MEMORANDUM

From: Peter E. McGrath

To: Clayton Bushong
David Severn

PEM
meg

Subject: Prowl

I am returning the subject memorandum on Prowl. This memorandum, which is in response to Akerman's note of July 8, 1980, needs to be a joint response from EFB and EEB.

The issue of a field monitoring study has to be resolved and, if required, recommended by EFB. I would like EFB to reexamine the environmental chemistry data on Prowl before making any appropriate recommendations. The degree of our concern with the mobility of Prowl in the environment and its persistence should be viewed relative to its very low level for reproductive effects in fish.

→ cc. James Akerman, RD
