$\xi_{s}$孚

1. Chemical: Amitrole 91.8
2. Test Material: $96.5 \%$ (technical ai), a white powder
3. Study Type: 48-hour $\mathrm{LC}_{50}$

Species Tested: Daphnia magna
4. Study ID:

Forbes, A.D. (1985) Acute Toxicity of Aminotriazole to Daphnia magna; Report No. 33718; prepared by Analytical Bio-Chemistry Laboratories, Inc., for Union Carbide, P.O. Box 12014, Research Triangle Park, NC 27709.
5. Reviewed by:

Date: $\quad 9-23-86$ signature: Daman Cook
Date: $\quad 9.24 .16$
7. Conclusions:

This study indicates Amitrole is slightly toxic to Daphnia mana with an $L C_{50}$ of $18 \mathrm{mg} / \mathrm{L}$. This study does fulfill the requirements in support of registration for an aquatic invertebrate study.
8. Recommendations: N/A.
9. Background:

EEB requested this study in order to fulfill the data gap in the reregistration process.
10. Discussion of Individual Test: N/A.

## ll. Materials and Methods:

a. Test Animals: Less than 24-hour-old Daphnia magna from the laboratory culture.
b. Test System: Glass beakers (250 mL) containing 200 mL of test solution; static exposure to test solution at $20 \pm 2{ }^{\circ} \mathrm{C} ; 48$ hours duration.
c. Dose: Static bioassay using nominal concentration; no solvent.
d. Design: Twenty Daphnia per level; five dose levels plus control ( $0,10, \overline{18,} 32,56$, and $100 \mathrm{mg} / \mathrm{L}$ ).
e. Statistics: Stephan's et al. program was used to calculate the LC50 value.
12. Reported Results:

The study author found that the 48 -hour $L_{50}$ was 18 ppm for Amitrole $91.83 \%$ ai. The no-effect level observed for Aminotriazole was $10 \mathrm{mg} / \mathrm{L}$ after 48 hours, which was based on the lack of mortality and abnormal effects.
13. Study Author's Conclusions:

The 48 -hour $L_{50}(95 \%$ ci) was $18(16-21) \mathrm{mg} / \mathrm{L}$. The study was conducted following the intent of Good Laboratory Practice Standards; Pesticide Programs (40 CFR 160). All original raw data were sent to Union Carbide Agricultural Product Company, with a copy retained at Analytical BioChemistry Laboratory.
14. Reviewer's Discussion and Interpretation of the Study
a. Test Procedures: The test procedure complied with the recommended EPA Protocol of October 1982 (Part 158).
b. Statistical Analysis: Stephan's et al. 1978 computer program was used to verify to the reported calculated $\mathrm{LC}_{50}$ value.
c. Discussion/Results: The 48-hour LC 50 of 18 ppm for technical Amitrole indicates this product is slightly toxic to Daphnia magna.
d. Adequacy of Study:

1. Category: Core.
2. Rationale: N/A.
3. Reparability: N/A.
4. Completion of One-Liner: Yes.
5. CBI Appendix: N/A.

| CONC. | NUMBER | NUMBER | PERCENT | BINOMIAL |
| :---: | :---: | :---: | :---: | :---: |
|  | EXPOSED | DEAD | DEAD | PROB. (PERCENT) |
| 100 | 20 | 20 | 100 | $9.53674 \mathrm{E}-05$ |
| 56 | 20 | 20 | 100 | $9.53674 \mathrm{E}-05$ |
| 32 | 20 | 19 | 95 | $2.00272 \mathrm{E}-03$ |
| 18 | 20 | 11 | 55 | 41.1901 |
| 10 | 20 | 0 | 0 | 9.53674E-05 |

THE BINOMIAL TEST SHOWS THAT 10 AND 32 CAN BE USED AS STATISTICALLY SOUND CONSERVATIVE 95 PERCENT CONFIDENCE LIMITS, BECAUSE THE ACTUAL CONFIDENCE LEVEL ASSOCIATED WITH THESE LIMITS IS GREATER THAN 95 PERCENT.

AN APPROXIMATE LC50 FOR THIS SET OF DATA IS 17.3148
