overlap with those of the Chilean colonies to the west (Putz *et al.* 2006, p. 740). We find that the literature increasingly refers to the biology and conservation of the suite of colonies around the southern tip of South America and the Falkland Islands as a significant larger regional concentration, downplaying emphasis on the discreteness of the Falkland Islands colonies (Kirkwood *et al.* 2007, p. 266; Putz *et al.* 2006, pp. 743–744; Schiavini *et al.* 2000, p. 289). We concur with this conclusion; therefore, we find that the Falkland Islands colonies of the southern rockhopper penguin do not meet the criterion of discreteness for determination of a DPS. On this basis, we do not consider the Falkland Islands colonies of the southern rockhopper penguin to be a DPS.

New Zealand/Australia: With respect to the discreteness criterion 1, the southern rockhopper breeding islands south of New Zealand and Australia are geographically isolated from southern rockhopper breeding areas in the Indian Ocean and near the southern tip of South America, with the closest colonies being roughly 7,300 km (4536 miles) at the Heard and McDonald Islands.

Based on the large geographic distance between the populations south of New Zealand and Australia from other populations, we conclude that this segment of the population of the southern rockhopper penguin passes the discreteness conditions for determination of a DPS.

Significance Analysis

If a population segment is considered discrete under one or more of the conditions described in our DPS policy, its biological and ecological significance is to be considered in light of Congressional guidance that the authority to list DPSs be used ''sparingly'' while encouraging the conservation of genetic diversity. In carrying out this examination, we consider available scientific evidence of the population segment's importance to the taxon to which it belongs. This consideration may include, but is not limited to: (1) Its persistence in an ecological setting unusual or unique for the taxon; (2) evidence that its loss would result in a significant gap in the range of the taxon; (3) evidence that it is the only surviving natural occurrence of a taxon that may be more abundant elsewhere as an introduced population outside its historic range; or (4) evidence that the DPS differs markedly from other populations of the species in its genetic characteristics. A population segment needs to satisfy only one of these criteria to be considered significant. Furthermore, the list of criteria is not exhaustive; other criteria may be used, as appropriate. Below, we consider the biological and ecological significance to the New Zealand/Australia DPS.

Historical numbers of southern rockhopper penguins in this region may have been as high as 960,000 breeding pairs, with declines recorded from the New Zealand islands. Currently there are approximately 89,600–101,500 breeding pairs in the region, which represents 6 to 7 percent of the current estimated population of 1.4 million southern rockhopper breeding pairs rangewide.

This group of breeding colonies inhabits a unique ecological and geographical position in the range of the southern rockhopper penguin. The underwater topography and oceanography of this area is unique and has been described in detail in the Macquarie Island Management Plan (Parks and Wildlife Service (Australia)

2006a, pp. 20–22). The islands sit in areas of relatively shallow water, generally less than 3,280 ft (1,000 m) deep. Macquarie Island is on the shallow Macquarie Ridge, which is associated with a deep trench to the east, and connects to the north with the broader Campbell Plateau, an extensive area of shallow water that is part of the continental shelf extending southeast from New Zealand. The New Zealand islands (Campbell, Auckland, and Antipodes), with breeding colonies of southern rockhopper penguins, sit on the Campbell Plateau. This region and all these islands sit just north of the Antarctic Polar Front Zone (APFZ), a distinct hydrographic boundary with cold nutrient-rich surface waters to the south and warmer, less rich, water to the north. In addition, the Macquarie Ridge and Campbell Plateau form a major obstruction to the ACC, which runs easterly at about 50° S latitude. This further increases the high degree of turbulence and current variability in the area and is likely to directly or indirectly encourage biological productivity (Parks and Wildlife Service (Australia) 2006a, pp. 20–22).

We conclude that loss of the colonies in the region would create a significant gap in the range of the taxon and remove southern rockhopper penguins from the unique ecological setting of the Macquarie Ridge and Campbell Plateau that lies in a unique position relative to the APFZ and the ACC. Therefore, because we find the New Zealand/Australia population segment to be discrete and because it meets the significance criterion, with respect to (1) Its persistence in an ecological setting unusual or unique for the taxon; and (2) evidence that its loss would result in a significant gap in the range of the taxon, it qualifies as a DPS under the Act.

New Zealand/Australia DPS Finding

Historical numbers of southern rockhopper penguins for this New Zealand/Australia DPS may have been as high as 960,000 breeding pairs; they are currently estimated at 89,600–101,500 breeding pairs. Significant historical declines have been reported, in particular, at Campbell Island, where a decline of 94 percent was recorded between the early 1940s and 1985; at Antipodes Islands, where a decline of 94 percent was recorded; and at Auckland Islands, where the numbers halved between 1983 and 1990. Current quantitative data is not available to indicate whether, and to what extent, numbers throughout all of this DPS continue to decline, but qualitative evidence indicates that numbers at Campbell Island continue to decline. At Macquarie Island, which represents 32 to 48 percent of this DPS, southern rockhopper penguin numbers were recently estimated to be lower than previous categorical estimates, but it is not clear whether this reflects a decline versus more precise surveys.

As described in our five-factor analysis, changes to the marine environment are cited as factors that have led to historic or recent large declines at some, but not all, of the breeding locations within the New Zealand/Australia DPS. While the oceanographic factors contributing to such declines have not been clearly explained, they appear to relate to changes in sea surface temperatures or to changes in marine productivity at scales affecting individual colonies or regions, leading to periodic or long-term reductions in food availability. There is little or no current information, however, on the effects of these changes on the breeding and foraging success of southern rockhopper penguins in areas of previous decline. Although changes in the marine environment appear to be affecting some southern rockhopper breeding areas within this DPS, information is not at a meaningful scale to evaluate current changes to the marine habitat in the overall New Zealand/Australia DPS or to make predictions on future trends about whether changes to the marine environment will affect southern rockhoppers penguins across the New Zealand/Australia DPS.

Although the data indicate that changes to the marine habitat may be a threat to New Zealand colonies on the Campbell Plateau, we do not find that historical declines there are currently rising to the level of having a significant effect on the entire DPS. Therefore, on the basis of the best available scientific and commercial information, we find that the present or threatened destruction, modification, or curtailment of this species' marine habitat or range is not a threat to the southern rockhopper penguin throughout the range of New Zealand/Australia DPS, now or in the future. Below, we will further consider whether the New Zealand colonies are a significant portion of the range (SPR) of the DPS.

We have not documented any significant changes to the terrestrial habitat of the southern rockhopper penguin. Also, on the basis of our five-factor analysis, we did not find any of the other factors to be threats to the southern rockhopper penguin's continued existence in any portion of the species' range in the New Zealand/Australia DPS now or in the future.

On the basis of our analysis of the best available scientific and commercial information, we find that the southern rockhopper penguin is not in danger of extinction throughout all of its range in the New Zealand/Australia DPS or likely to become so in the foreseeable future as a consequence of the threats evaluated under the five factors in the Act.

Significant Portion of the Range Analysis

Having determined that the southern rockhopper penguin is not now in danger of extinction throughout all of its range or in the New Zealand/Australia DPS or likely to become so in the foreseeable future as a consequence of the stressors evaluated under the five threat factors in the Act, we also considered whether there were any significant portions of its range where the species is in danger of extinction or likely to become so in the foreseeable future.

The Act defines an endangered species as one ''in danger of extinction throughout all or a significant portion of its range,'' and a threatened species as one ''likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range.'' The term ''significant portion of its range'' is not defined by statute. For purposes of this finding, a significant portion of a species' range is an area that is important to the conservation of the species because it contributes meaningfully to the representation, resiliency, or redundancy of the species.

The first step in determining whether a species is endangered in a SPR is to identify any portions of the range of the species that warrant further consideration. The range of a species can theoretically be divided into portions in an infinite number of ways. However, there is no purpose to analyzing portions of the range that are not reasonably likely to be significant and endangered. To identify those portions that warrant further consideration, we determine whether there is substantial information indicating that (i) the portions may be significant and (ii) the species may be in danger of extinction there. In practice, a key part of this analysis is whether the threats are geographically concentrated in some way. If the threats to the species are essentially uniform throughout its range, no portion is likely to warrant further consideration. Moreover, if any concentration of threats applies only to portions of the range that are unimportant to the conservation of the

species, such portions will not warrant further consideration.

If we identify any portions that warrant further consideration, we then determine whether, in fact, the species is threatened or endangered in any significant portion of its range. Depending on the biology of the species, its range, and the threats it faces, it may be more efficient for the Service to address the significance question first, or the status question first. Thus, if the Service determines that a portion of the range is not significant, the Service need not determine whether the species is threatened or endangered there. If the Service determines that the species is not threatened or endangered in a portion of its range, the Service need not determine if that portion is significant. If the Service determines that both a portion of the range of a species is significant and the species is threatened or endangered there, the Service will specify that portion of the range as threatened or endangered pursuant to section 4(c)(1) of the Act.

The terms ''resiliency,'' ''redundancy,'' and ''representation'' are intended to be indicators of the conservation value of portions of the range. Resiliency of a species allows the species to recover from periodic disturbance. A species will likely be more resilient if large populations exist in high-quality habitat that is distributed throughout the range of the species in such a way as to capture the environmental variability found within the range of the species. In addition, the portion may contribute to resiliency for other reasons—for instance, it may contain an important concentration of certain types of habitat that are necessary for the species to carry out its life-history functions, such as breeding, feeding, migration, dispersal, or wintering. Redundancy of populations may be needed to provide a margin of safety for the species to withstand catastrophic events. This does not mean that any portion that provides redundancy is a significant portion of the range of a species. The idea is to conserve enough areas of the range such that random perturbations in the system act on only a few populations. Therefore, each area must be examined based on whether that area provides an increment of redundancy important to the conservation of the species. Adequate representation ensures that the species' adaptive capabilities are conserved. Specifically, the portion should be evaluated to see how it contributes to the genetic diversity of the species. The loss of genetically based diversity may substantially reduce the ability of the species to respond and adapt to future environmental changes. A peripheral population may contribute meaningfully to representation if there is evidence that it provides genetic diversity due to its location on the margin of the species' habitat requirements.

To determine whether any portions of the range of the southern rockhopper penguin warrant further consideration as possible threatened or endangered significant portions of the range, we reviewed the entire supporting record for the status review of this species with respect to the geographic concentration of threats and the significance of portions of the range to the conservation of the species. As previously mentioned, we evaluated whether substantial information indicated that (i) the portions may be significant and (ii) the species in that portion may be currently in danger of extinction or likely to become so within the foreseeable future. We have found that population declines are uneven across the range, indicating the possible occurrence of differential stressors or threats across the range of the southern rockhopper penguin. On this basis we determined that some portions of the southern rockhopper's range might warrant further consideration as possible threatened or endangered significant portions of the range.

The southern rockhopper penguin is widely distributed throughout the Southern Ocean. In our five-factor analysis we did not identify any factor that was found to be a threat to the species throughout all of its range or throughout all of the New Zealand/Australia DPS. In our status review, we identified the Falkland Islands, Marion Island, and finally, the Campbell Island Plateau region within the New Zealand/Australia DPS as areas where declines have occurred, indicating the possibility that the species may be threatened or endangered there.

Falkland Islands SPR Analysis

For the Falkland Islands, we first considered whether there is substantial information to indicate that this portion of the range may be in danger of extinction. The southern rockhopper penguin breeds at about 52 locations around the Falkland Islands in aggregations numbering from a few hundred to more than 95,000 nests or breeding pairs. In the period from 1932–33 to 1995–96, the Falkland Islands numbers declined from an estimated 1.5 million breeding pairs to 263,000 breeding pairs, or about 2.75 percent per year. However, since that time numbers have been largely stable, fluctuating from 263,000 pairs in 1995–96 to a high of 272,000 breeding pairs in 2000–01 to approximately 210,000 breeding pairs in 2005–06 (Kirkwood *et al.* 2007, p. 266). It is unclear from available information whether numbers are fluctuating or moving into another period of decline.

In summary, even though numbers of southern rockhopper penguins at the Falkland Islands have shown an overall decline over time, numbers have not declined at a consistent rate, but rather, there have been periodic decreases in numbers, as well as at least one period of increase. Therefore, we cannot assume a consistent rate of decline into the future. Furthermore, it is unclear to what extent the fluctuations in numbers are attributed to potential relocations to nearby Staten Island, where numbers are stable to increasing. Numbers at the Falkland Islands appear to be relatively high, at approximately 210,000 breeding pairs, and in our five-factor analysis, we were unable to identify ongoing threats to southern rockhopper penguin colonies at the Falkland Islands.

Therefore, we have determined that the Falkland Islands portion of the range does not satisfy one of the two initial tests, because there is not substantial information to suggest that southern rockhopper penguins in the Falkland Islands portion of the range may be currently in danger of extinction, and since we cannot establish a continuing declining trend in numbers or a continuing trend in threat factors, we have no reason to believe that the species is likely to become endangered there within the foreseeable future. Because we find that the southern rockhopper penguin is not threatened or endangered in this portion of the range, we need not address whether this portion of its range is significant.

Marion Island SPR Analysis

For the Marion Island portion of the southern rockhopper penguin's range, we first considered whether there is substantial information to indicate that this portion of the range is significant. In terms of abundance, Marion Island represents less than 5 percent of the overall southern rockhopper penguin population, which is estimated at more that 1.4 million breeding pairs, with colonies widely distributed around the Southern Ocean. Even not considering the breeding pairs at Marion Island, the distribution of the species includes other large, stable or increasing populations in high-quality habitat representing the environmental variability found within the range of the species. Therefore, even without the colonies at Marion Island, the species would have sufficient resiliency to recover from periodic disturbances.

Furthermore, given the wide distribution of the species, even without the colonies at Marion Island, the species would have sufficient redundancy of other populations, such that random perturbations in the system would only affect a few of the remaining populations. Finally, not considering colonies at Marion Island, we find that the species has adequate representation of its adaptive capabilities to enable the species to adapt to future environmental changes. For example, the number of southern rockhopper penguins at nearby Prince Edward Island appears to have been stable since the 1980s with 35,000–45,000 pairs present. Given Marion Island's position within the species' range (*i.e.*, far from the periphery of its range), and its proximity to other southern rockhopper breeding areas, we do not believe the penguins at Marion Island represent unique adaptive capabilities that would be lost if their breeding colonies were lost from the population. Therefore, we have determined that the Marion Island portion of the species' range does not satisfy the significance test of being a significant portion of the species' range, and we need not address whether this portion of its range is threatened or endangered.

Campbell Plateau SPR Analysis

In our analysis of the New Zealand/Australia DPS of southern rockhopper penguins, we identified major declines in numbers of southern rockhopper penguins at the New Zealand breeding locations at Campbell, Auckland, and Antipodes Islands, while numbers at Macquarie Island are reported to be stable. As reflected in our five-factor analysis, declines in penguin numbers at the locations identified above are attributed to changes in the marine environment, which may have affected overall marine productivity or the distribution and abundance of southern rockhopper prey species at these sites. We view the New Zealand Campbell Plateau colonies as an integral part of the geographic area encompassed by the New Zealand/Australia DPS, and not as discrete in and of itself. On this basis and on the basis of the severe declines in this area, we will analyze the Campbell Plateau portion of the range as a possible SPR.

With approximately 60,000 breeding pairs in the New Zealand range of the southern rockhopper penguin, the three Campbell Plateau breeding areas (Campbell, Auckland, and Antipodes Islands) make up over 60 percent of the New Zealand/Australia DPS and represent three out of its four breeding concentrations. The presence of four breeding areas in this DPS provides a measure of resiliency against periodic disturbance. The loss of the Campbell Plateau breeding colonies would greatly reduce the overall geographic range of this DPS to one location. The species would no longer inhabit the ecologically distinct Campbell Plateau, an area of historically high-quality habitat (as evidenced by previous high numbers at Campbell Island). Loss of some or all of these three breeding concentrations, two of which number less than 3,600 breeding pairs, would significantly reduce the redundancy of populations in this DPS and increase the impact of random or catastrophic perturbations on remaining population numbers in the New Zealand/Australia DPS. Therefore, we conclude that this Campbell Plateau portion of the range passes the significance criterion for evaluating a SPR.

We next evaluate the Campbell Plateau portion of the range relative to the geographical concentration of threats in this region. Among colonies of southern rockhopper penguins throughout the species' range, the three island groups within the Campbell Plateau portion of the range have experienced the most severe declines. While trends are unclear at Macquarie Island, overall numbers at Campbell Island are recorded to have been as high as 800,000 breeding pairs in the early 1940s, and the last 1985 census numbers indicated a 94-percent reduction to 51,500 pairs. Current qualitative information indicates that colonies are still in decline, although the rate of that decline is undocumented. In our analysis of the New Zealand/Australia DPS, we concluded that changes to the marine environment that influence the southern rockhopper penguin have affected the Campbell Plateau more than the Macquarie Ridge region; therefore, the present or threatened destruction, modification, or curtailment of its habitat or range is a risk factor that threatens the southern rockhopper penguin in the Campbell Plateau of the New Zealand/Australia DPS. On this basis, we conclude that there is substantial information indicating that listing of the Campbell Plateau portion of the range of the southern rockhopper penguin as threatened or endangered may be warranted.

Having determined that the Campbell Plateau populations of the New Zealand/Australia DPS of the southern rockhopper penguin are significant and that there is substantial information indicating that listing of this portion of the range as threatened or endangered may be warranted, we will now summarize our analysis on whether listing of the Campbell Plateau SPR is warranted.

Finding of Campbell Plateau SPR

Within the Campbell Plateau portion of the range of the southern rockhopper penguin, significant historical declines have been reported, in particular for Campbell Island where a decline of 94 percent was recorded between the early 1940s and 1985. Continued unquantified declines were reported to the present day. The most recent survey data available from Campbell Island is from 1985, when there were 51,500 breeding pairs (Cunningham and Moors 1994, p. 34). At Antipodes Islands, a decline of 94 percent was recorded between 1978 and 1995, and current estimates are of 3,400 breeding pairs. At the Auckland Islands, the number of penguins halved between 1983 and 1990 to 3,600 breeding pairs. There are no current quantitative data to indicate whether, and to what extent, declines have continued at any of these three island groups. Historical numbers of southern rockhopper penguins in the Campbell Plateau portion of the species' range may have been as high as 860,000 breeding pairs in the early 1940s; an overall decline of 94 percent or more has brought this number down to less than 60,000 breeding pairs today. Given the low numbers at Antipodes and Auckland Islands, Campbell Island is the primary stronghold for the Campbell Plateau portion of the species' range.

In our five-factor analysis (see above), we did not find documentation of any significant changes to the terrestrial habitat of the southern rockhopper penguin. Changes to the marine environment, however, are cited as factors that have led to historical or recent large declines within the Campbell Plateau portion of the range. While the oceanographic factors contributing to such declines have not been clearly explained, they appear to relate to periodic or long-term changes in sea surface temperatures within the summer or winter foraging ranges of southern rockhopper penguins, or to changes in marine productivity at scales affecting individual colonies or regions. These oceanographic changes have apparently led to reductions in food availability that may have occurred in short periods or extended over periods of years. The available regulatory mechanisms have not ameliorated the effects of these changes in the marine environment, and we have no reason to believe these changes in the marine environment will be ameliorated in the future; therefore, we find it reasonably likely that the effects on the species in

this portion of its range will continue at current levels or potentially increase. On the basis of the best available scientific and commercial information and evidence of precipitous decreases of penguin numbers in this area, we find that the present or threatened destruction, modification, or curtailment of its marine habitat or range is a threat to the southern rockhopper penguin in the Campbell Plateau portion of its range now and in the future.

On the basis of our five-factor analysis of the best available scientific and commercial information (see above), we find that overutilization for commercial, recreational, scientific, or educational purposes; disease; and predation are not threats to the southern rockhopper penguin in the Campbell Plateau portion of its range. On the basis of information on fisheries and oil development, we find that other natural or manmade factors are not a threat to the southern rockhopper penguin in the Campbell Plateau portion of its range.

We find that precipitous population declines have depleted the Campbell Plateau SPR to 6 percent of its prior abundance, and based on our review of the best available information, we find it is reasonably likely that these severe declines resulted from effects of changes in the marine environment. We have no reason to believe that these changes in the marine environment will not continue to affect southern rockhopper penguins in the Campbell Plateau SPR at current (and potentially greater) levels, further reducing population numbers.

Lower population numbers, a reasonably likely result in the foreseeable future, would make this species even more vulnerable to the threats from changes in the marine habitat, and would make the species vulnerable to potential impacts from oil spills and other random catastrophic events. Therefore, on the basis of our analysis of the best available scientific and commercial information, we find that the southern rockhopper penguin in the Campbell Plateau SPR of the New Zealand/Australia DPS is likely to become endangered with extinction in the foreseeable future.

Proposed Determination for the Southern Rockhopper Penguin in the Campbell Plateau Portion of its Range

On the basis of analysis of the five factors and the best available scientific and commercial information, find that listing the southern rockhopper penguin as a threatened species in the Campbell Plateau portion of its range under the Act is warranted. We, therefore, propose to list the southern rockhopper penguin as a threatened species in the Campbell Plateau portion of its range under the Act.

Final Determination for the Southern Rockhopper Penguin in All Other Portions of its Range (*i.e.*, not including the Campbell Plateau)

On the basis of analysis of the five factors and the best available scientific and commercial information, we find that listing the southern rockhopper penguin as threatened or endangered under the Act throughout all or in any other portion of its range is not warranted.

Northern Rockhopper Penguin

Distribution

The northern rockhopper penguin (*Eudyptes moseleyi*) is restricted to islands of the Tristan da Cunha region and Gough Island (St. Helena, United Kingdom) in the South Atlantic and St. Paul and Amsterdam Islands (French Southern Territories) in the Indian Ocean.

Two chicks banded at Amsterdam Island in 1992 were recovered off the coast of eastern and southern Australia 7 and 9 months later, indicating that immature Indian Ocean birds may winter off southern Australia (Guinard *et al.* 1998, p. 224).

Population

The overall breeding population of northern rockhopper penguins is estimated to be approximately 315,000–334,000 pairs on these island groups in the South Atlantic and Indian Oceans and is thought to be declining (Jouventin *et al.* 2006, p. 3,417; Guinard *et al.* 1998, p. 224; Woehler 1993, p. 58); however, based on the current information available on population trends throughout the species' range, as discussed below, the overall population trend of the northern rockhopper penguin appears uncertain. Documentation of current trend information is at this time only available for areas of Gough Island, as discussed below, which is only part of the species' overall range.

South Atlantic Ocean

Gough Island

Early records indicate that numbers were historically in the millions on both Gough Island and Tristan da Cunha. The most recent population estimates indicate that over the past 45 years, numbers have declined by about 96 percent on Gough Island, where there are currently estimated to be 32,000–65,000 breeding pairs (Cuthbert in litt., as cited in BirdLife International 2008a, pp. 2–3). Numbers on this island are reported to have experienced large declines prior to the 1980s (BirdLife International 2008a, p. 2), but were stable between 1982 and 2000 (Cuthbert and Sommer 2004, p. 101). Recent unpublished reports are said to indicate recent substantial declines (Jouventin *et al.* 2006, p. 3,422); however, we have no further information on the regional extent of decline, and so we cannot evaluate the effect of these declines on the overall population status of the northern rockhopper penguin.

Tristan da Cunha

Tristan da Cunha consists of a main island and several smaller islands. It is reported that the main island experienced a decline of about 98 percent 130 years ago until about 30 years ago, but over the past few decades numbers have been stable, with numbers currently estimated at 3,200–4,500 breeding pairs (Cuthbert in litt., as cited in BirdLife International 2008a, pp. 2–3.)

At Inaccessible Island, numbers may have declined ''modestly'' and are currently estimated at 18,000–27,000 breeding pairs. Trends at Nightingale and Middle Islands are poorly known, but recent observations suggest local declines in the main colony on Nightingale Island. The latest estimate of numbers of northern rockhopper penguins on these two islands was in the 1970's and was reported to be 125,000 pairs (Cuthbert in litt., as cited in BirdLife International 2008a, p. 3). No information is available on numbers or trends at Stoltenhof Island. In summary, given the numbers reported above, there appear to be from 146,200–156,500 breeding pairs of northern rockhopper penguins in the Tristan da Cunha Island group, not including those on Stoltenhoff Island. Although numbers appear stable at Tristan, the main island, trends are unknown throughout the remainder of this region.

Indian Ocean

Amsterdam Island

Northern rockhopper penguins at Amsterdam Island decreased in numbers from 58,000 breeding pairs in 1971 to 24,890 in 1993, for an overall decrease of 57 percent. The declines were most rapid, at 5.3 percent per year, between 1988 and 1993, but this was also a period when there was the widest fluctuation in numbers, from a low of 17,400 to a high of 39,871 breeding pairs (Guinard *et al.* 1998, pp. 226–227). After a lengthy period of gradual decline, the most recent available data indicate a period of population fluctuation with

both increases (up to 39,871 breeding pairs from 17,400 pairs) and decreases in numbers. With the final reported figure of 24,890, which is above previous lows, best available data do not allow us to evaluate if the colonies at Amsterdam Island continue to fluctuate, or are stable, increasing, or declining.

St. Paul Island

At St. Paul Island, 50 mi (80 km) south of Amsterdam Island, the numbers of northern rockhopper penguins increased by 56 percent over the period of 1971–1993, with a current estimate of 9,000 breeding pairs (Guinard *et al.* 1998, p. 227). This increase is considered to have begun after the cessation of the use of rockhopper penguins as bait in a crayfish industry, which operated in the 1930s, although all the interrelationships acting on this gradual, upward trend are not understood (Guinard *et al.* 1998, p. 227).

Other Status Classifications

The IUCN Red List classifies the northern rockhopper penguin as 'Endangered,' due to ''very rapid population decreases over the last three generations (30 years) throughout its range.''

Summary of Factors Affecting the Species

Factor A: The Present or Threatened Destruction, Modification, or Curtailment of Its Habitat or Range

Terrestrial Habitat

We have found no current reports of threats to the terrestrial breeding habitat of northern rockhopper penguins, and we have no reason to believe threats to the terrestrial habitat will emerge in the future.

Climate-Related Changes in the Marine Environment

With respect to the marine environment, Guinard *et al.* (1998, p. 224) reported that sea surface temperatures declined significantly, approximately 1.4 °F (0.8 °C), around Amsterdam and St. Paul Islands between 1982 and 1993. The annual mean decrease correlated with declines in numbers of northern rockhopper penguins at Amsterdam Island in the same period. Summer (February) sea surface temperatures were also correlated with the numbers of northern rockhopper penguins at Amsterdam Island the following spring. However, there was no relationship between spring temperatures and the numbers of penguins at Amsterdam Island, and there were no significant correlations between sea surface temperatures and numbers at adjacent St. Paul Island, where penguin numbers increased 56 percent during this same period. The authors hypothesized that with cooling water temperatures, prey may have shifted towards more northern waters, which are less accessible for breeding penguins (Guinard *et al.* 1998, p. 227). Guinard *et al.* (1998, p. 226) did not find major differences in breeding success between the Amsterdam Island colony and study colonies in other areas. The absence of conclusive correlations and the opposing trends occurring at the two adjacent islands make it difficult to draw conclusions relative to the impact of sea surface temperature changes on northern rockhopper penguin marine habitat in these areas.

We have identified no reports of apparent marine habitat changes for northern rockhopper penguins at Gough Island and Tristan da Cunha, or reports of declines in the prey base in these areas.

Conclusion

Although it is possible that climate change will result in changes to the marine habitat of the northern rockhopper penguin, data on the relationship between sea surface temperature and other oceanic conditions are ambiguous and not sufficient to draw conclusions as to the contribution of changes in these conditions to the local declines at Amsterdam Island. This precludes us from being able to identify current relationships or to predict possible future trends.

Therefore, on the basis of the best available scientific and commercial information, we find that the present or threatened destruction, modification, or curtailment of this species' terrestrial and marine habitats or range is not a threat to the northern rockhopper penguin in any portion of its range now and we do not foresee that it will become so in the future.

Factor B: Overutilization for Commercial, Recreational, Scientific, or Educational Purposes

Use as Bait

Northern rockhopper penguins at the small colonies at St. Paul Island in the Indian Ocean were exploited heavily for bait to support a crayfish fishery in the 1930s, but this practice has been discontinued since the 1940s (Guinard 1998, p. 227), and we have no reason to believe it will recommence in the future.

In the Tristan da Cunha region, driftnet fishing and penguin use for bait is reported to have caused significant mortality in the past. Such activities are now prohibited and regarded as unlikely to return (BirdLife International 2007, p. 3).

Harvest of Eggs

In the South Atlantic, the United Kingdom Department for Environment, Food and Rural Affairs (DEFRA) reported that harvesting of many seabirds, including northern rockhopper penguins, was intensive in the past, but is now greatly reduced, and restricted to egg collection for traditional domestic use of the 269 residents of Tristan da Cunha. Under the 2006 Conservation Ordinance, egg collection is restricted to Nightingale (25,000 breeding pairs), Stoltenhof and Middle Islands (100,000 breeding pairs) in the Tristan da Cunha group (DEFRA 2007, p. 2; Tristan da Cunha Website 2008, p. 1). Rockhopper penguins lay two eggs, the first of which often fails during incubation. If the chick from the first egg hatches, this chick usually dies or is discarded as the parents raise the larger chick from the second egg. If the second egg fails to hatch or is lost, the chick from the first egg may survive (Marchant and Higgins 1990, p. 190); therefore, this information suggests that limited harvest of eggs for traditional domestic use can be conducted without influencing breeding success of the large colonies where collection occurs. However, we cannot evaluate whether this is true because: (1) Empirical data are not available to verify whether breeding success is affected by this practice; (2) population trends, which would be a partial indicator of population status, on these islands are unknown; and (3) since the restrictions on egg harvest were only recently adopted in 2006, there may not have been sufficient time to for the adopted restrictions on egg collection to have exhibited their affects on population growth. Nevertheless, given that northern rockhopper penguin numbers in the Tristan da Cunha region are estimated at 146,200–156,500 breeding pairs, we do not find over-harvest of eggs to be a threat to the species. Furthermore, we have no reason to believe that the level of egg harvest will increase in the future.

Collection of Penguins From the Wild

The United Kingdom permitted a one-time harvest of 146 live northern rockhopper penguins from Tristan da Cunha for exports to zoos in the autumn of 2003 (DEFRA 2007, p. 2). Under the 2006 Conservation Ordinance, no take, capture, removal, or collection of any native organism is allowed without a permit (Tristan da Cunha Website 2008,

p. 1). Any take of live penguins from the wild would reduce numbers, potentially acting as stressor to local colonies. However, given the large numbers of breeding pairs (146,200–156,500) in this region and the new (2006) regulations restricting take from the wild, we do not consider the current level of limited take of individuals from the wild to be a threat to this species. We have no reason to believe that the level of collection of individuals from the wild will increase in the future.

Scientific Research

Scientists studying northern rockhopper penguins at Amsterdam Islands applied flipper bands to all incubating birds in a study colony of from 100–300 breeding pairs. They reported that the mean adult survival rate of 72 percent was significantly lower in the first year after banding than in subsequent years (mean adult survival of 84 percent) suggesting that there was an effect of banding on the birds. There was a similar effect for banded chicks (Guinard *et al.* 1998, p. 223–224). Based on this information, we believe that bird banding acts as a stressor on northern rockhopper penguins in this region; however, given the small size of the study colony and the relatively small decrease in survival of a small number of birds, we conclude that the bird banding practice as described in the literature is not a threat to the northern rockhopper penguins at the Amsterdam Islands or elsewhere in the species' range. There is no information that suggests banding activities will increase in magnitude in any portion of the species' range in the future.

Conclusion

We conclude that the primary utilization of northern rockhopper penguins at this time in the Tristan da Cunha region is the regulated collection of eggs for traditional domestic consumption by the small number of residents, as well as regulated collection of individuals from the wild. Although there may have been insufficient time since regulations were put in place, to determine whether the current levels of egg and animal collection are acting as stressors on the species in this area, we believe that with the recent regulations in place, the effects of these activities on the species in this area have likely been reduced since 2006, and we expect that any as of yet unobserved effects of the regulations would result in positive effects on the conservation of the species. We have no reason to believe these collection and harvest activities will increase over the current levels. We do not have documentation of current population trends on the islands where egg collection is occurring, but given that the numbers in the Tristan da Cunha region are estimated at 146,200–156,500 breeding pairs, we do not find over-harvest of eggs, nor over-collection of individuals to be a threat to the species.

Based on the available information, the only other utilization of the species within its range that we were able identify is banding of individuals for scientific research at Amsterdam Island. As discussed above, we do not consider this activity a threat to the species now or in the future.

On the basis of this information, we find that overutilization for commercial, recreational, scientific, or educational purposes is not a threat to the northern rockhopper penguin in any portion of its range now or in the future.

Factor C: Disease or Predation

Disease

We are aware of no reports in the literature on the effect of disease on northern rockhopper penguins anywhere within the species' range, and we have no information to suggest that disease incidence or transmission to the northern rockhopper penguin will increase in the future. Therefore, we find that disease is not a threat to the northern rockhopper penguin in any portion of the species' range now or in the future.

Predation by Sub-Antarctic Fur Seals

Predation by sub-Antarctic fur seals has been identified as a possible stressor on northern rockhopper penguins at Amsterdam Island, where numbers of fur seals increased from 4,868–35,028 between the 1970s and 1982 (Guinard *et al.* 1998, p. 227). This increase in fur seal numbers occurred within the time period (1971–1993) that northern rockhopper penguin numbers at Amsterdam Island reportedly declined by 57 percent. Fur seal numbers subsequently leveled off through the mid-1990s. It is reported that fur seals occasionally hunt and prey upon rockhopper penguins, and Guinard *et al.* (1998, p. 227) concluded that, even if penguins represent a minor part of the fur seal diet, the increase in predation could be contributing to the declines of northern rockhopper penguins observed at Amsterdam Island. The researchers indicated that further study is needed to evaluate the effect of fur seals on rockhopper penguins.

We acknowledge that fur seal predation has the potential to reduce numbers of northern rockhopper penguins; however, as of yet the extent of predation and its effect on the northern rockhopper penguin population has not been determined. Furthermore, because fur seal numbers have leveled off, we do not believe the possibility of predation on northern rockhopper penguins will increase in the future. Although the population trend at Amsterdam Island is unknown, according to the best available information, there are an estimated 24,890 breeding pairs there, which is above previously low numbers.

There is no information to suggest that predation from fur seals is or will become a threat to the northern rockhopper penguin in any other portion of its range in the future.

Therefore we find that predation by fur seals is not a threat to the northern rockhopper penguin in any portion of its range now or in the future.

Introduced Predators

Rats were eradicated from St. Paul Island in 1999 (Terres Australes and Antarctiques Francaises (TAAF) 2008, p. 3). At Gough Island, Jones *et al.* (2003, p. 81) reported on the presence of mice (*Mus musculus*), but did not indicate any effect on northern rockhopper penguin colonies. There is no information available that suggests predation is a threat to northern rockhopper penguins in any other portion of its range and no reason to believe predation will become a threat to this species in any portion of its range in the future.

Factor D: The Inadequacy of Existing Regulatory Mechanisms

Northern rockhopper penguins are protected from human over-exploitation at the Tristan da Cunha area. Activities involving take of the species, specifically harvest of eggs for domestic use by the small community at Tristan da Cunha Island has been greatly reduced and restricted (BirdLife International 2007, p. 4; DEFRA 2007, p. 2; Tristan da Cunha Web site 2008, p. 1). Gough Island Wildlife Reserve is a Natural World Heritage site and was first protected under the Tristan da Cunha Wildlife Protection Ordinance in 1950. Inaccessible Island, also in the Tristan da Cunha group, was given protection under the Wildlife Protection Ordinance in 1997 and added to the Gough Island Wildlife Reserve World Heritage site in 2004 (UNEP WCMC 2008d, pp. 1–2; Ellis *et al.* 1998, p. 57).

Amsterdam Island was included in the French Antarctic National Park (Parc National Antarctique Francais) in 1938 (World Wildlife Fund and M. McGinley 2007, p. 4). Extensive restoration efforts

are underway at both Amsterdam and St. Paul Islands to restore native flora, control introduced predators and, in particular, to protect and restore the habitat of the endemic Amsterdam albatross (*Diomedea amsterdamensis*) (World Wildlife Fund and M. McGinley 2007, p. 4).

Regular monitoring of northern rockhopper penguins is reported to be taking place at Tristan da Cunha, and Gough, Amsterdam, and St. Paul Islands (Birdlife International 2007, p. 4).

The literature reviewed has not highlighted any current deficiencies in regulatory protection (Ellis *et al.* 1998, p. 57; BirdLife International 2007, p. 4), and we have no reason to believe the existing regulatory mechanisms will be reduced or will be less effective in the future. Therefore, on the basis of the information before us, we find that the existing regulatory mechanisms regarding the conservation of northern rockhopper penguins are adequate now and in the future throughout all or any portion of the species' range.

Factor E: Other Natural or Manmade Factors Affecting the Continued Existence of the Species

Competition With Fisheries

We have found no information documenting competition for prey with fisheries. Reports of possible bycatch from driftnet fishing are identified as having occurred in the past and not likely to recur (BirdLife International 2007, p. 3). BirdLife International (2008a, p. 4) suggests that northern rockhopper penguin food supplies may be affected by squid fisheries, but we have no supporting information to evaluate this factor as potential threat now or in the future.

Oil pollution is a possible concern for northern rockhopper penguins, but we have no information to conclude that this rises to the level of a threat for this species (Ellis *et al.* 2007, p. 5) now or in the future.

Therefore, we find that other natural or manmade factors are not a threat to the northern rockhopper penguin throughout all or any portion of its range now or in the future.

Foreseeable Future

In considering the foreseeable future as it relates to the status of the northern rockhopper penguin, we considered the stressors acting on the species. We considered the historical data to identify any relevant existing trends that might allow for reliable prediction of the future (in the form of extrapolating the trends). We also considered whether we could reliably predict any future events (not yet acting on the species and therefore not yet manifested in a trend) that might affect the status of the species.

With respect to the northern rockhopper penguin, the available data do not support a conclusion that there is a current overall trend in population numbers although the evidence suggests that there may have been significant declines in the past, and the overall population numbers are high. As discussed above in the five-factor analysis, we were also unable to identify any significant trends with respect to the stressors we identified. There is no evidence that any of the stressors are growing in magnitude. Although we believe that recent restrictions on egg collection and take from the wild may manifest itself in the future in a positive manner with respect to trends, with respect to the foreseeable future, we have considered the ongoing effects of current stressors at comparable levels.

There remains the question of whether we can reliably predict future events (as opposed to ongoing trends) that will likely cause the species to become endangered. As we discuss in the finding below, we acknowledge that periodic take from the wild and predation by fur seals may continue to reduce local numbers in some northern rockhopper penguin colonies, but we have no reason to believe they will have population-level impacts. We also acknowledge that restricted egg collection for traditional use and penguin banding activities may affect reproductive success in some colonies; however, we have no reason to believe these activities will have population-level impacts. Thus, the foreseeable future includes consideration of the effects of these factors on the viability of the northern rockhopper penguin.

Northern Rockhopper Penguin Finding Throughout Its Range

We identified a number of likely stressors to this species, including traditional egg harvest, take of individuals from the wild, bird banding associated with research activities, and predation by fur seals. To determine whether stressors individually or collectively rise to a ''threat'' level such that the northern rockhopper penguin is in danger of extinction throughout its range, or likely to become so within the foreseeable future, we first considered whether the stressors to the species were causing a long-term, population-scale decline in penguin numbers, or were likely to do so in the future.

As discussed above, the overall northern rockhopper population is estimated at 315,000–334,000 breeding pairs. Although this species declined severely in numbers over a large portion of its range, these long-term, large-scale declines appear to have ended due to the amelioration of historical threats: (1) Northern rockhopper penguin exploitation for use as bait at St. Paul Island ended in the 1940s, and the species' numbers there subsequently increased by 56 percent; (2) driftnet fishing and penguin use for bait in the Tristan da Cunha region is now prohibited; (3) fisheries bycatch has been reduced or eliminated; (4) egg collection at Tristan da Cunha has been restricted to traditional use for the small local population and has been restricted to certain areas since 2006; and (5) take of individuals from the wild at Tristan da Cunha has also been limited by regulation since 2006. Currently, the only recent documented declines are on Gough Island, which only represents 10 to 20 percent of the overall northern rockhopper population, but information is not available on the scope of the declines on Gough Island. We also do not know if local declines on Gough Island are being offset by increases in other areas. Because there appears to be no ongoing long-term decline, the species is neither endangered nor threatened due to factors causing ongoing population declines, and the overall population of 315,000–334,000 breeding pairs appears robust.

We also considered whether any of the stressors began recently enough that their effects are not yet manifested in a long-term decline, but are likely to have that effect in the future. The small, periodic decrease in numbers due to take from the wild is immediately reflected in population trends. Declines associated with fur seal predation began in the early 1970s, and since fur seal numbers leveled off through the 1990s, there has been sufficient time for the effect on population numbers to be reflected in population trends. The limited number of bird-banding activities has been demonstrated to manifest their effects on reproductive success the year subsequent to the banding activities. Any lag times associated with egg collection are unknown, but since this activity has been severely restricted, we expect any as of yet unobserved effects to be in the positive direction. Therefore, the northern rockhopper penguin is not threatened or endangered due to threats that began recently enough that their effects are not yet manifested in a long-term decline.

Next, we considered whether any of the stressors were likely to increase within the foreseeable future, such that the species is likely to become an

endangered species in the foreseeable future. As discussed above, we concluded that none of the stressors were likely to increase significantly.

Having determined that a current or future declining trend does not justify listing the northern rockhopper penguin, we next considered whether the species met the definition of an endangered species or threatened species on account of its present or likely future absolute numbers. The total population of approximately 315,000–334,000 breeding pairs appears robust. It is not so low that, despite our conclusion that there is no ongoing decline, the species is at such risk from stochastic events that it is currently in danger of extinction.

Finally, we considered whether, even if the size of the current population makes the species viable, it is likely to become endangered in the foreseeable future because stochastic events might reduce its current numbers to the point where its viability would be in question. Because of the wide distribution of this species, combined with its high population numbers, even if a stochastic event were to occur within the foreseeable future, negatively affecting this species, the population would still be unlikely to be reduced to such a low level that it would then be in danger of extinction.

The best available information suggests that the historical long-term, large-scale population declines have ended, largely due to an amelioration of historical threats to the species. Therefore, we conclude that the northern rockhopper penguin is neither an endangered species nor likely to become an endangered species in the foreseeable future throughout all of its range.

Distinct Population Segment

A discussion of distinct population segments and the Service policy can be found above in the southern rockhopper penguin Distinct Population Segment section.

We are not aware of any information that would lead us to conclude that the northern rockhopper penguin is comprised of population segments that are either discrete or significant. Therefore, we have not analyzed the northern rockhopper penguin under the Service's DPS policy.

Significant Portion of the Range Analysis

Having determined that the northern rockhopper penguin is not now in danger of extinction throughout all of its range or likely to become so in the foreseeable future as a consequence of the stressors evaluated under the five factors in the Act, we also considered whether there were any significant portions of its range where the species is in danger of extinction or likely to become so in the foreseeable future. See our analysis for southern rockhopper penguin for how we make this determination.

The northern rockhopper penguin is found in two primary areas of the South Atlantic and Indian Oceans. In our five-factor analysis, we did not identify any factor that was found to be a threat to the species throughout its range. In our status review, we identified Gough Island, Tristan da Cunha, and Amsterdam Island as areas where declines have occurred, indicating the possibility that the species may be threatened or endangered there.

Gough Island

The most recent population estimates indicate that over the past 45 years, numbers have declined by about 96 percent on Gough Island, where there are currently estimated to be 32,000–65,000 breeding pairs (Cuthbert in litt., as cited in BirdLife International 2008a, p. 2–3). Numbers on this island are reported to have experienced large declines prior to the 1980s (BirdLife International 2008a, p. 2), but were stable between 1982 and 2000 (Cuthbert and Sommer 2004, p. 101). Although recent unpublished reports are said to indicate recent substantial declines on Gough Island (Jouventin *et al.* 2006, p. 3,422), more detailed information on these declines is not currently available. Therefore, we cannot assess the regional extent in the declines or the magnitude of the decline. This precludes us from being able to evaluate the overall trend in numbers at Gough Island, and given the recent emergence of the reported decline, we are not able to predict if the decrease in numbers will continue into the future. We have not identified any threat to the species in this area, nor do we have reason to believe this will change within the foreseeable future. Therefore, we find that the northern rockhopper penguin is not threatened or endangered in this portion of its range, and we consequently need not address the question of significance.

Tristan da Cunha

It is reported that from 130 years ago until about 30 years ago the main island of Tristan experienced a decline of about 98 percent. However, since numbers have been stable for the past few decades, there is currently no ongoing long-term decline there. At Inaccessible Island, numbers are reported to have possibly declined ''modestly,'' but the limited information on the basis of this suggestion does not allow a sufficient analysis of trends in this area. Trends at Nightingale and Middle Islands are, likewise, poorly known, and no information is available for trends at Stoltenhof Island. In summary, given the numbers reported above, there appear to be from 146,200–156,500 breeding pairs of northern rockhopper penguins in the Tristan da Cunha Island group, not including those on Stoltenhof Island. Numbers appear stable at Tristan, the main island, but since trends are unknown throughout the remainder of this region, we are unable to establish an overall trend for the region.

Based on our five-factor analysis, we found that the known historical threats to this species in this region have been ameliorated: (1) Driftnet fishing and penguin use for bait is now prohibited; (2) fisheries bycatch has been reduced or eliminated; (3) egg collection has been restricted to traditional use for the small local population and has been restricted to certain areas since 2006; and (4) take of individuals from the wild has also been limited by regulation since 2006. In our five-factor analysis, we were unable to identify any current threats to the species in this area, and we have no reason to believe this will change in the future. Therefore, we find that the northern rockhopper penguin is not threatened or endangered in this portion of its range, and we consequently need not address the question of significance.

Amsterdam Island

The overall numbers at Amsterdam Island declined 57 percent between 1971, when there were 58,000 pairs, and 1993, when there were 24,890 pairs. During the last period from 1988–1993, the numbers fluctuated widely. For the years that survey data are available—in 1988, there were 39,871 pairs (69 percent of the 1971 estimate); in 1990, there were 30,000 pairs (51 percent); in 1991, there were 17,400 pairs (30 percent); in 1992, there were 35,000 pairs (60 percent); and in 1993, there were 24,890 pairs (43 percent). Given the wide fluctuations in this period, with both increases and decreases in numbers, with the last year of data above the lowest figure recorded, it is not possible to conclude that an overall declining trend has continued after this period. The wide fluctuations in this period and the ability of numbers of breeding pairs to rebound by 100 percent between two breeding seasons suggest that observed numbers at breeding colonies during years of low numbers in 1991 and perhaps in 1993

are not representative of the actual abundance in these years. There have been no survey data at Amsterdam Island for the past 15 years, and given the wide fluctuations during the last period of surveys, we cannot reliably predict a future population trend. The most recent population estimate of 24,890 breeding pairs is above previously low numbers, and based on our five-factor analysis, we have not identified any threat to the species in this area, nor do we have reason to believe this will change in the future. Therefore, we find that the northern rockhopper penguin is not threatened or endangered in this portion of its range, and we consequently need not address the question of significance.

Final Determination for the Northern Rockhopper Penguin

On the basis of analysis of the five factors and the best available scientific and commercial information, we find that listing the northern rockhopper penguin as threatened or endangered under the Act in all or any significant portion of its range is not warranted.

Macaroni Penguin

Background

Biology

The macaroni penguin (*Eudyptes chrysolophus*) is a large, yellow-crested, black-and-white penguin that inhabits sub-Antarctic islands from the tip of South America eastwards to the Indian Ocean (BirdLife International 2007, p. 1). It breeds in 16 colonies at 50 sites in: Southern Chile, Falkland Islands, South Georgia and the South Sandwich Islands, South Orkney and South Shetland Islands, Bouvet Island, Prince Edward and Marion Islands, Crozet Islands, Kerguelen Islands, Heard and MacDonald Islands, and locally on the Antarctic Peninsula (Woehler 1993, pp. 52–56; BirdLife International 2007, pp. 2–3).

Breeding colonies range in size from a few breeding pairs to large colonies of up to 180,000 breeding pairs or more (Crawford *et al.* 2003, p. 478; Trathan *et al.* 2006, p. 242). For example, at South Georgia Island in the South Atlantic, there are approximately 17 main breeding aggregations, ranging in size from 1,000 breeding pairs at Sheathbill Bay to 2,560,000 breeding pairs at the Willis Islands (Trathan *et al.* 2006, p. 241; Trathan *et al.* 1998, p. 266). Within these larger locations are individual colonies. For example, at Bird Island, the Fairy Point colony has about 500–600 pairs, Goldcrest Point colony has 43,811 pairs, and Macaroni Cwm colony has about 10,000 breeding pairs (Trathan *et al.* 2006, p. 242). In 2000–01 at Marion Island in the southwestern Indian Ocean, about 53 colonies were distributed around the entire perimeter of the 12 × 7 mi (19 × 12 km) island. Colonies at Marion Island range in size from a few breeding pairs to two large colonies of 143,000 and 186,812 breeding pairs, respectively (Crawford *et al.* 2003, p. 478).

The basic life history of macaroni penguins at breeding sites has been well-described, and there is reported to be little variation in the breeding biology of the members of the genus Eudyptes as a whole (Crawford *et al.* 2003, pp. 477–482). At both South Georgia and Marion Islands, after spending the winter at sea from May to September, breeding birds arrive at the colony synchronously in mid-October. During pre-breeding, incubation, and chick-brooding, the adults fast for long periods ashore, alternating with long periods at sea. At Marion Island, incubation was 35 days; chicks gathered into crèches at 23–25 days and fledged at 60 days around the third week of February (Crawford *et al.* 2003, p. 482). After abandoning the chicks, the adults leave the colony to feed and then return to molt before leaving the colonies for the winter. Age at first breeding at Marion Island is 2–3 years (Crawford *et al.* 2003, p. 482).

Given its large numbers and its widespread distribution, the macaroni penguin is considered to be one of the most abundant bird consumers of Antarctic krill (*Euphausia superba*). In global terms, the species is considered to be one of the most important avian predators, possibly consuming more food than any other seabird species (Trathan *et al.* 2006, pp. 239–240 ; Brooke 2004, p. 248).

Feeding habits studies have identified a variety of prey species consumed by macaroni penguins. At Marion Island, they were found to feed on crustaceans, mainly a decapod shrimp (*Nauticaris marionis*), euphausids (krill) (*Euphaudia vallenti* and *Thyssanoessa vicina*), and amphipods (*Themisto gaudichaudii*) (Crawford *et al.* 2003, p. 484). At South Georgia Island, the primary mass of the diet of macaroni penguins was found to contain krill (*Euphausia superba* (Antarctic krill) and *Thysanoessa* sp.), decapod shrimp (*Chorismus antarcticus*), and amphipods (*Themisto gaudichaudii*), as well as a number of cephalopod and fish species (Croxall *et al.* 1999, p. 128).

Macaroni penguins leave their colonies to forage at sea during the breeding season. At South Georgia Island, they forage in waters bathed by the ACC, which transports krill to the region from the waters around the western Antarctic Peninsula and the Scotia Sea (Trathan *et al.* 2003, p. 569; Trathan *et al.* 2006, p. 240; Reid and Croxall 2001, p. 382; Fraser and Hoffman 2003, p. 13). During the winter the birds leave the colonies, reportedly foraging widely north of the Antarctic Convergence and have been reported from the waters of Australia, New Zealand, southern Brazil, Tristan da Cunha, and South Africa (Shirihai 2002, p. 77).

The range of adults foraging at sea during ''brood guard'' (a portion of the chick provisioning stage—the period when males stay ashore to guard the chicks) is very tightly constrained, with females making limited duration foraging trips lasting about 12 hours (Trathan *et al.* 2006, p. 240). At South Georgia Island, females, when leaving the individual colonies, swim in straight lines along colony-specific trajectories toward predictable prey aggregations at the edge of the continental shelf. If prey is encountered before they reach the shelf edge, they stop and feed until they either return to the colony or move farther offshore to find more prey (Trathan *et al.* 2006, p. 248). In moving in predictable directions offshore during all parts of the chick provisioning stage, penguins move towards waters influenced by the southern ACC front, an area where krill abundance has been shown to be generally higher (Trathan *et al.* 2006, p. 249; Trathan *et al.* 2003, pp. 577, 579). These studies illustrate the importance of the southern ACC front in transporting krill from the region of the Antarctic Peninsula to the waters of South Georgia Island (Trathan *et al.* 2006, p. 240; Reid and Croxall 2001, p. 380).

Population

In 1993, the worldwide population of macaroni penguins was estimated at 11.8 million pairs (Woehler 1993, p. 52). Current estimates place the total population at 9 million pairs (BirdLife International 2007, p. 2; Ellis *et al.* 2007, p. 5; Ellis *et al.* 1998, p. 60), although due to potential underestimates in the South Georgia Island region (see South Atlantic Ocean discussion below), this estimate is, therefore, also likely to be an underestimate of the overall population size.

South Atlantic Ocean

In 1980, there were approximately 5.4 million pairs
± 25 to 50 percent, (Woehler 1993, pp. 3, 55) of macaroni penguins at South Georgia Island, yielding a range of 2.7–8.1 million pairs. At that same location, the current estimates are 2.5–2.7 million

pairs (BirdLife International 2007, p. 3; DEFRA 2007, p. 2). The current estimate, however, is likely to be an underestimate as it is based on extrapolations of counts in smaller areas to predict numbers in larger areas—an estimation technique of questionable use in this species (for example, at the Prince Edward Islands in the Indian Ocean, extrapolations of declining trends at small study colonies to estimates of overall trends for the overall island were not supported by empirical data; declines at larger colonies were much less significant than those at small colonies (Crawford *et al.* 2003, p. 485)).

At South Georgia Island, the current overall number was extrapolated from bird counts at a selected number of colonies that had declined by 50 percent over the last 2 decades of the 20th century (BirdLife International 2007, p. 3; Trathan *et al.* 2006, pp. 249–250). The conclusion that the overall South Georgia numbers had halved during that same time period has not been empirically verified in the literature (Trathan *et al.* 1998, p. 265; Trathan and Croxall 2004, p. 125; Trathan *et al.* 2006, pp. 249–250; Trathan 2004, p. 342). Furthermore, given the large variability in the 1980s estimate (2.7–8.1 million pairs) combined with the likely underestimate of current numbers at South Georgia Island (2.5–2.7 million pairs), we cannot reliably determine that there has been any decline in overall population numbers at South Georgia Island, nor can we reliably predict a declining population trend in the future.

South of the large concentrations of macaroni penguins at South Georgia Island, there are small colonies scattered locally around South Shetland Islands (about 7,080 total pairs), South Orkney Islands (about 50 pairs), and South Sandwich Islands (about 3,000 pairs), and a pair reported on the Antarctic Peninsula (Woehler 1993, p. 54–55; BirdLife International 2007, p. 3).

In the southeast Atlantic Ocean at Bouvet Island (Norwegian Territory), there were some 100,000 breeding pairs in the 1960s and early 1970s, but these are reported to have ''subsequently decreased'' but there is no current estimate (BirdLife International 2007, p. 3; Woehler 1993, p. 52).

Macaroni penguins also breed in small colonies in approximately 8 island sites around the southern tip of South America in southern Chile with abundance totaling up to 75,000 pairs and are reported to be stable (Woehler 1993, p. 56; BirdLife International 2007, p. 4).

Indian Ocean

In the Prince Edward Islands (South African Territory), there are about 300,000 pairs reported at Marion Island and 9,000 pairs at Prince Edward Island (Crawford and Cooper 2003, p. 417; Crawford 2007, p. 9). At Marion Island, there was a decline from 434,000 pairs in 1994–95 to 356,000 pairs in 2002–03, but given the magnitude of the population numbers, this 18-percent decline over the 8-year time period is not considered to be a significant change in the population (Crawford *et al.* 2003, p. 485). In the three subsequent breeding years (2003–06) small fluctuations between 350,000 and 300,000 pairs were observed (Crawford 2007, p. 9).

On a local scale at Marion Island, significant declines in three small study colonies (each under 1,000 pairs) have been reported, although the extent of the declines is questionable. Monitoring of these colonies between 1979–80 and 2002–03 indicated a cumulative decrease in numbers by 88 percent (Crawford *et al.* 2003, p. 485); however, changes in survey methodology, as explained below, limit the comparability of the survey data, calling into question actual changes in population numbers. While Crawford *et al.* (2003, p. 485) and Crawford (2007, p. 9) reported that the total number of breeding pairs in these colonies (comprising 9 to 20 percent of the total breeding numbers at Marion Island) decreased by 60 percent from 1994–95 to 2002–03, after a long period of relative stability, a sudden drop in numbers appeared at the same time as an apparent shift in the investigators' survey or tallying methodology (Crawford *et al.* 2003, p. 478). Despite the declines reported, breeding success increased from 1995–96 to 2004–05 in study colonies (Crawford *et al.* 2003, p. 484).

At Prince Edward Island, which has a fraction of the macaroni penguins of its neighboring Marion Island, numbers declined from approximately 17,000 pairs in 1976–77 to an estimated 9,000 pairs in 2001–02 (Crawford *et al.* 2003, p. 483). According to the more current information provided here, the current IUCN figures overestimate the percentage decline of the macaroni penguin at the Prince Edward Islands (BirdLife International 2007, p. 3). Summing the figures provided above on overall population declines at Marion and Prince Edward Islands, we calculate the total decline for the two islands to be approximately 32 percent since 1979, instead of the 50 percent reported.

Moving eastward in the southern Indian Ocean, Woehler (1993, p. 52; BirdLife International 2007, p. 4) reported up to 2 million breeding pairs at the Crozet Island. Farther east at the Kerguelen Islands, there are reported to be about 1.8 million pairs of macaroni penguin, with a reported increase of 1 percent per year between 1962 and 1985, and 1998 data indicate colonies are stable or increasing (BirdLife International 2007, p. 4).

The Heard and McDonald Islands south of the Kerguelen Islands are reported to have about 1 million breeding pairs each (Birdlife International 2007, p. 3; Woehler 1993, p. 53). There are no reports of trends.

Other Status Classifications

The macaroni penguin is categorized as 'Vulnerable' by IUCN Criteria because ''overall a majority of the world population appears to have decreased by at least 30 percent over 36 years (three generations).'' However, it is noted that this ''classification relies heavily on extrapolation from small-scale data, and large-scale surveys are needed to confirm the categorization'' (BirdLife International 2007, p. 1).

Population Summary

Current estimates place the total population of macaroni penguins at 9 million pairs (BirdLife International 2007, p. 2; Ellis *et al.* 2007, p. 5; Ellis *et al.* 1998, p. 60). Although penguin numbers appear to have declined by about 32 percent in the Prince Edward Islands since the late 1970s, this area represents only 3.4 percent of the overall current macaroni penguin population. As described above, in other parts of the species' range, trends are increasing, stable, or unknown due to poor or scant data. Given the different population dynamics observed throughout the range of the macaroni penguin, as described above, we cannot reliably predict nor do we have reason to believe that the overall population numbers will decline in the future.

Summary of Factors Affecting the Species

Factor A: The Present or Threatened Destruction, Modification, or Curtailment of Its Habitat or Range

Terrestrial Habitat

We have found no current reports of threats to the terrestrial breeding habitat of the macaroni penguin, and we have no reason to believe threats to the terrestrial habitat will emerge in the future.

Reduced Prey Availability

Changes in the availability of prey to the macaroni penguin have been hypothesized for declines observed in study colonies at Marion and South Georgia Islands. Below, we discuss both the potential impacts of low prey availability, as well as potential causes of reduced prey availability, including interspecific competition and climate-related changes in the marine environment. In Factor E, we discuss the potential impacts of fisheries on prey availability.

At Marion Island, moderate decreases in macaroni penguin numbers have been attributed to an altered availability of food (Crawford and Cooper 2003, p. 417) based on changes in weight of returning birds after a winter at sea and variations in mass of chicks at fledging (Crawford *et al.* 2006, pp. 185–186), but there is currently insufficient research evaluating the causes of declines at Marion Island to draw science-based conclusions.

At South Georgia Island, researchers have looked in depth at the foraging behavior and diet of macaroni penguins and other marine predators and related them to interspecific competition, prey switching, and changes in the overall food base. While krill is known as the primary prey of the macaroni penguins, at South Georgia Island study colonies, the percentage of krill in the diet at Bird Island declined significantly from 1980–2000, particularly after 1995 (Reid and Croxall 2001, p. 379). During this period, there was also a decline in the small Bird Island study colony (Reid and Croxall 2001, p. 379). The percentage of krill in the macaroni penguin diet was significantly correlated to the density of krill in the region and was also directly related to prey-switching by the penguins (Barlow *et al.* 2002, p. 211). In 1984, for example, krill was abundant and comprised 95 percent of the mass of prey in the diet of macaroni penguins studied at South Georgia Island (Croxall *et al.* 1999, p. 115). However, in years when krill abundance was reduced, as in 1994 when there was a four-fold decrease in krill biomass from 1984, the penguins studied shifted their diet to other prey species, including amphipods (63.2 percent of the mass in the diet) and fish species (15 percent, in particular, myctophids (*Krefftichthys anderssonii*) and channichthids (*Pseudochaenichthys georgianus*)), while krill comprised only 13.1 percent of the diet (Croxall *et al.* 1999, p. 117). This prey-switching behavior suggests that the macaroni penguin has some adaptability in adjusting to temporary fluctuations in their preferred prey (krill).

Reduction of Prey Due to Competition

Barlow *et al.* (2002, pp. 205–213) examined whether the decreased availability of krill for macaroni penguins at South Georgia Island is a result of competition with the other major krill predator in the region, the Antarctic fur seal. Study colonies of macaroni penguins have declined at South Georgia Island over the past 2 decades (see Population discussion above), while fur seal numbers have increased at a very rapid rate since the 1950s. The fur seal has recovered from near extinction in the first half of the 20th century (to 400,000 in 1972 and to more than 3 million individuals breeding at South Georgia Island at the present day), and they have expanded their breeding range across the northwest end of South Georgia Island (Barlow *et al.* 2002, p. 206). These researchers found at the Bird Island study site that there was substantial overlap in the foraging range of macaroni penguins and Antarctic fur seals during the breeding season, and that the size and nature of krill prey consumed were very similar. They were unable to determine if the different population trajectories of the two species during the same period reflected ''different and independent species-specific responses to variation in krill availability, or whether (or to what extent) they have been substantially influenced by direct interspecific competition'' (Barlow *et al.* 2002, p. 211). Therefore, although the researchers suggest there is a dynamic interaction that currently favors Antarctic fur seals over macaroni penguins in the study area, this suggestion is speculation because the empirical data have not distinguished whether the penguins and fur seals each have different and independent responses to the variation in krill availability or, alternatively, whether the two species have been influenced by being in direct competition with each other (*i.e.*, the research has not confirmed that competition is occurring). Furthermore, given that the level of interspecific competition is uncertain, the authors' prediction that competition will likely increase as fur seals continue to increase (Barlow *et al.* 2002, p. 212) is also speculation.

With respect to changes in the krill abundance at South Georgia Island, Reid and Croxall (2001, pp. 377–384) examined population demographics of the krill prey in the diets of four marine predators breeding at Bird Island—Antarctic fur seals, macaroni penguins, gentoo penguins (*Pygoscelis papua*), and black-browed albatrosses (*Thalassarche melanphrys*). For data averaged over the decade of the 1980s, the two penguin species and the Antarctic fur seals were consistently consuming the majority of their krill diet from the largest of three size classes identified. For the decade of the 1990s, there was a change in all three species toward consuming krill in the middle size class (Reid and Croxall 2001, p. 380). At the same time, negative changes in the reproductive performance of all four species were recorded. For macaroni penguins in the colonies studied, arrival condition and reproductive output declined significantly in the second decade after stability in penguin numbers in those colonies in the 1980s. These results suggest that in the 1980s the biomass of krill in the largest size class was sufficient to support predator demand, but it was not in the 1990s (Reid and Croxall 2001, p. 378).

Indices of reproductive output for macaroni penguins in study colonies declined over the period from 1980–2000 (Reid and Croxall 2001, pp. 379–380). While it is difficult to separate the relative contribution to this decline from interspecific competition versus reduction of krill due to other reasons, macaroni penguins were found to be unique among the four predator species studied because they were able to compensate for low availability of krill by switching to other prey (Reid and Croxall 2001, pp. 379, 381; Croxall *et al.* 1999, p. 117).

Reid and Croxall (2001, p. 383) concluded that the balance between krill supply and predator demand altered substantially from 1980–2000. They suggested that a combination of two factors: (1) Changes in the krill population structure arriving from the Antarctic Peninsula source region, and (2) increased predator-induced mortality on the larger size classes of krill arriving in the region effectively removed the buffer of krill abundance and increased ''the frequency of years where the amount of krill is insufficient to support predator demand'' (Reid and Croxall 2001, p. 383). They suggested that this buffer or ''krill surplus'' noted in the 1980s may have dated from the time when whaling severely reduced the numbers of great whales in the Southern Ocean. This unusually high temporary biomass of krill might have supported a higher biomass of predators, potentially resulting in artificially high population numbers of certain predator species, such as macaroni penguins. We acknowledge that the change in ecosystem dynamics could lead to a

new predator-prey equilibrium, whereby, some species temporarily decline in numbers. This possibility precludes our ability to reliable extrapolate population trends into the future, as long as population numbers are relatively high, as they are in the macaroni penguin.

Reduction of Prey Due to Climate-Related Changes in the Marine Environment

Changes in climate could potentially impact aspects of the marine environment such as sea surface temperatures or shifts in currents, ultimately leading to changes in prey availability. Reid and Croxall (2001, p. 377) hypothesized that changes in the Antarctic Peninsula region could affect the recruitment of the Antarctic krill populations that supply the South Georgia Island marine ecosystem. Reid *et al.* (2002, p. 1) showed that the size structure of the local South Georgia Island krill population tracked closely with krill-recruitment events in the Elephant Island region at the northeastern tip of the Western Antarctic Peninsula (WAP). Events at Elephant Island, in turn, have been found to be coherent with events at the Peninsula itself (Fraser and Hoffman 2003, p. 9).

Trathan *et al.* (2003, p. 581) concluded that physical data at the spatial and temporal resolution necessary to identify possible relationships between large-scale variability within the ACC and the krill biomass at South Georgia Island are not available. They did note, on a preliminary basis, that periods of high krill abundance (*i.e.*, January 1992 and January 1998) were linked to unusually low sea surface temperatures in the southern ACC front near South Georgia Island and that periods of krill scarcity were linked to sea surface temperatures in the upper 20 percent of recorded values (*i.e.*, January 1991 and January 1994) (Trathan *et al.* 2003, p. 581). In describing warm and cold anomalies in the temperature of the southern ACC front, these authors did not address the question of whether there are consistent directional changes occurring in the temperature of this current (Trathan *et al.* 2003, pp. 569–582).

Fraser and Hoffman (2003, pp. 1–15) reviewed the krill cycle and the recruitment of krill and related them to cyclical patterns of sea-ice extent at the WAP. In studies similar to those at South Georgia Island, the authors examined data on krill size classes in the diet of a different species, the Adelie penguin (*Pygoscelis adeliae*) near Palmer Station on the WAP, and compared these data against cyclical variability in sea-ice extent between 1973 and 1996. Analyses have shown that WAP sea-ice extent exhibits 4- to 5-year cycles of high ice years followed by several low-ice years. The cycles follow the periodicity of the Antarctic Circumpolar Wave (a phenomenon of interannual anomalies in the atmospheric pressure, wind stress, sea surface temperature, and sea-ice extent over the Southern Ocean that propagates eastward with a period of over 4–5 years and takes 8–10 years to circle the globe) (White and Peterson 1996, p. 699; Fraser and Hoffman 2003, p. 8). At the WAP, Fraser and Hoffman (2003, p. 6) identified the beginning of five cycles between the 1973–74 and 1996–97 field seasons, and tracked four complete cycles (two 4-year, one 5-year, and one 6-year). They looked at trends in krill size classes within the diet of Adelie penguins and found that years of high krill recruitment followed years of maximum September (winter) sea-ice extent (Fraser and Hoffman 2003, p. 6). In the years following high krill-recruitment years, the Adelie penguin diet reflected the consumption of larger and larger krill each year as the dominant large cohort grew, through a 4-to 5-year period, until the next large krill-recruitment year occurred.

The strong age classes produced in a good ice year become the core spawning stock for the next cyclical sea-ice maximum, generally 4 or 5 years away, with smaller cohorts in the intervening years. Krill reach the limit of their life span after 5 years, and this age class is reduced from several years of predation and mortality. We have discussed above the work of Fraser and Hoffman (2003, pp. 1–15), who reviewed the krill cycle and the recruitment of krill and related them to cyclical patterns of sea-ice extent at the WAP. Of significance to the observed trends at South Georgia Island, a 6-year ice cycle occurred between 1980 and 1986 (a gap unique in the contemporary WAP sea-ice record), which had significant consequences for krill recruitment (Fraser and Hoffman 2003, p. 12). This ''senescence event'' in which the large krill cohort originating from the 1980 sea-ice maxima may have died before they could reproduce and contribute to the next generation of recruits may have led to a loss of most of the strong 1980–81 cohort and its reproductive potential (Fraser and Hoffman 2003, p. 12). The authors suggested this may have had major ecological consequences. Correspondingly, krill abundance was at its lowest recorded levels at Elephant Island in 1990, at the time the lost cohort would have been expected to spawn again and, at South Georgia Island, krill predators, including macaroni penguins at study colonies, began to decline significantly after being stable throughout the 1980s (Fraser and Hoffman 2003, p. 13). The authors noted that two or more closely spaced senescence events of this sort would have devastating consequences on the structure and function of krill populations and the ecosystems they support (Fraser and Hoffman 2003, p. 13).

The study of Trathan *et al.* (2003, p. 581) described 2 years of ''particularly high'' krill abundance and 2 years of ''particularly low'' krill abundance during the 1990s. The study raises questions as to the ability to generalize comparisons between the 1980s and 1990s to the current period (2001 to the present), for which we currently have little or no empirical data either for krill or macaroni penguin abundance or reproductive output. The decadal analyses of krill abundance and macaroni penguin reproductive output at study colonies at South Georgia Island through the year 2000 (Reid and Croxall 2001, p. 377), and of krill response off the WAP to climate change, physical forcing (*e.g.*, shifts in current or temperature patterns), and ecosystem response, suggest that the krill populations and the ecosystems they inhabit have become more vulnerable to climate-induced perturbations (Fraser and Hoffman 2003, p. 13) and that overall krill abundance has declined significantly in the last few decades (Atkinson *et al.* 2004, p. 101; Loeb *et al.* 1997, p. 897).

Conclusion for South Georgia Island

Significant changes in krill abundance and composition have been documented in study colonies of macaroni penguins on South Georgia Island during a period of decline (up to 50 percent) of macaroni penguins in those colonies over the last 2 decades of the 20th century. Although these declines have been associated with a variety of factors, including: (1) Variations in the temperature of the ACC at South Georgia Island (Trathan *et al.* 2003, p. 581) and cycles of sea-ice extent at the WAP, which have affected krill recruitment (Fraser and Hoffman 2003, p. 13), and (2) increases in numbers of Antarctic fur seals, which share the same food, suggesting competition, not enough information is known about these relationships to predict the availability of krill to macaroni penguins in the future.

Despite concurrent declines in macaroni penguin numbers and

increases in fur seal numbers in certain areas of the South Georgia region, studies have not confirmed that competition between the two species is occurring. Therefore, we cannot make reliable predictions about whether competition will occur in the foreseeable future, much less to what extent it would affect the availability of krill to the macaroni penguin.

Although it is possible that climate change will result in changes within the ACC and krill biomass and/or the frequency or severity of krill ''senescence events,'' potentially affecting the macaroni penguin population in the South Georgia Island region, we do not have sufficient physical data at the spatial and temporal resolution necessary to identify or predict possible trends or relationships between large-scale variability within the ACC, sea ice changes, and potential changes in the krill biomass.

Aside from our inability to identify future trends related to krill availability to the macaroni penguin at South Georgia Island, neither do we have enough information on the adaptability of the macaroni penguin to changing krill availability. For example we do not know the extent of flexibility it has in: (1) Relying on a greater diversity of prey species to satisfy its long-term biological needs; (2) altering its foraging routes; or (3) moving its breeding locations closer to more dependable food supplies.

Despite our inability to predict future trends with regard to changes in prey availability to the macaroni penguin or its ability to adapt to those potential changes, we do not believe that the changes in food availability currently acting on the macaroni penguin population at South Georgia Island are causing a long-term decline in this population. Although numbers may have declined locally, these declines could have been offset, at least to some extent, by increases elsewhere within the South Georgia Island region, and the population continues to survive there in large numbers.

Macaroni penguins at South Georgia Island appear to have some ability to switch to different prey at times of low krill abundance. Given its flexibility in switching to alternative prey species and the estimated abundance of the macaroni penguin population at South Georgia Island (2.5–2.7 million pairs, and likely greater due to potential underestimates), we believe that this population can withstand disturbances linked to the marine changes identified. Given the lack of comprehensive survey data throughout the South Georgia Islands, we cannot reliably predict, nor do we have reason to believe, that the overall population numbers will decline in the future as a result of the marine changes identified. Therefore, we find that the present or threatened destruction, modification, or curtailment of the species' marine habitat or range is not a threat to the macaroni penguin in the South Georgia Island portion of its range now or in the foreseeable future.

Conclusion for the Remainder of the Macaroni Penguin's Range

At Marion Island, moderate decreases in macaroni penguin numbers have been attributed to an altered availability of food (Crawford and Cooper 2003, p. 417), but there is currently insufficient research evaluating the causes of declines at Marion Island to draw any conclusions about the causes, much less make predictions about future trends of prey availability in that area. There is no information available suggesting that a reduction in prey availability is a threat to the macaroni penguin in any other portion of the species' range.

Although penguin numbers appear to have declined by about 32 percent in the Prince Edward Islands since the late 1970s, this area represents only 3.4 percent of the overall current macaroni penguin population. As described above (see Population discussion), in other parts of the species' range, trends are increasing, stable, or unknown due to poor or scant data. Given the different population dynamics observed throughout the remainder of the range of the macaroni penguin, we cannot reliably predict nor do we have reason to believe that the overall population numbers will decline in the future as a result of marine changes. Therefore, we find that the present or threatened destruction, modification, or curtailment of the species' marine habitat or range is not a threat to the macaroni penguin in any other portion of its range now or in the foreseeable future.

Factor B: Overutilization for Commercial, Recreational, Scientific, or Educational Purposes

We are not aware of any overutilization for commercial, recreational, scientific, or educational purposes that is a threat to the macaroni penguin in any portion of its range (BirdLife International 2007, pp. 1–3; Ellis *et al.* 1998, p. 61) now or in the foreseeable future.

Factor C: Disease or Predation

No blood-borne parasites (*haematozoa*) were found in any of 89 blood smears from macaroni penguins collected at Marion Island in 2001 (Crawford and Cooper 2003, p. 418). Although parasites and disease have not been identified as stressors at this island or other areas of the Prince Edward Islands, the potential susceptibility of sub-Antarctic penguins to haematozoan vectors has been recognized, and so strict measures have been put in place at the Prince Edward Islands to minimize the possibility of introducing avian diseases. Therefore, we do not have reason to believe that disease will become a threat at the Prince Edward Islands in the foreseeable future. Disease has not been identified as a threat to macaroni penguins in any other areas of the species' range, nor do we have reason to believe disease will become a threat in any portion of the species' range within the foreseeable future. Therefore, we find that disease is not a threat to the macaroni penguin in any portion of its range now or in the foreseeable future.

Predation has not been cited as a threat in macaroni penguins. Although predation by feral cats has been reported on Kerguelen Archipelago, remains of macaroni penguins were rarely found in scat analyses from feral cats there (Pontier *et al.* 2002, p. 835), and the rare exceptions could have been a result of scavenging on carcasses as opposed to predation. There have been no reported local or large-scale declines in macaroni penguin numbers at the Kerguelen Islands, and in fact, there were reported increases in numbers there at a rate of 1 percent per year between 1962 and 1985. The 1998 data indicate colonies are stable or increasing (BirdLife International 2007, p. 4). This suggests that predation is not affecting the macaroni penguin numbers there. There is no information available that suggests the number of predators at the Kerguelen Islands will increase in the foreseeable future or that the current potential predators will begin to affect penguins in the foreseeable future. Therefore, we do not consider predation to be a stressor, much less a threat to macaroni penguins on the Kerguelen Archipelago. There is no information available that suggests predation is a threat to macaroni penguins in any other portion of its range, now, nor do we expect it to become a threat in the foreseeable future.

Based on review of the best available scientific and commercial information, we find that predation is not a threat to the macaroni penguin in any portion of its range now or in the foreseeable future.

Factor D: The Inadequacy of Existing Regulatory Mechanisms

The macaroni penguin is widely distributed on largely uninhabited islands in the territories of seven countries and the region under the jurisdiction of the Antarctic Treaty and the Convention for the Conservation of Antarctic Marine Living Resources (CCAMLR). Breeding islands are largely inaccessible, access is tightly controlled, and most of them are under protected status (BirdLife International 2007, p. 4; Ellis *et al.* 1998, p. 61). South Georgia Island is administered by the Government of South Georgia and South Sandwich Islands (GSGSSI). Research on macaroni penguins in South Georgia, for example at Bird Island, which is a Specially Protected Area under the South Georgia Environmental Management Plan, is conducted by the British Antarctic Survey under annual permits from the GSGSSI. Visitation to South Georgia is tightly controlled with visitors' permits required prior to visiting research sites (British Antarctic Survey 2008, p. 2). The Australian islands of Heard and McDonald are also World Heritage sites with limited or no visitation and with management plans in place (UNEP WCMC 2008, p. 6). In 1995, the Prince Edward Islands Special Nature Preserve was declared and accompanied by the adoption of a formal management plan (Crawford and Cooper 2003, p. 420). In our analysis of other factors, we determined that existing national regulatory mechanisms are adequate regarding the conservation of macaroni penguins throughout all or any portion of the species' range. (For example in our discussion of Factor E, we consider the adequacy of CCAMLR in the conservation and management of krill fisheries.) Furthermore, there is no information available to suggest this will change within the foreseeable future.

Factor E: Other Natural or Manmade Factors Affecting the Continued Existence of the Species

Competition With Commercial Krill Fisheries

Another possible factor affecting krill abundance is commercial krill fisheries. Krill fisheries have operated in the region of South Georgia Island since the early 1980s and are managed by CCAMLR (Reid and Croxall 2001, p. 383). Harvesting occurs in the winter around South Georgia Island and moves south as the ice retreats in spring and summer. Krill fisheries have harvested only a fraction of the approved CCAMLR catch limits since 1993 (Croxall and Nichol 2004, p. 574). In their analysis of predator response to changes in krill abundance, Reid and Croxall (2001, p. 383) note that the fishery near South Georgia Island is small and that total catches actually declined by almost 50 percent since 1980 for commercial reasons, rather than due to lack of krill abundance. They do not cite competition with krill fisheries as a contributor to macaroni penguin declines (Reid and Croxall 2001, p. 383); however, given that we have already identified the reduced availability of krill as a stressor to the macaroni penguin (see Factor A), we recognize that commercial krill fisheries have the potential to contribute as one of several sources of this stressor. With respect to the local macaroni penguin declines observed, Reid and Croxall (2001, p. 383) note that the potential for competition with krill fisheries should be taken into account in future CCAMLR krill management strategies.

Croxall and Nicol (2004, pp. 570–574) reported on the ongoing efforts within CCAMLR to improve management procedures for the krill fishery in long-established fisheries areas and sub-areas in the Southern Ocean. These included improving the overall estimation of krill to redefine catch limits over large sectors of the Southern Ocean (Croxall and Nicol 2004, p. 573). Also, out of concern that krill management was being undertaken at a scale too large to prevent localized depletion of the krill resource if the fishery was concentrated in small proportions of a particular established area or sub-area, CCAMLR adopted approaches to better manage the area encompassing the Antarctic Peninsula, Scotia Sea, and South Georgia.

First, on the basis of the work of their scientific committee, the CCAMLR Commission in 2002 formally adopted smaller and more ecologically realistic management areas, referred to as Small-Scale Management Units (SSMUs) to manage krill fishing at scales most relevant to the natural environment—prey-predator interactions (Hewitt *et al.* 2004, p. 84). This includes three SSMUs established in the South Georgia region. At the same time, CCAMLR adopted precautionary catch limits, well below the catch limits identified in global scale analyses, to limit harvest in the fisheries areas while specific protocols for dividing harvest among the SSMUs are being developed (Hewitt *et al.* 2004, p. 84).

The process of establishing science-based approaches by which to allocate harvest to the SSMUs was agreed by the CCAMLR commission and is well underway. Allocation options have been developed (Hewitt *et al.* 2004, pp. 81–97); these are being evaluated in a series of meetings that have taken place over the last 3 years; and by spring 2008, a model will be developed to allocate catch limits (Trivelpiece 2008, pers. comm.). This model will allow testing of different approaches to allocating catch and lead to recommendations to the Scientific Committee and the CCAMLR Commission (Hewitt *et al.* 2004, p. 84). This work to establish decision rules includes assessing: (1) Spatial and temporal use of the area by krill predators and fisheries; (2) fluxes of krill into and out of the area; (3) competition between species; and (4) how to manage these areas to respond to ecosystem change (Croxall and Nicol 2004, p. 573). In support of development of allocation approaches at the level of SSMUs, CCAMLR has already adopted a requirement that krill catches be reported to very small geographical detail (10 x 10 nm) and over small 10-day time scales (Hewitt *et al.* 2004, p. 84). Parallel efforts by the CCAMLR Ecosystem Monitoring Program involve monitoring selected predator, prey, and environmental indicators of ecosystem status to detect and record changes in critical components of the ecosystem and distinguish the impacts of harvesting from other environmental variability (Croxall and Nichol 2004, pp. 573–574).

Conclusion for South Georgia Island

Based on: (1) The small size of krill fisheries in the region of South Georgia Island, and (2) the ongoing efforts under CCAMLR to sustainably manage krill species, efforts specifically designed to investigate and respond to the phenomena described for the South Georgia Island region (*e.g.*, the setting of precautionary catch limits designed to limit local impacts and the development and implementation of SSMUs), we find that competition with krill fisheries is not a threat to the macaroni penguin at South Georgia Island. Furthermore, we have no reason to believe that the krill fisheries will expand in this region in the foreseeable future or that the current management and regulatory mechanisms will be weakened or become less effective in the foreseeable future.

Conclusion for the Remainder of the Macaroni Penguin's Range

Given the ongoing efforts within CCAMLR to improve management procedures for the krill fishery in long-established fisheries areas and sub-areas in the Southern Ocean (Croxall and Nicol 2004, pp. 570–574), including: (1) Efforts already completed to provide better management of overall harvest

limits and the adoption of precautionary catch limits for smaller management areas, and (2) the substantial progress being made in bringing krill harvest management down to the scale of SSMUs, we find that regulatory mechanisms for the management of krill fisheries are adequate. We have no reason to believe that the current regulatory mechanisms will be weakened or become less effective in the future. As discussed above, management efforts even improved over the last several years. Therefore, we find that competition with krill fisheries is not a threat to the macaroni penguin in any other portion of its range now or in the foreseeable future.

Oil Spills

The possibility of oil pollution is cited in reviews of the conservation status of macaroni penguins (BirdLife International 2007, p. 3; Ellis *et al.* 1998, p. 61). At Marion Island, oil spills have had severe effects on penguins at landing beaches, but a new Prince Edward Islands Management Plan, prepared by the Republic of South Africa, now requires that utmost care be taken to avoid fuel spills during transfers at the islands (Crawford and Cooper 2003, p. 418).

Oil and chemical spills can have direct effects on the macaroni penguin in New Zealand waters, and based on previous incidents around New Zealand, we consider this a stressor to this species. For example, in March 2000, the fishing Vessel *Seafresh 1* sank in Hanson Bay on the east coast of Chatham Island and released 66 tons (60 tonnes (t)) of diesel fuel. Rapid containment of the oil at this very remote location prevented any wildlife casualties (New Zealand Wildlife Health Center 2007, p. 2). The same source reports that in 1998 the fishing vessel D*on Wong 529* ran aground at Breaksea Islets, off Stewart Island, outside the range of the erect-crested penguin. Approximately 331 tons (300 t) of marine diesel was spilled along with smaller amounts of lubricating and waste oils. With favorable weather conditions and establishment of triage response, no wildlife casualties of the pollution event were discovered (Taylor 2000, p. 94). We are not aware of reports of other oil spill incidents within the range of the macaroni penguin.

We recognize that an oil spill near a breeding colony could have local effects on macaroni penguin colonies. However, on the basis of the species' widespread distribution around the remote islands of the South Atlantic and southern Indian Oceans and its robust population numbers, we believe the species can withstand the potential impacts from oil spills. Also, given the remoteness of South Georgia Island, its relatively high population numbers, and the measures in place to control cruise vessel activities in the region, we believe the population on South Georgia Island can withstand the potential impacts from oil spills. Furthermore, we have no reason to believe that the frequency or severity of oil spills in any portion of the species' range will increase in the future or that containment capabilities will be weakened. Therefore, we conclude that oil pollution from oil spills is not a threat to the species in any portion of its range now or in the foreseeable future.

Foreseeable Future

In considering the foreseeable future as it relates to the status of the macaroni penguin, we considered the stressors acting on the macaroni penguin. We considered the historical data to identify any relevant existing trends that might allow for reliable prediction of the future (in the form of extrapolating the trends). We also considered whether we could reliably predict any future events (not yet acting on the species and therefore not yet manifested in a trend) that might affect the status of the species.

With respect to the macaroni penguin, the available data do not support a conclusion that there is a current overall trend in population numbers, and the overall population numbers are high. As discussed above in the five-factor analysis, we were also unable to identify any significant trends with respect to the stressors we identified. There is no evidence that any of the stressors are growing in magnitude. Thus, the foreseeable future includes consideration of the ongoing effects of current stressors at comparable levels.

There remains the question of whether we can reliably predict future events (as opposed to ongoing trends) that will likely cause the species to become endangered. As we discuss in the finding below, we can reliably predict that periodic declines in prey availability and oil spills will continue to cause local declines in macaroni penguin colonies, but we have no reason to believe they will have population-level impacts. Thus, the foreseeable future includes consideration of the effects of such crashes on the viability of the macaroni penguin.

Macaroni Penguin Finding Throughout Its Range

We identified a number of stressors to this species: (1) Reduced prey (krill) availability due to (a) competition with Antarctic fur seals, (b) changes in the marine environment, or (c) competition with commercial krill fisheries; and (2) oil spills. To determine whether these stressors individually or collectively rise to a ''threat'' level such that the macaroni penguin is in danger of extinction throughout its range, or likely to become so within the foreseeable future, we first considered whether the stressors to the species were causing a long-term, population-scale decline in penguin numbers, or were likely to do so in the future.

As discussed above, the overall macaroni penguin population is estimated at 9 million pairs (BirdLife International 2007, p. 2; Ellis *et al.* 2007, p. 5; Ellis *et al.* 1998, p. 60) and is likely to be greater due to likely underestimates at South Georgia Island. Although penguin numbers appear to have declined by about 32 percent in the Prince Edward Islands since the late 1970s, this area represents only 3.4 percent of the overall current macaroni penguin population. In other parts of the species' range, trends are increasing, stable, or unknown due to poor or scant data. Based on the best available data, we conclude that the population is stable overall. In other words, the combined effects of reduced prey availability, competition with Antarctic fur seals, changes in the marine environment, competition with commercial krill fisheries, and the impacts from oil spills at the current levels are not causing a long-term decline in the macaroni penguin population. Because there appears to be no ongoing long-term decline, the species is neither endangered nor threatened due to factors causing ongoing population declines, and the overall population of 9 million pairs or more appears robust.

We also considered whether any of the stressors began recently enough that their effects are not yet manifested in a long-term decline, but are likely to have that effect in the future. There is little data on macaroni penguin prey availability prior to the last 3 decades, and even less information on causes of prey decline. In any case, the periodic declines in prey availability over the last 30 years have had sufficient time to be reflected in population trends, and there appears to be no overall trend, regardless of localized changes in abundance. In addition, no oil spill events have occurred recently enough

that the population effects would not yet be observed. Therefore, the macaroni penguin is not threatened or endangered due to threats that began recently enough that their effects are not yet manifested in a long-term decline.

Next, we considered whether any of the stressors were likely to increase within the foreseeable future, such that the species is likely to become an endangered species in the foreseeable future. As discussed above, we concluded that none of the stressors were likely to increase significantly.

Having determined that a current or future declining trend does not justify listing the macaroni penguin, we next considered whether the species met the definition of an endangered species or threatened species on account of its present or likely future absolute numbers. The total population of approximately 9 million pairs or more appears robust. It is not so low that, despite our conclusion that there is no ongoing decline, the species is at such risk from stochastic events that it is currently in danger of extinction.

Finally, we considered whether, even if the size of the current population makes the species viable, it is likely to become endangered in the foreseeable future because stochastic events might reduce its current numbers to the point where its viability would be in question. Because of the wide distribution of this species, combined with its high population numbers (approximately 9 million pairs), even if a stochastic event were to occur within the foreseeable future, negatively affecting this species, the population would still be unlikely to be reduced to such a low level that it would then be in danger of extinction.

Despite local declines in numbers of macaroni penguins in some colonies, the species has thus far maintained what appears to be high population levels, while being subject to most if not all of the current stressors. The best available information suggests that the overall macaroni penguin population is stable, despite localized changes in population numbers. Therefore, we conclude that the macaroni penguin is neither an endangered species nor likely to become an endangered species in the foreseeable future throughout all of its range.

Distinct Population Segment

A discussion of distinct population segments and the Service policy can be found above in the Distinct Population Segment section of the southern rockhopper penguin finding.

Macaroni penguins are widely dispersed throughout the sub-Antarctic in colonies located on isolated island groups. Among these groups, we have identified two possible segments to evaluate for DPS status: (1) The Prince Edward Islands, administered by South Africa, and (2) South Georgia Island, administered by the United Kingdom. For both of these areas, there may be differences in conservation status from other areas of the range of the macaroni penguin. Based on the data available, these are the only two areas where decreases in penguin numbers within colonies have been documented. Throughout the remainder of the macaroni penguin's range, population trends are for the most part unknown but in limited cases reported as stable or increasing (see Population discussion).

Discreteness Analysis

A discussion of discreteness can be found above in the southern rockhopper penguin Discreteness Analysis section.

Prince Edward Islands: Considering the question of discreteness, this island group is unique in the range of the macaroni penguin in being administered by the Republic of South Africa. Numbers are reported to have declined by approximately 18 percent at Marion Island between 1983–84 and 2002–03 and 47 percent at nearby Prince Edward Island in the same period for an overall 32-percent decline from about 451,000 to about 309,000 breeding pairs at the Prince Edward Islands. Based on its delimitation by international boundaries and its potentially different conservation status from other areas of abundance of the macaroni penguin, we conclude that this segment of the population of the macaroni penguin passes the discreteness conditions for determination of a DPS.

South Georgia Island: At this island, which is administered by the United Kingdom, macaroni penguin numbers at study colonies are reported to have declined by 50 percent in the last two decades of the 20th century. Based on its delimitation by international boundaries and its potentially different conservation status from other areas of abundance of the macaroni penguin, we conclude that this segment of the population of the macaroni penguin passes the discreteness conditions for determination of a DPS.

Significance Analysis

A discussion of significance can be found above in the southern rockhopper penguin Significance Analysis section.

