Hazard Evaluation Division (TS-769)

To: H. Jacoby, PM 21
Registration Division (TS-767C)

Susan Lewis, Data Call In
Registration Division (TS-767C)

Toxicology Branch
Hazard Evaluation Division (TS-769)

Joseph D. Panetta, Chairman, Maneb Task Force, has submitted a crop residue program for 1985-1986. All crops for which there are maneb tolerances, crop grouping, crops tested and year tested are included.

Our comments are as follows:

1. Brassica (cole) - The addition of residue data for broccoli and mustard greens in 1986 with residue data for cabbage in 1985 tests may not be sufficient for all the remaining crops in this group (cauliflower, Chinese cabbage, collards, kale and kohlrabi) unless the use is similar. See 40CFR 180.34f.
2. Leafy vegetables - The addition of residue data for celery and spinach in 1986 with residue data for lettuce in 1985 tests may not be sufficient for all the remaining crops in this group (endive, rhubarb) unless the use is similar. See 40CFR 180.34f.
3. Cucurbits - The residue data for the representative crops in 1985 tests may not be sufficient for the remaining crops in this group (winter squash, pumpkin) unless the use is similar. See 40CFR 180.34f.

Note to Susan Lewis:

Add to crops not supported by the 5/85 data the following:

cauliflower, Chinese cabbage, collards, kale, kohlrabi and eggplant.

This is a total of 23 crops (counting turnip tops and roots as one crop) which will not be supported by the 1985 test data.
