

# Model Release:

## *Tied to Nonroad Rulemaking*

### Milestone

- Draft Release at time of NPRM
- Comment Period
- Final Release after FRM

### Date

- Spring 2003
- 60 days
- Spring 2004

# Guidance:

## *Revising Input Data*

- Most Feasible

- Equipment Population  
(*\*.pop*) & Usage  
(*activity.dat*)
- Emission Factors (*\*.emf*)
- Growth Rate (*\*.grw*)
- Geographic Allocation  
(*\*.alo*)
- Temporal Allocation  
(*season.dat*)

- More Challenging

- Useful Life &  
Scrappage (*\*.pop*)
- Load Factors  
(*activity.dat*)
- Emission  
Deterioration Factors  
(*\*.det*)

## Guidance: *NONROAD in SIPs*

- Draft NONROAD is currently the best tool available for estimating regional nonroad inventories.
- However, as a draft model it is in transition.
- States may use NONROAD, but until it is final, it does not carry the presumptive weight of an approved model when EPA reviews a SIP.
- EPA will continue to review this policy as we get closer to the release of a new draft.
