THRU: Harold Podall, Section Head *HP 10/11/94*  
Product Chemistry Review Section

SUMMARY OF FINDINGS:

Applicant has submitted an updated CSF for addition of multiple sources of inert ingredients to be added to the Basic formulation, RSB has reviewed this formulation and compared it with the latest original basic formulation submitted on 9/28/92. Our comments which are based on the findings of comparisons of two basic CSF'S are listed below:

1. The basic CSF dated 6/29/98 *this is waiver with* submitted is not identical to the original basic CSF, the amounts of inert components vary considerably, each inert ingredient must be exactly in equal amount as the original basic CSF.

2. If the applicant is using different proportions of inert ingredients, then entire product specific product data matrix is required, or the applicant may request for a waiver giving technical reasons for the waiver of such a request.

RECOMMENDATIONS:

The basic CSF dated 6/24/94 cannot be accepted as submitted, applicant must clarify the aforementioned issues and satisfy the conditions as stated above. RSB has no objection to the proposed alternate sources of inert ingredients provided the inerts used are in identical proportions and used for identical purpose as the original basic CSF.
