In our review of 3/21/96, "Evaluation of Analytical Method and Residue Data. Glyphosate on Corn," we stated that liver and kidney tolerances both need to be increased. We noted this would be covered by the 4 ppm tolerances proposed in conjunction with the use on alfalfa in PP#4F4312, M. Rodriguez, 1/11/95. We now need to clarify that only the kidney tolerance needs to be increased in both the alfalfa petition and PP#8F3573 for use on corn. Liver tolerances can remain at 0.5 ppm. The kidney tolerance does need to be increased and will be covered by the 4 ppm tolerance proposed in PP#4F4312.

Our conclusion 9 in the 3/21/96 review should be modified deleting the word liver to read: "...covered by established tolerances with the exception of kidney, for which the 4 ppm tolerance recommended by CBTS in PP#4F4312 needs to be established."

END
