103.1.4 Aquatic Invertebrate

DATA REVIEW NUMBER: ES H1

TEST: Aquatic Invertebrate Acute Toxicity

SPECIES: Water Flea (Daphnia magna)

RESULTS: 96 hour LC<sub>50</sub> = 39 ppt (25-62 ppt) 95% C.L.

*This is in (sum)*

No discernible effect level 32 ppt.

48 hour LC<sub>50</sub> = 75 ppt (54-103 ppt) 95% C.L.

Statistical analysis of data by Finney Probit gave the following results for the 96 hour LC<sub>50</sub> [Chi<sup>2</sup>(3df) = 7.81].

5.705	M						
13.033	YINT	0.039	LD50	0.023	LD10	0.066	LD90

CHEMICAL: FMC 33297 Technical (95.7% A.1.)

TITLE: Acute Toxicity of FMC - 33297 Technical to Water Flea (Daphnia Magna)

ACCESSION NO: 096699

STUDY DATE: December, 1975

RESEARCHER: Bentley, Robert E.  
E. E. & G. Bionomics  
Aquatic Toxicology Laboratory  
Wareham, Massachusetts

REGISTRANT: FMC Corporation

VALIDATION CATEGORY: Core

CATEGORY REPAIRABILITY: NA. The aquatic invertebrate toxicity<sup>data</sup> for this study reported for 48 hours did not produce favorable results for the Chi<sup>2</sup> analysis ~~by~~ with Finney Probit. This study did supply values for 96-hour LC<sub>50</sub> for Daphnia magna. This study used acetone solvent and had 7% mortality in the solvent control. The raw data was analyzed using Finney Probit after correcting for control mortality by Abbotts Formula. The value derived had an acceptable Chi<sup>2</sup> value (4.712 < 7.81)

and therefore the 96 hour  $LC_{50}$  will be used in the hazard assessment.
