SUBJECT: Review quarterly report for ground water study for chlorothalonil.
DP Barcode: D211227; Submission S480385; ID# 081901
MRID # 435145-00, -01

General Comments:

The ground-water study appears to be progressing in a positive manner. The progress report presents the types of information that the Branch wants so that the progress of the study can be monitored. It appears that no serious problems have occurred at the study site. Although, some on-site monitoring equipment has malfunctioned due to lightning strikes, the registrant is working to provide supplemental and other information to fill in data gaps.

It is suggested that in future progress reports that a map (or sketch) be included which shows the general locations of the well clusters, lysimeter clusters, piezometers, and plot boundaries.

Additionally, a sentence or two should be provided as to how the peanut crop is doing and is the study having a detrimental impact on crop growth. The information is for informational purposes only. The registrant is not expected to measure or monitor analytically crop growth, this can be subjective.

Recommendations:

The progress report is acceptable. It is therefore recommended that the progress report be accepted.