Prince Edward Islands: The current abundance of about 309,000 breeding pairs of macaroni penguins at the Prince Edwards Islands represents 3 percent of the overall estimated population of macaroni penguins worldwide and 6 percent of the estimated numbers in the Indian Ocean. This does not provide a significant contribution globally to the abundance of the taxon. The Prince Edward Islands are the westernmost of one of four island groups that lie just north of the Antarctic Convergence Zone and comprise the Indian Ocean breeding habitat of the macaroni penguin. The Prince Edward Islands and the Crozet Islands sit 641 mi (1,066 km) apart in similar ecological settings, rising at about 46° S at the western and eastern ends, respectively, of the shallow Crozet Plateau. Both islands are adjacent to both the shallow waters of the plateau and the deeper water areas to the south of this region. Even though it is the westernmost breeding location in the Indian Ocean, loss of the Prince Edward Islands colonies would not create a significant gap in the range of the taxon. The Indian Ocean colonies are already very isolated (1,581 mi (2,545 km)) from the closest colonies to the west in the South Atlantic Ocean at Bouvet Island. The distance between Bouvet Island and the Prince Edward Islands is 1,581 mi (2,545 km) and the distance between Bouvet Island and Crozet Island is 2,135 mi (3,426 km). Loss of the Prince Edward Island population would increase the distance between Indian Ocean breeding areas and Bouvet Island by only 25 percent, or 554 mi (886 km). We do not have data to evaluate whether interchange occurs between these South Atlantic Ocean and Indian Ocean breeding colonies, so we do not know if the 25-percent increase in the distance between these breeding areas is significant. We also have no evidence that the Prince Edward Island populations differ markedly from others in genetic characteristics. On the basis of this information, we conclude that the Prince Edward Island birds do not comprise a significant numerical contribution to the overall population of macaroni penguins, they do not occupy an unusual or unique ecological setting for the taxon, and their loss would not result in a significant gap in the range of the taxon. This population is not the only surviving natural occurrence of this species, and it is not known to differ genetically from other populations of the species. On this basis, the Prince Edward Islands populations of the macaroni penguin are not significant to the taxon as a whole and therefore do not constitute a DPS.

South Georgia Island: The current abundance of macaroni penguins at South Georgia Island represents 28 percent of the global estimated population and is the largest known concentration of breeding colonies of

this species. For the South Atlantic region, the South Georgia Island population segment represents the core of a range that includes areas of abundance at the tip of South America and scattered small colonies in the islands at the tip of the Antarctic Peninsula. We conclude that loss of the colonies at South Georgia Island would create a significant gap in the range of the taxon and remove macaroni penguins from the unique ecological setting of South Georgia Island, which lies at the downstream end of the flow of nutrients and krill carried by the ACC from the vicinity of the Western Antarctic Peninsula. Therefore, we conclude that the South Georgia Island population of the macaroni penguin is significant to the taxon as a whole and qualifies as a distinct population segment.

South Georgia Island DPS Finding

We identified a number of stressors to the South Georgia Island DPS of the macaroni penguin: (1) Reduced prey (krill) availability due to (a) competition with Antarctic fur seals, (b) changes in the marine environment, or (c) competition with commercial krill fisheries; and (2) oil spills. To determine whether these stressors individually or collectively rise to a ''threat'' level such that the macaroni penguin is in danger of extinction in the South Georgia Island DPS, or likely to become so within the foreseeable future, we first considered whether the stressors were causing a long-term, population-scale decline in the DPS, or were likely to do so within the foreseeable future.

The macaroni penguin DPS at South Georgia Island is estimated to include 2.5–2.7 million breeding pairs; however, as previously discussed (see Population discussion) the current estimate is likely to be an underestimate as it is based on extrapolations of counts in smaller areas to predict numbers in larger areas—an estimation technique of questionable use in this species. Although study colonies within the South Georgia Island DPS have decreased steeply in numbers (by 50 percent) over the period from 1980–2000, we do not know the status of the remainder of the colonies throughout the DPS, and therefore, do not know the overall population trend for the South Georgia Island DPS. In a similar situation at the Prince Edward Islands, the use of figures from censuses of small study colonies would have led to a 100-percent overestimate of declines (*i.e.*, an inferred 50-percent decline, would actually be a 25-percent decline) (Crawford *et al.* 2003, p. 485). We also do not have information on whether the reported declines have continued over the last decade.

In our five-factor analysis for the macaroni penguin, we found that at South Georgia Island, reduced krill availability has been identified as a stressor associated with local declines of up to 50 percent at small study colonies over the last 2 decades of the 20th century. In our assessment of this stressor, we were unable to reliably identify the source of reduced krill availability to macaroni penguins in the South Georgia Island DPS. We do not have sufficient information as to the continued abundance of krill populations reaching the waters of South Georgia Island, nor predictive capability related to the future abundance of krill and other prey of the South Georgia DPS, to conclude that prey shortages will lead to future declines. Under CCAMLR, measures are being taken to monitor krill abundance and manage krill fisheries, which are small in scale, at ecosystem scales relevant to safeguarding prey for predator species at South Georgia, including the macaroni penguin. At the same time, studies have shown that macaroni penguins at South Georgia Island have some ability to compensate for declines in krill by switching to alternative prey. This may provide a means to mitigate, at least to some degree, against reproductive failure in times of reduced krill abundance.

With respect to other factors, we are not aware of any overutilization for commercial, recreational, scientific, or educational purposes that is a threat to the South Georgia DPS, and, based on review of the best available scientific and commercial information, we find that neither disease nor predation is a threat to the DPS. We find that regulatory mechanisms are adequate at South Georgia Island now or in the foreseeable future. With respect to other natural or manmade factors, we find that oil spills are not a threat to the DPS now or in the foreseeable future.

In evaluating the impact of these factors, we have also considered the size and trends of the South Georgia DPS of macaroni penguin. Recognizing the highlighted uncertainties about the overall population estimates for the South Georgia and the likelihood that these figures are likely to be underestimates, the best available information provided by the United Kingdom government indicates that there are estimated to be 2.7 million pairs (DEFRA 2007, p. 2). The previous estimate from 1980 has a large margin of error, which limits its use in establishing trends—5.4 million pairs ± 25 to 50 percent, (Woehler 1993, pp. 3, 55), yielding a range of 2.7–8.1 million pairs. Based on the poor quality of this population information, we cannot reliably establish an overall trend in the South Georgia Island DPS of the macaroni penguin. Therefore, there is no reliable data that lead us to believe that the combined effects of reduced prey availability, competition with Antarctic fur seals, changes in the marine environment, competition with commercial krill fisheries, and the impacts from oil spills at the current levels are causing a long-term decline in the South Georgia Island DPS of the macaroni penguin population. Because we cannot establish an ongoing long-term decline, this DPS is neither endangered nor threatened due to factors causing ongoing population declines, and the overall population estimate of 2.7 million pairs appears robust.

We also considered whether any of the stressors acting on colonies within the South Georgia DPS of the macaroni penguin began recently enough that their effects are not yet manifested in a long-term decline, but are likely to have that effect in the future. There is little data on macaroni penguin prey availability in the South Georgia region prior to the last 3 decades, and even less information on causes of prey decline. In any case, the periodic declines in prey availability over the last 30 years have had sufficient time to be reflected in population trends, and there is no reliable evidence of an overall population trend for the DPS, regardless of localized changes in abundance. In addition, no oil spill events have occurred recently enough that the population effects would not yet be observed. Therefore, the macaroni penguin is not threatened or endangered in the South Georgia Island DPS due to threats that began recently enough that their effects are not yet manifested in a long-term decline.

Next, we considered whether any of the stressors were likely to increase within the foreseeable future, such that the species is likely to become an endangered species in the foreseeable future. As discussed above, we concluded that within the South Georgia Island DPS, none of the stressors were likely to increase significantly.

Having determined that a current or future declining trend does not justify listing the South Georgia Island DPS of the macaroni penguin, we next considered whether the species met the definition of an endangered species or threatened species on account of its present or likely future absolute numbers. The total macaroni penguin

population in the South Georgia Island DPS is estimated at 2.7 million pairs, and appears robust. It is not so low that, despite our conclusion that there is no ongoing decline, the population is at such risk from stochastic events that it is currently in danger of extinction.

Finally, we considered whether, even if the size of the current population makes the species viable, it is likely to become endangered in the foreseeable future because stochastic events might reduce its current numbers to the point where its viability would be in question. Because of the large number of dispersed breeding areas (17 main breeding aggregations) throughout the South Georgia DPS, the large number of individual colonies within these larger areas, and finally, because of the large overall population size within the South Georgia DPS, we believe that even if a stochastic event were to occur within the foreseeable future, the population would still be unlikely to be reduced to such a low level that it would then be in danger of extinction.

Despite local declines in numbers of macaroni penguins in some colonies within the South Georgia DPS, the population has thus far maintained what appears to be high population levels, while being subject to most if not all of the current stressors, and there is no reliable information that shows an overall declining population trend of the South Georgia DPS. Therefore, we conclude that the South Georgia DPS of the macaroni penguin is neither an endangered species nor likely to become an endangered species in the foreseeable future.

Significant Portion of the Range Analysis

Having determined that the macaroni penguin is not now in danger of extinction or likely to become so in the foreseeable future throughout all of its range or in the South Georgia DPS as a consequence of the stressors evaluated under the five factors in the Act, we also considered whether there were any significant portions of its range, both within the South Georgia DPS, and within the remainder of the species' range where the species is in danger of extinction or likely to become so in the foreseeable future. See our analysis for southern rockhopper penguin for how we make this determination.

The macaroni penguin is widely distributed throughout the Southern Ocean. In our five-factor analysis, we did not identify any factor that was found to be a threat to the species throughout its range or throughout the South Georgia DPS.

SPR Analysis Within the South Georgia Island DPS

In an effort to determine whether this species is endangered or threatened in a significant portion of the range of the South Georgia Island DPS of the macaroni penguin, we first considered whether there was any portion of this range where stressors were geographically concentrated in some way. However, since we only have trend information on a limited number of colonies with respect to both stressors and population trends, we could not determine whether stressors were acting differently in one portion of the range versus another. Therefore, we were not able to identify any portions of the range within the South Georgia Island DPS that warrant further consideration.

SPR Analysis Within the Remainder of the Macaroni Penguin's Range

In an effort to determine whether this species is endangered or threatened in a significant portion of the remainder of the species' range (*i.e.*, anywhere within the species' range except the South Georgia DPS), we first considered whether there was any portion of this range where the species may be either endangered or threatened with extinction. Declines have been reported in the Prince Edward Islands. There was a decline from 451,000 pairs in 1983–84 to 356,000 pairs in 2002–03, but given the magnitude of the population numbers, this 18 percent decline over the 8-year time period is not considered to be a significant change in the population (Crawford *et al.* 2003, p. 485). In the three subsequent breeding years (2003–06) small fluctuations between 350,000 and 300,000 pairs were observed (Crawford 2007, p. 9). In our analysis, we found that the total decline has been approximately 32 percent since 1979. In our analysis of the five factors for the macaroni penguin we identified no unique stressor affecting the Prince Edward Islands populations. On the basis of its large population size and limited declines (relative to overall population numbers) observed over a period of 30 years, we conclude that there is not substantial information that the Prince Edward Islands portion of the range may currently be in danger of extinction or likely to become in danger of extinction in the foreseeable future. Therefore this portion of the range does not pass the test of endangerment for consideration as an SPR.

Final Determination for the Macaroni Penguin

On the basis of analysis of the five factors and the best available scientific and commercial information, we find that listing the macaroni penguin as threatened or endangered under the Act in all or any significant portion of its range or in the South Georgia DPS is not warranted.

Emperor Penguin

Background

Biology

The emperor penguin (*Aptenodytes forsteri*) is the largest living species of penguin. It is congeneric with the king penguin (*Aptenodytes patagonicus*), but is double the size of this next largest penguin species at 3–4 ft (1–1.3 m) in height and 44–90 lb (20–41 kg) in weight (Shirihai 2002, pp. 57, 59). Emperor penguins generally feed over continental shelf and continental margins of Antarctica, except for a wide-ranging and relatively undocumented juvenile life stage. In winter, they breed in colonies distributed widely along the sea ice fringing the coast of Antarctica. In summer, during the molting period when they must stay ashore, they depend on areas of stable pack ice or nearshore, land-fast ice (Kooyman 2002, pp. 485–495; Kooyman *et al.* 2000, p. 269).

Life History

The life history of emperor penguins is unique among birds, with breeding and incubation taking place in the Antarctic winter. Kooyman (2002, pp. 485–495) summarizes this life history. Breeding birds arrive in the colonies in April. After a period of courtship, egg-laying takes place in mid-May. Male emperor penguins incubate the eggs through the Antarctic winter until mid-July to early August. The females depart the colony soon after egg-laying and forage at sea for 2 months. When the females return, the males break their extensive winter fast. This fast of 110–115 days has been documented to last from before courtship, through incubation, and past the hatching of the chick (Kirkwood and Robertson 1997, p. 156). However, unlike previous natural history descriptions of emperor penguins, late fall transects have suggested that at some of the largest colonies in the northern Ross Sea, where open water is closely accessible in late fall, males and females may feed after courtship and immediately before egg-laying, thus shortening the fast and the energetic stress of incubation for males (Van Dan and Kooyman 2004, p. 317). After the single egg hatches, the female emperor penguin returns. At that point, the males and females begin to share the feeding of the chick, coming and going on foraging trips away from

the colony throughout the late winter and spring. These foraging trips last from 3 weeks to as little as 3 days, getting progressively shorter as the spring advances (Kooyman 2002, pp. 485–495; Kooyman *et al.* 1996, p. 397). The adults leave the colonies from mid-December to mid-January on pre-molt foraging trips, which may take them up to 186 mi (300 km) north of the continent and up to 745 mi (1,200 km) from the colony. By late January to early February they arrive in areas where they can find stable land-fast ice or pack ice to allow them to stay ashore for the 1-month molt (Kooyman *et al.* 2004, pp. 281–290; Wienecke *et al.* 2004, pp. 83–91). Following the molt, they embark on post-molt foraging trips, which bring breeding birds back to the colony in April.

The dispersal patterns of emperor penguin chicks after fledging are poorly known. Once they leave the colonies they are seldom seen and do not return again for several years. They return to the colony when 4 years old and breed the following year (Shirihai 2002, p. 61). Kooyman *et al.* (1996, p. 397) followed the movements of five radio-tagged juveniles at their departure from their colony at Cape Washington in the Ross Sea. All traveled north beyond the Ross Sea to the Antarctic Convergence, the boundary of the Southern Ocean, reaching 56.9° S latitude. While radio-signals were lost before the onset of winter, Kooyman *et al.* (1996, p. 397) suggested that the birds may have remained in the water north of the pack ice until at least June. He noted that at this crucial period of their lives, juvenile emperor penguins may be exposed to conditions similar to more northern penguin species, for example, commercial fishing in the Southern Ocean. It is hypothesized that juveniles ranging north from the Mawson Coast may feed and compete with king penguins that are foraging south in the fall and winter from their Indian Ocean breeding colonies.

Distribution

Emperor penguins breed on land-fast ice in colonies distributed around the perimeter of the Antarctic continent from the western Weddell Sea to the southwestern base of the Antarctic Peninsula (Kooyman 2002, p. 490; Lea and Soper 2005, p. 60; Woehler 1993, pp. 5–10;). For example, in the Ross Sea, six colonies are spaced 31–62 mi (50–100 km) apart along the Victoria Land coast (Kooyman 1993, p. 143).

Looking at the reported data, we conclude that the total number of historically or presently recorded colonies is approximately 45. Woehler (1993, pp. 5–10) documented 42 reported colonies around the continent, which included seven colonies discovered between 1979 and 1990 (Woehler 1993, p. 5). Colonies along Marie Byrd Land east of the Ross Sea are few or undocumented, with only one confirmed, recently discovered breeding colony at Siple Island (Lea and Soper 2005, pp. 59–60) and one outlying small colony at the Dion Islands at the western base of the Antarctic Peninsula (Woehler 1993, p. 9; Ainley *et al.* 2005, p. 177). At least three new locations have been discovered since 1990 (each with over 2,000 breeding pairs) and one other colony was confirmed (Woehler and Croxall 1997, p. 44; Coria and Montalti 2000, pp. 119–120; Lea and Soper 2005, pp. 59–60; Melick and Bremmers 1995, p. 426; Todd *et al.* 2004, pp. 193–194).

However, given the remote locations of emperor penguin colonies and the difficulties of accessing them, the number of colonies may vary from the 45 reported. At the time of the 1990's compilation of emperor penguin numbers and colony locations cited above, Woehler (1993, p. 5) stated that many colonies had not been observed or counted for many years, with in some cases, the most recent data dating to the 1950s and 1960s. On the other hand, in describing a new colony along the coast of Wilkes Land near a research base that had already been utilized for 35 years, Melick and Bremmers (1995, p. 427) cited a very strong likelihood that more emperor penguin colonies were waiting to be discovered in this area and that such discoveries could significantly raise the present estimates of emperor penguin numbers.

Breeding Areas

Emperor penguin breeding colonies are variable in size. In 1993, Woehler (1993, pp. 2–9) provided size estimates for 36 of the 42 colonies. Adding the 3 newly discovered colonies cited above, colony size for 39 colonies ranged from under 100 breeding pairs to 22,354 breeding pairs (with 2 colonies above 20,000 breeding pairs, 6 colonies between 10,000 and 20,000 pairs, 21 colonies between 1,000 and 10,000 pairs, and 10 colonies below 1,000 pairs). The largest colonies at Cape Washington and Coulman Island had 19,364 and 22,137 downy chicks (and accordingly the same number of breeding pairs), respectively, in 1990 (Kooyman 1993, p. 145), and 23,021 and 24,207 chicks, respectively, in 2005 (Barber-Meyer *et al.* 2007b, p. 7).

Emperor penguin breeding colonies are also variable in physical location. Scientists have attempted to describe the most important physical characteristics of colony locations and how they influence colony size. For six western Ross Sea colonies, Kooyman (1993, pp. 143–148) identified stable land-fast ice, nearby open water, access to fresh snow (for drinking water and thermal protection), and shelter from the wind as physical characteristics. At Beaufort Island, Cape Crozier, and Franklin Island, limited land-fast ice areas seem to dictate colony size (179, 477, and 4,989 fledgling chicks, respectively) because the birds were unable to move away from snow and ice that had been contaminated by guano over the course of the breeding season, and they had limited options to shelter from winds. At Coulman Island and Cape Washington, the largest known emperor penguin colonies (22,137 and 19,364 fledgling chicks, respectively), suitable land-fast ice areas were unlimited with a good base of snow. Access to open water in the winter is another major characteristic. Known locations of emperor penguin colonies have been found to be associated with known coastal polynyas-areas of winter open water in East Antarctica (Massom *et al.* 1998, p. 420).

Localized changes in colony size and breeding success have been recorded at specific colonies and attributed to local- or regional-scale factors. Changes in the physical environment can have an impact on individual colonies, especially smaller ones, which show higher year-to-year variation in live chick counts than larger colonies (Barber-Meyer *et al.* 2007b, p. 4).

Feeding Areas

The primary foods of emperor penguins are krill (*Euphausia superba*), Antarctic silverfish (*Pleurogramma antarcticum*), and some types of lanternfish and squid (Kirkwood and Robertson 1997, p. 165; Kooyman 2002, p. 491). The proportion of each of these in the diet is variable according to colony location and season, with fish comprising 20 to 90 percent, krill 0.5 to 68 percent, and squid 3 to 65 percent by weight in the diet (Kooyman 2002, pp. 488, 491).

During their winter feeding trips, female emperor penguins travel over ice to reach areas of open water or polynyas, which are generally accessible from emperor penguin colonies (Massom *et al.* 1998, p. 420). Penguins from the Auster and Taylor colonies on the Mawson coast of Antarctica, carrying time-depth recorders, took about 8 days to reach the ice edge and spent 50–60 days at sea foraging. They foraged about 62 mi (100 km) northeast of the colony in water over the outer

continental shelf and shelf slope. As penguins are visual foragers, foraging was limited to daylight, with penguins entering the water just after dawn and emerging at dusk after spending on average 4.71 hours in the water (Kirkwood and Robertson 1997, pp. 155, 168). Both on the journey north and between foraging days at sea, females occasionally huddled together in groups on the ice to minimize heat loss (Kirkwood and Robertson 1997, p. 161).

As mentioned above, juvenile penguins leaving their natal colonies upon fledging have been radio-tracked to 56.9° S latitude, the area of the Antarctic Convergence where they presumably feed (Kooyman *et al.* 1996, p. 397).

Molting Areas

The summer molt is a critical stage in the life history of the emperor penguin. The birds must find stable land-fast ice or pack ice to allow them to stay ashore for the 1-month molt (Kooyman *et al.* 2004, pp. 281–290; Wienecke *et al.* 2004, pp. 83–91). In the western Ross Sea, penguins departing their breeding grounds in December generally traveled an average straight-line distance of 745 mi (1,200 km) from their colonies to molt in the large consolidated pack-ice area in the eastern Ross Sea (Kooyman *et al.* 2000, p. 272). In 1998, molting birds were sighted on the southern edge of the summer pack ice in the western Weddell Sea (Kooyman *et al.* 2000, p. 275), and birds sighted were assumed to be from colonies in the eastern Weddell Sea up to 869 mi (1,400 km) to the east, although some may have come from the Snow Hill Colony recently discovered to the north of this area (Kooyman *et al.* 2000, pp. 275–276). Along the Mawson Coast, penguins departing colonies prior to molt traveled for 22–38 days and reached molting locations up to 384 mi (618 km) from the colony. Unlike Ross Sea penguins, they did not travel directly to consolidated pack-ice locations, but first moved north, apparently to feed, and then returned to molt in nearshore areas where land-fast ice persisted throughout the summer (Wienecke *et al.* 2004, p. 90).

Abundance and Trends

There are estimated to be 195,000 emperor penguin pairs breeding in approximately 45 colonies around the perimeter of the Antarctic continent. The population is believed to be stable rangewide (Woehler 1993, pp. 2–7; Ellis *et al.* 2007, p. 5) and in the Ross Sea (Barber-Meyer *et al.* 2007b, p. 3). As cited above, even as overall numbers remain stable, fluctuations in individual colony size have been reported for a number of colonies (Kato *et al.* 2004, p. 120; Kooyman *et al.* 2007, p. 37; Barber-Meyer *et al.* 2007b, p. 7; Barbraud and Weimerskirch 2001, pp. 183–186) and seem to reflect the impacts of local and regional physical and climatic variation in the harsh Antarctic environment, as well as the resilience of this species in responding to this variation.

Other Status Classifications

The emperor penguin is listed in the category of 'Least Concern' on the 2007 IUCN Red List on the basis of its large range and stable global population (BirdLife International 2007, p. 1). A species is considered of least concern when it has been evaluated against the IUCN criteria and does not qualify for 'Critically Endangered,' 'Endangered,' 'Vulnerable,' or 'Near Threatened.' Widespread and abundant species are included in this category (BirdLife International 2007, p. 1).

Summary of Factors Affecting the Species

Factor A: The Present or Threatened Destruction, Modification, or Curtailment of Its Habitat or Range

The breeding range of the emperor penguin consists of land-fast ice along the continental margins of Antarctica. The emperor penguin is an ice-dependent species. Therefore, emperor penguins are vulnerable to changes in the winter land-fast ice and polynya system (Ainley 2005, p. 178; Croxall 2004, p. 90), which comprises their breeding habitat, and to changes in the pack ice or residual land-fast ice, which they use for summer molt haul-out areas (Barber-Meyer *et al.* 2007b, p. 11; Kooyman *et al.* 2004, p. 289).

Studies reviewed below indicate that the emperor penguin lives in a harsh and highly changeable environment. Changes and perturbations that affect emperor penguins occur on daily, seasonal, annual, decadal, and historical timeframes. Localized changes in colony size and breeding success have been recorded at specific colonies and attributed to local- or regional-scale factors.

Changes in the physical environment can have an impact on individual colonies, especially smaller marginal ones that show higher year-to-year variation in live chick counts than larger colonies (Barber-Meyer *et al.* 2007b, pp. 7, 10). A dramatic example of physical changes to the breeding and foraging environment comes from the periodic calving of giant icebergs from the Ross Ice Shelf, expected every 3–4 decades on average (Arrigo *et al.* 2002, p. 4).

For example, the calving in 2000 and subsequent grounding of two giant icebergs in the Ross Sea severely affected the Cape Crozier and Beaufort Island emperor penguin colonies. In 2001, nesting habitat was destroyed at Cape Crozier by the collision of iceberg B15A with the northwest tongue of the Ross Ice Shelf, dislodging the ice shelf and creating a huge collection of iceberg rubble. Adult mortality was high, either due to trauma from shifting and heaving sea ice or subsequent starvation of penguins trapped in ravines. The colony produced no chicks in 2001. The high mortality of adults (Kooyman *et al.* 2007, p. 37) and continued instability and unsuitability of the area of this traditional colony contributed to a reduction in chick production that ranged from 0 to 40 percent of the high count of 1,201 chicks produced in 2000 (Kooyman *et al.* 2007, pp. 31, 34–35). Chick counts fluctuated from 0 in the iceberg year of 2001, to 247 in 2002, to 333 in 2003, to 475 in 2004, to 0 in 2005, to 340 chicks in 2006. The situation in 2005 was highly unusual because the 437 adults in the colony in mid-October showed no signs of breeding (*i.e.*, no eggs and no chicks). The reason for breeding failure was not apparent (Barber-Meyer *et al.* 2007b, pp. 7, 9). However, preliminary reports from 2006 indicated that breeding success at Cape Crozier was again improved with about 340 live chicks (Barber-Meyer *et al.* 2007b, p. 9). Recovery may have been slowed as a consequence of the high adult mortality in 2001. While breeding birds have persistently returned to the colony after the iceberg departed in 2003, they may be waiting for conditions at the colony to improve before breeding there again (Kooyman *et al.* 2007, p. 37).

At the Beaufort Island colony, the arrival of iceberg B15A, along with iceberg C16 in 2001, did not physically affect the colony substrate itself, but separated the breeding birds in the colony from their feeding area in the Ross Sea polynya with a 93-mi (150-km) long barrier. In the 2001–2004 breeding seasons, adult birds were forced to walk up to 56 mi (90 km) before being able to enter the water. Chick counts in 2004, the worst year of this period, dropped to 131 (6 percent of the high count of 2,038 in 2000). Unlike at Cape Crozier, once the icebergs finally left the area by 2005, the surface conditions of the colony were restored to pre-iceberg condition and, with accessibility to the Ross Sea polynya restored, the first post-iceberg breeding season saw recovery in chick production to 446 chicks (Kooyman *et al.* 2007, p. 36) to 628

chicks (Barber-Meyer *et al.* 2007b, p. 7), a little under one-third of 2000 levels.

Changes in the physical environment have also been shown to affect the food sources of emperor penguins in the Ross Sea (Arrigo *et al.* 2002, pp. 1–4). The presence of the B15A iceberg in the Ross Sea blocked the normal drift of pack ice and resulted in heavier spring and summer pack ice in the region in 2000–01. This resulted in a delay in the initiation of the annual phytoplankton bloom in some areas and failure to bloom in others, with a reduction in primary productivity in the Ross Sea region by 40 percent. While emperor penguin diets were not reported, Adelie penguin diets shifted to a krill species normally associated with extensive sea-ice cover during the first year of this grounding event (Arrigo *et al.* 2002, p. 3). The very large emperor penguin colony at Cape Washington, about 124 mi (200 km) away, experienced reduced chick abundance in the period when B15A was in the area; the iceberg's presence may have modified breeding behavior and chick nurturing in some way. Chick numbers rebounded in 2004 and 2005 (Barber-Meyer *et al.* 2007b, p. 10).

Future iceberg calving events are likely to affect emperor penguin colonies in the Ross Sea. Calving of the Ross Ice Shelf, which led to the formation of icebergs B15A and C16, is described as a cyclical phenomenon expected every 3–4 decades on average from the northeast corner of the ice shelf. While the Ross Ice Shelf front has been relatively stable over the last century, such events are a consequence of the longer-term behavior of the West Antarctic Ice Sheet in the Ross sector. Current retreat of the Western Antarctic Ice Shelf has been underway for the past 20,000 years since the last glacial maximum, and retreat is expected to continue, with or without global climate warming or sea-level rise (Conway *et al.* 1999, pp. 280–283). Efforts are underway to understand and predict the overall behavior of the West Antarctic Ice Sheet (Bentley 1997, pp. 1,077–1,078; Bindschalder 1998, pp. 428–429; Bindschalder *et al.* 2003, pp. 1,087–1,989), but we are not aware of any current predictions of local-scale changes in calving rates in the Ross Sea in the near future.

A number of studies have attempted to relate population changes at individual emperor penguin colonies to the effects of regional and global oceanographic and climatic processes affecting sea surface temperatures and sea-ice extent. In the Ross Sea, which contains the highest densities of emperor penguins in Antarctica and the largest and smallest and most southerly of all penguin colonies, Barber-Meyer *et al.* (2007b, pp. 3–11) examined large-scale and local-scale climatic factors against trends in chick abundance in six colonies in the western Ross Sea from 1979–2005. They found that overall emperor penguin numbers in the Ross Sea were stable during this period. They were unable to find any consistent correlation between trends in chick abundance and any of the climate variables of sea-ice extent—sea surface temperature, annual Southern Oscillation Index, and Southern Hemisphere Annular Mode. They determined that chick abundance in smaller colonies was more highly variable than in large colonies, suggesting that small colonies occupy marginal habitat and are more susceptible to environmental change. While they concede that significant local events such as the grounding of iceberg B15A may have masked subtle relationships with local sea-ice extent and large-scale climate variable, their analysis indicated that the environmental change most affecting chick abundance is fine-scale sea-ice extent and local weather events (Barber-Meyer *et al.* 2007b, pp. 3–11).

Similar analyses have been conducted for a single, small emperor penguin colony located near the D'Urmont D'Urville Station in the Point Geologie archipelago in Adelie Land in a study that has been widely cited as demonstrating the impacts of climate change on this species (Barbraud and Weimerskirch 2001, pp. 183–186). In the late 1970s, a 50-percent decline in the number of breeding pairs at this small colony (from 5,000–6,000 pairs to 2,500–3,000 pairs) occurred at the time of an extended period of warmed winter temperatures at the colony and reduced sea-ice extent in the vicinity. After the period of decline, numbers stabilized at half the pre-1970 levels for the next 17 years. Meteorological data collected at the station were used as a proxy for sea surface temperatures. The authors found that overall breeding success was not related to sea surface temperatures or sea-ice extent. Instead, the decrease was attributed to increased adult mortality. Emperor penguin survival apparently was reduced when temperatures were higher and penguins survived better when sea-ice extent was greater. The authors hypothesized that with decreased sea-ice extent during the warmer period in the late 1970s, krill recruitment may have been reduced, making it more difficult for adults to find food. The authors attributed an increased variability in breeding success during the 17 years of population stability after this period to a combination of local- and annual-scale physical factors, such as blizzards and early break out of the ice supporting the colony (Barbraud and Weimerskirch 2001, pp. 183–186). This increased variability over the last 17 years is consistent with the observations for the Ross Sea (Barber-Meyer *et al.* 2007b, p. 7), where annual variability in breeding success is larger for smaller colonies.

The conclusions of the Barbraud and Weimerskirch study and the ability to generalize based on its results have been questioned by several authors. As noted above, the results and conclusions are not supported by a larger-scale study of six large and small penguin colonies in the Ross Sea, which represent 25 percent of the world's population (Barber-Meyer *et al.* 2007b, pp. 10–11). In discussing this study, Ainley *et al.* (2005, pp. 177–180) concluded that the confounding factors of severe blizzards and increases in early departure of the land-fast ice nesting substrate suggest that the continued low population numbers at Point Geologie have not been fully explained, and they questioned the conclusion that higher mortality of adult emperor penguins during 1976–1980 was caused by increased sea surface temperatures. Croxall *et al.* (2002, p. 1,513) stated ''that current data on environment-prey-population interactions are insufficient for deriving a single coherent model that explains these observations.''

Further work at this same Antarctic location, building from local observations of seabird dynamics and measurements of regional sea-ice extent and the Southern Oscillation Index, led Jenouvrier *et al.* (2005, p. 894) to suggest that in the late 1970s there may have been a regime shift in cyclical Antarctic environmental factors such as sea-ice extent and the Southern Oscillation Index, which may have affected the dynamics of the Southern Ocean. In another paper, Weimerskirch *et al.* (2003, p. 254) suggested that the decrease in sea-ice extent in the late 1970s in the Adelie Land area could be related to a regional increase in temperatures in the Indian Ocean during that period.

In related work, Ainley *et al.* (2005, pp. 171–182) further described decadal-scale changes in the western Pacific and Ross Sea sectors of the Southern Ocean during the early to mid-1970s and again during 1988–1989. These large-scale periods of warming and cooling and corresponding changes in weather and sea-ice patterns were linked to decadal shifts in two atmospheric pressure-related systems in the region. The first

is the semi-annual oscillation (the strengthening and weakening of the circumpolar trough of low pressure that encircles Antarctica), and the second is the Antarctic oscillation (now referred to as the Southern Annual Mode), the pressure gradient between mid latitudes and high latitudes (Ainley *et al.* 2005, p. 172). The study showed that environmental changes in a number of sea-ice variables during these cyclical periods, including polynya size, led to corresponding reductions and increases in a number of Adelie penguin colonies in the Ross Sea and changes in the number of adults breeding and the reproductive output at a number of individual Adelie penguin colonies in the Ross Sea. The authors attempted to compare Ross Sea data for Adelie penguins with the observations at Pointe Geologie for emperor penguins, but data from the much more detailed subsequent studies of Barber-Meyer *et al.* (2007b, pp. 3–11) leave the reader with only the general conclusion that the two species respond differently to these cyclical environmental changes (Ainley *et al.* 2005, p. 171).

The primary breeding and winter foraging habitat of the emperor penguin is land-fast ice along the margins of the Antarctic continent. While overall populations are stable, local- or regional-scale variations in physical, oceanographic, and climatological processes, as described above, lead to year-to-year variations in chick production or colony breeding success in colonies scattered widely along the coast of Antarctica. Field observations show that emperor penguins respond to such factors, when they occur, but given the stability of penguin numbers around Antarctica, we have found no consistent trends with respect to the destruction, modification, or curtailment of their habitat or range.

With respect to larger-scale observations of the climate of Antarctica and the extent of the sea ice that makes up the primary habitat of the emperor penguin, the Working Group I report to the Fourth Assessment Report of the Intergovernmental Panel on Climate Change (IPCC), which reviewed the observations on the physical science basis for climate change, found that ''Antarctica sea ice extent continues to show interannual variability and localized changes, but no statistically significant overall trends, consistent with lack of warming reflected in atmospheric temperatures averaged across the region'' (IPCC 2007, p. 9).

Observations of climate and ice conditions are not uniform throughout Antarctica in any particular season or year. Attempts to describe and understand long-term observed conditions and to predict future conditions either on the basis of the demographic behavior of individual penguin colonies or on the basis of global-scale climate observations are difficult and incomplete. At a continent-wide scale, observational studies show sea-ice cover decreased significantly in the 1970s, but has increased overall since the late 1970s (Parkinson 2002, p. 439; Parkinson 2004, p. 387; Yuan and Martinson 2000, p. 1,712). More recently, the IPCC reported that Antarctic results show a small, positive trend in sea-ice extent that is not statistically significant (Lemke 2007, p. 351).

With respect to regional trends along the continent, satellite observational studies have shown, for Southern Ocean regions adjoining the South Atlantic, South Indian, and southwest Pacific Oceans, increasing trends in sea-ice cover, particularly during non-winter months. Regions adjoining the southeast Pacific Ocean, however, have shown decreasing trends in sea-ice coverage, particularly during the summer months (Stammerjohn and Smith 1997, p. 617; Kwok and Comiso 2002, p. 501; Yuan and Martinson 2000, p. 1,712). The distribution of sea-ice-extent anomalies (areas of more- or less-than-average sea ice) observed around the continent is bimodal with increased ice cover in the Indian Ocean sector, a slight decrease between the eastern Indian Ocean and Western Pacific, large increases in the western Pacific Ocean and Ross Sea sector, a large decrease in the Bellinghausen and Amundsen Seas of the eastern Pacific sector, and a large increase in the Weddell Sea (Curran *et al.* 2003, p. 1,205; Yuan and Martinson 2000, p. 1,712). Attempts to link south polar sea-ice trends to climate outside this polar region are extremely complex. In statistical and observational studies of Antarctic sea-ice extent and its global variability, sea-ice anomalies in the Amundsen Sea, Bellinghausen Sea, and Weddell Gyre, corresponding to the Western Antarctic Peninsula region, showed the strongest links to extrapolar climate (Yuan and Martinson 2000, p. 1,697) and to variations in the Southern Oscillation Index (Kwok and Comiso 2000, p. 500); however, these factors did not explain the trends of stable or increasing sea-ice extent for the majority of the continental coast of Antarctica, which encompasses the range of the emperor penguin.

Future Projections

With respect to the future of Antarctica, the IPCC reported, ''in 20th and 21st century simulations, Antarctic sea ice cover is projected to decrease more slowly than in the Arctic, particularly in the vicinity of the Ross Sea where most models predict a minimum in surface warming. This is commensurate with the region with the greatest reduction in ocean heat loss, which results from reduced mixing of the ocean'' (Meehl *et al.* 2007, p. 770).

Simulation models, comparing 1980–2000 observed winter and summer mean sea-ice concentrations around Antarctica with modeled 2080–2100 sea-ice concentrations, predicted declines in sea-ice concentrations in this timeframe (Bracegirdle *et al.* 2008, p. 8; Meehl *et al.* 2007, p. 771). While these models showed extensive deviation around mean predictions, they provided a general predictive picture of future Antarctic sea-ice conditions in the range of the emperor penguin. They showed winter sea-ice reductions by 2080–2100, with ice concentrations remaining high around the bulk of the continent and highest in the Ross, Amundsen, and Weddell Seas, and around the Mawson Coast in the Indian Ocean sector. Summer sea-ice concentrations also retreat, with sea ice persisting in the Ross and Weddell Seas and apparently greatly reduced or not persisting in the Indian Ocean sector. These large-scale model predictions seem to indicate that emperor penguins, especially in the Ross and Weddell Seas, are likely to continue to encounter suitable sea-ice habitat for breeding in the winter and molting in the summer in the 100-year timeframe. The IPCC is very clear on the limitations of these models—the report contains a section discussing the limitations and biases of sea-ice models and finding that even in the best cases, which involve Northern Hemisphere winter sea-ice extent, ''the range of simulated sea ice extent exceeds 50% of the mean and ice thickness also varies considerably, suggesting that projected decreases in sea ice remain rather uncertain'' (Randall *et al.* 2007, p. 616). It is difficult and premature, given the large geographic scale of these models, their extensive deviations around mean predictions, and their 100-year timeframe, to make specific predictions about the sea-ice conditions in any particular region of emperor penguin habitat around Antarctica. This is particularly difficult when empirical evidence to date suggests that such continent-wide sea-ice declines have not yet begun.

With respect to atmospheric temperatures, increases in the Southern Annular Mode (SAM) index (a monthly measure of differences in sea-level atmospheric pressure between the mid

latitudes and high latitudes of the Southern Hemisphere) (Trenberth *et al.* 2007, p. 287) from the 1960s to the present are associated with a strong warming over the Antarctic Peninsula and, to a lesser extent, with cooling over parts of continental Antarctica, the area of the range of the emperor penguin (Trenberth *et al.* 2007, p. 339). There is continued debate as to whether these trends in the SAM are related to stratospheric ozone depletion and to greenhouse gas increases (Trenberth *et al.* 2007, p. 292) or to decadal variation in teleconnections or large-scale patterns of pressure and circulation anomalies that span vast geographical areas and ''modulate the location and strength of storm tracks and poleward fluxes of heat, moisture and momentum'' (Trenberth *et al.* 2007, pp. 286–287). Reconstructions of century-scale records based on proxies of the SAM found that the magnitude of the current trend may not be unprecedented even in the 20th century (Trenberth *et al.* 2007, pp. 292–293). The response of the SAM to the ozone hole in the late 20th century, which has also had a warming affect on temperature, confounds simple extrapolation into the future (Christensen *et al.* 2007, p. 907).

At the regional scale, the IPCC reported that very little effort has been spent to model the future climate of Antarctica (Christenson 2007, p. 908). Annual warming over the Antarctic continent is predicted to be ''moderate but significant'' (2.5–9 °F (1.4–5 °C), with a median of 4.7 °F (2.6 °C)) at the end of the 21st century (Christenson 2007, p. 908). Models tend to show that the current pattern, which involves warming over the western Antarctic Peninsula and little change over the rest of the continent, is not projected to continue through the 21st century (Christenson 2007, p. 908). Ainley *et al.* (unpublished ms, n.d., pp. 1, 26–29), using a composite of selected climate models for 2025–2070, projected that an increase in earth's tropospheric temperature by 3.6 °F (2 °C) would result in a marked decline or disappearance of 50 percent of emperor colonies (40 percent of the population) at latitudes north of 70° S latitude because of severe decreases in pack-ice coverage and ice thickness, especially in the eastern Ross and Weddell Seas. Without further review and testing of this model, it would be premature to use this model's results to make specific predictions about the sea-ice conditions in the emperor penguin habitat around Antarctica.

We have examined current conditions and predictions for changes in sea ice and temperatures around Antarctica for the coming 100 years, which remain very general. We have paid particular attention to sea ice because it is the dominant habitat feature of the emperor penguin's life cycle. To date, evidence does not support the conclusion that directional changes in temperature or sea-ice extent are already occurring in the habitat of the emperor penguin. We do not discount the strong likelihood that predicted sea-ice changes will eventually reduce the habitat of emperor penguins. However, on the basis of: (1) Current observed conditions; (2) the stability of emperor penguin colonies throughout their range; (3) the likelihood in the 100-year timeframe that emperor penguin habitat requirements will continue to be met in current core areas of their range; and (4) the uncertainty of current large-scale predictive models and the absence of fine-scale climate models predicting conditions for the range of the emperor penguin, we conclude that there is not sufficient evidence to find that climate-change effects to the habitat of the emperor penguin will threaten the emperor penguin within the foreseeable future.

On the basis of this information, we conclude that the present or threatened destruction, modification, or curtailment of the emperor penguin's habitat or range is not a threat to the species in any portion of its range now or in the foreseeable future.

Factor B: Overutilization for Commercial, Recreational, Scientific, or Educational Purposes

The ecotourism industry in Antarctica has been growing, with an increase from 6,750 tourists during the 1992–93 summer season to a projected 35,000 tourists in 2007–08 (Austen 2007, p. 1). A few emperor penguin colonies have become the focus of increased, but limited, tourism activities in Antarctica. In particular, the newly discovered Snow Hill colony near the Antarctic Peninsula, which numbers about 4,000 pairs (Todd *et al.* 2004, pp. 193–194), is accessible to ice-breaking vessels coming to the Antarctic Peninsula from the southern ports of South America. The International Association of Antarctica Tourism Operators (IAATO 2007b, p. 1) reported that 909 visitors landed to visit the Snow Hill Colony in the 2006–07 summer season. These visitors all came off one vessel, the icebreaker *Kapitan Khlebnikov*. In November 2006, Burger and Gochfeld (2007, pp. 1,303–1,313) reported that there was one visit in 2004, no tour visits in 2005, and at least three visits in 2006. These authors concluded it was unlikely tourists would visit early in the season when chicks are most vulnerable.

Burger and Gochfeld (2007, pp. 1,303–1,313) examined whether the presence of tourists had an impact on the movement of emperor penguins between the colony and the sea. They found that penguins noticing the presence of people paused more often and for longer in their movements than those passing at a greater distance. The authors provided recommendations for tourist behavior to mitigate the effects of tourist presence on traveling penguins.

For the remainder of continental Antarctica tourists, visits and landings are extremely limited. For example, in 2006–07, 263 people are recorded as landing from one ship, again the icebreaker *Kapitan Khlebnikov,* at Cape Washington in the Ross Sea, the site of one of the largest emperor penguin colonies. Only 13 sites off the Antarctic Peninsula are recorded as receiving tourists (IAATO 2007c, p. 1).

The Antarctic Treaty sets out requirements for tourism operators and tourists entering the Antarctic Treaty region. Tourism operators are required to operate under the Antarctic Treaty's Guidance for those Organising and Conducting Tourism and Non-governmental Activities in the Antarctic: *Recommendation XVIII–1, adopted at the Antarctic Treaty Meeting, Kyoto, 1994*. This detailed guidance sets out requirements for: (1) Advance planning and advanced notification, as well as post-visit reporting of any proposed activities in the region, (2) preparation and compliance with contingency-response plans, including for waste management and marine pollution, and (3) awareness of and proper permitting related to Specially Protected Areas, Sites of Special Scientific Interest, and Historic Sites and Monuments (International Association of Antarctica Tour Operators (IAATO 2007a, p. 1). The Antarctic Treaty Guidance for Visitors to the Antarctic: *Recommendation XVIII–1, adopted at the Antarctic Treaty Meeting, Kyoto, 1994* is intended to ensure that all visitors to the Antarctic are aware of and comply with the treaty and its Protocol for Environmental Protection. This focuses in particular on the prohibition on taking or harmful interference with Antarctic wildlife, including care not to affect them in ways that cause them to alter their behavior, and on preventing the introduction of nonnative plants or animals into the Antarctic (Antarctic Treaty Secretariat 2007, pp. 1–5). Scientific research is also strictly regulated under the Antarctic Treaty.

On the basis that tourist activities reach very few penguin colonies, the number of tourists are limited, and their behavior is well regulated by the Antarctic Treaty, we find that tourism is not a threat to the emperor penguin in any portion of its range now or in the foreseeable future.

In addition, we are unaware of any overutilization for other commercial, recreational, scientific, or educational purposes that is a threat to the emperor penguin in any portion of its range now or in the foreseeable future.

Factor C: Disease or Predation

Antarctic species, such as the emperor penguin, are potentially susceptible to the introduction of avian diseases from outside the region (Jones and Shellam 1999, p. 182). Gardner *et al.* (1997, p. 245) found antibodies of an avian pathogen, Infectious Bursal Disease Virus (IBDV), in 65.4 percent of 52 emperor penguin chicks sampled at the Auster colony on the Mawson Coast in 1995, although no evidence of clinical disease was present. This pathogen of domestic chickens may have been introduced by humans into this area. The authors suggested that careless or inappropriate disposal of poultry products, allowing access by scavenging birds or inadvertent tracking by humans, was a potent source for spread of this environmental contaminant. The authors concluded that the potential for tourists or expeditions to be vectors of disease may pose a significant threat to Antarctic avifauna. Although disease may be a stressor to penguins, the Antarctic Treaty Parties have subsequently addressed concerns over the introduction of disease and invasive species in protocols to the treaty and guidelines arising out of them. These are discussed below under Factor D.

We are unaware of any information relative to detrimental predation impacts on the emperor penguin, either from native or nonnative species.

In conclusion, we find that neither disease nor predation is a threat to the species in any portion of its range now or in the foreseeable future.

Factor D: The Inadequacy of Existing Regulatory Mechanisms

The Antarctic Treaty, which entered into force in 1961, applies to the area south of 60 °S latitude including all ice shelves (Antarctic Treaty area). The primary purpose of the treaty, which has 28 full members or Parties, is to ensure ''in the interests of all mankind that Antarctica shall continue forever to be used exclusively for peaceful purposes and shall not become the scene of international discord'' (Jatko and Penhale 1999, p. 8). Measures for the Conservation of Antarctic Fauna and Flora arising out of language in Article IX of the treaty concerning ''preservation and conservation of living resources in Antarctica'' were adopted in 1964. They were incorporated into the Protocol on Environmental Protection to the Antarctic Treaty, which was ratified in 1991 and entered into force in January 1998. In the protocol, the Parties to the Antarctic Treaty committed themselves to the comprehensive protection of Antarctica's environment and dependent and associated ecosystems, and they designated Antarctic as a reserve devoted to peace and science (Jatko and Penhale 1999, p. 9). Five annexes to the protocol address specific areas of environmental protection, including environmental impact assessment, conservation of Antarctic fauna and flora, waste disposal and waste management, prevention of marine pollution, and the designation and management of protected areas. Annex II of the Protocol includes prohibitions on killing, capturing, handling, or disturbing animals or harmfully interfering with their habitat, as well as tight restrictions on the introduction of nonnative species; Annex III provides a comprehensive system of requirements for management of wastes generated in Antarctica, including elimination of landfills; and Annex IV addresses requirements to prevent marine pollution from ships operating in the Antarctic Treaty area (Jatko and Penhale 1999, pp. 9–10). As noted above, guidelines for activities in Antarctica directly address these prohibitions on the introduction of nonnative species as well as disposal of garbage (IAATO 2007a, pp.1–4). The Scientific Committee on Antarctic Research, originally established by the International Council of Scientific Unions, provides scientific advice to the Treaty Parties (Jatko and Penhale 1999, p. 8).

Because the Antarctic Treaty does not affect the rights of any State under international law with respect to the high seas, a series of separate conventions have been negotiated and ratified with respect to the exercise of rights in the seas around Antarctica. In particular, CCAMLR addresses the conservation of marine resources. Article II ''defines the objective of this Convention as the conservation of Antarctic marine living resources and states that conservation includes rational use of harvesting'' (Jatko and Penhale 1999, p. 11). CCAMLR operates on three principles: (1) Prevention of population decrease below that which ensures stable recruitment of harvested species; (2) maintenance of the ecological relationships among harvested, dependent, and related species; and (3) prevention of changes or minimization of risks of ecosystem changes. CCAMLR has been active in assessing the status of krill and species dependent upon krill, such as birds and mammals; regulating the harvest of Patagonian tooth fish (*Dissostichus* spp.); and ecosystem monitoring with the goal of detecting changes in critical components of ecosystems.

We find, on the basis of the protection and management of Antarctic ecosystems under the Antarctic Treaty and CCAMLR, that the inadequacy of regulatory mechanisms is not a threat to the emperor penguin in any portion of its range now or in the foreseeable future.

Factor E: Other Natural or Manmade Factors Affecting the Continued Existence of the Species

Fishery Interactions

We have found no evidence of fishing impacts on emperor penguins in the foraging range of adults along the continental margins. Kooyman *et al.* (1996, p. 397) found that juveniles range north into waters where commercial fishing may occur and noted the importance of determining the dispersal patterns of the young to ensure adequate protection. Kooyman (2002, p. 492) also noted that the Antarctic Treaty and CCAMLR extend only to the 60th parallel in this region of Antarctica. However, we are unaware of any reports of fisheries interactions with emperor penguin juveniles and have no reason to believe that this potential stressor will occur at a level to impact this species in the future.

Oil Pollution

Annex IV of the Protocol on Environmental Protection to the Antarctic Treaty sets out requirements to prevent pollution from ships operating in the Antarctic Treaty area (Jatko and Penhale 1999, p. 10). The November 2007 sinking of the cruise ship *MV Explorer* near the Antarctic Peninsula illustrates the possibility of oil spills and other ship-based pollution from increased vessel traffic in Antarctic waters. The *MV Explorer,* which held about 48,000 gallons (181,680 liters) of marine diesel fuel when it sank (Austen 2007, p. 1), did not sink near emperor penguin colonies, but it did sink in the vicinity of colonies of other penguin species. As noted in the discussion of Factor B above, emperor penguin

colonies are not a significant destination of the increasing tourist activity in Antarctica. The wide dispersal of emperor penguin colonies around Antarctica mitigates the concern that a single vessel accident could affect the population of emperor penguins, as does the fact that emperor penguin activity at rookeries may be reduced at the time of year when vessel traffic becomes significant. Vessel operations in the vicinity of emperor penguin colonies, near summer molting areas or elsewhere in their foraging range, remain a source of concern. Although we consider this a potential stressor to the emperor penguin, we have no reason to believe oil pollution will occur at a level to impact this species in the future.

Therefore, we find that fishery interactions and oil pollution are not threats to the emperor penguin in any portion of its range now or in the foreseeable future.

Foreseeable Future

A general discussion of threatened species and foreseeable future can be found above in the southern rockhopper penguin Foreseeable Future section.

In considering the foreseeable future as it relates to the status of the emperor penguin, we analyzed the stressors acting on this species. We reviewed the historical data to identify any relevant existing trends that might allow for reliable prediction of the future (in the form of extrapolating the trends). We also considered whether we could reliably predict any future events (not yet acting on the species and, therefore, not yet manifested in a trend) that might affect the status of the species.

As discussed above in the five-factor analysis, we were unable to identify any significant trends with respect to the stressors we identified for this species: (1) Physical changes in the sea-ice and marine habitat; (2) potential introduction of avian diseases from outside the region; (3) potential fishery interactions with juveniles that range north into waters where commercial fishing may occur; and (4) possible oil pollution in the vicinity of summer molting areas or in the penguin's foraging range. There is no evidence that any of the stressors are growing in magnitude. Thus, the foreseeable future includes consideration of the ongoing effect of current stressors at comparable levels.

There remains the question of whether we can reliably predict future events (as opposed to ongoing trends) that will likely cause the species to become endangered. As we discuss in the finding below, we can reliably predict that physical changes in the sea-ice and marine habitats will continue to have an impact on individual colonies, especially smaller marginal colonies, but we have no reason to believe the physical changes will have population level impacts. Thus, the foreseeable future includes the consideration of the effects of such changes on the viability of the emperor penguin.

Emperor Penguin Finding

We have carefully assessed the best available scientific and commercial information regarding the past, present, and potential future threats faced by the emperor penguin above. To determine whether the stressors identified above individually or collectively rise to the level of a threat such that the emperor penguin is in danger of extinction throughout its range or likely to become so within the foreseeable future, we considered whether the stressors were causing a long-term, population decline or were likely to do so in the future.

As discussed above, the overall emperor penguin population is estimated at 195,000 breeding pairs in approximately 45 colonies distributed around the perimeter of the Antarctic continent. We consider the population to be currently stable, and we are not aware of significant historical or current declines. Observed fluctuations in numbers at specific colonies, particularly smaller ones, are ongoing and have been attributed to physical events in the harsh Antarctic environment and seasonal, annual, and longer cyclical climatic or meteorological events. While observations of emperor penguin colonies are by nature constrained by the logistics of reaching remote sites, and many colonies are rarely visited or poorly described (Barber-Meyer *et al.* 2007a, p. 1,565), we are unaware of colony changes of significance to the overall population or of significant impacts to the emperor penguin's sea-ice or marine habitat. We also found no evidence that disease, fishery interaction, or oil pollution was affecting a decline in the emperor penguin population. Based on the best available data, we find that the identified stressors are not causing a long-term decline in the emperor penguin's population. Thus, we conclude that the species is neither threatened nor endangered due to factors causing ongoing population declines.

We also considered whether any of the stressors began recently enough that their effects are not yet manifested in a long-term decline, but are likely to have that effect in the future. As discussed above, the emperor penguin is an ice-dependent species, and changes in the physical environment can affect individual colonies. At the current time, based on the best available scientific evidence, we conclude that no current directional climatic changes are affecting the habitat of the emperor penguin, and we do not have sufficient scientific information to make reliable predictions as to declines of the species in the foreseeable future. Also, we are unaware of any reports of diseases in emperor penguins, fishery interactions with juvenile penguins, or oil spills that have affected emperor penguins. Therefore, the emperor penguin is neither threatened nor endangered due to threats that began recently enough that their effects are not yet manifested in a long-term decline.

Then, we considered whether any of the stressors were likely to increase within the foreseeable future, such that the species is likely to become endangered. As explained in greater detail in Factor A, climate model simulations of winter and summer mean sea-ice concentrations around Antarctica for the period 2080–2100 project declines in sea-ice concentrations from those observed in the 1980–2000 timeframe (Bracegirdle *et al.* 2008, p. 8; Meehl *et al.* 2007, p. 771). While these model simulations exhibit extensive deviation around mean predictions, they provide a general picture of future Antarctic sea-ice conditions in the range of the emperor penguin. They show winter sea-ice reductions by 2080–2100, with sea-ice concentrations remaining high around the bulk of the continent and highest in the Ross, Amundsen, and Weddell Seas, and around the Mawson Coast in the Indian Ocean sector. In the 2080–2100 timeframe, summer sea-ice concentrations also retreat, with sea ice persisting in the Ross and Weddell Seas and apparently greatly reduced or not persisting in the Indian Ocean sector.

The IPCC, Fourth Assessment Report (IPCC AR4), is very clear on the limitations of the climate models and their projections (Christenson 2007, p. 908; Randall *et al.* 2007, p. 616). It is difficult and premature to use these model results to make specific predictions about the sea-ice conditions in any particular region of emperor penguin habitat around Antarctica. This is particularly difficult when empirical evidence to date suggests that such continent-wide sea-ice declines have not yet begun. However, considering the species as a whole, these large-scale model predictions seem to indicate that emperor penguins, especially in the Ross and Weddell Seas, are likely to

continue to encounter suitable sea-ice habitat for breeding in the winter and molting in the summer in the 100-year timeframe (*i.e.*, 2080–2100). Therefore, we conclude that there is not sufficient evidence to find that climate change effects to the habitat of the emperor penguin are likely to be a threat to the emperor penguin in the foreseeable future. In addition, as discussed above, disease, fishery interaction with juveniles, and oil pollution are not likely to increase significantly in the future.

Next, we considered whether the species met the definition of an 'endangered' or 'threatened' species on the basis of its present or likely future numbers. The total population of 195,000 breeding pairs appears to be stable, and we are unaware of significant current declines. The population is widely distributed on the Antarctic Peninsula and the total number of penguins is not so low that the species is currently in danger of extinction.

Finally, we considered whether the species is likely to become endangered in the foreseeable future because stochastic events might reduce its current numbers to the point where its viability would be in question. Because this species is distributed in approximately 45 colonies on the Antarctic Peninsula, a future stochastic event that negatively affected the species would be unlikely to reduce the population to such a low level that the species would be in danger of extinction.

On the basis of analysis of the five factors and the best available scientific and commercial information, we find that the emperor penguin is not currently threatened or endangered in any portion of its range or likely to become so in the foreseeable future.

Distinct Population Segment

A discussion of distinct population segments and the Service policy can be found above in the southern rockhopper penguin Distinct Population Segment section.

Discreteness Analysis

A discussion of discreteness can be found above in the southern rockhopper penguin Discreteness Analysis section.

Emperor penguins have a continuous range from Marie Byrd Land east of the Ross Sea to the Weddell Sea. With respect to discreteness, while the emperor penguin can be found in three broadly defined areas of distribution, we are unaware of any marked separation between areas of abundance of the emperor penguin or of differences in physical, physiological, ecological, or behavioral factors among any groups within that range. We are unaware of any research on genetic or morphological discontinuity between any elements of the population. The range of the emperor penguin is entirely within the jurisdiction of the Antarctic Treaty and CCAMLR, except for one area of the Pacific Ocean where dispersing juveniles may spend some time outside of the CCAMLR zones. We find no significant differences in conservation status, habitat management, or regulatory mechanisms between any possible segment of the emperor penguin population. As a result of this analysis, we do not find any segments of the population of the emperor penguin that meet the criterion of discreteness for determination of a DPS. Therefore, we do not find a DPS for the emperor penguin.

Significant Portion of the Range Analysis

Having determined that the emperor penguin is not now in danger of extinction or likely to become so in the foreseeable future, we also considered whether there were any significant portions of its range where the species is in danger of extinction or likely to become so in the foreseeable future. See our analysis for the southern rockhopper penguin for how we make this determination.

First, we examined possible portions of the range that might be considered significant, and then we considered whether there were any portions of the range where the threats were different or concentrated in particular areas. Woehler (1993, p. 5) described three main areas, each of which encompasses a large area of the Antarctic coast: (1) The Weddell Sea and Dronning Maud Land; (2) Enderby and Princess Elizabeth lands; and (3) the Ross Sea. Within these areas, colonies are widely distributed along the coastline, and each is very isolated from its nearest neighbors. The area ''between'' these general regions is not a distinct geographical barrier, but an area where colonies are spread even more sparsely along the coast. In these areas, there is a longer distance between the individual colonies or ''links'' in the chain of colonies encircling most of the continent. During the period of molting, adult penguins range widely and often into the vicinity of other colonies. For example, Wienecke *et al.* (2004, p. 90) inferred potential mixing at sea between birds from four colonies along the Mawson Coast and suggested this was a potential vehicle for interbreeding of birds from different colonies.

In fact, the wider distribution of colonies between ''regions'' may actually be an artifact of the difficulty of visiting remote areas of the coast away from the few research stations that exist on the coast or difficulties of reaching these areas at a time when breeding can be detected (Kooyman 2002, p. 492). A recent discovery of a new colony along one of the longest stretches of Wilkes Land led researchers to predict that more colonies will be found in one of the longest gaps of recorded colonies. With each confirmed new discovery has come evidence indicating more colonies may exist. This would provide evidence of stronger connections between areas (Lea and Soper 2005, pp. 59–60; Melick and Bremmers 1995, p. 427) and greater potential for mixing or interbreeding between regions.

In the course of our review, we have discussed the declines that occurred at the small Cape Crozier and Beaufort Island colonies in the Western Ross Sea over the period of 2001–2005 as the result of the impact of iceberg B15A. The most recent data from 2005 indicated that the Beaufort Island colony had seen significant post-iceberg recovery in chick counts. After an initial breeding failure in 2001 at Cape Crozier, the year of iceberg impact, chick counts fluctuated from 247 in 2002, to 333 in 2003, to 475 in 2004, to 0 in 2005, and 340 chicks in 2006 (Barber-Meyer *et al.* 2007b, pp. 7, 9). Given the small current and historic size of these colonies (averaging 526 (Cape Crozier) and 896 (Beaufort Island) chicks over 22 years) and their location in the vicinity of four other larger emperor penguin colonies in the western Ross Sea with chick counts averaging from 2,843 (Franklin Island), to 19,776 (Cape Washington), to 23,859 (Coulman Island) and to 6,215 (Cape Roget) chicks) over the same period, we do not consider these colonies to represent a significant portion of the range of the emperor penguin.

Finding of Emperor Penguin SPR Analysis

Given the current stability of conditions for the emperor penguin throughout its range and the paucity of current stressors identified, we do not find through our five-factor analysis any stressor that has the potential to affect any one portion of the range of the emperor penguin differently than any other. With respect to the longer-term issue of changes in sea-ice cover, we do not find that current models provide sufficient predictive power to evaluate regional scenarios with confidence or to make distinctions as to the potential risks to any particular portion of the

range. For these reasons, we conclude that there are no portions of the emperor penguin's range that warrant further consideration as significant portions of the range.

Final Determination for the Emperor Penguin

On the basis of analysis of the five factors and the best available scientific and commercial information, we find that listing the emperor penguin as threatened or endangered under the Act in all or any significant portion of its range is not warranted.

Public Comments Solicited on the Proposed Rule To List the Southern Rockhopper Penguin in the Campbell Plateau Portion of Its Range

We intend that any final action resulting from this proposal will be as accurate and as effective as possible. Therefore, we request comments or suggestions on this proposed rule. We particularly seek comments concerning:

(1) Biological, commercial, trade, or other relevant data concerning any threats (or lack thereof) to this species and regulations that may be addressing those threats.

(2) Additional information concerning the range, distribution, and population size of this species, including the locations of any additional populations of this species.

(3) Any information on the biological or ecological requirements of the species.

(4) Current or planned activities in the areas occupied by the species and possible impacts of these activities on this species.

You may submit your comments and materials concerning this proposed rule by one of the methods listed in the **ADDRESSES** section. We will not consider comments sent by e-mail or fax or to an address not listed in the **ADDRESSES** section.

If you submit a comment via *http://www.regulations.gov,* your entire comment—including any personal identifying information—will be posted on the website. If you submit a hardcopy comment that includes personal identifying information, you may request at the top of your document that we withhold this information from public review. However, we cannot guarantee that we will be able to do so. We will post all hardcopy comments on *http://www.regulations.gov.*

Comments and materials we receive, as well as supporting documentation we used in preparing this proposed rule, will be available for public inspection on *http://www.regulations.gov,* or by appointment, during normal business hours, at the U.S. Fish and Wildlife Service, Division of Scientific Authority, 4401 N. Fairfax Drive, Room 110, Arlington, VA 22203; telephone 703–358–1708.

Available Conservation Measures

Conservation measures provided to species listed as endangered or threatened under the Act include recognition, requirements for Federal protection, and prohibitions against certain practices. Recognition through listing results in public awareness, and encourages and results in conservation actions by Federal governments, private agencies and groups, and individuals.

Section 7(a) of the Act, as amended, and as implemented by regulations at 50 CFR part 402, requires Federal agencies to evaluate their actions within the United States or on the high seas with respect to any species that is proposed or listed as endangered or threatened, and with respect to its critical habitat, if any is being designated. However, given that the Campbell Plateau portion of the range of the New Zealand/Australia Distinct Population Segment (DPS) of the southern rockhopper penguin is not native to the United States, critical habitat is not being designated for these species under section 4 of the Act.

Section 8(a) of the Act authorizes limited financial assistance for the development and management of programs that the Secretary of the Interior determines to be necessary or useful for the conservation of endangered and threatened species in foreign countries. Sections 8(b) and 8(c) of the Act authorize the Secretary to encourage conservation programs for foreign endangered species and to provide assistance for such programs in the form of personnel and the training of personnel.

The Act and its implementing regulations set forth a series of general prohibitions and exceptions that apply to all endangered and threatened wildlife. As such, these prohibitions would be applicable to the Campbell Plateau portion of the range of the New Zealand/Australia Distinct Population Segment (DPS) of the southern rockhopper penguin. These prohibitions, under 50 CFR 17.21, make it illegal for any person subject to the jurisdiction of the United States to ''take'' (take includes harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, collect, or to attempt any of these) within the United States or upon the high seas, import or export, deliver, receive, carry, transport, or ship in interstate or foreign commerce in the course of a commercial activity, or to sell or offer for sale in interstate or foreign commerce, any endangered wildlife species. It also is illegal to possess, sell, deliver, carry, transport, or ship any such wildlife that has been taken in violation of the Act. Certain exceptions apply to agents of the Service and State conservation agencies.

We may issue permits to carry out otherwise prohibited activities involving endangered and threatened wildlife species under certain circumstances. Regulations governing permits are codified at 50 CFR 17.22 for endangered species, and at 17.32 for threatened species. With regard to endangered wildlife, a permit must be issued for the following purposes: for scientific purposes, to enhance the propagation or survival of the species, and for incidental take in connection with otherwise lawful activities.

Peer Review

In accordance with our joint policy with National Marine Fisheries Service, ''Notice of Interagency Cooperative Policy for Peer Review in Endangered Species Act Activities,'' published in the **Federal Register** on July 1, 1994 (59 FR 34270), we will seek the expert opinions of at least three appropriate independent specialists regarding this proposed rule. The purpose of peer review is to ensure that our proposed rule is based on scientifically sound data, assumptions, and analyses. We will send copies of this proposed rule to the peer reviewers immediately following publication in the **Federal Register**. We will invite these peer reviewers to comment during the public comment period, on our specific assumptions and conclusions regarding this proposed rule.

We will consider all comments and information we receive during the comment period on this proposed rule during our preparation of a final determination. Accordingly, our final decision may differ from this proposal.

Public Hearings

The Act provides for one or more public hearings on this proposal, if we receive any requests for hearings. We must receive your request for a public hearing within 45 days after the date of this **Federal Register** publication (see **DATES**). Such requests must be made in writing and be addressed to the Chief of the Division of Scientific Authority at the address shown in the **FOR FURTHER INFORMATION CONTACT** section. We will schedule public hearings on this proposal, if any are requested, and announce the dates, times, and places of those hearings, as well as how to obtain reasonable accommodations, in the

Federal Register at least 15 days before the first hearing.

Required Determinations

Regulatory Planning and Review (Executive Order 12866)

The Office of Management and Budget has determined that this rule is not significant under Executive Order 12866.

National Environmental Policy Act (NEPA)

We have determined that environmental assessments and environmental impact statements, as defined under the authority of the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*), need not be prepared in connection with regulations adopted under section 4(a) of the Act. We published a notice outlining our reasons for this determination in the **Federal Register** on October 25, 1983 (48 FR 49244).

Clarity of the Rule

We are required by Executive Orders 12866 and 12988, and by the Presidential Memorandum of June 1, 1998, to write all rules in plain language. This means that each rule we publish must:

(a) Be logically organized;

(b) Use the active voice to address readers directly;

(c) Use clear language rather than jargon;

(d) Be divided into short sections and sentences; and

(e) Use lists and tables wherever possible.

If you feel that we have not met these requirements, send us comments by one of the methods listed in the **ADDRESSES** section. To better help us revise the rule, your comments should be as specific as possible. For example, you should tell us the numbers of the sections or paragraphs that are unclearly written, which sections or sentences are too long, the sections where you feel lists or tables would be useful, etc.

References Cited

A complete list of the references cited in this notice is available on the Internet at *http://www.regulations.gov* or upon request from the Division of Scientific Authority, U.S. Fish and Wildlife Service (see **FOR FURTHER INFORMATION CONTACT**).

Author

The authors of this proposed rule are staff of the Division of Scientific Authority, U.S. Fish and Wildlife Service (see **FOR FURTHER INFORMATION CONTACT**).

Proposed Regulation Promulgation

Accordingly, we propose to amend part 17, subchapter B of chapter I, title 50 of the Code of Federal Regulations, as set forth below:

PART 17—[AMENDED]

1. The authority citation for part 17 continues to read as follows:

Authority: 16 U.S.C. 1361–1407; 16 U.S.C. 1531–1544; 16 U.S.C. 4201–4245; Public Law 99–625, 100 Stat. 3500; unless otherwise noted.

2. Amend § 17.11(h) by adding a new entry for ''Penguin, southern rockhopper'' in alphabetical order under BIRDS to the List of Endangered and Threatened Wildlife as follows:

§ 17.11 Endangered and threatened wildlife.

* * * * *

Endangered and Threatened Wildlife and Plants; 12-Month Finding on a Petition to List Five Penguin Species Under the Endangered Species Act, and Proposed Rule To List the Five Penguin Species

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Proposed rule and notice of 12-month petition finding.

SUMMARY: We, the U.S. Fish and Wildlife Service (Service), propose to list the yellow-eyed penguin (*Megadyptes antipodes*), white-flippered penguin (*Eudyptula minor albosignata*), Fiordland crested penguin (*Eudyptes pachyrhynchus*), Humboldt penguin (*Spheniscus humboldti*), and erect-crested penguin (*Eudyptes sclateri*) as threatened species under the Endangered Species Act of 1973, as amended (Act). This proposal, if made final, would extend the Act's protection to these species. This proposal also constitutes our 12-month finding on the petition to list these five species. The Service seeks data and comments from the public on this proposed rule.

DATES: We will accept comments and information received or postmarked on or before February 17, 2009. We must receive requests for public hearings, in writing, at the address shown in the **FOR FURTHER INFORMATION CONTACT** section by February 2, 2009.

ADDRESSES: You may submit comments by one of the following methods:

- Federal eRulemaking Portal: *http://www.regulations.gov.* Follow the instructions for submitting comments.
- U.S. mail or hand-delivery: Public Comments Processing, Attn: [FWS–R9–IA–2008–0118]; Division of Policy and Directives Management; U.S. Fish and Wildlife Service; 4401 N. Fairfax Drive, Suite 222; Arlington, VA 22203.

We will not accept comments by e-mail or fax. We will post all comments on *http://www.regulations.gov.* This generally means that we will post any personal information you provide us (see the Public Comments section below for more information).

FOR FURTHER INFORMATION CONTACT: Pamela Hall, Branch Chief, Division of Scientific Authority, U.S. Fish and Wildlife Service, 4401 N. Fairfax Drive, Room 110, Arlington, VA 22203; telephone 703–358–1708; facsimile 703–358–2276. If you use a telecommunications device for the deaf (TDD), call the Federal Information Relay Service (FIRS) at 800–877–8339.

SUPPLEMENTARY INFORMATION:

Public Comments

We intend that any final action resulting from this proposal will be as accurate and as effective as possible. Therefore, we request comments or suggestions on this proposed rule. We particularly seek comments concerning:

(1) Biological, commercial, trade, or other relevant data concerning any threats (or lack thereof) to this species and regulations that may be addressing those threats.

(2) Additional information concerning the range, distribution, and population size of this species, including the locations of any additional populations of this species.

(3) Any information on the biological or ecological requirements of the species.

(4) Current or planned activities in the areas occupied by the species and possible impacts of these activities on this species.

You may submit your comments and materials concerning this proposed rule by one of the methods listed in the **ADDRESSES** section. We will not consider comments sent by e-mail or fax or to an address not listed in the **ADDRESSES** section.

If you submit a comment via *http://www.regulations.gov,* your entire comment—including any personal identifying information—will be posted on the Web site. If you submit a hardcopy comment that includes personal identifying information, you may request at the top of your document that we withhold this information from public review. However, we cannot guarantee that we will be able to do so. We will post all hardcopy comments on *http://www.regulations.gov.*

Comments and materials we receive, as well as supporting documentation we used in preparing this proposed rule, will be available for public inspection on *http://www.regulations.gov,* or by appointment, during normal business hours, at the U.S. Fish and Wildlife Service, Division of Scientific Authority, 4401 N. Fairfax Drive, Room 110, Arlington, VA 22203; telephone 703–358–1708.

Background

Section 4(b)(3)(A) of the Act (16 U.S.C. 1533(b)(3)(A)) requires the Service to make a finding known as a ''90-day finding'' on whether a petition to add, remove, or reclassify a species from the list of endangered or threatened species has presented substantial information indicating that the requested action may be warranted. To the maximum extent practicable, the finding shall be made within 90 days following receipt of the petition and published promptly in the **Federal Register**. If the Service finds that the petition has presented substantial information indicating that the requested action may be warranted (referred to as a positive finding), section 4(b)(3)(A) of the Act requires the Service to commence a status review of the species if one has not already been initiated under the Service's internal candidate assessment process. In addition, section 4(b)(3)(B) of the Act requires the Service to make a finding within 12 months following receipt of the petition on whether the requested action is warranted, not warranted, or warranted but precluded by higher-priority listing actions (this finding is referred to as the ''12-month finding''). Section 4(b)(3)(C) of the Act requires that a finding of warranted but precluded for petitioned species should be treated as having been resubmitted on the date of the warranted but precluded finding, and is, therefore, subject to a new finding within 1 year and subsequently thereafter until we take action on a proposal to list or withdraw our original finding. The Service publishes an annual notice of resubmitted petition findings (annual notice) for all foreign species for which listings were previously found to be warranted but precluded.

In this notice, we announce a warranted 12-month finding and proposed rule to list five penguin taxa as threatened species under the Act, yellow-eyed penguin, white-flippered penguin, Fiordland crested penguin, Humboldt penguin, and erect-crested penguin. We will announce the 12-month findings for the African penguin (*Spheniscus demersus*), emperor penguin (*Aptenodytes forsteri*), southern rockhopper penguin (*Eudyptes chrysocome*), northern rockhopper penguin (*Eudyptes chrysolophus*), and macaroni penguin (*Eudyptes chrysolophus*) in one or more separate **Federal Register** notice(s).

Previous Federal Actions

On November 29, 2006, the Service received a petition from the Center for Biological Diversity to list 12 penguin species under the Act: Emperor penguin, southern rockhopper penguin, northern rockhopper penguin, Fiordland crested penguin, snares crested penguin (*Eudyptes robustus*),

erect-crested penguin, macaroni penguin, royal penguin (*Eudyptes schlegeli*), white-flippered penguin, yellow-eyed penguin, African penguin, and Humboldt penguin. Among them, the ranges of the 12 penguin species include Antarctica, Argentina, Australian Territory Islands, Chile, French Territory Islands, Namibia, New Zealand, Peru, South Africa, and United Kingdom Territory Islands. The petition is clearly identified as such, and contains detailed information on the natural history, biology, status, and distribution of each of the 12 species. It also contains information on what the petitioner reported as potential threats to the species from climate change and changes to the marine environment, commercial fishing activities, contaminants and pollution, guano extraction, habitat loss, hunting, nonnative predator species, and other factors. The petition also discusses existing regulatory mechanisms and the perceived inadequacies to protect these species.

In the **Federal Register** of July 11, 2007 (72 FR 37695), we published a 90-day finding in which we determined that the petition presented substantial scientific or commercial information to indicate that listing 10 species of penguins as endangered or threatened may be warranted: Emperor penguin, southern rockhopper penguin, northern rockhopper penguin, Fiordland crested penguin, erect-crested penguin, macaroni penguin, white-flippered penguin, yellow-eyed penguin, African penguin, and Humboldt penguin. Furthermore, we determined that the petition did not provide substantial scientific or commercial information indicating that listing the snares crested penguin and the royal penguin as threatened or endangered species may be warranted.

Following the publication of our 90-day finding on this petition, we initiated a status review to determine if listing each of the 10 species is warranted, and opened a 60-day public comment period to allow all interested parties an opportunity to provide information on the status of the 10 species of penguins. The public comment period closed on September 10, 2007. In addition, we attended the International Penguin Conference in Hobart, Tasmania, Australia, a quadrennial meeting of penguin scientists from September 3–7, 2007 (during the open public comment period), to gather information and to ensure that experts were aware of the status review and the open comment period. We also consulted with other agencies and range countries in an effort to gather the best available scientific and commercial information on these species.

During the public comment period, we received over 4,450 submissions from the public, concerned governmental agencies, the scientific community, industry, and other interested parties. Approximately 4,324 e-mails and 31 letters received by U.S. mail or facsimile were part of one letter-writing campaign and were substantively identical. Each letter supported listing under the Act, included a statement identifying ''the threat to penguins from global warming, industrial fishing, oil spills and other factors,'' and listed the 10 species included in the Service's 90-day finding. A further group of 73 letters included the same information plus information concerning the impact of ''abnormally warm ocean temperatures and diminished sea ice'' on penguin food availability and stated that this has led to population declines in southern rockhopper, Humboldt, African, and emperor penguins. These letters stated that the emperor penguin colony at Point Geologie has declined more than 50 percent due to global warming and provided information on krill declines in large areas of the Southern Ocean. They stated that continued warming over the coming decades will dramatically affect Antarctica, the sub-Antarctic islands, the Southern Ocean and the penguins dependent on these ecosystems for survival. A small number of general letters and e-mails drew particular attention to the conservation status of the southern rockhopper penguin in the Falkland Islands.

Twenty submissions provided detailed, substantive information on one or more of the 10 species. These included information from the governments, or government-affiliated scientists, of Argentina, Australia, Namibia, New Zealand, Peru, South Africa, and the United Kingdom, from scientists, from 18 members of the U.S. Congress, and from one non-governmental organization (the original petitioner).

On December 3, 2007, the Service received a 60-day Notice of Intent to Sue from the Center for Biological Diversity (CBD). CBD filed a complaint against the Department of the Interior on February 27, 2008, for failure to make a 12-month finding on the petition. On September 8, 2008, the Service entered into a Settlement Agreement with CBD, in which we agreed to submit to the **Federal Register** 12-month findings for the 10 species of penguins, including the five penguin taxa that are the subject of this proposed rule, on or before December 19, 2008.

We base our findings on a review of the best scientific and commercial information available, including all information received during the public comment period. Under section 4(b)(3)(B) of the Act, we are required to make a finding as to whether listing each of the 10 species of penguins is warranted, not warranted, or warranted but precluded by higher priority listing actions.

Species Information and Factors Affecting the Species

Section 4 of the Act (16 U.S.C. 1533), and its implementing regulations at 50 CFR part 424, set forth the procedures for adding species to the Federal Lists of Endangered and Threatened Wildlife and Plants. A species may be determined to be an endangered or threatened species due to one or more of the five factors described in section 4(a)(1) of the Act. The five factors are: (A) The present or threatened destruction, modification, or curtailment of its habitat or range; (B) overutilization for commercial, recreational, scientific, or educational purposes; (C) disease or predation; (D) the inadequacy of existing regulatory mechanisms; and (E) other natural or manmade factors affecting its continued existence.

Below is a species-by-species analysis of these five factors. The species are considered in the following order: Yellow-eyed penguin, white-flippered penguin, Fiordland crested penguin, Humboldt penguin, and erect-crested penguin.

Yellow-Eyed Penguin (Megadyptes antipodes)

Background

The yellow-eyed penguin, also known by its Maori name, hoiho, is the third largest of all penguin species, averaging around 24 pounds (lb) (11 kilograms (kg)) in weight. It is the only species in the monotypic genus *Megadyptes*. Yellow-eyed penguins breed on the southeast coast of New Zealand's South Island, from Banks Peninsula to Bluff at the southern tip; in Fouveaux Strait, and on Stewart and adjacent islands just 18.75 mi (30 km) from the southern tip of the New Zealand mainland; and at the sub-Antarctic Auckland and Campbell Islands, 300 mi (480 km) and 380 mi (608 km), respectively, south of the southern tip of the South Island. The distribution is thought to have moved north since the 1950s (McKinlay 2001, p. 8). The species is confined to the seas of the New Zealand region and forages over the continental shelf (Taylor 2000, p. 93).

Unlike more strongly colonial breeding penguin species, yellow-eyed penguins nest in relative seclusion, out of sight of humans and one another (Wright, 1998, pp. 9–10; Ratz and Thompson 1999, p. 205). Current terrestrial habitats range from native forest to grazed pasture (McKinlay 2001, p. 10). In some places, they nest in restored areas and, in other places, they nest in areas where livestock are still present (McKinlay 2001, p. 10). Prior to land clearing for agriculture by European settlers, historic habitat was in coastal forests and shrub margins (Marchant and Higgins 1990, p. 237).

The New Zealand Department of Conservation (DOC) published the Hoiho (*Megadyptes antipodes*) Recovery Plan (2000–2025) (Recovery Plan) in 2001 to state the New Zealand DOC's intentions for the conservation of this species, to guide the New Zealand DOC in its allocation of resources, and to promote discussion among the interested public (McKinlay 2001, p. 20). The goal of the Recovery Plan, which updates a 1985–1997 plan previously in place, is to increase yellow-eyed penguin numbers and have active community involvement in their conservation. The primary emphasis over the 25-year period is to ''retain, manage and create terrestrial habitat'' and to ''investigate the mortality of hoiho at sea'' (McKinlay 2001, p. 2).

Current estimates place the total population at 1,602 breeding pairs (Houston 2007, p. 3).

In the recent past, the number of breeding pairs has undergone dramatic periods of decline and fluctuation in parts of its range on the mainland of the South Island. Records suggest that the mainland populations declined at least 75 percent from the 1940s to 1988, when there were 380 to 400 breeding pairs (Darby and Seddon 1990, p. 59). There have been large fluctuations since a low of about 100 breeding pairs in the 1989–90 breeding season to over 600 in the 1995–96 breeding season (McKinlay 2001, p. 10). Current mainland counts indicate 450 breeding pairs on the southeast coast of the mainland of the South Island (Houston 2007, p. 3). As recently as the 1940s, there were reported to be individual breeding areas where penguin numbers were estimated in the hundreds; in 1988, only three breeding areas on the whole of the South Island had more than 30 breeding pairs (Darby and Seddon 1990, p. 59).

Just across the Fouveaux Strait at the southern tip of the South Island, at Stewart Island and nearby Codfish Island, yellow-eyed penguin populations numbered an estimated 178 pairs in the early 2000s (Massaro and Blair 2003, p. 110). While these populations are essentially contiguous with the mainland range, this is the first population estimate for this area based on a comprehensive count and it is lower than previous estimates. It is unclear whether numbers have declined in the past 2 decades or whether previous estimates, which extrapolated from partial surveys, were overestimates (Massaro and Blair 2003, p. 110), but evidence points to the latter. For example, Darby and Seddon (1990, p. 58) provided 1988 estimates of 470 to 600 breeding pairs which were extrapolated from density estimates. In the Hoiho Recovery plan, which reported these 1998 numbers, it is noted that, ''In the case of Stewart Island, these figures should be treated with a great deal of skepticism. Only a partial survey was completed in the early 1990's'' (McKinlay 2001, p. 8). Darby (2003, p. 148), one of the authors of the earlier estimate, subsequently reviewed survey data from the decade between 1984 and 1994 and revised the estimates for this region down to 220 to 400 pairs. In conclusion, while it is reported that the numbers of birds at Stewart and Codfish Islands have declined historically (Darby and Seddon 1990, p. 57), it is unclear to what extent declines are currently underway. Houston (2008, p. 1) reported numbers are stable in all areas of Stewart and Codfish Islands, except in the northeast region of Stewart Island where disease and starvation are impacting colonies, as discussed in detail below.

In the sub-Antarctic island range of the yellow-eyed penguin, there are an estimated 404 pairs on Campbell Island (down from 490 to 600 pairs in 1997); and 570 pairs on the Auckland Islands (Houston, 2007, p. 3).

The yellow-eyed penguin is listed as 'Endangered' by IUCN (International Union for Conservation of Nature) criteria (BirdLife International 2007, p. 1). When the New Zealand Action Plan for Seabird Conservation was completed in 2000, the species' IUCN Status was 'Vulnerable,' and it was listed as Category B (second priority) on the Molloy and Davis threat categories employed by the New Zealand DOC (Taylor 2000, p. 33). On this basis, the species was placed in the second tier in New Zealand's Action Plan for Seabird Conservation. The species is listed as 'acutely threatened—nationally vulnerable' on the New Zealand Threat Classification System List (Hitchmough *et al.* 2007, p. 45; Molloy *et al.* 2002, p. 20).

Summary of Factors Affecting the Yellow-Eyed Penguin

Factor A. The Present or Threatened Destruction, Modification, or Curtailment of Yellow-Eyed Penguin's Habitat or Range

Deforestation and the presence of grazing animals and agricultural activities have destroyed or degraded yellow-eyed penguin habitat throughout the species' range on the mainland South Island of New Zealand and much of the decline in breeding numbers can be attributed to loss of habitat (Darby and Seddon 1990, p. 60; Taylor 2000, p. 94). The primary historic habitat of the reclusive yellow-eyed penguin on the southeast coast of the South Island of New Zealand was the podocarp hardwood forest. During the period of European settlement of New Zealand, almost all of this forest has been cleared for agriculture, with forest clearing activities continuing into at least the 1970s (Sutherland 1999, p. 18). This has eliminated the bulk of the historic mainland breeding vegetation type for this species (Marchant and Higgins 1990, p. 237). With dense hardwood forest unavailable, the breeding range of yellow-eyed penguins has now spread into previously unoccupied habitats of scrubland, open woodland, and pasture (Marchant and Higgins 1990, p. 237). Here the breeding birds are exposed to new threats. In agricultural areas, breeding birds are exposed to trampling of nests by domestic cattle. For example, at the mainland Otago Peninsula in 1985, 25 out of 41 nests (60 percent) were destroyed by cattle (Marchant and Higgins 1990, p. 238). In some cases, efforts to fence penguin reserves to reduce trampling by cattle have created more favorable conditions for attack by introduced predators (see Factor C) (Alterio *et al.* 1998, p. 187). Yellow-eyed penguins are also more frequently exposed to fire in these new scrubland and agricultural habitats, such as a devastating fire in 1995 at the Te Rere Yellow-eyed Penguin Reserve in the southern portion of the mainland of the South Island, which killed more than 60 adult penguins out of a population of 100 adults at the reserve as well as fledgling chicks on shore (Sutherland 1999, p. 2; Taylor 2000, p. 94). Five years after the fire, there was little evidence of recovery of bird numbers at this reserve (Sutherland 1999, p. 3), although there had been considerable efforts to restore the land habitat through plantings, creation of firebreaks, and predator control.

Habitat recovery efforts, dating as far back as the late 1970s and set out in the 1985–1997 Hoiho Species Conservation

Plan (McKinlay 2001, p. 12), have focused on protecting and improving breeding habitats. Habitat has been purchased or reserved for penguins at the mainland Otago Peninsula, North Otago and Catlins sites, with 20 mainland breeding locations (out of an estimated 32 to 42) reported to be under ''statutory'' protection against further habitat loss (Ellis 1998, p. 91) and new, currently unoccupied areas have been acquired to provide the potential to support increased populations in the future (McKinlay 2001, p. 12). Fencing and re-vegetation projects have been carried out to restore nesting habitat to exclude grazing animals from breeding habitats (McKinlay 2001, p. 12). Despite these efforts, yellow-eyed penguin numbers on the mainland have not increased and have continued to fluctuate dramatically around low levels of abundance, with no sustained increases over the last 27 years (McKinlay 2001, p. 10). Although we did not rely on future conservation efforts by New Zealand in our analysis of threats, we note that efforts in the second phase of the Hoiho Recovery Plan continue to focus on managing, protecting, and restoring the terrestrial habitat of the yellow-eyed penguin (McKinlay 2001, p. 15).

On the offshore and sub-Antarctic islands of its range, feral cattle and sheep destroyed yellow-eyed penguin nests on Enderby and Campbell Islands (Taylor 2000, p. 94). All feral animals were removed from Enderby Island in 1993, and from Campbell Island in 1984 (cattle) and 1991 (sheep) (Taylor 2000, p. 95). There has been reported to be very little change in the terrestrial habitat of the yellow-eyed penguin habitat on these islands (McKinlay 2001, p. 7).

Significant public and private efforts have been undertaken in New Zealand over past decades to protect and restore yellow-eyed penguin breeding habitat on the mainland South Island. Individual locations remain susceptible to fire or other localized events, but the threat of manmade habitat destruction has been reduced over the dispersed range of the species on the mainland South Island. Nevertheless, recovery goals for mainland populations have not been achieved. Specifically, the goal in the 1985–1997 recovery plan of maintaining two managed mainland populations, each with a minimum of 500 pairs was not achieved (McKinlay 2001, p. 13) and, 8 years into the 2000–2025 recovery plan, the long-term goal to increase yellow-eyed penguin populations remains elusive. In our analysis of other threat factors, in particular Factor C, we will further examine why these goals have not been met. The species' island breeding habitats have either not been impacted or, if historically impacted, the causes of disturbance have been removed. For this reason, we find that the present or threatened destruction, modification, or curtailment of its terrestrial habitat or range is not a threat to the species in any portion of its range.

In the marine environment, yellow-eyed penguins forage locally around colony sites during the breeding season. They feed on a variety of fish and squid species including opal fish (*Hemerocoetes monopterygius*), blue cod (*Parapercis colias*), sprat (*Sprattus antipodum*), silverside (*Argentina elongata*), red cod (*Pseudophycis bachus*), and arrow squid (*Nototodarus sloani*). Birds tracked from breeding areas on the Otago Peninsula on the mainland of the South Island foraged over the continental shelf in waters from 131 to 262 feet (ft) (40 to 80 meters (m)) deep. In foraging trips lasting on average 14 hours, they ranged a median of 8 mi (13 km) from the breeding area (Moore 1999, p. 49). Foraging ranges utilized by birds at the offshore Stewart Island were quite small (ca. 7.9 mi^2 (20.4 km^2)) compared to the areas used by birds at the adjacent Codfish Islands (ca. 208 mi^2 (540 km^2)) (Mattern *et al.* 2007, p. 115).

There is evidence that modification of the marine environment by human activities may reduce the viability of foraging areas for yellow-eyed penguins on a local scale. Mainland population declines in 1986–1987 have been attributed to ''changes in the marine environment and failure of quality food'' (McKinlay 2001 p. 9), but we have not found evidence attributing recent population changes at either mainland colonies or the more distant Campbell and Auckland Islands' colonies to changes in the marine environment.

