MEMORANDUM

SUBJECT: Pyriproxyfen: freshwater algae toxicity review

FROM: *ACW* Anthony F. Maciorowski, Chief 8-3-95
Ecological Effects Branch
Environmental Fate and Effects Division (7507C)

TO: Rick Keigwin/Joseph Travano
Product Manager 10
Registration Division (7505C)

Sumitomo Chemical Company, Ltd. submitted the following study to support pyriproxyfen:

Blasberg, J.W., S.L. Hicks, and D.L. Cramer. 1991. Acute toxicity of pyriproxyfen to *Selenastrum capricornutum* Printz. ABC Laboratories, Inc., Columbia, MO, Report #39543. MRID No. 436974-01.

The study is scientifically sound but does not fulfill the guideline requirement for a freshwater algae toxicity study. The study is supplemental, because it was conducted for only 72 hours, initial cell counts were not made for all concentrations, and light intensity was too high. The study must be repeated and conducted to conform with Subdivision J guideline requirements. The 72-hour EC₅₀ value of 0.056 ppm classifies the technical pyriproxyfen as very highly toxic to freshwater invertebrates.

If you have any questions, please contact Bill Erickson at 305-6212 or Harry Craven at 305-5320.

6. STUDY PARAMETERS:

Definitive Test Duration: 72 hours
Type of Concentrations: Mean measured

7. CONCLUSIONS: The study is scientifically sound but does not fulfill the guideline requirement for a freshwater algae toxicity study.

Results Synopsis:

72-hr EC₅₀: 0.056 mg/l
95% C.I.: 0.051-0.062 mg/l
NOEL: 0.020 mg/l

8. ADEQUACY OF THE STUDY: Supplemental. The study must be repeated and conducted in accordance with Subdivision J guideline requirements.

9. GUIDELINE DEVIATIONS:

1. The study was terminated after 72 hours (3 days); the guideline requirement is for at least a 5-day (120-hour) test.
2. Initial cell counts were made only for the negative and solvent controls.
3. Light intensity (8600 Lux) was higher than recommended (4000-5000 Lux).

10. SUBMISSION PURPOSE: Data to support EUP.
