SUBJECT: Metalaxyl (Reg. No. 100-607); proposed crop rotation

The proposed conditional registration of Metalaxyl (Ridomil™ 2E) to permit rotation to wheat (during the fall following application) and soybeans (in the year following treatment) would present no increase in hazard over existing registrations and no additional ecological effects data are needed to evaluate this change. The planting of crops in seasons or years following a pesticide application would not increase hazard to fish and wildlife beyond that resulting from the initial pesticide use.