Mattern *et al.* (2007, p. 115) concluded that degradation of benthic habitat by commercial oyster dredging is limiting viable foraging habitat and increasing competition for food for a small portion of Stewart Island penguins breeding in areas on the northeast coast of that island, resulting in chick starvation (King 2007, p. 106). Chick starvation and disease are the two most important causes of chick death at the northeast Stewart Island study colonies (King 2007, p. 106), and poor chick survival and, presumably, poor recruitment of new breeding pairs, is the main cause of a decline in the number of breeding pairs (King 2007, p. 106). At the adjacent Codfish Island, where food is more abundant and diverse (Browne *et al.* 2007, p. 81), chicks have been found to flourish even in the presence of disease. Browne *et al.* (2007, p. 81) found dietary differences between the two islands, with Stewart Island chicks receiving meals comprised of fewer species and less energetic value than those at Codfish Island. The foraging grounds of these two groups do not overlap, suggesting that local-scale influences in the marine environment (Mattern *et al.* 2007, p. 115) are impacting the Stewart Island penguins. These authors concluded that degradation of benthic habitat by commercial oyster dredging is limiting foraging habitat for yellow-eyed penguins at Stewart Island. The 178 pairs on Stewart Island and adjacent islands make up 11 percent of the total current population, and only a portion of this number are affected by the reported degradation of benthic habitat by fisheries activities. Therefore, while the present or threatened destruction, modification, or curtailment of its marine habitat or range by commercial oyster dredging is a threat to chick survival for some colonies at Stewart Island, we find that the present or threatened destruction, modification, or curtailment of its marine habitat or range is not a threat to the species in any other portion of its range.

Factor B. Overutilization for Commercial, Recreational, Scientific, or Educational Purposes

The yellow-eyed penguin has become an important part of the ecotourism industry on the mainland South Island of New Zealand, particularly around the Otago Peninsula and the Southland areas. We are not aware of tourism activities in the island portions of the range of the yellow-eyed penguin. Yellow-eyed penguins are extremely wary of human presence and will not land on the beach if humans are in sight. They select nest-sites with dense vegetative cover and a high degree of concealment (Marchant and Higgins 1990, p. 240) and prefer to be shaded from the sun and concealed from their neighbors (Seddon and Davis 1989, p. 653). Given these secretive habits, research has focused on the potential of increasing tourism to impact yellow-eyed penguins. In one study, yellow-eyed penguins showed lower breeding success in areas of unregulated tourism than in those areas visited infrequently for monitoring purposes only (McClung *et al.* 2004, p. 279). In another study, no impacts of tourist presence were found (Ratz and Thompson 1999, p. 208). In another study disturbance was associated with increased corticosterone levels (associated with stress) in parents and lower fledgling weights of chicks

(Ellenberg *et al.* 2007a, p. 54). The key impact from human disturbance described in the Recovery Plan is that incoming yellow-eyed penguins may not come ashore or may leave the shore prematurely after landing. These and more recent studies (Ellenberg *et al.* 2007b, p. 31) have provided information that is already being used in the design of visitor management and control procedures at yellow-eyed penguin viewing areas to minimize disturbance to breeding pairs. The Hoiho Recovery Plan identifies 14 mainland areas where current practices of viewing yellow-eyed penguins already minimize tourism impacts on yellow-eyed penguins and recommends that practices in these areas remain unchanged. Eight additional areas are identified as suitable for development as tourist destinations to observe yellow-eyed penguins where minimization of tourism impacts can be achieved (McKinlay 2001, p. 21). These existing lists are being used to guide the approval of tourism concessions by the New Zealand DOC. Overall, under the plan, tourism is being directed to those sites where impacts of tourism can be minimized.

Tourism is the primary commercial, recreational, and educational use of the yellow-eyed penguin. We have found no reports of impacts on this species from scientific research or any other commercial, recreational, scientific, or educational purposes.

We find that the New Zealand DOC through its Hoiho Recovery Plan has put in place measures, in cooperation with conservation, tourism, and industry stakeholders, to understand and minimize the impacts of tourism activities on the yellow-eyed penguin. For this reason, we find that overutilization for commercial, recreational, scientific, or educational purposes is not a threat to the yellow-eyed penguin in any portion of its range.

Factor C. Disease or Predation

Disease has been identified as a factor influencing both adult and chick mortality in yellow-eyed penguins. We have identified reports of one major disease outbreak involving adult penguins and ongoing reports of disease in yellow-eyed penguin chicks.

Initial investigation of a major die-off of adult yellow-eyed penguins at Otago Peninsula in 1990 failed to identify the etiology of the deaths (Gill and Darby 1993, p. 39). This involved mortality of 150 adult birds or 31 percent of a mainland population estimated at the time to include 240 breeding pairs. Subsequent investigation of avian malaria seroprevalence among yellow-eyed penguins found that the mortality features, climatological data, and pathological and serological findings at the time conformed to those known for avian malaria outbreaks (Graczyck *et al.* 1995, p. 404), leading the authors to conclude that avian malaria was responsible for the die-off. These authors associated the outbreak with a period of warmer than usual sea and land temperatures. More recently, Sturrock and Tompkins (2007, pp. 158–160) looked for DNA from malarial parasites in yellow-eyed penguins and found that all samples were negative. This suggests that earlier serological tests were overestimating the prevalence of infection or that infection was transient or occurred in age classes not sampled in their current study. While this raises questions as to the role of avian malaria in the 1990 mortality event, the authors noted, given the spread of avian malaria throughout New Zealand and previous results indicating infection and mortality in yellow-eyed penguins, that continued monitoring of malarial parasites in this species should be considered an essential part of their management until the issue of their susceptibility is resolved. There have been no subsequent disease-related die-offs of adult yellow-eyed penguins at mainland colonies since the 1990s (Houston 2007, p. 3).

The haemoparasite *Leucocytozoon*, a blood parasite spread by blackflies, was first identified in yellow-eyed penguins at the offshore Stewart and Codfish Islands in 2004 (Hill *et al.* 2007, p. 96) and was one contributor to high chick mortality at Stewart Islands in 2006–07, which involved loss of all 32 chicks at the northeast Anglem Coast monitoring area of the Yellow-eyed Penguin Trust. This disease may have spread from Fiordland crested penguins which are known to house this disease (Taylor 2000, p. 59). Chick mortality was also reported at this area in 2007–08 (Houston, pers. comm. 2008). It is not clear if the *Leucocytozoon* predisposes animals to succumb from other factors, such as starvation or concurrent infection with other pathogens (such as diphtheritic stomatitis), or is the factor that ultimately kills them, but over 40 percent of chick mortality over three breeding seasons at Stewart Island study colonies was attributed to disease (King 2007, p. 106). The survival of infected chicks at nearby Codfish Island, where food is more abundant, indicates that nutrition can make a difference in whether mortality occurs in diseased chicks (Browne *et al.* 2007, p. 81; King 2007, p. 106). Healthy adults who are infected, but not compromised, by this endemic disease provide a reservoir for infection of new chicks through the vector of blackflies. No viable method of treatment for active infections in either chicks or adults has been identified.

At the mainland Otago Peninsula in the 2004–05 breeding season, an outbreak of *Corynebacterium* infection (diptheritic stomatitis, *Corynebacterium amycolatum*) caused high mortality in yellow-eyed penguin chicks (Houston 2005, p. 267) at many colonies in the mainland range and on Stewart Island (where it may have been a contributing factor to the mortalities discussed above from *Leucocytozoon*). Mortality was not recorded at Codfish Island or at the sub-Antarctic islands (Auckland and Campbell Islands). The disease produced lesions in the chicks' mouths and upper respiratory tract and made it difficult for the chicks to swallow. All chicks at Otago displayed the symptoms with survival being better in older, larger chicks. Treatment with broad spectrum antibiotics was reported to have achieved ''varying results,'' and it is not known how this disease is triggered (Houston 2005, p. 267).

In summary, disease has seriously impacted both mainland and Stewart Island populations of yellow-eyed penguins over the past two decades. A mainland mortality event in 1990, attributed to avian malaria, killed 31 percent of the mainland adult population of yellow-eyed penguin. While there is lack of scientific certainty over the impact of malaria on yellow-eyed penguins, the overall spread of this disease, the small population size of yellow-eyed penguins, and evidence of its presence in their populations lead us to conclude that this is an ongoing threat. Disease events contributed to or caused mortality of at least 20 percent of chicks at Stewart Island in 2006–07 and complete mortality in local colonies. The continuing contribution to yellow-eyed penguin chick mortality from *Leucocytozoon* and diptheritic stomatitus at Stewart Island and the recent high mortalities of mainland chicks from diptheritic stomatitis indicate the potential for future emergence or intensified outbreaks of these or new diseases. The emergence of disease at both mainland and Stewart Island populations in similar time periods and the likelihood that Leucocytozoon was spread to the yellow-eyed penguin from the Fiordland crested penguin point out the significant possibility of future transmission of known diseases between colonies or between species, and the possibility of emergence of new diseases at any of the four identified breeding locations of the yellow-eyed penguin. Therefore, on the

basis of the best available scientific information, we conclude that disease is a threat to the yellow-eyed penguin throughout all of its range.

Predation of chicks, and sometimes adults, by introduced stoats (*Mustela erminea*), ferrets (*M. furo*), cats (*Felis catus*), and dogs (*Canis domesticus*) is the principal cause of yellow-eyed penguin chick mortality on the South Island with up to 88.5 percent of chicks in any given habitat being killed by predators (Alterio *et al.* 1998, p. 187; Clapperton 2001, p. 187, 195; Darby and Seddon 1990, p. 45; Marchant and Higgins 1990, p. 237; McKinlay *et al.* 1997, p. 31; Ratz *et al.* 1999, p. 151; Taylor 2000, pp. 93–94). In a 6-year, long-term study of breeding success of yellow-eyed penguins in mainland breeding areas, predation accounted for 20 percent of chick mortality overall, and was as high as 63 percent overall in one breeding season (Darby and Seddon 1990, p. 53). Proximity to farmland and grazed pastures was found to be a factor accounting for high predator densities and high predation with 88 percent predation at one breeding area adjacent to farmland (Darby and Seddon 1990, p. 57). In a study of cause of death of 114 yellow-eyed penguin carcasses found on the South Island mainland between 1996 and 2003, one-quarter were attributed to predation, with dogs and mustelids the most common predators (Hocken 2005, p. 4).

In light of this threat, protection of chicks from predators is a primary objective under the second Hoiho Recovery Plan (2000–2025). Approaches to predator control are being established and refined at breeding sites on the mainland (McKinlay *et al.* 1997, pp. 31–35), targeting ferrets, stoats, and cats. The New Zealand DOC has concluded that this is a threat which may be manageable with trapping or other cost-effective methods to protect chicks in nests (McKinlay 2001, p. 18). Analysis in the recovery plan indicates that a minimum protection of 43 percent of nests would be needed to ensure population growth (McKinlay 2001, p. 18). The recovery plan establishes a goal of protecting 50 percent of all South Island nests from predators between 2000 and 2025. Where intensive predator control regimes have been put in place, they are effective (McKinlay *et al.* 1997, p. 31), capturing 69 to 82 percent of predators present. In a long-term analysis of three closely monitored study colonies, which make up roughly half the nests at the Otago Peninsula and about 10 to 20 percent of the nests on the mainland, Lalas *et al.* (2007, p.237) found that the threat of predation on chicks by introduced terrestrial mammals had been mitigated by trapping and shooting, and no substantial predation events had occurred between 1984 and 2005. We do not have information on the extent to which anti-predator measures are in place for the remaining 80 to 90 percent of yellow-eyed penguin nests on the mainland of the South Island of New Zealand. Other efforts to remove or discourage predation have not been as successful. A widely applied approach of establishing ''vegetation buffers'' around yellow-eyed penguin nest sites to act as barriers between predators and their prey was found to actually increase predation rates. Predators preferred the buffer areas and utilized penguin paths within them to gain easy access to penguin nests (Alterio *et al.* 1998, p. 189). Given these conflicting reports, we can not evaluate to what extent management efforts are moving toward the goal of protection of 50 percent of all yellow-eyed penguin nests on the mainland. Therefore, we conclude that predation from introduced terrestrial mammals is a threat to the yellow-eyed penguin on the mainland South Island of New Zealand.

Offshore, at Stewart and Codfish Islands, there are a number of introduced predators, but mustelids are absent. Initial research indicated that the presence of feral cats could be depressing the population of yellow-eyed penguins at Stewart Island relative to adjacent islands without feral cats (Massaro and Blair 2003, p. 107). Subsequent research has not found direct evidence of predation by Stewart Island's large population of feral cats (King 2007, p. 106). Weka (*Gallirallus australis*) have been eradicated from Codfish Island, but may prey on eggs and small chicks in the Fouveaux Strait and some breeding islands in the Stewart Island region at the southern tip of New Zealand (Darby 2003, p. 152; Massaro and Blair 2003, p. 111).

Some islands, including the Codfish and Bravo group, have Norway rats (*Rattus norvegicus, R. exulans, R. rattus*), which are thought to prey on small chicks (Massaro and Blair 2003, p. 107). Even though there are Norway rats present at Campbell Island, evidence of egg or chick predation by terrestrial mammalian predators was not observed at during two breeding seasons (Taylor 2000, pp. 93–94).

At Auckland Island, it is reported that feral pigs (*Sus scrofa*) probably kill adults and chicks (Taylor 2000, pp. 93).

Even as objectives are set to attempt to bring terrestrial predators under more effective control, an emerging threat at Otago Peninsula is predation by the New Zealand sea lion (*Phocarctos hookeri*). Since 1985, sea lions have re-colonized the area and predation of yellow-eyed penguins has increased. Penguin remains have been more frequently found in sea lion scat samples. Two penguin breeding sites in close proximity to the founding nursery area of female sea lions have been particularly impacted. The number of nests at these two colonies has declined sharply since predation was first observed and when colonization by female sea lions first took place. As discussed above, these two sites are among those which have been intensively and successfully protected from introduced terrestrial predators between 1984 and 2005 (Lalas *et al.* 2007, p. 237) so declines can be directly attributed to sea lion predation. The predation has been attributed to one female, the daughter of the founding animal. Population modeling of the effect of continued annual kills by sea lions predicts the collapse of small populations (fewer than 100 nests) subject to targeted predation by one individual sea lion. At the current time, none of the 14 breeding sites at Otago Peninsula exceed 100 nests. No action has been taken to control this predation although removal of predatory individuals has been suggested (Lalas *et al.* 2007, pp. 235–246). Similar predation by New Zealand sea lions was observed at Campbell Island in 1988 and was considered a probable cause for local declines there (Moore and Moffat 1992, p. 68). Some authors have speculated that New Zealand sea lion may take yellow-eyed penguins at Stewart Island, but there are no documented reports (Darby 2003, p. 152).

Because of its continued role in suppressing the recovery of yellow-eyed penguin populations and because of the continued impact of introduced terrestrial and avian predators and native marine predators, we find that predation is a threat to the yellow-eyed penguin throughout all of its range.

In summary, we find that disease and predation, which have impacted both mainland and island populations, are a threat to the yellow-eyed penguin throughout all of its range now and in the foreseeable future.

Factor D. Inadequacy of Existing Regulatory Mechanisms

All but seven seabird species in New Zealand, including the yellow-eyed penguin, are protected under New Zealand's Wildlife Act of 1953, which gives absolute protection to wildlife throughout New Zealand and its surrounding marine economic zone. No one may kill or have in their possession

any living or dead protected wildlife unless they have appropriate authority.

The species inhabits areas within Rakiura National Park, which encompasses Stewart and Codfish Island (Whenua Hou). Under section 4 of the National Parks Act of 1980 and Park bylaws, ''the native plants and animals of the parks shall as far as possible be preserved and the introduced plants and animals shall as far as possible be eradicated.'' In addition to national protection, all New Zealand sub-Antarctic islands, including Auckland and Campbell Islands, are inscribed on the World Heritage List (2008, p.16). We do not have information to evaluate whether and to what extent these National Park bylaws reduce threats to the yellow-eyed penguin in these areas.

The yellow-eyed penguin is considered a 'threatened' species and measures for its protection are outlined under the Action Plan for Seabird Conservation in New Zealand of the New Zealand DOC (Taylor 2000, pp. 93–94) (see discussion of Factor D for Fiordland crested penguin). Ellis *et al.* (1998, p. 91) reported that habitat has been purchased or reserved for penguins at the mainland Otago Peninsula, North Otago and Catlins sites, with 20 mainland breeding locations (out of an estimated 32 to 42 sites) reported to be under ''statutory protection'' against further habitat loss. We have not found a complete breakdown of the types of legal protection in place for these areas, of the percent of the total mainland population encompassed under such areas, or of the effectiveness, where they are in place, of such regulatory mechanisms in reducing the identified threats to the yellow-eyed penguin.

As a consequence of its threatened designation, a Hoiho Recovery Plan 2000–2025 has been developed. This plan builds on the first 1985–1997 phase of Hoiho Recovery efforts (McKinlay 2001, pp. 12–13). This plan lays out future objectives and actions to meet the long-term goal of increasing yellow-eyed penguin populations and achieving active community engagement in their conservation (McKinlay 2001, pp. 1–24). The Recovery Plan outlines proposed measures to address chronic factors historically affecting individual colonies, such as destruction or damage to colonies due to fire, livestock grazing and other manmade disturbance, predation by introduced predators, disease, and the impact of human disturbance (especially through tourism activities) (McKinlay 2001, pp. 15–22). Another objective of the plan is to providing enduring legal guarantees of protections for breeding habitat through reservation or covenant (McKinlay 2001, p. 12). Best available information does not allow us to evaluate in detail the progress in meeting the eight objectives of the 2000–2025 recovery plan; although, as discussed elsewhere, the population recovery goals of the original earlier plan continue to be hard to reach for all but the Auckland Islands, and the development of anti-predator measures is an ongoing challenge. We are aware, as discussed in analysis of other threat factors that concerted public and private efforts on these objectives continue. However, in the absence of concrete information on implementation of the plan and reports on its efficacy, we did not rely on future measures proposed in the Hoiho Recovery Plan in our threat factor analysis.

New Zealand has in place The New Zealand Marine Oil Spill Response Strategy, which provides the overall framework to mount a response to marine oil spills that occur within New Zealand's area of responsibility. The aim of the strategy is to minimize the effects of oil on the environment and people's safety and health. The National Oil Spill Contingency Plan promotes a planned and nationally coordinated response to any marine oil spill that is beyond the capability of a local regional council or outside the region of any local council (Maritime New Zealand 2007, p. 1). As discussed below under Factor E, rapid containment of spills in remote areas and effective triage response under this plan has shown these to be effective regulatory mechanisms (New Zealand Wildlife Health Center 2007, p. 2; Taylor 2000, p. 94).

Following a review of the best available information, which indicates that despite the existence of general, or in some cases specific, protective or regulatory measures to address the threats to the yellow-eyed penguin, predation pressure, fisheries bycatch, local marine habitat modification through oyster dredging, and disease continue as threats to the yellow-eyed penguin, we find that inadequacy of regulatory mechanisms is a threat to the yellow-eyed penguin throughout all of its range.

Factor E. Other Natural or Manmade Factors Affecting the Continued Existence of the Species

The Action Plan for Seabird Conservation in New Zealand (Taylor 2000, p. 94) reported that there is no evidence that commercial or recreational fishing is impacting prey availability for the yellow-eyed penguin. Under Factor A, we have concluded that habitat modification by commercial oyster dredging is a threat to local yellow-eyed penguin colonies at Stewart Island, but we have not found evidence of direct competition for prey between yellow-eyed penguins and human fisheries activities. While following penguins from mainland colonies fitted with Global Positioning System (GPS) dive loggers, Mattern *et al.* (2005, p. 270) noted that foraging tracks of adult penguins were remarkably straight. They hypothesized that individuals were following dredge marks from bottom trawls, but there is not information to indicate that fishery interaction has any impact on the penguins. Therefore, we find that competition with fisheries is not a threat to this species in any portion of its range.

New Zealand's National Plan of Action to Reduce the Incidental Catch of Seabirds in New Zealand Fisheries, prepared by the Ministry of Fisheries and New Zealand DOC (MOF and DOC 2004, p. 57), listed yellow-eyed penguins as being incidentally caught in inshore set fishing nets (set nets). A study of bycatch of yellow-eyed penguins along the southeast coast of South Island of New Zealand from 1979–1997 identified gill-net entanglement as a significant threat to the species (Darby and Dawson 2000, p. 327). Mortality was highest in areas adjacent to the Otago Peninsula breeding grounds, with about 55 of 72 gill-netted penguins found in this area (Darby and Dawson 2000, p. 329). An analysis of 185 carcasses collected between 1975 and 1997 found that 42 (23 percent) showed features consistent with mortality from gill-net entanglement. In that period, a further 30 entanglements were reported to officials (Darby and Dawson 2000, p. 327). While these numbers may appear small for the timeframe under study, the authors consider them to be underestimates of actual bycatch mortality (Darby and Dawson 2000, p. 331) and, given the small sizes of local yellow-eyed penguin concentrations, significant to the maintenance of breeding colonies and the survival of adults in the population. Most entanglements reported by Darby and Dawson (2000, p. 331) are from a small geographic area at or near the Otago Peninsula, near the small concentrations of yellow-eyed penguins (in 1996 for example, there were approximately 350 breeding pairs of yellow-eyed penguin on the Otago Peninsula). Given these small numbers, the authors report that bycatch may be severe at a local scale; one small colony inside the entrance to

Otago harbor suffered 7 bycatch mortalities and was subsequently abandoned. The death of 32 birds along the north Otago coast over the period of the study is significant in light of the reported breeding population of only 39 pairs in this region, and, at Banks Peninsula, 7 reported mortalities occurred where there were only 8–10 breeding pairs (Darby and Dawson 2000, p. 331).

In response to bycatch of various species, set net bans have been implemented in the vicinity of the Banks Peninsula, which has been designated as a marine reserve. The 4-month set net ban is primarily designed to reduce entanglements of Hector's dolphin (*Cephalorhynchus hectori*), as well as yellow-eyed penguins and white-flippered penguins (NZ DOC 2007, p. 1). Early reports were that this ban had been widely disregarded (Taylor 2000, p. 70), and based on the best available information we are unable conclude that these measures at the Banks Peninsula have been effective in reducing bycatch of yellow-eyed penguins. In fact, the Hoiho Recovery Plan states that bycatch is likely the largest source of mortality at sea and outlines the need for research and liaison with fisheries managers to inform implementation of further measures to reduce the impact of fishing operations on yellow-eyed penguins (McKinlay 2001, p. 19). We do not have information on whether these proposed measures have been implemented. Therefore, for purposes of this analysis, we did not rely on these proposed measures to evaluate incidental take from gill-net entanglement.

With respect to the potential for bycatch from long-line fisheries, which impact a number of other New Zealand seabird species, the Action Plan for Seabird Conservation indicates it is unlikely that yellow-eyed penguins will be caught in long-lines and the National Plan of Action to Reduce the Incidental Catch of Seabirds in New Zealand Fisheries does not identify this as a threat to this species (MOF and DOC 2004, p. 57).

Based on the significant gill-net bycatch mortality of yellow-eyed penguins along the southeast coast of the South Island of New Zealand, which has the potential to impact over a quarter of the population, we find that fisheries bycatch is a threat to the mainland populations of the yellow-eyed penguin, but is not a threat in any other portion of its range.

We have examined the possibility that oil and chemical spills may impact yellow-eyed penguins. Such spills, should they occur and not be effectively managed, can have direct effects on marine seabirds such as the yellow-eyed penguin. In the range of the yellow-eyed penguin, the sub-Antarctic Campbell and Auckland Islands are remote from shipping activity and the consequent risk of oil or chemical spills is low. The Stewart Islands populations at the southern end of New Zealand and the southeast mainland coast populations are in closer proximity to vessel traffic and human industrial activities which may increase the possibility of oil or chemical spill impacts. Much of the range of the yellow-eyed penguin on mainland New Zealand lies near Dunedin, a South Island port city, and a few individuals breed at Banks Peninsula just to the south of Christchurch, another major South Island port. While yellow-eyed penguins do not breed in large colonies, their locally distributed breeding groups are found in a few critical areas of the coast of the South Island and its offshore islands. A spill event near the mainland South Island city of Dunedin and the adjacent Otago Peninsula could have a major impact on the 14 breeding sites documented there. Non-breeding season distribution along the same coastlines provides the potential for significant numbers of birds to encounter spills at that time as well. Two spills have been recorded in this overall region. In March 2000, the fishing vessel *Seafresh 1* sank in Hanson Bay on the east coast of Chatham Island and released 66 T (60 t) of diesel fuel. Rapid containment of the oil at this remote location prevented any wildlife casualties (New Zealand Wildlife Health Center 2007, p. 2). The same source reported that in 1998 the fishing vessel *Don Wong 529* ran aground at Breaksea Islets off Stewart Island. Approximately 331 T (300 t) of marine diesel was spilled along with smaller amounts of lubricating and waste oils. With favorable weather conditions and establishment of triage response, no casualties of the pollution event were discovered (Taylor 2000, p. 94). There is no doubt that an oil spill near a breeding colony could have a major effect on this species (Taylor 2000, p. 94). However, based on the wide distribution of yellow-eyed penguins around the mainland South Island, offshore, and sub-Antarctic islands, the low number of previous incidents around New Zealand, and the fact that each was effectively contained under the New Zealand Marine Oil Spill Response Strategy and resulted in no mortality or evidence of impacts on the population, we find that oil and chemical spills are not a threat to the yellow-eyed penguin in any portion of its range.

In summary, we find that fisheries bycatch is a threat to mainland populations of the yellow-eyed penguin in the foreseeable future, but is not a threat in any other portion of the range of the species.

Foreseeable Future

The term ''threatened species'' means any species (or subspecies or, for vertebrates, distinct population segments) that is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range. The Act does not define the term ''foreseeable future.'' For the purpose of this proposed rule, we defined the ''foreseeable future'' to be the extent to which, given the amount and substance of available data, we can anticipate events or effects, or reliably extrapolate threat trends, such that we reasonably believe that reliable predictions can be made concerning the future as it relates to the status of the species at issue.

In considering the foreseeable future as it relates to the status of the yellow-eyed penguin, we considered the threats acting on the yellow-eyed penguin, as well as population trends. We considered the historical data to identify any relevant existing trends that might allow for reliable prediction of the future (in the form of extrapolating the trends).

With respect to the yellow-eyed penguin, the available data indicate that historical declines, which were the result of habitat loss and predation, continue in the face of the current threats of predation from introduced predators, disease, and the inadequacy of regulatory mechanisms throughout the species' range. New or recurrent disease outbreaks are reasonably likely to occur in the future that may result in further declines throughout the species' range. There is no information to suggest that the current effects of predation by introduced predators will be reduced in the foreseeable future, nor that regulatory mechanisms will become sufficient to address or ameliorate the threats to the species. Furthermore, the threat of predation by endemic sea lions is impacting populations on the mainland and at the Campbell Islands, and we have no reason to believe this threat will not continue to reduce population numbers of the yellow-eyed penguin in that area. Bycatch in coastal gill-net fisheries is a threat to yellow-eyed penguins foraging from mainland breeding areas, despite efforts to regulate this activity; therefore we expect this threat to continue into the

foreseeable future. Based on our analysis of the best available information, we have no reason to believe that population trends will change in the future, nor that the effects of current threats acting on the species will be ameliorated in the foreseeable future.

Yellow-Eyed Penguin Finding

Yellow-eyed penguin populations number approximately 1,602 breeding pairs. After severe declines from the 1940s, mainland yellow-eyed penguin populations have fluctuated at low numbers since the late 1980s. The total mainland population of 450 breeding pairs (Houston 2007, p. 3) is well below single-year levels recorded in 1985 and 1997 (600 to 650 pairs) and well below historical estimates of abundance (Darby and Seddon 1990, p. 59). At Stewart Island and its adjacent islands, there are an estimated 178 breeding pairs. There are an estimated 404 pairs at Campbell Island where numbers have declined since 1997, and 570 pairs at the Auckland Islands.

The primary documented factor affecting yellow-eyed penguin populations is predation by introduced and native predators within the species' breeding range. The impact of predators is inferred from the decline of this species during the period of introduced predator invasion and from documentation of continuing predator presence and predation. New Zealand laws and the bylaws of the national parks, which encompass some of the range of the yellow-eyed penguin, provide some protection for this species, as well as programs for eradication of nonnative invasive species. However, while complete eradication of predators in isolated island habitats may be possible, permanent removal of the introduced mammalian predators on the mainland has not been achieved, and the ongoing threat of predation remains. Both intensive trapping and physical protection of significant breeding groups through fencing have proven successful for yellow-eyed penguins at local scales, but existing efforts require ongoing commitment, and not all breeding areas have been protected. More recently, local-scale predation by New Zealand sea lions reestablishing a breeding presence at the mainland Otago Peninsula has become a threat to yellow-eyed penguin populations as this rare and endemic Otariid species recovers. This threat has also been documented for Campbell Island. The threat of predation by introduced species or recovering native species is a significant risk for yellow-eyed penguins.

Disease is an ongoing factor negatively influencing yellow-eyed penguin populations. Disease has seriously impacted both mainland and Stewart Island colonies of yellow-eyed penguins in the last two decades. In mainland populations, avian malaria is thought to have led to mortality of 31 percent of the adult population on the mainland of New Zealand in the early 1990s and an outbreak of *Cornybacterium* infection cause high chick mortality in 2004–2005 and contributed to disease mortality at Stewart Island. Entire cohorts of penguin chicks at one breeding location at Stewart Island have been lost to the pathogen *Leucocytozoon*, especially at times when other diseases and other stress factors, such as food shortages, were present. Given the ongoing history of disease outbreaks at both island and mainland locations, it is highly likely that new or renewed disease outbreaks will impact this species in the foreseeable future with possible large-scale mortality of adults and chicks and consequent breeding failures and population reductions. Emergence or recurrence of such outbreaks on the mainland, where there are currently 450 breeding pairs, or at island breeding areas could result in severe reductions for a species which totals only 1,602 breeding pairs range wide.

The yellow-eyed penguin is also impacted by ongoing activities in the marine environment. Oyster dredging on the sea floor has been implicated in food shortages at penguin colonies at Stewart Island, which combined with disease, has led to years of 100 percent mortality of chicks at local breeding sites there. Bycatch in coastal gill-net fisheries is a threat to yellow-eyed penguins foraging from mainland breeding areas despite efforts to regulate this activity.

We considered whether pollution from oil or chemicals is a threat to the yellow-eyed penguin. Documented oil spill events have occurred within the range of this species in the last decade, but there have been no documented direct or indirect impacts on this species. Such events are rare and New Zealand oil spill response and contingency plans have been shown to be in place, and effective, in previous events; therefore, we have not identified this as a threat to the yellow-eyed penguin.

The yellow-eyed penguin has experienced consistent widespread declines in the past, and declines and low population numbers persist. This species has a relatively high reproductive rate (compared to other penguins) and substantial longevity. Despite these life history traits, which should provide the ability to rebound, and despite public and private efforts undertaken in New Zealand to address the threats to its survival, the species has not recovered. Historical declines resulting from habitat loss and predation continue in the face of the continued impact of predators, disease, and the inadequacy of regulatory mechanisms throughout its range. The threat of predation by endemic sea lions is impacting populations on the mainland and at the Campbell Islands. New or recurrent disease outbreaks are likely to cause further declines throughout the range in the foreseeable future. Just offshore of the southern tip of the South Island, local breeding groups at Stewart Island have been impacted by disease in concert with food shortages brought on by alteration of their marine habitat. At the Auckland Islands, the population has remained stable, but exists at low numbers and, like all yellow-eyed penguin populations, is susceptible to the emergence of disease and impacts of predation. Because of the species' low population size (1,602 breeding pairs), its continued decline in 3 out of 4 areas, and the threats of predation by introduced and native species, disease, and fisheries, we find that the yellow-eyed penguin is likely to become in danger of extinction within the foreseeable future throughout all of its range.

Significant Portion of the Range Analysis

Having determined that the yellow-eyed penguin is likely to become in danger of extinction within the foreseeable future throughout all of its range, we also considered whether there are any significant portions of its range where the species is currently in danger of extinction.

The Act defines an endangered species as one ''in danger of extinction throughout all or a significant portion of its range,'' and a threatened species as one ''likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range.'' The term ''significant portion of its range'' is not defined by statute. For purposes of this finding, a significant portion of a species' range is an area that is important to the conservation of the species because it contributes meaningfully to the representation, resiliency, or redundancy of the species. The contribution must be at a level such that its loss would result in a decrease in the ability to conserve the species.

The first step in determining whether a species is endangered in a significant portion of its range is to identify any portions of the range of the species that warrant further consideration. The range of a species can theoretically be divided into portions in an infinite number of ways. However, there is no purpose to analyzing portions of the range that are not reasonably likely to be significant and where the species is not in danger of extinction. To identify those portions that warrant further consideration, we determine whether there is substantial information indicating that (i) the portions may be significant and (ii) the species may be in danger of extinction there. In practice, a key part of this analysis is whether the threats are geographically concentrated in some way. If the threats to the species are essentially uniform throughout its range, no portion is likely to warrant further consideration. Moreover, if any concentration of threats applies only to portions of the range that are unimportant to the conservation of the species, such portions will not warrant further consideration.

If we identify any portions that warrant further consideration, we then determine whether in fact the species is threatened or endangered in any significant portion of its range. Depending on the biology of the species, its range, and the threats it faces, it may be more efficient for the Service to address the significance question first, or the status question first. Thus, if the Service determines that a portion of the range is not significant, the Service need not determine whether the species is threatened or endangered there. If the Service determines that the species is not threatened or endangered in a portion of its range, the Service need not determine if that portion is significant. If the Service determines that both a portion of the range of a species is significant and the species is threatened or endangered there, the Service will specify that portion of the range where the species is in danger of extinction pursuant to section 4(c)(1) of the Act.

The terms ''resiliency,'' ''redundancy,'' and ''representation'' are intended to be indicators of the conservation value of portions of the range. Resiliency of a species allows the species to recover from periodic disturbance. A species will likely be more resilient if large populations exist in high-quality habitat that is distributed throughout the range of the species in such a way as to capture the environmental variability found within the range of the species. In addition, the portion may contribute to resiliency for other reasons—for instance, it may contain an important concentration of certain types of habitat that are necessary for the species to carry out its life-history functions, such as breeding, feeding, migration, dispersal, or wintering. Redundancy of populations may be needed to provide a margin of safety for the species to withstand catastrophic events. This does not mean that any portion that provides redundancy is a significant portion of the range of a species. The idea is to conserve enough areas of the range such that random perturbations in the system act on only a few populations. Therefore, each area must be examined based on whether that area provides an increment of redundancy is important to the conservation of the species. Adequate representation ensures that the species' adaptive capabilities are conserved. Specifically, the portion should be evaluated to see how it contributes to the genetic diversity of the species. The loss of genetically based diversity may substantially reduce the ability of the species to respond and adapt to future environmental changes. A peripheral population may contribute meaningfully to representation if there is evidence that it provides genetic diversity due to its location on the margin of the species' habitat requirements.

To determine whether any portion of the range of the yellow-eyed penguin warrants further consideration as possibly endangered, we reviewed the entire supporting record for this proposed listing determination with respect to the geographic concentration of threats and the significance of portions of the range to the conservation of the species. As previously mentioned, we evaluated whether substantial information indicated that (i) the portions may be significant and (ii) the species in that portion may be currently in danger of extinction. We have found that the occurrence of certain threats is uneven across the range of the yellow-eyed penguin. On this basis, we determined that some portions of the yellow-eyed penguin's range might warrant further consideration as possible endangered significant portions of the range.

The yellow-eyed penguin range can be divided into four discrete areas. The first area consists of mainland colonies distributed along the southeast coast of the South Island of New Zealand. This mainland area is separated from three island based concentrations to the south. Just to the south is the Stewart Island/Codfish Island group which lies 18.75 mi (30 km) from the mainland South Island across the Fouveaux Strait. Stewart Island is a large island of 1,091 square mi (1,746 square km), and Codfish Island is a small island 8.75 square mi (14 square km) located within 6.25 mi (10 km) west of Stewart Island. The third and fourth discrete areas of yellow-eyed penguin habitat are the sub-Antarctic Auckland Islands and Campbell Island, which lie 300 mi (480 km) and 380 mi (608 km), respectively, to the south of the southern tip of the South Island. These are clearly isolated from each other and from other portions of the yellow-eyed penguin range.

To determine which areas may warrant further consideration, we evaluated these four areas of the entire range of the yellow-eyed penguin. Under the five-factor analysis, we determined that predation, disease, and inadequacy of regulatory mechanisms are threats to the yellow-eyed penguin throughout all of its range. In addition, we determined that fisheries bycatch and marine habitat modification from oyster dredging are threats to the species in only some portions of its range.

Bycatch has been identified as a threat only for mainland populations. Marine habitat modification through oyster dredging has been identified as a unique threat at Stewart Island/Codfish Island. Therefore, we have determined that there is substantial information that yellow-eyed penguins on the mainland and at the Stewart/Codfish Islands may face a greater level of threat than populations at the Auckland and Campbell Islands. In addition, the mainland populations of 450 pairs represent more than a quarter of the overall reported population of 1,602 pairs, indicating that this may be a significant portion of the range. Having met these two initial tests, a further evaluation was deemed necessary to determine if this portion of the range is both significant and endangered. The Stewart Island/Codfish Island population represents only 11 percent of the overall population of yellow-eyed penguins and is small in terms of geographical area. Given the proximity of this small population to the more numerous mainland portion of the range, with a contiguous distribution to colonies at the southern tip of the South Island, we do not find that this portion of the range is significant relative to the conservation of this species. We determined that the Auckland Islands and Campbell Islands portions of the range do not satisfy the two initial tests, because there is not substantial information to suggest that the species in those portions may currently be in danger of extinction.

Having identified one portion of the range which warrants further consideration—the mainland portion—

we then proceeded to determine whether this portion is both significant and endangered.

There have been large fluctuations in the mainland population of yellow-eyed penguins since at least 1980, with cyclical periods of population decline, followed by some recovery. As described in our threat factor analysis, these larger fluctuations have been tied to changes in the marine environment and the quality of food, as well as to periodic outbreaks of disease. The species is described as inherently robust, but recovery from these fluctuations is hampered by chronic predation threats as well as by the ongoing impact of fisheries bycatch. The combination of these cyclical and chronic factors has kept the mainland population fluctuating within the range of a few hundred to about 600 pairs over the last 3 decades. We have no evidence that the single factor of fisheries bycatch is driving the species toward extinction. Because the current population trend for the mainland populations is one of decline and fluctuation around low numbers, rather than precipitous decline, and because reproduction and recruitment are still occurring, we have determined the population is not currently in danger of extinction, but is likely to become so within the foreseeable future.

As a result, while the best scientific and commercial data available allows us to make a determination as to the rangewide status of the yellow-eyed penguin, we have determined that there are no significant portions of the range in which the species is currently in danger of extinction. Because we find that the yellow-eyed penguin is not endangered in the portions of the range that we previously determined to warrant further consideration (mainland populations), we need not address the question of significance for this portion.

Therefore, we propose to list the yellow-eyed penguin as threatened throughout all of its range under the Act.

White-Flippered Penguin (Eudyptula minor albosignata)

Background

The white-flippered penguin breeds on Motunau Island and the Banks Peninsula of the South Island of New Zealand. Birds disperse locally around the eastern South Island. Breeding adults appear to remain close to nesting colonies in the non-breeding season (Taylor 2000, p. 69; Challies and Burleigh 2004, p. 5; Brager and Stanley 1999, p. 370). White-flippered penguins feed on small shoaling fish such as pilchards (*Sardinops neopilchardus*) and anchovies (*Engraulis australis*) (Brager and Stanley 1999, p. 370).

The petitioner considers the white-flippered penguin to be a separate species (*Eudyptula albosignata*) on the basis of a 2006 paper by Baker *et al.* However, this paper (Baker *et al.* 2006, pp. 13–16) does not treat the specific question of the species or subspecies status of the group of *Eudyptula* penguins (little penguins). Among those researchers who have considered the phylogeny of the little penguin group in detail, Banks *et al.* (2002, p. 35), supported by Peucker *et al.* (2007, p. 126), make a strong case that the white-flippered penguin is part of one of two distinct lineages, or clades, of *Eudyptula* species (the Australian-Otago clade and the New Zealand clade, which includes the white-flippered penguin), each descended from one common ancestor.

Limited evidence for subspeciation within the New Zealand clade is found in some genetic differences, but the taxonomic status of these Banks Peninsula birds remains somewhat unclear (Peucker *et al.* 2007, p. 126). The New Zealand DOC considers the white-flippered penguin, with its distinct life history and morphological traits, as the southern end of a clinal variation of the little penguin (Houston 2007, p. 3). Consistent with the findings of Banks *et al.* (2002, p. 35), the New Zealand DOC recognizes the white-flippered penguin as an endemic subspecies in its Action Plan for Seabird Conservation in New Zealand (Taylor 2000, p. 69). We recognize the findings of Banks *et al.* (2002, p. 35), and the determination of the New Zealand Department of Conservation, and consider the white-flippered penguin (*Eudyptula minor albosignata*) as one of six recognized subspecies of the little penguin (*Eudyptula minor*).

The overall population of little penguins, which are found around Australia and New Zealand, numbers 350,000 to 600,000 birds. The total breeding population of the white-flippered subspecies, which is only found in New Zealand, is about 10,460 birds (Challies and Burleigh 2004, p. 1).

It is estimated that the Peninsula-wide population comprised tens of thousands of pairs at the time of European settlement. White-flippered penguins were ''very common'' on the Banks Peninsula in the late 1800s (Challies and Burleigh 2004, p. 4). Distribution of colonies was more widespread on the shores of the Banks Peninsula during the 1950s, with penguins nesting from the seaward headlands around to the inshore heads of bays.

At Motunau Island there are an estimated 1,650 breeding pairs or about 4,590 birds (Ellis *et al.* 1998, p. 87). This population is reported to have increased slightly since the 1960s (Taylor 2000, p. 69). On Banks Peninsula, exhaustive counts of all colonies in 2000–01 and 2001–02 found 68 colonies with a total of 2,112 nests or about 5,870 birds (Challies and Burleigh 2004, p. 5). This detailed survey increased the previously reported minimum estimates of 550 pairs published in 1998 (Ellis *et al.* 1998, p. 87), which were derived from partial surveys of only easily accessible colonies (Challies and Burleigh 2004, p. 1). While baseline information is lacking, Challies and Burleigh (2004, p. 5) have estimated that the present population is less than 10 percent of an estimated tens of thousands of pairs occupying the Peninsula prior to European settlement. Detailed monitoring of four individual colonies indicated that severe declines continue, with an overall loss of 83 percent of 489 nests monitored over the period from 1981–2000 (Challies and Burleigh 2004, p. 4).

The little penguin is listed as a species of 'Least Concern' in the IUCN Red List (BirdLife International 2007, p. 1), there is no separate status for the white-flippered subspecies. On New Zealand's Threat Classification system list, the white-flippered subspecies is listed as 'acutely threatened—nationally vulnerable,' indicating small to moderate population and moderate recent or predicted decline (Hitchmough *et al.* 2007, p. 45; Molloy *et al.* 2002, p. 20). This species was addressed in the Action Plan for Seabird Conservation in New Zealand, and it was ranked as Category B (second priority) on the Molloy and Davis threat categories employed by the New Zealand DOC (Taylor 2000, p. 33).

Summary of Factors Affecting the White-Flippered Penguin

Factor A. The Present or Threatened Destruction, Modification, or Curtailment of White-flippered Penguin's Habitat or Range

The terrestrial breeding habitat of the white-flippered penguin comprises the shores of the Banks Peninsula south of Christchurch, New Zealand, and of Motunau Island about 62 mi (100 km) north. Banks Peninsula has a convoluted coastline of approximately 186 mi (300 km), made up of outer coast and deep embayments (Challies and Burleigh 2004, p. 1). Motunau is a small island of less than 0.3 mi (0.5 km) in length. While cattle or sheep sometimes trample nests at Banks Peninsula, white-

flippered penguin nest sites are usually in rocky areas or among tree roots where they are inaccessible to such damage (Taylor 2000, p. 69). Fire has also been identified as a factor which could threaten white-flippered penguin habitat, but we are not aware of documented fire incidents (Taylor 2000, p. 69).

On the basis of this information, we find that the present or threatened destruction, modification, or curtailment of its habitat or range is not a threat to the white-flippered penguin in any portion of its range.

Factor B. Overutilization for Commercial, Recreational, Scientific, or Educational Purposes

White-flippered penguins are the object of privately managed local tourism activities at the Banks Peninsula (Taylor 2000, p. 70). Neither the New Zealand Action Plan for Seabird Conservation nor the IUCN Conservation Assessment and Management Plan provides any evidence that tourism is a factor affecting white-flippered penguin populations (Taylor 2000, p. 69; Ellis *et al.* 1998, p. 87). There is no evidence of use of the species for other commercial, recreational, scientific or educational purposes.

On the basis of this information, we find that overutilization for commercial, recreational, scientific, or educational purposes is not a threat to the white-flippered penguin in any portion of its range.

Factor C. Disease or Predation

There is no evidence of disease as a threat to the white-flippered penguin.

The most significant factor impacting white-flippered penguins is predation at Banks Peninsula by introduced mammalian predators. Ferrets, stoats, and feral cats take eggs and chicks and sometimes kill adult white-flippered penguins (Challies and Burleigh 2004, p.1). Populations are reported to have declined drastically since 1980 due to predation (Williamson and Wilson 2001, pp. 434–435). Dogs have also been cited as a potential predator (Taylor 2000, p. 69). In the past 25 years, predators have overrun colonies at the accessible heads and sides of bays at Banks Peninsula, reducing colony distribution to less accessible and more remote headlands and outer coasts (Challies and Burleigh 2004, p. 4). Thirty-four colonies (fifty percent) surveyed in 2000 to 2002, containing 1,345 nests (69 percent of the nests at Banks Peninsula), were considered to be vulnerable to predation. Seven of the 12 largest colonies (each containing more than 20 nests) contained either the remains of penguins that had been preyed on or other evidence predators had been there (Challies and Burleigh 2004, p. 4). The five large colonies not considered vulnerable to predation were either protected by bluffs or, in one case, located on an island.

The encroachment of predators destroyed the most accessible colonies first, in a progression from preferred habitat at the heads of bays towards the coast along a gradient of increasing coastal erosion. In the 1950s, penguins were still nesting around the heads of bays. These colonies disappeared soon thereafter (Challies and Burleigh 2004, p. 4). Of four colonies of greater than 50 nests on the sides of bays, one was destroyed between 1981 and 2000, and nest numbers in the other three colonies were reduced by 72 to 77 percent. In these four colonies, the total number of nests decreased 83 percent between 1981 and 2000, from 489 nests down to 85 nests. The surviving colonies are almost all inside the bays close to the headlands or on the peripheral coast (Challies and Burleigh 2004, p. 4), with white-flippered penguins breeding primarily on rocky sites backed by bluffs. Challies and Burleigh (2004, p. 4) concluded, given the species' historical habitat and the difficulties of landing at these exposed breeding sites, that predation has forced white-flippered penguins into marginal, non-preferred habitat.

At the present time, colonies are largest either on inshore predator-free islands or in places on the mainland where predators are being controlled or which are less accessible to predators. The historic decline in penguin numbers is clearly continuing based on the current evidence of predation in existing recently surveyed colonies (Challies and Burleigh 2004, p. 5). In addition to documenting direct overland access to colonies, Challies and Burleigh (2004, p. 5) documented predation at colonies thought not to be accessible over land. For example, there is evidence that stoats, which are good swimmers, are reaching colonies at otherwise inaccessible parts of the shoreline, indicating that the spread of predation continues.

The potential for dispersal and establishment of new colonies, which might allow for expansion of white-flippered penguin numbers, is also severely limited by predation. Fifty percent or more of adults attempt to nest away from their natal colony. Historically, such movements led to interchange between colonies and maintenance of colony size even as dispersal took place. With the presence of predators, this dispersal now leads breeding birds to settle in areas accessible to predators where they are eventually killed (Challies and Burleigh 2004, p. 5). One consequence of this pattern of dispersal and predation is that colonies suffer a net loss of breeding adults.

Predator trapping started in 1981 and is carried out by a network of volunteers and private landowners around the Banks Peninsula. Some small predator-proof fences were erected to protect vulnerable colonies (Taylor 2000, p. 70; Williamson and Wilson 2001, p. 435). It is not clear how widespread such efforts are over the large geographical area of the Banks Peninsula or how successful they are. Williamson and Wilson (2001, p. 435) reported on two predator trapping programs at two relic colonies at the heads of Flea and Stony Bays. Their preliminary results indicated numbers were stable at Flea Bay, but Stony Bay populations of white-flippered penguins were in decline. Even though such trapping efforts began in 1981, Challies and Burleigh (2004, p. 5) concluded on the basis of data collected in the 2000–01 and 2001–02 breeding seasons that the historic decline in white-flippered penguin numbers is continuing.

At Motunau Island, the only other breeding area for this subspecies, there are no introduced predators. Rabbits, which could have impacted breeding habitat, were eradicated in 1963 (Taylor 2000, p. 70). The Action Plan for Seabird Conservation in New Zealand lists pest quarantine measures to prevent new animal and plant pest species reaching Motunau Island as a needed future management action (Taylor 2000, p. 70), but we have no reports on whether such measures are now in place, and we cannot discount the current or future risk of predator introduction to Motunau Island.

Predators are present at the larger Banks Peninsula colony (56 percent of the nests for the species), but not currently at the smaller colony at Motunau Island (46 percent of the nests) although the risk of future predator introduction to Motunau Island exists. On the basis of information on the impact of predators, the failure of existing programs to eliminate them, and the possibility of dispersal of predators to current predator-free areas such as Motunau Island, we conclude that predation by introduced mammals is a threat to the white-flippered penguin throughout all of its range currently and in the foreseeable future.

Factor D. Inadequacy of Existing Regulatory Mechanisms

All but seven seabird species in New Zealand, including the white-flippered penguin, are protected under New Zealand's Wildlife Act of 1953, which gives absolute protection to wildlife throughout New Zealand and its surrounding marine economic zone. No one may kill or have in their possession any living or dead protected wildlife unless they have appropriate authority.

The IUCN Conservation Assessment and Management Plan (CAMP) data sheet for white-flippered penguin (Ellis *et al.* 1998, p. 87) concluded in 1998 that the deteriorating status of this subspecies was not a high priority for the New Zealand DOC due to budgetary constraints. The CAMP noted that activities to date had not been government funded, but self-funded by investigators or by grants from non-governmental organizations. Since then, the New Zealand DOC has adopted the Action Plan for Seabird Conservation, which includes recommendations on management of terrestrial threats to the white-flippered penguin as well as threats within the marine environment. We did not rely on these measures in our analysis because we do not have reports on which measures, if any, have been implemented and how they relate, in particular, to efforts to reduce the threat of predation on white-flippered penguins at Banks Peninsula.

The Banks Peninsula marine waters have special protective status as a marine sanctuary, which was established in 1988 and primarily directed at protection of the Hector's dolphin (*Cephelorhynchus hectori*) from bycatch in set nets. The 4-month set net ban, from November to the end of February, which also includes Motunau Island, is designed to reduce entanglements of these dolphins and to reduce the risk of entanglement of white-flippered penguins and yellow-eyed penguins (NZ DOC 2007, p. 1). Ten years ago, in the Action Plan for Seabird Conservation, this ban was reported to have been widely disregarded (Taylor 2000, p. 70). That Action Plan states that restriction on the use of set nets near key white-flippered penguin colonies may be necessary to protect the species and recommends an advocacy program to encourage set net users to adopt practices that will minimize seabird bycatch. We have information indicating that white-flippered penguins are frequently caught in set nets and no current information to indicate whether, or to what extent, set net restrictions have reduced take at either Banks Peninsula or Motunau Island.

New Zealand has in place The New Zealand Marine Oil Spill Response Strategy, which provides the overall framework to mount a response to marine oil spills that occur within New Zealand's area of responsibility. The aim of the strategy is to minimize the effects of oil on the environment and people's safety and health. The National Oil Spill Contingency Plan promotes a planned and nationally coordinated response to any marine oil spill that is beyond the capability of a local regional council or outside the region of any local council (Maritime New Zealand 2007, p. 1). As discussed below under Factor E, rapid containment of spills in remote areas and effective triage response under this plan have shown these to be effective regulatory mechanisms (New Zealand Wildlife Health Center 2007, p. 2; Taylor 2000, p. 94). However, given the location of the only two major concentrations of white-flippered penguins near a major South Island port, we conclude under Factor E that oil spills are a threat to this species.

On the basis of a review of available information and on the basis of the continued threats of predation, fisheries bycatch, and oil spills to this species, we find that inadequacy of existing regulatory mechanisms is a threat to the white-flippered penguin throughout all of its range now and in the foreseeable future.

Factor E. Other Natural or Manmade Factors Affecting the Continued Existence of the Species

New Zealand's Action Plan notes that white-flippered penguins are frequently caught in nearshore set nets, especially around Motunau Island (Taylor 2000, p. 69). The number of birds caught is not known but there is a history of ''multiple net catches'' of penguins around Motunau Island (Ellis *et al.*, 1998, p. 87). Restrictions on the use of set nets in the areas of Banks Peninsula and Motunau Island were instituted in 1988 (see discussion under Factor D above), but bans on leaving nets set inshore overnight were reported to be widely disregarded a decade ago (Ellis *et al.* 1998, p. 87). Such impacts interact with the more severe threat of predation at Banks Island, exacerbating declines there. Reports indicate bycatch impacts are most severe at Motunau Island, which is currently predator free. Based on the best available information we do not have a basis to conclude that rates of bycatch will decline in the foreseeable future, and we have found no current information to indicate that net restrictions have reduced take. Therefore, we find that bycatch of the white-flippered penguin by fishing activities is a threat to this species of penguin throughout all of its range.

We have examined the possibility that oil and chemical spills may impact white-flippered penguins. Such spills, should they occur and not be effectively managed, can have direct effects on marine seabirds, such as the white-flippered penguin. The entire subspecies nests in areas of moderate shipping volume coming to Port Lyttelton at Christchurch, New Zealand. This port lies adjacent to, and just north of, the Banks Peninsula and just south of Motunau Island.

On this basis, the Action Plan for Seabird Conservation in New Zealand specifically identifies a large oil spill as a key potential threat to this species (Taylor 2000, pp. 69–70) and recommends that penguin colonies be identified as sensitive areas in oil spill contingency plans (Taylor 2000, pp. 70–71).

Two spills have been recorded in the overall region of the South island of New Zealand and its offshore islands. These spills did not impact the white-flippered penguin. In March 2000, the fishing vessel *Seafresh 1* sank in Hanson Bay on the east coast of Chatham Island and released 66 T (60 t) of diesel fuel. Rapid containment of the oil at this remote location prevented any wildlife casualties (New Zealand Wildlife Health Center 2007, p. 2). The same source reported that in 1998 the fishing vessel *Don Wong 529* ran aground at Breaksea Islets, off Stewart Island. Approximately 331 T (300 t) of marine diesel was spilled along with smaller amounts of lubricating and waste oils. With favorable weather conditions and establishment of triage response, no casualties of the pollution event were discovered (Taylor 2000, p. 94).

While New Zealand has a good record of oil spill response, an oil spill in the vicinity of one of the two breeding colonies of the white-flippered penguin which lie closely adjacent to the industrial port of Port Lyttelton, could impact a large portion of the individuals of this subspecies if not immediately contained. Previous spills have been in more remote locations, with more leeway for longer-term response before oil impacted wildlife. Based on the occurrence of previous spills around New Zealand, the low overall numbers of white-flippered penguins, and the location of their only two breeding populations adjacent to Christchurch, a major South Island port, there is a high likelihood that oil spill events, should they occur in this area, will impact white-flippered penguins. Therefore, we find that oil spills are a threat to the

white-flippered penguin in the foreseeable future.

We find that fisheries bycatch and the potential for oil spills are threats to the white-flippered penguin throughout all of its range now and in the foreseeable future.

Foreseeable Future

The term ''threatened species'' means any species (or subspecies or, for vertebrates, distinct population segments) that is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range. The Act does not define the term ''foreseeable future.'' For the purpose of this proposed rule, we define the ''foreseeable future'' to be the extent to which, given the amount and substance of available data, we can anticipate events or effects, or reliably extrapolate threat trends, such that we reasonably believe that reliable predictions can be made concerning the future as it relates to the status of the species at issue.

In considering the foreseeable future as it relates to the status of the white-flippered penguin, we considered the threats acting on the subspecies, as well as population trends. We considered the historical data to identify any relevant existing trends that might allow for reliable prediction of the future (in the form of extrapolating the trends).

With respect to the white-flippered penguin, the available data indicate that the historic decline in penguin numbers is clearly continuing based on the current evidence of predation by introduced species in existing recently surveyed colonies at Banks Island. Given that existing programs have failed to eliminate introduced predators and that these predators appear to be spreading, we believe their impact on the white-flippered penguin will continue in the future. There is no information to suggest that the current effects of bycatch will be reduced in the foreseeable future, nor that regulatory mechanisms will become sufficient to address or ameliorate this threat to the subspecies. Based on the occurrence of previous oil spills around New Zealand and the location of the only two breeding populations of white-flippered penguins adjacent to Christchurch, a major South Island port, we find that oil spills will likely occur in the future. Furthermore, because of the low overall numbers of white-flippered penguins, there is a high likelihood that oil spill events, should they occur in this area, will impact white-flippered penguins. Based on our analysis of the best available information, we have no reason to believe that population trends will change in the future, nor that the effects of current threats acting on this subspecies will be ameliorated in the foreseeable future.

White-Flippered Penguin Finding

Predation by introduced mammalian predators is the most significant factor threatening white-flippered penguin within the species' breeding range. Predation by introduced species has contributed to the historical decline of this subspecies since the late 1800s and is reducing numbers at the current time. In addition to reducing numbers in existing colonies, the presence of predators has been documented as a barrier to the dispersal of breeding birds and the establishment of new colonies, perhaps indicating larger declines are to be expected. New Zealand laws require protection of this native subspecies. Anti-predator efforts have not stopped declines of white-flippered penguins at Banks Peninsula, although eradication of predators has been achieved at Motunau Island. Removal of introduced mammalian predators on the mainland Banks Peninsula is an extremely difficult, if not impossible, task. Trapping and physical protection of a few local breeding groups through fencing have proven locally successful but these efforts are not widespread. The Banks Peninsula with 186 mi (300 km) of coastline and 68 white-flippered penguin colonies, is a very large area to control and predation impacts will continue. The threat of reinvasion remains, both at Motunau Island and in areas of the Banks Peninsula where predator control has been implemented (Taylor 2000, p. 70; Challies and Burleigh 2004, p. 5). We find that predation is a threat to the white-flippered penguin throughout all of its range.

The white-flippered penguin is also impacted by threats in the marine environment. While set-net bans have been in place since the 1980s to reduce take of white-flippered penguins and other species, bycatch in coastal gill-net fisheries is known to result in mortality to white-flippered penguins foraging from breeding areas. Although we do not have quantitative data on the extent of bycatch, the best available information indicates that such impacts are an underlying threat which interacts with the more severe threat of predation at Banks Island and which especially impacts populations at Motunau Island. Based on the best available scientific and commercial information, we conclude that bycatch is a threat to the white-flippered penguin throughout all of its range.

Documented oil spills have occurred in the vicinity of the South Island of New Zealand in the last decade. While such events are rare, future events have the potential to impact white-flippered penguins. A spill event near the city of Christchurch and the adjacent Banks Peninsula, which was not immediately contained, would be very likely to impact either, or both, of the two breeding sites of the white-flippered penguin in a very short time, affecting up to 65 percent of the population at one time. While New Zealand oil spill response and contingency plans have been shown to be effective in previous events, the location of the only two breeding areas of this subspecies near industrial areas and marine transport routes increase the likelihood that spill events will impact the white-flippered penguin.

Major reductions in the numbers of nests in individual colonies and the loss of colonies indicate the population of white-flippered penguin at Banks Peninsula is declining as the threat of predation impacts this subspecies. The subspecies has a low population size (10,460 individuals) with breeding populations concentrated solely in two highly localized breeding areas. Bycatch from fisheries activities is an ongoing threat to members of this subspecies breeding at both Motunau Island and the Banks Peninsula. For both breeding areas, which are close to an industrial port and shipping lanes, oil spills are a threat to the white-flippered penguin in the foreseeable future. Based on the best available scientific and commercial information, we find that the white-flippered penguin is likely to become in danger of extinction within the foreseeable future throughout all of its range.

Significant Portion of the Range Analysis

Having determined that the white-flippered penguin is likely to become in danger of extinction within the foreseeable future throughout all of its range, we also considered whether there are any significant portions of its range where the species is currently in danger of extinction. See our analysis for the yellow-eyed penguin for how we make this determination.

White-flippered penguins breed in two areas, one on the shores of the Banks Peninsula south of Christchurch New Zealand, the other at Motunau Island about 62 mi (100km) north. It appears that colonization of any possible intermediate breeding range is precluded by predation (Challies and Burleigh 2004, p. 5). The Banks Island colony is larger, with about 2,112

breeding pairs, and Motunau Island has about 1,635 breeding pairs. Threats in the marine environment, particularly fisheries bycatch have similar impact on the two areas and, given the proximity of each colony to the port of Christchurch, we conclude that oil spills are a threat in both areas. Predation by introduced predators is documented at Banks Peninsula, and introduction of predators is a potential future threat at Motunau Island, where population numbers are stable. This leads us to consider whether the Banks Peninsula portion of the range, where population declines are ongoing, may be in danger of extinction. While the threat of introduced predators is greater at the Banks Peninsula, a combination of local management protection of some colonies and the existence of inaccessible refugia from predators for some small colonies on the outer coast and offshore rocks and islands leads us to conclude that there is not substantial information to conclude the species in this portion of the range may currently be in danger of extinction. We determine that the Motunau Island and Banks Island portions of the range do not satisfy the two initial tests because there is not substantial information to conclude that the species in those portions may currently be in danger of extinction.

As a result, while the best available scientific and commercial data allows us to make a determination as to the rangewide status of the white-flippered penguin, we have determined that there are no significant portions of the range in which the species is currently in danger of extinction.

Therefore, we propose to list the white-flippered penguin as threatened throughout all of its range under the Act.

Fiordland Crested Penguin (Eudyptes pachyrhynchus)

Background

The Fiordland crested penguin, also known by its Maori name, tawaki, is endemic to the South Island of New Zealand and adjacent offshore islands southwards from Bruce Bay. The species also nests on Solander Island (0.3 square miles (mi^2) (0.7 square kilometers (km^2))), Codfish Island (5 mi^2 (14 km^2)), and islands off Stewart Island at the south end of the South Island (Taylor 2000, p. 58). Major portions of the range are in Fiordland National Park (4,825 mi^2 (12,500 km^2)) and Rakiura National Park (63 mi^2 (163 km^2)) on Stewart and adjacent islands. Historically, there are reports of breeding north to the Cook Straits and perhaps on the southernmost part of the North Island (Ellis *et al.* 1998, p. 69). The Fiordland crested penguin breeds in colonies situated in inaccessible, dense, temperate rainforest along shores and rocky coastlines, and sometimes in sandy bays. It feeds on fish, squid, octopus, and krill (BirdLife International 2007, p. 3).

Outside the breeding season, the birds have been sighted around the North and South Islands and south to the sub-Antarctic islands, and the species is a regular vagrant to southeastern Australia (Simpson 2007, p. 2; Taylor 2000, p. 58). Houston (2007a, p. 2) of the New Zealand DOC comments that the appearance of vagrants in other locations is not necessarily indicative of the normal foraging range of Fiordland crested penguins; he also states that the non-breeding range of this species is unknown.

A five-stage survey effort, conducted from 1990–1995, documented all the major nesting areas of Fiordland crested penguin throughout its known current range (McLean and Russ 1991, pp. 183–190; Russ *et al.* 1992, pp. 113–118; McLean *et al.* 1993, pp. 85–94; Studholme *et al.* 1994, pp. 133–143; McLean *et al.* 1997, pp. 37–47). In these studies researchers systematically surveyed the entire length of the range of this species, working their way along the coast on foot to identify and count individual nests, and conducting small boat surveys from a few meters offshore to identify areas to survey on foot. The coastline was also scanned from a support ship, to identify areas to survey (McLean *et al.* 1993, p. 87). A final count of nests for the species resulted in an estimate of between 2,500 and 3,000 nests annually (McLean *et al.* 1997, p. 45) and a corresponding number of 2,500 to 3,000 breeding pairs. The staging of this survey effort reflects the dispersed distribution of small colonies of this species along the convoluted and inaccessible mainland and island coastlines of the southwest portion of the South Island of New Zealand.

Long-term and current data on overall changes in abundance are lacking. The June 2007 Fiordland National Park Management Plan (New Zealand Department of Conservation (NZ DOC) 2007, p. 53) observed that Fiordland crested penguin numbers appear to be stable, and reported on the nesting success of breeding pairs at island (88 percent) versus mainland (50 percent) sites. The Management Plan raises uncertainty as to whether 50 percent nesting success will be sufficient to maintain the mainland population long term. Populations on Open Bay Island decreased by 33 percent between 1988 and 1995 (Ellis *et al.* 1998, p. 70), and a long-term decline may have occurred on Solander Island (Cooper *et al.* 1986, p. 89). Historical data report thousands of individuals in locations where numbers in current colonies are 100 or fewer (Ellis *et al.* 1998, p. 69). The species account in the New Zealand Action Plan for Seabird Conservation states that ''the population status of the species throughout its breeding range is still unknown and will require long-term monitoring to assess changes'' (Taylor 2000, p. 58).

The IUCN Red List (BirdLife International 2007, p. 1) classifies this species as 'Vulnerable' because it has a small population assumed to have been undergoing a rapid reduction of at least 30 percent over the last 29 years. This classification is based on trend data from a few sites, for example at Open Bay Island there was a 33 percent decrease for the time period from 1988–1995. The Fiordland crested penguin is listed as Category B (second priority) on the Molloy and Davis threat categories employed by the New Zealand DOC (Taylor 2000, p. 33) and placed in the second tier in New Zealand's Action Plan for Seabird Conservation. The species is listed as 'acutely threatened—nationally endangered' on the New Zealand Threat Classification System list (Hitchmough *et al.* 20077, p. 38; Molloy *et al.* 2003, pp. 13–23). Under this classification system, which is non-regulatory, species experts assess the placement of species into threat categories according to both status criteria and threat criteria. Relevant to the Fiordland crested penguin evaluation are its low population size and reported declines of greater or equal to 60 percent in the total population in the last 100 years (Molloy *et al.* 2003, p. 20).

Summary of Factors Affecting the Fiordland Crested Penguin

Factor A. The Present or Threatened Destruction, Modification, or Curtailment of the Fiordland Crested Penguin's Habitat or Range

The Fiordland crested penguin has a patchy breeding distribution from Jackson Bay on the west coast of the South Island of New Zealand southward to the southwest tip of New Zealand and offshore islands, including Stewart Island. A major portion of this range is encompassed by the Fiordland National Park on the South Island and Rakiura National Park on Stewart and adjacent islands at the southern tip of New Zealand. The majority of the breeding range of the Fiordland crested penguin lies within national parks and is currently protected from destruction

and modification. The only reported instance of terrestrial habitat modification comes from the presence of deer (no species name provided) in some colonies that may trample nests or open up habitat for predators (Taylor 2000, p. 58).

We find that the present destruction, modification, or curtailment of the terrestrial habitat or range of the Fiordland crested penguin is not a threat to the species in any portion of its range.

The marine foraging range of the Fiordland crested penguin is poorly documented. Recent observations on the foraging behavior of the species around Stewart and Codfish Islands found birds foraging very close to shore and in shallow water (Houston 2007a, p. 2), indicating the species may not be a pelagic feeder. The species is a vagrant to more northerly areas of New Zealand and to southeastern Australia, but that is not considered indicative of its normal foraging range (Houston 2007a, p. 2).

''Prey shortage due to sea temperature change'' while foraging at sea has been cited as a threat (Ellis *et al.* 2007, p. 6) and changes in prey distribution as a result of slight warming of sea temperatures have been implicated for declines of southern rockhopper penguins at Campbell Island and mentioned as a possible threat for Fiordland crested penguins (Taylor 2000, p. 59). However, the Action Plan for Seabird Conservation in New Zealand concluded that the effects of oceanic changes or marine perturbations such as El Niño events on the Fiordland crested penguin are unknown (Taylor 2000, p. 59) and identified the need for future research on distribution and movements of this species in the marine environment (Taylor 2000, p. 61).

Based on this analysis, we find that the present or future destruction, modification, or curtailment of the terrestrial and marine habitat or range is not a threat to the Fiordland crested penguin in any portion of its range.

Factor B. Overutilization for Commercial, Recreational, Scientific, or Educational Purposes

Human disturbance of colonies is rare because the birds generally nest in inaccessible sites. However, in some accessible areas, such as in the northern portion of the range at South Westland, large concentrations of nests occur in areas accessible to people and dogs. In addition, nature tourism may disturb breeding (McLean *et al.* 1997, p. 46; Taylor 2000, p. 58). The Action Plan for Seabird Conservation in New Zealand stated that guidelines are needed to control visitor access to mainland penguin colonies and accessible sites should be protected as Wildlife Refuges (Taylor 2000, p. 60). It is not clear, based on the information available whether such measures have been implemented. Similarly, research activities may disturb breeding birds. Houston (2007a, p. 1) reported that monitoring of breeding success at Jackson's Head has been abandoned due to concerns of adverse effects of the research on breeding success and recruitment. There is no evidence of use of the species for other commercial, recreational, scientific or educational purposes.

Therefore, we find that the present overutilization for commercial, recreational, scientific, or educational purposes, particularly human disturbance, is a threat to the survival of the Fiordland crested penguin throughout all of its range now and in the foreseeable future.

Factor C. Disease or Predation

Reports from 1976 documented that Fiordland crested penguin chicks have been infected by the sandfly-borne protozoan blood parasite (*Leucocytozoon tawaki*) (Taylor 2000, p. 59) (see discussion under Factor C for the yellow-eyed penguins). Diseases such as avian cholera, which has caused the deaths of southern rockhopper penguin adults and chicks at Campbell Islands, are inferred to be a potential problem in Fiordland crested penguin colonies (Taylor 2000, p. 59). However, with no significant disease outbreaks reported, the best available information leads us to conclude that disease is not a threat to this species.

Predation from introduced mammals and birds is a threat to the Fiordland crested penguin (Taylor 2000, p. 58; Ellis *et al.* 1998, p. 70). Comments received from the New Zealand DOC link historical declines of Fiordland crested penguins to the time of arrival of mammalian predators, particularly stoats, to the area (Houston 2007a, p. 1). Only Codfish Island, where 144 nests have been observed, is fully protected from introduced mammalian and avian predators (Studholme *et al.* 1994, p. 142). This island lies closely adjacent to Stewart Island so the future possibility of predator reintroduction cannot be discounted. Mustelids, especially stoats, are reported to take eggs and chicks in mainland colonies and may occasionally attack adult penguins (Taylor 2000, p. 58). The Norway rat, ship rat (*Rattus rattus*), and Pacific rat (*Rattus exulans*) may be predators, but there is no direct evidence of it. Feral cats and pigs are also potential predators, but they are not common in nesting areas. Recent observations since the development of the Action Plan (Taylor 2000, p. 58), which originally discounted the impact of the introduced possum (*Trichosurus vulpecula*), indicate that this species has now colonized the mainland range of the Fiordland crested penguin in South Westland and Fiordland. Initially thought to be vegetarians, it is now documented that possums eat birds, eggs, and chicks and also compete for burrows with native species. It is not yet known if they compete for burrows or eat the eggs of Fiordland crested penguins, as they do other native species, but this is thought to be likely (Houston 2007b, p. 1). Domestic dogs are reported to kill adult penguins and disturb colonies near human habitation (Taylor 2000, p. 58).

Weka, which are omnivorous, flightless rails about the size of chickens and native to other regions of New Zealand, have been widely introduced onto offshore islands of New Zealand. At Open Bay Islands and Solander Islands, this alien species has been observed to take Fiordland crested penguin eggs and chicks. At Open Bay Island colonies, weka caused 38 percent of egg mortality observed and 20 percent of chick mortality (St. Clair and St. Clair 1992, p. 61). The decline in numbers of Fiordland crested penguin on the Solander Islands from ''plentiful'' to a few dozen since 1948 has also been attributed to egg predation by weka (Cooper *et al.* 1986, p. 89). Among the future management actions identified as needed in New Zealand's Action Plan for Seabird Conservation are weka eradication from Solander Island and addressing the problem of weka predation at Open Bay Islands (Taylor 2000, p. 60).

Predator control programs have been undertaken on only a few islands in a limited portion of the Fiordland crested penguin's range and are not practicable in the inaccessible mainland South Island strongholds of the species (Taylor 2000, p. 59).

Predation by introduced mammalian species is the primary threat facing the Fiordland crested penguin on the mainland South Island of New Zealand. At breeding islands free of mammalian predators, *e.g.,* Open Bay Islands and Solander Island, an introduced bird, the weka, is a predator on Fiordland penguin eggs and chicks. Only Codfish Island is fully protected from introduced mammalian and avian predators. Therefore, we find that predation by introduced species is not a threat to the Fiordland crested penguin on Codfish Island, but is a

threat to this species in other portions of its range now and in the foreseeable future.

Factor D. Inadequacy of Existing Regulatory Mechanisms

All but seven seabird species in New Zealand, including the Fiordland crested penguin, are protected under New Zealand's Wildlife Act of 1953, which gives absolute protection to wildlife throughout New Zealand and its surrounding marine economic zone. No one may kill or have in their possession any living or dead wildlife unless they have appropriate authority.

The majority of the range of the Fiordland crested penguin is within the Fiordland National Park (which includes Solander Island) and adjacent parks, including Rakiura National Park. Fiordland National Park covers 15 percent of public conservation land in New Zealand. Under section 4 of the National Parks Act of 1980 and Park bylaws, ''the native plants and animals of the parks shall as far as possible be preserved and the introduced plants and animals shall as far as possible be eradicated'' (NZ DOC 2007, p. 24). The June 2007 Fiordland National Park Management Plan (NZ DOC 2007, pp. 1–4) contains, in its section on Preservation of Indigenous Species and Habitats, a variety of objectives aimed at maintaining biodiversity by preventing the further loss of indigenous species from areas where they were previously known to exist. The Fiordland crested penguin is specifically referenced in the audit of biodiversity values to be preserved in the Park (NZ DOC 2007, p. 53). In addition, the Fiordland Marine Management Act of 2005 establishes the Fiordland Marine area and 8 marine reserves within that area, which encompasses more than 2.18 million ac (882,000 ha) extending from the northern boundary of the Park to the southern boundary (excluding Solander Island) (NZ DOC 2007, p. 29). The species also inhabits Rakiura National Park, which encompasses Stewart Island and Whenua Hou (Codfish Island) and also falls under the National Parks Act of 1980 and Park bylaws.

The Fiordland National Park is encompassed in the Te Wahipounamu—South West New Zealand World Heritage Area. World Heritage areas are designated under the World Heritage Convention because of their outstanding universal value (NZ DOC 2007, p. 44). Such designation does not confer additional protection beyond that provided by national laws.

Despite these designations and the possibility of future efforts, we have no information to indicate that measures have been implemented that reduce the threats to the Fiordland crested penguin.

The Fiordland crested penguin has been placed in the group of birds ranked as second tier threat status in New Zealand's Action Plan for Seabird Conservation on the basis of its being listed as 'Vulnerable' by IUCN Red List Criteria and as Category B (second priority) on the Molloy and Davis threat categories employed by the New Zealand DOC (Taylor 2000, p. 33). The Action Plan, while not a legally binding document, outlines actions and priorities intended to define the future direction of seabird work in New Zealand. High-priority future management actions identified are eradication of weka from Big Solander Island and development of a management plan for the Open Bay Islands to address the problem of weka predation on Fiordland crested penguins and other species. We do not have information to allow us to evaluate whether any of these proposed actions and priorities have been carried out and, therefore, have not relied on this information in our threat analysis.

New Zealand has in place The New Zealand Marine Oil Spill Response Strategy, which provides the overall framework to mount a response to marine oil spills that occur within New Zealand's area of responsibility. The aim of the strategy is to minimize the effects of oil on the environment and people's safety and health. The National Oil Spill Contingency Plan promotes a planned and nationally coordinated response to any marine oil spill that is beyond the capability of a local regional council or outside the region of any local council (Maritime New Zealand 2007, p. 1). As discussed below under Factor E, rapid containment of spills in remote areas and effective triage response under this plan has shown these to be effective regulatory mechanisms (New Zealand Wildlife Health Center 2007, p. 2; Taylor 2000, p. 94).

Major portions of the coastal and marine habitat of the Fiordland crested penguin are protected under a series of laws, and the species itself is covered under the New Zealand Wildlife Act. The National Parks Act specifically calls for controlling and eradicating introduced species. While there has been limited success in controlling some predators of Fiordland crested penguins at isolated island habitats comprising small portions of the overall range, the comprehensive legal protection of this species has not surmounted the logistical and resource constraints which stand in the way of limiting or eradicating predators on larger islands and in inaccessible mainland South Island habitats. Furthermore, we are not able to evaluate whether efforts to reduce the threats of human disturbance discussed in Factor B have been implemented or achieved results.

On the basis of this information, we find that inadequacy of existing regulatory mechanisms is a threat to the Fiordland crested penguin throughout all of its range now and in the foreseeable future.

Factor E. Other Natural or Manmade Factors Affecting the Continued Existence of the Species

Commercial fishing in much of the species' range is a comparatively recent development and is considered unlikely to have played a significant role in historic declines (Houston 2007a, p. 1). New Zealand's Seabird Action Plan noted that Fiordland crested penguins could potentially be caught in set nets near breeding colonies and that trawl nets are also a potential risk. Competition with squid fisheries is also noted as a potential threat (Taylor 2000, p. 59; Ellis *et al.* 1998, p. 70; Ellis *et al.* 2007, p. 7). The 1998 CAMP recommended research on foraging ecology to identify potential competition with commercial fisheries and effects of climatic variation (Ellis *et al.* 1998, pp. 70–71), but we are not aware of the results of any such studies. The New Zealand DOC (Houston 2007a, p. 1), in its comments on this petition, noted that the ''assessment of threats overstates the threat from fisheries'' to the Fiordland crested penguin. The distribution and behavior of this species may reduce the potential impact of bycatch. The Fiordland crested penguin is distributed widely along the highly convoluted, sparsely populated, and legally protected South Island coastline for a linear distance of over 155 mi (250 km), as well as along the coasts of several offshore islands. Significant feeding concentrations of the species, which might be susceptible to bycatch, have not been described. Given the absence of documentation of actual impacts of fisheries bycatch on the Fiordland crested penguin, we conclude that this is a not threat to the species in any portion of its range.

We have examined the possibility that oil and chemical spills may impact Fiordland crested penguins. Such spills, should they occur and not be effectively managed, can have direct effects on marine seabirds such as the Fiordland crested penguin. The range of the Fiordland crested penguin, on the southwest coast of the South Island of

New Zealand is remote from shipping activity and away from any major human population centers, and the consequent risk of oil or chemical spills is low. The Stewart Islands populations at the southern end of New Zealand are in closer proximity to vessel traffic and human industrial activities which may increase the possibility of oil or chemical spill impacts. Two spills have been recorded in this overall region. In March 2000, the fishing vessel *Seafresh 1* sank in Hanson Bay on the east coast of Chatham Island and released 66 T (60 t) of diesel fuel. Rapid containment of the oil at this remote location prevented any wildlife casualties (New Zealand Wildlife Health Center 2007, p. 2). The same source reports that in 1998 the fishing vessel *Don Wong 529* ran aground at Breaksea Islets off Stewart Island. Approximately 331 T (300 t) of marine diesel was spilled along with smaller amounts of lubricating and waste oils. With favorable weather conditions and establishment of triage response, no casualties of the pollution event were discovered (Taylor 2000, p. 94). There is no doubt that an oil spill near a breeding colony could have a major effect on this species (Taylor 2000, p. 94). However, based on the remote distribution of Fiordland penguins around the mainland South Island, and offshore islands at the southern tip of the South Island, the low number of previous incidents around New Zealand, and the fact that each was effectively contained under the New Zealand Marine Oil Spill Response Strategy and resulted in no mortality or evidence of impacts on the population, we find that oil and chemical spills are not a threat to the Fiordland crested penguin in any portion of its range.

In summary, while fisheries bycatch has been suggested as a potential source of mortality to the Fiordland crested penguin, the best available information leads us to conclude that this is not a threat to this species. There is a low-level potential for oil spill events to impact this species, but the wide dispersal of this species along inaccessible and protected coastlines lead us to conclude that this is not a threat to the Fiordland crested penguin. Therefore, we find that other natural or manmade factors are not a threat to the species in any portion of its range.

Foreseeable Future

The term ''threatened species'' means any species (or subspecies or, for vertebrates, distinct population segments) that is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range. The Act does not define the term ''foreseeable future.'' For the purpose of this proposed rule, we define the ''foreseeable future'' to be the extent to which, given the amount and substance of available data, we can anticipate events or effects, or reliably extrapolate threat trends, such that we reasonably believe that reliable predictions can be made concerning the future as it relates to the status of the species at issue.

In considering the foreseeable future as it relates to the status of the Fiordland crested penguin, we considered the threats acting on the species, as well as population trends. We considered the historical data to identify any relevant existing trends that might allow for reliable prediction of the future (in the form of extrapolating the trends).

With respect to the Fiordland crested penguin, the available data indicate that historical declines have been linked to the invasion by introduced predators to the South Island of New Zealand, and recently documented declines have been attributed to introduced predators. Given the remote and widely dispersed range of the Fiordland crested penguin, especially on the mainland of the South Island, significant anti-predator efforts are largely impractical for this species, and we are unaware of any time-bound plan to implement anti-predator protection for Fiordland crested penguins or of any significant efforts to stem ongoing rates of predation. Therefore, we find that predation by introduced species is reasonably likely to continue in the foreseeable future. The threat of human disturbance could increase as tourism activities become more widespread in the region, and we have no information that indicates this threat will be alleviated for the Fiordland crested penguin in the foreseeable future.

Fiordland Penguin Finding

The primary documented threat to the Fiordland crested penguin is predation by introduced mammalian and avian predators within the species' breeding range. We are only aware of one small breeding location that is known to be predator free. Even though this species is poorly known, an exhaustive multi-year survey effort documented current low population numbers. The impact of predators is evidenced by the major historical decline of the Fiordland crested penguin during the period of invasion by these predators to the South Island of New Zealand. Historical data from about 1890 cites thousands of Fiordland crested penguins in areas where current surveys find colonies of only 100 or fewer. Recent declines at Open Bay and Solander Islands have been documented as resulting from weka predation. While the Fiordland crested penguin is a remote and hard-to-study species, the impact of predators on naïve endemic penguins, which have never before experienced mammalian predation, is well documented for similar species, such as the yellow-eyed penguin (Darby and Seddon 1990, p. 45) and the white-flippered penguin (Challies and Burleigh 2004, p. 4) that are more accessible to scientific observation.

New Zealand laws and the bylaws of the national parks, which encompass the majority of the range of the Fiordland crested penguin, institute provisions to ''as far as possible'' protect this species and to seek eradication of nonnative invasive species. Unfortunately, while complete eradication of predators, such as weka in isolated island habitats (e.g., Solander Island), may be possible, removal of the introduced mammalian predators now known to be widespread in mainland Fiordland National Park is an extremely difficult, if not impossible, task. Similarly, physical protection of some breeding groups from predation, as has been done for species such as the yellow-eyed and white-flippered penguins, is impractical for the Fiordland crested penguin. For other penguin species located in more accessible and more restricted ranges, the task of predator control has been undertaken at levels of effort meaningful to protection of those species. For this remote and widely dispersed species, predator control has only been undertaken on a limited basis, and we have no reason to believe this threat to the Fiordland crested penguin will be ameliorated in the foreseeable future.

The threat of human disturbance is present in those areas of the range most accessible to human habitation, but could increase as tourism activities become more widespread in the region. While efforts to control this threat have been undertaken, we have no information which allows us to conclude this threat will be alleviated for the Fiordland crested penguin in the foreseeable future.

The overall population of the Fiordland crested penguin is small (2,500–3,000 pairs) and reported to be declining (Ellis *et al.* 2007, p. 6). The ongoing pressure of predation by introduced mammalian and avian species on this endemic species over the next few decades, with little possibility of significant anti-predator intervention, and the potential for human disturbance to impact breeding populations, leads us to find that the Fiordland crested

penguin is likely to become in danger of extinction within the foreseeable future throughout all of its range.

Significant Portion of the Range Analysis

Having determined that the Fiordland crested penguin is likely to become in danger of extinction within the foreseeable future (threatened) throughout all of its range, we must next consider whether there are any significant portions of its range where the species is in danger of extinction. See our analysis for the yellow-eyed penguin for how we make this determination.

Fiordland crested penguins breed in widely dispersed small colonies along the convoluted and inaccessible southwest coast of the South Island of New Zealand and adjacent offshore islands. The Fiordland National Park Management Plan reported that nesting success of breeding pairs at island sites was greater than at mainland sites, 88 and 55 percent, respectively. This led us to consider whether the threats in the mainland portion of the range may be in danger of extinction. In our previous five-factor analyses, we found that threats from human disturbance and inadequacy of regulatory mechanisms have similar impacts on both island and mainland portions of the range. The primary threat to the Fiordland crested penguin is predation by introduced birds on islands and introduced mammals on the mainland. While the eradication of predators, such as weka, in isolated island habitats may be possible, removal of the widespread introduced mammalian predators on the mainland may be extremely difficult, if not impossible. While the threat of introduced predators is greater on the mainland, the overall population is buffered by the existence of some colonies on small islands just offshore of the mainland portions of the range and at Codfish Island which are free of predators. We find that the mainland portions of the range do not satisfy the two initial tests because there is not substantial information to conclude that the species in those portions may currently be in danger of extinction.

As a result, while the best scientific and commercial data available allows us to make a determination as to the rangewide status of the Fiordland crested penguin, we have determined that there are no significant portions of the range in which the species is currently in danger of extinction.

Therefore, we propose to list the Fiordland crested penguin as threatened throughout all of its range under the Act.

Humboldt Penguin (Spheniscus humboldti)

Background

The Humboldt penguin is endemic to the west coast of South America from Foca Island (5°12′0″S) in northern Peru to the Pinihuil Islands near Chiloe, Chile (42°S) (Araya *et al.* 2000, p. 1). It is a congener of the African penguin and has similar life history and ecological traits.

Humboldt penguins historically bred on guano islands off the coast of Peru and Chile (Araya *et al.* 2000, p.1). Prior to human mining of guano for fertilizer, the Humboldt penguin's primary nesting habitat was in burrows, tunneled into the deep guano substrate on offshore islands. While the guano is produced primarily by three other species (the Guanay cormorant (*Phalacrocorax bouganvillii*), the Peruvian booby (*Sula variegate*), and Peruvian pelican (*Pelecanus thagus*)), Humboldt penguins depended on these burrows for shelter from the heat and from predators. With the intensive harvest of guano over the last century and a half in both countries, Humboldt penguins are forced to nest out in the open or seek shelter in caves or under vegetation (Paredes and Zavalga 2001, pp. 199–205).

The distribution of the Humboldt penguin is very closely associated with the Humboldt (Peruvian) current. The upwelling of cold, highly productive waters off the coast of Peru provides a continuous food source to vast schools of fish and large seabird populations (Hays 1986, p. 170). In the Chilean system to the south, upwelling is lighter and occurs more seasonally compared to Peru (Simeone *et al.* 2002, p. 44). In all regions, Humboldt penguins feed primarily on schooling fish such as the anchovy (*Engraulis ringens*), Auracanian herring (*Strangomera bentincki*), silversides (*Odontesthes regia*), garfish (*Scomberesox saurus*) (Herling *et al.* 2005, p. 21), and Pacific sardine (Simeone *et al.* 2002, p. 47). Depending on the location and the year, the proportion of each of these species in the diet varies.

Periodic failure of the upwelling and its impact on schooling fish and fisheries off Peru and Ecuador were the first recorded and signature phenomena of El Niño Southern Oscillation events (ENSO). El Niño events occur irregularly every 2–7 years (National Oceanic and Atmospheric Administration (NOAA) 2007, p. 4). This periodic warming of sea surface temperatures and consequent upwelling failure affects primary productivity and the entire food web of the coastal ecosystem. Especially impacted are anchovy and sardine populations, which comprise the major diet of Humboldt penguins. During El Niño events, seabirds, fish, and marine mammals experience reduced survival and reproductive success, and population crashes (Hays 1986, p. 170).

Given the north-south distribution of the Humboldt penguin along the Peruvian and Chilean coasts, researchers have looked for variation in breeding and foraging along this climatic gradient (Simeone *et al.* 2002, pp. 43–50). In dry Peruvian breeding areas, where upwelling provides a constant food source, penguins nest throughout the year with two well-defined peaks in breeding in the autumn and spring. Adults remain near the colony all year. Further south, in northern and north-central Chile, the birds follow the same pattern, despite stronger seasonal differences in weather (Simeone *et al.* 2002, pp. 48–49). They also attempt to breed twice a year, but the autumn breeding event is regularly disrupted by the rains more typical at that latitude, and there is high reproductive failure. Adults in the southern extent of the range (south-central Chile) leave the colonies in winter, presumably after abandoning nesting efforts (Simeone *et al.* 2002, p. 47). Peruvian and northern Chilean colonies are only impacted by rains and flooding during El Niño years, and during those years, nesting attempts are reduced as food supplies shift and adults forage farther afield (Culik *et al.* 2000, p. 2317).

Similar to the African penguin, the distribution of colonies within the breeding range of the Humboldt penguin in Peru has shifted south in recent years. This shift may be in response to a number of factors: (1) El Niño events in which prey distribution has been shown to move to the south (Culik *et al.* 2000, p. 2311); (2) increasing human pressure in central coastal areas; (3) long-term changes in prey distribution (Paredes *et al.* 2003, p. 135); or (4) overall increases in sea surface temperature.

The Humboldt penguin has decreased historically from more than a million birds in the 19th century to 41,000 to 47,000 individual birds today (Ellis *et al.* 2007, p. 7). Nineteenth century reports indicate there were more than a million birds in the Humboldt Current area. By 1936, there was already evidence of major population declines and of breeding colonies made precarious by the harvest of guano from over 100 Peruvian islands (Araya *et al.* 2000, p. 1).

Estimates of the population in Peru have fluctuated in recent history, with

3,500 to 7,000 in 1981, with a subsequent reported decrease to 2,100 to 3,000 individuals after the 1982–83 El Niño event. In 1996, there were reported to be 5,500 individuals, and after the strong 1997–98 El Niño event, fewer than 5,000. Population surveys in the southern portion of the range in Peru in 2006 found 41 percent more penguins than in 2004, increasing estimates for that area from 3,101 individuals to 4,390 and supporting an overall population estimate for Peru of 5,000 individuals (Instituto Nacional de Recursos Naturales (INRENA) 2007, p. 1; IMARPE 2007, p. 1).

In 1995–96, it was estimated there were 7,500 breeding Humboldt penguins in Chile (Ellis *et al.* 1998, p. 99; Luna-Jorguera *et al.* 2000, p. 508). This estimate was significantly revised following surveys conducted in 2002 and 2003 (Mattern *et al.* 2004, p. 373) at Isla Chanaral, one of the most important breeding islands for the Humboldt penguin. Mattern *et al.* (2004, p. 373) counted 22,021 adult penguins, 3,600 chicks, and 117 juveniles at that island in 2003. While larger numbers (6,000 breeding birds) had been recorded in the 1980s, counts after 1985 had never exceeded 2,500 breeding birds (Ellis *et al.* 1998, p. 99). The authors speculated that rather than representing a sudden population increase, the discrepancy is a result of systematic underestimates in eight previous counts at Isla Chanaral, which were all conducted using a uniform methodology. Just to the south of this study area in the Coquimbo region, Luna-Jorguera *et al.* (2000, p. 506) counted a total of 10,300 penguins in on-land and at-sea counts conducted in 1999. That study also produced numbers higher than the most recent previous census, which had estimated only 1,050 individuals in the Coquimbo region (Luna-Jorguera *et al.* 2000, p. 508). Other than the overall rangewide figures for the species presented by Ellis *et al.* (2007, p. 7), there is not a comprehensive current estimate of the total number of penguins in Chile. The best available scientific information indicates that there are approximately 30,000 to 35,000 individuals in the Chilean population.

