MEMORANDUM

EPA File Symbol: 69117-1 Pointer Insecticide

DP Barcode: D230827

Chemical: 129099 Imidacloprid

Test Material: Pointer Insecticide, is a yellowish liquid, batch: 6030138/96J335045

From: Lawrence A. Fried, Biologist
Precautionary Review Section
Registration Support Branch (7505W)

FORMULATION FROM LABEL

Ingredient(s) % by wt.

Imidacloprid ........................................ 5.00
Inerts .............................................. 95.00
Total .............................................. 100.00

BACKGROUND

Arborsystems Inc. has submitted primary eye (441376-01) and primary dermal (441376-02) studies on Pointer Insecticide. These data were submitted in order to support the amendment of the current precautionary labeling. PRS will provide the primary review of these studies.

RECOMMENDATION

81-4. Eye Irritation: Category II. The submitted study is acceptable.

81-5. Dermal Irritation: Category IV. The submitted study is acceptable.
LABEL RECOMMENDATION: For eye irritation and dermal irritation only. The following information should be used by the PM to amend the Pointer Insecticide precautionary label.

SIGNAL WORD: WARNING

PRECAUTIONARY STATEMENTS:

Causes substantial but temporary eye injury. Do not get in eyes or on clothing. Wear safety glasses. Wash thoroughly with soap and water after handling. Remove contaminated clothing and wash clothing before reuse.

STATEMENT OF PRACTICAL TREATMENT (SOP):

IF SWALLOWED: Call a physician or Poison Control Center. Do not induce vomiting. Drink promptly a large quantity of milk, egg whites, gelatin solution, or if these are not available, drink large quantities of water. Avoid alcohol.

IF IN EYES: Hold eyelids open and flush with steady, gentle stream of water for 15 minutes. Get medical attention.

Note To Physician: Probable mucosal damage may contraindicate the use of gastric lavage.
DATA REVIEW FOR ACUTE EYE IRRITATION TESTING (§81-4)

Product Manager: D. Edwards
MRID No.: 441376-01
Author: G. Robbins

Reviewer: Fried
Report No.: D3472
Report Date: 09-19-96

Conclusion:
Toxicity Category: II
Classification: Acceptable
Quality Assurance (40 CFR §160.12): Included
Procedure (Deviations from §81-4): None

Testing Facility: Cosmopolitan Safety Evaluation, Inc.

Test Material: Pointer Insecticide, is a yellowish liquid, batch: 6030138/96JGS045

Test Animal: Rabbit; New Zealand White; 3/sex
Age: Young adult (3-6 months)
Weight: 2.1 to 2.5 kg.
Source: Laboratory Colony (Branchville)

Test Conditions: Six healthy young adult albino rabbits were used. One eye of each rabbit was dosed with 0.1 ml of the test substance, the other eye remaining untreated as a control. The animals were observed consistently over a 17-day period.

Results: Corneal involvement at 48 and 72 hours was observed. At 72 hours all eyes showed opacity (grade 1 or 2), iritis (grade 1) and conjunctival redness (grade 1) and chemosis (grade 1) usually with excessive discharge. On day-10, three eyes were normal. The other three eyes had very faint opacity; in two eyes there was no dye retention and no iritis but in one eye there was still a small central area of dye retention on the cornea, with neovascularization from the limbus toward the slight opacity. On day-14, two eyes had slight opacity, with vascularization from the limbus, but no dye retention or iritis. None of the conjunctivae were positive for irritation. All effects cleared by 17 days.
DATA REVIEW FOR DERMAL IRRITATION TESTING (§81-5)

Product Manager: D. Edwards  
MRID No.: 441376-02  
Author: G. Robbins  
Reviewer: Fried  
Report No.: E3472  
Report Date: 09-18-96

Conclusion:
Toxicity Category: IV
Classification: acceptable
Quality Assurance (40 CFR §160.12): Included
Procedure Deviations from §81-5: None

Testing Facility: Cosmopolitan Safety Evaluation, Inc.

Test Material: Pointer Insecticide, is a yellowish liquid, 
batch: 6030138/96JG5045

Test Animal: Rabbit, New Zealand White
Age: Young adults
Weight: 2.1-2.4 kg
Source: Laboratory colony (Branchville)

Test Conditions: A 0.5 ml dose of test substance was applied to 
the application site for 4 hours on each of six rabbits. The 
degree of irritation was graded at approximately 1 hour after 
removal of the wraps and then at 24, 48 and 72 hours using a 
modification of the method of Draize and a primary irritation 
score was calculated.

Results: There was no immediate sign of discomfort on 
application. Approximately 45 minutes after patch removal there 
was slight irritation characterized by erythema (grade 1) at all 
sites and edema (grade 1) at three sites. Over the next three 
days the irritation tended to resolve and at 72 hours four test 
sites appeared normal and the remaining two test sites showed 
only very slight erythema (grade 1). The residual signs had 
subsided by day-4 when all test sites appeared normal. There was 
no systemic pharmacotoxic effect and no evidence of any injury in 
depth.
