-propyl-1,3-dioxolan-2yl methyl]	
-1H-1,2,4-triazole	14.7%
Inert Ingredients	85.3%

## Recommendations:

(1) Due to a misinterpretation of the procedure submitted for a dermal toxicity study, the study was ~~evaluated~~ as evaluated as an Acute Dermal Toxicity Study, but study is actually a Subacute Dermal Toxicity Study and must be reevaluated as such. Therefore the comments made in original review December 17, 1982 in regards to this study should be disregarded.