These updated Chilean counts have led to revision of overall population estimates for the species. As recently as 2007, BirdLife International (2007, p. 2) reported a total population of 3,000 to 12,000. Based on the new data, Ellis *et al.* (2007, p. 7) report a population of 41,000 to 47,000 individuals.

The 2007 IUCN Red List (BirdLife International 2007, p. 1) categorizes the Humboldt penguin as ''Vulnerable'' on the basis of 30 to 49 percent declines over the past 3 generations and predicted over 3 generations in the future.

Summary of Factors Affecting the Humboldt Penguin

Factor A. The Present or Threatened Destruction, Modification, or Curtailment of Humboldt Penguin's Habitat or Range

The habitat of the Humboldt penguin consists of terrestrial breeding and molting sites and the marine environment, which serves as a foraging range year-round.

Modification of their terrestrial breeding habitat is a continuing threat to Humboldt penguins. Humboldt penguin breeding islands were, and continue to be, a source of guano for the fertilizer industry and have been exploited since 1840 in both Peru and Chile. From 1840 to 1880, Peru exported an estimated 12.7 million T (11.5 t) of guano from its islands (Cushman 2007, p. 1). Throughout the past century, Peru has managed the industry through a variety of political and ecological conflicts, including the devastating impacts of El Niño on populations of guano-producing birds and the competition between the fishing industry and the seabird populations that are so valuable to guano production. After 1915, caretakers of the islands routinely hunted penguins for food even as their guano nesting substrate was removed; resulting in the birds being virtually eliminated from the guano islands (Cushman 2007, p. 11). Harvest of guano continues on a small scale today and is managed by Proyecto Especial de Promocion del Aprovechamiento de Abonos Provenientes de Aves (PROABONOS), a small government company producing fertilizer for organic farming (Cushman 2007, p. 24).

Reports from 1936 described completely denuded guano islands and indicated that by 1936 Humboldt penguin populations had undergone a vast decline throughout the range (Ellis *et al.* 1998, p. 97). Guano, which was initially many meters deep, was initially harvested down to the substrate level. Then, once the primary guano-producing birds had produced another ankle-deep layer, it was harvested again. The Humboldt penguins, which formerly burrowed into the abundant guano, were deprived of their primary nesting substrate and forced to nest in the open, where they are more susceptible to heat stress and their eggs and chicks are more vulnerable to predators, or they were forced to resort to more precarious nest sites (Ellis *et al.* 1998, p. 97).

Paredes and Zavalga (2001, pp. 199–205) investigated the importance of guano as a nesting substrate and found that Humboldt penguins at Punta San Juan, where guano harvest has ceased, preferred to nest in high-elevation sites where there was adequate guano available for burrow excavation. As guano depth increased in the absence of harvest, the number of penguins nesting in burrows increased. Penguins using burrows on cliff tops had higher breeding success than penguins breeding in the open, illustrating the impact of loss of guano substrate on the survival of Humboldt penguin populations.

Guano harvesting continues on Peruvian points and islands under government control. The fisheries agency, Instituto del Mar del Peru (IMARPE), is working with the parastatal guano extraction company, PROABONOS, to limit the impacts of guano extraction on penguins at certain colonies, with harvest conducted outside the breeding season and workers restricted from disturbing penguins (IMARPE 2007, p. 2). Two major colonies at Punta San Juan and Pchamacamac Island are in guano bird reserves and under the management and protection of the guano extraction agency, which has built walls to keep out people and predators (UNEP World Conservation Monitoring Center (UNEP WCMC) 2003, p. 9). However, guano extraction is still listed as a moderate threat to some island populations within the Reserva Nacional de Paracas (Lleellish *et al.* 2006, p. 4) and illegal guano extraction is listed by the Peruvian natural resource agency, Instituto Nacional de Recursos Naturales (INRENA), as one of three primary threats to the Humboldt penguin in Peru (INRENA 2007, p. 2). The penguin Conservation Assessment and Management Plan (CAMP) (Ellis *et al.* 1998, p. 101) recommended that the harvest of guano in Peru be regulated in order to preserve nesting habitat and reduce disturbance during the nesting seasons. Guano harvest is reported to have ceased in Chile (UNEP WCMC 2003, p. 6). We conclude, on the basis of the extent and severity of exploitation throughout the range of the Humboldt penguin in both countries over the past 170 years, and on the basis of limited ongoing guano extraction in Peru, that modification of the terrestrial breeding habitat is a threat to the survival of the Humboldt penguin throughout its range.

With respect to modification of the marine habitat of the Humboldt penguin, periodic El Niño events have

been shown to have significant effects on the marine environment on which Humboldt penguins depend and must be considered the main marine perturbation for the Humboldt penguin (Ellis *et al.* 1998, p. 101), impacting penguin colonies in Peru (Hays 1986, p. 169–180; INRENA 2007, p. 1) and Chile (Simeone *et al.* 2002, p. 43). The strength and duration of El Niño events has increased since the 1970s, with the 1997–98 event the largest on record (Trenberth *et al.* 2007, p. 288). The Humboldt Penguin Population and Habitat Viability Assessment (Araya *et al.* 2000, pp. 7–8) concluded that, even without El Niño and other impacts, documented rates of reproductive success and survival would cause declines in the Chilean populations. In the absence of other human impacts, annual declines from El Niño events in Chile alone were projected to lead to 2.3 to 4.4 percent annual declines. Peruvian population data found an overall population decline of 65 percent during the 1982–83 El Niño event (Hays 1986, p. 169). While we have not found comparable documentation of the impact of the 1997–98 event in Peru, few birds were recorded breeding at guano bird reserves in 1998 and, at one colony, Punta San Juan, the number of breeding individuals appears to have declined by as much as 75 percent between 1996 and 1999 before subsequent rebound (Paredes *et al.* 2003, p. 135). This suggests that a similar level of impact from a single El Niño event in the future could reduce current Peruvian populations from 5,000 birds to 1,250 to 1,750 birds. Cyclical El Niño events cause high mortality among seabirds, but there is also high selection pressure on Humboldt Current seabird populations to increase rapidly in numbers after each event (Ellis *et al.* 1998, p. 101). Nonetheless, with strengthening El Niño events, reduced Humboldt penguin population numbers, and the compounding influence of other threat factors, such as ongoing competition with commercial fisheries for food sources, which are discussed below under Factor E, the resiliency of Humboldt penguins to recover from cyclical El Niño events is highly likely to be reduced from historical times (Ellis *et al.* 1998, p. 101).

On the basis of this analysis, we find that the present and threatened destruction, modification, or curtailment of both its terrestrial and marine habitats is a threat to the Humboldt penguin throughout all of its range now and in the foreseeable future.

Factor B. Overutilization for Commercial, Recreational, Scientific, or Educational Purposes

Hunting of Humboldt penguins for food and bait and harvesting of their eggs have been long established on the coasts of Chile and Peru; it is not clear how much hunting persists today. At Pajaros Island in Chile, Humboldt penguins are sometimes hunted for human consumption or for use as bait in the crab fishery. At the Punihuil Islands farther south, they are also hunted on occasion for use as crab bait (Simeone *et al.* 2003, p. 328; Simeone and Schlatter 1998, p. 420). Paredes *et al.* (2003, p. 136) reported that as fishing occurs more frequently in the proximity of penguin rookeries this has attracted fishermen to take penguins for food in Peru. Cheney (UNEP WCMC 2003, p. 6) reported an observation of a fisherman taking 150 penguins to feed a party. In 1995, egg harvest was listed as the primary threat to Chilean populations (UNEP WCMC 2003, p. 6), but recent information does not indicate whether that practice continues today. Paredes *et al.* (2003, p. 136) also reported that guano harvesters supplement their meager incomes and diets through collecting eggs and chicks, although the fisheries agency, IMARPE, is working with PROABONOS to restrict workers from disturbing penguins (IMARPE 2007, p. 2). On the basis of this information, we conclude that localized intentional harvest may be ongoing. We have no basis to evaluate the effectiveness of reported efforts to control this harvest. Therefore, we conclude that intentional take is a threat to the Humboldt penguin throughout all of its range.

It was estimated in 1985 that 9,264 Humboldt penguins had been exported to several zoos around the world within a period of 32 years. Exportation of Humboldt penguins from Peru or Chile is now prohibited (Ellis *et al.* 1998, p. 101) and, as discussed under Factor D, the species is listed in Appendix I of the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES).

Tourism has been identified as a potential threat to the Humboldt penguin. Since the 1990 designation of the Humboldt National Reserve, which includes the islands of Damas, Choros, and Chanaral in Chile, tourism has increased rapidly but with little regulation (Ellenberg *et al.* 2006, p. 97). Ellenberg *et al.* (2006, p. 99) found that Humboldt penguin breeding success varied with levels of tourism at these three islands. Breeding success was very low at Damas Island, the most tourist accessible island that saw over 10,000 visitors. Better breeding success was observed at Choros Island, a less accessible island that saw less than 1,000 visitors. The highest breeding success was observed at the remote and largest Chanaral Island colony, where tourist access was negligible. Unlike their congeners, the Magellanic penguins (*Spheniscus magellanicus*), Humboldt penguins were found to be extremely sensitive to human presence and to display little habituation potential, suggesting a strong need for tourism guidelines for this species (Ellenberg *et al.* 2006, p. 103). Simeone and Schlatter (1998, p. 420) described nest destruction by unregulated tourists at Punihuil Island, a popular tourist destination in southern Chile. Both the attractiveness of the penguins for tourism and the potential for increased impacts from human disturbance stem from the coincidence of the prime tourist season with the Humboldt penguin's spring and summer breeding season. In Peru, the impact of tourism is listed as a minimal to mid-level threat at the Reserva Nacional de Paracas (Lleellish *et al.* 2006, p. 4).

In the areas described in the literature, tourism has increased rapidly and with little regulation in the Humboldt National Reserve, has caused nest destruction at Punihuil Island in Chile, and is reported to be a minimal to mid-level threat at Reserva Nacional de Paracas in Peru. Because Humboldt penguins are extremely sensitive to the presence of humans, the species' breeding success is impacted with the increased levels of tourism, and the prime tourist season coincides with the species' spring and summer breeding season, we conclude that tourism is a threat to the species in portions of its range where it is unregulated.

Other human activities may disturb penguins. For example, fishermen hunting European rabbits (*Oryctolagus cuniculus*) disturbed penguins at Choros Island (Simeone *et al.* 2003, p. 328), but we do not conclude that this activity has occurred at a scale that represents a threat to the Humboldt penguin.

We have identified intentional take and unregulated tourism as a threat to Humboldt penguins. Therefore, we find that overutilization for commercial, recreational, scientific, or educational purposes is a threat to the Humboldt penguin throughout all of its range now and in the foreseeable future.

Factor C. Disease or Predation

There is no information to indicate that disease is a threat to the Humboldt penguin.

Simeone *et al.* (2003, p. 331) reported that the presence of rats, rabbits, and cats has been documented on islands along the Chilean coast, but their impacts on Humboldt penguins are not known. In Peru, ''rats were observed at Pajaros Island, Chachagua, and Pajaro Nido. At Pajaros Islands, rats were present in large numbers and were observed to predate on penguin eggs and chicks'' (Simeone *et al.* 2003, p. 328). However, on the basis of the best available information, we do not conclude that predation is exerting a significant impact on Humboldt penguin populations. Therefore, on the basis of the best available information, we conclude that disease and predation are not a threat to the Humboldt penguin in any portion of its range.

Factor D. Inadequacy of Existing Regulatory Mechanisms

The Humboldt penguin is listed as 'endangered' in Peru, the highest threat category under Peruvian legislation, and take, capture, transport, trade and export are prohibited except for scientific or cultural purposes (IMARPE 2007, p. 1; UNEP WCMC 2003, p. 8). Most breeding sites are protected by designated areas. The principal breeding colonies are legally protected by PROABONOS, the institute managing guano extraction. The Reserva Nacional de Paracas protects an area of 1,293 mi^2 (3,350 km^2) of the coastal marine ecosystem. In 2006, 1,375 penguins were observed in this reserve (Lleellish *et al.* 2006, pp. 5–6). However, patrols of this area are inadequate to police illegal activities such as dynamite fishing (Lleellish *et al.* 2006, p. 4).

In Chile, there is a 30-year moratorium on hunting and capture of Humboldt penguins and at least four major colonies are protected. Most terrestrial sites where the species occurs are within the national system of protected areas (UNEP WCMC 2003, p. 8).

The species is listed in Appendix I of the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) and in Appendix I of the Convention on Migratory Species. Exportation of Humboldt penguins from Peru or Chile is now prohibited (Ellis *et al.* 1998, p. 101), removing this as a potential threat to the species.

While legal protections are in place for the Humboldt penguin in both Chile and Peru, in general it is reported that enforcement of such laws are limited due to limited resources and the remote location of penguin colonies (UNEP WCMC 2003, p. 8). The UNEP WCMC Report on the Status of Humboldt Penguins concluded that little has been done to establish particular fishing-free zones and there is little progress in preventing penguins from being caught in fishing nets.

Majluf *et al.* (2002, p. 1342) stated, ''There is currently no management of artesanal [sic] gill-net fisheries in Peru, except for restrictions on retaining cetaceans and penguins. Even these regulations are difficult to enforce in remote and isolated ports such as San Juan.''

Both countries have national authorities and national contingency plans for oil spill response. Chile has the capability to respond to Tier One (small spills with no outside intervention) and Tier Two (larger spills requiring additional outside resources and manpower) oil spill events (International Tankers Owners Pollution Federation Limited (ITOPF) 2003, p. 2). As of July 2003, Peru was not listed as having significant capability to respond to oil spill events (ITOPF 2000b, p. 1).

We find that inadequacy of existing regulatory mechanisms, particularly in the area of enforcement of existing prohibitions related to fishing methods and management of fisheries bycatch, is a threat to the Humboldt penguin throughout all of its range now and in the foreseeable future.

Factor E. Other Natural or Manmade Factors Affecting Its Continued Existence

Both large-scale commercial fisheries extraction and artesanal fisheries compete for the primary food of the Humboldt penguin throughout its range (BirdLife International 2007, p. 4; Ellis *et al.* 1998, p. 100; Herling *et al.* 2005, p. 23; Hennicke and Culik 2005, p. 178). While El Niño events cause severe fluctuations in Humboldt penguin numbers, over-fishing and entanglement (discussed below) are identified as a steady contributor to underlying long-term declines (BirdLife International 2007, p. 4). The anchovy fishery in Peru collapsed in the 1970s due to high catches and overcapacity of fishing fleets, exacerbated by the effects of the 1972–73 El Niño event. Twenty years passed before it became clear that this fishery had recovered (Food and Agriculture Organization (FAO) 2007, p. 2). These recovered stocks continue to be significantly impacted by major El Niño events, but have rebounded more quickly after recent events, with Peru reporting anchovy catches of 8.64 million T (9.6 million t) in 2000 and 5.76 million T (6.4 million t) in 2001 (FAO 2007, p. 2), and Chile reporting catches of 1.25 million T (1.4 million t) in 2004 (FAO 2006, p. 4). In Chile, local-level commercial extraction of specific fish species has reduced those species in the diet of penguins, and it has been noted that fisheries extraction has the potential of harming Humboldt penguins if overfishing occurs (Herling *et al.* 2005, p. 23). Culik and Luna-Jorquera (1997, p. 555) and Hennicke and Culik (2005, p.178), tracking foraging effort of penguins in northern Chile, concluded that even small variations in food supply, related to small changes in sea-surface temperature, led to increased foraging time. They concluded that Humboldt penguins have high energetic costs to obtain food even in non-El Niño years. They recommended the establishment of no-fishing zones, for example, encompassing the foraging range around the breeding area at Pan de Azucar Island to buffer the species from possible catastrophic effects of future El Niño events. While commercial fishing in combination with El Niño events has contributed to the historic declines of Humboldt penguin, and the identified threat of El Niño will interact with fisheries extraction during future El Niño episodes, on the basis of the best available information we conclude that overfishing or competition for prey from commercial or artesanal fisheries is not a threat to the Humboldt penguin in any portion of its range.

Incidental take by fishing operations is the most significant threat to Humboldt penguins. The Government of Peru lists incidental take by fisheries in fishing nets as one of the major sources of penguin mortality (IMARPE 2007, p. 2). Reports from Chile indicated a similar level of impact on the species (Majluf *et al.* 2002, pp. 1338–1343). In Peru, the expansion of local-scale fisheries and the switching to new areas and species as local fisheries are unable to compete with larger commercial operations has brought humans and penguins into increasing contact, with increased penguin mortality due to entanglement in fishing nets (Paredes *et al.* 2003, p. 135). Paredes *et al.* (2003, p. 135) attribute the changes in distribution of penguin colonies southward in Peru to this increased human disturbance—there are now fewer penguins on the central coastal area and more to the south.

Between 1991 and 1998, Majluf *et al.* (2002, pp. 1338–1343) recorded 922 deaths in fishing nets out of a population of approximately 4,000 breeding Humboldt penguins at Punta San Juan, Peru. This level of incidental take was found to be unsustainable even without factoring in periodic El Niño impacts. Take was highly variable between years, with the greatest incidental mortality when surface set

drift gill nets were being used to catch cojinovas (*Seriolella violace*), a species that declined during the course of the study. A subsequent study found that the risk of entanglement is highest when surface nets are set at night (Taylor *et al.* 2002, p. 706).

In Chile, Simeone *et al.* (1999, pp. 157–161) recorded 605 Humboldt penguins drowned in drift gill nets set for corvina (*Cilus gilberti*) in the Valparaiso region of central Chile between 1991 and 1996. Birds pursuing anchovies and sardines were apparently unable to see the transparent nets in their path and were entangled and drowned. These mortalities occurred outside of the breeding season when penguins forage in large aggregations and probably involved birds originating from beyond small local colonies. The deaths recorded represent underestimates of rangewide mortality—the authors only studied one of four major regions where corvina fishing occurred. Incidental mortality from such fishing operations is thought to affect Humboldt penguins throughout the species' range (Wallace *et al.* 1999, p. 442). Therefore we conclude that fisheries bycatch is a threat to the Humboldt penguin.

In addition, fishing with explosives, such as dynamite, is listed by INRENA as one of three major threats to Humboldt penguins in Peru (INRENA 2007, p. 2). The use of explosives is recurrent in the Reserva Nacional de Paracas, the primary center of population for penguins in Peru. Explosives use is especially prevalent in the southern zone, an area that contains more than 73 percent of the population, but does not receive as thorough patrolling as the north (Lleellish *et al.* 2006, p. 4).

Oil and chemical spills can have direct effects on the Humboldt penguin. The range of the species encompasses major industrial ports along the coast of both Chile and Peru. Approximately 100,000 barrels per day of crude oil transit the coastal waters from the tip of South America to Panama (ITOPF 2003, p. 1) with over 1,000 tankers calling annually at ports in that entire region. Major spill events in Chile have been limited to the Straits of Magellan to the south of the range of the Humboldt penguin, and no major events have been recorded for Peru (ITOPF 2000a, p. 2; ITOPF 2000b, p. 2). However, lesser spills have occurred. On May 25, 2007, about 92,400 gallons (350,000 liters) of crude oil leaked into San Vicente Bay in Talcuhuano, near Concepcion, Chile, during offloading of fuel by the vessel *New Constellation,* with impacts on sea lions and seabirds, including Humboldt penguins (Equipo Ciudano 2007, p. 1). A similar spill of 2,206 T (2,000 t) of crude oil occurred at an oil terminal off Lima in 1984, severely polluting beaches there (ITOPF 2000b, p. 3). As noted in Factor D, Chile and Peru have limited ability to handle spill cleanup.

However, while there is a possibility of oil spill impacts as a result of incidents along the Peruvian or Chilean coast, we find that a number of elements mitigate against our finding this a threat to the species. There is little history of spill events in the region and the breeding colonies of Humboldt penguin are widely dispersed along a very long coastline. In addition, the Humboldt penguin distribution does not encompass the southern tip of South America where the risk of oil spill is greatest. On this basis, we conclude that oil spill impacts are not a threat to the survival of the Humboldt penguin in any portion of its range.

In summary, we find that fisheries bycatch is a threat to the survival of the Humboldt penguin throughout all of its range now and in the foreseeable future.

Foreseeable Future

The term ''threatened species'' means any species (or subspecies or, for vertebrates, distinct population segments) that is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range. The Act does not define the term ''foreseeable future.'' For the purpose of this proposed rule, we define the ''foreseeable future'' to be the extent to which, given the amount and substance of available data, we can anticipate events or effects, or reliably extrapolate threat trends, such that we reasonably believe that reliable predictions can be made concerning the future as it relates to the status of the species at issue.

In considering the foreseeable future as it relates to the status of the Humboldt penguin, we considered the threats acting on the species, as well as population trends. We considered the historical data to identify any relevant existing trends that might allow for reliable prediction of the future (in the form of extrapolating the trends).

With respect to the Humboldt penguin, the available data indicate that historical declines have resulted from the destruction of Humboldt penguin nesting substrate by guano collection, and this loss of nesting habitat continues to impact the breeding success of the species. We have no reason to believe this will change in the future. El Niño events have caused periodic crashes of the food supply of Humboldt penguins in Peru and Chile in the historic and recent past. Such events, which occur irregularly every 2–7 years, have increased in frequency and intensity in recent years and are likely to impact Humboldt penguins more frequently and more severely in the foreseeable future. The harvest of Humboldt penguins for food, eggs, and bait is a threat to the survival of the Humboldt penguin, and we have no reason to believe this threat will be ameliorated in the future. Incidental take by fisheries operations has emerged as the most significant human-induced threat to Humboldt penguins in both Chile and Peru, causing significant mortality of Humboldt penguins in both countries in the 1990s. There currently appears to be a lack of enforcement and a lack of significant measures to reduce the impacts. Based on our analysis of the best available information, we have no reason to believe that population trends will change in the future, nor that the effects of current threats acting on the species will be ameliorated in the foreseeable future.

Humboldt Penguin Finding

The Humboldt penguin has decreased historically from more than a million birds in the 19th century to 41,000 to 47,000 individual birds today. Since 1981, the Peruvian population has fluctuated between 3,500 and 7,000 individuals, with the most recent estimate at 5,000 individuals. Estimates of the population in Chile (30,000 to 35,000 individuals) have been recently updated with improved documentation of a colony at Isla Chanaral. The increase in the population estimate is a correction of systematic undercounting for 20 years, and cannot be concluded to signify recent population increases in Chile.

Historical threats to terrestrial habitat, in particular the destruction of Humboldt penguin nesting substrate by guano collection, have been responsible for the massive historical decline of the species, and this loss of nesting habitat continues to impact the breeding success of the species. Effects of guano extraction on the current populations appear to have been reduced by designation of protected areas and management of the limited guano harvesting that still occurs. However, at guano islands the availability and quality of nesting habitat is still impacted by both historical and ongoing harvest.

The impact of El Niño events, which have caused periodic crashes of the food sources of Humboldt penguins in Peru and Chile in the historic and recent past, is a threat factor leading to declines of this species. Such events,

which occur irregularly every 2–7 years, have increased in frequency and intensity in recent years and are likely to impact Humboldt penguins more and more severely in the foreseeable future. Given reduced population sizes and the existence of other significant threats, the resiliency of the Humboldt penguin to respond to these cyclical El Niño events is greatly reduced.

We find that harvest of Humboldt penguins for food, eggs and bait is a threat to the survival of the Humboldt penguin throughout all of its range. Tourism, if not properly managed, has the potential to impact individual colonies; however, we do not conclude this is a threat to the species.

Unlike the African penguin which breeds directly on a major shipping route for petroleum and at major ports of call for tanker traffic, the range of the Humboldt penguin along the coast of Chile and Peru does not have the same history of major spills or the same level of shipping traffic. Therefore we conclude that oil spill impacts are not a threat to the survival of the Humboldt penguin in any portion of its range.

Industrial fisheries extraction, which in conjunction with El Niño caused collapse of anchovy stocks in the 1970s, has had a historical influence on the species and contributed to its long-term decline. The recovery of fish stocks since the 1970s, however, has improved the food base of this species. Although large-scale commercial fisheries and local-scale fisheries extraction is targeting the same prey as the Humboldt penguin, we do not identify this as a current threat to the species. More importantly, incidental take by fisheries operations has emerged as the most significant human-induced threat to Humboldt penguins in both Chile and Peru. Entanglement in gill nets caused significant documented mortality of Humboldt penguins in both countries in the 1990s. There is evidence of lack of enforcement and lack of significant measures to reduce the impacts of bycatch. Therefore, we find that fisheries bycatch is a threat to the Humboldt penguin throughout all of its range.

On the basis of: (1) Destruction of its habitat by guano extraction; (2) high likelihood of El Niño events catastrophically impacting the prey of Humboldt penguins in cyclical 2-to 7-year timeframes; (3) intentional harvest of this species for meat, eggs, and bait; (4) inadequacy of regulatory mechanisms, especially with respect to controlling fisheries bycatch; and (5) ongoing threat of incidental take from fisheries bycatch, we find that the Humboldt penguin is likely to become in danger of extinction within the foreseeable future throughout all of its range.

Distinct Population Segment (DPS)

Section 3(16) of the Act defines ''species'' to include ''any distinct population segment of any species of vertebrate fish or wildlife which interbreeds when mature.'' To interpret and implement the DPS provisions of the Act and Congressional guidance, the Service and National Marine Fisheries Service published a Policy regarding the recognition of Distinct Vertebrate Population Segments in the **Federal Register** (DPS Policy) on February 7, 1996 (61 FR 4722). Under the DPS policy, three factors are considered in a decision concerning the establishment and classification of a possible DPS. These are applied similarly to the list of endangered and threatened species. The first two factors—discreteness of the population segment in relation to the remainder of the taxon and the significance of the population segment to the taxon to which it belongs—bear on whether the population segment is a valid DPS. If a population meets both tests, it is a DPS and then the third factor is applied—the population segment's conservation status in relation to the standards for listing, delisting, or reclassification under the Act.

Discreteness Analysis

Under the DPS policy, a population segment of a vertebrate taxon may be considered discrete if it satisfies either of the following conditions: (1) It is markedly separated from other populations of the same taxon as a consequence of physical, physiological, ecological, or behavioral factors, or (2) it is delimited by international boundaries within which differences in control of exploitation, management of habitat, conservation status, or regulatory mechanisms exist that are significant in light of section 4(a)(1)(D) of the Act.

Humboldt penguins have a continuous range from northern Peru to mid-southern Chile. With respect to discreteness criterion 1, we have not identified any marked biological boundaries between populations within that range or of differences in physical, physiological, ecological, or behavioral factors among any groups within that range. We have found no reports of genetic or morphological discontinuity between any discrete elements of the population. The range of the Humboldt penguin crosses the international boundary between Peru and Chile, which leads to evaluation of the second discreteness factor. However, in our analysis of differences between Peru and Chile in conservation status, habitat management, and regulatory mechanisms, we have found no significant differences between the two countries. In both countries, take of penguins is prohibited, but some illegal take occurs, and measures to address fisheries bycatch are similar, but fisheries bycatch remains widespread. Both countries provide protection to major breeding colonies of the species. The Chilean population is more numerous, but the extent of their range is greater. Given the fact that problems in census data have only recently been corrected, we cannot conclude that Chilean Humboldt penguin population trends are different from the Peruvian or that conservation concerns are different. In fact, the impacts of habitat loss, the effects of El Niño, intentional take, inadequacy of regulatory mechanisms, and fisheries bycatch are concerns throughout the range.

Based on our analysis, we do not find that differences in conservation status or management for Humboldt penguins across the range countries are sufficient to justify the use of international boundaries to satisfy the discreteness criterion of the DPS Policy. Therefore, we have concluded that there are no population segments that satisfy the discreteness criterion of the DPS Policy. As a consequence, we could not identify any geographic areas or populations that would qualify as a DPS under our 1996 DPS Policy (61 FR 4722).

Significant Portion of the Range Analysis

Having determined that the Humboldt penguin is likely to become in danger of extinction within the foreseeable future throughout all of its range, we also considered whether there are any significant portions of its range where the species is currently in danger of extinction. See our analysis for the yellow-eyed penguin for how we make this determination.

Given the continuous linear range of the Humboldt penguin which breeds from northern Peru to south-central Chile and the distribution of colonies along that coast, no specific geographic portions of concern were immediately apparent. Therefore, we considered the occurrence of threat factors and to what extent their occurrence was uneven throughout the range or concentrated in any particular portion of the range, or whether there were any portions of the range where the threats were different.

Overall, for each factor identified as a threat, we found that these were threats throughout the range. Terrestrial and marine habitat loss, which included the impacts of guano extraction, the effects

of El Niño, intentional harvest, the inadequacy of regulatory mechanisms, and fisheries bycatch were determined to be threats throughout Humboldt penguin's range.

In reviewing our findings, one difference within threat Factor A relates to the ongoing limited harvest of guano in Peru, while such harvest has stopped in Chile. In our finding, we indicated that both the historic and present impacts of guano extraction were a threat to the Humboldt penguin. On the basis of this difference, we considered whether the Peruvian population of Humboldt penguin may be in danger of extinction in a significant portion of its range. The information available on local harvest patterns or population trends in specific areas where guano harvest is documented do not allow us to divide the range further. The most recent 2006 estimate of the Peruvian population of the Humboldt penguin is approximately 5,000 individuals. This count includes an increase of 41 percent since 2004 in the southern portion of the range where 80 percent of the birds are found. The overall population has fluctuated between 2,100 and 7,000 individuals since 1981with fluctuations attributed to response to El Niño events. While the population of Humboldt penguins in Peru has fluctuated at low numbers for many years, current evidence of increases over the last few years reflects continued reproduction and resiliency of this population. Therefore, we find that the Humboldt penguin is not currently in danger of extinction in the Peruvian portion of the range.

As a result, while the best available scientific and commercial data allows us to make a determination as to the rangewide status of the Humboldt penguin, we have determined that there are no significant portions of the range in which the species is currently in immediate danger of extinction.

Therefore, we propose to list the Humboldt penguin as a threatened species throughout its range under the Act.

Erect-Crested Penguin (Eudyptes sclateri)

Background

The erect-crested penguin, a New Zealand endemic, breeds primarily on the Bounty Islands and Antipodes Islands, located respectively, approximately 437 mi (700 km) and 543 mi (870 km) southeast of the South Island of New Zealand (NZ DODC 2006, pp. 27, 30). The Bounty Islands consist of eight islands with a total area of 0.5 mi^2 (1.3 km^2). The Antipodes Islands have two main islands and some minor islands. The largest is Antipodes Island, consisting of 23 mi^2 (60 km^2), and the second island, Bollons, consists of 0.77 mi^2 (2 km^2). Erect-crested penguins nest in large, dense, conspicuous colonies, numbering thousands of pairs, on rocky terrain (BirdLife International 2007, p. 3). Winter distribution at sea is largely unknown.

The Action Plan for Seabird Conservation of New Zealand lists the total world breeding population of erect-crested penguin at 81,000 pairs +/− 4,000 pairs (Taylor 2000, p. 65).

Counts of erect-crested penguins at Bounty Islands in 1978 estimated 115,000 breeding pairs (Robertson and van Tets 1982, p. 315) although these counts are considered overestimations (Houston 2007, p. 3). While the data were not directly comparable, 1997 counts found 27,956 pairs (Taylor 2000, p. 65), suggesting that a large decline in numbers may have occurred at the Bounty Islands (BirdLife International 2007, p. 2). There have been no further surveys since 1997–98.

In 1978, the population on the Antipodes was thought to be similar in size to Bounty Islands (about 115,000 breeding pairs). More recent surveys in 1995 indicate a population of 49,000 to 57,000 pairs in the Antipodes. Comparisons of photographs of nesting areas from the Antipodes show a constriction of colonies at some sites from 1978–1995. There have been no subsequent formal counts of erect-crested penguins at either the Bounty Islands or the Antipodes, and visits to the islands are rare. Both observations and photographs taken by researchers visiting these islands for other purposes have provided anecdotal information that erect-crested penguin colony sizes continue to decrease (Davis, 2001, p. 8; D. Houston 2008, pers. comm.).

A few hundred birds formerly bred at Campbell Island farther to the southwest in the 1940s; in 1986–87, a small number of birds (20 to 30 pairs) were observed there, but no breeding was seen (Taylor 2000, p. 65). Breeding on the Auckland islands, also to the southwest, was considered a possibility, with one pair found breeding there in 1976 (Taylor 2000, p. 65). The most recent penguin conservation assessment (Ellis *et al.* 2007, p. 6) reported erect-crested penguins are no longer present at Campbell or Auckland Islands. There is one record of breeding on the mainland of the South Island of New Zealand at Otago Peninsula, but it is unlikely there was ever widespread breeding there (Houston 2007, p. 3). Based on this information, we do not consider these areas as being part of the erect-crested penguin's current range, and have not included them in our analysis of the status of this species.

On the basis of declines of at least 50 percent in the past 45 years and a breeding range constricted to two locations, the IUCN has listed the species as 'Endangered' on the IUCN Red List (BirdLife International 2007, p. 1). It is ranked as Category B (second priority) on the Molloy and Davis threat categories used by the New Zealand DOC (Taylor 2000, p. 33) and, on that basis, placed in the second category of highest priority in the New Zealand Action Plan for Seabird Conservation (Taylor 2000, p. 33). The species is listed as 'acutely threatened—nationally endangered' on the New Zealand Threat Classification System list (Hitchmough *et al.* 2007, p. 38; Molloy *et al.* 2002, pp. 13–23). Under this classification system, which is non-regulatory, species experts assess the placement of species into threat categories according to both status criteria and threat criteria.

Summary of Factors Affecting the Erect-Crested Penguin

Factor A. The Present or Threatened Destruction, Modification, or Curtailment of Erect-Crested Penguin Habitat or Range

There is little evidence of destruction, modification, or curtailment of erect-crested penguin breeding habitat on land at the Bounty and Antipodes Islands. Feral animals, such as sheep and cattle, which could trample nesting habitat, are absent. Competition for breeding habitat with fur seals is reported to be minimal (Houston 2007, p. 1).

The New Zealand sub-Antarctic islands have been inscribed on the World Heritage List (World Heritage List 2008, p. 16). All islands are protected as National Nature Reserves and are State-owned (World Heritage Committee Report 1998, p. 21). We find that the present or threatened destruction, modification, or curtailment of the terrestrial habitat or range of the erect-crested penguin is not a threat of the species in any portion of its range.

Given the lack of terrestrial predators at the majority of erect-crested penguin colony sites, the absence of direct competition with other species, and the lack of physical habitat destruction at these sites, recent declines in erect-crested populations have been attributed to changes in the marine habitat. Penguins are susceptible to local ecosystem perturbations because they are constrained by how far they can swim from the colony in search of food (Davis 2001, p. 9). It has been

hypothesized that slight warming of sea temperatures and change in distribution of prey species may be having an impact on erect-crested penguin colonies (Taylor 2000, p. 66; Ellis *et al.* 2007, p. 6). The primary basis for this inference comes from studies of a closely-related species, the southern rockhopper penguin at Campbell Island (Cunningham and Moors 1994, p. 27), where the population declined by 94 percent between the early 1940s and 1985 from an estimated 800,000 breeding pairs to 51,500 (Cunningham and Moors 1994, p. 34). The majority of this decline appears to have coincided with a period of warmed sea surface temperatures between 1946 and 1956. It is widely inferred that warmer waters most likely affected southern rockhopper penguins through changes in the abundance, availability, and distribution of their food supply (Cunningham and Moors 1994, p. 34); recent research suggested they may have had to work harder to find the same food (Thompson and Sagar 2002, p. 11).

The suggestion that erect-crested penguins may have been similarly impacted by changes in the marine habitat during this time period is strengthened by the fact that erect-crested penguin breeding colonies are now absent from Campbell Island (Ellis *et al.* 2007, p. 6); they disappeared from the island during the same time period (1940s to 1987) as the southern rockhopper decline. In the 1940s, a few hundred erect-crested penguins bred on the island (Taylor 2000, p. 65). The latest IUCN assessment of the erect-crested penguin found that oceanic warming is a continuing threat that is resulting in a ''very rapid decline'' in greater than 90 percent of the population, and is therefore a threat of high impact to the erect-crested penguin (BirdLife International 2007, p. 2 of 'additional data'). Therefore, based on the best available information, we find that the present or threatened destruction, modification, or curtailment of the erect-crested penguin's marine habitat is a threat to the species throughout all its range now and in the foreseeable future.

Factor B. Overutilization for Commercial, Recreational, Scientific, or Educational Purposes

Aside from periodic surveys and the possibility of a future research program focused on the diet and foraging of the species, we are unaware of any purpose for which the erect-crested penguin is currently being utilized. Therefore, we conclude that overutilization for commercial, recreational, scientific, or educational purposes is not a threat to this species in any portion of its range.

Factor C. Disease or Predation

Avian disease has not been recorded in erect-crested penguins, although disease vectors of ticks and bird fleas are found in colonies (Taylor 2000, p. 66).

The only known mammalian predators within the current range of the erect-crested penguin are mice, which are present only on the main Antipodes Island. Although their eradication from this island is recommended as a future management action in the Action Plan for Seabird Conservation in New Zealand, we have found no reference to these mice being a threat to the erect-crested penguins on this one island in their range (Taylor 2000, p. 67). At the other islands in the Antipodes group (Bollons, Archway, and Disappointment) and at the Bounty Islands, mammalian predators are not present. Feral cats, sheep, and cattle are also no longer present (Taylor 2000, p. 66). The threat of future introduction of invasive species is being managed by the New Zealand DOC, which has measures in place for quarantine of researchers working on sub-Antarctic islands (West 2005, p. 36). These quarantine measures are an important step toward controlling the introduction of invasive species. At this time, however, we have no means to measure their effectiveness.

On the basis of this information, we find that neither disease nor predation is a threat to the erect-crested penguin in any portion of its range.

Factor D. Inadequacy of Existing Regulatory Mechanisms

All breeding islands of the erect-crested penguin are protected by New Zealand as National Nature Reserves. The marine areas are managed under fisheries legislation (World Heritage Committee Report 1998, p. 21).

The Action Plan for Seabird Conservation in New Zealand is in place and outlines previous conservation actions, future management actions needed, future survey and monitoring needs, and research priorities. Among the most relevant recommendations are pest quarantine measures to keep new animal and plant pest species from reaching offshore islands and eradication of mice from the main Antipodes Island (Taylor 2000, p. 67). At least one of these recommendations has been put into place; as mentioned under Factor C, strict required quarantine measures are now in place for researchers and expeditions to all New Zealand sub-Antarctic islands to prevent the introduction or re-introduction of animal and plant pest species (West 2005, p. 36). At this time, we have no means to measure the effectiveness of these quarantine measures.

In addition to national protection, all of New Zealand sub-Antarctic islands are inscribed on the World Heritage List (World Heritage List 2008, p. 16). World Heritage designation places an obligation on New Zealand to ''take appropriate legal, scientific, technical, administrative and financial measures, necessary for the identification, protection, conservation, presentation and rehabilitation of this heritage'' (World Heritage Convention 1972, p. 3). At the time of inscription of this site onto the World Heritage List in 1998, human impacts were described as ''limited to the effects of introduced species at Auckland and Campbell Islands'' (World Heritage Convention Nomination Documentation 1998, p. 1).

New Zealand has in place The New Zealand Marine Oil Spill Response Strategy, which provides the overall framework to mount a response to marine oil spills that occur within New Zealand's area of responsibility. The aim of the strategy is to minimize the effects of oil on the environment and people's safety and health. The National Oil Spill Contingency Plan promotes a planned and nationally coordinated response to any marine oil spill that is beyond the capability of a local regional council or outside the region of any local council (Maritime New Zealand 2007, p. 1). As discussed below under Factor E, rapid containment of spills in remote areas and effective triage response under this plan have shown these to be effective regulatory mechanisms (New Zealand Wildlife Health Center 2007, p. 2; Taylor 2000, p. 94).

On the basis of national and international protections in place, we find that inadequacy of existing regulatory mechanisms is not a threat to the erect-crested penguin in any portion of its range.

Factor E. Other Natural or Manmade Factors Affecting the Continued Existence of the Species

New Zealand's Action Plan for Conservation of Seabirds notes that, while there is a possibility that erect-crested penguins could be caught in trawl nets or by other fishing activity, there are no records of such (Taylor 2000, p. 66). The IUCN noted that the New Zealand DOC has limited legal powers to control commercial harvesting in waters around the sub-Antarctic islands and recommended

that the New Zealand Ministry of Fisheries should be encouraged to address fisheries bycatch and squid fishery impacts (World Heritage Nomination—IUCN Technical Evaluation 1998, p. 25). As noted in the discussion under Factor A, the Action Plan for Conservation of New Zealand Seabirds outlines research efforts that would provide more data on the diet and activities and distribution of erect-crested penguins at sea. Such research will assist in evaluating whether competition for prey with fisheries or bycatch from fisheries activities is a factor in declines of the erect-crested penguin. However, in the absence of such research results, we have found no evidence that erect-crested penguins are subject to fisheries bycatch.

A large proportion of erect-crested penguin populations are found on two isolated, but widely separated, island archipelagos during the breeding season. We have examined the possibility that oil and chemical spills may impact erect-crested penguins. Such spills, should they occur and not be effectively managed, can have direct effects on marine seabirds. As a gregarious colonial nesting species, erect-crested penguins are potentially susceptible to mortality from local oil spill events during the breeding season. A significant spill at either the Antipodes or Bounty Islands could jeopardize more than one-third of the population of this species. The non-breeding season distribution of erect-crested penguins is not well-documented, but there is the potential for birds to encounter spills within the immediate region of colonies or, if they disperse more widely, elsewhere in the marine environment.

Based on previous incidents of oil and chemical spills around New Zealand, we evaluated this as a potential threat to this species. For example, in March 2000, the fishing vessel *Seafresh 1* sank in Hanson Bay on the east coast of Chatham Island and released 66 T (60 t) of diesel fuel. Rapid containment of the oil at this very remote location prevented any wildlife casualties (New Zealand Wildlife Health Center 2007, p. 2). The same source reported that in 1998 the fishing vessel *Don Wong 529* ran aground at Breaksea Islets, off Stewart Island, outside the range of the erect-crested penguin. Approximately 331 T (300 t) of marine diesel was spilled along with smaller amounts of lubricating and waste oils. With favorable weather conditions and establishment of triage response, no casualties of the pollution event were discovered (Taylor 2000, p. 94). However, the potential threat of oil or chemical spills to the erect-crested penguin is mitigated by New Zealand's oil spill response and contingency plans, which have been shown to be effective in previous events even at remote locations, and by the remoteness of Antipodes and Bounty Islands from major shipping routes or shipping activity. While the 138 mi (221 km) distance between the two primary breeding areas reduces the likelihood of impacts affecting the entire population, the limited number of breeding areas is a concern relative to the potential of oil spills or other catastrophic events. On the basis of the best available information we find that oil and chemical spills are not a threat to the erect-crested penguin in any portion of its range.

On the basis of our analysis, we find that other natural or manmade factors are not a threat to the erect-crested penguin in any portion of its range.

Foreseeable Future

The term ''threatened species'' means any species (or subspecies or, for vertebrates, distinct population segments) that is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range. The Act does not define the term ''foreseeable future.'' For the purpose of this proposed rule, we define the ''foreseeable future'' to be the extent to which, given the amount and substance of available data, we can anticipate events or effects, or reliably extrapolate threat trends, such that we reasonably believe that reliable predictions can be made concerning the future as it relates to the status of the species at issue.

In considering the foreseeable future as it relates to the status of the erect-crested penguin, we considered the threats acting on the species, as well as population trends. We considered the historical data to identify any relevant existing trends that might allow for reliable prediction of the future (in the form of extrapolating the trends).

With respect to the erect-crested penguin, the most recent detailed information, from a decade ago, indicated populations were in decline, with more recent qualitative information suggesting that declines continue. Although this qualitative data is currently the best information available, its use in establishing a reliable population trend is limited. Therefore, we are specifically requesting the public to provide any updated information available on current population numbers or trends for this species. This will help ensure that any final Service action related to this species will be as accurate as possible.

As characterized in our analysis of threat factors above, the erect-crested penguin is at risk throughout its range by ongoing changes to its marine habitat. At this time, managers can monitor impacts of this threat but have no management tools to reduce the threat. Therefore, it is reasonably likely that this threat will continue in the future. Based on our analysis of the best available information, we have no reason to believe that population trends will change in the future, nor that the effects of current threats acting on the species will be ameliorated in the foreseeable future.

Erect-Crested Penguin Finding

Significant declines in numbers have been documented for the erect-crested penguin between 1978 and 1997 at their two primary breeding grounds on the Bounty and Antipodes Islands. The latest population estimates from the late 1990s indicated there were approximately 81,000 pairs of erect-crested penguins in these two primary breeding grounds. The declines are reported to be largest at Bounty Island, although the extent of the decline is uncertain due to the differing methodologies between the surveys conducted there in 1978 and those conducted in 1997–98. At the Antipodes Islands, declines of from 50 to 58 percent have been estimated between 1978 and 1995, with photographic evidence from those two years showing obvious contraction in colony areas at some sites (Taylor 2000, p.65). Formal surveys have not been conducted since the 1995 and 1997–98 surveys referenced above, for the Antipodes and Bounty Islands, respectively. The only further information for this primary portion of the range is qualitative photographic evidence and observations suggesting that declines continue.

We have no recent population assessments for the erect-crested penguin. The most recent detailed information, from a decade ago, indicated populations were in decline with more recent qualitative information suggesting declines continue. Despite the relatively high population numbers of this species estimated in 1998, the population numbers at the time showed a very high rate of decline. This species' breeding colonies have been reduced to only two breeding island groups, separated from one another by 138 mi (221 km). Lower population numbers reasonably likely to occur in the foreseeable future, combined with the limited number of breeding areas, would make this species

even more vulnerable to the threats from changes in the marine habitat, and would make the species vulnerable to potential impacts from oil spills and random catastrophic events. Therefore, on the basis of our analysis of the best available scientific and commercial information, we conclude that the erect-crested penguin is likely to become endangered with extinction throughout all of its range in the foreseeable future.

Significant Portion of the Range Analysis

Having determined that the erect-crested penguin is likely to become endangered with extinction in the foreseeable future throughout all of its range, we must next consider whether there are any significant portions of its range which warrant further consideration as to whether the species is endangered. See our analysis for the yellow-eyed penguin for how we make this determination.

Erect-crested penguins breed on two primary island groups, Bounty and Antipodes Islands, which lie about 138 mi (221 km) from one another in the South Pacific Ocean to the southwest of the South Island of New Zealand. The erect-crested penguin is documented as in decline at these two islands. Our rangewide threats analysis found that changes in the marine habitat—slight warming of sea surface temperatures and their possible impact on prey availability—have the same impact on the two areas. No information is available that suggests this threat is disproportionate between these two areas. The overall population number of the erect-crested penguins is not low—27,956 pairs at Bounty Island and 49,000 to 57,000 pairs at the Antipodes Islands. Although the population numbers have declined at a very high rate and appear to be continuing to decline, the most recent population estimates indicate that the populations of both island groups are not currently in danger of extinction.

As a result, while the best scientific and commercial data allows us to make a determination as to the rangewide status of the erect-crested penguin, we have determined that there are no significant portions of the range in which the species is currently in danger of extinction. Because we find that the erect-crested penguin is not currently in danger of extinction in these two portions of its range, we need not address the question of significance for these populations.

Therefore, we propose to list the erect-crested penguin as a threatened species throughout all of its range under the Act.

Available Conservation Measures

Conservation measures provided to species listed as endangered or threatened under the Act include recognition, requirements for Federal protection, and prohibitions against certain practices. Recognition through listing results in public awareness, and encourages and results in conservation actions by Federal governments, private agencies and groups, and individuals.

Section 7(a) of the Act, as amended, and as implemented by regulations at 50 CFR part 402, requires Federal agencies to evaluate their actions within the United States or on the high seas with respect to any species that is proposed or listed as endangered or threatened, and with respect to its critical habitat, if any is being designated. However, given that the yellow-eyed penguin, white-flippered penguin, Fiordland crested penguin, Humboldt penguin, and erect-crested penguin are not native to the United States, critical habitat is not being designated for these species under section 4 of the Act.

Section 8(a) of the Act authorizes limited financial assistance for the development and management of programs that the Secretary of the Interior determines to be necessary or useful for the conservation of endangered and threatened species in foreign countries. Sections 8(b) and 8(c) of the Act authorize the Secretary to encourage conservation programs for foreign endangered species and to provide assistance for such programs in the form of personnel and the training of personnel.

The Act and its implementing regulations set forth a series of general prohibitions and exceptions that apply to all endangered and threatened wildlife. As such, these prohibitions would be applicable to yellow-eyed penguin, white-flippered penguin, Fiordland crested penguin, Humboldt penguin, and erect-crested penguin. These prohibitions, under 50 CFR 17.21, make it illegal for any person subject to the jurisdiction of the United States to ''take'' (take includes harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, collect, or to attempt any of these) within the United States or upon the high seas, import or export, deliver, receive, carry, transport, or ship in interstate or foreign commerce in the course of a commercial activity, or to sell or offer for sale in interstate or foreign commerce, any endangered wildlife species. It also is illegal to possess, sell, deliver, carry, transport, or ship any such wildlife that has been taken in violation of the Act. Certain exceptions apply to agents of the Service and State conservation agencies.

We may issue permits to carry out otherwise prohibited activities involving endangered and threatened wildlife species under certain circumstances. Regulations governing permits are codified at 50 CFR 17.22 for endangered species, and at 17.32 for threatened species. With regard to endangered wildlife, a permit must be issued for the following purposes: For scientific purposes, to enhance the propagation or survival of the species, and for incidental take in connection with otherwise lawful activities.

Peer Review

In accordance with our joint policy with National Marine Fisheries Service, ''Notice of Interagency Cooperative Policy for Peer Review in Endangered Species Act Activities,'' published in the **Federal Register** on July 1, 1994 (59 FR 34270), we will seek the expert opinions of at least three appropriate independent specialists regarding this proposed rule. The purpose of peer review is to ensure that our proposed rule is based on scientifically sound data, assumptions, and analyses. We will send copies of this proposed rule to the peer reviewers immediately following publication in the **Federal Register**. We will invite these peer reviewers to comment during the public comment period, on our specific assumptions and conclusions regarding this proposed rule.

We will consider all comments and information we receive during the comment period on this proposed rule during our preparation of a final determination. Accordingly, our final decision may differ from this proposal.

Public Hearings

The Act provides for one or more public hearings on this proposal, if we receive any requests for hearings. We must receive your request for a public hearing within 45 days after the date of this **Federal Register** publication (see **DATES**). Such requests must be made in writing and be addressed to the Chief of the Division of Scientific Authority at the address shown in the **FOR FURTHER INFORMATION CONTACT** section. We will schedule public hearings on this proposal, if any are requested, and announce the dates, times, and places of those hearings, as well as how to obtain reasonable accommodations, in the **Federal Register** at least 15 days before the first hearing.

Required Determinations

Regulatory Planning and Review (Executive Order 12866)

The Office of Management and Budget has determined that this rule is not significant under Executive Order 12866.

National Environmental Policy Act (NEPA)

We have determined that environmental assessments and environmental impact statements, as defined under the authority of the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*), need not be prepared in connection with regulations adopted under section 4(a) of the Act. We published a notice outlining our reasons for this determination in the **Federal Register** on October 25, 1983 (48 FR 49244).

Clarity of the Rule

We are required by Executive Orders 12866 and 12988, and by the Presidential Memorandum of June 1, 1998, to write all rules in plain language. This means that each rule we publish must:

(a) Be logically organized;

(b) Use the active voice to address readers directly;

(c) Use clear language rather than jargon;

(d) Be divided into short sections and sentences; and

(e) Use lists and tables wherever possible.

If you feel that we have not met these requirements, send us comments by one of the methods listed in the **ADDRESSES** section. To better help us revise the rule, your comments should be as specific as possible. For example, you should tell us the numbers of the sections or paragraphs that are unclearly written, which sections or sentences are too long, the sections where you feel lists or tables would be useful, etc.

References Cited

A complete list of all references cited in this proposed rule is available on the Internet at *http://www.regulations.gov* or upon request from the Division of Scientific Authority, U.S. Fish and Wildlife Service (see **FOR FURTHER INFORMATION CONTACT**).

Author

The authors of this proposed rule are staff of the Division of Scientific Authority, U.S. Fish and Wildlife Service (see **FOR FURTHER INFORMATION CONTACT**).

Proposed Regulation Promulgation

Accordingly, we propose to amend part 17, subchapter B of chapter I, title 50 of the Code of Federal Regulations, as set forth below:

PART 17—[AMENDED]

1. The authority citation for part 17 continues to read as follows:

Authority: 16 U.S.C. 1361–1407; 16 U.S.C. 1531–1544; 16 U.S.C. 4201–4245; Pub. L. 99–625, 100 Stat. 3500; unless otherwise noted.

2. Amend § 17.11(h) by adding new entries for ''Penguin, Erect-crested,'' ''Penguin, Fiordland crested,'' ''Penguin, Humboldt,'' ''Penguin, White-flippered,'' and ''Penguin, Yellow-eyed'' in alphabetical order under BIRDS to the List of Endangered and Threatened Wildlife as follows:

§ 17.11 Endangered and threatened wildlife.

Endangered and Threatened Wildlife and Plants; 12-Month Finding on a Petition To List the African Penguin (Spheniscus demersus) Under the Endangered Species Act, and Proposed Rule To List the African Penguin as Endangered Throughout Its Range

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Proposed rule and notice of 12-month petition finding.

SUMMARY: We, the U.S. Fish and Wildlife Service (Service), propose to list the African penguin (*Spheniscus demersus*) as an endangered species under the Endangered Species Act of 1973, as amended (Act). This proposal, if made final, would extend the Act's protection to this species. This proposal also constitutes our 12-month finding on the petition to list this species. The Service seeks data and comments from the public on this proposed rule.

DATES: We will accept comments and information received or postmarked on or before February 17, 2009. We must receive requests for public hearings, in writing, at the address shown in the **FOR FURTHER INFORMATION CONTACT** section by February 2, 2009.

ADDRESSES: You may submit comments by one of the following methods:

- Federal eRulemaking Portal: *http://www.regulations.gov*. Follow the instructions for submitting comments.
- U.S. mail or hand-delivery: Public Comments Processing, Attn: [FWS–R9–IA–2008–0068]; Division of Policy and Directives Management; U.S. Fish and Wildlife Service; 4401 N. Fairfax Drive, Suite 222; Arlington, VA 22203.

We will not accept comments by e-mail or fax. We will post all comments on *http://www.regulations.gov*. This generally means that we will post any personal information you provide us (see the Public Comments section below for more information).

FOR FURTHER INFORMATION CONTACT: Pamela Hall, Branch Chief, Division of Scientific Authority, U.S. Fish and Wildlife Service, 4401 N. Fairfax Drive, Room 110, Arlington, VA 22203; telephone 703–358–1708; facsimile 703–358–2276. If you use a telecommunications device for the deaf (TDD), call the Federal Information Relay Service (FIRS) at 800–877–8339.

SUPPLEMENTARY INFORMATION:

Public Comments

We intend that any final action resulting from this proposal will be as accurate and as effective as possible. Therefore, we request comments or suggestions on this proposed rule. We particularly seek comments concerning:

(1) Biological, commercial, trade, or other relevant data concerning any threats (or lack thereof) to this species and regulations that may be addressing those threats.

(2) Additional information concerning the range, distribution, and population size of this species, including the locations of any additional populations of this species.

(3) Any information on the biological or ecological requirements of the species.

(4) Current or planned activities in the areas occupied by the species and possible impacts of these activities on this species.

You may submit your comments and materials concerning this proposed rule by one of the methods listed in the **ADDRESSES** section. We will not consider comments sent by e-mail or fax or to an address not listed in the **ADDRESSES** section.

If you submit a comment via *http://www.regulations.gov*, your entire comment—including any personal identifying information—will be posted on the Web site. If you submit a hardcopy comment that includes personal identifying information, you may request at the top of your document that we withhold this information from public review. However, we cannot guarantee that we will be able to do so. We will post all hardcopy comments on *http://www.regulations.gov*.

Comments and materials we receive, as well as supporting documentation we used in preparing this proposed rule, will be available for public inspection on *http://www.regulations.gov*, or by appointment, during normal business hours, at the U.S. Fish and Wildlife Service, Division of Scientific Authority, 4401 N. Fairfax Drive, Room 110, Arlington, VA 22203; telephone 703–358–1708.

Background

Section 4(b)(3)(A) of the Act (16 U.S.C. 1533 (b)(3)(A)) requires the Service to make a finding known as a ''90-day finding,'' on whether a petition to add, remove, or reclassify a species from the list of endangered or threatened species has presented substantial information indicating that the requested action may be warranted. To the maximum extent practicable, the finding shall be made within 90 days following receipt of the petition and published promptly in the **Federal Register**. If the Service finds that the petition has presented substantial information indicating that the requested action may be warranted (referred to as a positive finding), section 4(b)(3)(A) of the Act requires the Service to commence a status review of the species if one has not already been initiated under the Service's internal candidate assessment process. In addition, section 4(b)(3)(B) of the Act requires the Service to make a finding within 12 months following receipt of the petition on whether the requested action is warranted, not warranted, or warranted but precluded by higher-priority listing actions (this finding is referred to as the ''12-month finding''). Section 4(b)(3)(C) of the Act requires that a finding of warranted but precluded for petitioned species should be treated as having been resubmitted on the date of the warranted but precluded finding, and is, therefore, subject to a new finding within 1 year and subsequently thereafter until we take action on a proposal to list or withdraw our original finding. The Service publishes an annual notice of resubmitted petition findings (annual notice) for all foreign species for which listings were previously found to be warranted but precluded.

In this notice, we announce a warranted 12-month finding and proposed rule to list one penguin taxon, the African penguin, as an endangered species under the Act. We will announce the 12-month findings for the emperor penguin (*Aptenodytes forsteri*), southern rockhopper penguin (*Eudyptes chrysocome*), northern rockhopper penguin (*Eudyptes chrysolophus*), Fiordland crested penguin (*Eudyptes pachyrhynchus*), erect-crested penguin (*Eudyptes sclateri*), macaroni penguin (*Eudyptes chrysolophus*), white-flippered penguin (*Eudyptula minor albosignata*), yellow-eyed penguin (*Megadyptes antipodes*), and Humboldt penguin (*Spheniscus humboldti*) in one or more subsequent **Federal Register** notice(s).

Previous Federal Actions

On November 29, 2006, the Service received a petition from the Center for Biological Diversity to list 12 penguin species under the Act: Emperor penguin, southern rockhopper penguin, northern rockhopper penguin, Fiordland crested penguin, snares crested penguin (*Eudyptes robustus*), erect-crested penguin, macaroni penguin, royal penguin (*Eudyptes schlegeli*), white-flippered penguin, yellow-eyed penguin, African penguin, and Humboldt penguin. Among them, the ranges of the 12 penguin species include Antarctica, Argentina, Australian Territory Islands, Chile, French Territory Islands, Namibia, New Zealand, Peru, South Africa, and United Kingdom Territory Islands. The petition is clearly identified as such, and contains detailed information on the natural history, biology, status, and distribution of each of the 12 species. It also contains information on what the petitioner reported as potential threats to the species from climate change and changes to the marine environment, commercial fishing activities, contaminants and pollution, guano extraction, habitat loss, hunting, nonnative predator species, and other factors. The petition also discusses existing regulatory mechanisms and the perceived inadequacies to protect these species.

In the **Federal Register** of July 11, 2007 (72 FR 37695), we published a 90-day finding in which we determined that the petition presented substantial scientific or commercial information to indicate that listing 10 species of penguins as endangered or threatened may be warranted: Emperor penguin, southern rockhopper penguin, northern rockhopper penguin, Fiordland crested penguin, erect-crested penguin, macaronis penguin, white-flippered penguin, yellow-eyed penguin, African penguin, and Humboldt penguin. Furthermore, we determined that the petition did not provide substantial scientific or commercial information indicating that listing the snares crested penguin and the royal penguin as threatened or endangered species may be warranted.

Following the publication of our 90-day finding on this petition, we initiated a status review to determine if listing each of the 10 species is warranted, and opened a 60-day public comment period to allow all interested parties an opportunity to provide information on the status of the 10 species of penguins. The public comment period closed on September 10, 2007. In addition, we attended the International Penguin Conference in Hobart, Tasmania, Australia, a quadrennial meeting of penguin scientists from September 3–7, 2007 (during the open public comment period), to gather information and to ensure that experts were aware of the status review and the open comment period. We also consulted with other agencies and range countries in an effort to gather the best available scientific and commercial information on these species.

During the public comment period, we received over 4,450 submissions from the public, concerned governmental agencies, the scientific community, industry, and other interested parties. Approximately 4,324 e-mails and 31 letters received by U.S. mail or facsimile were part of one letter-writing campaign and were substantively identical. Each letter supported listing under the Act, included a statement identifying ''the threat to penguins from global warming, industrial fishing, oil spills and other factors,'' and listed the 10 species included in the Service's 90-day finding. A further group of 73 letters included the same information plus information concerning the impact of ''abnormally warm ocean temperatures and diminished sea ice'' on penguin food availability and stated that this has led to population declines in southern rockhopper, Humboldt, African, and emperor penguins. These letters stated that the emperor penguin colony at Point Geologie has declined more than 50 percent due to global warming and provided information on krill declines in large areas of the Southern Ocean. They stated that continued warming over the coming decades will dramatically affect Antarctica, the sub-Antarctic islands, the Southern Ocean and the penguins dependent on these ecosystems for survival. A small number of general letters and e-mails drew particular attention to the conservation status of the southern rockhopper penguin in the Falkland Islands.

Twenty submissions provided detailed, substantive information on one or more of the 10 species. These included information from the governments, or government-affiliated scientists, of Argentina, Australia, Namibia, New Zealand, Peru, South Africa, and the United Kingdom, from scientists, from 18 members of the U.S. Congress, and from one non-governmental organization (the original petitioner).

On December 3, 2007, the Service received a 60-day Notice of Intent to Sue from the Center for Biological Diversity (CBD). CBD filed a complaint against the Department of the Interior on February 27, 2008, for failure to make a 12-month finding on the petition. On September 8, 2008, the Service entered into a Settlement Agreement with CBD, in which we agreed to submit to the **Federal Register** 12-month findings for the 10 species of penguins, including the African penguin, on or before December 19, 2008.

We base our findings on a review of the best scientific and commercial information available, including all information received during the public comment period. Under section 4(b)(3)(B) of the Act, we are required to make a finding as to whether listing each of the 10 species of penguins is warranted, not warranted, or warranted but precluded by higher priority listing actions.

African Penguin (Spheniscus demersus)

Background

The African penguin is known by three other common names: Jackass penguin, cape penguin, and black-footed penguin. The ancestry of the genus *Spheniscus* is estimated at 25 million years ago, following a split between *Spheniscus* and *Eudyptula* from the basal lineage *Aptenodytes* (the ''great penguins,'' emperor and king). Speciation within *Spheniscus* is recent, with the two species pairs originating almost contemporaneously in the Pacific and Atlantic Oceans in approximately the last 4 million years (Baker *et al.* 2006, p. 15).

African penguins are the only nesting penguins found on the African continent. Their breeding range is from Hollamsbird Island, Namibia, to Bird Island, Algoa Bay, South Africa (Whittington *et al.* 2000a, p. 8), where penguins form colonies (rookeries) for breeding and molting. Outside the breeding season, African penguins occupy areas throughout the breeding range and farther to the north and east. Vagrants have occurred north to Sette Cama (2 degrees and 32 minutes South (2°32′S)), Gabon, on Africa's west coast and to Inhaca Island (26°58′S) and the Limpopo River mouth (24°45′S), Mozambique, on the east coast of Africa (Shelton *et al.* 1984, p. 219; Hockey *et al.* 2005, p. 632). A coastal species, they are generally spotted within 7.5 miles (mi) (12 kilometers (km)) of the shore.

There has been abandonment of breeding colonies and establishment of new colonies within the range of the species. Within the Western Cape region in southwestern South Africa, for example, penguin numbers at the two easternmost colonies (on Dyer and Geyser Islands) and three northernmost colonies (on Lambert's Bay and Malgas

and Marcus Islands) decreased, while the population more than doubled over the 1992–2003 period at five colonies, including the two largest (Dassen and Robben Islands) (du Toit *et al.* 2003, p. 1). The most significant development between 1978 and the 1990s was the establishment of three colonies that did not exist earlier in the 20th century—Stony Point, Boulder's Beach in False Bay, and Robben Island, which now supports the third largest colony for the species (du Toit *et al.* 2003, p. 1; Kemper *et al.* 2007, p. 326).

African penguins are colonial breeders. They breed mainly on rocky offshore islands, either nesting in burrows they excavate themselves or in depressions under boulders or bushes, manmade structures, or large items of jetsam. Historically, they dug nests in the layers of sun-hardened guano (bird excrement) that existed on most islands. However, in the 19th century, European and North American traders exploited guano as a source of nitrogen, denuding islands of their layers of guano (Hockey *et al.* 2005, p. 633; du Toit *et al.* 2003, p. 3).

African penguins have an extended breeding season; colonies are observed to breed year-round on offshore islands (Brown *et al.* 1982, p. 77). Broad regional differences do exist, though, and the peak of the breeding season in Namibia (November and December) tends to be earlier than the peak for South Africa (March to May). Breeding pairs are considered monogamous; about 80 to 90 percent of pairs remain together in consecutive breeding seasons. The same pair will generally return to the same colony, and often the same nest site each year. The male carries out nest site selection, while nest building is by both sexes.

Although population statistics vary from year to year, studies at a number of breeding islands revealed mean reported adult survival values per year of 0.81 (Crawford *et al.* 2006, p. 121). African penguins have an average lifespan of 10–11 years in the wild, the females reaching sexual maturity at the age of 4 years and the males at the age of 5 years. The highest recorded age in the wild is greater than 27 years (Whittington *et al.* 2000b, p. 81); however, several individual birds have lived to be up to 40 years of age in captivity.

Feeding habitats of the African penguin are dictated by the unique marine ecosystem of the coast of South Africa and Namibia. The Benguela ecosystem, encompassing one of the four major coastal upwelling ecosystems in the world, is situated along the coast of southwestern Africa. It stretches from east of the Cape of Good Hope in the south to the Angola Front to the north, where the Angola Front separates the warm water of the Angola current from the cold Benguela water (Fennel 1999, p. 177). The Benguela ecosystem is an important center of marine biodiversity and marine food production, and is one of the most productive ocean areas in the world, with a mean annual primary productivity about six times higher than that of the North Sea ecosystem. The rise of cold, nutrient-rich waters from the ocean depths to the warmer, sunlit zone at the surface in the Benguela produces rich feeding grounds for a variety of marine and avian species. The Benguela ecosystem historically supports a globally significant biomass of zooplankton, fish, sea birds, and marine mammals, including the African penguin's main diet of anchovy (*Engraulius encrasicolus*) and Pacific sardine (*Sardinops sagax*) (Berruti *et al.* 1989, pp. 273–335).

The principal upwelling center in the Benguela ecosystem is historically situated in southern Namibia, and is the most concentrated and intense found in any upwelling regime. It is unique in that it is bounded at both northern and southern ends by warm water systems, in the eastern Atlantic and the Indian Ocean's Agulhas current, respectively. Sharp horizontal gradients (fronts) exist at these boundaries with adjacent ocean systems (Berruti *et al.* 1989, p. 276).

African penguins prey upon small fish, as well as squid and krill. Studies conducted between 1953 and 1992 showed that anchovies and sardines contributed 50 to 90 percent by mass of the African penguin's diet (Crawford *et al.* 2006, p. 120). Trends in regional populations of the African penguin have been shown to be related to long-term changes in the abundance and distribution of these two fish species (Crawford 1998, p. 355; Crawford *et al.* 2006, p. 122).

Most spawning by anchovy and sardine takes place on the Agulhas Bank, which is to the southeast of Robben Island, from August to February (Hampton 1987, p. 908). Young-of-the-year migrate southward along the west coast of South Africa from March until September, past Robben Island to join shoals of mature fish over the Agulhas Bank (Crawford 1980, p. 651). The southern Benguela upwelling system off the west coast of South Africa is characterized by strong seasonal patterns in prevailing wind direction, which result in seasonal changes in upwelling intensity. To produce adequate survival of their young, fish reproductive strategies are generally well-tuned to the seasonal variability of their environment (Lehodey *et al.* 2006, p. 5011). In the southern Benguela, intense wind-mixing transport of surface waters creates an unfavorable environment for fish to breed. As a result, both anchovy and sardine populations have developed a novel reproductive strategy that is tightly linked to the seasonal dynamics of major local environmental processes—spatial separation between spawning and nursery grounds. For both species, eggs spawned over the western Agulhas Bank (WAB) are transported to the productive west coast nursery grounds via a coastal jet, which acts like a ''conveyor belt'' to transport early life stages from the WAB spawning area to the nursery grounds (Lehodey *et al.* 2006, p. 5011).

The distance that African penguins have to travel to find food varies both temporally and spatially according to the season. Off western South Africa, the mean foraging range of penguins that are feeding chicks has been recorded to be 5.7 to 12.7 mi (9 to 20 km) (Petersen *et al.* 2006, p. 14), mostly within 1.9 mi (3 km) of the coast (Berruti *et al.* 1989, p. 307). Foraging duration during chick provisioning may last anywhere from 8 hours to 3 days, the average duration being around 10–13 hours (Petersen *et al.* 2006, p. 14). Travel distance from the breeding colony is more limited when feeding young. Outside the breeding season, adults generally remain within 248 mi (400 km) of their breeding locality, while juveniles regularly move in excess of 621 mi (1,000 km) from their natal island (Randall 1989, p. 250).

During the non-breeding season, African penguins forage on the Agulhas Bank. Underhill *et al.* (2007, p. 65) suggested that the molt period of African penguins is closely tied to the spawning period of sardine and anchovy at the Agulhas Bank. Pre-molt birds travel long distances to the bank to fatten up during this time of the most predictable food supply of the year. This reliable food source, and the need to gain energy prior to molting, is hypothesized to be the most important factor dictating the annual cycle of penguins. In fact, adult birds are often observed to abandon large chicks in order to move into this critical pre-molt foraging mode. The South African National Foundation for the Conservation of Coastal Birds (SANCCOB) rescue facility took in over 700 orphaned penguin chicks from Dyer Island in 2005–06. Parents abandoned chicks as they began to molt (SANCCOB 2006, p. 1; SANCCOB 2007a, p. 1). The increasing observation of abandonment is perhaps related to a slight trend

toward earlier molting seasons (Underhill *et al.* 2007, p. 65).

There has been a severe historical decline in African penguin numbers in both the South African and Namibian populations. This decline is accelerating at the present time. The species declined from millions of birds in the early 1900s (1.4 million adult birds at Dassen Island alone in 1910) (Ellis *et al.* 1998, p. 116) to 141,000 pairs in 1956–57 to 69,000 pairs in 1979–80 to 57,000 pairs in 2004–05, and to about 36,188 pairs in 2006 (Kemper *et al.* 2007, p. 327). Crawford (2007, in litt.) reported that from 2006–2007, the overall population declined by 12 percent to 31,000 to 32,000 pairs.

The species is distributed in about 32 colonies in three major clusters. In South Africa in 2006, there were 11,000 pairs in the first cluster at the Eastern Cape, and about 21,000 in the second cluster at the Western Cape colonies, with 13,283 of these pairs at Dassen Island and 3,697 at Robben Island. South African totals were down from 32,786 pairs in 2006 to 28,000 pairs in 2007. There were about 3,402 pairs in the third major cluster in Namibia. The Namibian population has declined by more than 75 percent since the mid-20th century (from 42,000 pairs in 1956–57) and has been decreasing 2.5 percent per year between 1990 (when there were 7,000 to 8,000 pairs) and 2005 (Kemper *et al.* 2007, p. 327; Underhill *et al.* 2007, p. 65; Roux *et al.* 2007a, p. 55).

The African penguin is listed as 'Vulnerable' on the 2007 International Union for Conservation of Nature (IUCN) Red List on the basis of steep population declines (Birdlife International 2007, p. 1), but given the 56 percent decline observed over 3 generations, there is discussion in the most recent revision of the conservation status of the species of changing that Red List status to 'Endangered' if the declines continue (Kemper *et al.* 2007, p. 327). That same assessment, based on 2006 data, concluded that the Namibian population should already be regarded as Red List 'Endangered' by IUCN criteria with the probability of extinction of the African penguin from this northern cluster during the 21st century rated as high (Kemper *et al.* 2007, p. 327).

There are about 32 breeding colonies (Kemper *et al.* 2007, p. 327). Breeding no longer occurs at eight localities where it formerly occurred or has been suspected to occur—Seal, Penguin, North Long, North Reef, and Albatross Islands in Namibia, and Jacobs Reef, Quoin, and Seal (Mossel Bay) Islands in South Africa (Crawford *et al.* 1995a, p. 269). In the 1980s, breeding started at two mainland sites in South Africa (Boulder's Beach and Stony Point) for which no earlier records of breeding exist. There is no breeding along the coast of South Africa's Northern Cape Province, which lies between Namibia and Western Cape Province (Ellis *et al.* 1998, p. 115).

Summary of Factors Affecting the Species

Section 4(a)(1) of the Act (16 U.S.C. 1533(a)(1)) and regulations issued to implement the listing provisions of the Act (50 CFR part 424) establish the procedures for adding species to the Federal lists of endangered and threatened wildlife and plants. We may determine a species to be an endangered or threatened species due to one or more of the five factors described in section 4(a)(1) of the Act. These factors and their application to the African penguin are discussed below.

Factor A. The Present or Threatened Destruction, Modification, or Curtailment of African Penguin's Habitat or Range

The habitat of the African penguin consists of terrestrial breeding and molting sites and the marine environment, which serves as a foraging range both during and outside of the breeding season.

Modification of their terrestrial habitat is a continuing threat to African penguins. This began in the mid-1880s with the mining of seabird guano at islands colonized by the African penguin and other seabirds in both South Africa and Namibia. Harvesting of the guano cap began in 1845 (du Toit *et al.* 2003, p. 3; Griffin 2005, p. 16) and continued over decades, denuding the islands of guano. Deprived of their primary nest-building material, the penguins were forced to nest in the open, where their eggs and chicks are more vulnerable to predators such as kelp gulls (*Larus dominicanus*) (Griffin 2005, p. 16). Additionally, instead of being able to burrow into the guano, where temperature extremes are ameliorated, penguins nesting in the open are subjected to heat stress (Shannon and Crawford 1999, p. 119). Adapted for life in cold temperate waters, they have insulating fatty deposits to prevent hypothermia and black-and-white coloring that provides camouflage from predators at sea. These adaptations cause problems of overheating while they are on land incubating eggs and brooding chicks during the breeding season. Although guano harvesting is now prohibited in penguin colonies, many penguins continue to suffer from the lack of protection and heat stress due to the loss of this optimal breeding habitat substrate. We have not identified information on how quickly guano deposits may build up again to depths which provide suitable burrowing substrate, but hypothesize it is a matter of decades.

In Namibia, low-lying African penguin breeding habitat is being lost due to flooding from increased coastal rainfall and sea level rise of 0.07 inches (1.8 millimeters) a year over the past 30 years (Roux *et al.* 2007b, p. 6). Almost 11 percent of the nests on the four major breeding islands (which contain 96 percent of the Namibian population) are experiencing a moderate to high risk of flooding (Roux *et al.* 2007b, p. 6). Continued increases in coastal flooding from rising sea levels predicted by global and regional climate change models (Bindoff *et al.* 2007, pp. 409, 412) are predicted to increase the number and proportion of breeding sites at risk and lead to continued trends of decreased survival and decreased breeding success (Roux *et al.* 2007b, p. 6).

Competition for breeding habitat with Cape fur seals (*Arctocephalus pusillus pusillus*) has been cited as a reason for abandonment of breeding at five former breeding colonies in Namibia and South Africa, and expanding seal herds have displaced substantial numbers of breeding penguins at other colonies (Ellis *et al.* 1998, p. 120; Crawford *et al.* 1995a, p. 271).

Changes to the marine habitat present a significant threat to populations of African penguins. African penguins have a long history of shifting colonies and fluctuations in numbers at individual colonies in the face of shifting food supplies (Crawford 1998, p. 362). These shifts are related to the dynamics between prey species and to ecosystem changes, such as reduced or enhanced upwelling (sometimes associated with El Niño events), changes in sea surface temperature, or movement of system boundaries. In addition to such continuing cyclical events, the marine habitats of the Western Cape and Namibian populations of African Penguin are currently experiencing directional ecosystem changes attributable to global climate change; overall sea surface temperature increases have occurred during the 1900s and, as detailed above, sea level has been rising steadily in the region over the past 30 years (Bindoff *et al.* 2007, p. 391; Fidel and O'Toole 2007, pp. 22, 27; Roux *et al.* 2007a, p. 55).

At the Western Cape of South Africa, a shift in sardine distribution to an area outside the current breeding range of the

African penguin has led to a decrease of 45 percent between 2004 and 2006 in the number of penguins breeding in the Western Cape and increased adult mortality as the availability of sardine decreased for the major portion of the African penguin population located in that region (Crawford *et al.* 2007a, p. 8). From 1997 to the present, the distribution of sardine concentrations off South Africa has steadily shifted to the south and east, from its long-term location off colonies at Robben Island to east of Cape Infanta on the southern coast of South Africa east of Cape Agulhas, 248 mi (400 km) from the former center of abundance (Crawford *et al.* 2007a, p. 1).

This shift is having severe consequences for penguin populations. Off western South Africa, the foraging range of penguins that are feeding chicks is estimated to be 5.7 to 12.7 mi (9 to 20 km) (Petersen *et al.* 2006, p. 14), and while foraging they generally stay within 1.9 mi (3 km) of the coast (Berruti *et al.* 1989, p. 307). The southeastern most Western Cape Colonies occur at Dyer Island, which is southeast of Cape Town and about 47 mi (75 km) northwest of Cape Agulhas. Therefore, the current sardine concentrations are out of the foraging range of breeding adults at the Western Cape breeding colonies (Crawford *et al.* 2007a, p. 8), which between 2004 and 2006 made up between 79 and 68 percent of the rapidly declining South African population (Crawford *et al.* 2007a, p. 7).

Further, as described in Crawford (1998, p. 360), penguin abundances at these Western Cape colonies have historically shifted north and south according to sardine and anchovy abundance and accessibility from breeding colonies, but the current prey shift is to a new center of abundance outside the historic breeding range of this penguin species. While one new colony has appeared east of existing Western Cape colonies, more significantly, there has been a 45 percent decrease in breeding pairs in the Western Cape Province and a significant decrease in annual survival rate for adult penguins from 0.82 to 0.68 (Crawford *et al.* 2007a, p. 8). Exacerbating the problem of shifting prey, the authors reported that the fishing industry, which is tied to local processing capacity in the Western Cape, is competing with the penguins for the fish that remain in the west, rather than following the larger sardine concentrations to the east (Crawford *et al.* 2007a, pp. 9–10).

Changes in the northern Benguela ecosystem are also affecting the less numerous Namibian population of the African penguin. Over the past 3 decades, sea surface temperatures have steadily increased and upwelling intensity has decreased in the northern Benguela region. These long-term changes have been linked to declines in penguin recruitment at the four main breeding islands from 1993–2004 (Roux *et al.* 2007a, p. 55). Weakened upwelling conditions have a particular impact on post-fledge young penguins during their first year at sea, explaining 65 percent of the variance in recruitment during that period (Roux *et al.* 2007b, p. 9). These naïve birds are particularly impacted by increasingly scarce or hard-to-find prey. Even after heavy fishing pressure has been eased in this region in the 1990s, sardine stocks in Namibia have failed to recover, causing economic shifts for humans and foraging difficulties for penguins. This failure to recover has been attributed to the continuing warming trend and to increased horse mackerel (*Trachurus trachurus*) stocks, which have replaced sardines and anchovies (Benguela Current Large Marine Ecosystem (BCLME) 2007, pp. 2–3).

El Niño events also impact the Benguela marine ecosystem on a decadal frequency. These occur when warm seawater from the equator moves along the southwest coast of Africa towards the pole and penetrates the cold up-welled Benguela current. During the 1995 event, for example, the entire coast from Angola's Cabinda province to central Namibia was covered by abnormally warm water—in places up to 46 degrees Fahrenheit (°F) (8 degrees Celsius (°C)) above average—to a distance up to 186 mi (300 km) offshore (Science in Africa 2004, p. 2). During the last two documented events there have been mass mortalities of penguin prey species, prey species recruitment failures, and mass mortalities of predator populations, including starvation of over half of the seal population. The penguin data sets are not adequate to estimate the effects of Benguela El Niño events at present, but based on previous observations of impact on the entire food web of the northern Benguela, they are most likely to be negative (Roux *et al.* 2007b, p. 12). With increasing temperatures associated with climate change in the northern Benguela ecosystem, the frequency and intensity of Benguela El Niño events and their concomitant effects on the habitat of the African penguin are predicted to increase in the immediate upcoming years as new El Niño events emerge (Roux *et al.* 2007b, p. 5).

A third factor in the marine habitat of the Namibian populations is the extent of sulfide eruptions during different oceanographic conditions. Hydrogen sulfide accumulates in bottom sediments and erupts to create hypoxic (a reduced concentration of dissolved oxygen in a water body leading to stress and death in aquatic organisms) or even anoxic conditions over large volumes of the water column (Ludynia *et al.* 2007, p. 43; Fidel and O'Toole 2007 p. 9). Penguins, whose foraging range is restricted by the central place of their breeding colony location (Petersen *et al.* 2006, p. 24), are forced to forage in these areas, but their preferred prey of sardines and anchovies is unable to survive in these conditions. African penguins foraging in areas of sulfide eruptions expend greater amounts of energy in pursuit of available food, primarily the pelagic goby (*Sufflogobius bibarbatus*), which has lower energy content than their preferred prey. These sulphide eruptions, like the El Niño anomalies, are predicted to increase with continuing climate change (Bakun and Weeks 2004, pp. 1021–1022; Ludynia *et al.* 2007, p. 43). The Namibian population of African penguins, restricted in their breeding locations, will continue to be negatively impacted by this ongoing regime shift away from sardines and anchovies to pelagic goby and jellyfish.

We have identified a number of threats to the coastal and marine habitat of the African penguin which have operated in the past, are impacting the species now and will continue to impact the species in the immediate coming years and into the future. On the basis of this analysis, we find that the present and threatened destruction, modification, or curtailment of both its terrestrial and marine habitats is a threat to the African penguin throughout all of its range.

Factor B. Overutilization for Commercial, Recreational, Scientific, or Educational Purposes

The current use of African penguins for commercial, recreational, scientific, or educational purposes is generally low. Prior estimates of commercial collection of eggs for food from Dassen Island alone were 500,000 in 1925, and more than 700,000 were collected from a number of localities in 1897 (Shelton *et al.* 1984, p. 256). Since 1968, however, commercial collection of penguin eggs for food has ceased.

There are unconfirmed reports of penguins being killed as use for bait in rock-lobster traps. Apparently they are attractive as bait because their flesh and skin is relatively tough compared to that of fish and other baits. The extent of this practice is unknown, and most reports

emanate from the Namibian islands (Ellis *et al.* 1998, p. 121). Use for non-lethal, scientific purposes is highly regulated and does not pose a threat to populations (See analysis under Factor D).

On the basis of this analysis, we find that overutilization for commercial, recreational, scientific, or educational purposes is not a threat to the African penguin in any portion of its range now or in the foreseeable future.

Factor C. Disease or Predation

African penguins are hosts to a variety of parasites and diseases (Ellis 1998, pp. 119–120), but we find that disease is not a threat to the African penguin in any portion of its range. The primary concern is preventing the transmission of disease from the large numbers of African penguins rehabilitated after oiling to wild populations (Graczyk *et al.* 1995, p. 706).

Predation by Cape fur seals of protected avian species has become an issue of concern to marine and coastal managers in the Benguela ecosystem as these protected seals have rebounded to become abundant (1.5 to 2 million animals) (David *et al.* 2003, pp. 289–292). The seals are killing substantial numbers of seabirds, including African penguins and threatening the survival of individual colonies. At Dyer Island, 842 penguins in a colony of 9,690 individuals were killed in 1995–96 (Marks *et al.* 1997, p. 11). At Lambert's Bay, seals kill 4 percent of adult African penguins annually (Crawford *et al.* 2006, p. 124). In one instance, South Africa's Marine and Coastal Management Department within the Department of Environmental Affairs and Tourism instigated culling of the fur seals where they threatened the Cape Gannet (*Morus capensis*) (David *et al.* 2003, p. 290), but we are not aware of a similar program related to reducing the ongoing threat of predation by Cape fur seals on African penguins. Abandoned eggs and chicks are often lost to predators such as the kelp gull and other species. Additionally, without protection of burrows, penguin eggs and chicks are more vulnerable to predators (Griffin 2005, p. 16).

On the basis of this information, we find that predation, in particular by Cape Fur Seals that prey on significant numbers of African penguins at their breeding colonies, is a threat to the African penguin throughout all of its range, and we have no reason to believe the threat will be ameliorated in the foreseeable future.

Factor D. Inadequacy of Existing Regulatory Mechanisms

Under South Africa's Biodiversity Act of 2004, the African penguin is classified as a protected species, defined as an indigenous species of ''high conservation value or national importance'' that requires national protection (Republic of South Africa 2004, p. 52; Republic of South Africa 2007, p. 10). Activities which may be carried out with respect to such species are restricted and cannot be undertaken without a permit (Republic of South Africa 2004, p. 50). Restricted activities include among other things, hunting, capturing, or killing living specimens of listed species by any means, collecting specimens of such species (including the animals themselves, eggs, or derivatives or products of such species), importing, exporting or re-exporting, having such specimens within one's physical control, or selling or otherwise trading in such specimens (Republic of South Africa 2004, p. 18).

The species is classified as 'endangered' in Nature and Environmental Conservation Ordinance, No. 19 of the Province of the Cape of Good Hope (Western Cape Nature Conservation Laws Amendment Act 2000, p. 88), providing protection from hunting or possessing this species without a permit. According to Ellis *et al.* (1998, p. 115), this status applies to the Northern Cape, Western Cape, and Eastern Cape Provinces as well. Kemper *et al.* (2007, p. 326) reported that African penguin colonies in South Africa are all protected under authorities ranging from local, to provincial, to national park status. While Ellis *et al.* (1998, p. 115) reported that in Namibia there is no official legal status for African penguins, Kemper *et al.* (2007, p. 326) reported in a more recent review that all Namibian breeding colonies are under some protection, from restricted access to national park status. While we have no information that allows us to evaluate their overall effectiveness, these national, regional, and local measures to prohibit activities involving African penguins without permits issued by government authorities and to control or restrict access to African penguin colonies are appropriate to protecting African penguins from land-based threats, such as harvest of penguins or their eggs, disturbance from tourism activities, and impacts from unregulated, scientific research activities.

The South African Marine Pollution (Control and Civil Liability) Act (No. 6 of 1981) (SAMPA) provides for the protection of the marine environment (the internal waters, territorial waters, and exclusive economic zone) from pollution by oil and other harmful substances, and is focused on preventing pollution and determining liability for loss or damage caused by the discharge of oil from ships, tankers, and offshore installations. The SAMPA prohibits the discharge of oil into the marine environment, sets requirements for reporting discharge or likely discharge and damage, and designates the South African Maritime Safety Authority the powers of authority to take steps to prevent pollution in the case of actual or likely discharge and to remove pollution should it occur, including powers of authority to direct ship masters and owners in such situations. The SAMPA also contains liability provisions related to the costs of any measures taken by the authority to reduce damage resulting from discharge (Marine Pollution (Control and Civil Liability) Act of 1981 2000, pp. 1–22).

South Africa is a signatory to the 1992 International Convention on Civil Liability for Oil Pollution Damages and its Associate Fund Convention (International Fund for Animal Welfare (IFAW) 2005, p. 1), and southern South African waters have been designated as a Special Area by the International Maritime Organization, providing measures to protect wildlife and the marine environment in an ecologically important region used intensively by shipping (International Convention for the Prevention of Pollution from Ships (MARPOL) 2006, p. 1). One of the prohibitions in such areas is on oil tankers washing their cargo tanks.

Despite these existing regulatory mechanisms, the African penguin continues to decline due to the effects of habitat destruction, predation, fisheries competition, and oil pollution. We find that these regulatory and conservation measures have been insufficient to significantly reduce or remove the threats to the African penguin and, therefore, that the inadequacy of existing regulatory mechanisms is a threat to this species throughout all of its range.

Factor E. Other Natural or Manmade Factors Affecting the Continued Existence of the Species

Over the period from 1930 to the present, fisheries harvest by man and more recently fisheries competition with increasingly abundant seal populations have hindered the African penguin's historical ability to rebound from oceanographic changes and prey regime shifts. The reduced carrying

capacity of the Benguela ecosystem, presents a significant threat to survival of African penguins (Crawford *et al.* 2007b, p. 574).

Crawford (1998, pp. 355–364) described the historical response of African penguins to regime shifts between their two primary prey species, sardines and anchovies, both in terms of numbers and colony distribution from the 1950s through the 1990s. There was a repeated pattern of individual colony collapse in some areas and, as the new food source became dominant, new colony establishment and population increase in other areas. Crawford (1998, p. 362) hypothesized that African penguins have coped successfully with many previous sardine-anchovy shifts. Specific mechanisms, such as the emigration of first-time breeders from natal colonies to areas of greater forage abundance may have historically helped them successfully adapt to changing prey location and abundance. However, over the period from the 1930s to the 1990s, competition for food from increased commercial fish harvest and from burgeoning fish take by recovering populations of the Cape fur seal appears to have overwhelmed the ability of African penguins to compete; the take of fish and cephalopods by man and seals increased by 2 million tons (T) (1.8 million tonnes (t)) per year from the 1930s to the 1980s (Crawford 1998, p. 362). Crawford *et al.* (2007b, p. 574) conclude that due to the increased competition with purse-seine (net) fisheries and burgeoning fur seal populations, the carrying capacity of the Benguela ecosystem for African penguins has declined by 80 to 90 percent from the 1920s to the present day. In the face of increased competition and reduced prey resources, African penguin populations are no longer rebounding successfully from underlying prey shifts, and they have experienced sharply decreased reproductive success.

These negative effects of decreased prey availability on reproductive success and on population size have been documented. Breeding success of African penguins was measured at Robbin Island from 1989–2004 (Crawford *et al.* 2006, p. 119) in concert with hydro-acoustic surveys to estimate the spawner biomass of anchovy and sardine off South Africa. When the combined spawner biomass of fish prey was less than 2 million T (1.8 million t), pairs of African penguins fledged an average of only 0.46 chicks annually. When it was above 2 million T (1.8 million t), annual breeding success had a mean value of 0.73 chicks per pair (Crawford *et al.* 2006, p. 119). The significant relationships obtained between breeding success of African penguins and estimates of the biomass of their fish prey confirm that reproduction is influenced by the abundance of food (Adams *et al.* 1992, p. 969; Crawford *et al.* 1999, p. 143). The levels of breeding success recorded in the most recent studies of the African penguin were found to be inadequate to sustain the African penguin population (Crawford *et al.* 2006, p. 119).

