**CITATION:** Palmer, S.J., *et al.* 2003. AE C421200: A 96-Hour Static Acute Toxicity Test with the Rainbow Trout (*Oncorhynchus mykiss*). Unpublished study performed by Wildlife International, Ltd., Easton, MD. Laboratory Project No. 149A-159. Study sponsored by Bayer CropScience, Frankfurt am Main, Germany. Study initiated April 8, 2003 and completed June 30, 2003.

**EXECUTIVE SUMMARY:**

In a 96-hour acute toxicity study, Rainbow Trout (*Oncorhynchus mykiss*) were exposed under static conditions to AE C421200 (a metabolite of thidiazuron) at nominal concentrations of 0 (negative control), 6.3, 13, 25, 50, or 100 ppm. Mean-measured concentrations were <3.00 (<LOQ, control), 6.3, 13, 25, 51, and 103 ppm a.i.

No mortality or sub-lethal effects were observed in any test group following 96 hours of exposure. The 96-hour LC<sub>50</sub> was >103 ppm a.i., which categorizes AE C421200 (a metabolite of thidiazuron) as practically non-toxic to Rainbow trout (*Oncorhynchus mykiss*) on an acute toxicity basis. The NOEC and LOEC, based on both mortality and sub-lethal effects, were 103 and >103 ppm a.i., respectively.

This study is scientifically sound and satisfies the guideline requirements for an acute toxicity study with Rainbow Trout (§72-1c). This study is classified as CORE.

**Results Synopsis**

Test Organism Size/Age (mean Weight or Length): 11 weeks old (reviewer-calculated); mean of 1.1 g (wet) and 5.3 cm (mean of 10 negative control fish at test termination)  
Test Type (Flow-through, Static, Static Renewal): Static

**96-Hour**

LC<sub>50</sub>: >103 ppm a.i.  
NOEC: 103 ppm a.i.  
LOEC: >103 ppm a.i.  
Endpoints affected: None

**I. MATERIALS AND METHODS**

**GUIDELINE FOLLOWED:** The study protocol was based on procedures outlined in the OECD Guideline No. 203 (1993); the U.S. EPA OPPTS No. 850.1075 (Draft, 1996); and ASTM Standard E729-88a (1994). Deviations from U.S. EPA §72-1 included:

1. Aeration of the test vessels was not addressed.
2. The water hardness (132 mg/L as CaCO<sub>3</sub>) was three times higher than recommended (40-48 mg/L as CaCO<sub>3</sub>).
3. The pH range (8.1-8.6) was greater than recommended (7.2-7.6).
4. The total organic carbon (TOC), particulate matter, and residual chlorine concentrations in the dilution water were not reported.

These deviations did not affect the validity or acceptability of the study.

**COMPLIANCE:** Signed and dated GLP, Confidentiality, and Quality Assurance statements were provided. This study was conducted in accordance with GLP standards of the U.S. EPA (40 CFR Part 160), OECD, and Japan MAFF (p. 3).

PMRA Submission Number {.....}

EPA MRID Number 46203511

**A. MATERIALS:**

- 1. Test Material** AE C421200 (a metabolite of thidiazuron)
- Description:** White powder
- Lot No./Batch No.:** DSC 1441 (Product code: AE C421200 00 1B98 0001)
- Purity:** 98.4% (w:w) a.i.
- Stability of Compound Under Test Conditions:** The stability of the test substance in the dilution water during the course of the study was verified by analytical determination at 0, 48, and 96 hours (Table 1, p. 17). Recoveries were 97.8-103% of nominal concentrations at 0 hours, 97.3-103% of nominal at 48 hours, and 97.5-104% of nominal at 96 hours.
- Storage conditions of test chemicals:** Stored frozen.
- OECD requires water solubility, stability in water and light,  $pK_a$ ,  $P_{ow}$ , and vapor pressure of the test compound. OECD requirements were not reported.*

**2. Test organism:**

- Species:** Rainbow Trout (*Oncorhynchus mykiss*)
- Age at test initiation:** 11 weeks old (reviewer-calculated, hatched on February 24, 2003).
- Weight at study initiation:** Not provided; the blotted wet weight of 10 negative control fish measured at test termination averaged 1.1 g (range of 0.87-1.8 g).
- Length at study initiation:** Not provided; the length of 10 negative control fish measured at test termination averaged 5.3 cm (range of 4.8-6.1 cm).
- Source:** Thomas Fish Company, Anderson, CA.

