Recommendation

The acute dermal LD₅₀ study is inadequate and has been designated Supplementary Data for reasons stated in the review.

*No RPAR Criteria have been exceeded.

Review

Twelve female rabbits had 10% of their hair removed from their backs. Animals were divided into 3 groups of 4 animals each and received dermal applications of 1, 2, 5 ml/kg of the test material. The sites were occluded for 24 hours; after which, any residual test material was removed by washing and towel drying. The animals were observed for 14 days.

Results

LD₅₀ was not determined definitively

Toxic Signs: not reported

Necropsy: not performed

Tox category: II

Classification: Supplementary Data

1) a lower dose level should have been tested since 50% or greater mortality was observed at all dose levels tested.