In addition to guano collection, as described in Factor A, disturbance of breeding colonies may arise from other human activities such as angling and swimming, tourism, and mining (Ellis *et al.* 1998, p. 121). Such disturbances can cause the penguins to panic and desert their nesting sites. Exploitation and disturbance by humans is probably the reason for penguins ceasing to breed at four colonies, one of which has since been re-colonized (Crawford *et al.* 1995b, p. 112). Burrows can be accidentally destroyed by humans walking near breeding sites, leading to penguin mortality.

Oil and chemical spills can have direct effects on the African penguin. Based on previous incidents and despite national and international measures to prevent and respond to oil spills referenced in Factor D, we consider this to be a significant threat to the species. African penguins live along the major global transport route for oil and have been frequently impacted by both major and minor oil spills. Since 1948, there have been 13 major oil spill events in South Africa, each of which oiled from 500 to 19,000 African penguins. Nine of these involved tanker collisions or groundings, three involved oil of unknown origins, and one involved an oil supply pipeline bursting in Cape Town harbor (Underhill 2001, pp. 2–3). In addition to these major events, which are described in detail below, there is a significant number of smaller spill events, impacting smaller number of birds. These smaller incidental spills result in about 1,000 oiled penguins being brought to SANCCOB, which has facilities to clean oiled birds, over the course of each year (Adams 1994, pp. 37–38; Underhill 2001, p. 1). Overall, from 1968 to the present, SANCCOB (2007b, p. 2), has handled more than 83,000 oiled sea birds, with the primary focus on African penguins.

The most recent and most serious event, the *Treasure* spill, occurred on June 23, 2000, when the iron ore carrier *Treasure* sank between Robben and Dassen Islands, where the largest and third-largest colonies of African penguin occur (Crawford *et al.* 2000, pp. 1–4). Large quantities of oil came ashore at both islands. South Africa launched a concerted effort to collect and clean oiled birds, to move non-oiled birds away from the region, to collect penguin chicks for artificial rearing, and to clean up oiled areas. Nineteen thousand African penguins were oiled and brought for cleaning to the SANCCOB facility. An additional 19,500 penguins were relocated to prevent them from being oiled. A total of 38,500 birds were handled in the context of this major oil spill. The last oil was removed from *Treasure* on July 18, 2000. Two months after the spill, mortality of African penguins from the spill stood at 2,000 adults and immature birds and 4,350 chicks (Crawford *et al.* 2000, p. 9). The Avian Demography Unit (ADU) of the University of Cape Town has undertaken long-term monitoring of penguins released after spill incidents. Response in the *Treasure* spill and success in rehabilitation have shown that response efforts have improved dramatically. The next most serious spill of the *Apollo Sea,* which occurred in June 1994, released about 2,401 T (2,177 t) of fuel oil near Dassen Island. About 10,000 penguins were contaminated with only 50 percent of these birds successfully de-oiled and put back in the wild. Over the 10 years after this spill, the ADU followed banded released birds to monitor their survival and reproductive histories (Wolfaardt *et al.* 2007, p. 68). They found that success in restoring oiled birds to the point that they attempt to breed after release has steadily improved. The breeding success of restored birds and the growth rates of their chicks, however, are lower than for non-oiled birds. Nevertheless, because adults could be returned successfully to the breeding population, they concluded that de-oiling and reintroduction of adults are effective conservation interventions (Wolfaardt *et al.* 2007, p. 68).

Therefore, we find that immediate and ongoing competition for food resources with fisheries and other species, overall decreases in food abundance, and ongoing severe direct and indirect threat of oil pollution are threats to the African penguin throughout all of its range.

Foreseeable Future

The term ''threatened species'' means any species (or subspecies or, for vertebrates, distinct population segments) that is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range. The Act does not define the term ''foreseeable future.'' For the purpose of this

proposed rule, we defined the ''foreseeable future'' to be the extent to which, given the amount and substance of available data, we can anticipate events or effects, or reliably extrapolate threat trends, such that we reasonably believe that reliable predictions can be made concerning the future as it relates to the status of the species at issue.

In considering the foreseeable future as it relates to the status of the African penguin, we considered the threats acting on the species, as well as population trends. We considered the historical data to identify any relevant existing trends that might allow for reliable prediction of the future (in the form of extrapolating the trends). We also considered whether we could reliably predict any future events (not yet acting on the species and therefore not yet manifested in a trend) that might affect the status of the species.

The African penguin is in serious decline throughout its range, and this decline is accelerating at the present time in all three population clusters. We have identified a number of threats to the coastal and marine habitat of the African penguin, and we predict that these threats are reasonably likely to continue to result in African penguin population declines in the foreseeable future. We have found that predation by Cape Fur Seals is a threat to the African penguin throughout all of its range, and we have no reason to believe the threat will be ameliorated within the foreseeable future. We have found that regulatory and conservation measures have been insufficient to significantly reduce or remove the threats to the African penguin, and we do not expect this to change in the foreseeable future. Finally, we have found that competition for food resources with fisheries and other species, decreases in food abundance, and severe direct and indirect threats of oil pollution are threats to the African penguin, and based on the information available, we have no reason to believe that these threats will lessen in the foreseeable future.

African Penguin Finding

The African penguin is in serious decline throughout its range. This decline is accelerating at the present time in all three population clusters, with a one-year decrease of 12 percent from 2006–2007 to between 31,000 to 32,000 breeding pairs, and an overall 3-year decline of 45 percent from 2004–2007. These verified, accelerating, and immediate declines, across all areas inhabited by African penguin populations are directly attributable to ongoing threats that are severely impacting the species at this time. Historical threats to terrestrial habitat, such as destruction of nesting areas for guano collection and the threat of direct harvest, have been overtaken by long-term competition for prey from human fisheries beginning in the 1930s. This competition is now exacerbated by the increased role of burgeoning Cape fur seal populations throughout the range in competing with commercial fisheries for the prey of the African penguin (Crawford 1998, p. 362). In combination, competition with fisheries and fur seals have reduced the carrying capacity of the marine environment for African penguins to 10 to 20 percent of its 1920s value and by themselves represent significant immediate threats to the African penguin throughout all of its range.

Changes in the different portions of the range of the African penguin are adding additional stressors to the overall declines in the prey of African penguins. In Namibia, the fisheries declines in the marine environment are being exacerbated by long-term declines in upwelling intensities and increased sea surface temperatures. These changes have hampered the recovery of sardine and anchovy populations in the region even as fishing pressure on those species has been relaxed, forcing penguins to shift to a less nutritious prey, the pelagic goby. The changes have also forced a regime shift in the Benguela ecosystem to other fish species, which are not the prey of African penguins. The phenomenon of sulfide eruption has further hampered the recovery of the food base.

In the Western Cape, in addition to the severe fisheries declines and severe reduction of the carrying capacity of the marine environment, the primary food source of African penguins has, beginning in 1997, shifted consistently eastward to areas east of the southernmost tip of South Africa. Over the past decade, the primary food base for the most populous African penguin colonies in South Africa has shifted outside the accessible foraging range for those colonies. This shift has led to declines in penguin recruitment and significant decreases in adult survival and represents an additional significant immediate threat to the West Cape populations of the African penguin.

On land, the effects of guano removal from penguin breeding islands continue to be felt in lack of predator protection and heat stress in breeding birds. Predation on penguins by kelp gulls and recovering Cape fur seals has become a predominant threat factor. In Namibia, where African penguin numbers are lowest, with only 3,402 pairs, low-lying islands have experienced flooding from increased rainfall and rising sea-levels, threatening 10 percent of the nests in the four major breeding colonies, further stressing a species under severe immediate threat from factors in the marine environment.

Finally, the marine and coastal habitat of the African penguin lies on one of the world's busiest sea lanes. Despite improvements in oil spill response capability and global recognition of the importance of protecting these waters from the impacts of oil, catastrophic and chronic spills have been and continue to be the norm. The most recent catastrophic spill in 2000 in South Africa resulted in the oiling of 19,000 penguins and the translocation of 19,500 more birds in direct danger from the spill. With the global population at a historical low (between 31,000 and 32,000 pairs), future oil spills, which consistent experience shows may occur at any time, pose a significant and immediate threat to the species throughout all of its range.

We have carefully assessed the best scientific and commercial information available regarding the threats faced by this species. The African penguin is in serious decline throughout all of its range, and the decline is currently accelerating. This decline is due to threats of a high magnitude—(1) The immediate impacts of a reduced carrying capacity for the African penguin throughout its range due to fisheries declines and competition for food with Cape fur seals (severely exacerbated by rapid ongoing ecosystem changes in the marine environment at the northern end of the penguin's distribution and by major shifts of prey resources to outside of the accessible foraging range of breeding penguins at the southern end of distribution); (2) the continued threats to African penguins on land throughout their range from habitat modification and destruction and predation; and (3) the immediate and ongoing threat of oil spills and oil pollution to the African penguin. The severity of these threats to the African penguin within its breeding and foraging range puts the species in danger of extinction. Therefore, we find that the African penguin is in danger of extinction throughout all of its range.

Available Conservation Measures

Conservation measures provided to species listed as endangered or threatened under the Act include recognition, requirements for Federal protection, and prohibitions against certain practices. Recognition through listing results in public awareness, and encourages and results in conservation

actions by Federal governments, private agencies and groups, and individuals.

Section 7(a) of the Act, as amended, and as implemented by regulations at 50 CFR part 402, requires Federal agencies to evaluate their actions within the United States or on the high seas with respect to any species that is proposed or listed as endangered or threatened, and with respect to its critical habitat, if any is being designated. However, given that the African penguin is not native to the United States, no critical habitat is being proposed for designation in this rule.

Section 8(a) of the Act authorizes limited financial assistance for the development and management of programs that the Secretary of the Interior determines to be necessary or useful for the conservation of endangered and threatened species in foreign countries. Sections 8(b) and 8(c) of the Act authorize the Secretary to encourage conservation programs for foreign endangered species and to provide assistance for such programs in the form of personnel and the training of personnel.

The Act and its implementing regulations set forth a series of general prohibitions and exceptions that apply to all endangered and threatened wildlife. As such, these prohibitions would be applicable to the African penguin. These prohibitions, under 50 CFR 17.21, make it illegal for any person subject to the jurisdiction of the United States to ''take'' (take includes harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, collect, or to attempt any of these) within the United States or upon the high seas, import or export, deliver, receive, carry, transport, or ship in interstate or foreign commerce in the course of a commercial activity, or to sell or offer for sale in interstate or foreign commerce, any endangered wildlife species. It also is illegal to possess, sell, deliver, carry, transport, or ship any such wildlife that has been taken in violation of the Act. Certain exceptions apply to agents of the Service and State conservation agencies.

We may issue permits to carry out otherwise prohibited activities involving endangered and threatened wildlife species under certain circumstances. Regulations governing permits are codified at 50 CFR 17.22 for endangered species, and at 17.32 for threatened species. With regard to endangered wildlife, a permit must be issued for the following purposes: for scientific purposes, to enhance the propagation or survival of the species, and for incidental take in connection with otherwise lawful activities.

Peer Review

In accordance with our joint policy with National Marine Fisheries Service, ''Notice of Interagency Cooperative Policy for Peer Review in Endangered Species Act Activities,'' published in the **Federal Register** on July 1, 1994 (59 FR 34270), we will seek the expert opinions of at least three appropriate independent specialists regarding this proposed rule. The purpose of peer review is to ensure that our proposed rule is based on scientifically sound data, assumptions, and analyses. We will send copies of this proposed rule to the peer reviewers immediately following publication in the **Federal Register**. We will invite these peer reviewers to comment during the public comment period, on our specific assumptions and conclusions regarding the proposal to list the African penguin as endangered.

We will consider all comments and information we receive during the comment period on this proposed rule during our preparation of a final determination. Accordingly, our final decision may differ from this proposal.

Public Hearings

The Act provides for one or more public hearings on this proposal, if we receive any requests for hearings. We must receive your request for a public hearing within 45 days after the date of this **Federal Register** publication (see **DATES**). Such requests must be made in writing and be addressed to the Chief of the Division of Scientific Authority at the address shown in the **FOR FURTHER INFORMATION CONTACT** section. We will schedule public hearings on this proposal, if any are requested, and announce the dates, times, and places of those hearings, as well as how to obtain reasonable accommodations, in the **Federal Register** at least 15 days before the first hearing.

Required Determinations

Regulatory Planning and Review (Executive Order 12866)

The Office of Management and Budget has determined that this rule is not significant under Executive Order 12866.

National Environmental Policy Act (NEPA)

We have determined that environmental assessments and environmental impact statements, as defined under the authority of the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*), need not be prepared in connection with regulations adopted under section 4(a) of the Act. We published a notice outlining our reasons for this determination in the **Federal Register** on October 25, 1983 (48 FR 49244).

Clarity of the Rule

We are required by Executive Orders 12866 and 12988, and by the Presidential Memorandum of June 1, 1998, to write all rules in plain language. This means that each rule we publish must:

(a) Be logically organized;

(b) Use the active voice to address readers directly;

(c) Use clear language rather than jargon;

(d) Be divided into short sections and sentences; and

(e) Use lists and tables wherever possible.

If you feel that we have not met these requirements, send us comments by one of the methods listed in the **ADDRESSES** section. To better help us revise the rule, your comments should be as specific as possible. For example, you should tell us the numbers of the sections or paragraphs that are unclearly written, which sections or sentences are too long, the sections where you feel lists or tables would be useful, etc.

References Cited

A complete list of all references cited in this proposed rule is available on the Internet at *http://www.regulations.gov* or upon request from the Division of Scientific Authority, U.S. Fish and Wildlife Service (see **FOR FURTHER INFORMATION CONTACT**).

Author

The authors of this proposed rule are staff of the Division of Scientific Authority, U.S. Fish and Wildlife Service (see **FOR FURTHER INFORMATION CONTACT**).

List of Subjects in 50 CFR Part 17

Endangered and threatened species, Exports, Imports, Reporting and recordkeeping requirements, Transportation.

Proposed Regulation Promulgation

Accordingly, we propose to amend part 17, subchapter B of chapter I, title 50 of the Code of Federal Regulations, as set forth below:

PART 17—[AMENDED]

1. The authority citation for part 17 continues to read as follows:

Authority: 16 U.S.C. 1361–1407; 16 U.S.C. 1531–1544; 16 U.S.C. 4201–4245; Pub. L. 99–625, 100 Stat. 3500; unless otherwise noted.

2. Amend § 17.11(h) by adding a new entry for ''Penguin, African,'' in

alphabetical order under ''BIRDS'' to the List of Endangered and Threatened Wildlife to read as follows:

§ 17.11 Endangered and threatened wildlife.

* * * * *

Department of Transportation

Federal Transit Administration

FTA Fiscal Year 2009 Apportionments, Allocations, and Program Information; Notice

DEPARTMENT OF TRANSPORTATION

Federal Transit Administration

FTA Fiscal Year 2009 Apportionments, Allocations, and Program Information

AGENCY: Federal Transit Administration (FTA), DOT.

ACTION: Notice.

SUMMARY: Division A of the Consolidated Security, Disaster Assistance, and Continuing Appropriations Act, 2009, (Pub. L. 110–329) signed into law by President Bush on September 30, 2008, continues to fund the Federal transit programs of the Department of Transportation (DOT) at the same levels that were available under Division K of the ''Consolidated Appropriations Act, 2008'' (Pub. L. 110–161) until a DOT Appropriations Act for Fiscal Year (FY) 2009 is enacted or March 6, 2009, whichever occurs first. This notice provides information on funding amounts that are currently available for the Federal Transit Administration (FTA) assistance programs; provides program guidance and requirements; and provides information on several program issues important in the current year. The notice also includes tables that show certain discretionary programs unobligated (carryover) funding from previous years that will be available for obligation during FY 2009.

FOR FURTHER INFORMATION CONTACT: For general information about this notice contact Henrika Buchanan-Smith, Director, Office of Transit Programs, at (202) 366–2053. Please contact the appropriate FTA regional office for any specific requests for information or technical assistance. The Appendix at the end of this notice includes contact information for FTA regional offices. An FTA headquarters contact for each major program area is also included in the discussion of that program in the text of the notice.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Overview

This document apportions or allocates the FY 2009 funds that were made available under Division A of the Consolidated Security, Disaster Assistance, and Continuing Appropriations Act, 2009, (Pub. L. 110–329, September 30, 2008), hereinafter, (''Continuing Appropriations Act, 2009'') among potential program recipients according to statutory formulas in 49 U.S.C. Chapter 53 and existing Full Funding Grant Agreements. The notice only includes the amount of FY 2009 funds that is currently available, which is approximately 5/12 or 43% of the amounts that were available under the Consolidated Appropriations Act, 2008. The notice does not include any extension or reprogramming of any discretionary funds that lapsed to the designated project as of September 30, 2008. The notice also does not include partial amounts made available to projects designated Bus and Bus-Related Facilities Program funds or National Research Program funds under SAFETEA–LU. FTA will issue a supplemental notice at a later date regarding these projects and any additional increments of formula and discretionary funds that become available.

For each FTA program included in this notice, we have provided relevant information on the FY 2009 funding currently available, program requirements, period of availability, and other related program information and highlights, as appropriate. A separate section of the document provides information on program requirements and guidance that are applicable to all FTA programs.

II. FY 2009 Funding for FTA Programs

A. Funding Based on the Continuing Appropriations Act, 2009 (Pub. L. 110–329, September 30, 2008) and SAFETEA–LU Authorization

The Continuing Appropriations Act, 2009, provides general funds and obligation authority on trust funds from the MTA that total $4.1 billion for FTA programs, until a DOT Appropriations Act for FY 2009 is enacted or a continued continuing Resolution after March 6, 2009, whichever occurs first. Table 1 of this document shows the funding for the FTA programs, as provided for in the Continuing Appropriations Act, 2009. All Formula Programs and the Section 5309 Bus and Bus-Related Facilities Program are funded entirely from MTA of the Highway Trust Fund in FY 2009. The Section 5309 New Starts Program, the Research Program, and FTA administrative expenses are funded by appropriations from the General Fund of the Treasury.

Congress has enacted a partial year Continuing Appropriations Act, 2009. This **Federal Register** notice includes tables of apportionments and allocations for FTA formula programs based on that Act. Prorated allocations based on FY 2008 funding levels are also included for active Full Funding Grant Agreements (FFGAs) under the New Starts discretionary program; however, FY 2009 discretionary allocations for other discretionary programs will not be published until FTA issues a subsequent notice as additional resources are made available.

B. Program Funds Set-Aside for Project Management Oversight

FTA uses a percentage of funds appropriated to certain FTA programs for program oversight activities conducted by the agency. The funds are used to provide necessary oversight activities, including oversight of the construction of any major capital project under these statutory programs; to conduct safety and security, civil rights, procurement systems, management, planning certification and, financial reviews and audits, as well as evaluations and analyses of grantee specific problems and issues; and to provide technical assistance to correct deficiencies identified in compliance reviews and audits.

Section 5327 of title 49 U.S.C., authorizes the takedown of funds from FTA programs for project management oversight. Section 5327 provides oversight takedowns at the following levels: 0.5 percent of Planning funds, 0.75 percent of Urbanized Area Formula funds, 1 percent of Capital Investment funds, 0.5 percent of Special Needs of Elderly Individuals and Individuals with Disabilities formula funds, 0.5 percent of Nonurbanized Area Formula funds, and 0.5 percent of the Paul S. Sarbanes Transit in the Parks Program funds (formerly the Alternative Transportation in the Parks and Public Lands Program).

III. FY 2009 FTA Program Initiatives and Changes

A. SAFETEA–LU Implementation

In FY 2009, FTA continues to focus on implementation of SAFETEA–LU through issuance of new and revised program guidance and regulations. Before any documents that place binding obligations on grantees are finalized and issued, FTA makes them available for public comment. We encourage grantees to regularly check the FTA Web site at *http://www.fta.dot.gov* and the U.S. Government docket management Website at *http://regulations.gov* for new issuances and to comment to the docket established for each document on relevant issues.

B. Planning Emphasis Areas

In recognition of the priority planning organizations and grantees are giving to the implementation of the new and changed provisions of SAFETEA–LU, FTA and the Federal Highway Administration (FHWA) are not issuing new planning emphasis areas for FY 2009, and have rescinded planning emphasis areas from prior years.

C. Earmarks and Competitive Grant Opportunities

SAFETEA–LU contained statutory earmarks under several programs. Absent future legislation to the contrary, FTA will honor the statutory earmarks; however, funds for the FY 2009 discretionary programs with the exception of New Start Program funds for existing FFGAs will not be made available in partial increments. FTA will publish the availability of discretionary funds in a subsequent notice. This notice does include tables of unobligated balances for earmarks from previous years under the Bus and Bus-Related Facilities Program, the New Starts Program, the Clean Fuels Program, and the Alternatives Analysis Program. FTA will continue to honor those earmarks. FTA will supplement this notice, at a later date, to provide any additional discretionary allocations of funds made available in FY 2009 and any lapsed prior year earmarks that the Secretary of Transportation determines to extend or reprogram, once the Department has examined the requests.

D. Flexible Funding Procedures

Obligation authority for flexible funds, high priority projects and other transit projects in title 23 U.S.C. is transferred to FTA when States and local agencies determine that FTA will administer the project. The liquidating cash, however, is transferred between Federal accounts only as needed to ensure that adequate funds are available for disbursement on a timely basis. In order to track the cash flow more closely, FTA no longer combines funds transferred from FHWA into a single grant with FTA funds in the program to which they are transferred. FTA has established codes and procedures for grants involving funds transferred from FHWA. Grantees can contact the appropriate regional office for assistance.

E. Changes in Match for Biodiesel Vehicles and Hybrid Retrofits

Section 164 of the Consolidated Appropriations Act, 2008, allowed a 90 percent Federal share for biodiesel buses and for the net capital cost of factory-installed or retrofitted hybrid electric propulsion systems and any equipment related to such a system. This increased federal share is a cross-cutting provision and is applicable across FTA programs for any grants awarded during FY 2008 regardless of what fiscal year funding is used. This provision remains in effect pursuant to Division A of the Continuing Appropriations Act, 2009, which expires on or before March 6, 2009. Grantees may apply for a 90 percent Federal share for the entire cost of a biodiesel bus, but only for the cost of the propulsion system and related equipment in the case of the hybrid electric systems, not for 90 percent of the cost of the entire vehicle. In lieu of calculating the costs of the equipment separately, grantees may apply for 83 percent of the cost of the vehicle.

F. National Transit Database (NTD) Disaster Adjustments Policy

Previously, when a transit provider could not report to the NTD due to an ''Act of God'', such as an earthquake, fire, or flood, FTA would grant the affected transit provider a ''hold harmless adjustment,'' by using the previous year's service data reported to the NTD for that transit provider in the apportionment of formula grants for urbanized areas. On August 14, 2008, FTA proposed to change this policy and initiated notice and comment on the proposal. Effective November 13, 2008, (73 FR 67247), FTA established a new policy, retroactive to NTD Report Year (RY) 2007 data, allowing transit providers that suffer a marked decrease in service data due to a natural or man-made disaster to receive a similar ''hold harmless adjustment'' in the apportionment of formula grants for urbanized areas. This adjustment is not automatic and must be requested in writing by either the affected transit provider, or the affected designated recipient for the urbanized area. FTA will approve or deny each request at its discretion based on the following factors: (1) Whether a Federal disaster declaration was in place for all or part of the current report year, for either all or part of the transit provider's service area; (2) whether the request demonstrates that the decrease in transit service from the report year before the disaster is in large part due to the ongoing impact of the disaster; and (3) whether the request demonstrates that the decrease in transit service reasonably appears to be temporary, and does not reflect the true transit needs of the urbanized area. FTA will not grant adjustment requests that do not address all three factors. Adjustment requests should include sufficient documentation to allow FTA to evaluate the request based on these factors. FTA may request additional information from an applicant for an adjustment to evaluate the request based on these factors. A request for an adjustment may only be made for one year at a time. Requests for an adjustment related to the same disaster may be made in subsequent years, provided that the applicant can continue to support its request based on the above factors. If the adjustment request is granted, the NTD data in all publicly-available data sets and data products would remain unadjusted, and would reflect the actual NTD submission for the transit provider. The only adjustment would be in using data from the previous full NTD Report Year before the disaster occurred in the data sets used for the apportionments of formula grants for urbanized areas.

Further instructions for requesting a ''hold harmless'' adjustment will be found in future editions of the NTD Annual Reporting Manual, available at *http://www.ntdprogram.gov.*

IV. FTA Programs

This section of the notice provides available FY 2009 funding and/or other important program-related information for the three major FTA funding accounts included in the notice (Formula and Bus Grants, Capital Investment Grants, and Research Grants). Of the 17 separate FTA programs contained in this notice that fall under the major program area headings, funding for ten programs is apportioned by statutory or administrative formula. Funding for the other seven is allocated on a discretionary or competitive basis.

Funding and/or other important information for each of the 17 programs is presented immediately below. This includes program apportionments or allocations, certain program requirements, length of time FY 2009 funding is available for obligation and other significant program information pertaining to FY 2009.

A. Metropolitan Planning Program (49 U.S.C. 5305(d))

Section 5305(d) authorizes federal funding to support a cooperative, continuous, and comprehensive planning program for transportation investment decision-making at the metropolitan area level. The specific requirements of metropolitan transportation planning are set forth in 49 U.S.C. 5303 and further explained in 23 CFR Part 450 as referenced in 49 CFR Part 613, *Statewide Transportation Planning; Metropolitan Transportation Planning; Final Rule.* State Departments of Transportation are direct recipients of funds allocated by FTA, which are then suballocated to Metropolitan Planning Organizations (MPOs) by formula, for planning activities that support the economic vitality of the metropolitan area, especially by enabling global competitiveness, productivity, and efficiency; increasing the safety and security of the transportation system for motorized and non-motorized users; increasing the accessibility and mobility options available to people and for freight; protecting and enhancing the environment, promoting energy conservation, and improving quality of life; enhancing the integration and connectivity of the transportation system, across and between modes, for people and freight; promoting efficient system management and operation; and emphasizing the preservation of the existing transportation system. This funding must support work elements and activities resulting in balanced and comprehensive intermodal transportation planning for the movement of people and goods in the metropolitan area. Comprehensive transportation planning is not limited to transit planning or surface transportation planning, but also encompasses the relationships among land use and all transportation modes, without regard to the programmatic source of Federal assistance. Eligible work elements or activities include, but are not limited to studies relating to management, planning, operations, capital requirements, and economic feasibility; evaluation of previously funded projects; peer reviews and exchanges of technical data, information, assistance, and related activities in support of planning and environmental analysis among MPOs and other transportation planners; work elements and related activities preliminary to and in preparation for constructing, acquiring, or improving the operation of facilities and equipment. An exhaustive list of eligible work activities is provided in FTA Circular 8100.1C, Program Guidance for Metropolitan Planning and State Planning and Research Program Grants, dated September 1, 2008. For more about the Metropolitan Planning Program and the FTA Circular 8100.1C, contact Victor Austin Office of Planning and Environment at (202) 366–2996.

1. FY 2009 Funding Availability

The Continuing Appropriations Act, 2009, provides $38,068,323 to the Metropolitan Planning Program (49 U.S.C. 5305(d)) to support metropolitan transportation planning activities set forth in 49 U.S.C. 5303. The total amount apportioned for the Metropolitan Planning Program to States for MPOs' use in urbanized areas (UZAs) is 37,877,981, as shown in the table below, after the deduction for oversight and the addition of prior year reapportioned funds.

METROPOLITAN PLANNING PROGRAM

Total Appropriation	$38,068,323
Oversight Deduction	−190,342
Total Apportioned	37,877,981

States' apportionments for this program are displayed in Table 2.

2. Basis for Formula Apportionments

As specified in law, 82.72 percent of the amounts authorized for Section 5305 are allocated to the Metropolitan Planning program. FTA allocates Metropolitan Planning funds to the States according to a statutory formula. Eighty percent of the funds are distributed to the States as a basic allocation based on each State's UZA population, based on the most recent decennial Census. The remaining 20 percent is provided to the States as a supplemental allocation based on an FTA administrative formula to address planning needs in the larger, more complex UZAs. The amount published for each State is a combined total of both the basic and supplemental allocation.

3. Program Requirements

The State allocates Metropolitan Planning funds to MPOs in UZAs or portions thereof to provide funds for projects included in an annual work program (the Unified Planning Work Program, or UPWP) that includes both highway and transit planning projects. Each State has either reaffirmed or developed, in consultation with their MPOs, a new allocation formula, as a result of the 2000 Census. The State allocation formula may be changed annually, but any change requires approval by the FTA regional office before grant approval. Program guidance for the Metropolitan Planning Program is found in FTA Circular 8100.1C, Program Guidance for Metropolitan Planning and State Planning and Research Program Grants, dated September 1, 2008. For more about the Metropolitan Planning Program and the FTA Circular 8100.1C, contact Victor Austin of the Office of Planning and Environment at (202) 366–2996.

4. Period of Availability

The funds apportioned under the Metropolitan Planning program remain available to be obligated by FTA to recipients for four fiscal years—which includes the year of apportionment plus three additional years. Any apportioned funds that remain unobligated at the close of business on September 30, 2012, will revert to FTA for reapportionment under the Metropolitan Planning Program.

5. Other Program or Apportionment Related Information and Highlights

a. Planning Emphasis Areas (PEAs). FTA and FHWA are not issuing new PEAs this year, and are rescinding PEAs issued in prior years, in light of the priority given to implementation of SAFETEA–LU planning and program provisions.

b. Consolidated Planning Grants. FTA and FHWA planning funds under both the Metropolitan Planning and State Planning and Research Programs can be consolidated into a single consolidated planning grant (CPG), awarded by either FTA or FHWA. The CPG eliminates the need to monitor individual fund sources, if several have been used, and ensures that the oldest funds will always be used first. Unlike ''flex funds'' for capital programs, planning funds from FHWA may be combined with FTA planning funds in a single grant. Alternatively, FTA planning funds may be transferred to FHWA to be administered as combined grants.

Under the CPG, States can report metropolitan planning program expenditures (to comply with the Single Audit Act) for both FTA and FHWA under the Catalogue of Federal Domestic Assistance number for FTA's Metropolitan Planning Program (20.505). Additionally, for States with an FHWA Metropolitan Planning (PL) fund-matching ratio greater than 80 percent, the State can waive the 20 percent local share requirement, with FTA's concurrence, to allow FTA funds used for metropolitan planning in a CPG to be granted at the higher FHWA rate. For some States, this Federal match rate can exceed 90 percent.

States interested in transferring planning funds between FTA and FHWA should contact the FTA Regional Office or FHWA Division Office for more detailed procedures. Current guidelines are included in Federal Highway Administration Memorandum dated July 12, 2007, ''Information: Final Transfers to Other Agencies that Administer Title 23 Programs.''

For further information on CPGs, contact Kristen Clarke, Office of Budget and Policy, FTA, at (202) 366–1686, Ken Johnson, Office of Program Management, FTA, at (202) 366–1659, or Kenneth Petty, Office of Planning and Environment, FHWA, at (202) 366–6654.

B. State Planning and Research Program (49 U.S.C. 5305(e))

This program provides financial assistance to States for Statewide transportation planning and other technical assistance activities, including supplementing the technical assistance program provided through the Metropolitan Planning program. The specific requirements of Statewide transportation planning are set forth in 49 U.S.C. 5304 and further explained in 23 CFR Part 450 as referenced in 49 CFR Part 613, *Statewide Transportation Planning; Metropolitan Transportation Planning; Final Rule.* This funding must support work elements and activities resulting in balanced and comprehensive intermodal transportation planning for the movement of people and goods. Comprehensive transportation planning is not limited to transit planning or surface transportation planning, but also encompasses the relationships among land use and all transportation modes, without regard to the programmatic source of Federal assistance. For more information, contact Victor Austin of the Office of Planning and Environment at (202) 366–2996.

1. FY 2009 Funding Availability

The Continuing Appropriations Act, 2009, provides $7,952,377 to the State Planning and Research Program (49 U.S.C. 5305). The total amount apportioned for the State Planning and Research Program (SPRP) is $7,912,615, as shown in the table below, after the deduction for oversight (authorized by 49 U.S.C. 5327).

STATE PLANNING AND RESEARCH PROGRAM

Total Appropriation	$7,952,377
Oversight Deduction	−39,762
Total Apportioned	7,912,615

State apportionments for this program are displayed in Table 2.

2. Basis for Apportionment Formula

As specified in law, 17.28 percent of the amounts authorized for Section 5305 are allocated to the State Planning and Research program. FTA apportions funds to States by a statutory formula that is based on the most recent decennial Census, and the State's UZA population as compared to the UZA population of all States.

3. Requirements

Funds are provided to States for Statewide transportation planning programs. These funds may be used for a variety of purposes such as planning, technical studies and assistance, demonstrations, and management training. In addition, a State may authorize a portion of these funds to be used to supplement Metropolitan Planning funds allocated by the State to its UZAs, as the State deems appropriate. Program guidance for the State Planning and Research program is found in FTA Circular 8100.1C. This funding must support work elements and activities resulting in balanced and comprehensive intermodal

transportation planning for the movement of people and goods. Comprehensive transportation planning is not limited to transit planning or surface transportation planning, but also encompasses the relationships among land use and all transportation modes, without regard to the programmatic source of Federal assistance. Eligible work elements or activities include, but are not limited to studies relating to management, planning, operations, capital requirements, and economic feasibility; evaluation of previously funded projects; peer reviews and exchanges of technical data, information, assistance, and related activities in support of planning and environmental analysis; work elements and related activities preliminary to and in preparation for constructing, acquiring, or improving the operation of facilities and equipment. An exhaustive list of eligible work activities is provided in FTA Circular 8100.1C, Program Guidance for Metropolitan Planning and State Planning and Research Program Grants, dated September 1, 2008. For more information, contact Victor Austin, Office of Planning and Environment at (202) 366–2996.

4. Period of Availability

The funds apportioned under the State Planning and Research program remain available to be obligated by FTA to recipients for four fiscal years—which include the year of apportionment plus three additional fiscal years. Any apportioned funds that remain unobligated at the close of business on September 30, 2012, will revert to FTA for reapportionment under the State Planning and Research Program.

5. Other Program or Apportionment Related Information and Highlights

See Section A5 for information about Planning Emphasis Areas and CPGs.

C. Urbanized Area Formula Program (49 U.S.C. 5307)

Section 5307 authorizes Federal capital and operating assistance, in some cases, for transit in Urbanized Areas (UZAs). A UZA is an area with a population of 50,000 or more that has been defined and designated as such in the most recent decennial Census by the U.S. Census Bureau. The Urbanized Area Formula Program funds may also be used to support planning activities, and may supplement to planning projects funded under the Metropolitan Planning program described above. Urbanized Areas Formula Program funds used for planning must be shown in the UPWP for MPO(s) with responsibility for that area. Funding is apportioned directly to each UZA with a population of 200,000 or more, and to the State Governors for UZAs with populations between 50,000 and 200,000. Eligible applicants are limited to entities designated as recipients in accordance with 49 U.S.C. 5307(a)(2) and other public entities with the consent of the Designated Recipient. Generally, operating assistance is not an eligible expense for UZAs with populations of 200,000 or more. However, there are several exceptions to this restriction. The exceptions are described in section 3(d)(5) below.

For more information about the Urbanized Area Formula Program contact Scott Faulk, Office of Transit Programs, at (202) 366–1660.

1. FY 2009 Funding Availability

The Continuing Appropriations Act, 2009, provides $1,682,053,574 to the Urbanized Area Formula Program (49 U.S.C. 5307). The total amount apportioned for the Urbanized Area Formula Program is $1,828,187,915 as shown in the table below, after the 0.75 percent deduction for oversight (authorized by 49 U.S.C. 5327) and including funds apportioned to UZAs from the appropriation for Section 5340 for Growing States and High Density States.

URBANIZED AREA FORMULA PROGRAM

Total Appropriation	$1,682,053,574 [a]
Oversight Deduction	−12,615,402
Section 5340 Funds Added	158,749,743
Total Apportioned	1,828,187,915

[a] One percent set-aside for Small Transit Intensive Cities Formula.

Table 3 displays the amounts apportioned under the Urbanized Area Formula Program.

2. Basis for Formula Apportionment

FTA apportions Urbanized Area Formula Program funds based on legislative formulas. Different formulas apply to UZAs with populations of 200,000 or more and to UZAs with populations less than 200,000. For UZAs with 50,000 to 199,999 in population, the formula is based solely on population and population density. For UZAs with populations of 200,000 and more, the formula is based on a combination of bus revenue vehicle miles, bus passenger miles, fixed guideway revenue vehicle miles, and fixed guideway route miles, as well as population and population density. Table 4 includes detailed information about the formulas.

To calculate a UZA's FY 2009 apportionment, FTA used population and population density statistics from the 2000 Census and (when applicable) validated mileage and transit service data from transit providers' 2007 National Transit Database (NTD) Report Year. Pursuant to 49 U.S.C. 5336(b), FTA used 60 percent of the directional route miles attributable to the Alaska Railroad passenger operations system to calculate the apportionment for the Anchorage, Alaska UZA.

We have calculated dollar unit values for the formula factors used in the Urbanized Area Formula Program apportionment calculations. These values represent the amount of money each unit of a factor is worth in this year's apportionment. The unit values change each year, based on all of the data used to calculate the apportionments. The dollar unit values for FY 2009 are displayed in Table 5. To replicate the basic formula component of a UZA's apportionment, multiply the dollar unit value by the appropriate formula factor (*i.e.*, the population, population × population density), and when applicable, data from the NTD (*i.e.*, route miles, vehicle revenue miles, passenger miles, and operating cost).

In FY 2009, one percent of funds appropriated for Section 5307, or $16,820,536 based on the Continuing Appropriations Act, is set aside for Small Transit Intensive Cities (STIC). FTA apportions these funds to UZAs under 200,000 in population that operate at a level of service equal to or above the industry average level of service for all UZAs with a population of at least 200,000, but not more than 999,999, in one or more of six performance categories: Passenger miles traveled per vehicle revenue mile, passenger miles traveled per vehicle revenue hour, vehicle revenue miles per capita, vehicle revenue hours per capita, passenger miles traveled per capita, and passengers per capita.

The data for these categories for the purpose of FY 2009 apportionments comes from the NTD reports for the 2007 reporting year. This data is used to determine a UZA's eligibility under the STIC formula, and is also used in the STIC apportionment calculations. Because these performance data change with each year's NTD reports, the UZAs eligible for STIC funds and the amount each receives may vary each year. In FY 2009, FTA apportioned $56,826 for each performance factor/category for which the urbanized area exceeded the national average for UZAs with a

population of at least 200,000 but not more than 999,999.

In addition to the funds apportioned to UZAs, according to the Section 5307 formula factors contained in 49 U.S.C. 5336, FTA also apportions funds to urbanized areas under Section 5340 Growing States and High Density States formula factors. In FY 2009, FTA apportions $64,557,843 to 453 UZA's in all 50 States and $94,191,900 to 46 UZAs in seven High Density States. Half of the funds appropriated for Section 5340 are available to Growing States and half to High Density States. FTA apportions Growing States funds by a formula based on State population forecasts for 15 years beyond the most recent Census. FTA distributes the amounts apportioned for each State between UZAs and nonurbanized areas based on the ratio of urbanized/nonurbanized population within each State in the 2000 census, and to UZAs proportionately based on UZA population in the 2000 census because population estimates are not available at the UZA level. FTA apportions the High Density States funds to States with population densities in excess of 370 persons per square mile. These funds are apportioned only to UZAs within those States. FTA pro-rates each UZA's share of the High Density funds based on the population of the UZAs in the State in the 2000 census.

FTA cannot provide unit values for the Growing States or High Density formulas because the allocations to individual States and urbanized areas are based on their relative population data, rather than on a national per capita basis.

Based on language in the conference report accompanying SAFETEA–LU, FTA is to show a single apportionment amount for Section 5307, STIC and Section 5340. FTA shows a single Section 5307 apportionment amount for each UZA in Table 3, the Urbanized Area Formula apportionments. The amount includes funds apportioned based on the Section 5307 formula factors, any STIC funds, and any Growing States and High Density States funding allocated to the area. FTA uses separate formulas to calculate and generate the respective apportionment amounts for the Section 5307, STIC and Section 5340. For technical assistance purposes, the UZAs that received STIC funds are listed in Table 6. FTA will make available breakouts of the funding allocated to each UZA under these formulas, upon request to the regional office.

3. Program Requirements

Program guidance for the Urbanized Area Formula Program is presently found in FTA Circular C9030.1C, Urbanized Area Formula Program: Grant Application Instructions, dated October 1, 1998, and supplemented by additional information or changes provided in this document. FTA is in the process of updating the circular. Several important program requirements are highlighted below.

a. Urbanized Area Formula Apportionments to Governors

For small UZAs, those with a population of less than 200,000, FTA apportions funds to the Governor of each State for distribution. A single total Governor's apportionment amount for the Urbanized Area Formula, STIC, and Growing States and High Density States is shown in the Urbanized Area Formula Apportionment Table 3. The table also shows the apportionment amount attributable to each small UZA within the State. The Governor may determine the sub-allocation of funds among the small UZAs except that funds attributed to a small UZA that is located within the planning boundaries of a Transportation Management Area (TMA) must be obligated to that small UZA, as discussed in subsection f below.

b. Transit Enhancements

Section 5307(d)(1)(K) requires that one percent of Section 5307 funds apportioned to UZAs with populations of 200,000 or more be spent on eligible transit enhancement activities or projects. This requirement is now treated as a certification, rather than as a set-aside as was the case under the Transportation Equity Act for the 21st Century (TEA–21). Designated recipients in UZAs with populations of 200,000 or more certify they are spending not less than one percent of Section 5307 funds for transit enhancements. In addition, Designated Recipients must submit an annual report on how they spent the money with the Federal fiscal year's final quarterly progress report in TEAM-Web. The report should include the following elements: (a) Grantee name; (b) UZA name and number; (c) FTA project number; (d) transit enhancement category; (e) brief description of enhancement and progress towards project implementation; (f) activity line item code from the approved budget; and (g) amount awarded by FTA for the enhancement. The list of transit enhancement categories and activity line item (ALI) codes may be found in the table of Scope and ALI codes on TEAM-Web, which can be accessed at *http://FTATEAMWeb.fta.dot.gov.*

The term ''transit enhancement'' includes projects or project elements that are designed to enhance public transportation service or use and are physically or functionally related to transit facilities. Eligible enhancements include the following: (1) Historic preservation, rehabilitation, and operation of historic mass transportation buildings, structures, and facilities (including historic bus and railroad facilities); (2) bus shelters; (3) landscaping and other scenic beautification, including tables, benches, trash receptacles, and street lights; (4) public art; (5) pedestrian access and walkways; (6) bicycle access, including bicycle storage facilities and installing equipment for transporting bicycles on mass transportation vehicles; (7) transit connections to parks within the recipient's transit service area; (8) signage; and (9) enhanced access for persons with disabilities to mass transportation.

It is the responsibility of the MPO to determine how the one-percent for transit enhancements will be allotted to transit projects. The one percent minimum requirement does not preclude more than one percent from being expended in a UZA for transit enhancements. However, activities that are only eligible as enhancements—in particular, operating costs for historic facilities—may be assisted only within the one-percent funding level.

c. Transit Security Projects

Pursuant to section 5307(d)(1)(J), each recipient of Urbanized Area Formula funds must certify that of the amount received each fiscal year, it will expend at least one percent on ''public transportation security projects'' or must certify that it has decided the expenditure is not necessary. For applicants not eligible to receive Section 5307 funds for operating assistance, only capital security projects may be funded with the one percent. SAFETEA–LU, however, expanded the definition of eligible ''capital'' projects to include specific crime prevention and security activities, including: (1) Projects to refine and develop security and emergency response plans; (2) projects aimed at detecting chemical and biological agents in public transportation; (3) the conduct of emergency response drills with public transportation agencies and local first response agencies; and (4) security training for public transportation employees, but excluding all expenses related to operations, other than such

expenses incurred in conducting emergency drills and training. ALI codes have been established for these four new capital activities. The one percent may also include security expenditures included within other capital activities, and, where the recipient is eligible, operating assistance. The relevant ALI codes would be used for those activities.

FTA is often called upon to report to Congress and others on how grantees are expending Federal funds for security enhancements. To facilitate tracking of grantees' security expenditures, which are not always evident when included within larger capital or operating activity line items in the grant budget, we have established a non-additive (''non-add'') scope code for security expenditures—Scope 991. The non-add scope is to be used to aggregate activities included in other scopes, and it does not increase the budget total. Section 5307 grantees should include this non-add scope in the project budget for each new Section 5307 grant application or amendment. Under this non-add scope, the applicant should repeat the full amount of any of the line items in the budget that are exclusively for security and include the portion of any other line item in the project budget that is attributable to security, using under the non-add scope the same line item used in the project budget. The grantee can modify the ALI description or use the extended text feature, if necessary, to describe the security expenditures.

The grantee must provide information regarding its use of the one percent for security as part of each Section 5307 grant application, using a special screen in TEAM-Web. If the grantee has certified that it is not necessary to expend one percent for security, the Section 5307 grant application must include information to support that certification. FTA will not process an application for a Section 5307 grant until the security information is complete.

d. FY 2009 Operating Assistance

UZAs under 200,000 in population may use Section 5307 funds for operating assistance. In addition, Section 5307, as amended by, SAFETEA–LU and TEA–21, allows some UZAs with a population of 200,000 or more to use FY 2009 Urbanized Area Formula funds for operating assistance under certain conditions. The specific provisions allowing the limited use of operating assistance in large UZAs are as follows:

(1) Section 5307(b)(1)(E) provides for grants for the operating costs of equipment and facilities for use in public transportation in the Evansville, IN–KY urbanized area, for a portion or portions of the UZA if the portion of the UZA includes only one State, the population of the portion is less than 30,000, and the grants will be not used to provide public transportation outside of the portion of the UZA.

(2) Section 5307(b)(1)(F) provides operating costs of equipment and facilities for use in public transportation for local governmental authorities in areas which adopted transit operating and financing plans that became a part of the Houston, Texas, UZA as a result of the 2000 decennial census of population, but lie outside the service area of the principal public transportation agency that serves the Houston UZA.

(3) Section 5336(a)(2) prescribes the formula to be used to apportion Section 5307 funds to UZAs with population of 200,000 or more. SAFETEA–LU amended 5336(a)(2) to add language that stated, ''* * * except that the amount apportioned to the Anchorage urbanized area under subsection (b) shall be available to the Alaska Railroad for any costs related to its passenger operations.'' This language has the effect of directing that funds apportioned to the Anchorage urbanized area, under the fixed guideway tiers of the Section 5307 apportionment formula, be made available to the Alaska Railroad, and that these funds may be used for any capital or operating costs related to its passenger operations.

(4) Section 3027(c)(3) of TEA–21, as amended (49 U.S.C. 5307 note), provides an exception to the restriction on the use of operating assistance in a UZA with a population of 200,000 or more, by allowing transit providers/grantees that provide service exclusively to elderly persons and persons with disabilities and that operate 20 or fewer vehicles to use Section 5307 funds apportioned to the UZA for operating assistance. The total amount of funding made available for this purpose under Section 3027(c)(3) is $1.4 million. Transit providers/grantees eligible under this provision have already been identified and notified.

(5) Pursuant to the SAFETEA–LU Technical Corrections Act, 2008, in FY 2009, section 5307(b)(2) allows (1) UZAs that grew in population from under 200,000 to over 200,000 or that were under 200,000 but merged into another urbanized area and the population is over 200,000, as a result of the 2000 Census to use Section 5307 funds for operating assistance in an amount up to 50 percent of the grandfathered amount for FY 2002 funds; (2) Areas that were nonurbanized under the 1990 Census and became urbanized, as a result of the 2000 Census, to use no more than 50 percent of the amount apportioned to the area for FY 2003 for operating assistance; and (3) nonurbanized areas under the 1990 Census that merged into urbanized areas over 200,000, as a result of the 2000 Census, to use 50 percent of the amount the area received in FY 2002 Section 5311 funding for operating assistance.

e. Sources of Local Match

Pursuant to Section 5307(e), the Federal share of an urbanized area formula grant is 80 percent of net project cost for a capital project and 50 percent of net project cost for operating assistance unless the recipients project a greater local share. The remainder of the net project cost (i.e., 20 percent and 50 percent, respectively) shall be provided from the following sources:

1. In cash from non-Government sources other than revenues from providing public transportation services;

2. From revenues derived from the sale of advertising and concessions;

3. From an undistributed cash surplus, a replacement or depreciation cash fund or reserve, or new capital;

4. From amounts received under a service agreement with a State or local social service agency or private social service organization; and

5. Proceeds from the issuance of revenue bonds.

In addition, funds from Section 403(a)(5)(C)(vii) of the Social Security Act (42 U.S.C. 603(a)(5)(C)(vii)) can be used to match Urbanized Area Formula funds.

f. Designated Transportation Management Areas (TMA)

Guidance for setting the boundaries of TMAs is in the joint transportation planning regulations codified at 23 CFR Part 450 as reference in 49 CFR Part 613. In some cases, the TMA planning boundaries established by the MPO for the designated TMA includes one or more small UZAs. In addition, one small UZA (Santa Barbara, CA) has been designated as a TMA. In either of these situations, the Governor cannot allocate ''Governor's Apportionment'' funds attributed to the small UZAs to other areas; that is, the Governor only has discretion to allocate Governor's Apportionment funds attributable to areas that are outside of designated TMA planning boundaries.

The list of small UZAs included within the planning boundaries of

designated TMAs is provided in the table below.

Designated TMA	Small urbanized area included in TMA planning boundary
Albany, NY	Saratoga Springs, NY.
Houston, TX	Galveston, TX; Lake Jackson-Angleton, TX; Texas City, TX; The Woodlands, TX.
Jacksonville, FL	St. Augustine, FL.
Orlando, FL	Kissimmee, FL.
Palm Bay-Melbourne, FL	Titusville, FL.
Philadelphia, PA–NJ–DE–MD	Pottstown, PA.
Pittsburg, PA	Monessen, PA; Weirton, WV-Steubenville, OH–PA (PA portion); Uniontown-Connellsville, PA.
Seattle, WA	Bremerton, WA.
Washington, DC–VA–MD	Frederick, MD.

The MPO must notify the Associate Administrator for Program Management, Federal Transit Administration, 1200 New Jersey Avenue, SE., Washington, DC 20590, in writing, no later than July 1 of each year, to identify any small UZA within the planning boundaries of a TMA.

g. Urbanized Area Formula Funds Used for Highway Purposes

Funds apportioned to a TMA are eligible for transfer to FHWA for highway projects, if the Designated Recipient has allocated a portion of the areas section 5307 funding for such use. However, before funds can be transferred, the following conditions must be met: (1) Such use must be approved by the MPO in writing, after appropriate notice and opportunity for comment and appeal are provided to affected transit providers; (2) in the determination of the Secretary, such funds are not needed for investments required by the Americans with Disabilities Act of 1990 (ADA); and (3) the MPO determines that local transit needs are being addressed.

The MPO should notify the appropriate FTA Regional Administrator of its intent to use FTA funds for highway purposes, as prescribed in section V.D below. Urbanized Area Formula funds that are designated by the MPO for highway projects will be transferred to and administered by FHWA.

4. Period of Availability

The Urbanized Area Formula Program funds apportioned in this notice remain available to be obligated during the year of appropriation plus three additional years. Accordingly, these funds must be obligated by FTA to recipients by September 30, 2012. Any of these apportioned funds that remain unobligated at the close of business on September 30, 2012, will revert to FTA for reapportionment under the Urbanized Area Formula Program.

5. Other Program or Apportionment Related Information and Highlights

In each UZA with a population of 200,000 or more, the Governor in consultation with responsible local officials, and publicly owned operators of public transportation has designated one or more entities to be the Designated Recipient for Section 5307 funds apportioned to the UZA. The same entity(s) may or may not be the Designated Recipient for the Job Access and Reverse Commute (JARC) and New Freedom program funds apportioned to the UZA. In UZAs under 200,000 in population, the State is the Designated Recipient for Section 5307 as well as JARC and New Freedom programs. The Designated Recipient for Section 5307 may authorize other entities to apply directly to FTA for Section 5307 grants pursuant to a supplemental agreement. While the requirement that projects selected for funding be included in a locally developed coordinated public transit/human service transportation plan is not included in Section 5307 as it is in Sections 5310, 5316 (JARC) and 5317 (New Freedom), FTA expects that in their role as public transit providers, recipients of Section 5307 funds will be participants in the local planning process for these programs.

D. Clean Fuels Grant Program (49 U.S.C. 5308)

The Clean Fuels Grant Program supports the use of alternative fuels in air quality maintenance or nonattainment areas for ozone or carbon monoxide through capital grants to urbanized areas for clean fuel vehicles and facilities. Previously an unfunded Formula Program under TEA–21, the program is now a discretionary program. For more information about this program, contact Kimberly Sledge, Office of Transit Programs, at (202) 366–2053.

1. FY 2009 Funding Availability

The Continuing Appropriations Act, 2009, provides $21,074,900 to the Clean Fuels Grant Program (49 U.S.C. 5308). FTA will publish project allocations in a supplemental notice when all program funds have been made available.

2. Requirements

Clean Fuels program funds may be made available to any grantee in a UZA that is designated as maintenance or nonattainment area for ozone or carbon monoxide as defined in the Clean Air Act. Eligible recipients include Section 5307 Designated Recipients as well as recipients in small UZAs. In the case of a small UZA, the State in which the area is located will act as the recipient.

Eligible projects include the purchase or lease of clean fuel buses (including buses that employ a lightweight composite primary structure), the construction or lease of clean fuel buses or electrical recharging facilities and related equipment for such buses, and construction or improvement of public transportation facilities to accommodate clean fuel buses.

Legislation will be necessary if a recipient wishes to use Clean Fuels funds earmarked in SAFETEA–LU for eligible program activities outside the scope of a project description.

Unless otherwise specified in law, grants made under the Clean Fuels program must meet all other eligibility requirements as outlined in Section 5308.

3. Period of Availability

Funds designated for specific Clean Fuels Program projects remain available for obligation for three fiscal years, which includes the year of appropriation plus two additional fiscal years. The FY 2009 funding for projects will remain available through September 30, 2011. Clean Fuels funds not obligated in an FTA grant for eligible purposes at the end of the period of availability will generally be made available for other projects.

5. Other Program or Allocation Related Information and Highlights

Prior year unobligated balances for Clean Fuel allocations in the amount of $46,862,483 remain available for obligation in FY 2009. This includes $6,690,000 in FY 2007 and $40,172,483 in FY 2008 unobligated allocations. The unobligated amounts available as of September 30, 2008, are displayed in Table 7.

E. Capital Investment Program (49 U.S.C. 5309)—Fixed Guideway Modernization

This program provides capital assistance for the modernization of existing fixed guideway systems. Funds are allocated by a statutory formula to UZAs with fixed guideway systems that have been in operation for at least seven years. A ''fixed guideway'' refers to any transit service that uses exclusive or controlled rights-of-way or rails, entirely or in part. The term includes heavy rail, commuter rail, light rail, monorail, trolleybus, aerial tramway, inclined plane, cable car, automated guideway transit, ferryboats, that portion of motor bus service operated on exclusive or controlled rights-of-way, and high-occupancy-vehicle (HOV) lanes. Eligible applicants are the public transit authorities in those urbanized areas to which the funds are allocated. For more information about Fixed Guideway Modernization contact Scott Faulk, Office of Transit Programs, at (202) 366–2053.

1. FY 2009 Funding Availability

The Continuing Appropriations Act, 2009, provides $675,257,000 to the Fixed Guideway Modernization Program. The total amount apportioned for the Fixed Guideway Modernization Program is $668,504,430, after the deduction for oversight, and addition of prior year reapportioned funds, as shown in the table below.

FIXED GUIDEWAY MODERNIZATION PROGRAM

Total Appropriation	$675,257,000
Oversight Deduction	−6,752,570
Total Apportioned	668,504,430

The FY 2009 Fixed Guideway Modernization Program apportionments to eligible areas are displayed in Table 8.

2. Basis for Formula Apportionment

The formula for allocating the Fixed Guideway Modernization funds contains seven tiers. The apportionment of funding under the first four tiers is based on amounts specified in law and NTD data used to apportion funds in FY 1997. Funding under the last three tiers is apportioned based on the latest available data on route miles and revenue vehicle miles on segments at least seven years old, as reported to the NTD. Section 5337(f) of title 49, U.S.C. provides for the inclusion of Morgantown, West Virginia (population 55,997) as an eligible UZA for purposes of apportioning fixed guideway modernization funds. Also, pursuant to 49 U.S.C. 5336(b) FTA used 60 percent of the directional route miles attributable to the Alaska Railroad passenger operations system to calculate the apportionment for the Anchorage, Alaska UZA under the Section 5309 Fixed Guideway Modernization formula.

FY 2009 Formula apportionments are based on data grantees provided to the NTD for the 2007 reporting year. Table 9 provides additional information and details on the formula. Dollar unit values for the formula factors used in the Fixed Guideway Modernization Program are displayed in Table 5. To replicate an area's apportionment, multiply the dollar unit value by the appropriate formula factor, *i.e.*, route miles and revenue vehicle miles.

3. Program Requirements

Fixed Guideway Modernization funds must be used for capital projects to maintain, modernize, or improve fixed guideway systems. Eligible UZAs (those with a population of 200,000 or more) with fixed guideway systems that are at least seven years old are entitled to receive Fixed Guideway Modernization funds. A threshold level of more than one mile of fixed guideway is required in order to receive Fixed Guideway Modernization funds. Therefore, UZAs reporting one mile or less of fixed guideway mileage under the NTD are not included. However, funds apportioned to an urbanized area may be used on any fixed guideway segment in the UZA. Program guidance for Fixed Guideway Modernization is presently found in FTA Circular C9300.1B, Capital Facilities and Formula Grant Programs, dated November 1, 2008.

4. Period of Availability

The funds apportioned in this notice under the Fixed Guideway Modernization Program remain available to be obligated by FTA to recipients during the year of appropriation plus three additional years. FY 2009 Fixed Guideway Modernization funds that remain unobligated at the close of business on September 30, 2012, will revert to FTA for reapportionment under the Fixed Guideway Modernization Program.

F. Capital Investment Program (49 U.S.C. 5309)—Bus and Bus-Related Facilities

This program provides capital assistance for new and replacement buses, and related equipment and facilities. Funds are allocated on a discretionary basis. Eligible purposes are acquisition of buses for fleet and service expansion, bus maintenance and administrative facilities, transfer facilities, bus malls, transportation centers, intermodal terminals, park-and-ride stations, acquisition of replacement vehicles, bus rebuilds, bus preventive maintenance, passenger amenities such as passenger shelters and bus stop signs, accessory and miscellaneous equipment such as mobile radio units, supervisory vehicles, fare boxes, computers, and shop and garage equipment. Eligible applicants are State and local governmental authorities. Eligible subrecipients include other public agencies, private companies engaged in public transportation and private non-profit organizations. For more information about Bus and Bus-Related Facilities contact Kimberly Sledge, Office of Transit Programs, at (202) 366–2053.

1. FY 2009 Funding Availability

The Continuing Appropriations Act, 2009, provides $350,455,128 for the Bus and Bus-Related Facilities program. FTA will publish project allocations in a supplemental notice when all program funds have been made available.

The SAFETEA–LU Technical Corrections Act of 2008 extended funds made available for FY 2006 SAFTETEA–LU projects number 176 and 652. Funds for these projects remain available until September 30, 2009 and are shown in Table 10.

2. Requirements

FTA honors Congressional earmarks for the purpose designated, for purposes eligible under the program or under the expanded eligibility of a ''notwithstanding'' provision. Projects designated for funding in the report language accompanying the Consolidated Appropriations Act, 2008, were incorporated as earmarks into the Act by reference. FTA will treat these projects as projects designated in law. To apply to use funds designated in report language under the Bus Program in any year for project activities outside the scope of the project designation included in report language, the recipient must submit a request for reprogramming to the House and Senate

Committees on Appropriations for resolution.

FTA will continue to honor projects earmarked to receive Section 5309 bus funds in SAFETEA–LU for fiscal years 2007 and 2008 as well as projects earmarked by reference in the Consolidated Appropriations Act, 2008. Legislation will be necessary to amend the earmark if you wish to use funds for project activities outside the scope of the project description.

Grants made under the Bus and Bus-Related Facilities program must meet all other eligibility requirements as outlined in Section 5309 unless otherwise specified in law.

Program guidance for Bus and Bus-Related Facilities is found in FTA Circular C9300.1B, ''Capital Investment Program Guidance and Application Instructions,'' (November 1, 2008).

3. Period of Availability

The FY 2007 and FY 2008 Bus and Bus-Related Facilities funds not obligated in a grant for eligible purposes as of September 30, 2009 and September 30, 2010, respectively, may be made available for other projects under 49 U.S.C. 5309.

4. Other Program or Allocation Related Information and Highlights

Prior year unobligated balances for Bus and Bus-Related allocations in the amount of $665,031,952 remain available for obligation in FY 2009. This includes $1,772,317 for FY 2006 earmarks extended in the SAFETEA–LU Technical Corrections Act, 2008; $197,666,184 in FY 2007 unobligated allocations (earmarked and discretionary projects); and $465,593,451in FY 2008 unobligated allocations. The unobligated amounts available as of September 30, 2008, are displayed in Table 10. The FTA will issue a supplemental notice at a later date that identifies project funds that are redirected to other eligible activities or extended to the original project by subsequent action. Project funding that was extended or redirected under the SAFETEA–LU Technical Corrections Act of 2008 are listed above in section 1 and also included in Table 10.

G. Capital Investment Program (49 U.S.C. 5309)—New Starts

The New Starts program provides funds for construction of new fixed guideway systems or extensions to existing fixed guideway systems. Eligible purposes are light rail, rapid rail (heavy rail), commuter rail, monorail, automated fixed guideway system (such as a ''people mover''), or a busway/high occupancy vehicle (HOV) facility, Bus Rapid Transit that is fixed guideway, or an extension of any of these. Projects become candidates for funding under this program by successfully completing the appropriate steps in the major capital investment planning and project development process. Major new fixed guideway projects, or extensions to existing systems, financed with New Starts funds typically receive these funds through a full funding grant agreement (FFGA) that defines the scope of the project and specifies the total multi-year Federal commitment to the project. Beginning in FY 2007, up to $200,000,000 each year is designated for ''Small Starts'' (Section 5309(e)) projects with a New Starts share of less than $75,000,000 and a net project cost of less than $250,000,000.

For more information about New Starts project development contact Elizabeth Day, Office of Planning and Environment, at (202) 366–4033, or for information about published allocations contact Kimberly Sledge, Office of Transit Programs, at (202) 366–2053.

1. FY 2009 Funding Availability

The Continuing Appropriations Act, 2009, provides $668,117,803 to New Starts. The total amount allocated for New Starts is $430,252,472, as shown in the table below.

CAPITAL INVESTMENT PROGRAM (NEW STARTS)

Total Appropriation	$674,866,468
Oversight (one percent)	−6,748,665
Undistributed Amount	237,865,331
Total Allocated	430,252,472

2. Basis for Allocation

Congress included authorizations for specific New Starts projects with Full Funding Grant Agreements (FFGA) in SAFETEA–LU. Under the Continuing Appropriations Act, 2009, FFGAs have been allocated 5/12ths and the one percent statutory project management oversight takedown has been applied. Funds allocated to specific projects are shown in Table 11.

3. Requirements

Because New Starts projects are earmarked in law rather than report language, reprogramming for a purpose other than that specified must also occur in law. New Starts projects are subject to a complex set of approvals related to planning and project development set forth in 49 CFR Part 611. FTA has published a number of rulemakings and interim guidance documents related to the New Starts program since the passage of SAFETEA–LU. Grantees should reference the FTA Web site at *http://www.fta.dot.gov* for the most current program guidance about project developments and management. Grant related guidance for New Starts is found in FTA Circular C9300.1B, Capital Investment Program Guidance and Application Instructions dated November 1, 2008; and C5200.1A, Full Funding Grant Agreement Guidance, dated December 5, 2002.

4. Period of Availability

New Starts funds remain available for three fiscal years (including the fiscal year the funds are made available or appropriated plus two additional years). FY 2009 funds remain available through September 30, 2011. Funds may be made available for other section 5309 projects after the period of availability has expired.

5. Other Program or Apportionment Related Information and Highlights

Prior year unobligated allocations for New Starts in the amount of $325,627,924 remain available for obligation in FY 2009. This amount includes $62,712,383 in FY 2007 and $262,915,541 in FY 2008 unobligated allocations. These unobligated amounts are displayed in Table 12.

H. Special Needs of Elderly Individuals and Individuals With Disabilities Program (49 U.S.C. 5310)

This program provides formula funding to States for capital projects to assist private nonprofit groups in meeting the transportation needs of the elderly and individuals with disabilities when the public transportation service provided in the area is unavailable, insufficient, or inappropriate to meet these needs. A State agency designated by the Governor administers the Section 5310 program. The State's responsibilities include: Notifying eligible local entities of funding availability; developing project selection criteria; determining applicant eligibility; selecting projects for funding; and ensuring that all subrecipients comply with Federal requirements. Eligible nonprofit organizations or public bodies must apply directly to the designated State agency for assistance under this program. For more information about the Elderly and Individuals with Disabilities Program contact David Schneider, Office of Transit Programs, at (202) 366–2053.

1. FY 2009 Funding Availability

The Continuing Appropriations Act, 2009, provides $54,622,700 to the Elderly and Individuals with Disabilities Program (49 U.S.C. 5310).

After deduction of 0.5 percent for oversight, and the addition of reapportioned prior year funds, $54,349,586 remains available for allocation to the States.

ELDERLY AND INDIVIDUALS WITH DISABILITIES PROGRAM

Total Appropriation	$54,622,700
Oversight Deduction	−273,113
Total Apportioned	54,349,587

The FY 2009 Elderly and Individuals with Disabilities Program apportionments to the States are displayed in Table 13.

2. Basis for Apportionment

FTA allocates funds to the States by an administrative formula consisting of a $125,000 floor for each State ($50,000 for smaller territories) with the balance allocated based on 2000 Census population data for persons aged 65 and over and for persons with disabilities.

3. Requirements

Funds are available to support the capital costs of transportation services for older adults and people with disabilities. Uniquely under this program, eligible capital costs include the acquisition of service. Seven specified States (Alaska, Louisiana, Minnesota, North Carolina, Oregon, South Carolina, and Wisconsin) may use up to 33 percent of their apportionment for operating assistance under the terms of the SAFETEA–LU Section 3012(b) pilot program.

Capital assistance is provided on an 80 percent Federal, 20 percent local matching basis except that Section 5310(c) allows States eligible for a higher match under the sliding scale for FHWA programs to use that match ratio for Section 5310 capital projects. Operating assistance is 50 percent Federal, 50 percent local. Funds provided under other Federal programs (other than those of the DOT, with the exception of the Federal Lands Highway Program established by 23 U.S.C. 204) may be used as match. Revenue from service contracts may also be used as local match.

While the assistance is intended primarily for private non-profit organizations, public bodies approved by the State to coordinate services for the elderly and individuals with disabilities, or any public body that certifies to the State that there are no non-profit organizations in the area that are readily available to carry out the service, may receive these funds.

States may use up to ten percent of their annual apportionment to administer, plan, and provide technical assistance for a funded project. No local share is required for these program administrative funds. Funds used under this program for planning must be shown in the United Planning Work Program (UPWP) for MPO(s) with responsibility for that area.

The State recipient must certify that: The projects selected were derived from a locally developed, coordinated public transit-human services transportation plan; and, the plan was developed through a process that included representatives of public, private, and nonprofit transportation and human services providers and participation by the public. The locally developed, coordinated public transit-human services transportation planning process must be coordinated and consistent with the metropolitan and statewide planning processes and funding for the program must included in the metropolitan and statewide Transportation Improvement Program (TIP and STIP) at a level of specificity or aggregation consistent with State and local policies and procedures. Finally, the State must certify that allocations of the grant to subrecipients are made on a fair and equitable basis.

The coordinated planning requirement is also a requirement in two additional programs. Projects selected for funding under the Job Access Reverse Commute program and the New Freedom program are also required to be derived from a locally developed coordinated public transit/human service transportation plan. FTA anticipates that most areas will develop one consolidated plan for all the programs, which may include separate elements and other human service transportation programs.

The Section 5310 program is subject to the requirements of Section 5307 to the extent the Secretary determines appropriate. Program guidance is found in FTA C 9070.1F, dated May 1, 2007. The circular is posted on the FTA Web site at *http://www.fta.dot.gov.*

4. Period of Availability

FTA has administratively established a three year period of availability for Section 5310 funds. Funds allocated to States under the Elderly and Individuals with Disabilities Program in this notice must be obligated by September 30, 2011. Any funding that remains unobligated as of that date will revert to FTA for reapportionment among the States under the Elderly and Individuals with Disabilities Program.

5. Other Program or Apportionment Related Information and Highlights

States may transfer Section 5310 funds to Section 5307 or Section 5311, but only for projects selected under the Section 5310 program, not as a general supplement for those programs. FTA anticipates that the States would use this flexibility primarily for projects to be implemented by a Section 5307 recipient in a small urbanized area, or for Federally recognized Indian Tribes that elect to receive funds as a direct recipient from FTA under Section 5311. A State that transfers Section 5310 funds to Section 5307 must certify that each project for which the funds are transferred has been coordinated with private nonprofit providers of services. FTA has established a scope code (641) to track 5310 projects included within a Section 5307 or 5311 grant. Transfer to Section 5307 or 5311 is permitted but not required. FTA expects primarily to award stand-alone Section 5310 grants to the State for any and all subrecipients.

I. Nonurbanized Area Formula Program (49 U.S.C. 5311)

This program provides formula funding to States and Indian Tribes for the purpose of supporting public transportation in areas with a population of less than 50,000. Funding may be used for capital, operating, State administration, and project administration expenses. Eligible subrecipients include State and local public agencies, Indian Tribes, private non-profit organizations, and private operators of public transportation services, including intercity bus companies. Indian Tribes are also eligible direct recipients under Section 5311, both for funds apportioned to the States and for projects selected to be funded with funds set aside for a separate Tribal Transit Program.

For more information about the Nonurbanized Area Formula Program contact Lorna Wilson, Office of Transit Programs, at (202) 366–2053.

1. FY 2009 Funding Availability

The Continuing Appropriations Act, 2009, provides $188,383,800 to the Nonurbanized Area Formula Program (49 U.S.C. 5311). The total amount apportioned for the Nonurbanized Area Formula Program is $208,147,062, after take-downs of two percent for the Rural Transportation Assistance Program (RTAP), 0.5 percent for oversight, and $5,161,200 for the Tribal Transit Program, and the addition of Section 5340 funds and prior year funds

reapportioned, as shown in the table below.

NONURBANIZED AREA FORMULA PROGRAM

Total Appropriation	$188,383,800
Oversight Deduction	−941,919
RTAP Takedown	−3,767,676
Tribal Transit Takedown	−5,161,200
Section 5340 Funds Added	29,634,057
Total Apportioned	208,147,062

The FY 2009 Nonurbanized Area Formula apportionments to the States are displayed in Table 14.

2. Basis for Apportionments

FTA apportions the funds available for apportionment after take-down for oversight, the Tribal Transit Program, and RTAP according to a statutory formula. FTA apportions the first twenty percent to the States based on land area in nonurbanized areas with no state receiving more than 5 percent of the amount apportioned. FTA apportions the remaining eighty percent based on nonurbanized population of each State relative to the national nonurbanized population. FTA does not apportion Section 5311 funds to the Virgin Islands, which by a statutory exception are treated as an urbanized area for purposes of the Section 5307 formula program.

FTA is allocating $29,634,057 to the 50 States for nonurbanized areas from the Growing States portion of Section 5340. FTA apportions Growing States funds by a formula based on State population forecasts for 15 years beyond the most recent census. FTA distributes the amounts apportioned for each State between UZAs and nonurbanized areas based on the ratio of urbanized/nonurbanized population within each State in the 2000 census.

3. Program Requirements

The Nonurbanized Area Formula Program provides capital, operating and administrative assistance for public transit service in nonurbanized areas under 50,000 in population.

The Federal share for capital assistance is 80 percent and for operating assistance is 50 percent, except that States eligible for the sliding scale match under FHWA programs may use that match ratio for Section 5311 capital projects and 62.5 percent of the sliding scale capital match ratio for operating projects.

Each State must spend no less than 15 percent of its FY 2009 Nonurbanized Area Formula apportionment for the development and support of intercity bus transportation, unless the State certifies, after consultation with affected intercity bus service providers, that the intercity bus service needs of the State are being adequately met. FTA also encourages consultation with other stakeholders, such as communities affected by loss of intercity service.

Each State prepares an annual program of projects, which must provide for fair and equitable distribution of funds within the States, including Indian reservations, and must provide for maximum feasible coordination with transportation services assisted by other Federal sources.

In order to retain eligibility for funding, recipients of Section 5311 funding must report data annually to the NTD.

Program guidance for the Nonurbanized Area Formula Program is found in FTA C 9040.1F, Nonurbanized Area Formula Program Guidance and Grant Application Instructions, dated April 1, 2007, which was revised and reissued after notice and comment. The circular is posted at *http://www.fta.dot.gov.*

4. Period of Availability

Funds apportioned to nonurbanized areas under the Nonurbanized Area Formula Program during FY 2009 will remain available for two additional fiscal years after the year of apportionment. Any funds that remain unobligated at the close of business on September 30, 2011, will revert to FTA for allocation among the States under the Nonurbanized Area Formula Program.

5. Other Program or Apportionment Related Information and Highlights

a. NTD Reporting. By law, FTA requires that each recipient under the Section 5311 program submit an annual report to the NTD containing information on capital investments, operations, and service provided with funds received under the Section 5311 program. Section 5311(b)(4), as amended by SAFETEA–LU, specifies that the report should include information on total annual revenue, sources of revenue, total annual operating costs, total annual capital costs, fleet size and type, and related facilities, revenue vehicle miles, and ridership. State or Territorial DOT 5311 grant recipients must complete a one-page form of basic data for each 5311 subrecipient, unless the subrecipient is already providing a full report to the NTD as a Tribal Transit direct recipient or as an urbanized area reporter (without receiving a Nine or Fewer Vehicles Waiver). For the 2008 Report Year State or Territorial DOTs must report on behalf of any subrecipient receiving Section 5311 grants in 2008, or that continued to benefit in 2008 from capital assets purchased using Section 5311 grants. Tribal Transit direct recipients must report if they received an obligation or an outlay for a Section 5311 grant in 2008, or if they continued to benefit in 2008 from capital assets using Section 5311 Grants, unless the Tribe is already filing a full NTD Reports as an urbanized area reporter or unless the Tribe only received $50,000 or less in planning grants. The NTD Rural Reporting Manual contains detailed reporting instructions and is posted on the NTD Web site, *http://www.ntdprogram.gov.*

b. Extension of Intercity Bus Pilot of In-Kind Match. Beginning in FY 2007, FTA implemented a two year pilot program of in-kind match for intercity bus service. The initial program was set to expire after FY 2008; however, FTA decided to extend the program through FY 2009. FTA published guidance on the in-kind match pilot in the **Federal Register** on February 28, 2007, as Appendix 1 of the Notice announcing the final revised circular 9040.1F.

J. Rural Transportation Assistance Program (49 U.S.C. 5311(b)(3))

This program provides funding to assist in the design and implementation of training and technical assistance projects, research, and other support services tailored to meet the needs of transit operators in nonurbanized areas. For more information about Rural Transportation Assistance Program (RTAP) contact Lorna Wilson, Office of Transit Programs, at (202) 366–2053.

1. FY 2009 Funding Availability

The Continuing Appropriations Act, 2009, provides $3,767,676 to RTAP (49 U.S.C. 5311(b)(2)), as a two percent takedown from the funds appropriated for Section 5311. FTA has reserved 15 percent for the National RTAP program. After adding prior year funds eligible for reapportionment, $3,202,525 is available for allocations to the States, as shown in the table below.

RURAL TRANSIT ASSISTANCE PROGRAM

Total Appropriation	$3,767,676
National RTAP Takedown	−565,151
Total Apportioned	3,202,525

Table 14 shows the FY 2009 RTAP allocations to the States.

2. Basis for Allocation

FTA allocates funds to the States by an administrative formula. First FTA allocates $65,000 to each State ($10,000 to territories), and then allocates the balance based on nonurbanized population in the 2000 census.

3. Program Requirements

States may use the funds to undertake research, training, technical assistance, and other support services to meet the needs of transit operators in nonurbanized areas. These funds are to be used in conjunction with a State's administration of the Nonurbanized Area Formula Program, but may also support the rural components of the Section 5310, JARC, and New Freedom programs.

4. Period of Availability

Funds apportioned to States under RTAP remain available for two fiscal years following FY 2009. Any funds that remain unobligated at the close of business on September 30, 2011, will revert to FTA for allocation among the States under the RTAP.

5. Other Program or Apportionment Related Information and Highlights

The National RTAP project is administered by cooperative agreement and re-competed at five-year intervals. In FY 2008, FTA awarded the cooperative agreement to the Neponset Valley Transportation Management Association (NVTMA) located in Waltham, Massachusetts through a competitive process. The projects are guided by a project review board that consists of managers of rural transit systems and State DOT RTAP programs. National RTAP resources also support the biennial TRB National Conference on Rural Public and Intercity Bus Transportation and other research and technical assistance projects of a national scope.

K. Public Transportation on Indian Reservations Program (49 U.S.C. 5311(c)(1))

FTA refers to this program as the Tribal Transit Program. It is funded as a takedown from funds appropriated for the Section 5311 program. Federally recognized Indian Tribes are defined as eligible direct recipients. The funds are to be apportioned for grants to Indian Tribes for any purpose eligible under Section 5311, which includes capital, operating, planning, and administrative assistance for rural public transit services and rural intercity bus service. For more information about the Tribal Transit Program contact Lorna Wilson, Office of Transit Programs, at (202) 366–2053.

1. Funding Availability in FY 2009

Under the Continuing Appropriations Act, 2009, the amount allocated to the program in FY 2009 is $5,161,200, as authorized in Section 5311(c)(1)(C).

2. Basis for Allocation

Based on procedures developed in consultation with the Tribes, FTA will issue a Notice of Funding Availability (NOFA) soliciting applications for FY 2009 funds.

3. Requirements

FTA developed streamlined program requirements based on statutory authority allowing the Secretary to determine the terms and conditions appropriate to the program. These conditions are contained in the annual NOFA. Beginning with grants awarded in FY 2009, the grant agreement will incorporate the statement of warranty for labor protective arrangements, and tribal grants will be submitted to the Department of Labor (DOL) upon FTA approval.

4. Period of Availability

Funds remain available for three fiscal years, which includes the fiscal year the funds were apportioned or appropriated plus two additional years. Funds appropriated in FY 2009 will remain available for obligation to the tribes competitively selected to receive the funds through September 30, 2011. Any funds that remain unobligated after September 30, 2011, will revert to FTA for reallocation among the Tribes.

5. Other Program or Apportionment Related Information and Highlights

Prior year unobligated allocations under the Tribal Transit Program in the amount of $2,876,718 remain available for obligation in FY 2009. These unobligated amounts are displayed in Table 15.

The funds set aside for the Tribal Transit Program are not meant to replace or reduce funds that Indian Tribes receive from states through the Section 5311 program but are to be used to enhance public transportation on Indian reservations and transit serving tribal communities. Funds allocated to Tribes by the States may be included in the State's Section 5311 application or awarded by FTA in a grant directly to the tribe. We encourage Tribes intending to apply to FTA as direct recipients to contact the appropriate FTA regional office at the earliest opportunity.

Technical assistance for Tribes may be available from the State DOT using the State's allocation of RTAP or funds available for State administration under Section 5311, from the Tribal Transportation Assistance Program (TTAP) Centers supported by FHWA, and from the Community Transportation Association of America under a program funded by the United States Department of Agriculture (USDA). The National RTAP will also be developing new resources for Tribal Transit.

L. National Research Programs (49 U.S.C. 5314)

FTA's National Research Programs (NRP) include the National Research and Technology Program (NRTP), the Transit Cooperative Research Program (TCRP), the National Transit Institute (NTI), and the University Transportation Centers Program (UTC).

Through funding under these programs, FTA seeks to deliver solutions that improve public transportation. FTA's Strategic Research Goals are to provide transit research leadership, increase transit ridership, improve capital and operating efficiencies, improve safety and emergency preparedness, and to protect the environment and promote energy independence. For more information contact Bruce Robinson, Office of Research, Demonstration and Innovation, at (202) 366–4209.

1. Funding Availability in FY 2009

The Continuing Appropriations Act, 2009, provides $28,112,583 for the Research and University Research Centers Programs. Of this amount $3,999,930 is allocated for TCRP, $1,849,430 for NTI, $3,010,700 for the UTC, and $19,252,523 for NRTP. Within the NRTP, $22,615,000 is allocated for specific activities under 49 U.S.C. 5338(d) and in Section 3046 of SAFETEA–LU, more than the amount currently available. All research and research and development projects, as defined by the Office of Management and Budget, are subject to a 2.6% reduction for the Small Business Innovative Research Program (SBIR). A project allocation table with the entire year's funding will be published in a subsequent notice.

2. Program Requirements

Application Instructions and Program Management Guidelines are set forth in FTA Circular 6100.1C. Research projects must support FTA's Strategic Research Goals and meet the Office of Management and Budget's Research and Development Investment Criteria. All

research recipients are required to work with FTA to develop approved Statements of Work and plans to evaluate research results before award.

Eligible activities under the NRTP include research, development, demonstration and deployment projects as defined by 49 U.S.C. 5312(a); Joint Partnership projects for deployment of innovation as defined by 49 U.S.C. 5312(b); International Mass Transportation Projects as defined by 49 U.S.C. 5312(c); and, human resource programs as defined by 49 U.S.C. 5322. Unless otherwise specified in law, all projects must meet one of these eligibility requirements.

Problem Statements for TCRP can be submitted on TCRP's website: *http://www.tcrponline.org.* Information about NTI courses can be found at *http://www.ntionline.com.* UTC funds are transferred to the Research and Innovative Technology Administration to make awards.

3. Period of Availability

Funds are available until expended.

4. Other Program or Apportionment Related Information and Highlights

Funds not designated by Congress for specific projects and activities will be programmed by FTA based on national priorities. Opportunities are posted in *http://www.grants.gov* under Catalogue of Federal Domestic Assistance Number 20.514.

M. Job Access and Reverse Commute Program (49 U.S.C. 5316)

The Job Access and Reverse Commute (JARC) program provides formula funding to States and Designated Recipients to support the development and maintenance of job access projects designed to transport welfare recipients and low-income individuals to and from jobs and activities related to their employment, and for reverse commute projects designed to transport residents of UZAs and other than urbanized to suburban employment opportunities. For more information about the JARC program contact David Schneider, Office of Transit Programs, at (202) 366–2053.

1. Funding Availability in FY 2009

The Continuing Appropriations Act, 2009, provides $67,095,600 for the JARC Program. The total amount apportioned by formula is shown in the table below.

JOB ACCESS AND REVERSE COMMUTE PROGRAM

Total Apportioned	$67,095,600

Table 16 shows the FY 2009 JARC apportionments.

2. Basis for Formula Apportionment

By law, FTA allocates 60 percent of funds available to UZAs with populations of 200,000 or more persons (large UZAs); 20 percent to the States for urbanized areas with populations ranging from 50,000 to 200,000 persons (small UZAs), and 20 percent to the States for rural and small urban areas with populations of less than 50,000 persons. FTA apportions funds based upon the number of low income individuals residing in a State or large urbanized area, using data from the 2000 Census for individuals below 150 percent of poverty. FTA publishes apportionments to each State for small UZAs and for rural and small urban areas and a single apportionment for each large UZA.

The Designated Recipient, either for the State or for a large UZA, is responsible for further allocating the funds to specific projects and subrecipients through a competitive selection process. If the Governor has designated more than one recipient of JARC funds in a large UZA, the Designated Recipients may agree to conduct a single competitive selection process or sub-allocate funds to each Designated Recipient, based upon a percentage split agreed upon locally, and conduct separate competitions.

States may transfer funds between the small UZA and the nonurbanized apportionments, if all of the objectives of JARC are met in the size area the funds are taken from. States may also use funds in the small UZA and nonurbanized area apportionments for projects anywhere in the State (including large UZAs) if the State has established a statewide program for meeting the objectives of JARC. A State planning to transfer funds under either of these provisions should submit a request to the FTA regional office. FTA will assign new accounting codes to the funds before obligating them in a grant.

3. Requirements

States and Designated Recipients must solicit grant applications and select projects competitively, based on application procedures and requirements established by the Designated Recipient, consistent with the Federal JARC program objectives. In the case of large UZAs, the area-wide solicitation shall be conducted in cooperation with the appropriate MPO(s).

Funds are available to support the planning, capital, and operating costs of transportation services that are eligible for funding under the program. Assistance may be provided for a variety of transportation services and strategies directed at assisting welfare recipients and eligible low-income individuals address unmet transportation needs, and to provide reverse commute services. The transportation services may be provided by public, non-profit, or private-for-profit operators. The Federal share is 80 percent of capital and planning expenses and 50 percent of operating expenses. Funds provided under other Federal programs (other than those of the DOT, with the exception of the Federal Lands Highway Program established by 23 U.S.C. 204) may be used for local/State match for funds provided under Section 5316, and revenue from service contracts may be used as local match.

States and Designated Recipients may use up to ten percent of their annual apportionment for administration, planning, and to provide technical assistance. No local share is required for these program administrative funds. Funds used under this program for planning in urbanized areas must be shown in the UPWP for MPO(s) with responsibility for that area.

The Designated Recipient must certify that: the projects selected were derived from a locally developed, coordinated public transit-human services transportation plan; and, the plan was developed through a process that included representatives of public, private, and nonprofit transportation and human services providers and participation by the public, including those representing the needs of welfare recipients and eligible low-income individuals. The locally developed, coordinated public transit-human services transportation planning process must be coordinated and consistent with the metropolitan and statewide planning processes and funding for the program must be included in the metropolitan and statewide Transportation Improvement Program (TIP and STIP) at a level of specificity or aggregation consistent with State and local policies and procedures. Finally, the State must certify that allocations of the grant to subrecipients are made on a fair and equitable basis.

The coordinated planning requirement is also a requirement in two additional programs. Projects selected for funding under the Section 5310 program and the New Freedom program are also required to be derived from a locally developed coordinated public transit-human service transportation plan. FTA anticipates that most areas will develop one consolidated plan for all the programs, which may include

separate elements and other human service transportation programs. The goal of the coordinated planning process is not to be an exhaustive document, but to serve as a tool for planning and implementing beneficial projects. The level of effort required to develop the plan will vary among communities based on factors such as the availability of resources. FTA does not approve coordinated plans.

The JARC program is subject to the relevant requirements of Section 5307, including the requirement for certification of labor protections. JARC program requirements are published in FTA circular 9050.1, dated April 1, 2007. The circular and other guidance including frequently asked questions are posted on the FTA Web site at *http://www.fta.dot.gov.*

4. Period of Availability

FTA has established a consistent three-year period of availability for JARC, New Freedom, and the Section 5310 program, which includes the year of apportionment plus two additional years. FY 2009 funding is available through FY 2011. Any funding that remains unobligated on September 30, 2011 will revert to FTA for reapportionment among the States and large UZAs under the JARC program.

5. Other Program or Apportionment Related Information and Highlights

a. Carryover Earmarks. Table 17 lists prior year carryover of $7,791,630 for JARC projects designated by Congress in FYs 2002–2005. JARC earmarks carried over from TEA–21 are subject to the terms and conditions under which they were originally appropriated, including the requirement for a 50 percent local share for both capital and operating assistance. All projects should be in a regional JARC Plan as required under TEA–21 or in the new local coordinated plan required by the new formula JARC program. FTA will award a grant for a designated project upon receipt of a complete application, but can honor changes to the original designation only if so directed by the Appropriations Committee chairs. FTA intends to propose that any remaining JARC Discretionary Program funds be reallocated in the agency's FY 2010 budget. Grantees intending to use their remaining discretionary JARC funds should obligate funds prior to September 30, 2009.

b. Designated Recipient. FTA must have received formal notification from the Governor or Governor's designee of the Designated Recipient for JARC funds apportioned to a State or large UZA before awarding a grant to that area for JARC projects.

c. Transfers to Section 5307 or 5311. States may transfer JARC funds to Section 5307 or Section 5311, but only for projects competitively selected under the JARC program, not as a general supplement for those programs. FTA anticipates that the States would use this flexibility primarily for projects to be implemented by a Section 5307 recipient in a small urbanized area or for Federally recognized Indian Tribes that elect to receive funds as a direct recipient from FTA under Section 5311. FTA has established a scope code (646) to track JARC projects included within a Section 5307 or 5311 grant. Transfer to Section 5307 or 5311 is permitted but not required. FTA will also award stand-alone Section 5316 grants to the State for any and all subrecipients. In order to track disbursements accurately against the appropriate program, FTA will not combine JARC funds with Section 5307 funds in a single Section 5307 grant, nor will FTA combine JARC with New Freedom funds in a single Section 5307 grant.

d. Evaluation. Section 5316(i)(2), of SAFETEA–LU, requires FTA to conduct a study to evaluate the effectiveness of the JARC program. To support the evaluation, annual GAO reports on the program, and DOT Performance Measures, while reducing the burden grantees previously experienced from separate reporting required for the JARC program under TEA–21. FTA has established a web-based system for designated recipients to report their program measures on behalf of themselves and their subrecipients.

N. New Freedom Program (49 U.S.C. 5317)

SAFETEA–LU established the New Freedom Program under 49 U.S.C. 5317. The program purpose is to provide new public transportation services and public transportation alternatives beyond those currently required by the Americans with Disabilities Act of 1990 (42 U.S.C. 12101 *et seq.*) that assist individuals with disabilities with transportation, including transportation to and from jobs and employment support services. For more information about the New Freedom program contact David Schneider, Office of Transit Programs, at (202) 366–2053.

1. Funding Availability in FY 2009

The Continuing Appropriations Act, 2009, provides $37,633,750 for the New Freedom Program. The entire amount is apportioned by formula, as shown in the table below.

NEW FREEDOM PROGRAM

Total Apportioned	$37,633,750

Table 18 shows the FY 2009 New Freedom apportionments.

2. Basis for Formula Apportionment

By law, FTA allocates 60 percent of funds available to UZAs with populations of 200,000 or more persons (large UZAs); 20 percent to the States for urbanized areas with populations ranging from 50,000 to 200,000 persons (small UZAs), and 20 percent to the States for rural and small urban areas with populations of less than 50,000 persons. FTA apportions funds based upon the number of persons with disabilities over the age of five residing in a State or large urbanized area, using data from the 2000 Census. FTA publishes apportionments to each State for small UZAs and for rural and small urban areas and a single apportionment for each large UZA.

The Designated Recipient, either for the State or for a large UZA, is responsible for further allocating the funds to specific projects and subrecipients through a competitive selection process. If the Governor has designated more than one recipient of New Freedom funds in a large UZA, the Designated Recipients may agree to conduct a single competitive selection process or sub-allocate funds to each Designated Recipient, based upon a percentage split agreed on locally and conduct separate competitions.

3. Requirements

States and Designated Recipients must solicit grant applications and select projects competitively, based on application procedures and requirements established by the Designated Recipient, consistent with the Federal New Freedom program objectives. In the case of large UZAs, the area-wide solicitation shall be conducted in cooperation with the appropriate MPO(s).

Funds are available to support the capital and operating costs of new public transportation services and public transportation alternatives that are beyond those required by the Americans with Disabilities Act. Funds provided under other Federal programs (other than those of the DOT, with the exception of the Federal Lands Highway Program established by 23 U.S.C. 204) may be used as match for capital funds provided under Section 5317, and revenue from contract services may be used as local match.

