DATA EVALUATION REPORT

STUDY: Rabbit Teratology

LABORATORY: International Research and Development Corp.

STUDY NUMBER & DATE: # 293-032a 2/25/76 Francis Wazeter

ACCESSION NUMBER: Not Assigned

MRID: Not Assigned

MATERIAL TESTED: DAC-3701

ANIMALS: Dutch Belted Does

METHODS: See the Review of PP # 6F1799, R. Coberly, 1/12/77.

LEVELS OFFERED: 0, 1, 2.5 and 5 mg/day by gavage during days 6 through 18 of gestation.

RESULTS: No terata reported at any level tested.

CONCLUSIONS:

DAC 3701 is not teratogenic in Dutch Belted Rabbits at levels up to 5 mg/kg given orally on days 6 - 18 of gestation.

CORE RATING:

Minimum Data.
