Ecological Effects Branch
Hazard Evaluation Division (TS-769C) *James W. Akerman*
7/21/88

This memorandum pertains to the 6 June 1988 submission by O. M. Scott and Sons Company requesting an alternate formulation for ProGrow Ornamental Herbicide 2 (EPA Reg. No. 538-172) which contains the active ingredients oxyfluorfen (Pesticide Chemical Code 111601) and pendimethalin (PCC 108501). ProGrow is a preemergent herbicide for weed control in container and field grown ornamentals and is registered for commercial use. The product label allows only for ground application.

[redacted] specified on the current Confidential Statement of Formula. The registrant proposes adding [redacted]. Both of these materials are considered to be "safe" inert (i.e., "List 4"). EEB does not expect [redacted] cause significant harm to nontarget organisms. Therefore, EEB has no objections to the proposed alternate formulation of ProGrow.

INERT INGREDIENT INFORMATION IS NOT INCLUDED
