Note to the Product Manager:

Our review of 10/16/84 stated that an exposure monitoring study was required since no data were available to the Agency to do an exposure assessment. If appropriate surrogate data had been available we would have used them and no field study would have been required. The surrogate studies submitted by ICI are inappropriate. EAB will therefore not review this package in any depth. The company is required to conduct exposure monitoring studies for applicators and inhabitants using personal monitoring techniques approved by the agency.
