

US EPA ARCHIVE DOCUMENT

EPA # 524-8RI	Date 3/12/76	Product Name MON-0139	Classification	Toxicity Category
------------------	-----------------	--------------------------	----------------	-------------------

RECOMMENDATION: Before the signal word "Warning" can be changed to "Caution" as requested in Mr. S. H. Hannah letter of 1/20/76, a sample of the product must receive acute primary eye irritation testing at our Beltsville sub laboratory. This requirement is made because of the toxicity data resulting from the acute primary eye irritation of EPA No 524-8RI, a very similar product, which indicated Category II for eye toxicity. - If the registrant agrees - I will set up the testing at Beltsville.

Acute Oral (Rat)	LD50	TECH	FORMULATION	DILUTION	DATA ACCEPT ABLI
------------------	------	------	-------------	----------	------------------

Toxic signs:

Comments: Please inform me before the sample is sent to the lab.
