Environmental Chemistry Review for Chlorothalonil (tetrachloroisophthalonitrile)

Petition no. 5E1569  
Registration no. 677-313 AA  
Company name IR-4 (Diamond Shamrock)

I. INTRODUCTION

See evaluations dated 7/19/72 and 7/15/71. Also, see reevaluations # 1,2 and 3 dated 7/27/72 and 8/6/72.

The fungicide, Bravo 6F (6.0 lb ai/gal), is proposed for use on passion fruit in Hawaii only.

II. DIRECTIONS FOR USE

Apply by ground 1.5 lb ai/A in about 100 gal water for adequate coverage of fruit and leaves. Begin treatment when disease appears and continue at 14 day intervals until disease incidence drops.

Do not feed treated vines or by-products to livestock.

III. DISCUSSION OF DATA

A letter of authorization is said to be included in the submission, but it could not be found.

No new 70-15 data was submitted.

IV. CONCLUSIONS

previously submitted data satisfies 70-15 requirements for this use.

V. RECOMMENDATIONS

1) NAC
