SUMMARY OF FINDINGS

The technical Propazine was reviewed earlier by Dr. Sami Malak, and 63-13(Stability) was indicated as data gap as per letter of the Agency dated December 18, 1995. The registrant responded on May 3, 1996 stating that the requirements of 63-13 have been met by submitting the data on sensitivity to sunlight under guideline 161-3, the stability of the AI at normal and elevated temperatures was assessed under 63-17, and the sensitivity of the compound to a metal(Zn) and metal ion(KMnO₄) was assessed in 63-14.

Conclusion:

It is recommended that the registrant put together all these studies mentioned and submit to the Agency under guideline 63-13 for evaluation. The registrant must provide experimental details for each study carried out.