**B. STUDY DESIGN:**

**1. Experimental Conditions**

a. Range-finding Study: The definitive nominal test concentrations were selected in consultation with the sponsor, and were based upon the results of an exploratory range-finding toxicity test. The results of the range-finding study were not reported (p. 9).

b. Definitive Study

Parameter	Details	Remarks
		Criteria
Acclimation period: Conditions: (same as test or not) Feeding: Health: (any mortality observed)	At least 14 days prior to testing Same as test Fed commercially-prepared diet supplied by Zeigler Brothers Inc., Gardners, PA. Fish were not fed two days prior to and during testing. During the 48 hours prior to testing, fish showed no signs of disease, stress or mortality.	EPA requires: minimum 14 days; no feeding during test OECD requires minimum of 12 days.
Duration of the test	96-hour	EPA/OECD requires: 96 hour
Test condition static/flow through Type of dilution system- for flow through method. Renewal rate for static renewal	Static N/A N/A	EPA: Must provide reproducible supply of toxicant, with a consistent flow rate of 5-10 vol/24 hours, and meter systems calibrated before study and checked twice daily during test period
Aeration, if any	Not reported	EPA requires: no aeration; OECD permits aeration
<u>Test vessel</u> Material: (glass/stainless steel) Size: Fill volume:	Stainless steal aquaria with stainless steal cover 38 L 25 L (19.5-cm depth)	EPA requires: Size 19 L (5 gal) or 30 x 60 x 30 cm Fill volume: 15-30 L of solution
Source of dilution water	The dilution water was freshwater obtained from an on-site laboratory well (40-m deep). The well water was sand-filtered, aerated, then filtered (0.45 µm) again prior to use.	EPA 1975; Soft reconstituted water or water from a natural source, <b>not</b> dechlorinated tap water; OECD permits dechlorinated tap water.

Parameter	Details	Remarks
		Criteria
Feeding	Animals were not fed during testing.	<i>EPA/OECD requires: No feeding during the study</i>
Recovery of chemical	99.5-102% of nominal	Based on quality control matrix spikes fortified at 6.00, 20.0, or 100 ppm and analyzed concurrently with the samples (Appendix 4.5, p. 33).
Level of Quantitation	3.00 ppm a.i.	
Level of Detection	Not reported	
Positive control {if used, indicate the chemical and concentrations}	N/A	
Other parameters, if any	N/A	

**2. Observations:**

**Table 2: Observations**

Criteria	Details	Remarks/Criteria
Parameters measured including the sub-lethal effects/toxicity symptoms	Mortality and sub-lethal effects	
Observation intervals	at 5 hours and every 24 hours thereafter	<i>(EPA/OECD requires: minimally every 24 hours)</i>
Were raw data included?	Yes, sufficient	
Other observations, if any	N/A	

**II. RESULTS AND DISCUSSION:**

**A. MORTALITY:**

No mortality occurred in any group during the 96-hour study (Table 4, p. 20). The 96-hour LC<sub>50</sub> was >103 ppm a.i., the highest concentration tested (Table 5, p. 21). The NOEC based on mortality data was 103 ppm a.i.