Funding is available for transportation services provided by public, non-profit,

or private-for-profit operators. Assistance may be provided for a variety of transportation services and strategies directed at assisting persons with disabilities to address unmet transportation needs. Eligible public transportation services and public transportation alternatives funded under the New Freedom program must be both new and beyond the ADA. (In FY 2007, FTA published interim guidance holding Designated Recipients harmless for project selections conducted in good faith based on FTA's earlier preliminary determination that eligible services could be either new or beyond the ADA. Grants awarded in FY 2009 are now subject to the requirements of the final guidance which was published April 1, 2007).

The Federal share is 80 percent of capital expenses and 50 percent of operating expenses. Funds provided under other Federal programs (other than those of the DOT) may be used for local/state match for funds provided under Section 5317, and revenue from service contracts may be used as local match.

States and Designated Recipients may use up to ten percent of their annual apportionment to administer, plan, and provide technical assistance for a funded project. No local share is required for these program administrative funds. Funds used under this program for planning must be shown in the UPWP for MPO(s) with responsibility for that area.

The Designated Recipient must certify that: the projects selected were derived from a locally developed, coordinated public transit-human services transportation plan; and, the plan was developed through a process that included representatives of public, private, and nonprofit transportation and human services providers and participation by the public, including those representing the needs of welfare recipients and eligible low-income individuals. The locally developed, coordinated public transit-human services transportation planning process must be coordinated and consistent with the metropolitan and statewide planning processes and funding for the program must be included in the metropolitan and statewide Transportation Improvement Program (TIP and STIP) at a level of specificity or aggregation consistent with State and local policies and procedures. Finally, the State must certify that allocations of the grant to subrecipients are made on a fair and equitable basis.

The coordinated planning requirement is also a requirement in two additional programs. Projects selected for funding under the Section 5310 program and the JARC program are also required to be derived from a locally developed coordinated public transit-human service transportation plan. FTA anticipates that most areas will develop one consolidated plan for all the programs, which may include separate elements and other human service transportation programs.

The New Freedom program is subject to the relevant requirements of Section 5307, but certification of labor protections is not required. New Freedom Program requirements are published in FTA circular 9045.1, which was effective May 1, 2007. The circular and other guidance including frequently asked questions are posted on the FTA Web site at *http://www.fta.dot.gov.*

4. Period of Availability

FTA has established a consistent three-year period of availability for New Freedom, JARC, and the Section 5310 program, which includes the year of apportionment plus two additional years. FY 2009 funding is available through FY 2011. Any funding that remains unobligated on September 30, 2011, will revert to FTA for reapportionment among the States and large UZAs under the New Freedom program.

5. Other Program or Apportionment Related Information and Highlights

a. Designated Recipient. FTA must have received formal notification from the Governor or Governor's designee of the Designated Recipient for New Freedom funds apportioned to a State or large UZA before awarding a grant to that area for New Freedom projects.

b. Transfers to Section 5307 or 5311. States may transfer New Freedom funds to Section 5307 or Section 5311, but only for projects competitively selected under the New Freedom program, not as a general supplement for those programs. FTA anticipates that the States would use this flexibility for projects to be implemented by a Section 5307 recipient in a small urbanized area or for Federally recognized Indian Tribes that elect to receive funds as a direct recipient from FTA under Section 5311. FTA has established a scope code (647) to track New Freedom projects included within a Section 5307 or 5311 grant. Transfer to Section 5307 or 5311 is permitted but not required. FTA will also award stand-alone Section 5317 grants to the State for any and all subrecipients. In order to track disbursements accurately against the appropriate program, FTA will not combine New Freedom funds with Section 5307 funds in a single Section 5307 grant, nor will FTA combine New Freedom with JARC funds in a single Section 5307 grant.

c. Performance Measures. To support the evaluation of the program and Departmental reporting under the Governmental Performance and Results Act and the Office of Management and Budget's Performance Assessment and Rating Tool, FTA has established a web-based system for designated recipients to report their program measures on behalf of themselves and their subrecipients.

O. Paul S. Sarbanes Transit in Parks Program (49 U.S.C. 5320)

The Paul S. Sarbanes Transit in Parks Program (Transit in Parks Program), formally the Alternative Transportation in Parks and Public Lands (ATPPL) program, is administered by FTA in partnership with the Department of the Interior (DOI) and the U.S. Department of Agriculture's Forest Service. The purpose of the program is to enhance the protection of national parks and Federal lands, and increase the enjoyment of those visiting them. The program funds capital and planning expenses for alternative transportation systems such as buses and trams in federally-managed parks and public lands. Federal land management agencies and State, tribal and local governments acting with the consent of a Federal land management agency are eligible to apply.

1. FY 2009 Funding Availability

The Continuing Appropriations Act, 2009, makes $10,752,500 available for the program in FY 2009. Up to ten percent of the funds may be reserved for planning, research, and technical assistance. FTA will publish a Notice of Funding Availability (NOFA) in the **Federal Register** inviting applications for projects to be funded in FY 2009.

2. Program Requirements

Projects are competitively selected based on criteria specified in the Notice of Funding Availability. The terms and conditions applicable to the program are also specified in the NOFA. Projects must conserve natural, historical, and cultural resources, reduce congestion and pollution, and improve visitor mobility and accessibility. No more than 25 percent may be allocated for any one project.

3. Period of Availability

The funds under the Transit in Parks Program remain available until expended.

4. Other Program or Apportionment Related Information and Highlights

Project selections for the FY 2008 funding were published in the **Federal Register** on October 10, 2008. Fifty-two projects totaling $24,470,501 were awarded.

P. Alternatives Analysis Program (49 U.S.C. 5339)

The Alternatives Analysis Program provides grants to States, authorities of the States, metropolitan planning organizations, and local government authorities to develop studies as part of the transportation planning process. These studies include an assessment of a wide range of public transportation alternatives designed to address a transportation problem in a corridor or subarea; sufficient information to enable the Secretary to make the findings of project justification and local financial commitment required; the selection of a locally preferred alternative; and the adoption of the locally preferred alternative as part of the state or regional long-range transportation plan. For more information about this program contact Ron Fisher, Office of Planning and Environment, at (202) 366–4033.

1. FY 2009 Funding Availability

The Continuing Appropriations Act, 2009, provides $10,619,642 to the Alternatives Analysis Program (49 U.S.C. 5339). FTA will publish project allocations in a supplemental notice when all program funds have been made available.

2. Requirements

Alternatives Analysis program funds may be made available to States, authorities of the States, metropolitan planning organizations, and local governmental authorities. The Government's share of the cost of an activity funded may not exceed 80 percent of the cost of the activity. The funds will be awarded as separate Section 5339 grants. The grant requirements will be comparable to those for Section 5309 grants. Eligible projects include planning and corridor studies and the adoption of locally preferred alternatives within the fiscally constrained Metropolitan Transportation Plan for that area. Funds awarded under the Alternatives Analysis Program must be shown in the UPWP for MPO(s) with responsibility for that area. Pre-award authority applies to these funds after Congress appropriates funds for these projects and the allocations are published in an FTA notice of apportionments and allocations.

Legislation to amend a 2007 or 2008 earmark under section 3037(c) of SAFETEA–LU is necessary should a recipient wish to use section 5339 funds for eligible project activities outside the scope of the project description. Unless otherwise specified in law, grants made under the Alternatives Analysis program must meet all other eligibility requirements as outlined in Section 5309.

3. Period of Availability

Funds designated for specific Alternatives Analysis Program projects remain available for obligation for three fiscal years, which includes the year of availability plus two additional fiscal years. Alternatives Analysis funds not obligated in an FTA grant for eligible purposes at the end of the period of availability will generally be made available for other projects.

4. Other Program or Apportionment Related Information and Highlights

Table 19 lists prior year carryover of $23,481,600 for Alternatives Analysis projects allocated project funding in FY 2007 and FY 2008. This amount includes $480,000 for FY 2006, which was competitively awarded in FY 2007. The total carryover amount also includes $8,987,600 from FY 2007 and $14,014,000 from FY 2008.

The SAFETEA–LU Technical Corrections Act of 2008 rescinded FY 2006 and FY 2007 funding in the amount of $500,000 for the Middle Rio Grande Coalition of Governments, Albuquerque to Santa Fe Corridor Study. Funding for the Lane County, Oregon Bus Rapid Transit Phase II Corridor Study is now available to all phases of the project.

Q. Growing States and High Density States Formula Factors

The Continuing Appropriations Act, 2009, makes $188,383,800 available for apportionment in accordance with the formula factors prescribed for Growing States and High Density States in Section 5340 of SAFETEA–LU. Fifty percent of this amount (or $94,191,900) is apportioned to eligible States and urbanized areas using the Growing State formula factors. The other 50 percent is apportioned to eligible States and urbanized areas using the High Density States formula factors. Based on application of the formulas, $64,557,843 of the Growing States funding was apportioned to urbanized areas and $29,634,057 to nonurbanized areas. All of the $94,191,900 allotted to High Density States was apportioned to urbanized areas.

The term 'State' is defined only to mean the 50 States. For the Growing State portion of Section 5340, funds are allocated based on the population forecasts for fifteen years after the date of that census. Forecasts are based on the trend between the most recent decennial census and Census Bureau population estimates for the most current year. Census population estimates as of December 27, 2007 were used in the FY 2009 apportionments Funds allocated to the States are then sub-allocated to urbanized and non-urbanized areas based on forecast population, where available. If forecasted population data at the urbanized level is not available, as is currently the case, funds are allocated to current urbanized and non-urbanized areas on the basis of current population in the 2000 Census. Funds allocated to urbanized areas are included in their Section 5307 apportionment. Funds allocated for non-urbanized areas are included in the states' Section 5311 apportionments.

R. Over-the-Road Bus Accessibility Program (49 U.S.C. 5310 note)

The Over-the-Road Bus Accessibility (OTRB) Program authorizes FTA to make grants to operators of over-the-road buses to help finance the incremental capital and training costs of complying with the DOT over-the-road bus accessibility final rule, 49 CFR Part 37, published on September 28, 1998 (63 FR 51670). FTA conducts a national solicitation of applications, and grantees are selected on a competitive basis. For more information about the OTRB program contact Blenda Younger, Office of Transit Programs, at (202) 366–2053.

1. Funding Availability in FY 2009

The Continuing Appropriations Act, 2009, provides $3,569,830 for the Over-the-Road Bus Accessibility (OTRB) Program, which is the total amount allocable for OTRB, as shown in the table below.

OVER-THE-ROAD BUS ACCESSIBILITY PROGRAM

Total Apportioned	$3,569,830

Of this amount, $2,677,373 is allocable to providers of intercity fixed-route service, and $892,457 to other providers of over-the-road bus services, including local fixed-route service, commuter service, and charter and tour service.

2. Program Requirements

Projects are competitively selected. The Federal share of the project is 90

percent of net project cost. Program guidance is provided in the **Federal Register** notice soliciting applications. Assistance under the program is available to private operators of over-the-road buses that are used substantially or exclusively in intercity, fixed route and over-the-road bus service. Assistance is also available to private operators of over-the-road buses in other services, such as charter, tour, and commuter service. Capital projects eligible for funding include projects to add lifts and other accessibility components to new vehicle purchases and to purchase lifts to retrofit existing vehicles. Eligible training costs include developing training materials or providing training for local providers of over-the-road bus services. A comprehensive listing of program requirements is published annually in the OTRB Program Notice of Funding Availability (NOFA).

3. Period of Availability

FTA has observed that some private operators selected to receive funding under this program have not acted promptly to obligate the funds in a grant and request reimbursement for expenditures. While the program does not have a statutory period of availability, in the FY 2008 Apportionment Notice, FTA published its intention to limit the period of availability to a selected operator to three years, which includes the year of allocation plus two additional years. Accordingly, funds for projects selected in FY 2005 or prior years are no longer available for obligation in a grant and will be reallocated in the FY 2009 competition. FY 2006 funds will be reallocated at the end of FY 2009 if not obligated in a grant by September 30, 2009. FY 2007 and FY 2008 funds were allocated on August 22, 2008 and will be reallocated if not obligated in a grant by September 30, 2010. Funds for project selections announced in FY 2009 will be reallocated if not obligated in a grant by September 30, 2011.

4. Other Program or Apportionment Related Information and Highlights

FTA will publish a NOFA soliciting applications for FY 2009 in a subsequent notice once the full funding level is made available to the program. The notice will be available at *http://www.fta.dot.gov/laws/leg_reg_federal_register.html.*

V. FTA Policy and Procedures for FY 2009 Grants

A. Automatic Pre-Award Authority To Incur Project Costs

1. Caution to New Grantees and Grantees Using Innovative Financing

While we provide pre-award authority to incur expenses prior to grant award for many projects, we recommend that first-time grant recipients not utilize this automatic pre-award authority and wait until the grant is actually awarded by FTA before incurring costs. As a new grantee, it is easy to misunderstand pre-award authority conditions and not be aware of all of the applicable FTA requirements that must be met in order to be reimbursed for project expenditures incurred in advance of grant award. FTA programs have specific statutory requirements that are often different from those for other Federal grant programs with which new grantees may be familiar. If funds are expended for an ineligible project or activity, FTA will be unable to reimburse the project sponsor and, in certain cases, the entire project may be rendered ineligible for FTA assistance.

Grantees proposing to use innovative financing techniques or capital leasing are required to consult with the applicable FTA Regional Office (see Appendix A) prior to entering into the financial agreement—especially where the grantee expects to use Federal funds for debt service or capital lease payments. Consulting with FTA prior to entering into the agreement allows FTA to advise the grantee of any applicable federal regulations, such as the Capital Leasing Regulation, and will minimize the risk of the costs being ineligible for reimbursement at a later date.

2. Policy

FTA provides pre-award authority to incur expenses prior to grant award for certain program areas described below. This pre-award authority allows grantees to incur certain project costs prior to grant approval and retain the eligibility of those costs for subsequent reimbursement after grant approval. The grantee assumes all risk and is responsible for ensuring that all conditions are met to retain eligibility. This pre-award spending authority permits a grantee to incur costs on an eligible transit capital, operating, planning, or administrative project without prejudice to possible future Federal participation in the cost of the project. In the **Federal Register** Notice of November 30, 2006, FTA extended pre-award authority for capital assistance under all formula programs through FY 2009, the duration of SAFETEA–LU. In this notice, FTA extends pre-award authority through FY 2010 for capital assistance under all formula programs. FTA provides pre-award authority for planning and operating assistance under the formula programs without regard to the period of the authorization. In addition, we extend pre-award authority for certain discretionary programs based on the annual Appropriations Act each year. All pre-award authority is subject to conditions and triggers stated below:

a. FTA does not impose additional conditions on pre-award authority for operating, planning, or administrative assistance under the formula grant programs. Grantees may be reimbursed for expenses incurred prior to grant award so long as funds have been expended in accordance with all Federal requirements. In addition to cross-cutting Federal grant requirements, program specific requirements must be met. For example, a planning project must have been included in a Unified Planning Work Program (UPWP); a New Freedom operating assistance project or a JARC planning or operating project must have been derived from a coordinated public transit-human services transportation plan (coordinated plan) and competitively selected by the Designated Recipient prior to incurring expenses; expenditure on State Administration expenses under State Administered programs must be consistent with the State Management Plan. Designated Recipients for JARC and New Freedom have pre-award authority for the ten percent of the apportionment they may use for program administration, if the use is consistent with their Program Management Plan.

b. Pre-Award authority for Alternatives Analysis planning projects under 49 U.S.C. 5339 is triggered by the publication of the allocation in FTA's **Federal Register** Notice of Apportionments and Allocations following the annual Appropriations Act, or announcement of additional discretionary allocations. The projects must be included in the UPWP of the MPO for that metropolitan area.

c. Pre-award authority for design and environmental work on a capital project is triggered by the authorization of formula funds, or the appropriation of funds for a discretionary project.

d. Following authorization of formula funds or appropriation and publication of discretionary projects, pre-award authority for capital project implementation activities including property acquisition, demolition,

construction, and acquisition of vehicles, equipment, or construction materials is triggered by completion of the environmental review process with FTA's concurrence in the categorical exclusion (CE) determination or signing of an environmental Record of Decision (ROD) or Finding of No Significant Impact (FONSI). Prior to exercising pre-award authority, grantees must comply with the conditions and Federal requirements outlined in paragraph 3 below. Failure to do so will render an otherwise eligible project ineligible for FTA financial assistance. Capital projects under the Section 5310, JARC, and New Freedom programs must comply with specific program requirements, including coordinated planning and competitive selection. In addition, prior to incurring costs, grantees are strongly encouraged to consult with the appropriate FTA regional office regarding the eligibility of the project for future FTA funds and the applicability of the conditions and Federal requirements.

e. As a general rule, pre-award authority applies to the Section 5309 Capital Investment Bus and Bus-Related Facilities, the Clean Fuels Bus program, high priority project designations, and any other transit discretionary projects designated in SAFETEA–LU only AFTER funds have been appropriated. Pre-award authority is currently extended for FY 2007 and FY 2008 discretionary project funding. As of the date of this notice, FTA extends preaward authority to FY 2009 projects designated discretionary funding in SAFETEA–LU and to discretionary allocations extended or reprogrammed under the SAFETEA–LU Technical Corrections Act of 2008, as of June 6, 2008. For Section 5309 Capital Investment Bus and Bus-Related, Clean Fuels Program, or other transit capital discretionary projects such as those designated in an annual Appropriations Act, the date that costs may be incurred is: (1) For design and environmental review, the appropriations bill which funds the project was enacted; and (2) for property acquisition, demolition, construction, and acquisition of vehicles, equipment, or construction materials, the date that FTA approves the document (ROD, FONSI, or CE determination) that completes the environmental review process required by the National Environmental Policy Act (NEPA) and its implementing regulations. FTA introduced this new trigger for pre-award authority in FY 2006 in recognition of the growing prevalence of new grantees unfamiliar with Federal and FTA requirements to ensure FTA's continued ability to comply with NEPA and related environmental laws. Because FTA does not sign a final NEPA document until MPO and statewide planning requirements (including air quality conformity requirements, if applicable) have been satisfied, this new trigger for pre-award will ensure compliance with both planning and environmental requirements prior to irreversible action by the grantee.

f. In previous notices, FTA extended pre-award authority to Section 330 projects referenced in the DOT Appropriation Act, 2002, and the Consolidated Appropriations Resolution, 2003 and to those surface transportation projects commonly referred to as Section 115 projects administered by FTA, for which amounts were provided in the Consolidated Appropriations Act, 2004, Section 117 projects in the 2005 Appropriations Act, and Section 112 of the 2006 Appropriations Act that are to be administered by FTA. FTA, in the FY 2008 Apportionment Notice, extended pre-award authority to high priority projects in SAFETEA–LU, as of the date they were transferred or allotted to FTA for administration. The same conditions described for bus projects apply to these projects. We strongly encourage any prospective applicant that does not have a previous relationship with FTA to review Federal grant requirements with the FTA regional office before incurring costs.

g. Blanket pre-award authority does not apply to Section 5309 Capital Investment New Starts funds. Specific instances of pre-award authority for Capital Investment New Starts projects are described in paragraph 4 below. Pre-award authority does not apply to Capital Investment Bus and Bus-Related Facilities or Clean Fuels projects authorized for funding beyond this fiscal year. Before an applicant may incur costs for Capital Investment New Starts projects, Bus and Bus-Related Facilities projects, or any other projects not yet published in a notice of apportionments and allocations, it must first obtain a written Letter of No Prejudice (LONP) from FTA. To obtain an LONP, a grantee must submit a written request accompanied by adequate information and justification to the appropriate FTA regional office, as described below.

h. Blanket pre-award authority does not apply to Section 5314 National Research Programs. Before an applicant may incur costs for National Research Programs, it must first obtain a written Letter of No Prejudice (LONP) from FTA. To obtain an LONP, a grantee must submit a written request accompanied by adequate information and justification to the appropriate FTA headquarters office. Information about LONP procedures may be obtained from the appropriate headquarters office.

3. Conditions

The conditions under which pre-award authority may be utilized are specified below:

a. Pre-award authority is not a legal or implied commitment that the subject project will be approved for FTA assistance or that FTA will obligate Federal funds. Furthermore, it is not a legal or implied commitment that all items undertaken by the applicant will be eligible for inclusion in the project.

b. All FTA statutory, procedural, and contractual requirements must be met.

c. No action will be taken by the grantee that prejudices the legal and administrative findings that the Federal Transit Administrator must make in order to approve a project.

d. Local funds expended by the grantee pursuant to and after the date of the pre-award authority will be eligible for credit toward local match or reimbursement if FTA later makes a grant or grant amendment for the project. Local funds expended by the grantee prior to the date of the pre-award authority will not be eligible for credit toward local match or reimbursement. Furthermore, the expenditure of local funds on activities such as land acquisition, demolition, or construction prior to the date of pre-award authority for those activities (*i.e.*, the completion of the NEPA process) would compromise FTA's ability to comply with Federal environmental laws and may render the project ineligible for FTA funding.

e. The Federal amount of any future FTA assistance awarded to the grantee for the project will be determined on the basis of the overall scope of activities and the prevailing statutory provisions with respect to the Federal/local match ratio at the time the funds are obligated.

f. For funds to which the pre-award authority applies, the authority expires with the lapsing of the fiscal year funds.

g. When a grant for the project is subsequently awarded, the Financial Status Report, in TEAM-Web, must indicate the use of pre-award authority.

h. Environmental, Planning, and Other Federal Requirements.

All Federal grant requirements must be met at the appropriate time for the project to remain eligible for Federal funding. The growth of the Federal transit program has resulted in a growing number of inexperienced grantees who make compliance with

Federal planning and environmental laws increasingly challenging. FTA has therefore modified its approach to pre-award authority to use the completion of the NEPA process, which has as a prerequisite the completion of planning and air quality requirements, as the trigger for pre-award authority for all activities except design and environmental review.

i. The requirement that a project be included in a locally adopted metropolitan transportation plan, the metropolitan transportation improvement program and Federally-approved statewide transportation improvement program (23 CFR Part 450) must be satisfied before the grantee may advance the project beyond planning and preliminary design with non-Federal funds under pre-award authority. If the project is located within an EPA-designated non-attainment area for air quality, the conformity requirements of the Clean Air Act, 40 CFR Part 93, must also be met before the project may be advanced into implementation-related activities under pre-award authority. Compliance with NEPA and other environmental laws and executive orders (*e.g.*, protection of parklands, wetlands, and historic properties) must be completed before State or local funds are spent on implementation activities, such as site preparation, construction, and acquisition, for a project that is expected to be subsequently funded with FTA funds. The grantee may not advance the project beyond planning and preliminary design before FTA has determined the project to be a categorical exclusion, or has issued a Finding of No Significant Impact (FONSI) or an environmental Record of Decision (ROD), in accordance with FTA environmental regulations, 23 CFR Part 771. For planning projects, the project must be included in a locally-approved Unified Planning Work Program (UPWP) that has been coordinated with the State.

j. In addition, Federal procurement procedures, as well as the whole range of applicable Federal requirements (*e.g.*, Buy America, Davis-Bacon Act, Disadvantaged Business Enterprise) must be followed for projects in which Federal funding will be sought in the future. Failure to follow any such requirements could make the project ineligible for Federal funding. In short, this increased administrative flexibility requires a grantee to make certain that no Federal requirements are circumvented through the use of pre-award authority. If a grantee has questions or concerns regarding the environmental requirements, or any other Federal requirements that must be met before incurring costs, it should contact the appropriate regional office.

4. Pre-Award Authority for New Starts Projects

a. Preliminary Engineering (PE) and Final Design (FD). Projects proposed for Section 5309 New Starts funds are required to follow a Federally defined New Starts project development process. This New Starts process includes, among other things, FTA approval of the entry of the project into PE and into FD. In accordance with Section 5309(d), FTA considers the merits of the project, the strength of its financial plan, and its readiness to enter the next phase in deciding whether or not to approve entry into PE or FD. Upon FTA approval to enter PE, FTA extends pre-award authority to incur costs for PE activities. Upon FTA approval to enter FD, FTA extends pre-award authority to incur costs for FD activities. The pre-award authority for each phase is automatic upon FTA's signing of a letter to the project sponsor approving entry into that phase. PE and FD are defined in the New Starts regulation entitled Major Capital Investment Projects, found at 49 CFR Part 611.

b. Real Property Acquisition Activities. FTA extends automatic pre-award authority for the acquisition of real property and real property rights for a New Starts project upon completion of the NEPA process for that project. The NEPA process is completed when FTA signs an environmental Record of Decision (ROD) or Finding of No Significant Impact (FONSI), or makes a Categorical Exclusion (CE) determination. With the limitations and caveats described below, real estate acquisition for a New Starts project may commence, at the project sponsor's risk, upon completion of the NEPA process.

For FTA-assisted projects, any acquisition of real property or real property rights must be conducted in accordance with the requirements of the Uniform Relocation Assistance and Real Property Acquisition Policies Act (URA) and its implementing regulations, 49 CFR Part 24. This pre-award authority is strictly limited to costs incurred: (i) To acquire real property and real property rights in accordance with the URA regulation, and (ii) to provide relocation assistance in accordance with the URA regulation. This pre-award authority is limited to the acquisition of real property and real property rights that are explicitly identified in the final environmental impact statement (FEIS), environmental assessment (EA), or CE document, as needed for the selected alternative that is the subject of the FTA-signed ROD or FONSI, or CE determination. This pre-award authority does not cover site preparation, demolition, or any other activity that is not strictly necessary to comply with the URA, with one exception. That exception is when a building that has been acquired, has been emptied of its occupants, and awaits demolition poses a potential fire-safety hazard or other hazard to the community in which it is located, or is susceptible to reoccupation by vagrants. Demolition of the building is also covered by this pre-award authority upon FTA's written agreement that the adverse condition exists.

Pre-award authority for property acquisition is also provided when FTA makes a CE determination for a protective buy or hardship acquisition in accordance with 23 CFR 771.117(d)(12), and when FTA makes a CE determination for the acquisition of a pre-existing railroad right-of-way in accordance with 49 U.S.C. 5324(c). When a tiered environmental review in accordance with 23 CFR 771.111(g) is being used, pre-award authority is not provided upon completion of the first-tier environmental document except when the Tier-1 ROD or FONSI signed by FTA explicitly provides such pre-award authority for a particular identified acquisition.

Project sponsors should use pre-award authority for real property acquisition and relocation assistance very carefully, with a clear understanding that it does not constitute a funding commitment by FTA. FTA provides pre-award authority upon completion of the NEPA process to maximize the time available to project sponsors to move people out of their homes and places of business, in accordance with the requirements of the Uniform Relocation Act, but also with maximum sensitivity to the plight of the people so affected. Although FTA provides pre-award authority for property acquisition upon completion of the NEPA process, FTA will not make a grant to reimburse the sponsor for real estate activities conducted under pre-award authority until the project has been approved into FD. Even if funds have been appropriated for the project, the timing of an actual grant for property acquisition and related activities must await FD approval to ensure that Federal funds are not risked on a project whose advancement beyond PE is still not yet assured.

c. National Environmental Policy Act (NEPA) Activities. NEPA requires that major projects proposed for FTA funding assistance be subjected to a

public and interagency review of the need for the project, its environmental and community impacts, and alternatives to avoid and reduce adverse impacts. Projects of more limited scope also need a level of environmental review, either to support an FTA finding of no significant impact (FONSI) or to demonstrate that the action is categorically excluded from the more rigorous level of NEPA review.

FTA's regulation titled ''Environmental Impact and Related Procedures,'' at 23 CFR Part 771 states that the costs incurred by a grant applicant for the preparation of environmental documents requested by FTA are eligible for FTA financial assistance (23 CFR 771.105(e)). Accordingly, FTA extends pre-award authority for costs incurred to comply with NEPA regulations and to conduct NEPA-related activities for a proposed New Starts or Small Starts project, effective as of the date of the Federal approval of the relevant STIP or STIP amendment that includes the project or any phase of the project. NEPA-related activities include, but are not limited to, public involvement activities, historic preservation reviews, section 4(f) evaluations, wetlands evaluations, endangered species consultations, and biological assessments. This pre-award authority is strictly limited to costs incurred to conduct the NEPA process, and to prepare environmental, historic preservation and related documents. It does not cover PE activities beyond those necessary for NEPA compliance.

For many FTA programs, costs incurred by a grant applicant exercising pre-award authority in the preparation of environmental documents required by FTA are eligible for FTA reimbursement (See also 23 CFR 771.105(e)). FTA assistance for environmental documents for New Starts and Small Starts projects, however, is subject to certain restrictions. Under SAFETEA–LU, Section 5309 New Starts funds cannot be used for any activity, including a NEPA-related activity that occurs prior to the approval of a New Starts project into PE or a Small Starts project into Project Development (PD). Section 5339 (Alternatives analysis program), Section 5307 (Urbanized Area Formula Program) and flexible highway funds are available for NEPA work conducted prior to PE approval (for New Starts) or PD approval (for Small Starts). Section 5309 New Starts funds, however, as well as Section 5307 (Urban Formula program) and flexible highway funds, can be used for NEPA work conducted after PE approval (for New Starts) or PD approval (for Small Starts). NEPA-related activities include, but are not limited to, public involvement activities, historic preservation reviews, section 4(f) evaluations, wetlands evaluations, endangered species consultations, and biological assessments. As with any pre-award authority, FTA reimbursement for costs incurred is not guaranteed.

d. Other New Starts Activities Requiring Letter of No Prejudice (LONP). Except as discussed in paragraphs a through c above, a grant applicant must obtain a written LONP from FTA before incurring costs for any activity expected to be funded by New Start funds not yet awarded. To obtain an LONP, an applicant must submit a written request accompanied by adequate information and justification to the appropriate FTA regional office, as described in B below.

5. Pre-Award Authority for Small Starts

When FTA issues a Project Development approval letter for a Small Starts project, FTA grants pre-award authority for the engineering and design activities necessary to complete NEPA. Upon FTA's issuance of a Record of Decision (ROD), a Finding of No Significant Impact (FONSI), or a Categorical Exclusion (CE) determination, pre-award authority is granted to incur costs for all other project engineering activities including right-of-way acquisition and utility relocation. When FTA issues a Project Construction Grant Agreement (PCGA), FTA grants pre-award authority for the construction phase of the project. Pre-award authority for NEPA-related work on a Small Starts project is described in paragraph 4.c above. Pre-award authority for real property acquisition activities for a Small Starts project is granted under the same conditions and for the same reasons as for New Starts projects, as described in paragraph 4.b above.

B. Letter of No Prejudice (LONP) Policy

1. Policy

LONP authority allows an applicant to incur costs on a project utilizing non-Federal resources, with the understanding that the costs incurred subsequent to the issuance of the LONP may be reimbursable as eligible expenses or eligible for credit toward the local match should FTA approve the project at a later date. LONPs are applicable to projects and project activities not covered by automatic pre-award authority. The majority of LONPs will be for Section 5309 New Starts or Small Starts funds not covered under a full funding grant agreement (FFGA) or PCGA, or for Section 5309 Bus and Bus-Related projects authorized but not yet appropriated by Congress. LONPs may be issued for formula and discretionary funds beyond the life of the current authorization or FTA's extension of automatic pre-award authority; however, the LONP is limited to a five-year period.

2. Conditions and Federal Requirements

The conditions for pre-award authority specified in section V.A.2 above apply to all LONPs. The Environmental, Planning and Other Federal Requirements described in section V.A.3 also apply to all LONPs. Because project implementation activities may not be initiated prior to NEPA completion, FTA will not issue an LONP for such activities until the NEPA process has been completed with a ROD, FONSI, or Categorical Exclusion determination.

3. Request for LONP

Before incurring costs for a project not covered by automatic pre-award authority, the project sponsor must first submit a written request for an LONP, accompanied by adequate information and justification, to the appropriate regional office and obtain written approval from FTA. FTA approval of an LONP for a New Starts or Small Starts project is determined on a case-by-case basis. As a prerequisite to FTA approval of an LONP for a New Starts or Small Starts project, FTA will require project sponsors to demonstrate project worthiness and readiness that establish the project as a promising candidate for an FFGA or PCGA. For New Starts projects, this usually cannot be determined prior to the project's approval to enter final design. However, there may be limited instances where LONP requests prior to entry into final design are approved, if strongly justified. Projects will be assessed based upon the criteria considered in the New Start evaluation process. Specifically, when requesting an LONP, the applicant shall provide sufficient information to allow FTA to consider the following items:

a. Description of the activities to be covered by the LONP.

b. Justification for advancing the identified activities. The justification should include an accurate assessment of the consequences to the project scope, schedule, and budget should the LONP not be approved.

c. Data that indicates that the project will maintain its ability to receive a rating of ''medium'', or better and that its cost-effectiveness rating will be ''medium'' or better, unless such project

has been specifically exempted from such a requirement.

d. Allocated level of risk and contingency for the activity requested.

e. Status of procurement progress, including, if appropriate, submittal of bids for the activities covered by the LONP.

f. Strength of the capital and operating financial plan for the New Starts project and the future transit system.

g. Adequacy of the Project Management Plan.

h. Resolution of any readiness issues that would affect the project, such as land acquisition and technical capacity to carry out the project.

C. FTA FY 2009 Annual List of Certifications and Assurances

The full text of the FY 2009 Certifications and Assurances was published in the **Federal Register** on October 31, 2008, and is available on the FTA Website and in TEAM-Web. The FY 2009 Certifications and Assurances must be used for all grants made in FY 2009, including obligation of carryover. All grantees with active grants are required to have signed the FY 2009 Certifications and Assurances within 90 days after publication. Any questions regarding this document may be addressed to the appropriate Regional Office or to Nydia Picayo, in the FTA Office of Program Management, at (202) 366–1662.

D. FHWA Funds Used for Transit Purposes

SAFETEA–LU continues provisions in the Intermodal Surface Transportation Efficiency Act of 1991 (ISTEA) and TEA–21 that expanded modal choice in transportation funding by including substantial flexibility to transfer funds between FTA and FHWA formula program funding categories. The provisions also allow for transfer of certain discretionary program funds for administration of highway projects by FHWA and transit projects by FTA. FTA and FHWA execute Flex Funding Transfers between the Formula and Bus Grants Transit programs and the Federal Aid Highway programs. This also includes the transfer of Metropolitan and Statewide planning set-aside funds from FHWA to FTA to be combined with metropolitan and statewide planning resources as Consolidated Planning Grants (CPG). These transfers are based on States requests to transfer funding from the Highway and/or Transit programs to fund States and local project priorities, and joint planning needs. This practice can result in transfers to the Federal Transit Program from the Federal Aid Highway Program or vice versa.

1. Transfer Process for Funds

SAFETEA–LU was enacted on August 10, 2005. With the enactment of SAFETEA–LU, beginning in FY2006, Federal transit programs are funded solely from general funds or trust funds. The transit formula and bus grant programs are now funded from MTA of the Highway Trust Fund. The Formula and Bus Grant Programs receives flex funding transfers from the Federal Aid Highway Program.

As a result of the changes to program funding mechanisms, there is no longer a requirement to transfer budget authority and liquidating cash resources simultaneously upon the execution of a flex funding transfer request by a State. Since the transfers are between trust fund accounts, the only requirement is to transfer budget authority (obligation limitation) between the Federal Aid Program trust fund account and the Federal Transit Formula and Bus Grant Program account. At the point in time that the obligation resulting from the transfer of budgetary authority is expended, a transfer of liquidating cash will be required.

Beginning in FY 2007, the accounting process was changed for transfers of flex funds and other specific programs to allow budget authority to be transferred and the cash to be transferred separately. FTA requires that flexed fund transfers to FTA be in separate and identifiable grants in order to ensure that the draw-down of flexed funds can be tracked, thus securing the internal controls for monitoring these resources from the Federal Highway Administration to avoid deficiencies in FTA's Formula and Bus Grants account.

FTA monitors the expenditures of flexed funded grants and requests the transfer of liquidating cash from FHWA to ensure sufficient funds are available to meet expenditures. To facilitate tracking of grantees' flex funding expenditures, FTA developed codes to provide distinct identification of ''flex funds.''

The process for transferring flexible funds between FTA and FHWA programs is described below. Note that the new transfer process for ''flex funds'' that began in FY 2007 does not apply to the transfer of State planning set-aside funds from FHWA to FTA to be combined with metropolitan and statewide planning resources as Consolidated Planning Grants (CPG). These transfers are based on States requests to transfer funding from the Highway and/or Transit programs to fund States and local project priorities, and joint planning needs. Planning funds transferred will be allowed to be merged in a single grant with FTA planning resources using the same process implemented in FY 2006. For information on the process for the transfer of funds between FTA and FHWA planning programs refer to section IV.A and B. Note also that certain prior year appropriations earmarks (Sections 330, 115, 117, and 112) are allotted annually for administration rather than being transferred. For information regarding these procedures, please contact Kristen D. Clarke, FTA Budget Office, at (202) 366–1686; or FHWA Budget Division, at (202) 366–2845.

a. Transfer From FHWA to FTA

FHWA funds transferred to FTA are used primarily for transit capital projects and eligible operating activities that have been designated as part of the metropolitan and statewide planning and programming process. The project must be included in an approved STIP before the funds can be transferred. By letter, the State DOT requests the FHWA Division Office to transfer highway funds for a transit project. The letter should specify the project, amount to be transferred, apportionment year, State, urbanized area, Federal aid apportionment category (i.e., Surface Transportation Program (STP), Congestion Mitigation and Air Quality (CMAQ) or identification of the earmark and indication of the intended FTA formula program (i.e., Section 5307, 5311 or 5310) and should include a description of the project as contained in the STIP. Note that FTA may also administer certain transfers of statutory earmarks under the Section 5309 bus program, for tracking purposes.

The FHWA Division Office confirms that the apportionment amount is available for transfer and concurs in the transfer, by letter to the State DOT and FTA. The FHWA Office of Budget and Finance then transfers obligation authority. All FHWA, CMAQ, and STP funds transferred to FTA will be transferred to one of the three FTA formula programs (i.e. Urbanized Area Formula (Section 5307), Nonurbanized Area Formula (Section 5311) or Elderly and Persons with Disabilities (Section 5310). High Priority projects in Section 1702 of SAFETEA–LU or Transportation Improvement projects in Section 1934 of SAFETEA–LU and other Congressional earmarks that are transferred to FTA will be aligned with and administered through FTA's discretionary Bus and Bus Related Facilities Program (Section 5309). The most recent guidance on transfers of FHWA funds as allowed

under SAFETEA–LU is FHWA Memorandum, dated July 19, 2007, ''Information Fund Transfers to Other Agencies and Among Title 23 Programs.''

The FTA grantee's application for the project must specify which program the funds will be used for, and the application must be prepared in accordance with the requirements and procedures governing that program. Upon review and approval of the grantee's application, FTA obligates funds for the project.

Transferred funds are treated as FTA formula or discretionary funds, but are assigned a distinct identifying code for tracking purposes. The funds may be transferred for any capital purpose eligible under the FTA formula program to which they are transferred and, in the case of CMAQ, for certain operating costs. FHWA issued revised interim guidance on project eligibility under the CMAQ program in a Notice at 71 FR 76038 *et seq.* (December 19, 2006) incorporating changes made by SAFETEA–LU. In accordance with 23 U.S.C. 104(k), all FTA requirements except local share are applicable to transferred funds except in certain cases when CMAQ funds are authorized for operating expenses. Earmarks that are transferred to the Section 5309 Bus Program for administration, however, can be used for the Congressionally designated transit purposes, and in some case where the law provides, are not limited to eligibility under the Bus Program.

In the event that transferred formula funds are not obligated for the intended purpose within the period of availability of the formula program to which they were transferred, they become available to the Governor for any eligible capital transit project. Earmarked funds, however, can only be used for the Congressionally designated purposes.

b. Transfers From FTA to FHWA

The MPO submits a written request to the FTA regional office for a transfer of FTA Section 5307 formula funds (apportioned to a UZA 200,000 and over in population) to FHWA based on approved use of the funds for highway purposes, as determined by the designated recipient under Section 5307 and contained in the Governor's approved State Transportation Improvement Program. The MPO must certify that: (1) Notice and opportunity for comment and appeal has been provided to affected transit providers; (2) the funds are not needed for capital investments required by the Americans with Disabilities Act, and (3) local transit needs are being addressed. The FTA Regional Administrator reviews and, if he or she concurs in the request, then forwards the approval in written format to FTA Headquarters, where a reduction equal to the dollar amount being transferred to FHWA is made to the grantee's Urbanized Area Formula Program apportionment.

Transfers of discretionary earmarks for administration by FHWA are handled on a case-by-case basis, by the FTA regional office, in consultation with the FTA Office of Program Management, Office of Chief Counsel, and Office of Budget and Policy.

c. Matching Share for FHWA Transfers

The provisions of Section 104(k) of title 23 U.S.C., regarding the non-Federal share, apply to Title 23 funds used for transit projects. Thus, FHWA funds transferred to FTA retain the same matching share that the funds would have if used for highway purposes and administered by FHWA.

There are four instances in which a Federal share higher than 80 percent would be permitted. First, in States with large areas of Indian and certain public domain lands and national forests, parks and monuments, the local share for highway projects is determined by a sliding scale rate, calculated based on the percentage of public lands within that State. This sliding scale, which permits a greater Federal share, but not to exceed 95 percent, is applicable to transfers used to fund transit projects in these public land States. FHWA develops the sliding scale matching ratios for the increased Federal share.

Second, commuter carpooling and vanpooling projects and transit safety projects using FHWA transfers administered by FTA may retain the same 100 percent Federal share that would be allowed for ride-sharing or safety projects administered by FHWA.

The third instance is the 100 percent Federally-funded safety projects; however, these are subject to a nationwide 10 percent program limitation.

The fourth instance occurs with CMAQ funds. H.R. 6, The Energy Independence and Security Act, 2007, increased the federal share of CMAQ projects to 100% at the State's discretion. FTA will honor this increased match for CMAQ funds transferred to FTA for implementation if the state chooses to fund the project at a higher federal share than 80 percent. The federal share for CMAQ projects cannot be lower than 80 percent.

D. Miscellaneous Transit Earmarks in FHWA Programs

The FY 2002 and FY 2003 Appropriations Acts and accompanying reports included Section 330, which identified a number of transit projects among projects designated to receive funding from certain FHWA funding sources. The FY 2004 Appropriations Act similarly included transit projects among projects designated to receive funding from certain FHWA sources in Section 115, the FY 2005 Appropriations Act included a set of designations under Section 117, and the FY 2006 Appropriations Act included designations under Section 112, which may include some projects that FHWA will identify to be administered by FTA. For those projects identified by FHWA as transit in nature, FHWA allots the funds to FTA to administer. The funds are available for the designated project until obligated and expended. Some of these FY 2002–2006 designations for transit projects have not yet been obligated. However, because these are FHWA funds, funds for projects unobligated at the end of the FY are not automatically available as carry over made available in the following FY. Instead FHWA re-allots obligation authority to FTA annually, after reconciling account balances. Because the requirements and procedures associated with these projects differ in some cases from those for the FTA programs that FTA grantees are familiar with, and the availability of funds for obligation by FTA depends on allotments from FHWA, transit applicants seeking funding under these miscellaneous FHWA designations must work closely with the appropriate FTA regional office and FHWA Division Office when applying for a grant under these designations.

E. Grant Application Procedures

1. Grantees must provide a Dun and Bradstreet (D&B) Data Universal Numbering System (DUNS) number for inclusion in all applications for a Federal grant or cooperative agreement. The DUNS number should be entered into the grantee profile in TEAM-Web. Additional information about this and other Federal grant streamlining initiatives mandated by the Federal Financial Assistance Management Improvement Act of 1999 (Pub. L. 106–107) can be accessed on OMB's Web site at *http://www.whitehouse.gov/omb/grants/reform.html.*

2. All applications for FTA funds should be submitted electronically to the appropriate FTA regional office through TEAM-Web, an Internet-

accessible electronic grant application system. FTA has provided limited exceptions to the requirement for electronic filing of applications.

3. In FY 2009, FTA remains committed to processing applications promptly upon receipt of a completed application by the appropriate regional office. In order for an application to be considered complete and for FTA to assign a grant number, enabling submission in TEAM-Web, the following requirements must be met:

a. The project is listed in a currently approved Metropolitan Transportation Plan, Metropolitan Transportation Improvement Program (TIP); FTA approved Statewide Transportation Improvement Program (STIP), or Unified Planning Work Program (UPWP).

b. All eligibility issues have been resolved.

c. Required environmental findings have been made.

d. The project budget's Activity Line Items (ALI), scope, and project description meet FTA requirements.

e. Local share funding source(s) have been identified.

f. The grantee's required Civil Rights submissions are current.

g. Certifications and assurances are properly submitted.

h. Funding is available, including any flexible funds included in the budget.

i. For projects involving new construction (using at least $100 million in New Starts or formula funds), FTA engineering staff has reviewed the project management plan and given approval.

j. When required for grants related to New Starts projects, PE and/or FD has been approved.

k. Milestone information is complete, or FTA determines that milestone information can be finalized before the grant is ready for award. The grant must include sufficient milestones appropriate to the scale of the project to allow adequate oversight to monitor the progress of projects from the start through completion and closeout.

4. Under most FTA programs, grants involving funding related to transit operations must be submitted to the Department of Labor (DOL) for certification of labor protective arrangements, prior to grant award. Grants under the Nonurbanized Area Formula Program and Over-the-Road Bus Program are covered under the special warranty provision and do not require certification. Beginning with grants associated in FY 2009, Tribal Transit grants are also covered by the special warranty. Although grants under these programs will not be certified, they must be submitted to DOL upon approval by FTA. This change resulted from the new DOL Regulations, 29 CFR Part 215, published on August 13, 2008. In addition, before FTA can award grants for discretionary projects and activities designated by Congress, notification must be given to members of Congress, and in the case of awards greater than $500,000, to the House and Senate authorizing and appropriations committees three days prior to award. Discretionary grants allocated by FTA also go through the Congressional notification process if they are greater than $500,000. In previous years, the amount requiring notification was $1 million; however, the Continuing Appropriations Act, 2008, lowered the threshold for notification to $500,000 dollars.

5. Other important issues that impact FTA grant processing activities are discussed below.

a. Change in Budget Structure

Because SAFETEA–LU restructured FTA's accounts from split funded accounts to one solely trust funded account and three general funded accounts, FTA does not mix funds from years prior to FY 2006 in the same grant with funds appropriated in FY 2006 and beyond (except for New Starts and research grants). Prior to FY 2006, all programs were funded approximately 80 percent from MTA of the Highway Trust Fund and 20 percent from the General Funds U.S. Treasury. The trust funds were transferred into the general funded accounts at the beginning of the year. Under SAFETEA–LU most programs are funded entirely from trust funds derived from the MTA, while the New Starts and Research programs are funded with general funds. For a New Starts or research project, any prior year funds currently available for obligation and FY 2009 funds may be included in an amendment to an existing grant.

For formula programs funded solely from trust funds beginning in FY 2006, grantees may not combine funds appropriated since FY 2006 in the same grant with FY 2005 and prior year funds. Grant amendments cannot be made to add FY 2006 and later year funds to a grant that includes FY 2005 or prior funds. However, grantees are able to amend new grants established with FY 2006 or later year funds to add funds made available after FY 2006. We regret any inconvenience this accounting change may cause as we implement new statutory requirements under SAFETEA–LU. We encourage grantees to spend down and close out old grants as quickly as possible to minimize the inconvenience.

b. Grant Budgets—SCOPE and Activity Line Item (ALI) Codes

FTA uses the SCOPE and Activity Line Item (ALI) Codes in the grant budgets to track program trends, to report to Congress, and to respond to requests from the Inspector General and the Government Accountability Office (GAO), as well as to manage grants. The accuracy of the data is dependent on the careful and correct use of codes. As needed, we revise the SCOPE and ALI table to include new codes for newly eligible capital items, to better track certain expenditures, and to accommodate new or modified programs. We encourage grantees to review the table before selecting codes from the drop-down menus in TEAM-Web while creating a grant budget and to consult with the regional office in the correct use of codes.

c. Earmark and Discretionary Program Tracking

FTA has implemented procedures in TEAM-Web for matching grants to earmarks or projects selected by FTA under discretionary programs. Each earmark or selected discretionary project published in the **Federal Register** is associated with a unique identifier. Tables of earmarks and selected discretionary projects have also been established in TEAM-Web. When applying for a grant using funding designated by Congress or FTA for a particular project, grantees are asked to identify the amount of funding associated with each specific earmark or discretionary project used in the grant. Further instructions are posted on the TEAM-Website and regional staff can provide additional assistance.

F. Payments

Once a grant has been awarded and executed, requests for payment can be processed. To process payments FTA uses ECHO-Web, an Internet accessible system that provides grantees the capability to submit payment requests on-line, as well as receive user-IDs and passwords via e-mail. New applicants should contact the appropriate FTA regional office to obtain and submit the registration package necessary for set-up under ECHO-Web.

G. Oversight

FTA conducts periodic oversight reviews to assess grantee compliance with Federal requirements. Each urbanized area grantee is reviewed every three years (a Triennial Review). Triennial reviews have been modified to look at the grantee's involvement in the coordinated planning for transportation for the populations targeted by the JARC

and New Freedom programs and participation in delivery of specialized services under those programs in the urbanized area. States are reviewed periodically for their management of the Section 5310, 5311, JARC, and New Freedom programs. Other more detailed reviews are scheduled based on an annual grantee risk assessment, for example, reviews in the areas of Procurement, Financial Management, Safety and Civil Rights.

H. Technical Assistance

FTA headquarters and regional staff will be pleased to answer your questions and provide any technical assistance you may need to apply for FTA program funds and manage the grants you receive. This notice and the program guidance circulars previously identified in this document may be accessed via the FTA Web site at *http://www.fta.dot.gov.*

In addition, copies of the following circulars and other useful information are available on the FTA Web site and may be obtained from FTA regional offices; Circular 4220.1F, Third Party Contracting Requirements; and Circular 5010.1D, Grant Management Guidelines. Both circulars were recently revised and can be found at *http://www.fta.dot.gov/laws/leg_reg_circulars_guidance.html.* The FY 2009 Annual List of Certifications and Assurances and Master Agreement are also posted on the FTA Web site. The DOT final rule on ''Participation by Disadvantaged Business Enterprises in Department of Transportation Financial Assistance Programs,'' which was effective July 16, 2003, can be found at *http://www.access.gpo.gov/nara/cfr/waisidx_04/49cfr26_04.html/*

Issued in Washington, DC, this 8th day of December 2008.

Sherry Little,

Acting Administrator.

Appendix A

FTA Regional Offices

Richard H. Doyle, Regional Administrator, Region 1—Boston, Kendall Square, 55 Broadway, Suite 920, Cambridge, MA 02142–1093, Tel. 617 494–2055.

States served: Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont

Brigid Hynes-Cherin, Regional Administrator, Region 2—New York, One Bowling Green, Room 429, New York, NY 10004–1415, Tel. No. 212 668–2170.

States served: New Jersey, New York

Letitia Thompson, Regional Administrator, Region 3—Philadelphia, 1760 Market Street, Suite 500, Philadelphia, PA 19103–4124, Tel. 215 656–7100.

States served: Delaware, Maryland, Pennsylvania, Virginia, West Virginia, and District of Columbia

Yvette Taylor, Regional Administrator, Region 4—Atlanta, Atlanta Federal Center, Suite 17T50, 61 Forsyth Street, SW., Atlanta, GA 30303, Tel. 404 562–3500.

States served: Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, Puerto Rico, South Carolina, Tennessee, and Virgin Islands

Marisol Simon, Regional Administrator, Region 5—Chicago, 200 West Adams Street, Suite 320, Chicago, IL 60606, Tel. 312 353–2789.

States served: Illinois, Indiana, Michigan, Minnesota, Ohio, and Wisconsin

Robert C. Patrick, Regional Administrator, Region 6—Ft. Worth, 819 Taylor Street, Room 8A36, Ft. Worth, TX 76102, Tel. 817 978–0550.

States served: Arkansas, Louisiana, Oklahoma, New Mexico and Texas

Mokhtee Ahmad, Regional Administrator, Region 7—Kansas City, MO, 901 Locust Street, Room 404, Kansas City, MO 64106, Tel. 816 329–3920.

States served: Iowa, Kansas, Missouri, and Nebraska

Terry Rosapep, Regional Administrator, Region 8—Denver, 12300 West Dakota Ave., Suite 310, Lakewood, CO 80228–2583, Tel. 720–963–3300.

States served: Colorado, Montana, North Dakota, South Dakota, Utah, and Wyoming

Leslie T. Rogers, Regional Administrator, Region 9—San Francisco, 201 Mission Street, Room 2210, San Francisco, CA 94105–1926, Tel. 415 744–3133.

States served: American Samoa, Arizona, California, Guam, Hawaii, Nevada, and the Northern Mariana Islands

Rick Krochalis, Regional Administrator, Region 10—Seattle, Jackson Federal Building, 915 Second Avenue, Suite 3142, Seattle, WA 98174–1002, Tel. 206 220–7954.

States served: Alaska, Idaho, Oregon, and Washington

TABLE 1

FY 2009 AVAILABLE FUNDING AND APPORTIONMENTS FOR FORMULA GRANT PROGRAMS

(The total available amount for a program is based on funding made available under the Continuing Appropriations Resolution, 2009 - P.L. 110-329)

FORMULA GRANTS	
Section 5303 Metropolitan Transportation Planning Program	
Total Available	$38,068,323
Less Oversight (one-half percent)	(190,342)
Total Apportioned	$37,877,981
Section 5304 Statewide Transportation Planning Program	
Total Available	$7,952,377
Less Oversight (one-half percent)	(39,762)
Total Apportioned	$7,912,615
Section 5307 Urbanized Area Formula Program	
Total Available	$1,682,053,574
Less Oversight (three-fourths percent)	(12,615,402)
Total Apportioned	$1,669,438,172
Section 5309 Fixed Guideway Modernization	
Total Available	$675,257,000
Less Oversight (one percent)	(6,752,570)
Total Apportioned	$668,504,430
Section 5310 Special Needs of Elderly Individuals and Individuals with Disabilities Program	
Total Available	$54,622,700
Less Oversight (one-half percent)	(273,113)
Total Apportioned	$54,349,587
Section 5311 Nonurbanized Area Formula Program	
Total Available	$179,454,924
Less Oversight (one-half percent)	(941,919)
Total Apportioned	$178,513,005
Section 5311(b)(3) Rural Transportation Assistance Program (RTAP)	
Total Available	$3,767,676
Less Amount Reserved for National RTAP	(565,151)
Total Apportioned	$3,202,525
Section 5316 Job Access and Reverse Commute Program	
Total Available	$67,095,600
Total Apportioned	$67,095,600
Section 5317 New Freedom Program	
Total Available	$37,633,750
Total Apportioned	$37,633,750
Section 5340 Growing States and High Density States Formula	
Total Available	$188,383,800 1/
Total Apportioned	$188,383,800
CAPITAL INVESTMENT GRANTS	
Section 5309 New Starts	
Total Available	$674,866,468
Less Oversight (one percent)	(6,748,665)
Funds Available for Allocation	$668,117,803
RESEARCH	
Section 5314 National Research Program	$28,112,583
TOTAL AVAILABLE (Above Grant Programs)	**$3,637,268,775** 2/
TOTAL APPORTIONMENT (Above Grant Programs)	**$3,609,141,851**

1/ Apportionments derived from the Section 5340 formula are combined with the Section 5307 or Section 5311 apportionments, as appropriate, in accordance with language in the SAFETEA-LU conference report

2/ The amount shown here only includes funding for the programs included in this notice and shown above It does not include $5,161,200 in funds currently available under the Tribal Transit Program, which will be competitively awarded when the full year's appropriation is available

TABLE 4

FY 2009 SECTION 5307 APPORTIONMENT FORMULA

Distribution of Available Funds

Of the funds made available to the Section 5307 program, a one percent takedown is authorized for Small Transit Intensive Cities. This amount is apportioned to the Governors based on a separate formula that uses criteria related to specific service performance categories.

The remaining funds are apportioned to small, medium, and large sized urbanized areas (UZAs). 9.32% is made available for UZAs 50,000-199,999 in population, and 90.68% to UZAs 200,000 or more in population.

UZA Population and Weighting Factors

50,000-199,999 in population : (Apportioned to Governors)

9.32% of available Section 5307 funds

50% apportioned based on population

50% apportioned based on population x population density

200,000 and greater in population: (Apportioned to UZAs)

90.68% of available Section 5307 funds

33.29% (Fixed Guideway Tier*)

95.61% (Non-incentive Portion of Tier)

--- at least 0.75% to each UZA with commuter rail and pop. 750,000 or greater

60% - fixed guideway revenue vehicle miles

40% - fixed guideway route miles

4.39% ("Incentive" Portion of Tier)

-- at least 0.75% to each UZA with commuter rail and pop. 750,000 or greater

-- fixed guideway passenger miles x fixed guideway passenger miles/operating cost

66.71% ("Bus" Tier)

90.8% (Non-incentive Portion of Tier)

73.39% for UZAs with population 1,000,000 or greater

50% - bus revenue vehicle miles

25% - population

25% - population x population density

26.61% for UZAs pop. < 1,000,000

50% - bus revenue vehicle miles

25% - population

25% - population x density

9.2% ("Incentive" Portion of Tier)

-- bus passenger miles x bus passenger miles/operating cost

* Includes all fixed guideway modes, such as heavy rail, commuter rail, light rail, trolleybus, aerial tramway, inclined plane, cable car, automated guideway transit, ferryboats, exclusive busways, and HOV lanes.

TABLE 5

FISCAL YEAR 2009 FORMULA PROGRAMS APPORTIONMENT DATA UNIT VALUES

(Apportionment unit values are based on funding made available under the FY 2009 Continuing Resolution - P.L. 110-329)

	APPORTIONMENT DATA UNIT VALUE
Section 5307 Urbanized Area Formula Program - Bus Tier	
Urbanized Areas Over 1,000,000:	
Population	$1.39841610
Population x Density	$0.00035482
Bus Revenue Vehicle Mile	$0.17613278
Urbanized Areas Under 1,000,000:	
Population	$1.28159331
Population x Density	$0.00056074
Bus Revenue Vehicle Mile	$0.22900919
Bus Incentive (PM denotes Passenger Mile):	
Bus PM x Bus PM = Operating Cost	$0.00377591
Section 5307 Urbanized Area Formula Program - Fixed Guideway Tier	
Fixed Guideway Revenue Vehicle Mile	$0.25893392
Fixed Guideway Route Mile	$13,691
Commuter Rail Floor	$3,577,357
Fixed Guideway Incentive:	
Fixed Guideway PM x Fixed Guideway PM = Operating Cost	$0.00026752
Commuter Rail Incentive Floor	$164,257
Section 5307 Urbanized Area Formula Program - Areas Under 200,000	
Population	$2.57765050
Population x Density	$0.00128224
Section 5307 Small Transit Intensive Cities	
For Each Qualifying Performance Category	$56,826
Section 5311 Urbanized Area Formula Program - Areas Under 50,000	
Population	$1.59515476

Section 5309 Capital Program - Fixed Guideway Modernization

	Tier 2	Tier 3	Tier 4	Tier 5	Tier 6	Tier 7
Legislatively Specified Areas:						
Revenue Vehicle Mile	$0.01308985	-------	$0.05880084	$0.01451199	$0.00956834	$0.10753224
Route Mile	$912.86	-------	$3,365.70	$1,129.67	$744.84	$8,370.73
Other Urbanized Areas:						
Revenue Vehicle Mile	$0.07005658	$0.00247808	$0.05880084	$0.02700359	$0.02204374	$0.37160243
Route Mile	$2,046.72	$72.40	$3,365.70	$790.52	$645.32	$10,878.54

Notes:

1. Unit values for Section 5307 do not take into account Section 5340 funding added to the program.

2. The unit value for Section 5311 is based on the total nonurbanized/rural population for the States and territories. It does not take into account Section 5311 funds allocated based on land area in nonurbanized areas, or Section 5340 funding added to the program.

FEDERAL TRANSIT ADMINISTRATION

TABLE 9

FY 2009 FIXED GUIDEWAY MODERNIZATION PROGRAM APPORTIONMENT FORMULA

Tier 1 First $497,700,000 to the following areas:

Baltimore	$	8,372,000
Boston	$	38,948,000
Chicago/N.W. Indiana	$	78,169,000
Cleveland	$	9,509,500
New Orleans	$	1,730,588
New York	$	176,034,461
N. E. New Jersey	$	50,604,653
Philadelphia/So. New Jersey	$	58,924,764
Pittsburgh	$	13,662,463
San Francisco	$	33,989,571
SW Connecticut	$	27,755,000

Tier 2 Next $70,000,000 as follows: Tier 2(A): 50 percent is allocated to areas identified in Tier 1; Tier 2(B): 50 percent is allocated to other urbanized areas with fixed guideway tiers in operation at least seven years. Funds are allocated by the Urbanized Area Formula Program fixed guideway tier formula factors that were used to apportion funds for the fixed guideway modernization program in FY 1997.

Tier 3 Next $5,700,000 as follows: Pittsburgh 61.76%; Cleveland 10.73%; New Orleans 5.79%; and 21.72% is allocated to all other areas in Tier 2(B) by the same fixed guideway tier formula factors used in fiscal year 1997.

Tier 4 Next $186,600,000 as follows: All eligible areas using the same year fixed guideway tier formula factors used in fiscal year 1997.

Tier 5 Next $70,000,000 as follows: 65% to the 11 areas identified in Tier 1, and 35% to all other areas using the most current Urbanized Area Formula Program fixed guideway tier formula factors. Any segment that is less than 7 years old in the year of the apportionment will be deleted from the database.

Tier 6 Next $50,000,000 as follows: 60% to the 11 areas identified in Tier 1, and 40% to all other areas using the most current Urbanized Area Formula Program fixed guideway tier formula factors. Any segment less than 7 years old in the year of the apportionment will be deleted from the database.

Tier 7 Remaining amounts as follows: 50% to the 11 areas identified in Tier 1, and 50% to all other areas using the most current Urbanized Area Formula Program fixed guideway formula factors. Any segment that is less than 7 years old in the year of the apportionment will be deleted from the database.

Part V

Department of Justice

28 CFR Part 75

Revised Regulations for Records Relating to Visual Depictions of Sexually Explicit Conduct; Inspection of Records Relating to Depiction of Simulated Sexually Explicit Performance; Final Rule

DEPARTMENT OF JUSTICE

28 CFR Part 75

[Docket No. CRM 104; CRM 105; AG Order No. 3025–2008___]

RIN 1105–AB18; RIN 1105–AB19

Revised Regulations for Records Relating to Visual Depictions of Sexually Explicit Conduct; Inspection of Records Relating to Depiction of Simulated Sexually Explicit Performance

AGENCY: Department of Justice.

ACTION: Final rule.

SUMMARY: This rule finalizes two proposed rules and amends the record-keeping, labeling, and inspection requirements to account for changes in the underlying statute made by Congress in enacting the Adam Walsh Child Protection and Safety Act of 2006.

DATES: This rule is effective January 20, 2009. *Compliance date:* The requirements of this rule apply to producers of visual depictions of the lascivious exhibition of the genitals or pubic area of a person and producers of simulated sexually explicit conduct as of March 18, 2009.

FOR FURTHER INFORMATION CONTACT: Andrew Oosterbaan, Chief, Child Exploitation and Obscenity section, Criminal Division, United States Department of Justice, Washington, DC 20530; (202) 514–5780. This is not a toll-free number.

SUPPLEMENTARY INFORMATION: The Child Protection and Obscenity Enforcement Act of 1988, Public Law 100–690, codified at 18 U.S.C. 2257, imposes certain name- and age-verification, record-keeping, and labeling requirements on producers of visual depictions of actual human beings engaged in sexually explicit conduct. Specifically, section 2257 requires producers of such material to ''ascertain, by examination of an identification document containing such information, the performer's name and date of birth,'' to ''ascertain any name, other than the performer's present and correct name, ever used by the performer including maiden name, alias, nickname, stage, or professional name,'' and to record and maintain this information. 18 U.S.C. 2257(b). Violations of these record-keeping requirements are criminal offenses punishable by imprisonment of not more than five years for a first offense and not more than 10 years for subsequent offenses. *See id.* 2257(i). Any matter containing such visual depictions must be labeled with a statement indicating where the records are located, and those records are subject to inspection by the government. *See id.* 2257(c), (e). These provisions supplement the federal statutory provisions criminalizing the production and distribution of materials visually depicting minors engaged in sexually explicit conduct. *See id.* 2251, 2252.

The regulations in 28 CFR part 75 implement section 2257. On May 24, 2005, the Department of Justice (''the Department'') published a final rule that updated those regulations to account for changes in technology, particularly the Internet, and to implement the Prosecutorial Remedies and Other Tools to End the Exploitation of Children Today (PROTECT) Act of 2003, Public Law 108–21. *See* Inspection of Records Relating to Depiction of Sexually Explicit Performances, 70 FR 29607 (May 24, 2005) (CRM 103; RIN 1105–AB05).

On July 27, 2006, President George W. Bush signed into law the Adam Walsh Child Protection and Safety Act, Public Law 109–248 (''the Adam Walsh Act'' or ''the Act''). As described in more detail below, the Act made a number of changes to section 2257 and added section 2257A to title 18, imposing similar record-keeping requirements on producers of visual depictions of simulated sexually explicit conduct. Furthermore, the Act created a certification regime for producers of such conduct and for producers of depictions of one type of actual sexually explicit conduct to exempt them from the detailed regulatory requirements.

This final rule amends the regulations in part 75 to comport with these statutory changes. As described in more detail below, the Department published two separate proposed rules, one to implement the revision to section 2257 and the other to implement the requirements of section 2257A with regard to simulated sexually explicit conduct and its certification regime. This rule finalizes both proposed rules in one rulemaking in order to simplify and coordinate implementation of the Adam Walsh Act. Most importantly, this approach ensures that the requirements of revised section 2257 go into effect in coordination with the effectiveness of the certification regime applicable to it. The final rule also makes numerous changes to the proposed rules that will simplify the regulatory process and lessen the burden on businesses covered by the Act.

Background

Protecting children from sexual exploitation is one of government's most important responsibilities. Children are incapable of giving voluntary and knowing consent to perform in pornography. Furthermore, children often are forced to engage in sexually explicit conduct for the purpose of producing pornography. For these reasons, visual depictions of sexually explicit conduct that involve persons under the age of 18 constitute child pornography under federal law. *See* 18 U.S.C. 2256(8). Producers of such depictions are subject to appropriately severe penalties. *See id.* 2251.

Establishing the identity of every performer in a depiction of sexually explicit conduct is critical to ensuring that no performer is a minor and that, hence, the depiction is not child pornography. Section 2257 has facilitated identification and age-verification efforts by requiring producers to ascertain the identity and age of performers in their depictions and to maintain records evidencing such compliance. Producers are less likely as a result of these requirements to exploit children and to create child pornography through carelessness, recklessness, or deliberate indifference. As for those who intentionally produce material depicting minors engaged in sexually explicit conduct, the statute and regulations provide an additional basis for prosecuting such individuals besides the applicable child-exploitation statutes. In addition, the statute and the regulations ''deprive child pornographers of access to commercial markets by requiring secondary producers to inspect (and keep a record of) the primary producers' proof that the persons depicted were adults at the time they were photographed or videotaped.'' *Am. Library Ass'n* v. *Reno*, 33 F.3d 78, 86 (D.C. Cir. 1994).

In the Adam Walsh Act, Congress filled two gaps in section 2257 by amending it to cover lascivious exhibition of the genitals or pubic area (''lascivious exhibition'') and by enacting section 2257A to cover simulated sexually explicit conduct, while at the same time creating an exception from these new record-keeping requirements in certain circumstances.

With regard to lascivious exhibition, the Act corrected an anomaly in the definition of ''sexually explicit conduct'' to which section 2257's requirements apply. Prior to the enactment of the Act, section 2257 referenced the definition of ''sexually explicit conduct'' for purposes of Chapter 110 of the U.S. Code in section 2256(2)(A) and listed four of the five categories of conduct included in that section. Section 2257 did not include ''lascivious exhibition of the genitals or

pubic area of any person.'' 18 U.S.C. 2256(2)(A)(v). The Act revised section 2257 to include that category along with the others. *See* Adam Walsh Act, Public Law 109–248 § 502(a)(4). Because part 75 defines ''sexually explicit conduct'' by referencing that term in section 2256(2)(A), part 75 will apply to depictions of ''lascivious exhibition.''

With regard to simulated sexually explicit conduct, it is crucial to note that Chapter 110 of title 18 of the U.S. Code (''Sexual Exploitation and Other Abuse of Children'') already covers both actual and simulated sexually explicit conduct. Specifically, it defines ''sexually explicit conduct'' as:

> (A) * * * actual or *simulated*—(i) sexual intercourse, including genital-genital, oral-genital, anal-genital, or oral-anal, whether between persons of the same or opposite sex; (ii) bestiality; (iii) masturbation; (iv) sadistic or masochistic abuse; or (v) lascivious exhibition of the genitals or pubic area of any person;
>
> (B) For purposes of subsection 8(B) of this section [part of the definition of ''child pornography''], ''sexually explicit conduct'' means—(i) graphic sexual intercourse, including genital-genital, oral-genital, anal-genital, or oral-anal, whether between persons of the same or opposite sex, or lascivious *simulated* sexual intercourse where the genitals, breast, or pubic area of any person is exhibited; (ii) graphic or lascivious simulated; (I) bestiality; (II) masturbation; or (III) sadistic or masochistic abuse; or (iii) graphic or *simulated* lascivious exhibition of the genitals or pubic area of any person * * *.

18 U.S.C. 2256(2) (emphases added).

Numerous States' child-exploitation statutes refer to both simulated and actual sexual conduct. *See* Alaska Stat. § 11.41.455; Ariz. Rev. Stat. § 13–3551; Ark. Code Ann. § 5–27–302; Cal. Penal Code § 311.11; Colo. Rev. Stat. § 18–6–403; Conn. Gen. Stat. § 53a–193; Fla. Stat. § 827.071; Ga. Code Ann. § 16–12–100; Idaho Code Ann. § 18–1507; 720 Ill. Comp. Stat. Ann. 5/11–20.1; Kan. Stat. Ann. § 21–3516; Ky. Rev. Stat. Ann. § 531.300; La. Rev. Stat. Ann. § 14:81.1; Mass. Ann. Laws ch. 272 § 29C; Mich. Comp. Laws Serv. § 750.145c; Minn. Stat. § 617.246; Miss. Code Ann. § 97–5–33; Mo. Rev. Stat. § 573.010; Mont. Code Ann. § 45–5–625; Nev. Rev. Stat. § 200.725; N.H. Rev. Stat. Ann. § 649–A:2; N.M. Stat. Ann. § 30–6A–3; N.Y. Penal § 263.00; N.D. Cent. Code § 12.1–27.2–01; Okla. Stat. tit. 21 § 1024.1; Or. Rev. Stat. § 163.665; S.D. Codified Laws § 22–24A–2 to –3; Tenn. Code Ann. § 39–17–1003; Tex. Penal Code Ann. § 43.25; Utah Code Ann. § 76–5a–2; Va. Code Ann. § 18.2–390; Wash. Rev. Code § 9.68A.011; W. Va. Code § 61–8C–1; Wis. Stat. § 948.01; Wyo. Stat. Ann. § 6–4–303. Accordingly, ''simulated'' in the context of sexually explicit conduct is neither a novel nor an uncommon term.

These statutes recognize that a child may be harmed both physically and psychologically in the production of visual depictions of simulated sexually explicit conduct, even if no sexually explicit conduct actually takes place. Furthermore, producers of visual depictions of actual sexually explicit conduct often substitute a visual depiction of simulated sexually explicit conduct (so-called ''soft-core'' pornography) in place of the actual sexually explicit conduct; then the soft-core pornography is often distributed more widely than the unedited version of the same production. In such cases, the protection of children from exploitation in the production of a visual depiction of actual sexually explicit conduct necessitates that producers of visual depictions of simulated sexually explicit conduct also be required to maintain records and label their products.

Sections 2257 and 2257A thus operate in tandem to protect children from exploitation in visual depictions of sexually explicit conduct. Part 75 implementing those statutes has undergone significant public comment, and several courts have found it to be a constitutional exercise of governmental authority. *See Am. Library Ass'n* v. *Reno*, 33 F.3d 78 (D.C. Cir. 1994); *Free Speech Coalition* v. *Gonzales*, 406 F. Supp. 2d 1196 (D. Colo. 2005) (''*Free Speech I*'') (upholding certain aspects of part 75, although preliminarily enjoining others); *Free Speech Coalition* v. *Gonzales*, 483 F. Supp. 2d 1069 (D. Colo. 2007) (''*Free Speech II*''); *but see also Connection Distrib. Co.* v. *Gonzales*, 2006 WL 1305089, 2006 U.S. Dist. LEXIS 29506 (N.D. Ohio, May 10, 2006) (upholding the constitutionality of part 75), *rev'd and remanded sub nom. Connection Distrib. Co.* v. *Keisler*, 505 F.3d 545 (6th Cir. 2007) (striking down section 2257, but not directly addressing the constitutionality of part 75), *vacated and rehearing en banc granted sub nom. Connection Distrib. Co.* v. *Mukasey*, 2008 U.S. App. LEXIS 9032 (6th Cir. Apr. 10, 2008). Although one court invalidated part 75 as ultra vires to the extent it regulated those whose activity ''does not involve hiring, contracting for[,] managing, or otherwise arranging for the participation of the performers depicted,'' *see Sundance Assocs., Inc.* v. *Reno*, 139 F.3d 804, 808 (10th Cir. 1998) (quotation marks omitted; alteration in original), Congress subsequently amended the statute, see Adam Walsh Act, Public Law 109–248 section 502(a)(4), and adopted the Attorney General's interpretation of section 2257. Cf. *Free Speech Coalition II*, 483 F. Supp. 2d at 1075 (suggesting that the enactment of section 502 of the Act moots the plaintiff's *ultra vires* challenge to part 75).

The Proposed Rules

Revisions to Section 2257

The Department issued a proposed rule to implement the revisions to section 2257 on July 12, 2007. *See* Revised Regulations for Records Relating to Visual Depictions of Sexually Explicit Conduct, 72 FR 38033 (July 12, 2007) (CRM 104; RIN 1105–AB18). The proposed rule reflected the change to the definition of ''actual sexually explicit conduct'' to include lascivious exhibition by adding to the definitional section of the regulations at § 75.1(n). Although proposed part 75 applied to the ''lascivious exhibition of the genitals or pubic area of a person,'' it did not define this term beyond the language of section 2256(2)(A). Case law provides guidance as to the types of depictions that federal courts have considered to be lascivious exhibition of the genitals or pubic area, and the Department will rely on such precedent in the context of section 2257 investigations and prosecutions.

The leading case is *United States* v. *Dost*, 636 F. Supp. 828 (S.D. Cal. 1986), *aff'd sub nom. United States* v. *Weigand*, 812 F.2d 1239 (9th Cir. 1987), which provides a list of factors for determining whether a visual depiction constitutes lascivious exhibition:

(1) Whether the focal point of the visual depiction is on the child's genitalia or pubic area;

(2) whether the setting of the visual depiction is sexually suggestive, i.e., in a place or pose generally associated with sexual activity;

(3) whether the child is depicted in an unnatural pose, or in inappropriate attire, considering the age of the child;

(4) whether the child is fully or partially clothed, or nude;

(5) whether the visual depiction suggests sexual coyness or a willingness to engage in sexual activity;

(6) whether the visual depiction is intended or designed to elicit a sexual response in the viewer.

Dost, 636 F. Supp. at 832. Several courts of appeals have relied upon the Dost factors. *See, e.g., United States* v. *Grimes*, 244 F.3d 375 (5th Cir. 2001); *United States* v. *Knox*, 32 F.3d 733 (3d Cir. 1994); *United States* v. *Wolf*, 890 F.2d 241 (10th Cir. 1989).

The July 2007 proposed rule noted that, although these factors have been used to determine whether visual

depictions of children constituted lascivious exhibition for purposes of criminal prosecution for violations of sections 2251, 2252, and 2252A of title 18, only the third factor is necessarily dependent on the age of the person depicted. The other factors provide guidance as to the types of depictions that would constitute lascivious exhibition for purposes of section 2257 and part 75, as well, even though those sections apply to any performers regardless of age.

The July 2007 proposed rule noted that the applicability of part 75 was to be prospective from the effective date of the Adam Walsh Act. It therefore contemplated that the rule applied only to depictions whose original production date was on or after July 27, 2006. That is, under the proposed rule, records would not be required to be maintained either by a primary producer or by a secondary producer for a visual depiction of lascivious exhibition, the original production date of which was prior to July 27, 2006. In the case of a secondary producer, the proposed rule stated that even if the secondary producer ''produces'' (as defined in the regulation) such a depiction on or after July 27, 2006, he need not maintain records if the original production date of the depiction is prior to that date.

Second, the Adam Walsh Act revised the exclusions in the statute for the operations of Internet companies. Specifically, the Act amended section 2257 by excluding from the definition of ''produces'' the ''provision of a telecommunications service, or of an Internet access service or Internet information location tool * * * or the transmission, storage, retrieval, hosting, formatting, or translation (or any combination thereof) of a communication, without selection or alteration of the content of the communication.'' These exclusions are based on the definitions in section 231 of the Communications Act of 1934, 47 U.S.C. 231.

Third, the Adam Walsh Act made several changes in the terminology of the statute. In subsection 2257(e)(1), it added at the end the following: ''In this paragraph, the term 'copy' includes every page of a Web site on which matter described in subsection (a) appears.'' That change was reflected in the proposed rule at §§ 75.1(e)(3), 75.6(a), and 75.8(d). The change materially affects the regulation's labeling requirement as applied to Web sites. Section 75.8(d) of the current regulations permits a producer of a computer site of service or Web site to affix the label stating where the records required under the regulations are located ''on its homepage, any known major entry points, or principal URL (including the principal URL of a subdomain), or in a separate window that opens upon the viewer's clicking a hypertext link that states, '18 U.S.C. 2257 RecordKeeping Requirements Compliance Statement.' '' Because of the change in the statute, the proposed rule eliminated that portion of the current regulations. The proposed rule required, per the statute, that the statement describing the location of the records required by this part be affixed to every page of a Web site (controlled by the producer) on which visual depictions of sexually explicit conduct appear.

Finally, the Adam Walsh Act confirmed that the statute applies to secondary producers as currently (and previously) defined in the regulations. Specifically, the Act defines any of the following activities as ''produces'' for purposes of section 2257:

> (i) Actually filming, videotaping, photographing, creating a picture, digital image, or digitally- or computer-manipulated image of an actual human being;
>
> (ii) Digitizing an image[ ] of a visual depiction of sexually explicit conduct; or, assembling, manufacturing, publishing, duplicating, reproducing, or reissuing a book, magazine, periodical, film, videotape, digital image, or picture, or other matter intended for commercial distribution, that contains a visual depiction of sexually explicit conduct; or
>
> (iii) Inserting on a computer site or service a digital image of, or otherwise managing the sexually explicit content[ ] of a computer site or service that contains a visual depiction of, sexually explicit conduct * * *

18 U.S.C. 2257(h)(2)(A).

It excludes from the definition of ''produces,'' however, the following activities, in pertinent part:

> (i) Photo or film processing, including digitization of previously existing visual depictions, as part of a commercial enterprise, with no other commercial interest in the sexually explicit material, printing, and video duplication.
>
> (ii) Distribution;
>
> (iii) Any activity, other than those activities identified in subparagraph (A), that does not involve the hiring, contracting for, managing, or otherwise arranging for the participation of the depicted performers * * *

Id. 2257(h)(2)(B), as amended.

This language replaces the previous definition of ''produces'' in the statute, which stated, in pertinent part, as follows:

> [T]he term ''produces'' means to produce, manufacture, or publish any book, magazine, periodical, film, video tape, computer generated image, digital image, or picture, or other similar matter and includes the duplication, reproduction, or reissuing of any such matter, but does not include mere distribution or any other activity which does not involve hiring, contracting for managing, or otherwise arranging for the participation of the performers depicted * * *

18 U.S.C. 2257(h) (2000 ed. & Supp. V) (former version).

In enacting the revised language, Congress upheld the Department's consistently held position that the rule's requirements for secondary producers have been in effect since the rule's original publication. As explained by the sponsor of the Act in the House of Representatives:

> Congress previously enacted the PROTECT Act of 2003 against the background of Department of Justice regulations applying section 2257 to both primary and secondary producers. That fact, along with the Act's specific reference to the regulatory definition that existed at the time, reflected Congress's agreement with the Department of Justice's view that it already had the authority to regulate secondary procedures [sic] under the applicable law.
>
> A federal court in Colorado, however, recently enjoined the Department from enforcing the statute against secondary producers, relying on an earlier Tenth Circuit precedent holding that Congress had not authorized the Department to regulate secondary producers. These decisions conflicted with an earlier DC Circuit decision upholding Congress's authority to regulate secondary producers. Section 502 of the bill is meant to eliminate any doubt that section 2257 applies both to primary and secondary producers, and to reflect Congress's agreement with the regulatory approach adopted by the Department of Justice in enforcing the statute.

152 Cong. Rec. H5705, H5725 (2006) (statement of Rep. Pence).

Congress thus rejected the interpretation adopted by the court in *Sundance Associates* v. *Reno*, 139 F.3d 804 (10th Cir. 1998), in favor of the DC Circuit's decision upholding the application of the statute to secondary producers. *Am. Library Ass'n* v. *Reno*, 33 F.3d 78 (D.C. Cir. 1994). In upholding the constitutionality of the secondary-producer requirements, the D.C. Circuit both recognized the importance of these requirements and effectively rejected the argument that Congress lacked the authority to regulate secondary producers.

In accordance with the current law, the proposed rule retained July 3, 1995, as the effective date of the rule's requirements for secondary producers. (The current regulations, published in 2005, adopted July 3, 1995, as the effective date of enforcement of section 2257 based on the court's order in *American Library Association* v. *Reno*, No. 91–0394 (SS) (D.D.C. July 28, 1995). The one exception was that the proposed rule would not have penalized

secondary producers for failing to maintain required records in connection with those acts of production that occurred prior to the effective date of the Act. While the law would permit the Department to apply the statute and regulations to actions that occurred prior to that date, the Department determined that the proposed rule would not apply in such circumstances to avoid any conceivable *ex post facto* concern.

In addition to implementing the changes in the statute described above, the July 2007 proposed rule clarified several other issues. First, it clarified that primary producers may redact non-essential information from copies of records provided to secondary producers, including addresses, phone numbers, social security numbers, and other information not necessary to confirm the name and age of the performer. However, the identification number of the picture identification card presented to confirm name and age—such as drivers' license number or passport number—may not be redacted, so that its validity may be confirmed. Second, the proposed rule clarified that producers of visual depictions performed live on the Internet need not maintain a copy of the full running-time of every such depiction. Rather, they may maintain a copy that contains running-time sufficient to identify each and every performer with the records needed to confirm his or her age.

Third, the proposed rule clarified that, with regard to the government-issued photo identification required for records, a foreign-government-issued picture identification is acceptable if the performer providing it is a foreign citizen and the producer maintaining the records produces the visual depiction of the performer in a foreign country, no matter whether the producer is a U.S. or foreign citizen. That is, a U.S. producer who produces a depiction of sexually explicit conduct while located in a foreign country may rely on a foreign-government-issued picture identification card of a performer in that depiction who is a foreign citizen. All other requirements of the regulations continue to apply mutatis mutandis—i.e., the producer must examine and maintain a legible copy of the foreign-government-issued picture identification card in his records. Furthermore, a foreign-government-issued picture identification card is not sufficient to comply with the regulations for U.S. citizens, even when abroad. That is, if a U.S. producer travels to a foreign country to produce a depiction of sexually explicit conduct, all U.S. citizens performing in the depiction must have a U.S.-government-issued picture identification card, even though a foreign citizen performing in the same depiction may provide a foreign-government-issued picture identification card. And, as is the case in the current regulation, only a U.S.-government-issued picture identification card complies with the regulations relating to productions in the United States, no matter whether the performer is a U.S. or foreign citizen. The regulation also states that producers of visual depictions made after July 3, 1995, the effective date of the regulations published in 1992, and before June 23, 2005, the effective date of the current regulations published in 2005, may rely on picture identification cards issued by private entities such as schools or private employers that were valid forms of required identification under the provisions of part 75 in effect on the original production date. Finally, although it was not necessary to change the text of the regulations for this purpose, the Department clarified at the time that it issued the proposed rule that a producer need not keep a copy of a URL hosting a depiction that the producer produced but over which he exercises no control.

Section 2257A

As noted above, on June 6, 2008, the Department published a proposed rule making additional amendments to part 75 to implement section 2257A. *See* Inspection of Records Relating to Depiction of Simulated Sexually Explicit Performances, 73 FR 32262 (June 6, 2008) (CRM. 105; RIN 1105–AB19). The June 2008 proposed rule contained two key elements—a definition of ''simulated sexually explicit conduct'' and the details of the certification regime.

As to the definition of ''simulated sexually explicit conduct,'' as noted above, ''sexually explicit conduct'' is defined in section 2256(2)(A) with reference to certain physical acts and with reference to both ''actual'' and ''simulated'' performance of those acts. No definition of ''actual'' or ''simulated'' is contained in section 2256, or anywhere else in chapter 110. When first published in 1990, amended in 2005, and proposed to be amended in 2007, part 75 did not adopt a definition of ''actual,'' because the Department believed that in the context of the acts described, the meaning of the term was sufficiently precise for regulatory purposes. Public comments on the previous versions of part 75 did not address the definition of ''actual,'' nor has the meaning of that term arisen in litigation regarding the regulations.

With the extension of part 75 to cover simulated conduct, however, and with the statutory provision for a certification regime for simulated conduct, the Department believed that a definition of the term ''simulated sexually explicit conduct'' was necessary. A definition would make clear to the public what types of conduct come within the ambit of the regulation, as distinct from conduct not covered at all, and what types of conduct will be eligible for the certification regime.

The Department started its analysis of the proper definition of the term for regulatory purposes with the term's plain meaning. The word ''simulated'' is typically defined as ''made to look genuine.'' *Merriam-Webster's Collegiate Dictionary* 1162 (11th ed. 2003).

The Department believes that an objective standard—that is, one defined in terms of a reasonable person viewing the depiction—is appropriate to add to this basic definition. The proposed rule's definition of ''simulated sexually explicit conduct'' thus read as follows: ''[S]imulated sexually explicit conduct means conduct engaged in by performers in a visual depiction that is intended to appear as if the performers are engaged in actual sexually explicit conduct, and does so appear to a reasonable viewer.''

The June 2008 proposed rule's definition was based on the plain meaning of the term and is supported by extrinsic sources of meaning. Chapter 110 was created by the Protection of Children Against Sexual Exploitation Act of 1977, which defined ''sexually explicit conduct'' to include both ''actual or simulated'' acts. See Protection of Children Against Sexual Exploitation Act of 1977, Public Law 95–225, section 2(a), 92 Stat. 7, 8 (1978). That statute did not define ''simulated,'' however, and the legislative history of the act does not indicate that Congress considered defining that term. *See* S. Rep. No. 438, 95th Cong., 1st Sess. (1977); H.R. Report No. 696, 95th Cong., 1st Sess. (1977). When Congress amended chapter 110 in 1984, it considered defining ''simulated'' but ultimately did not do so, thereby leaving the definition of that term to the discretion of the Attorney General.

As noted above, most States have laws similar to the federal statute criminalizing production, distribution, and possession of simulated sexually explicit conduct involving a minor. A number of those States' statutes, in contrast to section 2257A, define ''simulated,'' and therefore may inform the federal definition of that term in part

75. State definitions of ''simulated'' generally fall into three categories:

(1) Definitions based on giving the appearance of actual sexually explicit conduct. For example: ''An act is simulated when it gives the appearance of being sexual conduct.'' Cal. Penal Code section 311.4(d)(1); 14 V.I. Code section 1027(b). '' 'Simulated sexually explicit conduct' means a feigned or pretended act of sexually explicit conduct which duplicates, within the perception of an average person, the appearance of an actual act of sexually explicit conduct.'' Utah Code Ann. section 76–5a–2(9). ''Sexual intercourse is simulated when it depicts explicit sexual intercourse which gives the appearance of the consummation of sexual intercourse, normal or perverted.'' Mass. Ann. Laws ch. 272, section 31; N.H. Rev. Stat. Ann. section 649–A:2(III).

(2) Definitions based on depiction of genitals that gives the impression of actual sexually explicit conduct, such as: '' 'Simulated' means any depicting of the genitals or rectal areas that gives the appearance of sexual conduct or incipient sexual conduct.'' Ariz. Rev. Stat. section 13–3551(10); Miss. Code Ann. section 97–5–31(f); Mont. Code Ann. section 45–5–625(5)(c).

(3) Definitions based on (a) the depiction of uncovered portions of the body and (b) that gives the impression of actual sexually explicit conduct, such as: '' 'Simulated' means the explicit depiction of [sexual] conduct * * * which creates the appearance of such conduct and which exhibits any uncovered portion of the breasts, genitals, or buttocks.'' Fla. Stat. § 827.071(1)(i). '' 'Simulated' means the explicit depiction of sexual conduct that creates the appearance of actual sexual conduct and during which a person engaging in the conduct exhibits any uncovered portion of the breasts, genitals, or buttocks.'' Tex. Penal Code § 43.25(a)(6). '' 'Simulated' means the explicit depiction of any [sexual] conduct * * * which creates the appearance of such conduct and which exhibits any uncovered portion of the breasts, genitals or buttocks.'' N.Y. Penal L. § 263.00(6).

The definitions categorized above as ''based on giving the appearance of actual sexually explicit conduct'' are closest to that proposed by the Department in the proposed rule. The other two definitions, which require the actual depiction of nudity, are overly restrictive in that a child may be exploited in the production of a visual depiction of simulated sexually explicit conduct even if no nudity is present in the final version of the visual depiction. The producer of the depiction may arrange the camera or the body positions to avoid depicting uncovered genitals, breasts, or buttocks yet still cause harm to the child by having him or her otherwise realistically appear to be engaging in sexually explicit conduct.

It is also important to note that ''simulated'' in this context does not mean ''virtual.'' For purposes of chapter 110, including sections 2256, 2257, and 2257A, and for purposes of part 75, ''simulated sexual explicit conduct'' means conduct engaged in by real human beings, not conduct engaged in by computer-generated images that only appear to be real human beings. Although Congress did attempt to criminalize production, distribution, and possession of ''virtual'' child pornography on the basis that it contributed to the market in child pornography involving real children, the Supreme Court held that the child-protection rationale for the criminalization of child pornography under *Ferber* did not apply to images in which no real children were harmed. *See Ashcroft* v. *Free Speech Coalition,* 535 U.S. 234, 250–51 (2002). Section 2257A does not cover such ''virtual'' child pornography, but rather ''simulated'' sexually explicit conduct, the production of which, as noted above, can exploit a real child. The Court's decision in *Ashcroft* is thus not relevant to sections 2257 or 2257A, or part 75, which, for clarity's sake, consistently refers to sexually explicit conduct engaged in by an ''actual human being.''

The second key element of the proposed rule was the crafting of the certification regime. In enacting section 2257A, Congress determined it would be appropriate, in certain circumstances, to exempt producers of visual depictions of lascivious exhibition (for which records must be kept under section 2257, as amended by the Act) and producers of visual depictions of simulated sexually explicit conduct (for which records must be kept under section 2257A) from statutory requirements otherwise applicable to such visual depictions. *See* 18 U.S.C. 2257A(h).

The safe harbor provision in the statute in essence permits certain producers of visual depictions of lascivious exhibition or of simulated sexually explicit conduct to certify that in the normal course of business they collect and maintain records to confirm that performers in those depictions are not minors, while not necessarily collected and maintained in the format required by part 75. Where a producer makes the required certification, matter containing such visual depictions is not subject to the labeling requirements of the statute.

