MUTAGENICITY REVIEW SUMMARY

CHEMICAL: Phosmet (Imidan)

Date: 11/16/93

CAS No. : 732-11-6 Caswell No.: 543 P.C. Code: 059201

Structure:

Analogues (w/CAS and Caswell #):

Chemical Name: N-(mercaptomethyl)phthalamide S-(O,O-dimethyl phosphosodithioate)

Acceptable Studies (with MRID and Document Control Numbers):

- 1) Salmonella assay (MRID #00164884; Doc #006339): positive \pm activation (TA100)
- 2) mouse lymphoma gene mutation assay (MRID #00164885; Doc #006339): positive \pm activation (lower frequency with activation)
- 3) mouse lymphoma cells/aberrations (MRID #00164886; Doc #006339, 009535): positive w/o activation
- 4) mouse lymphoma cells/SCE (MRID #00164886; Doc #006339, 009535): positive \pm activation
- 5) human fibroblasts/DNA damage - nucleoid sedimentation (MRID #00164887; Doc #006339): negative
- 6) BALB/3T3 cell transformation assay (MRID #00164888; Doc #006339, 009535): positive
- 7) mouse micronucleus assay (MRID #40199401; Doc #006465): negative

Unacceptable Studies (with MRID and Document Control Numbers):

Other Information (e.g. GeneTox printout, published studies):

Published studies: 1) SAL + (very large increase in TA100)(Mutat Res 116:185-216, 1983); 2) DBA (EUE cells, increased single strand breaks, less break w/act.), DBH (single strand breaks confirmed w/DNA unwinding exp.), V79 (hprt locus, increased mutations, greater w/act.), SHE (positive for transformation SHE cells)(tested mixture of phosmet 2%, xylene 45.3%, other "inerts"; Environ Molec Mutagen 20: 73-78, 1992)

Peer Review Carcinogenicity Classification:

11/08/93
