THRU: Charles L. Trichilo, Chief  
Residue Chemistry Branch  
Hazard Evaluation Division (TS-769) *CT*

We have recieved the final report (attached) on the method trial for iprodione and metabolites on kiwifruit. The kiwifruit fortified at 0.01 and 7 ppm with each of parent and two metabolites showed recoveries ranging from 60 to 97% with most values >70%. We conclude that the method is satisfactory for enforcement of a tolerance on kiwifruit.

Recommendation: TOX and EFB considerations permitting and provided the petitioner submits a revised Section F proposing a tolerance of 10 ppm for residues of iprodione and its metabolites on kiwifruit we recommend that the tolerance be established.
