Applicant: Mitsui Toatsu Chemicals Inc.

DP BARCODE: D211334

MRID No.: 435190-01

Pesticide Chemical Code No.: 128965

Company Code No.: 033657

Chemical Name: 2-(4-Ethoxyphenyl)-2-methylpropyl-3-
phenoxybenzyl ether

Trade Name: Etofenprox

Introduction: This is a supplementary review. Refer to
original reviews dated 5/21/90 and 3/6/89
by T. Alston and supplementary review dated
12/6/94 by B. Gandhi. This review only concerns
the analytical method used to determine the
impurities present in Etofenprox Technical.

SERIES 62: ANALYSIS AND CERTIFICATION OF PRODUCT INGREDIENTS

62-3 Analytical Methods to Verify Certified Limits

Additional information was submitted in MRID No. 435190-01 for the determination of the impurities in Etofenprox Technical. The same GLC analytical method previously submitted in MRID No. 434521-01 for the determination of Etofenprox Technical was used to analyze the impurities in the technical product. The analytical method is acceptable and no additional information is required. Typical analyses for the impurities present in Etofenprox Technical are reported in Confidential Appendix A.

CONCLUSIONS AND RECOMMENDATIONS

SERIES 62: ANALYSIS AND CERTIFICATION OF PRODUCT INGREDIENTS

The analytical method for the determination of the impurities in Etofenprox Technical as reported in MRID No. 435190-01 is acceptable and no additional information is required. The data fulfill the requirements of 40 CFR §158.180 as an enforcement analytical method for the determination of the impurities in Etofenprox Technical.
62-3: ANALYTICAL METHODS TO VERIFY CERTIFIED LIMITS

Data were submitted in MRID No. 435190-01 which provide information for the determination of the impurities in Etofenprox Technical. The levels of impurities which may be unreacted starting materials are determined by the same GLC analytical method as used for the parent compound Etofenprox previously submitted in MRID No. 434521-01.

Etofenprox is dissolved in Cyclohexane containing Dicyclohexyl phthalate as an internal standard and is determined by GLC using a flame ionization detector. Sample chromatograms showing retention times for the impurities have been provided and are summarized as follows:
