NOTE: Complete this form. Write "NA" where not applicable.

<input checked="" type="checkbox"/> INCOMING CALL	VISITOR
<input type="checkbox"/> OUTGOING CALL	CONGRESSIONAL

DATE 7/16/73
TIME OF CALL 11:15

NAME AND ADDRESS OF CALLER OR VISITOR
American Cyanamid
(Ray Baron)

PHONE NO. (Include Area Code or IDS No.)
REGISTRATION, ID NO. OR FILE SYMBOL 241-EXP
DATE OF LATEST SUBMISSION

BRIEF SUMMARY OF CONVERSATION
How long (days) do the simulated field exposure studies with pheasants have to be conducted? High temperatures in Illinois at present time are affecting the captive birds. Ten days may be the outside limit for maintaining the penned pheasants.

ACTION TAKEN OR RECOMMENDED
Recommended that studies last 7-10 days. Birds exposed for 7-10 days should be sufficient to evaluate possible hazard associated with granules exposed on soil surface (as per our suggestion for simulated field testing during the permit).
