COMMENTS

1. We will accept the storage stability data, but we await the results of one year shelf-life data.
2. Label claims of flea and tick control for 4 months are acceptable. The label must bear a statement that informs the user that efficacy may not be apparent for ticks for several days after collar attachment. The correct name for D. andersoni is Rocky Mountain Wood Tick.
3. The toxicology requirements for domestic animal safety have not been satisfied. A ~~cat~~ cholinesterase inhibition study must be performed on the most sensitive test animal (dog or cat) in which data is obtained about ~~at~~ every other day during the period of greatest pesticide ~~at~~ emission from the collar. This would give the maximum degree of cholinesterase inhibition occurring under actual use conditions.

4. Immediately after "General Classification" on the label add "It is a violation of Federal law to use this product in a manner inconsistent with its labeling."
5. Add a disposal statement immediately before the directions or after them. It must be headed by "Disposal", ~~and~~ in the same type size as "Keep Out of Reach of Children", and followed with "Do not use empty container. Wrap container and put it in trash collection."