**Data Evaluation Report on the acute toxicity of AE C421200 (Metabolite of Thidiazuron) to Rainbow Trout (*Oncorhynchus mykiss*)**

PMRA Submission Number {.....}

EPA MRID Number 46203511

**Table 3: Effect of AE C421200 on mortality of Rainbow Trout (*Oncorhynchus mykiss*).**

Treatment, ppm a.i. Measured and (nominal) concn.	No. of fish at start of study	Observation Period					
		0-48 Hours		72 Hours		96 Hours	
		No Dead	% mortality	No Dead	% mortality	No Dead	% mortality
Negative control	20	0	0	0	0	0	0

103 (100)	20	0	0	0	0	0	0
NOEC (mortality)	103 ppm a.i.						
LC <sub>50</sub> (95% C.I.)	>103 ppm a.i.						
Positive control, if used mortality: LC <sub>50</sub> :	N/A	N/A	N/A	N/A	N/A	N/A	N/A

**B. NON-LETHAL TOXICITY ENDPOINTS:**

No sub-lethal effects were observed in any group during the 96-hour study (Table 4, p. 20). The NOEC based on sub-lethal effects was 103 ppm a.i.

Table 4. Sub-lethal effects of AE C421200 on Rainbow Trout (*Oncorhynchus mykiss*).

Treatment, ppm a.i. Measured and (nominal) concn.	Observation Period			
	endpoint at 5-24 Hours	endpoint at 48 Hours	endpoint at 72 Hours	endpoint at 96 Hours
	% affected	% affected	% affected	% affected
Negative control	AN	AN	AN	AN
6.3 (6.3)	AN	AN	AN	AN
13 (13)	AN	AN	AN	AN
25 (25)	AN	AN	AN	AN
51 (50)	AN	AN	AN	AN
103 (100)	AN	AN	AN	AN
NOEC (sub-lethal)	103 ppm a.i.			
LOEC (sub-lethal)	>103 ppm a.i.			
EC <sub>50</sub>	Not determined			
Positive control, if used % sub-lethal effect: EC <sub>50</sub> :	N/A	N/A	N/A	N/A

AN - All surviving fish appeared normal.

**C. REPORTED STATISTICS:**

Due to a lack of mortality or sub-lethal effects at any treatment level by 96 hours, the 96-hour LC<sub>50</sub>, NOEC, and LOEC values were determined by visual observation, and were based on mean-measured treatment concentrations (p. 14).

**96-Hour**

LC<sub>50</sub>: >103 ppm a.i.  
 NOEC: 103 ppm a.i.  
 LOEC: >103 ppm a.i.  
 Endpoints affected: None

**D. VERIFICATION OF STATISTICAL RESULTS:**

The 96-hour LC<sub>50</sub> was determined visually due to a lack of mortality at any treatment level by 96 hours. The NOEC was visually determined as the highest concentration which exhibited no significant mortality or sub-lethal effects. All toxicity values were determined in terms of the reported mean-measured treatment concentrations.

**96-Hour**

LC<sub>50</sub>: >103 ppm a.i.

NOEC: 103 ppm a.i.

LOEC: >103 ppm a.i.

Endpoints affected: None

**E. STUDY DEFICIENCIES:**

There were no significant deviations from U.S. EPA guideline §72-1c that affected the acceptability or validity of this study.

**F. REVIEWER'S COMMENTS:**

Results of the reviewer's statistical verification were identical to those of the study author.

The test solutions appeared clear and colorless at test initiation and termination (p. 12).

**G. CONCLUSIONS:**

This study is scientifically sound and satisfies the guideline requirements for an acute toxicity study with freshwater fish, cold water species (§72-1c). This study is classified as CORE. The 96-hour LC<sub>50</sub> was >103 ppm a.i., which classifies AE C421200 (a metabolite of thidiazuron) as practically non-toxic to Rainbow Trout (*Oncorhynchus mykiss*) on an acute toxicity basis. The NOEC (for mortality and sub-lethal effects) was 103 ppm a.i., the highest concentration tested.

**96-Hour**

LC<sub>50</sub>: >103 ppm a.i.

NOEC: 103 ppm a.i.

LOEC: >103 ppm a.i.

Endpoints affected: None