In the June 2008 proposed rule, the Department crafted a certification regime that would have implemented the safe harbor in such a way as to permit such producers, in accordance with the statute, to be subject to lesser record-keeping burdens than those in part 75 while still protecting children from sexual exploitation. The proposed rule would have required producers to include the following information in certifications: (1) The legal basis for the exemption and basic evidence in support; (2) a statement that they collect and maintain the requisite individually identifiable information concerning their employees; (3) a list of the producer's materials depicting simulated sexually explicit conduct or lascivious exhibition that show non-employee performers; (4) a list of the producer's materials depicting simulated sexually explicit conduct or lascivious exhibition produced since the last certification; (5) with respect to foreign-produced material, a statement that the foreign producer of that material either collects and maintains the requisite records or itself has made a certification, or, with respect to material depicting sexually explicit conduct only, a statement that the producer took reasonable steps to confirm that the performers depicted in that material are not minors; (6) if applicable, a list of the foreign-produced material depicting simulated sexually explicit conduct that the producer took reasonable steps to confirm did not depict minors; and (7) if applicable, a statement that the primary producer of material secondarily produced by the certifying producer either collects and maintains the requisite records or itself has made a certification. The proposed rule would also have required that the certification be submitted every two years.

Changes From the Proposed Rules

This final rule makes a number of changes in the proposed rules in response to commenters' concerns. The Department believes that the changes, while still enabling the Department to enforce the statutes, will considerably lessen the burdens on the regulated industries.

Most significantly, as described in more detail below in response to specific comments, the Department has done the following:

- Consolidated the publication of the final versions of the two proposed rules into one final rule;

• Ensured that the regulatory requirements applicable to depictions of actual sexually explicit conduct consisting of lascivious exhibition apply starting on the date of availability of the statutorily provided safe harbor;
• Permitted the use of third-party custodians of records;
• Permitted records to be maintained digitally;
• Clarified the definition of ''simulated sexually explicit conduct'';
• Clarified the exemption from the record-keeping requirements for those engaged in distribution;
• Clarified that, for purposes of the requirement that every page of a Web page contain the disclosure statement, a hyperlink or ''mouseover'' is permitted;
• Eliminated the requirement that statements on the location of records contain a date of production (or any other date), although added a requirement that primary producers create a record of the date of production;
• Clarified the application of the requirements regarding location of the statement to DVDs; and
• Eliminated the detailed information required by the certification regime, and replaced it with a significantly simpler certification.

Comments on the Proposed Rules

The following section reviews comments to the proposed rules and how, if at all, the Department has changed the final rule in response to them. Comments on both proposed rules are included in this section, organized according to the subsections of the rule.

Definitions

The proposed rule outlined several changes to definitions of terms that are contained in 28 CFR 75.1. The Department received a number of comments regarding the proposed definitions.

Picture Identification Card

The proposed rule requires in § 75.1(b) that a producer of actual sexually explicit conduct check a picture identification card issued by a United States or State government entity for a performer who is an American citizen, whether the production occurs in the United States or abroad. Under the proposed rule, a producer abroad may rely on foreign government identification cards for foreign performers, but must maintain a copy of that identification, and a producer may not rely on a foreign identification card for a foreign citizen when production occurs in the United States, but must check a United States identification card in that circumstance. The Department received three comments on this proposal, all of which voiced opposition.

One comment noted that a producer cannot hire a foreign adult performer to work in the United States who lacks American documents, but that if the producer took her across the border, then she could work with foreign documents, a situation the commenter suggested would not help children. The commenter also states that because the proposed rule lacked a good faith exception, a producer operating outside the United States would need to make sure that a performer using foreign documents was not in fact an American citizen. Moreover, the commenter claims that the goal of avoiding errors in immigration status that the proposed rule would therefore achieve did not help children.

The Department declines to adopt this comment. Protecting American citizens is a top priority of the Department, and given the more stringent standards for issuing government identification documents in recent years, the Department believes that children will be best protected by a requirement that American identification documents be provided before an American is hired to engage in sexually explicit conduct. It further believes that conduct within American borders should necessitate that the producer check for American issued identification documents even if the performer is a foreign citizen, so that all producers in this country check the age and identification of all performers. It is true that the rules will differ if the production occurs in foreign countries with foreign performers. Given the Department's resources and concerns regarding comity, the Department continues to believe that the proposed rule best addresses this issue.

One comment expressed the belief that the Department should not always require that a producer obtain a copy of a picture identification card before creating an actual sexually explicit depiction. It hypothesizes the existence of a recording of a sexual act by a Congressman in a public place. It argues that a news organization could not air this recording under the proposed rule in the absence of the checking of a picture identification card, even though the Congressman by constitutional operation must be at least 25 years old.

The Department declines to adopt this comment. Regardless of the apparent age or identity of an individual, the rule appropriately requires that identification be checked to determine that the performer is of legal age. The individual pictured in this hypothetical may only appear to be a Congressman, for instance. Moreover, an entity regulated by the FCC, which the comment presupposes for airing such a depiction, may well be able to utilize the exemption provisions of section 2257A.

The Department has also clarified that a picture identification card must include the performer's date of birth. Such a requirement was implicit in the proposed rule in that picture identification documents issued by government agencies, such as a passport or driver's license, normally contain the individual's date of birth. The final rule makes this requirement explicit.

Producer

The Department received thousands of comments that appear to be part of an orchestrated campaign that opposes the requirement in the proposed rule that adult social-networking sites obtain and maintain personal information concerning their users, including obtaining and maintaining users' photo identification, as well the ability of the Department to inspect such records and invade user privacy without safeguarding the information once observed. They state that it is not feasible to have adult networking sites for thousands of users under the rule, and they note that users of such sites already certify that they are over 18.

The Department does not adopt these comments. First, most social networking sites would appear not to be covered by the statute and the rule under the definition of ''produces'' in section 2257(h)(2)(B)(v) and § 75.1(c)(4)(v), respectively. The statutory definition excludes from ''produces'': ''the transmission, storage, retrieval, hosting, formatting, or translation (or any combination thereof) of a communication, without selection or alteration of the content of the communication.'' *See also* 28 CFR 75.1(c)(4)(v) (excluding ''[a] provider of an electronic communication service or remote computing service who does not, and reasonably cannot, manage the sexually explicit content of the computer site or service''). Therefore, the Department does not accept that such sites cannot operate under the proposed rule, or that such sites must maintain information concerning their users, much less that the Department must be able to inspect such data. However, one who posts sexually explicit activity on ''adult'' networking sites may well be a primary or secondary producer. Users of social networking sites may therefore be subject to the proposed rule, depending on their conduct. That such users may certify without penalty or effective

monitoring that they are over 18 is irrelevant to compliance with the proposed rule, since they may not in fact be above 18. Moreover, depictions such users put on the sites may feature not only themselves but other people who have not even made the unverifiable certification required by a social networking site.

One comment states that the Department must clarify the distinction between secondary producers and distributors. The comment notes that the Act amended the statutory definition of ''produces'' to broaden the distribution exclusion from ''mere distribution'' to ''distribution.'' *See* 18 U.S.C. 2257(h)(2)(B)(ii). The comment states that this means ''distribution'' is not meant to be narrowly construed, and that the Department should thus state that ''unless an entity that disseminates a depiction of sexually explicit conduct is responsible for creating or materially altering its content, or for its physical construction, the entity is engaged in 'distribution' and is exempt from the statute and rules.'' The comment goes on to note that ''non-material alteration'' should include removing or pixilating depictions of sexually explicit conduct.

The Department adopts this comment in part. The Department cannot adopt the comment in toto because doing so would conflict with the statute in that sections 2257(h)(2)(A)(ii) and (iii) include several activities under the definition of ''produces,'' such as digitizing an image, inserting an image on a computer site or service, or managing the sexually explicit content of a computer site or service, that would fall under the comment's proposed definition of ''distribution.'' The Department, however, states in the final rule that, unless activities are described in section 2257(h)(2)(A), an entity whose activities are limited to the dissemination of a depiction of sexually explicit conduct without having created it or altered its content is excluded from the definition of ''producer.''

The Department cannot adopt the suggestion as to ''non-material alteration'' of depictions for two reasons: First, pixilating an image would appear to constitute ''creating a digitally- or computer-manipulated image of an actual human being,'' and thus would fall under the definition of ''produces'' in section 2257(h)(2)(A)(i); second, to the extent images are posted on Web sites, alteration (and subsequent posting on a Web site) of an image would appear to constitute ''inserting * * * [such image] on a computer site * * * or otherwise managing the sexually explicit content'' of such a site. While the comment correctly states that the proposed exclusion is analogous to the exclusion for transmission, which permits a transmitter to delete material that it considers ''obscene * * * or otherwise objectionable'' without being considered to have selected or altered the content of the communication, see 18 U.S.C. 2257(h)(2)(B)(v) (citing 47 U.S.C. 230(c)), Congress did not provide similar language modifying the exclusion for distribution of the image, and thus the Department is limited by the statutory text.

In addition, as described in more detail below, in certain circumstances a pixilated depiction can still constitute lascivious exhibition. *United States* v. *Knox*, 32 F.3d 733 (3d Cir. 1994). A categorical exemption for persons who pixilated or otherwise obscured depictions would risk creating a loophole for the production of material that is in fact covered by the definition of sexually explicit conduct.

Several commenters ask the Department to exclude news and documentary programming from the definition of ''producer.'' The comments claim that producers of that programming use footage provided by others under the fair use doctrine. The comments posit that if a producer includes news and documentary producers, then such producers either will lose the ability to obtain footage depicting any adult sexual conduct, or will be forced to make payments to the original producer notwithstanding the fair use doctrine.

The Department declines to adopt this comment. The First Amendment does not permit even a bona fide reporter to trade in child pornography in order to create a work of journalism, see *United States* v. *Matthews*, 209 F.3d 338 (4th Cir. 2000), not to mention the possibility that someone might purport to be a news or documentary producer to evade the statute. Accordingly, it is consistent with the law for the final rule to cover journalistic and similar works.

One comment inquires whether a secondary producer is required by the proposed rule's change to § 75.2(a)(1) to ''examin[e] * * * a picture identification card prior to production of the depiction,'' or whether this obligation is limited to the primary producer. The commenter asks that the Department allow an entity that obtains a domestic or foreign-made film or program for American distribution but has no role in the production of that film or program to be considered a ''distributor'' rather than a ''secondary producer'' of such material, and therefore to be exempt from the requirements. The comment would allow secondary producers to disseminate a work in the United States even when a primary producer failed to obtain the required records prior to the date of original production.

The Department declines to adopt this comment. The comment would effectively turn all secondary producers into distributors, exempting them from section 2257's requirements, contrary to the Act's making section 2257 applicable to that activity. A significant goal of the legislation was to eliminate commercial markets for non-commercially produced child pornography. Although the rule does not require secondary producers to check identification themselves, secondary producers should be aware that they incur a significant risk if they do not avail themselves of the identification documents that primary producers have created. Secondary producers who do not check records run the risk that they are distributing child pornography if the performers depicted in fact were not of legal age. Furthermore, to the extent that such foreign-produced material includes only lascivious exhibition, a U.S. secondary producer could avail itself of the provisions of the certification.

One comment notes the proposed rule's elimination of ''mere'' from the term ''mere distribution'' that is contained in the current regulation and requests that the Department add ''or gratuitous transfer'' after the word ''distribution'' in the definition of ''producer'' in § 75.1(c)(4)(ii). The comment suggests that adding ''or gratuitous transfer'' would avoid a potential problem in the meaning of the word ''distribution'' when read in connection with the term's restriction to commercial contexts in § 75.1(d) of the current regulations. The comment believes that the latter provision correctly suggests that the regulations' record-keeping requirements are restricted to commercial production operations. And it requests that the Department to elaborate whether or which transfers should require disclosure statements.

The Department declines to adopt this comment. The definitions in the proposed rule are (with minor grammatical changes to conform to the structure of the regulation) exactly those in the statute, and the Department sees no need for further clarification, particularly with respect to a particular term that itself would have to be defined.

One comment asks the Department to remove the term ''assembles'' from the definition of ''producer'' in § 75.1(c)(2). The Department declines to adopt this comment. As noted above, the

definitions in the regulations are those contained in the statute, and the statutory definition of ''produces'' includes ''assembling * * * a book, magazine, periodical, film, videotape, digital image, or picture, or other matter intended for commercial distribution, that contains a visual depiction of sexually explicit conduct.'' 18 U.S.C. 2257(h)(2)(A)(ii).

One comment notes that many depictions will have more than one primary producer, as a depiction can be photographed, then digitized, or be generated by computer from a depiction of an actual person. Various entities could be involved in creating a particular depiction. Each entity or person who performed even one of these tasks would be a primary producer. Moreover, since only secondary producers can rely on copies of documents, the comment requests that the Department provide that only one primary producer should be designated and required to maintain records.

Another comment states that the rules are unclear concerning how many or which producers must be named if there is more than one primary or secondary producer. It notes that parents and subsidiaries may not have the same address. The Department adopts this comment in part by stating that the final rule provides that where a primary producer is a corporate entity, only one primary producer associated with that entity will exist. For purposes of efficiency in inspection, where the corporate parent entity is the primary producer, that is the entity that should be named in the disclosure statement as the keeper of the records.

The Department adopts these comments in part. In response to a similar comment, the final rule published in 2005 stated, ''The Department does not believe that logic, practicability of record-keeping or inspections, or the statue dictates that there be one and only one primary producer for any individual sexually explicit depiction. Any of the persons defined as primary producer has easy access to the performers and their identification documents and should therefore each have responsibility individually and separately of maintaining the records of those documents.'' However, upon reconsideration, the Department has decided to clarify that if multiple individuals are all employed by the same entity, the entity constitutes the ''primary producer'' for purposes of record-keeping, not the individuals.

Similarly, one comment notes that a single reproduction can create numerous secondary producers. Under § 75.1(c)(2), a preexisting photograph can be digitized by one person, inserted on a computer site by another, which is managed by a third, and if each of these is employed by a corporation, then there are now seven secondary producers arising out of a single reproduction, each of whom must now seek and obtain from the primary producer information concerning every depicted performer. The commenter considers this scenario to be unlikely, threatening availability of the depiction.

As with the similar comment regarding multiple primary producers, the Department adopts this comment in part. The Department has clarified that if multiple individuals are all employed by the same entity, the entity constitutes the ''secondary producer'' for purposes of record-keeping, not the individuals. However, there may be multiple secondary producers who are separate entities engaged in separate commercial enterprises—e.g., one company purchases a depiction from the primary producers and publishes it on a Web site and another purchases and publishes the same depiction in a magazine several years later—and who must each maintain the records associated with the depiction.

One comment questions whether § 75.1(c)(4)(v), which allows a Web site such as YouTube to post depictions without having to keep records, allows someone to display a YouTube video on their own Web site and still fall within the exemption because YouTube would not have the records itself and the person downloading from YouTube would not have access to the records. As described in the comment, it would appear that the individual who downloads a depiction of actual sexually explicit material from a another site onto a site that he or she controls is a producer because he or she has ''reproduc[ed]'' or ''insert[ed] on a computer site or service a digital image of, or otherwise manage[ed] the sexually explicit content of a computer site or service that contains a visual depiction of an actual human being engaged in actual sexually explicit conduct'' within the meaning of the definition of ''secondary producer'' in § 75.1(c)(2). Whether or not the source for the person is a site such as YouTube, which may not be required to maintain records as a secondary producer, since the original individual producer who posts a depiction on that site is required to affix a disclosure notice to each page of the sexually explicit depiction, a secondary producer who downloads that depiction onto another site should be able to obtain the requisite information for compliance with its own record-keeping and disclosure requirements.

Date of Original Production

The proposed rule defined ''date of original production'' to mean the date that the primary producer actually created the image of actual sexually explicit conduct. One comment requests that the Department define this term in this fashion for primary producers, but, in the case of secondary producers, that the date of original production should also be permitted, at the discretion of the secondary producer, to be the date of the secondary producer's relevant conduct.

The Department adopts this comment. Obtaining the date of the original production from the primary producer should not pose a problem for a secondary producer, since the secondary producer obtains the records of the production from the producer. As explained more fully below, the Department in the final rule has eliminated the requirement that the statement of location of records required by § 75.6 contain a date of original production (or any other date, as in the regulation currently in force). Hence, a secondary producer is not responsible for including that information in a statement that it affixes to material it secondarily produces. However, primary producers, as explained below, will henceforth be required to create and maintain a record of the date of original production, such record being transferred to the secondary producer along with all other records required by part 75.

To the extent that this is a new requirement for both primary and secondary producers that did not exist previous to the proposed rule, the Department clarifies that it applies only prospectively from the date of the publication of this final rule.

Also, in response to a comment, the Department has clarified that if a depiction is made over the course of multiple dates, the date of original production consists of the earliest of those dates. There is no requirement in the rule that any depicted performer be 18 on the date of original production so long as that performer is 18 as of the date that a depiction of that individual is created. Producers who keep records demonstrating that performers are 18 as of the date of original production conform to the requirements of the rule. The final rule has been changed to reflect that in the case of a performer who was under 18 at the time that production began, but became of legal age before he or she was depicted, an alternative date of original production

with respect to that performer is the first date that that performer was actually filmed for the production at issue.

The Department has also clarified the meaning of ''*date of original production*'' with respect to matter that is a secondarily produced compilation of one or more separate, primarily produced depictions. The final rule provides that with respect to such a compilation, the date of original production of the matter is the earliest date after July 3, 1995, on which any individual depiction therein was produced. In the event a performer in any of the individual depictions was under 18 on that date, the alternative date of original production with respect to that performer is the first date that any scene depicting that performer was actually recorded.

Employed by

One comment states that the Department erred in defining ''employed'' in the 2257A proposed rule because the Department cannot make the term broader than it is normally understood by simply defining it broadly. The comment goes on to state that ''[w]e do not think that it is a rare case at all that a producer creates images covered by sections 2257 or 2257A which depict non-employees—as properly understood—in sexual roles. But defining 'employe[e]' more broadly than usual defeats the obvious sense of the safe harbor provision which Congress has promulgated.''

The Department declines to adopt this comment. The definition of ''employed'' used in the proposed rule is consistent with the commonly understood definition, which does not necessarily require that an employee be paid by an employer. One common definition of ''employ'' is ''to use or engage the services of,'' while another is ''to provide with a job that pays wages or a salary.'' *Merriam-Webster Collegiate Dictionary* 408 (11th ed. 2003). Although the commenter seeks to characterize the Department's definition of the term as somehow broader than normal, the Department's definition is wholly consistent with the dictionary definition of the term in that it covers not only a producer providing a person with a job that pays wages but also a producer using or engaging the services of a person. The Department thus does not believe that the proposed rule's definition of ''employed'' is inconsistent with the text of the statute.

Sexually Explicit Conduct

Many comments argue that the *Dost* factors are vague and not readily transferable to an adult, notwithstanding the Department's statements concerning the proposed rule. These comments asserted that inquiring whether setting, pose, and visual depictions are appropriate, natural, or suggestive for a child are nonsensical for adults because such conduct is not improper for adults. One comment maintained that the *Dost* factors represent in this context an inappropriate burden shift from presumed constitutional expression to a presumption of child pornography, and another suggested that an image not otherwise lascivious could be inappropriately found to be lascivious based on its proximity to adult lascivious images.

The Department does not adopt these comments. The Department does not consider application of the *Dost* test to adults to be nonsensical. The point of the factors is to determine whether a particular depiction is of actual sexually explicit conduct for purposes of determining whether compliance with various legal requirements is necessary. The age of the person depicted is irrelevant to whether the image depicts actual sexually explicit conduct, except for one *Dost* factor that is age-dependent and which the proposed rule identified as not being relevant to the depiction's status as actual sexually explicit conduct. If the acts depicted would fall within any of the remaining *Dost* factors if they were performed by a minor, one who produces actual sexually explicit conduct must take the requisite steps necessary to ensure that the individual performing these acts is of legal age. The proposed rule creates no presumption of or against the existence of child pornography. The rule's applicability depends on the image as it is without reliance on any presumptions. The *Dost* factors themselves do not erect any presumption. Nor is the lasciviousness determination made with regard to anything but the depiction that is produced.

One comment, relying on a Court of Appeals decision that accepted the relevance of the *Dost* factors, *United States* v. *Knox*, 32 F.3d 733 (3d Cir. 1994), maintains that their applicability here would mean that millions of images on Myspace or Youtube or Facebook may require section 2257 compliance even though they do not involve nudity or sexual activity. The comment states that the rule must define exhibition of the genitals to consist only of nude exhibition. Otherwise, it maintains, every photo of male water polo players or other competitive swimmers would be potentially subject to section 2257 record-keeping, as would other depictions of persons in tight clothing suggestive of genitalia.

The Department does not adopt this comment. The comment takes an overly broad reading of the law of child pornography and applies that reading to produce a nonsensical result. The *Knox* case does not stand for the proposition claimed by the comment. It is not the case that pictures of boys' water polo teams constitute child pornography. The images at issue in *Knox* were lasciviously displayed. Although the genitals were clothed in that case, they were covered by thin, opaque clothing with an obvious purpose to draw attention to them, were displayed by models who spread or extended their legs to make the pubic and genital region entirely visible to the viewer, and were displayed by models who danced or gyrated in a way indicative of adult sexual relations. 32 F.3d at 746–47. None of these attributes remotely applies to standard swim team photographs or underwear or other mainstream advertising. Therefore, very few images posted on Myspace or Youtube of clothed individuals would require section 2257 compliance, and the description in this rule of the kinds of images that do so provides clear guidance to the narrow situations in which clothed images would trigger section 2257 compliance.

One comment suggests, as an alternative to the *Dost* factors, that the rule define ''lascivious exhibition of the genitals'' to mean images that display an individual's naked genital area.

The Department declines to adopt this comment. As discussion of the depictions at issue in the *Knox* case shows, there are instances when covered genitals can amount to child pornography. When such images are created, if the performers are under 18, what is being produced is child pornography. The obligations of the proposed rule must apply to producers who create depictions that could constitute lascivious exhibition, so as to reduce the possibility of child exploitation. One comment asks whether the depiction of scantily clad women in a strip club or bedroom would be subject to the regulations and criminal penalties. The comment maintains that the need to pose such a question means that producers would not know what materials trigger the record-keeping requirements, which would cause a chilling effect. The comment claims that creators of widely shown films and television programs who make a mistake in this respect risk prosecution.

The Department does not adopt this comment. The proposed rule rejected a

categorical approach that would state whether every possible depiction was one that fell within a definition. Rather, it adopted the *Dost* factors, which rely on context as well as content. A depiction of scantily clad women in a strip club or bedroom can appear in limitless permutations, and the Department cannot state that all or none would constitute lascivious exhibition of the genitals without consideration of the *Dost* factors. Those factors provide the context that producers and the Department will rely on to determine whether an image depicts actual sexually explicit conduct so as to minimize any chilling effect. Film and television producers are particularly unlikely to risk prosecution for displaying scantily clad performers because of the certification option.

One comment suggested that because of the vagueness of the *Dost* test, a producer may not know that he must obtain identification before production. If the producer does not do so, the comment asks what options are then available to the secondary producer who determines that the *Dost* test applies. The comment maintains that as a result, some producers may not be able to acquire and disseminate a wide range of movies and television programs, especially foreign productions.

The Department does not adopt this comment. Prosecutions for production of child pornography have been upheld by many courts applying the *Dost* test to determine whether a depiction is one that lasciviously exhibits the genitals. *See, e.g., United States* v. *Horn*, 187 F.3d 781 (8th Cir. 1999); *United States* v. *Villard*, 885 F.2d 117, 122 (3d Cir. 1989). That they have done so contradicts the argument that the test amounts to unconstitutional vagueness in defining ''lascivious exhibition.'' A secondary producer who is concerned that a primary producer may have violated the requirements of the statute and the regulation has the options of requesting that the primary producer revisit the issue and examine picture identification cards and compile age records. Furthermore, secondary producers of qualifying material may be able to avail themselves of the certification in section 2257A and its implementing regulation.

One comment disputed the Act's extension of section 2257 to cover lascivious exhibition as closing a previous loophole in that statute. The comment asserts that the prior version reflected a desire to limit the law to depictions that involve actual sexually explicit activity and avoid overbreadth through inapplicability of its provisions to fully clothed adults.

The Department does not adopt this comment. The characterization of the Act is not an operative part of the regulation that requires a response.

One comment requests that the Department distinguish between actual and simulated masturbation in defining actual sexually explicit conduct. The Department declines to adopt this comment. To the extent that this is merely a subset of a larger question as to the distinction between ''actual'' and ''simulated'' conduct, the meaning of ''actual'' conduct with respect to all the conduct covered by the statute and the regulation is clear on its face. To the extent that ''simulated'' was not clear on its face, this final rule regulation contains a definition.

One comment requests that the Department define ''sadistic or masochistic abuse'' because some people believe that safe and consensual bondage is not abuse, and requests that the Department distinguish between actual and simulated sadistic or masochistic abuse. The Department declines to adopt this comment. That term is not a subject of this rulemaking. Moreover, actual sexually explicit conduct depends on the content of what is being displayed, not on whether the content is subjectively considered to be abusive. If belief as to abuse were to control, a producer who determined that nothing was abusive would be able to avoid compliance with the regulations in their entirety, creating massive opportunity for child exploitation.

One comment contends that the definition of ''sexual'' varies among communities and that the final rule should contain more guidance as to the meaning of the term. It asks whether nude photos of a single person's erect penis is sexual, or whether a hand over the pubic area is sexual.

The Department declines to adopt this comment. It believes that the definition of actual sexually explicit conduct contained in the final rule is clear. The Department does not believe that a producer would have any difficulty in determining whether hypothetical depictions of the kind posed by the commenter would constitute actual sexually explicit conduct within the meaning of the rule.

Simulated Sexually Explicit Conduct

In the proposed rule to implement section 2257A, the Department started its analysis of the proper definition of the term for regulatory purposes with the term's plain meaning. The term ''simulated'' is generally defined as ''made to look genuine.'' *Merriam-Webster's Collegiate Dictionary* 1162 (11th ed. 2003). The Department believed that an objective standard—that is, one defined in terms of a reasonable person viewing the depiction—is appropriate to add to this basic definition. The proposed rule's definition of ''simulated sexually explicit conduct'' thus read as follows: ''[S]imulated sexually explicit conduct means conduct engaged in by performers in a visual depiction that is intended to appear as if the performers are engaged in actual sexually explicit conduct, and does so appear to a reasonable viewer.''

Three comments state that the final rule should incorporate the definition of ''simulated sexual intercourse'' provided by the Supreme Court in *United States* v. *Williams*, 128 S. Ct. 1830, 1840–41 (2008). One comment further recommends that the definition should explicitly incorporate by reference the definition in *Williams*. That definition reads, in pertinent part:

> ''simulated'' sexual intercourse is not sexual intercourse that is merely suggested, but rather sexual intercourse that is explicitly portrayed, even though (through camera tricks or otherwise) it may not actually have occurred. The portrayal must cause a reasonable viewer to believe that the actors actually engaged in that conduct on camera.

Id. While the *Williams* definition refers to ''simulated sexual intercourse,'' not ''simulated sexually explicit conduct,'' the Department understands the comments to recommend that the final rule use the *Williams* definition as appropriately amended to refer to ''simulated sexually explicit conduct,'' not ''simulated sexual intercourse.''

The Department believes that the *Williams* definition conceptually is not dissimilar to that outlined in the proposed rule, and adopts both comments. The final rule thus incorporates a revised definition of ''simulated sexually explicit conduct.''

One comment recommends that the proposed rule's definition of ''sexually explicit conduct'' should refer to 18 U.S.C. 2256(2)(B), not 18 U.S.C. 2256(2)(A). The comment states that the narrower definition at section 2256(2)(B), which would require depictions to be graphic or lascivious, would be more consistent with the state laws the Department rejected in determining how to define ''simulated sexually explicit conduct.''

The Department declines to adopt this comment. The definition at section 2256(2)(B) is limited, by its own terms, to images described in section 2256(8)(B)—images that are ''a digital image, computer image, or computer-generated image that is, or is indistinguishable from, that of a minor engaging in sexually explicit conduct.''

In other words, section 2256(2)(B) has no relevance to a regulation that concerns actual persons as opposed to virtual persons.

All Performers, Including Minor Performers

One comment states that the proposed rule is unclear as to whether the record-keeping requirements apply to all performers in a depiction, or to primary performers, and recommends that the Department should clarify that these requirements apply only to primary performers and not to any background performers in the depiction.

The Department declines to adopt this comment. The commenter did not attempt to define ''primary'' or ''background'' in this context, and the Department has difficulty in doing so. As a practical matter, in many cases it would be difficult to determine whether a performer in a visual depiction of lascivious exhibition or simulated sexually explicit conduct is a ''primary'' or a ''background'' performer. For example, in a lascivious exhibition depiction of a person on a bed, a person depicted in that same image as standing nearby, wearing lingerie, and watching the person on the bed could well be a ''primary'' performer—however that term were to be defined—depending on the level of interaction between that person and the person depicted on the bed. On the other hand, conceivably a fully clothed person could be considered a ''background'' performer even if located on the same bed, again depending on the level of interaction between the performers. Similar confusion would apply in the context of depictions of simulated sexually explicit conduct. In order to avoid such confusion, the Department believes that it is appropriate to require, as stated in the proposed rule, that all performers in depictions of lascivious exhibition or simulated sexually explicit conduct be covered.

Maintenance of Records

Date of Original Production

One comment characterizes the proposed rule as faulty because it does not specifically require that a record be made of the date of original production, although the proposed rule will require that this date be stated in the disclosure statement.

The Department adopts the comment's view that it was an oversight that the proposed rule did not require that a record otherwise be made of the date of production. As noted above, the Department, after careful consideration, has amended the record-keeping requirement to include that a primary producer record the date of original production at the time it examines the picture identification card of the first performer in the depiction. Again, to the extent that this is a new requirement for primary producers, the Department clarifies that it applies only prospectively from the date of the publication of this final rule.

Several comments note that in § 75.2(a)(1) of the proposed rule, producers are required to create and maintain records of the name and date of birth of each performer obtained by the producer's examination of a picture identification card prior to the date of production of the depiction. They point out that the Act made no change to section 2257(b), which is the source of this requirement. The comments ask the Department to state that only the ''examination'' of the picture identification card that must take place prior to the production of sexually explicit images, and not necessarily the creation of a record based on the examination of the picture identification that must occur before production.

The Department declines to adopt these comments. As noted above, the Department believes that in order to fully implement the purpose of the statute, the record must be made at the time of examination of the document and has clarified that in this final rule. Furthermore, the Department requires in the final rule that a primary producer make a record of the date of original production. This record will then flow to secondary producers and enable them to affix the date to the disclosure statement. However, in order to simplify the requirement, the Department has clarified that if a depiction is made over the course of multiple dates, the date of original production consists of the single and earliest of those dates.

One comment states that the original production date is not often available, particularly because it was never a requirement of section 2257. The comment cautions that were the final rule to require keeping this information, hosts of most Web sites will be immediately out of compliance. Another comment notes that the Department stated in its proposed rule that secondary producers need comply only with the rules for material that was produced after the Act's 2006 effective date, and § 75.2(c) states that producers of visual depictions made after 1995 and before 2005 may rely on identification that was valid under the record-keeping and labeling regulations that were in force on the date of original production.

As noted above, the Department adopts the comment seeking prospective application of the record-keeping requirements documenting that identification was checked prior to the occurrence of production. The comment noting that producers may rely on identification rules and record-keeping requirements that applied on the date of original production of the depiction is correct, and demonstrates that Web site owners will not have to conform their existing records to the new requirements, contrary to the statement contained in the comment noted above.

Two comments request that the record-keeping requirements with respect to viewing identification documents prior to production apply only to primary producers. According to the comments, only primary producers have an opportunity to examine picture identification cards prior to the production. At most, the comments ask, secondary producers should be required to examine what they receive from the primary producer that relates to depictions from the primary producer. One of the comments believes that without such an alternative, there will be an effective prohibition on disseminating numerous widely disseminated productions. And even then, it claims, foreign films would not have such documentation because even if a secondary producer could obtain and inspect the required records retroactively, it may be unable to do so because of difficulties in locating performers or because of data protection laws.

The Department adopts these comments in part. It rejects some of the concerns as reflecting a misunderstanding of the requirements of the final rule. A secondary producer is not required under the rule to check identification documents. That is a responsibility only of the primary producer. A secondary producer may risk child pornography offenses, however, if he does not take steps to assure himself that the performer is actually of legal age. Nonetheless, the secondary producer is required by the final rule only to retain records. Those records enable the Department to identify who the primary producer was for any depiction and to verify that the depicted performers were of legal age. The Department believes that to avoid a commercial market in child pornography through the witting or unwitting actions of secondary producers, secondary producers must keep records that each depiction occurred only after the primary producer checked valid identification documents. Were secondary producers to be exempted from this requirement, a real risk of commercial marketing of

illegal product would develop. The comments are mistaken in postulating that the final rule imposes a duty on a secondary producer to locate foreign performers after the fact. What the secondary producer must do, even for foreign productions, is to ensure that it has copies of the records that show that the primary producer checked the legal age of performers prior to the date of original production.

Requirement of Hard Copies

The proposed rule amends § 75.2(a) concerning requirements for maintenance of records. The proposed rule requires that the copy of the identification documents be retained in hard copy form. The Department received four comments regarding the proposed rule's requirements for maintaining copies of identification card records in hard copy form.

Two comments state that nothing in the Act or proposed rule requires that records be kept in hard copy format. It contends that there is no justification with contemporary technology for requiring hard copies. The comment also notes that the proposed rule represents a departure from § 75.2(f), which permits records to be kept in digital form if they include scanned copies of identification documents. Another comment reiterates that point, and adds that electronic copies would permit the passage of records along the chain of distribution as the rules contemplate. Otherwise, records could be divided when shared, which could create losses or errors and put the producer in danger of violating rules by having incomplete or improperly maintained records. This comment asks that the Department return § 75.(2)(a)(1) to its current form by deleting the word ''hard,'' or consider the new requirement for a hard copy of the picture identification document to be satisfied by scanning the identification card or a hard copy of it, and/or by electronic versions that can be printed out to create hard copies at the time of inspection.

The Department adopts these comments. Nothing in section 2257 requires that records be kept in hard copy format, and, indeed, existing § 75.2(f) permits copies of identification documents to be scanned and stored electronically if they can be authenticated by a custodian. The proposed rule did not seek to amend § 75.2(f). The proposed rule's changes to § 75.2(a) that mandate the retention of all copies of identification documents and pictures in hard copy format would create a conflict with the terms of § 75.2(f). The final rule, therefore, amends proposed § 75.2(a)(1) to add ''or digitally scanned or other electronic copy of a hard copy.'' Note, however, that in the event a regulated entity or individual decides to retain records in electronic format, nothing in the Act or the regulations provides that technical difficulties would excuse failure to make the records available at reasonable times for inspection.

One comment notes that in the proposed rule the Department stated that a producer need not keep a copy of a URL hosting a depiction that the producer produced ''but over which he exercises no control.'' The commenter asks that the Department modify this statement to read ''but over which he exercises no corporate control'' or other such language that clarifies that the producer is not responsible for Web sites not owned by the producer.

The Department declines to adopt this comment. Were the Department to state that the producer is not responsible for Web sites the producer does not own, the final rule would not apply to a producer who influenced or directed what happened to the depiction, even if he did not own the Web site. If a producer exercises control over a depiction, whether as an individual or as a corporate entity, and regardless of whether the producer owns the Web site on which the depiction is displayed, then the producer must retain the copy of the URL hosting a depiction that the producer produced. The only exception to this requirement, as noted above, is where an individual who would be a primary producer under the final rule's definition is an employee of a corporate primary producer. Under such circumstances, that individual will not be considered a primary producer.

Redaction

One comment states that the viewer of the identification document need not know the Social Security number or exact birth date of a performer.

The Department does not adopt this comment. The proposed rule quite clearly allows a producer to redact the performer's Social Security number. An exact birth date sometimes may be redacted so long as the year is not obscured. However, if a performer is 18 on the date of original production, the month or even the day of the month must not be redacted if a question would exist whether he was of legal age at the time of the original production.

Compliance Date

In accordance with current law, the final rule retains July 3, 1995, as the effective date of the rule's requirements for secondary producers related to depictions of actual sexually explicit conduct. (The current regulations, published in 2005, adopted July 3, 1995, as the effective date of enforcement of section 2257 based on the court's order in *American Library Association* v. *Reno,* No. 91–0394 (SS) (D.D.C. July 28, 1995).)

In response to a comment stating that the proposed rule created potential confusion by omitting language from the 2007 proposed rule implementing the Adam Walsh Act's changes to section 2257, the Department clarifies, as stated in the preamble to the 2007 proposed rule, *see* 72 FR at 38036, that the one exception is that this final rule would not penalize secondary producers for failing to maintain required records in connection with those acts of production that occurred prior to the effective date of the Adam Walsh Act. The proposed rule also stated that producers of visual depictions of actual sexually explicit conduct made after July 3, 1995, the effective date of the regulations published in 1992, and before June 23, 2005, the effective date of the current regulations published in 2005, may rely on picture identification cards issued by private entities such as schools or private employers that were valid forms of required identification documentation under the provisions of part 75 in effect on the original production date. Finally, the proposed rule stated that the effective date concerning depictions of simulated sexually explicit conduct will be 90 days after it is published in the **Federal Register** as a final rule.

Two comments address the disparity between the statutory effective date of section 2257's coverage of depictions of lascivious exhibition (July 27, 2006) and the statutory effective date of section 2257A (90 days after publication of this final rule implementing section 2257A), which includes the safe harbor provision exempting producers who certify from section 2257's provisions concerning depictions of lascivious exhibition. One comment recommends that the Department make the safe harbor provision retroactive to the July 27, 2006, effective date of section 2257 concerning depictions of lascivious exhibition. The other comment states that the Department should make the effective date of part 75 with respect to depictions of lascivious exhibition the same date as the statutory effective date of section 2257A. This comment further states that setting the same effective date for rules regulating depictions of lascivious exhibition and simulated sexually explicit conduct would ''avoid[ ] potentially fatal vagueness problems under the First Amendment.''

Under either suggestion, the effective date of the safe harbor provision and the regulatory requirements concerning depictions of lascivious exhibition would be the same.

The Department adopts these comments in part. The final rule provides that the regulatory requirements applicable to depictions of lascivious exhibition apply starting 90 days after the publication of this final rule.

Two comments argue that the proposed rule creates First Amendment vagueness and ex post facto problems because individuals did not create records as of the effective date of the proposed rule which they did not think would be necessary. The Department does not accept the comment that the proposed rule created any First Amendment vagueness problem, *see American Library Ass'n, supra,* but does accept the comment insofar as the proposed rule would operate retroactively and, as stated above, modifies the compliance date accordingly.

Two comments state that to avoid retroactivity, the final rule should not apply to material that is actually sexually explicit only because it displays lascivious exhibition of the genitals and that was acquired by a secondary producer prior to the compliance date of the regulation. One of these comments requests the Department, if it adopts a different standard, to define ''acts of production,'' so that a secondary producer would know based on an acquisition date or other standard what content required record-keeping and what did not.

The Department declines to adopt this comment. Although the Department is sympathetic to the concerns expressed in the comment, and wishes to avoid retroactivity, it does not agree that the date that a secondary producer obtained the image displaying lascivious exhibition of the genitals should determine whether the regulation applies. There is no requirement in the existing or proposed rules that secondary producers document the date they obtained particular depictions. Were the Department to adopt the comment, unscrupulous secondary producers could claim that they acquired any depiction created before the final rule's compliance date prior to that date. Secondary producers who wished to demonstrate in good faith that their collections contained depictions that were obtained only after the compliance date of the final rule would be obliged to mark every such depiction currently in their possession to prove that they possessed it as of that date. Moreover, the Department would have no way of proving that the producer acquired the depiction prior to the compliance date of the final rule. The Department seeks to ensure that prohibited depictions were not created on or after the compliance date as herein modified. This concern derives from the statutory language, which turns on the date of production. The date that the secondary producer acquired the image is of no relevance. A secondary producer will be able to comply with the final regulation on an exclusively prospective basis by determining that appropriate procedures were followed for such depictions that were originally produced after the compliance date of the final rule.

Another comment requests that, even if the Department were to adopt a prospective compliance date, the final rule not apply to images (as opposed to depictions) created before the compliance date, i.e., a digitization of a previously existing depiction. The comment points out that a digital image made after the compliance date could be based on an initial depiction that could be older. The producer of the digital image could not use that earlier depiction, even if it were eighty years old, because it could not reconstruct the records. Therefore, the comment concludes that the final rule should be limited to images first created before the compliance date. The comment also states that the Department must accept that it cannot address preexisting content.

The Department declines to adopt this comment. The Department does agree that because the final rule will apply prospectively, it cannot address preexisting depictions that constitute actual sexually explicit material only because they display lascivious exhibition of the genitals. However, the Department can address digitized or other modified versions of preexisting content where the modifications occur after the final rule's compliance date. In light of the changed compliance date of the rule, any preexisting depiction of lascivious exhibition of the genitals that is not now digitized can be digitized before the rule takes effect. That will avoid the problem stated by the comment. Any secondary producer after that date who digitizes a depiction without obtaining records showing that the depiction was in accordance with the final rule will either need to obtain another digitized version of the depiction that does so or track down the primary producer of either the original or another digitized version of the depiction to create the records.

One comment notes that the statutory language on this point is broader than the language of the proposed rule. The statute says that section 2257 does not apply to ''any depiction of actual sexually explicit conduct'' involving lascivious exhibition of the genitals that was produced ''in whole or in part'' prior to the compliance date. The comment states that the final rule should track that language.

The Department declines to adopt this comment. The comment implies that under the statutory language, any depiction of lascivious exhibition of the genitals that was produced after the compliance date of the final rule is not covered by section 2257 if any other part of the image was produced before the compliance date. The Department does not so read the statute. There are five situations in which the statutory language discussed could apply, and the Department believes that it is important to set forth the applicability of the statutory language to each.

First, prior to the compliance date of the final rule, a depiction could have been created of lascivious exhibition of the genitals and no other form of actual sexually explicit conduct as that term is defined after the compliance date of the final rule. Prior to the final rule, this was not a depiction of actual sexually explicit conduct. If the depiction were modified or another depiction connected to it that did not contain lascivious exhibition or another form of actual sexually explicit conduct, then the final rule would not apply because the lascivious exhibition of the genitals was produced before the compliance date of the final rule.

Second, a depiction produced before the compliance date could have contained neither actual sexually explicit conduct as that term was then defined nor lascivious exhibition of the genitals. If a producer then altered or added to the depiction, or to a connected depiction, a depiction of lascivious exhibition of the genitals after the compliance date, this comment implies, the depiction would be one of lascivious exhibition of the genitals that was ''in part'' created after the compliance date of the final rule, and the final rule would not apply. The Department disagrees. No depiction of lascivious exhibition of the genitals was contained in this image before the compliance date of the regulation. All such material appeared only after the compliance date of the regulation, and, therefore, such material is covered by the final rule.

Third, a depiction of actual sexually explicit material as it was then defined, but which did not depict lascivious

exhibition of the genitals, could have been produced before the compliance date of the final rule. After that date, a producer might then add lascivious exhibition of the genitals to the depiction itself or to a connected depiction. According to the implication of the comment, section 2257 could not apply to the depiction that contains lascivious exhibition of the genitals because it was produced in part prior to the compliance date of the final rule. In fact, the image was already covered by the statute because it displayed actual sexually explicit content as that term was defined prior to the compliance date of the final rule. Nothing in the Act made material that was previously subject to section 2257 lose that status. No depiction of actual sexually explicit conduct involving lascivious depiction of the genitals was produced in whole or in part prior to the compliance date. Notwithstanding that the depiction of lascivious exhibition was added after the compliance date, the depiction nonetheless is subject to section 2257. Otherwise, any depiction of actual child pornography could be taken out of the scope of section 2257 by modifying or connecting to such an image a depiction of lascivious exhibition of the genitals that was produced prior to the compliance date of the final rule. A statute passed to enhance prosecution of child pornography cannot reasonably be read so as to prevent the prosecution of all child pornography offenses through such a simple subterfuge.

Fourth, a depiction could have been produced prior to the compliance date of the final rule that depicted lascivious exhibition of the genitals and no other form of actual sexually explicit conduct. Suppose that after the compliance date of the final rule, another depiction of lascivious exhibition of the genitals were then added, whether or not it also displayed any other example of actual sexually explicit conduct. The implication of the comment is that the depiction contains lascivious exhibition of the genitals that was produced ''in part'' before the compliance date of the final rule, and therefore is beyond the reach of the final rule. Under this theory, even if the after-added actual sexually explicit conduct were in fact child pornography, section 2257 could not apply because the earlier image contained a depiction of lascivious exhibition of the genitals that was produced prior to the compliance date of the regulation. The Department disagrees. It will treat each such image separately. The depiction of lascivious exhibition of the genitals that was produced before the compliance date of the final rule will not be governed by the final rule although some of the image was produced after its compliance date. This is the case because part of the depiction was produced before the compliance date. The connected depiction of actual sexual sexually explicit conduct in this example was produced after the compliance date of the rule, and must conform to its strictures.

Fifth, a depiction could have been produced before the compliance date of the rule that contained both lascivious exhibition of the genitals and actual sexually explicit conduct as it was defined before passage of the Adam Walsh Act. Then, following the compliance date of the final rule, the depiction could have had appended to it any form of actual sexually explicit conduct, including actual child pornography. Under the implication of the comment, the depiction would contain, in part, lascivious exhibition of the genitals that was produced before the compliance date of the Act, and, therefore, none of the material would be subject to the final rule. Under this approach, even the material that was actual sexually explicit conduct under its pre-Act definition would no longer be covered by section 2257. The Department disagrees. There is no indication that Congress intended to accomplish that result. Under this approach, every example of child pornography—even those that have been subject to section 2257—could never yield a prosecution if it were appended to a depiction of lascivious exhibition of the genitals that was produced before the compliance date of the final rule. No such result is required. In this circumstance, each depiction would be treated separately. The part of the depiction that involved only lascivious exhibition of the genitals and was produced prior to the compliance date of the final rule would not be subject to the final rule. The other parts of the depiction would be subject to the final rule, either because they were examples of actual sexually explicit conduct as that term was defined before the compliance date of the final rule or they were produced after the compliance date of the final rule and met the definition of the term as it existed upon that compliance date.

Inspections

Although the proposed rule made no changes to the inspection requirements contained in § 75.5, the Department received a number of comments on the existing regulations.

One comment proposes that the amount of time for which business premises be open for inspections should not be 20 hours per week as per § 75.5(c). The comment says that there is a need to address inspection timing where a producer has an entirely separate full-time job elsewhere. Two comments, including this one, contend that this problem would be eliminated by using third-party record-keepers. Four comments state that small businesses in this field work out of their homes, and cannot staff their operation for 20 hours per week while performing outside employment. These comments also expressed concern about inspections occurring in their homes.

The same question was raised in the context of the rulemaking on the prior version of the regulations, and the Department declined to accept the comment. *See* Inspection of Records Relating to Depiction of Sexually Explicit Performances, 70 FR 29607, 29614 (May 24, 2005). At the time, the Department believed that permitting third-party custodianship would unnecessary complicate the inspection process and undermine its effectiveness.

Upon reconsideration, the Department adopts this comment in part. The Department now believes that it can still accomplish the purposes of the statute—in particular, effective inspections—even allowing for third-party custodianship of the records. Hence, although it will not modify § 75.5(c), the Department will permit records required under part 75 to be held by third parties. By allowing third-party custodians to maintain the records, the burden on small businesses is reduced, including any fears arising from posting home addresses, where many of these small businesses are reported to operate, and any concerns of record-keeping inspections of those same premises. In the text of the regulation, such a third party is referred to a ''non-employee custodian of records'' to distinguish it from the producer and any person he may directly employ to maintain the records.

In addition to this change, in response to one comment, the Department has eliminated the requirement that the name of an individual be listed on the disclosure statement and has permitted only the title to be listed.

One comment states that section 2257 allows the Attorney General to inspect records, and that, therefore, the obligation of the producer is to make records available only to ''the Attorney General.'' Section 75.5(a) allows inspectors other than the Attorney General, and the comment claims that the statute does not permit such individuals to inspect. The comment further notes that the rule should

identify the class of persons who are investigators, lest the custodian be uncertain concerning which people he should allow to inspect the premises. The comment maintains that there is a need for the Department to demonstrate to those subject to inspections that the inspection authority will not be abused.

The Department declines to adopt this comment. Under general principles of delegation, the Attorney General may delegate to subordinate officials the performance of the Attorney General's duties. The commenter's fear that under the language of the proposed rule, unaccountable or unknown individuals could conduct the record searches is therefore unwarranted.

The Department received thousands of similar comments that note that § 75.5(b) provides for inspections without advance notice and request that it should instead require such notice. Some commenters say producers will not destroy any records if given notice because they would then face liability for a missing record. If notice is used to put into order records that have not been organized, then the comment believes that no legitimate purpose of the record-keeping requirement would be harmed by providing notice. The commenters further ask the Department to specify the consequences at the premises if no one is present when the investigator arrives, such as whether the inspector will knock down the door. Two other comments request that the Department eliminate no-notice inspections.

The Department declines to adopt these comments. As it stated previously:

> Advanced notice would provide the opportunity to falsify records in order to pass inspection. Lack of specific case-by-case notice prior to inspection will promote compliance with the statute and encourage producers to maintain the records in proper order at all times, as is contemplated by the statute. The rule will specify that inspections are to occur during the producer's normal business hours. The inspection process clearly does not contemplate warrantless forced entry solely because no one is present when the investigator arrives.

70 FR at 29619.

The Department received thousands of similar comments that argue that non-routine inspections should always require probable cause and a search warrant. The Department declines to adopt these comments. These inspections are administrative in nature, and, under well-established legal principles, no search warrant is required. *See id.*

One comment states that a single owner of a home-based Web site would be captive in his own home for 20 hours per week. The Department responds to this comment by noting that it is permitting required records under Part 75 to be held by third parties.

One comment maintains that the ''reasonable times'' provision of § 75.5(c)(1) could mean that an inspection could be made at 2:30 a.m. if a live Webstream or production work is being conducted then, and that such an inspection would interrupt production. Moreover, according to the comment, production could be done during the day in Europe while it is 2:30 a.m. in the United States, even though it would not yet be clear which images will be published and there will not have been time to cross-reference. The comment argues that if there is probable cause to believe that an underage performer is actually working in an off-hours production, the courts can issue warrants without the need for any late-night records inspection at all.

The Department declines to adopt this comment. The ''reasonable times'' provision will be applied according to its plain meaning. Moreover, the comment misunderstands the nature of the statutory requirement which the rule implements. The goal of the record-keeping regime is not to intervene to stop crimes involving underage performers that have already occurred. Rather, the point of the record-keeping is to prevent victimization in the future. The inspection requirement is designed to ensure that the prophylactic identification- and age-verification measures are complied with.

One comment concerning the four-month interval for inspections states that although some large entities or a custodian arrangement may warrant inspections as often as every four months, the many small production operations with small numbers and static images do not. It claims that inspections of such entities that occurred with such frequency would simply mean that inspectors would review the same images, which it contends is an invitation to harassment. The Department responds to this comment by noting that while inspections may take place as often as every four months, they are not required to occur so frequently. Moreover, the regulation requires that inspections ''be conducted so as not to unreasonably disrupt the operations of the establishment.''

One comment notes that § 75.5(c)(4) specifies what the investigator may say at the end of an inspection, and what the producer is permitted to say. The comment expresses that the regulations should also include a statement that the authority to search does not include the authority to require that any questions be answered. The comment also maintains that the regulation should say that everyone on the premises is free to leave before or during a records inspection. If everyone is not free to leave, the comment believes that the rule should say so and include the constitutional safeguards appropriate for custodial investigation situations.

The Department declines to adopt this comment. Administrative inspections are not custodial investigations that would require advisories concerning the right to counsel or to avoid self-incrimination.

One comment states that the Department should consider ''legislation'' forbidding anyone other than a custodian or a Department investigator from moving, disturbing, or interfering with the required records in any way. It contends that the integrity of the records, including their cross-referencing, otherwise could be disturbed. The comment also asks that this notice clarify that the seizure or theft of some or all of the records does not require the cessation of any ongoing or planned ''expression.'' If the seizure did have this effect, according to the comment, then the records would have to be returned within 24 hours so that ''expression'' could promptly resume.

The Department declines to adopt this comment. The Department has no evidence that unauthorized individuals have interfered with records or that there is a serious risk of such interference occurring in the future. (The Department also notes that it lacks the authority to enact laws, and that its authority is limited to executing laws, including through the publication of implementing regulations such as this one.)

One comment posits that searches under section 2257 have not identified any underage performers, so their purpose cannot be to catch and prosecute people who arrange for such performances. It claims that no producer knowingly uses underage performers, and that section 2257 is an after-the-fact tool, not one that advances prevention.

The Department does not adopt this comment. It does not agree that no producer knowingly uses underage performers. On the contrary, the Department's successful prosecution of child pornography cases every year proves that some producers do knowingly or recklessly use underage performers. Further, as discussed above, the Department believes that section 2257 is in fact preventive because it ensures that before any production occurs, the producer undertakes steps to ensure that the performers are of legal

age. Finally, the purpose of the regulation in large part is to prevent unknowing use of underage performers.

Location of Records

Statement of Location of Books and Records

The proposed rule changes the requirement under § 75.6(a) that producers place on every ''copy'' of a depiction of sexually explicit conduct a statement that indicates the location of books and records. Under the current regulation, that statement could be contained in a label or a hyperlink. The proposed rule would require that the definition of ''copy'' mean that the producer must attach a ''statement describing the location of records * * * [that is to] be affixed to every page of a Web site (controlled by the producer) on which visual depictions of sexually explicit conduct appear.''

One comment argues that an exemption statement is not required if a depiction is produced by foreign producers who did not intend at the time of production for the depiction to enter the United States market.

The Department does not adopt this comment. Determining when the producers of the foreign production intended to distribute the depiction in the United States would be essentially impossible, leaving producers free to claim that they had no such intention on the date of original production. If the depiction is made available in the United States, then the disclosure statement is required, regardless of the intent at the time of production.

Eleven comments claim that the proposed rule's change to including the statement on every page could lead to harassment of Web page operators who operate their sexually explicit businesses out of their homes, potentially resulting in physical injury, stalking, burglary, or identity theft. They say that placing a link on the Web page constitutes affixing the copy to a Web page but avoids harassment risk because the exposure of the custodian's name will be limited to people who are seriously seeking the records information. Two commenters raise their concerns that sharing this information with secondary producers could result in the same harms and ask that secondary producers not keep this information. Nine comments raise similar harms as potentially occurring to performers if the location of the records were placed on every page. One comment expresses concern that the primary producer's sharing with others of the addresses and other contact information could make it liable for how the information might be used by others, including crimes against the performers. Two comments request that the secondary producer's home address not appear on the disclosure statement, while another comment recommends that the secondary producer's street address be included but not the street address of the primary producer, which would keep the secondary producer's statements of locations of records from being unmanageably long due to the inclusion of other producers' locations. One comment states that the proposed rule will greatly increase exposure of identification of producers, chill protected speech, and serve the rule's purpose no better than a link would.

One comment reported that Web sites based on static pages would have to manually update every page if changes must be made to the compliance notice, such as the publication date, business address, producer name, and custodian name. Each update would cause the potential for error, and each honest mistake could result in prosecution. Although dynamic sites could more easily update the compliance notice, extra processing by the Web site server would be necessary, which is costly. There would be a considerable extra load on the server for individual page compliance, according to the comment, and dynamic pages will face technical challenges if operators of such Web sites are to comply.

The Department adopts these comments in part. The Act requires that the location of the records must appear on each ''copy'' of a depiction of sexually explicit conduct, meaning every Web page for Internet sites. The Department believes that its final rule allowing producers to place records in the care of third-party custodians will obviate any harms to performers that might otherwise occur due to disclosure of the address where the records are kept. It also will amend the final rule to permit the posting of a link or ''mouseover'' on each Web page to satisfy the requirement that every page of a Web site provide the location where the required records are stored.

Five comments say that a hyperlink text to a full statement that can be updated as needed would fulfill the purpose of the proposed rule. The hyperlink would appear on each page. One of these comments notes that the Act requires that a notice appear on every page on which a depiction appears, but that notice could still appear in a dedicated link. It claims that although the Act required that the notice appear on every page, the Act did not alter the manner in which the notice is presented. One comment says that the Web site could use an appropriately labeled link that opens to several pages of disclosure statements or an elaborate table of disclosure statements. Producers could use a series of links to keep individual disclosure statements close to the galleries to which they relate. One comment believes that one notice linked to every page of a site provides everything the Department needs to enforce the statute by identifying the responsible record and the place where the records are located.

Four comments claim that the requirement that a notice appear on every page would ruin the aesthetics of the Web site. Attention of viewers is measured in seconds, according to these comments, and clutter will harm gaining attention. One comment thought that a solution to the aesthetics problem would be to avoid having the disclosure statement appear on the face of the image, so as not to increase the size of the image files or to harm the integrity of the image itself. If the disclosure statement appeared in a comment field within the digital file, at a defined location, then both the producer and the Department would know where it could be found, the comment concluded.

The Department adopts these comments in part. Without accepting as valid every fear that the comments raise, the Department does believe that the language in the proposed rule, and even its comments at 72 FR at 38035, allow it to require a less-burdensome disclosure statement than commenters anticipated by eliminating language in the current regulation that permitted a home page statement or hyperlink on that page. Although the current regulations that allow such a statement to be placed only on the home page cannot be squared with the statutory changes, the Department does believe that the Act would permit the required statement that appears on each page to be a hyperlink that contained all the statutorily required record-keeping compliance information. By adopting this change, the Department believes that it will respond to essentially every concern that a comment raised regarding privacy, threats, aesthetics, or computer technology.

Seven comments state that moving the disclosure statement from the main page to every page is unnecessary and a nuisance. One comment says that each printed page is necessary for records and books, but an explanation is needed for applying this mandate to electronic media. Another comment thought that the disclosure statement could be affixed to a magazine or other printed matter in the same fashion as a shoplifting tag, not printed on the copy

itself, and that only movies would actually require appearance of the statement on the work itself. Two comments state that the existing requirement of a disclosure statement on the homepage or principal URL of a Web site has worked well and that there is no need for it to appear on each and every Web page where the triggering content appears.

Two comments state that it is impossible to apply the requirement that the disclosure statement appear on every Web page to live Web casts. Another contends that it is unrealistic to expect a separate disclosure statement or a separate line in a disclosure statement for every separate work that is placed on each and every Web page. One comment notes that for composite works, there are thousands of images often organized into separate galleries. A Web page could have an index page with 100 images that were produced on different dates, according to the comment, and that more generality should be allowed in the statement.

The Department declines to adopt these statements. Section 2257A(e)(1) requires that a statement describing where the records are located ''shall cause to be affixed to every copy,'' and provides specifically that ''the term 'copy' includes every page of a Web site on which matter describes in subsection (a) appears.'' The Department must issue regulations implementing the statute, and it is prevented from adopting those comments asking that each page not be required to contain the disclosure notice, or stating that such notices are unnecessary, that notices should be able to appear on a separate tag, or that it is unrealistic to expect that each Web page will contain a disclosure notice. And because the statutory requirement applies to ''[a]ny person to whom subsection (a) applies,'' the Department may exempt neither primary producers, secondary producers, nor producers of live Web casts. As noted in the proposed rule, and finalized in this rule at § 75.2(a)(1), however, producers of live Web casts may satisfy the requirement by ''includ[ing] a copy of the depiction with running-time sufficient to identify the performer in the depiction and to associate the performer with the records needed to confirm his or her age.''

One comment states that the records should require not the name and address of the individual, but a title, since the name of the relevant individual changes over time. The comment believes that such a change would avoid an invasion of privacy if the person maintaining the records is a performer. The comment believes that this is the same privacy interest that led the Department in the proposed rule to redact non-essential information from copies of performers' identification cards before providing secondary producers with copies of records. The Department believes that its allowance of the keeping of the records by third-party custodians eliminates any possibility of invasions of privacy of this type. The Department also accepts the comment's view that the title of the custodian could be provided rather than the name of a specific individual, since the responsible person could change over time, otherwise requiring that each existing disclosure statement be changed.

One comment expressed the view that the disclosure statement should provide information concerning the date of photography and the name, address, and title of a person who produced it, including its insertion into a Web page, and state the name of the person responsible for maintaining the records. The Department declines to adopt this comment, because the Department does not believe it is necessary for the disclosure statement to contain all of this information. Instead, the Department believes that the objectives of the statute are advanced through the rule's record-keeping requirements, which will ensure that the necessary information is available, while at the same time reducing the burdens on entities compared to those that would be imposed by additional requirements concerning the disclosure statement.

One comment recommends that the existing regulations on the appearance of the disclosure statement contained at § 75.6(e) should be changed. It contends that the typeface requirements are inadequate because point size is an objective criterion. It would prefer that the regulation specify how large the type should be but not how large it is compared to other printing. It also argues that a point-measured minimum size is irrelevant on a computer site because the appearance of the text will depend on the settings of each monitor displaying it.

The Department has declined to adopt this comment. Precisely because typeface appearance can vary, the Department believes that it is important to require that disclosure-statement typeface be a certain size compared to other printing. Because the size of computer screens and their settings tend to vary little among the general public, the Department concludes that specifications governing the size of type should be retained.

One comment asks which entity bears the obligation of providing a disclosure statement when one Web site frames content originating from, and wholly contained on, the servers of another producer, where the content is selected and changed in the originator's sole and exclusive discretion. The Department states that where a Web site operator operates as a producer, even as a secondary producer, it must comply with the disclosure statement requirements of the final rule. Where a Web site operator is a distributor, it need not comply with those requirements.

Date of Original Production

The proposed rule also would require that the date of original production be among the records that are required to be contained in the statement describing the location of books and records. One comment argues that it is sensible to use the date of first production because this is the date that matters for the production of child pornography, to which the records relate, and which would determine when the record-keeping obligations expire. However, this comment states that the date of original production should not appear on the disclosure statement because it is important only once the performers' dates of birth are known. Since that information is not a part of the disclosure statement, the comment states that inclusion of the production date makes no sense. The commenter suggests requiring that the records referred to in the disclosure statement themselves detail the relevant production dates: The earliest date that the primary producer created any sexual image depicted of each performer.

As noted above, the Department adopts this comment.

Location of the Statement

One comment requests that the Department describe how the rules requiring a statement apply to simulated sexually explicit material on digital video discs (DVDs) that are divided into different segments, such as bonus material. The regulations at § 75.8, the comment notes, tell what should be done where end credits exist, but often such bonus material has no end credits. The comment advocates that § 75.8(e) should apply in this circumstance rather than §§ 75.8(b) and (c). The comment also asks the Department to conclude that the statement can appear at the end of each item of bonus material available, or if identical for all materials, in a separate dedicated menu option that opens the statement.

The Department adopts this comment and has clarified in the final rule that for purpose of § 75.8, a DVD containing

multiple depictions is a single matter for which the statement may be located in a single place covering all depictions on the DVD. This is analogous to a magazine containing multiple depictions, per § 75.8(a), locating the statement on a single page.

Two comments state that some Web sites contain thousands of pages of constitutionally protected visual depictions and other content. They question whether producers would be required to display thousands of disclosure statements, especially when so many different depictions can appear on one site. They contend that affixing disclosure statements to thousands of depictions would create a stigma based on an ambiguous definition of lascivious exhibition in one picture out of thousands.

The Department does not adopt these comments. If any entity operates a Web site that contains thousands of pages of depictions of sexually explicit conduct, then those entities are required by law to display thousands of disclosure statements. As noted, the Department in this final rule is permitting those statements to appear as hyperlinks. The number of depictions on a site is not the relevant issue, but whether on a particular Web page there appears one or more such depictions. If the owner of a Web site chooses to display thousands of depictions on one Web page and one of those is a depiction of lascivious exhibition, then that Web page must contain a disclosure statement. The comments offer no evidence to support a view that such a statement would create a stigma, nor does the Department believe that ''lascivious exhibition'' is defined ambiguously. Any person who believes that only one depiction among thousands is of lascivious exhibition can display that depiction on a Web page unto itself. Moreover, a studio or any other entity that conforms to section 2257A's certification safe harbor will not face the situation that these comments hypothesize.

These comments also ask the Department to delay the compliance date of the disclosure statement until the Department issues its regulations effectuating the safe harbor of section 2257A, which may apply to the entities referenced in the comments. The Department believes that Congress intended that the safe harbor was to be available to entities who qualified for its operation in a manner that would preclude the need for such entities to conform to the disclosure and record-keeping requirements. Therefore, as noted earlier, the Department adopts this portion of the comments.

One comment specifically requests that the current language of § 75.8(d) that permits a hyperlink on the homepage of a URL be retained. The Department declines to adopt this comment. The Act requires a disclosure statement on each page of a Web site. As noted above, however, the Department will allow that statement to appear as a hyperlink that is displayed on each page that depicts sexually explicit conduct.

One comment asks that if the Department allows a hyperlink on the index page, that it make clear where the disclosure hyperlink should appear since the first page may not contain any covered depiction. Because the Department does not adopt the view that the Act permits the appearance of a hyperlink only on an index page, it does not adopt this comment.

Two comments ask whether the disclosure statement that the Act requires for each page depicting actual sexually explicit conduct applies to every page of such Web site, or only the pages that contain actual sexually explicit conduct. The Department responds to this comment by referencing that the plain language of section 2257A(e)(1) of the Act provides that a disclosure statement must appear on ''every page of a Web site on which matter described in subsection (a) appears.''

One comment asks what the word ''matter'' means, and the Department again references the plain language of the Act in subsection (a), which refers to depictions of sexually explicit conduct. Another comment asks whether a Web site is a ''matter'' subject to regulation and, if so, whether each of its elements is an individually ''matter'' for such a purpose. It also inquires whether a Web site as a whole is a ''matter'' or whether it is simply an amalgamation of many matters, and whether the Department is requiring many different disclosure statements because a Web site has many different pages.

The Department answers this comment by stating that it requires many different disclosure statements only when a Web site displays many different depictions of sexual explicit conduct. The Act requires that when any page of any Web site depicts any sexually explicit conduct—''matter'' as contained in subsection (a)—then the page must contain a disclosure statement. Hence, it is not the Web site or its pages that is a ''matter,'' but the depiction itself.

One comment related that neither the statute nor regulations define a ''Web page.'' The comment says that the term could mean a screen that appears on a computer, an HTML document on the Internet, or anything covered by a single URL. The comment suggests that a definition is needed to avoid vagueness and provides a list of 28 definitions of the term.

The Department declines to adopt this comment. The use of the term ''Web page'' in the regulation predates the amendment of the statute in the Act, and the lack of a definition of ''Web page'' was not previously raised in the comments in the rulemaking for the 2005 version of the regulation. That is the case even though the definition of ''URL'' was commented upon, and responded to by the Department. See 70 FR and 29610. This confirms the Department's belief that a definition of the term is not needed for compliance with the regulation.

The same comment contends that it would be impractical and unnecessary to require the disclosure statement to appear on the screen during the playing of a video clip that depicts actual sexually explicit conduct. The Department does not accept this comment. It refers the commenter to the terms of existing § 75.8(b), which describes where the disclosure statement must appear for a motion picture or videotape.

Exemption Statement

One comment states that there should not be an exemption statement under § 75.7. Even in the presence of such a statement, the comment contends that the government must still prove all the elements of an offense. It says that many depictions are not required to contain a disclosure statement—not just ones produced before the compliance date, but also later depictions for which the record-keeping period has expired. The comment also maintains that no such exemption statement is required if a depiction is foreign-produced by producers who did not intend at the time of production for the depiction to enter the United States market, or by married couples who produce videotaped images of themselves for their own personal use.

The Department declines to adopt these comments. It does not agree that foreign-produced materials will not require disclosure statements if they were not intended to be made available in the United States at the time of production. Determining when the producers of the foreign production intended to distribute the depiction in the United States would be essentially impossible, and even if it were possible to do so, producers would simply claim that on the date of original production, no such intent had manifested itself. If

the depiction is made available in the United States, then the disclosure statement is required, regardless of the intent at the time of production. With respect to personal use, the Department does not construe section 2257 and part 75 to encompass an adult couple's recording of its intimate activity for the couple's private use in the home.

Exemption From Statutory Requirements With Respect to Visual Depictions of Lascivious Exhibition and of Simulated Sexually Explicit Conduct In Certain Circumstances and Associated Certification Regime

As outlined above, Congress in the Act filled two gaps left by the original section 2257 by amending section 2257 to cover lascivious exhibition and by enacting section 2257A to cover simulated sexually explicit conduct. In enacting section 2257A, Congress determined it would be appropriate, in certain circumstances, to exempt producers of visual depictions of lascivious exhibition (for which records must be kept under section 2257, as amended by the Act) and producers of visual depictions of simulated sexually explicit conduct (for which records must be kept under section 2257A) from statutory requirements otherwise applicable to such visual depictions. See 18 U.S.C. 2257A(h).

The safe harbor provision in the statute in essence permits certain producers of visual depictions of lascivious exhibition or of simulated sexually explicit conduct to certify that in the normal course of business they collect and maintain records to confirm that performers in those depictions are not minors, although the records may not necessarily be collected and maintained in the format required by part 75. Where a producer makes the required certification, matter containing such visual depictions is not subject to the labeling requirements of the statute.

In the proposed rule, the Department crafted a certification regime (described in detail below) that would have implemented the safe harbor in such as way as to permit such producers, in accordance with the statute, to be subject to lesser record-keeping burdens than those in part 75, while still protecting children from sexual exploitation. Four comments recommend several major changes to the certification provision. These comments are described below.

Who May Certify

Any entity that meets the statutory requirements for eligibility, which are incorporated verbatim in the proposed rule, may certify that it meets the requirements of section 2257A(h). In addition, an entity may certify for itself and all sub-entities that it owns or controls. The names of all sub-entities covered must be listed in such certification, however, and must be cross-referenced to the matter for which the sub-entity served as the producer.

Both United States and foreign entities may certify. In the case of a certification by a foreign entity, the foreign entity, which may be unlikely to collect and maintain information in accordance with United States federal and state tax and other laws, may certify that it maintains the required information in accordance with their foreign equivalents. The Department considers the statute's use of a broad description of laws and other documentation that would satisfy the certification to provide authority for this permission to foreign entities.

The proposed rule would have required that the certification be signed by the chief executive officer of the entity making the certification, or in the event an entity does not have a chief executive officer, the senior manager responsible for overseeing the entity's activities.

One comment recommends that due to chief executive officers' demanding schedules, other executive officers should be able to sign the certification. The Department adopts this comment.

One comment urges the Department to confirm that if an entity produces both materials that are and are not covered by the certification regime, the entity is not disqualified from using the certification regime for covered materials. The Department adopts this comment.

The certification regime in the proposed rule was similar for producers of lascivious exhibition and producers of simulated sexually explicit conduct, but differed in some material respects, as described below.

Time Period for Certification

The proposed rule would have required the certification to be filed every two years. The Department could have chosen a shorter period for certification, a longer period, or a permanent certification. The Department believed, however, that two years is a reasonable period, as it would ensure that certifications remained up-to-date without imposing overly onerous burdens on regulated entities.

One comment recommends the elimination of proposed § 75.9(e), which would require certifications every two years. The comment points out that if the requirement to list the titles of works covered by the certification and other related information were deleted, it would not be necessary to require producers to submit certifications every two years. Instead, the Department could simply require re-certification if there are material changes in the information the producer certified under § 75.9(c)(1) and (2) concerning how the producer collects and maintains information concerning its employees who perform in its works covered by the certification regime.

The Department adopts this comment. As explained below, as the Department adopts various comments concerning the information to be provided in the certification under § 75.9, it is not necessary to require producers to re-certify every two years. It is, however, still necessary to establish certifications on the record as soon as possible. Accordingly, the Department will require an initial certification due 180 days after the publication of this proposed rule as a final rule. This will provide sufficient time for entities to determine if they wish to certify and to come into compliance with the certification requirements. Initial certifications of producers who begin production after the publication of this proposed rule but before the expiration of the 180-day period following its publication as a final rule are due on the last day of the 180-day period. Initial certifications of producers who begin production after the expiration of the 180-day period are due within 60 days of the start of production. In any case where a due date or last day of a time period falls on a Saturday, Sunday, or federal holiday, the due date or last day of a time period is considered to be the next day that is not a Saturday, Sunday, or federal holiday.

Enforcement of the Certification

All of the statements in the certification are subject to investigation. The proposed rule stated that ''a false certification will result in a violation of section 2257A and potentially other criminal statutes.'' *See* 72 FR at 32266.

One comment asks the Department to clarify that a ''false certification'' is one that is knowingly and willfully false, and to specify the criminal statutes that may be violated by such a false certification.

The Department adopts this comment. The federal statute criminalizing a false certification is 18 U.S.C. 1001, which requires that a statement be knowingly and willfully false. Depending on the facts of a particular case, however, a person submitting a false certification could violate other federal statutes. The Department notes that a false certification would necessarily result in

a violation of sections 2257 or 2257A if a producer submitting that false certification did not comply with the record-keeping provisions of the relevant statute.

Form and Content of the Certification

The certification regime in the proposed rule requires that a producer provide a letter to the Attorney General that:

(1) Sets out the statutory basis under which it and any relevant sub-entities are permitted to avail themselves of the safe harbor;

(2) Certifies that regularly and in the normal course of business, the producer, and any relevant sub-entities collect and maintain individually identifiable information regarding all performers employed by the producer who appear in visual depictions of simulated sexually explicit conduct or of lascivious exhibition;

(3) Lists the titles, names, or other identifying information of visual depictions (or matter containing them) that include non-employee performers;

(4) Lists the titles, names, or other identifying information of visual depictions (or matter containing them) produced since the last certification;

(5) Certifies that any foreign producers of visual depictions acquired by the certifying entity either maintain the records required by section 2257A or have themselves provided a certification to the Attorney General, and the producer making the certification has copies of those records or certification; or, for visual depictions of simulated sexually explicit conduct only, has taken reasonable steps to confirm that the performers are not minors;

(6) Lists the titles, names, or other identifying information of the foreign-produced visual depictions (or matter containing them) that include performers for whom no information is available but for whom the U.S. entity has taken reasonable steps to confirm that the performers are not minors; and

(7) Certifies that U.S. primary producers of visual depictions acquired by the certifying entity either maintain the records required by section 2257A or certify themselves under the statute's safe harbor, and that the producer making the certification has copies of those records or certification(s). *See* 28 CFR 75.1(c)(1).

The Department received several comments on the certification provisions of the proposed rule. These comments are discussed below in turn.

One comment states that the Department should prepare a form for the certification instead of requiring producers to submit a letter.

The Department declines to adopt this comment. As outlined below, the Department has simplified the requirements for the certification in response to comments received. Accordingly, the short letter that would be required would not be significantly more burdensome on producers, if at all, than requiring producers to fill out a form.

Statutory Basis for the Certification

The first requirement is straightforward—the entity providing the certification must state why it is entitled to certify under the terms of the statute. This will include citation to the specific subsections of the statute under which it is making the certification and to basic evidence justifying that citation. Specifically, the letter should either: (i) Cite 18 U.S.C. 2257A(h)(1)(A) and 28 CFR § 75.9 and state that the visual depictions listed in the letter are ''intended for commercial distribution,'' ''created as a part of a commercial enterprise'' that meets the requirements of 18 U.S.C. 2257A(h)(1)(A)(ii), and are ''not produced, marketed or made available * * * in circumstances such tha[t] an ordinary person would conclude that * * * [they] contain a visual depiction that is child pornography as defined in section 2256(8)''; or (ii) cite 18 U.S.C. 2257A(h)(1)(B) and 28 CFR § 75.9 and state that the visual depictions listed in the letter are ''subject to regulation by the Federal Communications Commission acting in its capacity to enforce 18 U.S.C. 1464 regarding the broadcast of obscene, indecent or profane programming'' and are ''created as a part of a commercial enterprise'' that meets the requirements of 18 U.S.C. 2257A(h)(1)(B)(ii).

No comments were received on this provision.

Certification of Collection and Maintenance of Records

The second requirement is the certification under either subsection 2257A(h)(1)(A)(ii) or (B)(ii). Under either subsection, the certifier must demonstrate its compliance with five elements: that the entity (1) ''regularly and in the normal course of business collects and maintains'' (2) ''individually identifiable information'' (3) ''regarding all performers, including minor performers employed by'' the entity (4) ''pursuant to Federal and State tax, labor, and other laws, labor agreements, or otherwise pursuant to industry standards'' (5) ''where such information includes the name, address, and date of birth of the performer.'' The Department will consider any entity's procedures that include these basic elements to be in compliance with the certification.

One comment states that the proposed rule's certification statement is inconsistent with the statutory safe harbor provision because it requires the producer to certify that it maintains records concerning all performers employed by the producer who appear in depictions of simulated sexually explicit conduct or lascivious exhibition, whereas the statute permits a blanket certification as to all performers employed by the producer. The comment then states that requiring the producer to certify only as to performers who appear in visual depictions of simulated sexually explicit conduct or lascivious exhibition would first require the producer to determine which depictions may contain simulated sexually explicit conduct or lascivious exhibition, which would be difficult and time-consuming (another comment also notes the ''troubling'' nature of requiring producers to determine what materials depict lascivious exhibition or simulated sexually explicit conduct ''given the vagueness of the definitions for these terms''). Moreover, the comment states that the proposed rule would be inconsistent with Congressional intent because it would deny producers the ability to make the blanket certification contemplated by the statute. The comment also states that a blanket certification will better serve the Department's goals than a tailored certification. The comment thus recommends that the certification language at § 75.9(c)(2) be revised to end at ''all performers employed by [name of entity],'' deleting ''who appear in visual depictions of simulated sexually explicit conduct or of lascivious exhibition of the genitals or pubic area.'' The comment makes a conforming recommendation that the definitions of ''regularly and in the normal course of business collects and maintains'' and ''all performers, including minor performers'' at § 75.1(p) and (r), respectively, be amended to clarify that the certification applies to all performers a producer employs, not just those appearing in depictions of lascivious exhibition or simulated sexually explicit conduct.

The Department adopts this comment. Section 75.9(c)(2) in the final rule thus has been amended to end at ''all performers employed by [name of entity].'' Sections 75.1(p) and (r) in the final rule have also been amended pursuant to the comment.

List of the Titles, Names, or Other Identifying Information of Visual Depictions That Include Non-Employee Performers

As an extra precaution against evasion, the proposed rule's third requirement would have been a list of all visual depictions or matter containing visual depictions in which non-employees have engaged in sexually explicit conduct. This would have provided the Department with notice and a record that such visual depictions by the producers exist and, if necessary, would have enabled the Department to investigate the bona fides of the certifying entity. The Department believed the list would not be so burdensome as to have defeated the purpose of the certification regime—namely, reducing the burden of the record-keeping requirements otherwise imposed in part 75. Rather than maintaining age-verification records, copies of each performance, etc., the certifying entities would have needed only to provide a list of their productions that include depictions of lascivious exhibition or simulated sexually explicit conduct by non-employee performers.

Four comments state that this provision, § 75.9(c)(3) of the proposed rule, is overly burdensome, not contemplated by the statute, and should be stricken. Four comments also state that § 75.9(c)(4) and (6) should be stricken, while three comments state that § 75.9(c)(5) and (7) should be stricken. Because these comments generally apply to § 75.9(c)(3) through (7) of the proposed rule, the Department will summarize and respond to them all here rather than repetitively throughout the preamble.

These comments make various claims, described below, in seeking the deletion of these provisions. First, these provisions go beyond the statutory requirements for the certification by requiring the producer to determine whether materials depict lascivious exhibition or simulated sexually explicit conduct. Second, these provisions are inconsistent with the statutory requirements for the certification by requiring the producers to make lists, whereas the statute does not mention lists at all. Third, the list requirements would likely be found unconstitutional because they would result in eviscerating the statutory safe harbor: By limiting the safe harbor to producers who go through the burdensome process of identifying which materials depict lascivious exhibition or simulated sexually explicit conduct, the proposed rule would impose substantial content-based restrictions on protected speech, with the result that the government would interfere with protected speech in the name of targeting unprotected speech. Fourth, unlike other provisions of the relevant statutes, which expressly permit the Department to specify the records that must be kept and how they must be maintained, section 2257A(h) does not provide the Department any flexibility as to what a producer must certify to be eligible for the safe harbor. Fifth, the list provisions are inconsistent with Congressional intent that once a producer makes the certification required by statute, it should ''not be subject to the more burdensome requirements of this statute.'' Sixth, much ''back office'' work will be required to enable producers to have a reasonable basis for the expansive certifications required. Seventh, while the certification process as outlined in the proposed rule may be less burdensome than full record-keeping under part 75, the difference is only a matter of degree, as the amount of information required to complete a certification under the proposed rule would be significant.

The Department adopts these comments in part, and will strike § 75.9(c)(3), (4), (6), and (7) from the final rule. As explained below, the Department will amend § 75.9(c)(5) in the final rule rather than striking it entirely.

List of the Titles, Names, or Other Identifying Information of Visual Depictions Produced Since the Last Certification

The fourth requirement in the proposed rule would have provided the Department with both a notice and a record regarding which depictions or matters are subject to the certification. In drafting the proposed rule, the Department considered simply allowing entities to make a blanket assertion that they maintain the required records on all employees who perform in all matter they produce. The Department initially determined, however, that depiction-specific information would enable investigators more easily to determine whether a visual depiction is covered by the section 2257A certification regime. The list submitted by a certifying entity would have included the titles, names, or other identifying information of visual depictions acquired by the certifying entity from foreign or U.S. primary producers.

As noted above, the Department is adopting comments to strike this provision from the final rule.

Certification for Entities Acquiring Foreign-Produced Matter

The fifth requirement in the proposed rule was a subsidiary certification for entities acquiring matter subject to the record-keeping requirements from foreign producers. The Department understands that many producers in the United States acquire films and other matter that may contain visual depictions of lascivious exhibition or simulated sexually explicit conduct from producers abroad. In order to produce that matter for the U.S. market and comply with the law, the U.S. entity acquiring the matter must certify either that the foreign producer in the first instance maintained the records required by the statute and that the U.S. entity has copies of those records, or that the foreign entity has certified on its own that it (the foreign producer) maintains foreign-equivalent records in the normal course of business, and that the U.S. entity has a copy of that certification. The Department believes it is appropriate for the exemption to apply based on certifications that foreign producers maintain foreign-equivalent records because foreign countries generally have tax and employment laws requiring identification of employees that are substantially similar to requirements under U.S. law.

There may be cases where a U.S. entity acquires foreign-produced matter and cannot certify the information above. In such a case, the U.S. entity would not be able to produce the matter in the United States. Denying the market in the United States access to a large amount of foreign-produced matter, however, could be construed as a burden on American citizens' First Amendment rights to free expression. At the same time, the Department cannot risk permitting either foreign children to be exploited in the visual depictions produced for the U.S. market or evasion of the statute by unscrupulous U.S. producers.

Therefore, U.S. entities making the certification may certify that, to the extent that they have acquired visual depictions or matter containing visual depictions of simulated sexually explicit conduct from foreign entities, and, to the extent that the primary foreign producer does not either maintain the records required by the statute or provide a certification to the Attorney General itself, the entity making the certification has made reasonable efforts to ensure that no performer in any such foreign visual depiction is a minor.

One comment describes as vague and unreasonably burdensome the proposed rule's certification at § 75.9(c)(5) that U.S. secondary producers take ''reasonable steps to confirm'' that performers in foreign works are not minors. The comment states that the Department should either impose a lesser standard, such as a good faith belief that the foreign work does not depict minors, or specify what is meant by ''reasonable steps.'' The comment suggests that ''reasonable steps'' could include reliance on representations and warranties from a foreign producer. Another comment makes the same points, stating that if the proposed rule's § 75.9(c)(5) is not stricken, the section should be amended to specify what constitutes ''reasonable steps'' and that such steps should not impose a duty to investigate but rather should permit reliance on a review of the work itself and/or reliance on a representation or warranty of the foreign producer. This comment also notes that the certification as to the age of the performers should explicitly state that the performer was not a minor at the time the visual depiction was produced.

The Department adopts these comments to the extent they recommend clarification of ''reasonable steps,'' with the caveat that any review of the materials or reliance on the representations made by a foreign producer must itself be in good faith. The Department also adopts these comments to the extent they recommend the certification be revised to state the performer's age at the time the visual depiction was originally produced. Accordingly, the corresponding section in the final rule (designated as § 75.9(c)(3) due to the deletion of the proposed rule's § 75.9(c)(3) and (4)) will explain that reasonable steps may include, but are not limited to, a good-faith review of the material itself or good-faith reliance on representations and warranties from a foreign producer, and the certification will be revised to state that the performers were not minors at the time the visual depiction was originally produced.

One comment states that the proposed rule's § 75.9(c)(5) would require a producer to take affirmative steps where a foreign producer either did not make a certification itself to the Attorney General or does not collect and maintain the requisite records, which would be an additional burden. Another comment vigorously opposes any suggestion that foreign producers must comply with any provision of section 2256 or 2257A in order for their material to be eligible into the United States, and acknowledged that the Department itself recognized that any such suggestion could be construed as a burden on First Amendment rights. A third comment also notes the Department's recognition of this constitutional concern, stating that ''permitting a secondary producer to make an alternative certification [the ''reasonable steps'' certification under the proposed rule's § 75.9(c)(5)] for such [foreign-produced] materials is consistent with the purpose of the Act and constitutional principles.'' This commenter believes that the alternative certification ''is a reasonable accommodation to ensure that American citizens are not deprived of access to a substantial amount of foreign material.''

The Department of course recognizes that the ''reasonable steps'' certification would require a U.S. producer to take additional steps concerning foreign-produced material if the foreign producer neither has made a certification to the Attorney General nor collects and maintains foreign-equivalent records. For the reasons outlined above, however, a certification that provided no assurance or indication whatsoever that the performers in foreign-produced works are not minors could lead to the possibility that U.S. producers could inadvertently introduce foreign material depicting minors engaged in simulated sexually explicit conduct into the United States market. The Department believes that the alternate certification for foreign-produced material in the final rule, which is significantly less burdensome than that originally proposed (because it does not require the production of any list of covered material and specifies that a U.S. producer may rely on the representations and warranties of the foreign producer), strikes an appropriate balance.

The proposed rule would not have permitted the same certification process for visual depictions of lascivious exhibition acquired from foreign entities. The Department considered that the risks of exploitation of children in such visual depictions and the risk of evasion of the record-keeping requirements would be too great to permit the accommodation for visual depictions of simulated sexually explicit conduct outlined above. The Department was further concerned that providing a method for weaker enforcement of section 2257 with regard to lascivious exhibition would undermine the existing section 2257 requirements. The Department did note, however, that Congress clearly considered non-compliance with record-keeping requirements concerning visual depictions of simulated sexually explicit conduct (under section 2257A) to be a less-serious crime than non-compliance with analogous requirements for visual depictions of actual sexually explicit conduct (under section 2257), as exemplified by the misdemeanor penalty for violation of the former section versus the felony penalty for violation of the latter section.

Three comments state that the alternative certification outlined above concerning foreign-produced material depicting simulated sexually explicit conduct should also be available for foreign material depicting lascivious exhibition. One of these comments provided the following proposed text for this certification: ''I hereby certify that with respect to foreign primary producers who do not either collect and maintain the records required by sections 2257 and 2257A of title 18 of the U.S. Code, or certify to the Attorney General that they collect and maintain individually identifiable information regarding all performers, including minor performers, whom they employ pursuant to tax, labor, and other laws, labor agreements, or otherwise pursuant to industry standards, where such information includes the names, addresses, and dates of birth of the performers, in accordance with 28 CFR part 75, [name of entity] has taken reasonable steps to confirm that the performers in any depictions that may potentially constitute * * * [simulated sexually explicit conduct] or * * * [lascivious exhibition] are not minors.'' This comment further notes that ''[d]ue to the comparably small number of foreign films at issue, the burdens associated with making such reasonable efforts would be minimal when compared with the burdens of reviewing all domestically-produced matter to identify scenes containing'' simulated sexually explicit conduct or lascivious exhibition.

One comment explained that the Department was wrong to suggest, by providing an alternate certification for materials depicting simulated sexually explicit conduct but not for materials depicting lascivious exhibition, that ''posing a minor for simulated sexual conduct is necessarily less abusive than depicting a minor in the lascivious display of genitals or pubic area'' and that the Department should treat both kinds of material similarly to minimize constitutional concerns. The comment also notes that expanding the alternate certification to cover lascivious exhibition materials will not place foreign children at risk of being victimized through the production of child pornography because ''the

importation and even the mere possession of child pornography remains seriously criminal in all of the United States, even if all of the children depicted are other than U.S. nationals.'' Another comment states that it was inexplicable for the Department to permit an alternative certification for materials depicting simulated sexually explicit conduct but not for materials depicting lascivious exhibition.

The Department adopts these comments. Accordingly, in the final rule § 75.9(c)(3) (renumbered from the proposed rule's § 75.9(c)(5)) will use the text proposed by the comment above.

List of All Foreign-Acquired Matter for Which Records of Performers Are Not Available

The sixth requirement in the proposed rule would have required that the entity making the certification include a list of the visual depictions or matter, including those visual depictions for which no records exist but for which the certifying entity had made reasonable efforts to ensure that no performer in any visual depiction is a minor. As with the case of non-employee performers, this list would have provided the Department with notice and a record that such visual depictions existed and, if necessary, would have enabled investigation of such matter. At the same time, the requirement of the list and a certification of reasonable efforts by the secondary producer in the United States would have provided as much protection as possible without unduly infringing on constitutional rights. The Department considered that the risk of evasion would have been mitigated by the severe criminal penalties for production of child pornography that would apply to any matter covered by the record-keeping requirements.

As noted above, the Department is adopting comments to strike this provision from the final rule.

Certification of Record-Keeping by Primary Producers

The seventh requirement in the proposed rule would have been that, as with foreign primary producers, an entity acquiring visual depictions must certify either that the primary producer in the first instance maintained the records required by the statute and that the certifying entity has copies of those records, or that the primary producer has certified on its own that it (the primary producer) has made a certification and that the entity has a copy of that certification.

As noted above, the Department is adopting comments to strike this provision from the final rule. A key consideration in the Department's determination to adopt these comments is that this provision necessarily would have only applied to material produced in the United States. As the U.S. primary producers of that material would either be required to comply with the record-keeping provisions of sections 2257 or 2257A or to have themselves provided with the certification to the Attorney General required by § 75.9, it appears that the Act's goals would be met without requiring the secondary producers to provide another certification.

Application to Secondary Producers

The Department has received many comments on the application of the proposed rule to secondary producers. Two comments note that the proposed rule applies to secondary producers as of July 3, 1995, except that no penalties would be imposed against secondary producers who failed to maintain records for acts of production that occurred prior to the 2006 effective date of the Adam Walsh Act. The comments argue that this would allow criminal prosecutions of secondary producers to be based on materials that were not covered at the time of their creation. The Department believes that application of its regulations to secondary producers has reflected the statutory language since 1995 and that the Act reinforces this applicability. Nonetheless, the Department, recognizing that some secondary producers might not have believed that they were required to adhere to the requirements of part 75, agreed in the proposed rule to apply the penalties against secondary producers only for depictions with dates of production after the 2006 effective date of the Act. However, the statutory language is clear that secondary producers are subject to the Act, and, therefore, it is not the case that any prosecution of any secondary producer for failure to adhere to part 75 for depictions originally produced prior to the Act's 2006 effective date would subject anyone to criminal sanctions based on materials that were not covered at the time of their creation.

One comment states that the regulations should not apply to a secondary producer who obtained the materials before the compliance date without reproduction rights. According to the commenter, the republication rights would be worthless since it is impossible to go back to the primary producer to obtain those records, particularly if the contract at the time did not permit providing the records.

