7. CONCLUSIONS:

The only data requirements currently satisfied for pendimethalin are hydrolysis and long-term field dissipation. Data on file that are preliminary, since they do not fulfill data gaps, indicate that pendimethalin does not rapidly leach through soil.

8. RECOMMENDATIONS:

Because of the lack of adequate data, EAB cannot support the requested Section 18.

9. BACKGROUND:

The state of Louisiana is requesting a sect. 18 for the use of pendimethalin for control of Itchgrass and Browntop Panicum on approximately 40,000 Acres of sugarcane. The application rate would be 2.0 lbs/A for a total of 80,000 lbs of active ingredient.
