Dear Ms. Jordan:

In light of the U.S. Environmental Protection Agency's (U.S. EPA) recent announcement of their intent to implement the 2008 federal ozone standard, we are providing an update to our previous recommendations for area designations and boundaries that were submitted on March 12, 2009.

In general, we base our updated recommendations on ambient ozone concentrations measured from 2008 through 2010 by Federal Reference Method monitors located throughout California. Several areas we previously recommended as nonattainment show improvement and now qualify as attainment based on 2008-2010 data. In addition, several more areas show attainment based on data for 2009 through 2011. We are working with our Monitoring and Laboratory Division and the affected local air districts to expedite validation and submittal of critical 2011 data to U.S. EPA's Air Quality System so they can be used in your final area designation review. We may also expedite 2011 data submittals for additional areas for use in classifications.

Overall, we recommend U.S. EPA designate 17 areas as nonattainment, 15 areas as attainment, and 6 areas as unclassifiable for the 2008 ozone standard of 0.075 parts per million (ppm). Enclosure 1 contains a complete listing of areas and design values for all parts of California. Enclosure 2 provides the boundary descriptions for newly defined areas.

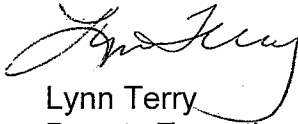

The energy challenge facing California is real. Every Californian needs to take immediate action to reduce energy consumption. For a list of simple ways you can reduce demand and cut your energy costs, see our website: <http://www.arb.ca.gov>.