The Department does not adopt this comment. As stated above, once the Adam Walsh Act took effect, all secondary producers were clearly on notice that part 75 applied to all depictions that were originally produced after the compliance date. However difficult obtaining the necessary records may now be, the secondary producer could have done so at the time in accordance with its statutory obligation. Failure to have done so will not excuse noncompliance. However, as elaborated more fully below, the Department in response to comments has changed the compliance date of the final rule for entities who can claim the exemption from part 75 obligations that is contained in section 2257A. Thus, although secondary producers who are governed by part 75 must comply with its provisions with respect to depictions of actual sexually explicit conduct originally produced after the Act's compliance date, secondary producers who can claim the exemption in section 2257A will not need to comply with part 75 in the interim.

Two comments argue that secondary producers will not be able to comply with the terms of the proposed rule because primary producers have not made information available to secondary producers in all cases due to privacy concerns. Two other comments remark that even if the primary producer provides the records to the secondary producer, requiring the secondary producer to keep the records harms the performers' privacy.

The Department does not adopt these comments. The Act applies to secondary producers, and, therefore, the final rule does so as well. Moreover, privacy concerns may not always be the reason why a primary producer chooses not to provide such identification records. The possibility exists that the primary producer declines to provide the records because the models are not of legal age. Congress applied section 2257 to secondary producers, and reaffirmed that applicability in the Act, so that child pornography would not be able to gain a market among secondary producers. Eliminating that market is critical to the suppression of child pornography. Given the Department's willingness to allow redaction of personal information to the extent possible to protect privacy while at the same time confirming legal age, it believes that there will be no unwarranted invasion of the performers' privacy as a result of the proposed rule.

Four comments objected to applicability of the proposed rule to secondary producers on the ground that

secondary producers rarely come into contact with performers. These commenters claim that it is impossible for secondary producers to inspect the original identification of the performers, and that secondary producers cannot comply with this requirement.

The Department declines to adopt these comments. As stated, Congress intended to prevent secondary producers from creating a commercial market for child pornography by relying on their lack of knowledge of the age of performers used by primary producers. The Department believes that it is inaccurate to state that secondary producers cannot comply with the proposed rule. No aspect of the rule is such that secondary producers will find it ''impossible'' in any sense to comply with them. Moreover, the legal duty that the final rule imposes on secondary producers relates to record-keeping only. The comments' claim that the secondary producer must inspect the original identification documents of the performers is incorrect, although secondary producers should take steps to ensure that they do not violate criminal prohibitions relating to child pornography.

Another comment states that secondary producers cannot know whether the information that the primary producers possess is accurate. It notes that a secondary producer can be non-compliant despite taking all possible compliance measures. The Department agrees that both primary and secondary producers who keep the required records may lack full certainty that the information that they have is accurate. However, the rule does not require that producers be completely certain of accuracy. Primary producers must check documents and keep records based on those documents, with the entitlement to see driver's license or passport numbers to ensure that the identification validly identifies that the named performer is of legal age. A secondary producer is not required to examine documents, and if it chooses to do so, will not face liability simply because the documents are not accurate.

Two comments contend that the proposed rule should not extend to secondary producers because concerns relating to those entities' document availability can be addressed by referencing the name and address of the primary producer's records custodian, without requiring a duplicate and separate set of regulatory documents by the secondary producer. A third comment makes a similar point, noting that such a reference is permitted under the current § 75.2(b) of the regulations. The comment asks that only primary producers—not secondary producers—be required to personally discharge the record-keeping requirements.

The Department does not adopt these comments. Under the suggested approach, the secondary producer will not have demonstrated that he has actually received copies of the records from the primary producer. If secondary producers were exempted from an obligation to keep records, then the Department could never determine the identity of the primary producer. Failing to have the rule apply to secondary producers would also thwart the language of the Act that makes section 2257 applicable to secondary producers, increasing the chances that a commercial market would exist for child pornography and thus for child exploitation.

One related comment notes that under the proposed rule and section 2257(f)(4), each republisher must include the producer's disclosure statement on every republished copy. According to the comment, an investigator would therefore know where to find the primary producer, and it would be easier for an investigator to locate the primary producer rather than to inspect the secondary producer's records. Two other comments state that secondary producers should not be inspected because they use content provided by primary producers; they argue that inspection of primary producers' records would be easier than inspecting thousands of secondary producer sites.

The Department declines to adopt these comments. The Act imposed a requirement for secondary producers to maintain records that governs the Department's final regulation.

One comment posits that when original footage is created by a foreign primary producer, but an American secondary producer seeks to use the footage in news or a documentary, the foreign producer is beyond the reach of section 2257 and may not have any documents. The secondary producer in this circumstance will be unable to obtain the necessary records, and will have to forgo the footage or risk criminal penalties. According to the comment, this would result in a ban on certain programming, raising major First Amendment concerns.

The Department does not adopt this comment. In such a circumstance, the U.S. producer would be able to rely on the certification.

General Comments

Numerous comments address the proposed rules in general ways that do not require individual responses. For example, many comments argue that the rule is an unconstitutional burden on free speech, a violation of the Equal Protection Clause of the Constitution, a violation of the Fourth Amendment, or a violation of privacy rights. Other comments argue that the rule legislates morality, targets a legal industry for harassment, impedes citizen access to the Internet, or establishes government surveillance of citizens' Internet activities. Some comments recommend that rather than the government publishing this rule, the government should encourage better parenting, enforce laws prohibiting and punishing child pornography more vigorously, or establish an alternative age verification program, such as a database of all performers. A number of comments claim that the rule unfairly burdens small businesses run by women. Some comments misunderstand the scope of the rule to apply to consumers of pornography and therefore suggest that consumers be subject to age verifications procedures. Three comments raised the possibility that producers might experience stress over the fear that they might go to jail for inadvertently misfiling or misplacing records, another commenter is concerned that a person could face liability for inadvertently posting a depiction of sexually explicit conduct, and other commenters fear that producers are liable to suit for disclosing information about performers or that a Web site operator could be liable to suit for disclosing information about those who post depictions on their Web sites. Other commenters request exemptions for certain types of media or Web site operations that are not provided for in the statute. One comment recommends ending all record-keeping requirements prior to this rule and starting anew.

The Department notes that these comments essentially took issue with the underlying statute and its requirements. The Department responds with three points. First, many of the comments either misunderstand or overstate the effect of the regulation. Second, courts have upheld existing section 2257 and its implementing regulation as a valid exercise of power by Congress and the Executive Branch, and the Department believes that the Adam Walsh Act and the final regulations are as well. Third, the Department is under a statutory obligation to publish the rule and cannot ignore its duty or change the statutory requirements through its rulemaking. To the extent these comments raise issues relating to the regulations themselves, the Department

also relies on the discussion in other parts of the supplementary information in support of the rule.

Finally, the Department responds to three other comments regarding the regulation's applicability to non-commercial activities. One comment states that the definition of ''sell, distribute, redistribute, and re-release,'' in § 75.1(d) suggests that the entire record-keeping obligation of producers is limited to commercial production operations. One comment stated that age-verification requirements should apply only to producers who pay performers, not individuals who post photos of themselves, and another comment maintains that an exemption statement should not be required if a depiction is produced by married couples who produce videotaped images of themselves for their own personal use.

The Department adopts these comments in part and rejects them in part. The statute is not clearly limited to producers who pay performers. However, it is limited to pornography intended for sale or trade. Section 2257 speaks in terms of participants in the professional pornography industry: The persons exhibited are ''sexual performers'' who must provide their ''alias, nickname, stage, or professional name,'' 18 U.S.C. 2257(b)(2), and the producer's relationship with the ''performer'' is described as ''hiring, contracting for, managing and otherwise arranging for the depiction of'' the individual to be shown in the images, *id.* 2257(h)(2)(B)(iii). Similarly, records must be kept for ''every performer portrayed'' (suggesting multiple ''performers''); a disclosure statement is to be affixed to ''every copy'' of covered sexually explicit material (suggesting multiple copies); and producers working with images already in existence by definition produce materials ''intended for commercial distribution.'' *Id.* 2257(a), (e)(1), (h)(2)(A)(ii). Further, age records must be maintained at the producer's ''business premises'' and made available for administrative inspection. *Id.* 2257(c). Likewise, under the implementing regulations, age records must be cross-indexed by performer and by title of the explicit work, 28 CFR 75.2, and maintained ''at the producer's place of business,'' *id.* § 75.4. Finally, records inspections may be carried out at ''any establishment of a producer,'' and ''during the producer's normal business hours.'' *Id.* § 75.5. The legislative history of section 2257 further underscores Congress's intent to regulate images produced by the pornography industry: The age-verification system was proposed by the 1986 Pornography Commission, which described the recommended legislation as reaching anyone ''engaged in the sale or trade of sexually explicit material'' so that minors could be protected ''through every level of the pornography industry.'' Atty Gen. Comm'n on Pornography, *Final Report* at 619 (1986).

Regulatory Procedures

Regulatory Flexibility Act—Final Regulatory Flexibility Analysis

The Department of Justice drafted this rule in a way to minimize its impact on small businesses in accordance with the Regulatory Flexibility Act, 5 U.S.C. 601–612, while meeting its intended objectives. Because the Department, based on the preliminary information available to it through past investigations and enforcement actions involving the affected industry, was unable to state with certainty that the proposed rule, if promulgated as a final rule, would not have any effect on small businesses of the type described in 5 U.S.C. 601(3), the Department prepared preliminary Regulatory Flexibility Analyses in accordance with 5 U.S.C. 604. Based on this same information, the Department concluded that there were likely to be a number of small businesses that are producers of sexually explicit conduct as defined in the statute, as amended by the Act. In the proposed rules, the Department specifically requested information from affected entities. This information was requested, in part, to assist us in determining the nature and extent of the impact the final rule will have on affected entities. Although the Department received some comments, the information we received was not sufficiently detailed to allow us to state with certainty that this rule, if promulgated, will not have the effect on small businesses of the type described in 5 U.S.C. 605. Accordingly, the Department has prepared the following final Regulatory Flexibility Act analysis in accordance with 5 U.S.C. 603.

A. Need for and Objectives of the Rules

As described in detail in the ''Background'' section above, the objectives of the rules were to reduce the chances that minors are depicted in actual or simulated sexually explicit conduct by requiring that producers ensure that all performers are in fact of legal age, so as to reduce harm to children at the time of production and in subsequent years.

B. Summary of Significant Issues Raised by Public Comments in Response to the IRFA

The Department received 35 comments on its preliminary Regulatory Flexibility Analysis with regard to the proposed rule implementing revised section 2257. No commenters on the proposed rule to implement section 2257A commented specifically on that proposed rule's Regulatory Flexibility Analysis; comments as to the cost of that proposed rule are addressed below in the sections on the Small Business Regulatory Enforcement Fairness Act of 1996 and Paperwork Reduction Act.

Many of these provided general comments about expenses that small businesses would incur without comparing such costs to their total revenues. One comment states that individual women who put depictions of lascivious exhibition on the Web make between $15,000 and $50,000 and do not have the money to buy office space. Three comments noted that producers who work from home will have to rent office space if they want to keep their home address private, or they will be required to pay for day care. One comment states that the proposed rule would create significant bureaucratic challenges to content producers by implementing a requirement to provide production-date information in more locations.

The significant issues raised by the public comments in response to the initial regulatory flexibility analysis are as follows: One comment estimated that costs of compliance for an ''adult business'' would be $250,000, about 25% of the business' net revenues.

For example, one comment remarked that his business would need to hire three full-time staff to manage and collect information concerning 205,000 profile holders on a personal posting Web site and compile the required age documents. The comment estimated that the cost of the three base salaries would be $150,000 per year, which exceeded the business' current revenue, and that his home (office space) lacked room for three additional staff. The comment also notes that it could not pass these costs on because the business did not charge a membership fee, and that making copies of records on 205,000 users would mean that it would have to purchase 136 three-drawer filing cabinets. It contends that the space required for this many cabinets would mean that it would have to rent external storage units for $67,200 per year, that the cost of the filing cabinets would be $68,000, and that the total compliance cost for the business would be $345,800.

Three comments made similar comments concerning types of expenses without specifying amounts.

Six comments claim that compliance costs for collecting records, documentation, updating, cross-referencing, and legal services would be high. One comment states that small businesses would incur excessive legal costs because of the ''draconian sanctions'' for failure to comply with the substantive or procedural requirements of the statute and regulations. One comment claims that the costs of compliance would present a large obstacle to expanding a business. Three comments state generally that the proposed rule would harm small business. Two comments point out that small businesses would need to separate these records from others, which would be costly, and that they would incur vastly increased storage costs due to the necessity of maintaining records for every photograph of every performer. Two comments contend that the proposed rule would place an unreasonable burden on many law-abiding businesses. One comment claims that the vast majority of Web sites are small entities, and that listing their owner's street (often home) address and individual name is a substantial burden and creates a chilling effect on constitutionally protected expression. One comment states that secondary producers are often small businesses that could not afford the time or expense to obtain and maintain copies of records that are best created and maintained by the primary producer that does see the original documents. Two commenters represented that some secondary producers will go out of business due to the proposed rule's requirements. One comment states that it would lose revenue from international profile holders because he will not be able to obtain required United States documents from foreigners who post self-nudes on the commenter's profile Web site. Two commenters from small businesses claimed that they could never generate the money necessary to pay for the increased expenses associated with the proposed rule.

One comment states that the Department would greatly reduce compliance costs if section 2257 producers could take advantage of the 2257A process under 2257A(h)(1)(A)(ii). The comment states that this would eliminate the need to produce and maintain segregated records. Doing so, the comment states, would give these producers the same compliance option as producers who are identical in every permissible relevant respect. One comment argues that the Department is required under 5 U.S.C. 605(b) to conduct analyses to ensure that the regulation will not have a ''significant impact on a number of small entities.'' The comment states that analyses are required unless the agency can make a ''no significant impact'' certification. One comment argues that the Department failed to conduct or write a proper initial regulatory flexibility analysis.

These comments are not all specifically addressed to the proposed rule's initial regulatory flexibility analysis, but the content of the comments raise issues that are in substance addressed to the analysis, and are therefore discussed in the final regulatory flexibility analysis. The Department offers the following as a summary of its assessment of the issues that were raised.

The Department believes that there is merit in those comments that raised cost impact and logistical concerns relating to individuals who produce actual sexually explicit depictions on Web sites at their homes. The Department has made changes to the proposed rule as a result of these comments. The Department believes that the final rule relieves three restrictions that will largely respond to the generalized comments that the Department received concerning the cost impact of the proposed rule on small businesses. First, the final rule does not require the keeping of hard copies, only that such copies be produced on the demand of inspectors. This relief of a restriction will reduce costs of storage, personnel, and related expenses that were noted in the comments. The combined effect of these reliefs of restrictions will greatly reduce the impact of the rule on law-abiding businesses, on expanding businesses, and on the profitability of businesses. Second, the final rule, in a change from the proposed rule, allows hyperlinks to appear on each Web page, rather than require that the full disclosure statement appear on each such Web page. This relief of a restriction will reduce the cost of providing information concerning the original production date in more locations, as one comment raised. Third, the final rule permits the producer not to retain records onsite. Rather, the required records can be retained by third-party custodians. This change, although imposing a cost of custodian services by those entities that choose to take advantage of it, will greatly reduce compliance costs in the categories of storage, rental space, and record-keeping including segregation of records, legal, and staff salaries. Additionally, this change will relieve other burdens on small businesses enunciated by the comments, such as release of home address information. Finally, small businesses that can fall within the safe harbors contained in section 2257A will be relieved of record-keeping and disclosure-statement requirements altogether as outlined above.

In addition to the reduction in burden on small businesses associated with substantive changes to the proposed rule, the Department notes the importance of the change in the compliance date of the final rule in alleviating burdens on small businesses. Originally, the record-keeping obligations that the rule imposes on small businesses were to relate to all works produced after the effective date of the statute in 2006. But the Department has changed the final rule's compliance date to the compliance date of the final rules that will be issued to implement section 2257A. The Department believes that the two statutes are interrelated because section 2257A contemplates that some entities, including some small businesses, are to be able to comply with its terms, and that by doing so, they would not have to comply with the regulations issued under the Act. Because the final rule's record-keeping requirements will never apply even for a single day to small businesses that comply with the section 2257A certification process, the record-keeping cost burden on such small businesses is completely eliminated. Moreover, even those small businesses that will eventually need to comply with the final rule because their conduct does not permit them to use the section 2257A certification exemption will not have to expend resources complying with the final rule for the years that have lapsed since the proposed rule's compliance date.

Two of the commenters were Internet sites on which users can post profiles who claim that the rule would adversely affect their business operations. The Department does not believe that these comments reflected the effect of either the proposed rule or the final rule on their businesses. A profile site is not normally a producer. The individuals who post depictions of lascivious exhibition on those sites are producers. It is the latter, not the former, assuming that the Web site does not act as a producer, who are required to comply with the record-keeping and disclosure statements. Furthermore, this final rule does not impose as large an impact on small business as some commenters understood from the proposed rule.

The Department responds to the comment that recommends that small businesses receive the opportunity to comply with the statutory safe harbor by stating that the exemption referred to in the comment is available to any producer who can meet its conditions. The Department's ability to apply an exemption is limited by the statutory language. However, the Department has recognized the exception that is created in section 2257A(h)(1)(A)(ii), and in its final rule, the Department has stated that it will ensure that the applicability of that safe harbor will operate despite the fact that no regulation implementing it has been promulgated. As stated above, the Department has set the compliance date for the final rule so as to allow entities who are compliant with section 2257A(h)(1)(A)(ii) not to comply with the final rule or incur the costs of doing so, even as an interim measure. Moreover, the Department notes that applicability of the exemption does not turn on whether the entity seeking to comply with the safe harbor is a large or small business. The exemption turns on the conduct of the entity that seeks to utilize it, not the status of the entity itself.

With respect to the procedural requirements for a regulatory flexibility analysis, the Department believes that this final regulatory flexibility analysis fully satisfies 5 U.S.C. 604.

As in its initial regulatory flexibility analysis, the Department continues to believe that approximately 500,000 Web sites involving 5,000 businesses that depict actual sexually explicit conduct are affected by the rule. As a result of being subject to the final rule, these businesses will be required to check identification documents, record information about production dates and age and names of performers, and affix disclosure statements to each copy of a page that depicts actual sexually explicit conduct. These businesses are in the film, magazine, Internet, satellite, mail order, magazine, content aggregation, and wholesaler industries. Although one commenter claims that there are more affected businesses based on considerable exposure to the industry, the comment provides no specific basis for that belief, nor did it offer any competing number or evidence for such a number. One other commenter notes that there are about 1,000 firms that operate more than 100,000 adult subscription Web sites. This statement does not affect the validity of the Department's estimates of the number of Web sites and firms that the rule would affect. The Department's estimate did not estimate the number of subscription sites or the number of firms that operate them. The commenter's estimate of a portion of the relevant site universe is fully consistent with the Department's estimate of the entire number of affected Web sites. No other commenters specifically took issue with the Department's estimate, which it continues to adhere to.

The final rule requires small businesses and other entities that produce actual sexually explicit materials to undertake record-keeping and other compliance requirements. They must check particular forms of identification to determine that all performers portrayed in such depictions are of legal age, they must keep records, they must segregate the records, and they must place disclosure statements on each page of a Web site that contains actual sexually explicit conduct. The professional skills required to comply are those necessary to produce the records and to place the disclosure statement on a hyperlink on each page of a Web site.

C. Description and Estimates of the Number of Small Entities Affected by the Rules

A ''small business'' is defined by the Regulatory Flexibility Act (''RFA'') to be the same as a ''small business concern'' under the Small Business Act (''SBA''), 15 U.S.C. 632. Under the SBA, a small business concern is one that: (1) Is independently owned and operated; (2) is not dominant in its field of operation; and (3) meets any additional criteria established by the SBA. See 5 U.S.C. 601(3) (incorporating by reference the definition of ''small business concern'' in 15 U.S.C. 632). As in its initial regulatory flexibility analysis, the Department continues to believe that approximately 500,000 Web sites involving 5,000 businesses that depict actual sexually explicit conduct are affected by the rule. The Department believes that of these 5,000 businesses, 4,000 are small businesses. It reaches this conclusion from comments that stated that the vast majority of businesses affected by the final rule are small businesses.

In the proposed rule to implement revisions to section 2257, the Department stated that, based upon the information provided to the Department through past investigations and enforcement actions involving the affected industry, there are likely to be a number of small businesses that are producers of visual depictions of sexually explicit conduct as defined in the statute, as amended by the Adam Walsh Act. In the proposed rule to implement section 2257A, the Department stated that based upon the information available to the Department, there are likely to be a significant number of small businesses that are producers of visual depictions of simulated sexually explicit conduct.

Pursuant to the RFA, the Department requested affected small businesses to estimate what these regulations will cost as a percentage of their total revenues in order to enable the Department to ensure that small businesses are not unduly burdened.

The Department also stated that the proposed rules had no effect on State or local governmental agencies.

D. Description of the Proposed Reporting, Record-Keeping and Other Compliance Requirements of the Rule

In the proposed rule to implement revisions to section 2257, the Department stated that the proposed rule modified existing requirements for private companies with regard to visual depictions of sexually explicit conduct to ensure that minors are not used in such depictions. One of these requirements that would specifically affect private companies is Congress's expansion of the coverage of the definition of ''sexually explicit conduct'' to cover lascivious exhibition of the genitals.

In the proposed rule to implement section 2257A, the Department stated that the proposed rule imposed requirements on private companies with respect to visual depictions of simulated sexually explicit conduct to ensure that minors are not used in such depictions. Specifically, the Department noted, the rule imposed certain name- and age-verification and record-keeping requirements on producers of visual depictions of simulated sexually explicit conduct concerning the performers portrayed in those depictions. The Department also noted that the proposed rule, however, provided an exemption from these requirements applicable in certain circumstances.

The costs of the rule to small entities are less than the Department originally anticipated. Thus, the conclusions of the cost estimate that was submitted to the Department by Georgetown Economic Services reflect assumptions that no longer apply. For instance, that report estimated average small business monthly compliance costs of $5,000, plus up-front conversion costs and time to ensure initial compliance. The report contends that most small businesses in the pornography industry generate insufficient revenue to cover this level of regulatory cost imposition. However, because the Department has listened to the comments that it has received, and

believes that its objectives can be accomplished while at the same time implementing regulatory changes resulting in imposing a lighter burden on regulated industry, it does not believe that the report's conclusion, if it ever was correct, applies to the final rule.

For instance, the report assumes in its high cost estimate figures related to formatting section 2257 records and leasing storage space. However, the final rule changed the requirements that imposed these costs so as to dramatically reduce them. For instance, far less storage space is needed now that the final rule, in response to comments, has eliminated the hard-copy requirement. It was the proposed rule's hard-copy requirement that had generated the need for significant storage space. Similarly, the cost of legal fees will be significantly less than anticipated. The report estimated that the proposed rule would require affected businesses to hire at least one full-time employee to maintain the database at a cost of $20 per hour. Since the final rule, responding to various comments concerning the need to hire employees and the difficulties that this requirement posed for part-time operators and for operations that were run out of the home, has permitted records to be stored in offsite, third-party locations, businesses will not need to incur the cost of hiring full-time individuals to maintain only their own records. And it bears repeating that the cost estimate's figures for online dating sites misapprehend the nature of both the proposed and final rules. The operator of such a site incurs no obligations under either rule if it simply operates as a location where users post lascivious exhibitions; it is the individual producer who posts such material on the Web site who must comply with the regulatory provisions.

E. Description of the Steps Agency Has Taken To Minimize the Significant Adverse Economic Impact on Small Entities

The Department took numerous steps to minimize the economic impact on small entities consistent with the objectives of the Act. As noted above, precisely to minimize the concerns of commenters that significant compliance costs would be incurred by small businesses if the proposed rule were promulgated without change as a final rule, the Department adopted three significant substantive changes to that proposed rule: (1) Elimination of a ''hard copy'' requirement for record-keeping; (2) allowing third parties to be custodians of the records; and (3) allowing the disclosure statement to appear as a hyperlink, rather than in full, on each page. The Department also changed the compliance date. These changes will reduce staffing requirements, the need to rent or purchase filing cabinets, the cost of modifying existing images, and other small business compliance costs that commenters have raised. Although some of the general comments that the Department received were rejected based on policy concerns, few of the comments submitted on the economic impact of the rule on small business were rejected for policy reasons. Such comments were either adopted to reduce the restrictions on small businesses where the Act permitted or, in almost all circumstances, were rejected because the Act did not legally permit the Department to adopt them.

Section 2257(a) requires that whoever produces matter that contains actual sexually explicit conduct ''create and maintain individually identifiable records pertaining to every performer portrayed in such a visual depiction.'' This requirement prevents the Department from modifying the proposed rule to exempt secondary producers or small businesses as a class. Moreover, each person with this obligation must ascertain by examining identification documents the name and date of birth of each performer who is visually depicted in sexually explicit conduct. And each must also ascertain other names of the performer. Subsection (c) requires that the records be maintained under the terms of regulations promulgated by the Attorney General and that they be made available at all reasonable times for inspection. These provisions impose burdens on small and other businesses that are not reducible to insignificance. Similarly, subsection (e) requires that all covered entities affix to every copy of sexually explicit material a statement indicating where the mandated records are kept. Those records are to conform to standards issued by the Attorney General. And section 2257A(h) contains a specific safe harbor certification process that allows some entities to avoid compliance with these requirements.

The Department, however, may not expand the category of entities that fall within that subsection's parameters beyond those who meet the statutory conditions. Nor may the Department exempt secondary producers from record-keeping and other compliance requirements that the Act mandates. Therefore, the Department accepted alternatives to the proposed rule that effectuated the statutory objectives while reducing the compliance burdens of small businesses, but rejected those alternatives that were inconsistent with the statute and its purposes.

One proposed reduction in compliance costs for small businesses that was rejected on policy grounds was the request to end the segregation-of-records requirement for section 2257 records. Because the Attorney General must inspect these records, the Department believes that a lesser imposition will occur on those subject to inspection if the requisite records are kept separately. The Attorney General will not then need to review all of a producer's records in search of section 2257 records, nor will the small business need to disrupt its business for the length of time for all of its records to be inspected. Therefore, the Department believes that its position on this point will not impose substantial cost on small business. Further, it believes that it has drafted the final rule to take into account the legitimate cost concerns of small businesses to the proposed rule wherever possible. The Department is unaware of any other federal rules that may duplicate or conflict with the proposed rule, and no commenter has brought any such rule to its attention.

Executive Order 12866

This final rule has been drafted and reviewed in accordance with section 1(b) of Executive Order 12866 (Principles of Regulation). The Department has determined that this rule is a ''significant regulatory action'' under section 3(f) of Executive Order 12866. Accordingly this rule has been reviewed by the Office of Management and Budget.

The benefit of the rule is that children will be better protected from exploitation in the production of visual depiction of sexually explicit conduct by ensuring that only those who are at least 18 years of age perform in such depictions. The costs to the industry include slightly higher record-keeping costs.

Executive Order 13132

This rule will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 13132, it is determined that this rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

Executive Order 12988

This rule meets the applicable standards set forth in sections 3(a) and 3(b)(2) of Executive Order 12988.

Unfunded Mandates Reform Act of 1995

This rule will not result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of $100,000,000 or more, in any one year, and it will not significantly or uniquely affect small governments. Therefore, no actions were deemed necessary under the provisions of the Unfunded Mandates Reform Act of 1995, 2 U.S.C. 1501 *et seq.*

Small Business Regulatory Enforcement Fairness Act of 1996

Proposed Rule on Revisions to Section 2257

At the time of the proposed rule the Department stated that the proposed rule was not a major rule as defined by section 251 of the Small Business Regulatory Enforcement Fairness Act of 1996, codified at 5 U.S.C. 804. 72 FR at 38037. The Department determined that the proposed rule would not result in an annual effect on the economy of $100,000,000 or more; a major increase in costs or prices; or significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of United States-based companies to compete with foreign-based companies in domestic and export markets.

One comment disputes the Department's view that the proposed rule would not cost the economy more than $100,000,000. According to this comment, software support and legal advice costs ''will be substantial and probably incalculable.'' It claims that secondary producers will need to employ a records custodian at least 20 hour per week and that doing so for the 5,000 businesses that the Department estimates will be affected would cost $30,000 each, for a total cost of more than $100,000,000. One comment cited a poll of businesses asking them what they expected the cost of compliance with the proposed rule would be and determined an average cost of more than $210,000 per business. The comment asks that the proposed rule be reviewed and promulgated in accordance with requirements pertaining to rules that impose a greater than $100,000,000 impact on the economy. The Department received a comment containing a long technical cost estimate that had been prepared by an entity other than the commenter that posited that compliance costs associated with the proposed rule would be significant.

The Department does not adopt these comments. First, as outlining the substance of the comments in the notice demonstrates, not all commenters have accurately understood the proposed rule. In each instance, those commenters overstate the burden of the proposed rule upon them. That overstatement would necessarily cause such entities who participated in a poll to overestimate the compliance costs they would incur as a result of the rule. Second, the comments on the proposed rule by affected entities were entirely unfavorable. These entities would have every reason to overstate their compliance costs, and there is reason to believe that this has occurred. The Department questions the salary estimates that were offered for hiring staff to keep records, for instance. Similarly, one commenter states that compliance costs per small business would amount to $30,000 and another that the cost would be more than $200,000. This chasm in the estimates raises serious questions concerning the accuracy of the estimates and the methodology that produced them.

Moreover, whatever validity these estimates may have had with respect to the proposed rule, the decreased compliance costs due to removing restrictions as contained in the final rule reduces the accuracy of the submitted estimates significantly. Although a business that produces depictions of lascivious exhibition will be required to keep records, because such a business could use a third-party custodian that would benefit from economies of scale, because hard copies would not have to be kept, and because the disclosure statement requirements have been significantly eased, such a business would avoid significant amounts of compliance costs for such categories as legal, storage, and staffing costs. There is no reason to believe that the final rule would impose $100,000,000 in costs on the economy. Many of the entities covered by this final rule already produce actual sexually explicit conduct as defined under the narrower existing rule, which imposes greater costs on such entities than those associated with this final rule; hence, they will face only negligible additional costs.

Because the cost estimates are based on assumptions regarding the proposed rule that were changed for the final rule, its conclusions that ''most web-based businesses will exit from the industry'' and that other types of businesses ''will either shut down or move their businesses to another country'' are not valid. The Department has adopted the legitimate concerns of legitimate pornographic small businesses, and has changed the final rule in ways that significantly reduce the costs of the regulations on operations, and that will result in few if any business failures on the part of entities that wish to comply with the laws against producing child pornography.

In addition, the Department believes that the best estimate of cost of compliance per affected small business is in actuality far less than what commenters have submitted. The Department is aware of the existence of businesses that provide section 2257 services to regulated entities to ensure satisfaction of the requirements of the 2005 final rule, and it therefore fully expects that such entrepreneurial activity will also provide compliance services with respect to this final rule. Various Web sites provide model releases, software, technical support, installation, assistance with data, and additional hardware such as scanners. For example, one service provides tracking of content, performers, identification, and other section 2257 compliance information for a cost of $8,000 to the producer. Another Web site offers similar services with respect to performer data collection, creation of digitized images, indexing, cross-referencing, record-creation, offsite maintenance of records, release documents, reports, correction of record discrepancies, generation of documents for vendors and distributors, storage of scanned releases and compliance statements, and storage of names and aliases, for an initial cost of $1,500 plus $60 per month for online record access and stored performer records.

The Department also expects that since the final rule allows third parties to hold records of small businesses, even apart from the services now being offered, some of which include offsite record maintenance, a third-party custodian industry will exist to support regulated small businesses at reasonable costs, should a small business wish to outsource only those elements of its compliance costs with the final rule.

One comment states that many of the entities regulated by the final rule would be considered small businesses, in that their revenue would be less than $27,000,000, or if secondary producers, $23,000,000, or $13,500,000, or $6,500,000, depending on their respective operations; however, the comment provided no average revenue per small business. In any event, averages in the context of the rule could diverge widely from medians. Suffice it to say, given that the comment states that the adult pornography business generates $12 billion in revenues, even

a small business with revenues considerably less than the smallest category of small business—$6,500,000—would not find to be overly burdensome compliance costs ranging from (at the low end) $1,500 plus $60 per month to (at the high end) $8000.

One comment argues that SBREFA requires agencies to consider alternatives that fit federal regulatory initiatives to the scope and scale of small entities. It states that agencies must consider the regulatory impact of their rules on small businesses, and analyze alternatives that minimize effects on small businesses. The Department adopts this comment, and as noted elsewhere in this notice, has made multiple changes to the proposed rule that demonstrate consideration of alternatives that would reduce the impact of the rule on small businesses, and has adopted several proposals that commenters have asked the Department to accept where the statutory language permitted it to do so.

One comment characterizes the compliance costs of the proposed rule as burdensome with respect to staffing, software development, updating and maintenance, and institution of new compliance procedures. The Department has addressed this comment in part by adopting the cost-saving measures described earlier in this preamble: reducing the staffing and computer burdens of the final rule by allowing third-party custodians to keep records, by eliminating the hard copy requirement of the proposed rule, and by permitting the disclosure statement to appear on each page by hyperlink text.

Five comments state that the proposed rule would force small companies to shut down. These five comments also maintained that surviving firms would face a much harder time in continuing operations. Yet another comment posited that the remaining firms would produce less output as a result of the proposed rule. One comment raised concerns that affiliate sites that contain photographs will not be able to survive the cost of formatting records, maintaining a database, and leasing space, and may go out of business as a result. One other comment related that dating sites that displayed about 8,000,000 profiles with graphic content would need to make photo records at 3 minutes per record, with a staffer paid $20 per hour to create a picture for every file. That comment cited a National Research Council report that compliance with the regulations would be likely to increase expenses and drive out some of the small enterprises.

The Department does not adopt these comments. First, as stated above, the Department does not believe that the final rule will cause the outcomes that the comments predicted, since the final rule takes into account so many of the concerns of small businesses. Also, as stated above, businesses such as dating services that in fact do not produce depictions of sexually explicit conduct, are not the entities that are responsible for record-keeping and disclosure statements. Those responsibilities in those circumstances would fall upon the individuals who post graphic content on the site. To the extent that the final regulation does impose costs on small businesses that could affect their operations, the Department believes that these costs are the irreducible minimum costs that Congress imposed in the Act as a consequence of increasing the likelihood that underage depictions would not be produced or that demand for and distribution of such depictions would not be increased because of the existence of secondary producers who wittingly or unwittingly made them available.

In addition, the Department does not believe that the National Research Council's 2002 report, *Youth, Pornography, and the Internet,* quoted by one commenter, provides support for the commenter's position. First, the report is now six years old and was issued before the current regulations were published. Second, the report did not quantify the purported effect of regulations on small businesses that would occur as a result of even the prior rules, much less this rule. Moreover, at page 213, the report notes that ''[m]ore active enforcement'' of the record-keeping requirements ''may better protect minors from participation in the creation of child pornography.'' To the extent that the comment relies on the report to claim that the effect of the rule might be to drive some small operators out of business, the Department agrees, but that report makes that statement only with respect to businesses who do not comply with their statutory obligations.

Many comments pertained to the proposed rule's effect on social networking sites. These comments claim that the proposed rule would harm adult social networking sites because of record-keeping requirements on users, a decline in the number of users, and their unwillingness to provide the required information because of fear of discrimination, because their names would be posted. Additionally, they state that the effect of the proposed rule could be the elimination of the social networking site industry, which the comments described as a legal and valuable way for adults to meet one another.

The Department does not adopt these comments. Although the rule would require users who chose to display actual sexually explicit conduct on adult social networking sites to keep records, the rule is inapplicable to social network site operators. The rule cannot exempt users from the record-keeping requirements the Act imposes. The Department has minimized these effects by reducing the costs of compliance. Moreover, it has eliminated any concerns, whether or not justified, that such users would face discrimination by allowing third-party custodians to maintain the records. The user's disclosure statement that is required to appear on the Web site would therefore not need to identify any name or address of the user, but merely the location of the third party that holds the records.

Two comments claim that secondary producers' income would decline as a result of having to comply with the rule. According to these commenters, out of fear of relying on primary producers' records, rather than reproducing depictions provided by primary producers, they would instead use text links to primary producers' sites. The Department does not adopt these comments. As a result of the final rule, secondary producers can trust that primary producers complied with section 2257 and did not employ underage performers.

Four comments state that the proposed rule would not affect foreign Web masters, and the federal government would have to spend funds to determine which businesses were or were not foreign. These comments also contend that harm to domestic business would occur vis-a-vis foreign businesses as perhaps more production would occur offshore, which would circumvent the safeguards. One comment claims that the rule would worsen the balance of payments because Americans will have to obtain their pornography from foreign sources. One comment states that the regulation would create an unfair trade barrier (against the United States) because offshore personal page Web sites will be more attractive for American citizens who wish to self-post nude content, and all users will shift their profiles to offshore sites.

The Department does not adopt these comments. The rule can apply only to circumstances to which the Act applies. Congress has limited authority to apply American criminal prohibitions against entities that operate only in foreign

countries, and the Department can only issue regulations implementing those prohibitions that have the same reach. To the extent that production of depictions of actual sexually explicit conduct shifts offshore as a result of record-keeping requirements generally, that is the unavoidable effect of the Act. The Department has minimized burdens on small business to minimize the effect of the rule on the situation these comments raise. To the extent that the rule reduces production of child pornography in the United States, that is the desired goal of both the Act and the rule. With respect to balance of payments, Americans who seek pornography will have access to numerous domestic sources of pornography under the rule, even if some production moved offshore. The comment makes no showing that the rule will cause the price of access to domestic pornography to rise compared to foreign pornography to a level that would lead pornography-seeking Americans to shift their purchases from domestic to imported product.

One commenter notes that the EU Privacy Directive means that some primary producers will only obtain affidavits that relate to people under 18 and that state where the records are located. Therefore, American businesses could not obtain needed records, while foreign competitors do not need to worry about the need to comply or experience compliance costs.

The Department does not adopt this comment. The Act requires that records exceeding those allowed in the EU Privacy Directive be kept. Foreign competitors will operate under different rules to the extent of U.S. and EU authority. The Department is unable to change that fact.

Proposed Rule To Implement Section 2257A

As stated in the proposed rule, the Department is unable to estimate with any precision the number of entities producing visual depictions of simulated sexually explicit conduct. Because the issue of the number of entities producing visual depictions of simulated sexually explicit conduct is a new issue that has arisen precisely because of the enactment of section 2257A, there does not appear to be much available information concerning the number of entities producing such material. As a partial indication, according to the U.S. Census Bureau, in 2002 there were 11,163 establishments engaged in motion picture and video production in the United States. Based on a rough estimation that 10% were engaged in the production of visual depictions of simulated sexually explicit conduct, the Department estimated that approximately 1,116 motion picture and video producing establishments would be covered. The underlying statute provides an exemption from these requirements applicable in certain circumstances, and it requires producers to submit certifications to qualify for this exemption. The Department has no information concerning the number of otherwise covered entities that would qualify for this statutory exemption, nor is it able to estimate this number. For entities that qualify for the statutory exemption, however, the Department estimated that it would take less than 20 hours per year, at an estimated cost of less than $25.00 per hour, to prepare the biennial certification required for the statutory exemption. The Department's burden-hour estimate for preparing the biennial certification required for the statutory exemption was based on the proposed rule's requirements for such certification, which have been drastically curtailed and simplified in the final rule. The proposed rule would have required that the certification take the form of a letter indicating that the producer regularly and in the normal course of business collects and maintains individually identifiable information regarding all performers employed by that person, and would have required a list of the titles, names, or other identifying information of visual depictions of simulated sexually explicit conduct or lascivious exhibition produced since the last certification, as well as a list of the titles, names, or other identifying information of visual depictions of simulated sexually explicit conduct or lascivious exhibition that include non-employee performers. The Department assumed that the certification's main burden would have been to require producers to maintain a list of the visual depictions produced during the certification period, and that the majority of the work to prepare the certification would be performed by administrative staff. The Department further estimated that 90% of such entities would qualify for the exemption.

The Department received three comments contesting the Department's estimates for preparing the certification contemplated by the proposed rule. One comment states that the Department's estimation that preparing the certification would require less than 20 hours a year of administrative staff time at a cost of less than $25 per hour ''grossly understates the burden at issue'' because the determination as to whether given depictions constituted lascivious exhibition or simulated sexually explicit conduct, a prerequisite to preparing the lists contemplated by the proposed rule, would require attorneys to review the depictions at a cost far higher than $25 per hour, and thousands of hours of material would have to be reviewed. The comment thus concludes that ''the regulations impose not a trivial burden, but a very substantial one that will surely chill legitimate expression by producers anxious to avoid criminal sanctions.''

The second comment states flatly that the Department's estimate that the certification contemplated by the proposed rule would require less than 20 hours per year to prepare, at an estimated cost of less than $25 per hour ''has no basis in reality'' because some producers will have hundreds or even thousands of depictions, and also because the producers will have certain obligations with respect to foreign-produced materials such as seeking to determine if foreign producers comply with the requirements of United States law or taking reasonable steps to assure that foreign materials do not depict minors in depictions of lascivious exhibition or simulated sexually explicit conduct. This comment also explains that the determination as to whether depictions constitute lascivious exhibition or simulated sexually explicit conduct will have to made with the assistance of counsel, which will entail increased costs.

The third comment bluntly states that the Department's ''assumptions regarding the time and cost of compliance with the proposed [certification] regime * * * are unsupported and fallacious.'' The comment states that Department's citation to the 11,163 producers in 2002, above, ''represented only 'primary producers' '' and that ''there have long been many, many times that many websites featuring sexually explicit materials operating from the United States.'' This comment also states that the Department's estimation that 10% of the 11,163 producers ''disseminate simulated sexually explicit materials or material with lascivious exhibition * * * cannot be justified and seems unrealistic to us.'' Moreover, the comment states that ''since domestic 'secondary producers' are substantially dependent upon foreign primary producers, limiting the number of producers to those counted by the Census Bureau excludes thousands more primary producers'' and ''including 'secondary producers' '' into the Department's numbers multiplies the scope by magnitudes.'' The

comment concludes that ''[a]ssuming a more realistic number of several million adult websites, even keeping the unjustified and unjustifiable ten percent [that produce depictions of lascivious exhibition or simulated sexually explicit conduct], the Department has undercounted the number of entities affected by a factor of one hundred or more'' and that ''rather than the 1100 producers claimed by the Department, there are likely several hundred thousand.''

The Department recognizes the difficulty of estimating the burden of preparing the certification contemplated by the proposed rule and the difficulty of estimating the number of producers of depictions of lascivious exhibition and simulated sexually explicit conduct. Accordingly, the Department appreciates the comments that responded to the Department's request for input on these issues.

With respect to the burden of preparing the certification required by the final rule, the Department believes that it would be minimal compared to the burden of preparing the certification contemplated by the proposed rule. The certification in the final rule does not require producers to identify which of their materials constitute depictions of lascivious exhibition or simulated sexually explicit conduct, nor does it require producers to keep records concerning the depictions produced that include non-employee performers, the depictions produced since the last certification, the foreign-produced depictions that the certifier took reasonable steps to confirm did not depict minors, or a certification that a primary producer either collects and maintains the records required by sections 2257 and 2257A or has itself made the requisite certification to the Attorney General. The final rule now only requires that the producer state the basis under which it qualifies for the certification regime, using the brief certification statement contained in § 75.9(c)(2) of the final rule. For foreign-produced materials, a producer would use either the certification or alternate certification contained in § 75.9(c)(3) of the final rule. The Department thus believes that the certification would impose a far smaller burden than that contemplated by the proposed rule.

In cases other than those involving foreign-produced material, for which the alternate certification is necessary, the Department estimates the certification would require less than two hours to complete. A further reduction in the burden as compared to the certification contemplated by the proposed rule is that the final rule only requires that the certification be submitted once and amended only as needed, rather than requiring that a certification be submitted every two years. Estimating that the certification is prepared by an administrative staffer at a cost of $25 per hour, the certification should cost a producer no more than $50.

In cases involving foreign-produced material where the alternate certification contained in § 75.9(c)(3) of the final rule is necessary, a producer would have to take ''reasonable steps to confirm'' that depictions do not depict minors. The certification in the final rule would impose a reduced burden in this circumstance as well, as the final rule clarifies that such ''reasonable steps'' can include simply reviewing the depictions or relying on a representation or warranty made by the foreign producer of these materials. In cases where the foreign producer makes such a representation or warranty, the Department estimates little or no additional cost in preparing the certification. In cases where the producer is required to review the materials, the Department believes that U.S. producers for sound business reasons already review the materials they obtain from foreign producers, and the review contemplated by the certification would involve little or no additional cost. In particular, the Department does not believe this review would be required to be conducted by an attorney, as a good-faith belief that the material does not depict minors would be sufficient to meet the certification's standard.

Accordingly, even assuming that the Department understated the number of producers by a factor of one hundred as stated by one comment cited above, resulting in an estimate of roughly 100,000 producers in the United States, and further estimating that 90% of these producers qualify for the exemption, the total cost of preparing the certification required for the statutory exemption would be approximately $4.5 million (100,000 producers times 90% times $50 each). Given that a study submitted as a comment to the proposed rule implementing section 2257 (and submitted as an attachment to a comment on the proposed rule implementing section 2257A) estimated that the adult industry had revenues of $12.9 billion in 2006 ($9.2 billion from sectors including: video sales and rentals, the Internet, magazines, cable/satellite/hotel, and mobile), the Department believes the $4.5 million estimated cost of preparing the certification is not excessive.

In the proposed rule, the Department estimated that if 3,000,000 visual depictions of simulated sexually explicit conduct are created each year and that it requires 6 minutes to complete the record-keeping requirement for each depiction, the record-keeping requirements would impose a burden of 300,000 hours. Based on the Department's estimation that producers of 90% of these depictions would qualify for the statutory exemption from these requirements, the proposed rule estimated that the requirements would only impose a burden of 30,000 hours. The Department further estimated that the record-keeping requirements would cost $6.00 per hour to complete and $0.05 for each image of a verifiable form of identification.

The Department received two comments on its estimate for collecting the required records for those producers that do not qualify for the statutory exemption. One comment states that it was ''ludicrous'' for the Department to estimate that it would only take six minutes to complete the record-keeping requirement for each depiction, estimating four performers in each depiction, often foreign records for each performer, and the need to cross-reference the records to the performance. The comment states that ''there is no possibility that the process could take only six minutes, even for one performer.'' The other comment states that it is ''extraordinarily unlikely that * * * record-keeping associated with certification would 'cost $6.00 per hour to complete.' ''

The Department notes, however, that a study submitted as a comment to the proposed rule implementing section 2257 (and submitted as an attachment to a comment on the proposed rule implementing section 2257A) ''assume[d], based on industry interviews, that * * * [i]t takes at least three minutes to complete a Section 2257 file for a photograph * * * [and] [t]he market rate in California for a worker who can complete a Section 2257 file without error quickly is $20 per hour, including all benefits.'' The Department thus declines to accept the comment that a six-minute-per-depiction estimate is unrealistic, but accepts the comment that its $6 per hour estimate for these record-keeping tasks understates the costs. Given the nature of the work and the availability of software to assist in the record-keeping, it seems unlikely that the associated tasks would require skilled labor. Even providing roughly 130% of the Federal minimum wage for work that would appear to be essentially data

entry would yield only $10 per hour. Therefore, the Department rejects the view that $20 per hour is an accurate estimate, but adopts $10 as more reasonable.

No commenter disputed the Department's 3,000,000 images figure. Therefore, the Department continues to estimate that 3,000,000 visual depictions potentially covered by the statutory exemption are created each year. Applying its estimation that it takes 6 minutes to complete the record-keeping requirement for each depiction, the Department therefore continues to calculate that the record-keeping requirements would impose a burden of 300,000 hours. Although one commenter alleged that the Department understated the number of producers by 100 to 1, no commenter disputed that 90% of those producers would qualify for the statutory exemption. Hence, based on the Department's continued estimation that producers of 90% of the 3,000,000 depictions would qualify for the statutory exemption from these requirements, the final rule continues to estimate that the requirements would only impose a burden of 30,000 hours. The Department now estimates, however, that the record-keeping requirements would cost $10.00 per hour to complete. In an abundance of caution, to account for the costs of software noted above, the Department now estimates that each image would cost $.10 to process (i.e., twice the original estimate). Furthermore, the Department, based on the comment claiming underestimation of the number of primary and secondary producers by 100 to 1, adopts 100,000 as the total number of affected producers. Accordingly, the Department now estimates that the total annual cost for the 10% of entities (i.e., 10,000) not qualifying for the statutory exemption would be $330,000 (30,000 hours times $10 per hour, plus $.10 times 300,000 images). Thus, the average cost to an individual small business producer who did not qualify for the exemption would be $33.00 per year ($330,000 divided by 10,000). Even at the commenter's suggested $20, the cost per small business would be $66.00 per year. As mentioned above, even a small business in the lowest revenue level would find this cost to be manageable.

Paperwork Reduction Act

This final rule modifies existing requirements to conform to newly enacted legislation. It contains a revised information collection that satisfies the requirements of existing regulations to clarify the means of maintaining and organizing the required documents. This information collection will be submitted to the Office of Management and Budget for regular approval in accordance with the Paperwork Reduction Act of 1995. In the proposed rule, the Department asked for public comment on four issues: (1) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and estimations used; (3) how to enhance the quality, utility, and clarity of the information to be collected; and (4) how to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology (e.g., permitting electronic submission of responses). The Department estimated that there are 500,000 Web sites and at least 200 producers of DVDs, videos, and other images containing visual depictions of actually explicit conduct (as defined by the revised section 2257), constituting 5000 businesses, and invited comments on these estimates. The Department also invited comments on its estimates that the proposed rule implementing section 2257 applied to 2,000,000 depictions of actual sexually explicit conduct (including the visual depictions of lascivious exhibition of the genitals or pubic area of a person not covered by the regulation), that each depiction would generate 6 minutes to complete its associated record-keeping, and that the record-keeping requirements would impose a burden of 200,000 hours.

Two comments state that the entire record-shifting burden arises from the requirement that records be maintained at the producer's own place of business. If third parties were custodians, and their location were properly disclosed, then both primary and secondary producers could rely on the same third-party custodian using the same disclosure statement. This would minimize the record-keeping burdens by concentrating them on third parties who were willing and able to receive the information and then organize, maintain, and make the information available for inspection. The comments posit that there may be interest in the regulated industry to assist in having third-party professional record-keepers trained and compliant in the record-keeping. These third parties would perform cross-reference and maintenance, and allow records to be available for forty hours per week, dramatically easing the overall burdens. According to the comments, the secondary producer could then fulfill its record-keeping obligations by merely referring to the location of the records created by the primary producer.

The Department adopts the comments in part. As stated above, the Department believes that its objectives can be accomplished and the burden reduced on small business by allowing producers to use third-party custodians to store their records. The final rule reflects this change from the proposed rule. The Department believes, however, as stated above, that a secondary producer who does not actually see copies of identification cards that the primary producer uses to prove that the performer was at least 18 years old as of the date of original production may take an unnecessary risk of distributing child pornography.

One comment remarked that some producers of actual sexually explicit conduct exist only virtually and that their records should therefore be permitted to be created only virtually. The Department accepts this comment in part. Regardless of the nature of the entity that produces actual sexually explicit conduct, the final rule permits records to be kept in electronic form.

One comment states that subjecting those who exclusively produce depictions involving lascivious exhibitions to record-keeping as of July 2006 would create a paperwork burden not intended by Congress. The comment expressed the view that Congress intended to reduce these entities' paperwork by creating a certification process. As stated above, the Department is delaying the imposition of the record-keeping requirements for entities whose activities enable them to confirm to the certification safe harbor until such time as the Department issues the final rule that implements section 2257A.

One comment notes the burden imposed by having each Web page contain a substantial amount of regulatory information to enable the producer to display otherwise constitutionally protected expression without criminal penalties, which it contends violates free expression. The Department adopts this comment in part. The final rule's display requirements will not require substantial regulatory information, but will permit hyperlinks. The Department does not accept the remainder of the comment. Under the terms of the final rule, producers of constitutionally

protected depictions of actual sexually explicit conduct will be fully able to create such images without risk of criminal penalties so long as they maintain records and affix a disclosure statement to each page that displays such an image. Without such compliance, there is no guarantee that the depiction is in fact constitutionally protected expression. In fact, experience demonstrates that there is too great a likelihood that a child will have been victimized by such a depiction, and that such a depiction may be used to victimize others.

Four comments state that compliance with the proposed rule is expensive, invasive, and burdensome. One comment notes that the proposed rule placed a burden on a person who displayed depictions of actual sexually explicit conduct to keep and distribute information to strangers about the performers. The Department adopts these comments in part. Although some of the requirements of the Adam Walsh Act will result in additional expenses for businesses, the Department has reduced those burdens in the final rule. It has eliminated the hard copy requirement, permitted hyperlinks rather than complete disclosure statements on each Web page, and permitted producers to place required records in the hands of third-party custodians. Primary producers must share information on performers with secondary producers, but that is a requirement of the Act.

Two comments state that hard copy is not required and is very expensive. One comment says that hard copy is counter to the requirements of the Paperwork Reduction Act requirement that agencies minimize the burden of information collections through appropriate electronic or other information technology. One comment notes that some Web sites have many thousands of pages of actual sexually explicit material, and it argues that there is no reason for a hard copy. Inexpensive scanners, it maintains, can produce digital depictions at a resolution such as 300 dots per inch that can eliminate the need to read a copy of the identification document, and that hard copies may be less clear for inspectors. The Department accepts these comments, without necessarily agreeing with the characterization of the proposed rule under the PRA and, as stated, will permit the required records to be stored electronically.

One comment notes that the proposed rule is burdensome given its requirements concerning the date of original production, which would mandate overhauling each and every disclosure on a Web site after identifying such a date for those images. The Department adopts this comment. Identification of the original date of production is crucial to the inspection process, and the records must indicate that date; however, it is not necessary to have on the disclosure statement. Accordingly, the final rule eliminates § 75.6(B)(2).

Four comments state that the proposed rule would achieve none of its stated goals, either because people will lie about their age or produce fake identification documents or because illicit entities would not keep records. Thirty-five comments claim that the rule would do little to protect minors or curb child pornography.

The Department does not adopt these comments. People who lie about their age must still produce identification cards, or the producers will be criminally liable for depicting them. The Department cannot guarantee that some individuals will not provide fake documents, but such individuals risk incurring criminal penalties, and the Department believes that the existence of these penalties will persuade many people who would be tempted to use fake documentation to avoid doing so. Further, the Department believes the rule will achieve its objective of implementing the policies of the Act, whether or not it is completely successful in eradicating the production of all child pornography.

On a related issue, one comment notes that false identification cards can appear authentic and lead to the production of many depictions and subsequent republications of the performer's image. However, since the rule requires that a copy of each image must be kept in the records of each of the many producers, the comment asks what producers are to do once the fraud is revealed. It states that producers will destroy their images when the fraud is revealed, but asks if the rule permits the destruction of the records, and if not, asks how custodians would be protected against state laws that criminalize even the private possession of child pornography.

The Department responds to this comment by stating that records of the production of such depictions must be retained even after the fraud is discovered. The Department would need to be able to inspect the identification documents that were provided as a basis for creating the depiction.

One comment states that secondary producers cannot determine if a scanned or faxed document was actual or altered, and could unknowingly accept false information. The comment questions whether the producer would be shielded from prosecution if the primary producer presents false or altered documents, and asks whether there will be a database for the secondary producer to check whether the primary producer's age documents are valid, as would be the case with a passport.

The Department responds to this comment by stating that the secondary producer must keep a copy of the relevant identification documents under the terms of the rule. So long as the producer keeps a copy of the document that reasonably appears to conform to the requirements of the rule, the producer will not face criminal liability. But as stated above, the producer must keep the records even if the image turns out not to relate to a performer of legal age. As discussed above, the Department will not establish a database as part of this rule.

One comment states that secondary producers have no relationship with the performers depicted in actual sexually explicit conduct, and that applying the record-keeping requirements to them therefore accomplishes nothing. The Department does not adopt this comment. Unless the secondary performer keeps appropriate records, then the fears that Congress expressed that secondary producers will knowingly or unknowingly create a commercial market for child pornography may materialize.

One comment contends that the proposed rule's requirement that information be placed on every page will not make the required information more easily accessible to the Department, and that it will increase compliance costs. The Department does not adopt this comment. Placement of the required information on every page will enable the Department to determine that any given depiction of actual sexual conduct is of a person who is of appropriate age, and the adherence to this requirement will make that information more accessible to the Department. Additionally, the Act requires that the Department's final rule impose such a requirement, and the Department notes that the final rule will impose the minimal compliance costs associated with the Act's requirement by permitting hyperlinks rather than the full disclosure statement to appear on each regulated page.

One comment concedes that the cross-referencing requirement has a governmental purpose when an inspector needs to obtain performance records based upon a legal name or an alias or a title of a work. However, the

comment contends that there is no basis to require cross-referencing so that an inspector can obtain an alias name that was never used in productions and was never used as an adult, or records concerning unknown works.

The Department does not adopt this comment. The Department would not know (and questions whether many producers would know) that an alias was never used in productions. If an alias had in fact been used in productions, it is vital for the Department to be able to determine that such depictions were originally produced when the performers were over 18. If an alias was never used while a performer was an adult, it may have been used when the performer was a child. Being able to trace records when the performer may have been a minor is of obvious significance to the Department's efforts to combat child exploitation.

One comment requests that the Department prepare a form analogous to an IRS form that, if properly completed, will assure the filer that it has complied with all statutory and regulatory reporting requirements. The form would be available for employers to record the fact that they have examined appropriate identification requirements before employing any individual in covered employment. The comment believes that primary producers should not have to guess concerning the required content of their records or to seek expensive legal advice from attorneys. The comment recommends that the form should be one that is used to create paper records or that can be digitally incorporated into record-keeping software for those who choose to keep the records in digital form.

The Department does not adopt this requirement. It is not possible for the Department to create a form that would ensure that the regulated entity has complied with all requirements. It is the actual performance of the checking function that the record-keeping must document. Individualized records must be kept, rather than filling out a form indicating merely that identity was checked. Moreover, copies of the identification cards must be kept to prove that the performers were of age. Finally, the comment seeks what is essentially a compliance certification procedure rather than a record-keeping principle. Congress created a particular means by which entities may be found to be in compliance with the rule even though the statutory record-keeping and disclosure requirements are not adhered to. The Department is not free to write another alternative method of compliance.

Two comments claim that the current regulations are more than adequate to fulfill their purpose. The Department does not accept this comment. Congress enacted the Act to impose additional requirements to prevent the production of child pornography because section 2257's pre-Act definition of ''actual sexually explicit conduct'' and accompanying regulations were insufficient to achieve that objective. The Department must therefore issue the final rule per statutory command and believes that these additional requirements will make the production of child pornography more difficult than under current rules.

One comment states that some sites have many thousands of images and that each would take many kilobytes of storage and that the largest sites would need many gigabytes of storage to comply with the rule. It claims that sites with streaming video need to retain seven years' worth of recorded video. According to the comment, regardless of whether video is live or recorded, and regardless of whether copies are held in hard form or electronically, the size and number of video files will create a significant burden, in some cases requiring storage of gigabytes of data or thousands of videos. The comment wonders what governmental benefits these requirements will produce.

The Department does not adopt this comment. As to live performances, the proposed rule specifically provides, ''For any performer in a depiction performed live on the Internet, the records shall include a copy of the depiction with running-time sufficient to identify the performer in the depiction and to associate the performer with the records needed to confirm his or her age.'' 72 FR at 38036. This will significantly reduce the storage costs the commenter discusses. As to recorded performances, the Department does not accept the alleged burdensome nature of the storage costs. The district court in *Free Speech Coalition* v. *Gonzales* favorably cited the Department's expert witness to the effect that ''large numbers of depictions can be electronically stored by purchasing hard drives at insubstantial prices.'' *Free Speech I,* 406 F. Supp. 2d at 1208.

Several commenters address the time period for the retention of records. One comment views the seven-year record retention requirement as excessive, noting that at three inspections per year, the producer would face 20 or 21 inspection cycles. The comment believes that there is no reason why that many inspections would be needed for a particular record and that the Department would learn the actual age of a depicted performer before so many inspections were carried out. The comment asks that the final rule make clear that the records of a depiction can be disposed of seven years after a depiction's creation, and that a producer's records concerning a performer can be disposed of seven years after the performer is last depicted by the producer.

One comment points out that the required time for keeping records can be seventeen years. If a corporation leaves the adult entertainment business just before the seven-year record-keeping requirement, it must keep the records for an additional five years. And if the company goes out of business altogether, then the individual custodian must keep the records for another five years. The comment asks that the final rule should say that the operative period is the shortest of whichever of these three contingencies occurs first.

One comment notes that a secondary producer must keep the relevant record for seven years after the depiction was reproduced, perhaps beginning seven years after the depiction was produced. The comment points out that the information in the records properly relates to the initial production and not the reproduction. It posits that there is no reason to restart the clock for each republication. The comment also expresses concern that requiring the records to be maintained as long as the depiction is in circulation would be so cumulatively burdensome as to unconstitutionally harm expression.

One comment asks that no one be required to keep records of a particular depiction more than seven years after it was initially created. A secondary producer may want to reproduce a depiction eight years after it was made, but the primary producer may have eliminated the records. The comment asks whether the secondary producer can reproduce without the records, or its further reproduction is restricted at the cost of the constitutional rights of the primary producer who is also now quite lawfully without the records.

The Department declines to adopt these comments. Concerns about the retention period for records were addressed in the final rule published in 2005. At that time, the Department stated, ''The regulation provides for retention of records for seven years from production or last amendment and five years from cessation of production by a business or dissolution of the company. The Department does not believe that these limits are unreasonable. The only way to satisfy the commenters' objection that the periods of time can multiply

would be to impose a blanket short period of time no matter what changes to the records were made. Such a change would frustrate the ability to ensure that records were maintained up-to-date and prevent inspectors from examining older records to determine if a violation had been committed. In addition, the time periods, contrary to the claim of the commenters, do not violate *American Library Association* v. *Reno*. In that case, the DC Circuit held that part 75 could not require records to be maintained for as long as the producer remained in business and allowed a five-year retention period '[p]ending its replacement by a provision more rationally tailored to actual law enforcement needs.' 33 F.3d at 91. The Department has determined that the seven-year period is reasonable, thus satisfying the court's directive. The production of child pornography statute of limitations was increased in the PROTECT Act from five years to the life of the child, and the increase contained in the regulation seeks to comport with that extended statute of limitations. Finally, the Department wishes to clarify that the statute requires that each time a producer publishes a depiction, he must have records proving that the performers are adults. Thus, if a producer purges his or her records after the retention period but continues to use a picture for publication, the producer would be deemed in violation of the statute for not maintaining records that the person depicted was an adult. Records are required for every iteration of an image in every instance of publication.'' 70 FR at 29614.

One comment believes that the proposed rule's record-keeping requirements impose a heavy burden. It argues that copies of the full set of required records must follow any depiction to any secondary producer who assists in disseminating the constitutionally protected expression, which will restrict such dissemination.

The Department does not adopt this comment. Although a burden is imposed by the record-keeping requirement, it is necessary that secondary producers retain copies of records that the primary producer examined prior to producing depictions of sexually explicit conduct. Otherwise, there is no way to determine that the depiction is in fact constitutionally protected expression rather than a record of child exploitation. Since preventing the existence of a commercial market for child pornography is a major purpose of the Act, the Department believes that it has adopted the least-restrictive burden for secondary producers and the Department to be sure that the performers were of legal age on the original production date of the depiction of actual sexually explicit conduct.

One comment points out that because a secondary producer cannot assemble records from scratch, he should be able to receive a copy of the primary producer's records so long as the secondary producer also obtains, records, and maintains the primary producer's business address. The comment expressed a belief that the volume and complexity of the requirements will limit the distribution of constitutionally protected material. It complains that if a primary producer licenses some but not all of a set of its images, it will be difficult for a secondary producer to untangle the cross-references so that the secondary possesses the required records (because possessing extraneous matter subjects that individual to a five-year sentence per § 75.2(e)). The comment anticipates that some primary producers will not want to share records concerning identification cards because secondary producers might compete with those primary producers if they knew where to find the performers. Moreover, if the performer obtained an agreement from the primary producer not to use a secondary producer to republish their depiction, then constitutionally protected expression will be frozen out of existence.

The Department does not adopt this comment. For a secondary producer to know that as of the original production date, the performers were of legal age, copies of the records of the primary producer must be provided that demonstrate that fact. To identify the appropriate primary producer, the secondary producer must keep records itself. The only means of ensuring that children are not performing in the depiction is to determine the birthdates of the performers and to keep records. The Department must have access to these records to ensure that children are not being depicted. First Amendment rights are not implicated if, in response to the rule, primary producers choose not to share records because they fear that secondary producers may compete with them. Moreover, if a performer obtains an agreement through an agent that the primary producer will not use a secondary producer to republish a depiction, then the reason that the secondary producer would become unable to obtain the image is through the operation of the agreement, whether or not the Department had ever issued any regulations. The First Amendment is not implicated under those circumstances.

One comment states that a secondary producer can satisfy the Act by requiring only an email or a letter from the primary producer attesting to the availability of the date of birth documentation's availability at the primary producer's place of business, unless the secondary producer is also a primary producer. The Department does not adopt this comment. A secondary producer's reliance on an email or letter does not ensure that the secondary producer actually retains records documenting that the performer was of legal age as of the date of original production.

One comment notes that each Web site can contain multiple depictions, which may have been created on different dates. Each webmaster would have to develop a unique system of cross-referencing, coding, or identifying the production date of each depiction. The comment would prefer that webmasters be permitted to identify the most relevant date, of either production, duplication, reproduction, or reissuance of a depiction.

The Department does not adopt this comment. Apart from the lack of clarity concerning what the most relevant date from the choices above for a particular depiction, the Department believes that the date of original production is a critical element for the disclosure statement that Congress has required. Confirmation of the date of birth of the performer and of the date of original production are the two most important pieces of information necessary to be recorded if child pornography is to be kept out of production and commercial distribution. Knowledge of only a later date that is unrelated to the date of original production of the image will not ensure that the performer was of legal age as of the date that the depiction was created, the key factor determining whether a particular depiction is child pornography or not.

Two comments oppose cross-referencing requirements because, the commenters say, they are a means only to harass producers. The Department does not adopt this comment. Cross-referencing requirements, as described above, are vital to determining whether a performer under any name that the performer has used has been depicted in actual sexually explicit conduct despite their status as a minor. Cross-referencing will enable the Department to establish, whatever name may be used, whether a performer's identification card demonstrates legality of age for such productions.

Two comments suggest that the burden of segregating records in § 75.2(d) and (e) is too stringent. One points out that if a stray 1099 form, model release, or I–9 form were to wind up in the section 2257 records instead of the more general personnel file, then the producer or custodian would face years in prison. The comment contends that there should be a different rule for inadvertent misfiling.

The Department does not accept this comment. The segregation requirement in fact reduces the burden that the rule imposes upon the regulated entity. Due to segregation of records, the inspector need only review a unified set of records, without need to search every document in the facility.

Two comments request that the final rule reduce the burden on primary producers by not requiring that they make or receive sworn statements that all content is legal and all models are over 18. The Department declines to adopt this comment, as it describes the effect of neither the proposed rule nor existing regulation.

The Department received no comments challenging its estimates that 2,000,000 depictions of actual sexually explicit conduct would be generated this year, that the associated record-keeping for each depiction would amount to 6 minutes, and that the total related burden of compliance for this category was 200,000 hours, and it therefore continues to adhere to these estimates. Two million depictions at a cost of $10 per hour of record-keeping and a duplication cost of $0.10 per depiction produces a total cost of compliance with the final section 2257 rule of $2,400,000.

The OMB Control Number pertaining to the rule is 1105–0083.

List of Subjects in 28 CFR Part 75

Crime, infants and children, Reporting and record-keeping requirements.

■ Accordingly, for the reasons set forth in the preamble, part 75 of chapter I of title 28 of the Code of Federal Regulations is amended as follows:

PART 75—CHILD PROTECTION RESTORATION AND PENALTIES ENHANCEMENT ACT OF 1990; PROTECT ACT; ADAM WALSH CHILD PROTECTION AND SAFETY ACT OF 2006; RECORDKEEPING AND RECORD-INSPECTION PROVISIONS

■ 1. The authority citation for part 75 is revised to read as follows:

Authority: 18 U.S.C. 2257, 2257A.

■ 2. The heading of part 75 is revised to read as set forth above.

■ 3. Amend § 75.1 by revising paragraphs (b), (c)(1), (c)(2), (c)(4), (d), and (e), and by adding paragraphs (m) through (s), to read as follows:

§ 75.1 Definitions.

* * * * *

(b) *Picture identification card* means a document issued by the United States, a State government, or a political subdivision thereof, or a United States territory, that bears the photograph, the name of the individual identified, and the date of birth of that individual, and provides specific information sufficient for the issuing authority to confirm its validity, such as a passport, Permanent Resident Card (commonly known as a ''Green Card''), or employment authorization document issued by the United States, a driver's license or other form of identification issued by a State or the District of Columbia; or a foreign government-issued equivalent of any of the documents listed above when the person who is the subject of the picture identification card is a non-U.S. citizen located outside the United States at the time of original production and the producer maintaining the required records, whether a U.S. citizen or non-U.S. citizen, is located outside the United States on the original production date. The picture identification card must be valid as of the original production date.

* * * * *

(c) * * *

(1) *Primary producer* is any person who actually films, videotapes, photographs, or creates a digitally- or computer-manipulated image, a digital image, or a picture of, or who digitizes an image of, a visual depiction of an actual human being engaged in actual or simulated sexually explicit conduct. When a corporation or other organization is the primary producer of any particular image or picture, then no individual employee or agent of that corporation or other organization will be considered to be a primary producer of that image or picture.

(2) *Secondary producer* is any person who produces, assembles, manufactures, publishes, duplicates, reproduces, or reissues a book, magazine, periodical, film, videotape, or digitally- or computer-manipulated image, picture, or other matter intended for commercial distribution that contains a visual depiction of an actual human being engaged in actual or simulated sexually explicit conduct, or who inserts on a computer site or service a digital image of, or otherwise manages the sexually explicit content of a computer site or service that contains a visual depiction of, an actual human being engaged in actual or simulated sexually explicit conduct, including any person who enters into a contract, agreement, or conspiracy to do any of the foregoing. When a corporation or other organization is the secondary producer of any particular image or picture, then no individual of that corporation or other organization will be considered to be the secondary producer of that image or picture.

* * * * *

(4) Producer does not include persons whose activities relating to the visual depiction of actual or simulated sexually explicit conduct are limited to the following:

(i) Photo or film processing, including digitization of previously existing visual depictions, as part of a commercial enterprise, with no other commercial interest in the sexually explicit material, printing, and video duplication;

(ii) Distribution;

(iii) Any activity, other than those activities identified in paragraphs (c)(1) and (2) of this section, that does not involve the hiring, contracting for, managing, or otherwise arranging for the participation of the depicted performers;

(iv) The provision of a telecommunications service, or of an Internet access service of Internet information location tool (as those terms are defined in section 231 of the Communications Act of 1934 (47 U.S.C. 231));

(v) The transmission, storage, retrieval, hosting, formatting, or translation (or any combination thereof) of a communication, without selection or alteration of the content of the communication, except that deletion of a particular communication or material made by another person in a manner consistent with section 230(c) of the Communications Act of 1934 (47 U.S.C. 230(c)) shall not constitute such selection or alteration of the content of the communication; or

(vi) Unless the activity or activities are described in section 2257(h)(2)(A), the dissemination of a depiction without having created it or altered its content.

(d) *Sell, distribute, redistribute, and re-release* refer to commercial distribution of a book, magazine, periodical, film, videotape, digitally- or computer-manipulated image, digital image, picture, or other matter that contains a visual depiction of an actual human being engaged in actual or simulated sexually explicit conduct, but does not refer to noncommercial or

educational distribution of such matter, including transfers conducted by bona fide lending libraries, museums, schools, or educational organizations.

(e) *Copy*, when used:

(1) In reference to an identification document or a picture identification card, means a photocopy, photograph, or digitally scanned reproduction;

(2) In reference to a visual depiction of sexually explicit conduct, means a duplicate of the depiction itself (e.g., the film, the image on a Web site, the image taken by a webcam, the photo in a magazine); and

(3) In reference to an image on a webpage for purposes of §§ 75.6(a), 75.7(a), and 75.7(b), means every page of a Web site on which the image appears.

* * * * *

(m) *Date of original production* or *original production date* means the date the primary producer actually filmed, videotaped, or photographed, or created a digitally- or computer-manipulated image or picture of, the visual depiction of an actual human being engaged in actual or simulated sexually explicit conduct. For productions that occur over more than one date, it means the single date that was the first of those dates. For a performer who was not 18 as of this date, the date of original production is the date that such a performer was first actually filmed, videotaped, photographed, or otherwise depicted. With respect to matter that is a secondarily produced compilation of individual, primarily produced depictions, the date of original production of the matter is the earliest date after July 3, 1995, on which any individual depiction in that compilation was produced. For a performer in one of the individual depictions contained in that compilation who was not 18 as of this date, the date of original production is the date that the performer was first actually filmed, videotaped, photographed, or otherwise depicted for the individual depiction at issue.

(n) *Sexually explicit conduct* has the meaning set forth in 18 U.S.C. 2256(2)(A).

(o) *Simulated sexually explicit conduct* means conduct engaged in by performers that is depicted in a manner that would cause a reasonable viewer to believe that the performers engaged in actual sexually explicit conduct, even if they did not in fact do so. It does not mean not sexually explicit conduct that is merely suggested.

(p) *Regularly and in the normal course of business collects and maintains* means any business practice(s) that ensure that the producer confirms the identity and age of all employees who perform in visual depictions.

(q) *Individually identifiable information* means information about the name, address, and date of birth of employees that is capable of being retrieved on the basis of a name of an employee who appears in a specified visual depiction.

(r) *All performers, including minor performers* means all performers who appear in any visual depiction, no matter for how short a period of time.

(s) *Employed by* means, in reference to a performer, one who receives pay for performing in a visual depiction or is otherwise in an employer-employee relationship with the producer of the visual depiction as evidenced by oral or written agreements.

■ 4. Amend § 75.2 by:

■ a. Revising paragraph (a) introductory text and paragraphs (a)(1) and (a)(2), and adding paragraph (a)(4);

■ b. Adding two sentences at the end of paragraph (b);

■ c. Revising paragraphs (c) and (d); and

■ d. Adding paragraphs (g) and (h).

The additions and revisions read as follows:

§ 75.2 Maintenance of records.

(a) Any producer of any book, magazine, periodical, film, videotape, digitally- or computer-manipulated image, digital image, picture, or other matter that is produced in whole or in part with materials that have been mailed or shipped in interstate or foreign commerce, or is shipped, transported, or intended for shipment or transportation in interstate or foreign commerce, and that contains one or more visual depictions of an actual human being engaged in actual sexually explicit conduct (except lascivious exhibition of the genitals or pubic area of any person) made after July 3, 1995, or one or more visual depictions of an actual human being engaged in simulated sexually explicit conduct or in actual sexually explicit conduct limited to lascivious exhibition of the genitals or pubic area of any person made after March 18, 2009, shall, for each performer portrayed in such visual depiction, create and maintain records containing the following:

(1) The legal name and date of birth of each performer, obtained by the producer's examination of a picture identification card prior to production of the depiction. For any performer portrayed in a depiction of an actual human being engaged in actual sexually explicit conduct (except lascivious exhibition of the genitals or pubic area of any person) made after July 3, 1995, or of an actual human being engaged in simulated sexually explicit conduct or in actual sexually explicit conduct limited to lascivious exhibition of the genitals or pubic area of any person made after March 18, 2009, the records shall also include a legible hard copy or legible digitally scanned or other electronic copy of a hard copy of the identification document examined and, if that document does not contain a recent and recognizable picture of the performer, a legible hard copy of a picture identification card. For any performer portrayed in a depiction of an actual human being engaged in actual sexually explicit conduct (except lascivious exhibition of the genitals or pubic area of any person) made after June 23, 2005, or of an actual human being engaged in simulated sexually explicit conduct or in actual sexually explicit conduct limited to lascivious exhibition of the genitals or pubic area of any person made after March 18, 2009, the records shall include a copy of the depiction, and, where the depiction is published on an Internet computer site or service, a copy of any URL associated with the depiction. If no URL is associated with the depiction, the records shall include another uniquely identifying reference associated with the location of the depiction on the Internet. For any performer in a depiction performed live on the Internet, the records shall include a copy of the depiction with running-time sufficient to identify the performer in the depiction and to associate the performer with the records needed to confirm his or her age.

(2) Any name, other than the performer's legal name, ever used by the performer, including the performer's maiden name, alias, nickname, stage name, or professional name. For any performer portrayed in a visual depiction of an actual human being engaged in actual sexually explicit conduct (except lascivious exhibition of the genitals or pubic area of any person) made after July 3, 1995, or of an actual human being engaged in simulated sexually explicit conduct or in actual sexually explicit conduct limited to lascivious exhibition of the genitals or pubic area of any person made after March 18, 2009, such names shall be indexed by the title or identifying number of the book, magazine, film, videotape, digitally- or computer-manipulated image, digital image, picture, URL, or other matter. Producers may rely in good faith on representations by performers regarding accuracy of the names, other than legal names, used by performers.

* * * * *

(4) The primary producer shall create a record of the date of original production of the depiction.

(b) * * * The copies of the records may be redacted to eliminate non-essential information, including addresses, phone numbers, social security numbers, and other information not necessary to confirm the name and age of the performer. However, the identification number of the picture identification card presented to confirm the name and age may not be redacted.

(c) The information contained in the records required to be created and maintained by this part need be current only as of the date of original production of the visual depiction to which the records are associated. If the producer subsequently produces an additional book, magazine, film, videotape, digitally- or computer-manipulated image, digital image, or picture, or other matter (including but not limited to an Internet computer site or service) that contains one or more visual depictions of an actual human being engaged in actual or simulated sexually explicit conduct made by a performer for whom he maintains records as required by this part, the producer may add the additional title or identifying number and the names of the performer to the existing records maintained pursuant to § 75.2(a)(2). Producers of visual depictions made after July 3, 1995, and before June 23, 2005, may rely on picture identification cards that were valid forms of required identification under the provisions of part 75 in effect during that time period.

(d) For any record of a performer in a visual depiction of actual sexually explicit conduct (except lascivious exhibition of the genitals or pubic area of any person) created or amended after June 23, 2005, or of a performer in a visual depiction of simulated sexually explicit conduct or actual sexually explicit conduct limited to lascivious exhibition of the genitals or pubic area of any person made after March 18, 2009, all such records shall be organized alphabetically, or numerically where appropriate, by the legal name of the performer (by last or family name, then first or given name), and shall be indexed or cross-referenced to each alias or other name used and to each title or identifying number of the book, magazine, film, videotape, digitally- or computer-manipulated image, digital image, or picture, or other matter (including but not limited to an Internet computer site or service). If the producer subsequently produces an additional book, magazine, film, videotape, digitally- or computer-manipulated image, digital image, or picture, or other matter (including but not limited to an Internet computer site or service) that contains one or more visual depictions of an actual human being engaged in actual or simulated sexually explicit conduct made by a performer for whom he maintains records as required by this part, the producer shall add the additional title or identifying number and the names of the performer to the existing records, and such records shall thereafter be maintained in accordance with this paragraph.

* * * * *

(g) Records are not required to be maintained by either a primary producer or by a secondary producer for a visual depiction of sexually explicit conduct that consists only of lascivious exhibition of the genitals or pubic area of a person, and contains no other sexually explicit conduct, whose original production date was prior to March 18, 2009.

(h) A primary or secondary producer may contract with a non-employee custodian to retain copies of the records that are required under this part. Such custodian must comply with all obligations related to records that are required by this Part, and such a contract does not relieve the producer of his liability under this part.

■ 5. Revise § 75.4 to read as follows:

§ 75.4 Location of records.

Any producer required by this part to maintain records shall make such records available at the producer's place of business or at the place of business of a non-employee custodian of records. Each record shall be maintained for seven years from the date of creation or last amendment or addition. If the producer ceases to carry on the business, the records shall be maintained for five years thereafter. If the producer produces the book, magazine, periodical, film, videotape, digitally- or computer-manipulated image, digital image, or picture, or other matter (including but not limited to Internet computer site or services) as part of his control of or through his employment with an organization, records shall be made available at the organization's place of business or at the place of business of a non-employee custodian of records. If the organization is dissolved, the person who was responsible for maintaining the records, as described in § 75.6(b), shall continue to maintain the records for a period of five years after dissolution.

■ 6. Section 75.5 is amended by revising:

■ a. Paragraphs (c)(1), (c)(3), and (c)(4);

■ b. Paragraph (d); and

■ c. Paragraph (e).

The revisions read as follows:

§ 75.5 Inspection of records.

* * * * *

(c) *Conduct of inspections.* (1) Inspections shall take place during normal business hours and at such places as specified in § 75.4. For the purpose of this part, ''normal business hours'' are from 9 a.m. to 5 p.m., local time, Monday through Friday, or, for inspections to be held at the place of business of a producer, any other time during which the producer is actually conducting business relating to producing a depiction of actual sexually explicit conduct. To the extent that the producer does not maintain at least 20 normal business hours per week, the producer must provide notice to the inspecting agency of the hours during which records will be available for inspection, which in no case may be less than 20 hours per week.

* * * * *

(3) The inspections shall be conducted so as not to unreasonably disrupt the operations of the establishment.

(4) At the conclusion of an inspection, the investigator may informally advise the producer or his non-employee custodian of records of any apparent violations disclosed by the inspection. The producer or non-employee custodian or records may bring to the attention of the investigator any pertinent information regarding the records inspected or any other relevant matter.

* * * * *

(d) *Frequency of inspections.* Records may be inspected once during any four-month period, unless there is a reasonable suspicion to believe that a violation of this part has occurred, in which case an additional inspection or inspections may be conducted before the four-month period has expired.

(e) *Copies of records.* An investigator may copy, at no expense to the producer or to his non-employee custodian of records, during the inspection, any record that is subject to inspection.

* * * * *

■ 7. Amend § 75.6 by:

■ a. Revising paragraph (a);

■ b. Removing and reserving paragraph (b)(2), and removing the second sentence from paragraph (b)(3);

■ c. Revising paragraph (c); and

■ d. Adding paragraph (f).

The addition and revisions read as follows:

§ 75.6 Statement describing location of books and records.

(a) Any producer of any book, magazine, periodical, film, videotape, digitally- or computer-manipulated image, digital image, or picture, or other matter (including but not limited to an Internet computer site or service) that contains one or more visual depictions of an actual human being engaged in actual sexually explicit conduct made after July 3, 1995, and produced, manufactured, published, duplicated, reproduced, or reissued after July 3, 1995, or of a performer in a visual depiction of simulated sexually explicit conduct or actual sexually explicit conduct limited to lascivious exhibition of the genitals or pubic area of any person made after March 18, 2009, shall cause to be affixed to every copy of the matter a statement describing the location of the records required by this part. A producer may cause such statement to be affixed, for example, by instructing the manufacturer of the book, magazine, periodical, film, videotape, digitally- or computer-manipulated image, digital image, picture, or other matter to affix the statement. In this paragraph, the term ''copy'' includes every page of a Web site on which a visual depiction of an actual human being engaged in actual or simulated sexually explicit conduct appears.

* * * * *

(c) If the producer is an organization, the statement shall also contain the title and business address of the person who is responsible for maintaining the records required by this part.

* * * * *

(f) If the producer contracts with a non-employee custodian of records to serve as the person responsible for maintaining his records, the statement shall contain the name and business address of that custodian and may contain that information in lieu of the information required in paragraphs (b)(3) and (c) of this section.

■ 8. Revise § 75.7 to read as follows:

§ 75.7 Exemption statement.

(a) Any producer of any book, magazine, periodical, film, videotape, digitally- or computer-manipulated image, digital image, picture, or other matter may cause to be affixed to every copy of the matter a statement attesting that the matter is not covered by the record-keeping requirements of 18 U.S.C. 2257(a)–(c) or 18 U.S.C. 2257A(a)–(c), as applicable, and of this part if:

(1) The matter contains visual depictions of actual sexually explicit conduct made only before July 3, 1995, or was last produced, manufactured, published, duplicated, reproduced, or reissued before July 3, 1995. Where the matter consists of a compilation of separate primarily produced depictions, the entirety of the conduct depicted was produced prior to July 3, 1995, regardless of the date of secondary production;

(2) The matter contains only visual depictions of simulated sexually explicit conduct or of actual sexually explicit conduct limited to lascivious exhibition of the genitals or pubic area of any person, made before March 18, 2009;

(3) The matter contains only some combination of the visual depictions described in paragraphs (a)(1) and (a)(2) of this section.

(b) If the primary producer and the secondary producer are different entities, the primary producer may certify to the secondary producer that the visual depictions in the matter satisfy the standards under paragraphs (a)(1) through (a)(3) of this section. The secondary producer may then cause to be affixed to every copy of the matter a statement attesting that the matter is not covered by the record-keeping requirements of 18 U.S.C. 2257(a)–(c) or 18 U.S.C. 2257A(a)–(c), as applicable, and of this part.

■ 9. Amend § 75.8 by:

■ a. Revising paragraph (d);

■ b. Redesignating paragraph (e) as paragraph (f); and

■ c. Adding a new paragraph (e).

The revisions and additions read as follows:

§ 75.8 Location of the statement.

* * * * *

(d) A computer site or service or Web address containing a digitally- or computer-manipulated image, digital image, or picture shall contain the required statement on every page of a Web site on which a visual depiction of an actual human being engaged in actual or simulated sexually explicit conduct appears. Such computer site or service or Web address may choose to display the required statement in a separate window that opens upon the viewer's clicking or mousing-over a hypertext link that states, ''18 U.S.C. 2257 [and/or 2257A, as appropriate] Record-Keeping Requirements Compliance Statement.''

(e) For purpose of this section, a digital video disc (DVD) containing multiple depictions is a single matter for which the statement may be located in a single place covering all depictions on the DVD.

* * * * *

■ 10. Add § 75.9 to read as follows:

§ 75.9 Certification of records.

(a) *In general.* The provisions of §§ 75.2 through 75.8 shall not apply to a visual depiction of actual sexually explicit conduct constituting lascivious exhibition of the genitals or pubic area of a person or to a visual depiction of simulated sexually explicit conduct if all of the following requirements are met:

(1) The visual depiction is intended for commercial distribution;

(2) The visual depiction is created as a part of a commercial enterprise;

(3) Either—

(i) The visual depiction is not produced, marketed or made available in circumstances such that an ordinary person would conclude that the matter contains a visual depiction that is child pornography as defined in 18 U.S.C. 2256(8), or,

(ii) The visual depiction is subject to regulation by the Federal Communications Commission acting in its capacity to enforce 18 U.S.C. 1464 regarding the broadcast of obscene, indecent, or profane programming; and

(4) The producer of the visual depiction certifies to the Attorney General that he regularly and in the normal course of business collects and maintains individually identifiable information regarding all performers, including minor performers, employed by that person, pursuant to Federal and State tax, labor, and other laws, labor agreements, or otherwise pursuant to industry standards, where such information includes the name, address, and date of birth of the performer. (A producer of materials depicting sexually explicit conduct not covered by the certification regime is not disqualified from using the certification regime for materials covered by the certification regime.)

(b) *Form of certification.* The certification shall take the form of a letter addressed to the Attorney General signed either by the chief executive officer or another executive officer of the entity making the certification, or in the event the entity does not have a chief executive officer or other executive officer, the senior manager responsible for overseeing the entity's activities.

(c) *Content of certification.* The certification shall contain the following:

(1) A statement setting out the basis under 18 U.S.C. 2257A and this part under which the certifying entity and any sub-entities, if applicable, are permitted to avail themselves of this exemption, and basic evidence justifying that basis.

(2) The following statement: ''I hereby certify that [name of entity] [and all sub-entities listed in this letter] regularly and in the normal course of business collect and maintain individually identifiable information regarding all performers employed by [name of entity]''; and

(3) If applicable because the visual depictions at issue were produced outside the United States, the statement that: ''I hereby certify that the foreign producers of the visual depictions produced by [name of entity] either collect and maintain the records required by sections 2257 and 2257A of title 18 of the U.S. Code, or have certified to the Attorney General that they collect and maintain individually identifiable information regarding all performers, including minor performers, employed by that person, pursuant to tax, labor, and other laws, labor agreements, or otherwise pursuant to industry standards, where such information includes the name, address, and date of birth of the performer, in accordance with 28 CFR part 75; and [name of entity] has copies of those records or certifications.'' The producer may provide the following statement instead: ''I hereby certify that with respect to foreign primary producers who do not either collect and maintain the records required by sections 2257 and 2257A of title 18 of the U.S. Code, or certify to the Attorney General that they collect and maintain individually identifiable information regarding all performers, including minor performers, whom they employ pursuant to tax, labor, or other laws, labor agreements, or otherwise pursuant to industry standards, where such information includes the names, addresses, and dates of birth of the performers, in accordance with 28 CFR part 75, [name of entity] has taken reasonable steps to confirm that the performers in any depictions that may potentially constitute simulated sexually explicit conduct or lascivious exhibition of the genitals or pubic area of any person were not minors at the time the depictions were originally produced.'' ''Reasonable steps'' for purposes of this statement may include, but are not limited to, a good-faith review of the visual depictions themselves or a good-faith reliance on representations or warranties from a foreign producer.

(d) *Entities covered by each certification.* A single certification may cover all or some subset of all entities owned by the entity making the certification. However, the names of all sub-entities covered must be listed in such certification and must be cross-referenced to the matter for which the sub-entity served as the producer.

(e) *Timely submission of certification.* An initial certification is due June 16, 2009. Initial certifications of producers who begin production after December 18, 2008, but before June 16, 2009, are due on June 16, 2009. Initial certifications of producers who begin production after June 16, 2009 are due within 60 days of the start of production. A subsequent certification is required only if there are material changes in the information the producer certified in the initial certification; subsequent certifications are due within 60 days of the occurrence of the material change. In any case where a due date or last day of a time period falls on a Saturday, Sunday, or federal holiday, the due date or last day of a time period is considered to run until the next day that is not a Saturday, Sunday, or federal holiday.

Dated December 9, 2008.

Michael B. Mukasey,

Attorney General.

Servicemembers' Group Life Insurance Traumatic Injury Protection Program; comments due by 12-26-08; published 11-26-08 [FR E8-28114]

LIST OF PUBLIC LAWS

This is a continuing list of public bills from the current session of Congress which have become Federal laws. It may be used in conjunction with "PLUS" (Public Laws Update Service) on 202–741–6043. This list is also available online at *http://www.archives.gov/federal-register/laws.html*.

The text of laws is not published in the **Federal Register** but may be ordered in "slip law" (individual pamphlet) form from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402 (phone, 202–512–1808). The text will also be made available on the Internet from GPO Access at *http://www.gpoaccess.gov/plaws/index.html*. Some laws may not yet be available.

H.R. 2040/P.L. 110–451

Civil Rights Act of 1964 Commemorative Coin Act (Dec. 2, 2008; 122 Stat. 5021)

S. 602/P.L. 110–452

Child Safe Viewing Act of 2007 (Dec. 2, 2008; 122 Stat. 5025)

S. 1193/P.L. 110–453

To direct the Secretary of the Interior to take into trust 2 parcels of Federal land for the benefit of certain Indian Pueblos in the State of New Mexico, and for other purposes. (Dec. 2, 2008; 122 Stat. 5027)

Last List December 2, 2008

Public Laws Electronic Notification Service (PENS)

PENS is a free electronic mail notification service of newly enacted public laws. To subscribe, go to *http://listserv.gsa.gov/archives/publaws-l.html*

Note: This service is strictly for E-mail notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.
